# MEDICAL SCIENCE:

CONTAINING

A FULL EXPLANATION OF THE VARIOUS SUBJECTS AND TERMS OF ANATOMY, PHYSIOLOGY, MEDICAL CHEMISTRY, PHARMACY, PHARMACOLOGY, THERAPEUTICS, MEDICINE, HYGIENE, DIETETICS, PATHOLOGY, BACTERIOLOGY, SURGERY, OPHTHALMOLOGY, OTOLOGY, LARNYGOLOGY, DERMATOLOGY, GYNECOLOGY, OBSTETRICS, PEDIATRICS, MEDICAL JURISPRUDENCE, DENTISTRY, VETERINARY SCIENCE, ETC.

BY

ROBLEY DUNGLISON, M.D., LL.D.,

LATE PROFESSOR OF INSTITUTES OF MEDICINE AND MEDICAL JURISPRUDENCE IN THE JEFFERSON MEDICAL COLLEGE OF PHILADELPHIA, ETC.

## TWENTY-THIRD EDITION,

THOROUGHLY REVISED, WITH THE PRONUNCIATION, ACCENTUATION, AND DERIVATION OF THE TERMS.

BY

THOMAS L. STEDMAN, A.M., M.D.,

FELLOW OF THE NEW YORK ACADEMY OF MEDICINE.

# PREFACE TO TWENTY-THIRD EDITION.

THE reviser of the present edition of Dunglison's *Dictionary* is spared the usual task of the writer of prefaces. A book which has held its own through twenty-two editions for nearly three-quarters of a century needs no apology. It is not expected to fill a long-felt want, for its existence has obviated the possibility of such a want. It has become an institution, and the only office of the present editor is to tell what liberties he has taken with the work of the author—and why.

A distinguishing feature of the successive editions of this *Dictionary* has been the explanatory fulness and encyclopedic nature of its definitions. As was written in the preface to the second edition, "the Author's object has not been to make the work a mere lexicon or dictionary of terms, but to afford, under each, a condensed view of its various medical relations, and thus to render the work an epitome of the existing condition of medical science." It has been the editor's endeavor to preserve in the new matter this characteristic of the work, and not to give merely a bald definition or array of synonyms, but to explain the condition denoted by the term. Some of the old definitions have been modified slightly in the direction of greater conciseness, but the identity of the author, which by long association has become endeared to such a host of practitioners, has been preserved as far as possible, even the quaintness of diction being altered only when the progress of our science has made a new definition imperative. For the same reason the author's preferences have been respected in the choice of the principal terms, when the word preferred by him has not actually become obsolete. For example, the sympathetic nervous system is defined under trisplanchnic nerve, and the spinal cord under medulla spinalis. With the system of cross references employed this will occasion no confusion for the new users of the dictionary, while it is hoped that those who, like the editor, made their first acquaintance with the language of medicine under the guidance of "Dunglison," will be glad to know that their old friend and companion has not been revised out of all recognition.

A glance through the successive editions of this work brings home to one the marvellous advances made by medicine during the second half of the nineteenth century. In each edition it was found necessary to insert new terms, varying in number from several hundred to several thousand, and the present edition has over fifteen hundred new definitions, a large number of these being in the new science of immunity, so recently grown out of that of bacteriology, in protozoan biology, and in radiopraxis.

With this constant increase in the number of medical terms calling for definition, the chief problem presented to the editor has been that of economy of space. In the present edition it was necessary to find room not only for new words but also for the illustrations, which, although almost indispensable in explaining certain things that defy definition in a few words, are enormous consumers of space. The problem was met in several ways. In the first place many words were cut out entirely. Some of these were artificial and clumsy compounds never used again in medicine after their coiners had introduced them; others were only remotely connected with medicine and really out of place in a modern lexicon of that science.

Another way by which the bulk of the work was greatly reduced was by the excision of the figured pronunciation in all cases except those in which general usage is in conflict with authority regarding the value of certain letters, as in "gynecology," for example. In most cases the indication of the accented syllable has been thought to be a sufficient guide to the pronunciation for English-speaking persons. The province of a medical dictionary is to define medical terms, and the medical lexicographer should but touch the outskirts of phonology. The same may be said of the minutiæ of etymology, but since to know the parentage of a word often aids one to grasp better and to remember its meaning, the derivation of most of the words of Greek or Latin origin has been retained in the present edition. This being done, the finer details of orthoepy and word history have been left to the large dictionaries of the English language, where they properly belong.

In the many revisions to which the dictionary has been subjected some confusion had crept in in the matter of cross references, a word to which reference had been made having occasionally been dropped, the reference, however, remaining. An endeavor has been made to correct this and also to insert new cross references when they seemed to be of service in the amplification of a definition. The table of doses has been omitted, but the doses, expressed in Troy and metric values, have been inserted with the descriptive matter relating to the various drugs. These descriptions have, in the case of official preparations, been made to conform with the directions of the United States and British Pharmacopœias.

As indicated on the title page, this work is designed to be of practical utility to all, whether graduates or undergraduates, who are interested in medicine or any of the cognate sciences. For this reason the publishers, in their desire to ensure absolute accuracy and completeness of definition in every department, secured for the preceding edition the services of Professor Leonard Pearson in the revision of the veterinary terms, and those of the brilliant and lamented Dr. H. H. Burchard in that of the titles relating to dentistry. The editor has made in these departments only such changes as the advances, evident here as elsewhere, notably in the field of protozoan disease in the lower animals, have demanded; this new edition, therefore, like the former, is enriched by the work of these experts.

T. L. S.

New York, 1903.

# INTRODUCTION.

Each word is, as far as possible, accentuated and defined; but if the word has several synonyms, the definition is usually given under the main or most prominent word, and the synonyms are referred to it, especially when a long explanatory definition is necessary. In terms of more words than one the definition is generally given under the more significant word, but if not it will be found under the other. *Respiratory murmur*, for instance, is defined under *Murmur; Side-chain theory*, under *Chain; Becquerel rays*, under *Ray*.

In the pronunciation of the few words in which other than the accentual marks have been deemed necessary a simple phonetic system has been adopted which, it is believed, will be readily intelligible, and which requires but little explanation. Indeed, any explanation as to the sound or accentuation of the letters is rendered unnecessary by the self-evident character of the division of the syllables.

The derivations of the words given throughout the work are generally from the Latin and Greek languages, but for easy understanding the Greek alphabet is not employed, the English characters being substituted.

# LIST OF ABBREVIATIONS.

| | | |
|---|---|---|
| **A.** | | Accommodation. Anode. Argon. |
| **āā.** | Ana | Of each. |
| **Abst.** or **Abstr.** | Abstractum | Abstract. |
| **A. C.** | | Anodal contraction. Anodal closure. Air conduction. |
| **A. C. C.** | | Anodal closure contraction. |
| **Acc.** | | Accommodation. |
| **A. D.** | | Anodal duration. |
| **Add.** | Adde, addatur | Add; let there be added. |
| **Ad deliq.** | Ad deliquium | Up to point of fainting. |
| **Ad. 2 vic.** | Ad duos vices | For two doses. |
| **Adhib.** | Adhibeatur | Let it be administered. |
| **Ad lib.** | Ad libitum | At pleasure. |
| **Admov.** | Admoveatur | Let it be applied. |
| **Ad pond. om.** | Ad pondus omnium, | To the whole weight. |
| **Adv.** | Adversum | Against. |
| **Ag.** | Argentum | Silver. |
| **Ah.** | | Hyperopic astigmatism. |
| **Al.** | | Aluminum. |
| **Alt. dieb.** | Alternis diebus | Every other day. |
| **Alt. hor.** | Alternis horis | Every other hour. |
| **Am.** | | Myopic astigmatism. |
| **Amp.** | | Ampère. |
| **An.** | | Anode. |
| **Anat.** | | Anatomy or anatomical. |
| **A. O.** | | Anodal opening. |
| **A. O. C.** | | Anodal opening contraction. |
| **Aq.** | Aqua | Water. |
| **Aq. bull** | Aqua bulliens | Boiling water. |
| **Aq. cal.** | Aqua calida | Warm water. |
| **Aq. comm.** | Aqua communis | Common water. |
| **Aq. dest.** | Aqua destillata | Distilled water. |
| **Aq. ferv.** | Aqua fervens | Hot water. |
| **Aq. fluv.** | Aqua fluvialis | River water. |
| **Aq. font.** | Aqua fontana | Spring water. |
| **Aq. mar.** | Aqua marina | Sea water. |
| **Aq. pur.** | Aqua pura | Pure water. |
| **Arg.** | Argentum | Silver. |
| **As.** | | Arsenic. |
| **Ast.** | | Astigmatism. |
| **At. wt.** | | Atomic weight. |
| **Av.** or **Avoir.** | | Avoirdupois. |
| **B.** | | Boron. |
| **Ba.** | | Barium. |
| **Bals.** | Balsamum | Balsam. |
| **Bi.** | | Bismuth. |
| **Bib.** | Bibe | Drink. |
| **Biol.** | | Biology. |
| **B.** or **Bis in d.** | Bis in die | Twice daily. |
| **B. M.** | Baccalaureus medicinæ, | Bachelor of Medicine. |
| **B. m.** | Balneum mariæ | Water-bath. |
| **Bol.** | Bolus | A large pill. |
| **Bot.** | | Botany. |
| **Br.** | | Bromine. |
| **B. S.** | Baccalaureus scientiæ, | Bachelor of Science. |
| **Bull.** | Bulliens | Boiling. |
| | Bulliat | Let it boil. |
| **But.** | Butyrum | Butter. |
| **C.** | | Cathode. Closure. Cubic. Contact. Centigrade. Gallon (*congius*). |
| **Ca.** | | Calcium. |
| **Cap.** | Capiat | Let him take. |
| **Caps.** | Capsula | Capsule. |
| **C. C.** | | Cathodal closure. |
| **c.c.** | | Cubic centimetre. |
| **C. C. C.** | | Cathodal closure contraction. |
| **C. C. T.** | | Cathodal closure tetanus. |
| **C. D.** | | Cathodal duration. |
| **Cd.** | | Cadmium. Caudal. |
| **Ce.** | | Cerium. |
| **Cel.** | | Celsius. |
| **Cent.** | | Centigrade. |
| **Cg.** | | Centigramme. |
| **Chart.** | Charta or Chartula, | Paper or small paper. Powder. |
| **Chem.** | | Chemistry. |
| **C. M.** | Chirurgiæ magister, | Master in Surgery. |
| **cm.** | | Centimetre. |
| **C. O. C.** | | Cathodal opening contraction. |
| **Co.** | | Cobalt. |
| **Coch.** or **Cochl.** | Cochleare | Spoonful. |
| **Cochl. ampl.** | Cochleare amplum, | A tablespoonful. |
| **Cochl. mag.** | Cochleare magnum, | A tablespoonful. |
| **Cochl. med.** or **mod.**, | Cochleare medium or modicum, | A dessertspoonful. |
| **Cochl. min.** | Cochleare minimum, | A teaspoonful. |
| **Cochl. parv.** | Cochleare parvum, | A teaspoonful. |
| **Coct.** | Coctus | Boiled. |
| **Col.** | Cola | Strain. |
| **Colat.** | Colatus | Strained. |
| **Colet.** | Coletur | Let it be strained. |
| **Collut.** | Collutorium | Mouth-wash. |
| **Collyr.** | Collyrium | Eye-wash. |
| **Comp.** | Compositus | Compound. |
| **Conf.** | Confectio | Confection. |
| **Cong.** | Congius | A gallon. |
| **Cont.** | Continuetur | Let it be continued. |
| **Coq.** | Coque | Boil. |
| | Coquatur | Let it be boiled. |
| **Cort.** | Cortex | Bark. |
| **C. O. T.** | | Cathodal opening tetanus. |

| | | |
|---|---|---|
| **Cr.** | | Chromium. |
| **C. S.** | | Current strength. |
| **Cs.** | | Cæsium. |
| **Cu.** | Cuprum | Copper. |
| **Cwt.** | | A hundredweight. |
| **Cyath.** | Cyathus | A wineglassful. |
| **Cyath. theæ** | Cyathus theæ | A teacupful. |
| **Cyath. vinar.** | Cyathus vinarius | A wineglassful. |
| **Cyl.** | | Cylinder; cylindrical lens. |
| **D.** | | Dose. Duration. Density. |
| **D. D. S.** | | Doctor of Dental Surgery. |
| **Decoct** | Decoctum | Decoction. |
| **Decub.** | Decubitus | Lying down. |
| **De d. in d.** | De die in diem. | From day to day. |
| **Deg.** | | Degeneration. Degree. |
| **Dep.** | Depuratus | Purified. |
| **Dest.** | Destillatus | Distilled. |
| **Det.** | Detur | Let it be given. |
| **D. ut s.** | Detur ut signetur, | Let it be given as directed. |
| **Dieb. alt.** | Diebus alternis | Every other day. |
| **Dieb. tert.** | Diebus tertiis | Every third day. |
| **Dil.** | Dilutus | Dilute. |
| **Dim.** | Dimidius | One-half. Diminutive. |
| **D. in p. æq.** | Dividatur in partes æquales, | Let it be divided in equal parts. |
| **Div.** | Divide | Divide. |
| **D. R.** | | Degeneration reaction. |
| **Dr.** or **Drach.** | Drachma | A drachm. |
| **D. V. S.** | | Doctor of Veterinary Surgery. |
| **E.** | | Electromotive force. Emmetropia. |
| **Eb.** | | Erbium. |
| **Elect.** | Electuarium | Electuary. |
| **Emb.** | | Embryology. |
| **E. M. F.** | | Electromotive force. |
| **Emp.** | Emplastrum | Plaster. |
| **Er.** | | Erbium. |
| **Exhib.** | Exhibeatur | Let it be given. |
| **Ext.** | Extractum | Extract. |
| | Externus | External. |
| **F.** | Fac. | Make. |
| | Fiat or fiant | Let it or them be made. |
| | | Fahrenheit. |
| | | Fluorine. |
| | | Field of vision. |
| | | Formula. |
| **F′** | | Symbol of first focal distance. |
| **F″** | | Symbol of second focal distance. |
| **Fah.** or **Fahr.** | | Fahrenheit. |
| **Far.** | | Faradic. |
| **Fasc.** | Fasciculus | Bundle. |
| **Filt.** | Filtra | Filter. |
| **Fl.** | Fluidus | Fluid. |
| **Flor.** | Flores | Flowers. |
| **F. m.** or **mist.** | Fiat mistura | Let a mixture be made. |
| **Fol.** | Folia | Leaves. Folio. |
| **F. p.** | Fiat potio | Make a potion. |
| **F. pil.** | Fiat pilula | Let a pill be made |
| **Fract. dos.** | Fractâ dosi | In divided dose. |
| **F. R. C. P.** | | Fellow of the Royal College of Physicians. |
| **F. R. C. S.** | | Fellow of the Royal College of Surgeons. |

| | | |
|---|---|---|
| **F. R. S.** | | Fellow of the Royal Society. |
| **Fruct.** | Fructus | Fruit. |
| **Frust.** | Frustillatim | In small pieces. |
| **F. s. a.** | Fiat secundum artem, | Prepare skilfully. |
| **Ft.** | Fiat, Fiant | Let it or them be made. |
| **G.** | | Gramme. |
| **Ga.** | | Gallium. |
| **Galv.** | | Galvanic. |
| **Garg.** | Gargarisma | A gargle. |
| **Gel.** | Gelatina | Gelatin or jelly. |
| **Gm.** | | Gramme. |
| **Gr.** | Granum or grana, | Grain or grains (in countries where the metric system alone is employed, Gramme). |
| **Grad.** | Gradatim | By degrees. |
| **Gt.** | Gutta | A drop. |
| **Gtt.** | Guttæ | Drops. |
| **Gum.** | Gummi | Gum. |
| **Guttat.** | Guttatim | By drops. |
| **H.** | | Hydrogen. Hyperopia. Hour (*hora*). |
| **Haust.** | Haustus | A draught. |
| **H. D.** | | Hearing distance. |
| **Hg.** | Hydrargyrum | Mercury. Hectogramme. |
| **Hl.** | | Hectolitre. |
| **Hm.** | | Hectometre. |
| **Hor. decub.** | Horâ decubitus | At bedtime. |
| **H. s.** or **Hor. som.** | Horâ somni | At bedtime. |
| **Ht.** | | Total hypermetropia. |
| **I.** | | Iodine. Intensity. |
| **Ib.** or **Ibid.** | Ibidem | In the same place. |
| **Id.** | Idem | The same. |
| **Imp. meas.** | | Imperial measure. |
| **In d.** | In dies | Daily. |
| **Inj.** | Injectio | An injection. |
| **Ir.** | | Iridium. |
| **K.** | Kalium | Potassium. Kathode. |
| **K. C.** | | Kathodal closure. |
| **K. C. C.** | | Kathodal closure contraction. |
| **K. C. T.** | | Kathodal closure tetanus. |
| **K. D.** | | Kathodal duration. |
| **K. D. T.** | | Kathodal duration tetanus. |
| **Kl.** | | Kilolitre. |
| **Km.** | | Kilometre. |
| **L.** | | Litre. Left. |
| **Lb.** | Libra | A pound weight. |
| **Lb.** and **Llb.** | Libræ | Pounds. |
| **L. D. A.** | | Left dorsoanterior, said of the position of the fœtus in utero. |
| **L. D. P.** | | Left dorsoposterior, said of the position of the fœtus in utero. |
| **L. D. S.** | | Licentiate of Dental Surgery. |
| **L. E.** | | Left eye. |
| **L. F. A.** | | Left frontoanterior, said of the position of the fœtus in utero. |
| **L. F. P.** | | Left frontoposterior, said of the position of the fœtus in utero. |

| | | |

| **Q. p.** | Quantum placeat, | In amount at discretion. |
| **Qq. hor.** | Quâquâ horâ | Every hour. |
| **Q. r.** | Quantitas recta | Right quantity. |
| **Q. s.** | Quantum sufficit | Enough. |
| **Qt.** | | Quart. |
| **Q. v.** | Quantum volueris,<br>Quod vide | As much as you wish.<br>Which see. |
| **℞.** | Recipe | Take. |
| **R.** | | Réaumur. Resistance (electrical). Respiration. Far point (*remotum*). Right. |
| **Rad.** | Radix | Root. Radical. |
| **Rb.** | | Rubidium. |
| **R. D. A.** | | Right dorsoanterior, said of the position of the fœtus in utero. |
| **R. D. d.** | | Reaction of degeneration at a distance. |
| **R. D. P.** | | Right dorsoposterior, said of the position of the fœtus in utero. |
| **R. E.** | | Right eye. |
| **Rec.** | Recipe | Take. |
| **Rect.** | Rectificatus | Rectified. |
| **Rep.** or **Rept.** | Repetatur | Let it be repeated. |
| **R. F. A.** | | Right frontoanterior, said of the position of the fœtus in utero. |
| **R. F. P.** | | Right frontoposterior, said of the position of the fœtus in utero. |
| **Rh.** | | Rhodium. |
| **R. M. A.** | | Right mentoanterior, said of the position of the fœtus in utero. |
| **R. M. P.** | | Right mentoposterior, said of the position of the fœtus in utero. |
| **R. O. A.** | | Right occipitoanterior, said of the position of the fœtus in utero. |
| **R. O. P.** | | Right occipitoposterior, said of the position of the fœtus in utero. |
| **R. S. A.** | | Right sacroanterior, said of the position of the fœtus in utero. |
| **R. S. P.** | | Right sacroposterior, said of the position of the fœtus in utero. |
| **Ru.** | | Ruthenium. |
| **S.** | Signa<br>Semis<br>Sinister<br> | Mark or label.<br>Half.<br>Left.<br>Sulphur. |
| **S. a.** | Secundum artem | Prepared according to art. |
| **Sat.** | Saturatus | Saturated. |
| **Sb.** | | Stibium. |
| **Scr.** or **Scrup.** | | Scruple. |
| **S. D. A.** | Sacro-dexter-anterior, | Same as R. S. A. |
| **S. D. P.** | Sacro-dexter-posterior, | Same as R. S. P. |
| **Sel.** | | Selenium. |
| **Sem.** | Semen, Semina | Seed, Seeds. |
| **Semidr.** | Semidrachma | Half a drachm. |
| **Semih.** | Semihora | Half an hour. |
| **Serv.** | Serva | Keep; preserve. |
| **Sesquih.** | Sesquihora | An hour and a half. |
| **Sesunc.** | Sesuncia | Ounce and a half. |
| **S. g.** | | Specific gravity. |
| **Si.** | | Silicon. |
| **Sig.** | Signetur | Let it be labelled. |
| **Sing.** | Singulorum | Of each. |
| **Sn.** | Stannum | Tin. |
| **Solv.** | Solve | Dissolve. |
| **Sp.** | Spiritus | Spirit. |
| **Sp. gr.** | | Specific gravity. |
| **Sph.** | | Spherical. Spherical lens. |
| **Spir.** | Spiritus | Spirit. |
| **Sr.** | | Strontium. |
| **ss.** | Semis | One-half. |
| **S. S. A.** | Sacro-sinister-anterior, | Same as L. S. A. |
| **S. S. P.** | Sacro-sinister-posterior, | Same as L. S. P. |
| **St.** | Stet | Let it stand. |
| **Stat.** | Statim | Immediately. |
| **Sum.** | Sumat | Let him or her take. |
| **Surg.** | | Surgery. Surgical. |
| **Syr.** | Syrupus | Syrup. |
| **T.** | | Tension of the eyeball. Time. |
| **T. d.** | Ter in die | Thrice a day. |
| **Te.** | | Tetanic contraction.<br>Tellurium. |
| **Th.** | | Thallium. |
| **Ti.** | | Titanium. |
| **Tinct.** or **Tr.** | Tinctura | Tincture. |
| **Trit.** | Tritura | Triturate. |
| **U.** | | Uranium. |
| **Unc.** | Uncia | Ounce. |
| **Ung.** | Unguentum | Ointment. |
| **Ut dict.** | Ut dictum | As directed. |
| **V.** | Visus | Acuteness of vision. Vision. Vanadium. |
| **Ves.** or **Vesic.** | Vesicatorium | A blister. |
| **Vesp.** | Vespere | In the evening. |
| **Vid.** | Vide | See. |
| **Vin.** | Vinum | Wine. |
| **V. M.** | | Voltmeter. |
| **V. S.** | | Volumetric solution. |
| **W.** | Wolfram | Tungsten. |
| **Wt.** | | Weight. |
| **Y.** | | Yttrium. |
| **Yb.** | | Ytterbium. |
| **Y. s.** | | Yellow spot of the retina. |
| **Zn.** | | Zinc. |
| **Zr.** | | Zirconium. |

# A PRONOUNCING DICTIONARY
OF
# MEDICAL SCIENCE.

## A.

**A** and **An**, as prefixes, have, in compound medical terms, privative (negative) or debasing signification, like that of particles *in, im, un, ir*. Thus: *Sthenia* means strength; *asthenia*, want of strength; *anœmia*, want of blood, etc. **Ab** and **Abs**, as prefixes, usually have like signification, but occasionally, in compound words, they have an intensive meaning.

**A** or **āā.** Abbreviation for *ana*, which see.

**Aa'beck bush-bark.** Bark of Australian bush; diaphoretic.

**Aar'on.** Arum maculatum.

**Aasmus** (ah-as'mus). Asthma.

**Ab'aca.** Musa textilis; Manila hemp.

**Abac'tio** (*abigo*, to drive away). Driving away or expelling, as *abactio fœtûs* or *partûs*, expulsion of fœtus, artificial abortion, or premature delivery.

**Ab'ades.** Cantharides.

**Abadie's' sign.** Spasm of the levator palpebræ superioris muscle, noticed in exophthalmic goitre.

**Abagmen'tum** (*abigo*, to drive away). Agent capable of producing abortion.

**Abaiu'cu.** Fruit of Cynometra ramiflora.

**Aba'lienated** (*ab*, from, *alienus*, different). Separated. Unserviceable. Mentally deranged.

**Abaliena'tio men'tis** (*mens*, mind). Insanity.

**Abaliena'tion.** Failure of mental or physical power.

**Abaliena'tus.** Useless or unserviceable, as *membra abalienata*, benumbed limbs; abalienated.

**Ab'anet** or **ab'net.** A girdle-shaped bandage.

**Aban'ga.** Fruit of palm tree of St. Thomas, W. I., seeds of which are used in diseases of the chest.

**Abaptist'a, Abaptist'on,** or **Abaptist'um** (*a*, priv., *baptizo*, to plunge). Trepan, made of conical shape or provided with a flange to prevent it from plunging suddenly into cavity of cranium.

**Ab'apus.** Gethyllis.

**Abari'ga.** Palm growing in St. Thomas, yielding abanga.

**Abarthro'sis** (*ab*, from, *arthron*, joint). Diarthrosis.

**Abartic'ular** (*ab*, from, *articulus*, joint). Apart from or in a direction away from a joint.

**Abarticula'tion.** Diarthrosis; synarthrosis; dislocation.

**Aba'sia** (*a*, priv., *basis*, step). Inability to walk through motor incoordination.

**Abate'ment.** Mitigation or diminution, as of pain, fever, or any disease.

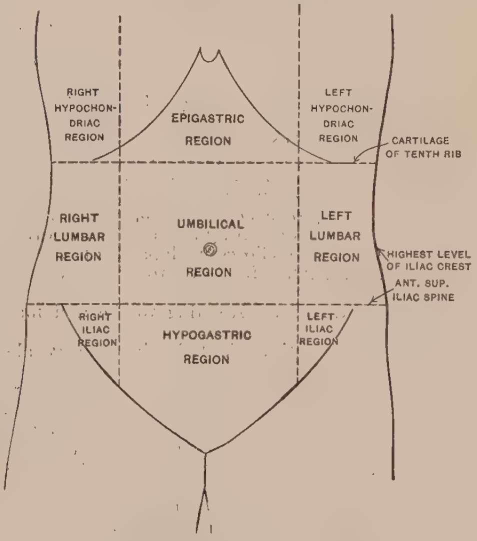
**Abax'ial** or **Abax'ile.** Lying to one side of the axis; term used chiefly in botany.

**Abbé conden'ser** or **illu'minator.** An apparatus consisting of a series of two or three achromatic lenses placed beneath the stage of a microscope, by means of which the rays of light reflected from a plane mirror are focused exactly upon the object.

**Ab'be's opera'tion.** Lateral anastomosis of the intestine effected by means of **Ab'be's rings,** made of several strands of stout catgut, arranged in the form of an oval; these hold in apposition the walls of the gut through which communication has been established.

**Abces'sus** (*ab*, from, *cedo*, to depart). Abscess.

**Abdomen,** ab-do'men or ab'do-men (*abdo*, to conceal, because it conceals visceras). The belly; largest of the three splanchnic cavities. It is bounded above by the diaphragm; below by the pelvic cavity, with which it is continuous; behind by the lumbar vertebræ, quadratus lumborum, and psoas muscles; and at the sides and forepart by the abdominal muscles (rectus, transversalis, obliquus internus, obliquus externus, and sometimes pyramidalis) and fascia. It is divisible into three anterior regions, from above downward—epigastric, umbilical, or mesogastric, and hypogastric or pubic —each divided into three others, one middle and



Abdominal regions. (Gerrish.)

two lateral; thus, the *epigastric region* comprises the epigastrium and hypochondria; the *umbilical region*, umbilicus and flanks or lumbar regions; the *hypogastric region*, hypogastrium and iliac or inguinal regions. Chief viscera contained in the abdomen are stomach, intestines, liver, spleen, pancreas, and kidneys. **Pen′dulous a.**, relaxed condition of the abdominal wall; excessive corpulency.

**Abdom′inal.** Belonging or relating to the abdomen. **A. an′eurysm,** aneurysm of the abdominal artery. **A. aor′ta,** terminal portion of aorta contained in the abdomen; see *Aorta*. **A. ar′tery,** superior epigastric branch of internal mammary artery. **A. ban′dage** or **bind′er,** broad bandage for supporting or compressing the abdomen, used after childbirth or tapping for ascites or other collection of fluid. **A. brain,** solar plexus. **A. breath′ing,** see *Abdominal respiration*. **A. cav′ity,** see *Abdomen*. **A. fe′ver,** typhoid fever. **A. gan′glion,** semilunar ganglion. **A. gestation,** extra-uterine pregnancy. **A. lines,** lines on abdomen formed by adhesion of the skin to the deep fascia; these lines are both transverse and longitudinal, the most marked of the latter being the central *linea alba*, which see. **A. mus′cles,** see *Abdomen* and illustrations under *Muscle*. **A. nerve,** vagus. **A. phthi′sis,** tuberculosis of the intestine, mesenteric glands, or peritoneum. **A. preg′nancy,** extra-uterine pregnancy. **A. pto′sis,** enteroptosis. **A. re′flex,** involuntary muscular contraction of abdominal walls following stimulation of skin of that region. **A. re′gions,** see *Abdomen*. **A. respira′tion,** respiration effected with the muscles of the abdomen and diaphragm, as opposed to costal or thoracic respiration, in which the chest walls are chiefly concerned. **A. rings,** openings in transversalis fascia (*internal ring*) and aponeurosis of the external oblique muscle of abdomen (*external ring*), giving passage to the spermatic cord in the male and round ligament in the female. **A. sec′tion,** cœliotomy. **A. sweet′bread,** pancreas. **A. ty′phus,** typhoid fever. **A. vis′cera,** organs, chiefly of digestion, contained in the abdominal cavity; see *Abdomen*.

**Abdo′minis explora′tio.** Abdominoscopy.

**Abdom′inoanterior.** Term given to position of the fœtus in utero with abdomen presenting anteriorly.

**Abdom′inocyst′ic.** Abdominovesical.

**Abdom′inogen′ital.** Relating to the abdomen and genital organs.

**Abdom′inohysterec′tomy.** Extirpation of the uterus through an incision in the abdominal wall.

**Abdom′inohysterot′omy.** Operation upon the uterus through an incision in the abdominal wall.

**Abdom′inoposte′rior.** Term given to position of fœtus in utero with abdomen presenting posteriorly.

**Abdominos′copy** (*abdomen* + *skopeo*, to view). Examination of the abdomen by auscultation or other means of diagnosis; cœlioscopy; laparoscopy.

**Abdom′inoscro′tal.** Relating to the abdomen and scrotum.

**Abdom′inothora′cic.** Relating to the abdomen and thorax.

**Abdom′inous.** Abdominal; having a large abdomen.

**Abdom′ino-uterec′tomy.** Abdominohysterectomy.

**Abdom′ino-uterot′omy.** Abdominohysterotomy.

**Abdom′inoves′ical.** Relating to abdomen and bladder. **A. pouch,** a sagging of the peritoneum between the bladder, when distended, and the anterior abdominal wall.

**Abdu′cens** (*ab*, from, *duco*, to lead). Abducting; drawing away from the median line. **A. labi′orum,** abducens oris. **A. mus′cle,** abducens oculi. **A. nerve,** sixth cranial nerve; motor nerve of external rectus muscle of the eye. **A. nu′cleus,** point from which abducens nerve takes its origin in the medulla. **A. oc′uli,** rectus externus oculi muscle. **A. o′ris,** levator anguli oris muscle.

**Abdu′cent.** Abducens.

**Abduct′.** To draw away from the median line.

**Abduc′tion** (*ab*, from, *duco*, to lead). Movement of a limb or other part from axis of body or of limb; also position maintained by part after such movement; separation of fragments occurring in case of fracture near articular extremity of bone.

**Abduc′tor.** Muscle concerned in moving certain parts by abduction; also nerve supplying such muscle. The name is applied to all the interosseous muscles of the hands and feet whose function is to abduct the fingers or toes, and also to other muscles of the body whose contraction causes abduction of any part. **A. an′guli o′ris,** accessory orbicular muscle of mouth. **A. au′ris** or **auricula′ris,** retrahens aurem muscle. **A. bre′vis al′ter,** inner deep portion of abductor pollicis muscle; a. pollicis brevis. **A. coccy′gis,** coccygeus muscle. **A. dig′iti quin′ti,** a. minimi digiti. **A. of ear,** a. auris muscle. **A. of Eusta′chian tube,** tensor palati. **A. of eye,** rectus externus oculi. **A. hallu′cis,** muscle passing on the inner side of foot from os calcis and internal lateral ligament to first phalanx of large toe. **A. humera′lis pol′licis,** anomalous form of extensor carpi radialis longior, arising from supracondyloid ridge of the humerus, inserted on first phalanx of thumb. **A. in′dicis,** muscle arising from os trapezium and metacarpal bone of the thumb and inserted into the first bone of the forefinger; its action is to bring the forefinger toward the thumb. **A. in′dicis pe′dis,** prior indicis pedis, posterior indicis pedis. **A. inter′nus,** a. brevis alter. **A. laryn′gis,** cricoarytenoideus posticus. **A. lon′gus auric′ulæ,** cervicoauricularis. **A. longus pol′licis,** abductor pollicis longus. **A. metacar′pi,** extensor obliquus metacarpi. **A. min′imi dig′iti ma′nûs,** origin, fleshy, from os pisiforme and annular ligament near it; insertion, tendinous, into inner side of base of first phalanx of the little finger; use, to draw little finger from the rest. **A. min′imi dig′iti pe′dis** (by Winslow, divided into two portions —*parathenar major* and *metatarseus*), forms the outer margin of the sole of the foot, and is immediately beneath the plantar aponeurosis; it arises, tendinous and fleshy, from outer side of protuberance of os calcis, and from root of metatarsal bone of little toe, and is inserted into outer part of root of first bone of little toe; its use is to draw the little toe outward. **A. nerve,** abducens nerve. **A. obli′quus hallu′cis,** a. hallucis. **A. oc′uli,** rectus externus oculi. **A. os′sis metatar′si min′imi dig′iti,** a. minimi digiti pedis. **A. os′sis metatar′si quin′ti,** rare muscle, passing from os calcis to fifth metatarsal bone. **A. pol′licis bicor′nis,** extensor ossis metacarpi pollicis. **A. pol′licis bre′vis,** short, flat, triangular muscle, arising from the anterior surface of os scaphoides and annular ligament of carpus, and terminating at outside of the upper extremity of the first phalanx of the thumb; a portion of the inner side of this muscle is called, by Albinus, *abductor brevis alter*. **A. pol′licis lon′gus,** long, thin muscle, arising from posterior surface of ulna, radius, and interosseous ligament, and inserted at outer side of upper extremity of first metacarpal bone. **A. pol′licis ma′nûs,** abductor pollicis brevis. **A. pol′licis pe′dis,** origin, fleshy, from anterior and inner part of protuberance of os calcis, and tendinous from same bone where it joins with os naviculare; insertion, tendinous, into internal os sesamoideum and root of first bone of great toe; its use is to pull great toe from the rest. **A. pupil′læ,** rectus oculi externus. **A. of thigh,** gluteus maximus, gluteus minimus, and superior portion of gluteus medius combined. **A. transver′sus hallu′cis,** transversus pedis. **A. tu′bæ,** tensor palati.

**Abdu′men.** Abdomen.

**Abeceda′ria.** Acmella mauritiana; Spilanthes acmella. So called because the root was alleged to be chewed by Arab children to loosen their tongues and facilitate the articulation of the difficult sounds of their language.

**Abel′asis.** Cyperus esculentus, African groundnut, having galactagogue properties.

**Abelme′luch.** African name for ricinus.

**Abelmosch** (ab′el-mosk), **Ab′elmusk,** or **Abelmoschus** (ab-el-mos′kus). Hibiscus.

**Abepithym′ia** (*ab*, from, *epi*, upon, *thymos*, soul). Paralysis of the solar plexus. Perverted appetites or desires.

**Abe′ria.** Genus of *Bixaceæ*, of which A. caffra has acid fruit called kei apple.

**Ab′ernethy's fas′cia.** Areolar tissue beneath the peritoneum, dividing the external iliac artery from the iliac fascia, superimposed on the psoas muscle. **A.'s opera′tion,** ligation of the external iliac artery through a curved incision extending from an inch to the inner side, and an inch above the anterior superior spine of the ilium, to a point an inch and a half external to, and an inch and a half above the centre of Poupart's ligament. **A.'s sarco′ma,** see *Adipose* and *Pancreatic.*

**Aber′rans.** Aberrant.

**Aber′rant** (*ab*, from, *erro*, to wander). Wandering away, or from straight line or direction. **A. duct,** vasculum aberrans of testicle. **A. ducts,** bile ducts in the liver, not connected with the normal biliary apparatus of that organ; probably result of atrophy in early life. **A. ves′sels,** see *Vasa aberrantia.*

**Aberra′tio.** Aberration. **A. lac′tis,** galactoplania. **A. lo′ci,** heterotopia. **A. men′sium** or **menstruo′rum,** vicarious menstruation. **A. tem′poris,** heterochronia.

**Aberra′tion** (*ab*, from, *erro*, to wander). Passage of fluid of living body into order of vessels not destined for it; error loci. Flow of fluid toward an organ different from that to which it is ordinarily directed, as in vicarious hemorrhage. Extravasation of blood corpuscles. Aberration of sense or judgment is an error in perceptions or derangement of intellectual faculties. In botany and zoölogy, a deviation in type from the normal. In optics aberration is the dispersion of rays of light in passing through a lens, so that they form a blurred image. **An′gle of a.,** angle of deviation, formed by the line of the refracted ray and that of the same ray if it were not refracted. **Chromat′ic a.,** aberration of refrangibility of the light rays, resulting in a blurred and prismatically colored image. **Distan′tial a.,** blurring of image due to imperfect adjustment of focus. **Men′tal a.,** abnormal action of the mind, not always amounting to insanity. **Newto′nian a.,** chromatic a. **A. of refrangibil′ity,** chromatic or Newtonian a., error of dispersion. In a common lens the rays passing near the circumference of the lens are decomposed, so that a colored image is observed. This in the human eye is corrected by the iris, which does not permit the rays to fall near circumference of lens, and also by the crystalline lens itself acting as an achromatic glass. **A. of spheric′ity** or **spher′ical a.,** takes place when the rays passing through the centre of the lens, and those passing near the circumference, are unequally refracted, so that they do not meet at a common focus. This aberration, like a. of refrangibility, is corrected in the human eye by the iris and lens.

**Abevacua′tion** (*ab*, from, *evacuo*, to empty). Partial or imperfect evacuation; immoderate evacuation; metastatic secretion. See *Apocenosis.*

**Abia′ba.** Bark of Lucuma caimito, a South American tree; tonic, antiperiodic, antidysenteric, antiseptic; dose, gr. ii–v (0.13–0.32).

**Ab′icum.** Thyroid cartilage.

**Ab′ies** (gen. abi′etis). A genus of the *Coniferæ* fir tree. **A. al′ba,** Pinus picea. **A. balsa′mea,** Pinus balsamea. **A. balsamif′era,** Pinus balsamea. **A. canadensis,** Pinus canadensis. **A. commu′nis,** A. excelsa. **A. excel′sa,** Pinus abies. **A. fra′seri,** a source of Canada turpentine. **A. gal′lica,** Pinus picea. **A. larix,** Pinus larix. **A. menzie′sii,** balsam pine of W. United States. **A. ni′gra,** black spruce, Pinus nigra. **A. pectina′ta,** Pinus picea. **A. picea,** Pinus picea. **A. ru′bra,** Pinus abies. **A. toxifo′lia,** Pinus picea.

**Abiet′ic.** Relating to a fir tree. **A. acid** ($C_{20}H_{30}O_2$), acid formed by acting on pine resin with dilute alcohol.

**Abietin′.** Resinous substance from A. balsamea, A. pectinata, and other varieties of abies.

**Abietin′ic acid.** Abietic acid.

**Ab′ietite** $C_6H_8O_3$. Neutral extractive from Abies pectinata, resembling mannite.

**Ab′iga.** Ajuga; Teucrium chamæpitys.

**Abiogen′esis** (*a*, priv., *bios*, life, *genesis*, generation). Spontaneous generation.

**Abiogenet′ic** or **Abiogenous** (ab-e-oj′en-us). Relating to or occurring by abiogenesis.

**Abiog′eny.** Abiogenesis.

**Abiolog′ical.** Not relating to or connected with biology.

**Abionar′ce** (*a*, priv., *bios*, life, *narke*, stupor). Paralytic torpor.

**Abio′sis** (*a*, priv., *bios*, life). Lifelessness; defective vitality.

**Abiot′ic.** Inanimate; nearly dead; dependent upon defective vitality.

**Abiot′rophy** (*a*, priv., *biotrophos*, vital nutrition). Degeneration or decay in consequence of a defect of vital endurance.

**Abio′tus.** Conium maculatum.

**Abir′ritant.** Devoid of irritability; calmative.

**Abirrita′tion.** Absence or defect of irritation; debility; asthenia.

**Abis′ga.** Capparis sodada.

**Ablacta′tion** (*ab*, from, *lacto*, to suckle). Weaning.

**Ablac′tate** or **Ablacta′tus.** Weaned.

**Ablastem′ic** (*a*, priv., *blastema*, a sprout). Not formative; not connected with germination or generation.

**Ablas′tes** or **Ablas′tous,** (*a*, priv., *blastos*, germ). Sterile.

**Abla′tion** (*ablatio*, a taking away). Extirpation, as by excision; remission, as of fever or acute disease; separation or detachment, as of the retina.

**Ablepha′ria** or **Ableph′aron** (*a*, priv., *blepharon*, eyelid). Absence of an eyelid or eyelids.

**Ableph′arous.** Without eyelids.

**Ablep′sia** or **Ablep′sy.** Blindness.

**Abluen′tia** or **Ab′luents** (*ab*, from, *luo*, to wash). Detergents.

**Ablu′tion.** Washing; cleansing of the body, externally or internally, by water. Religious ceremony, common among Orientals, in which a part or the whole of the body is subjected to particular affusions. In chemistry, the separation of a particular substance from a mixture, by the addition of a special fluid which dissolves it, as the removal of fats by ether.

**Abmor′tal** (*ab*, from, *mors*, death). Direction of electric current in wounded muscle toward uninjured portion.

**Ab′net** or **Ab′anet.** A girdle-shaped bandage.

**Abneu′ral** (*ab*, from, *neuron*, nerve). Part of embryo opposite to central nervous system.

**Abnor′mal** or **Abnor′mous** (*ab*, from, *norma*, rule). Not conforming to rule; irregular.

**Abnormal′ity, Abnor′mi-ty,** or **Abnor′mitas.** Anomaly; malformation; deviation from the ordinary.

**Abo′borah.** Pumpkin or gourd. **A. doma′ta,** Brazilian species, used in dropsy.

**Aboli′tion.** Destruction or suppression; complete suspension of any symptom or function or of consciousness.

**Aboma′sum** or **Aboma′sus.** Rennet; so-called true or fourth stomach of ruminating animals.

**Abo′rad** (*ab*, from, *os*, gen., *oris*, mouth, *ad*, to). In a direction away from the mouth.

**Abo′ral** (*ab*, from, *os*, mouth). Remote from the mouth.

**Abor′sio** or **Abor′sus.** Abortion.

**Abor′sive.** Abortive.

**Abort′** (*abortio*, to miscarry). To miscarry; to become arrested or to subside before full development, said of a disease—smallpox, for instance.

Often employed improperly as a transitive verb, in the sense of to cause to abort.

**Abort'icide** (*abortus*, abortion, *cædo*, to kill). Destruction of fœtus by induction of abortion.

**Aborticid'ium.** Aborticide.

**Abor'tient.** Abortive or abortifacient.

**Abortifa'cient** (*abortus*, abortion, *facio*, to make). Abortive drug or other agent producing abortion.

**Abor'tion** (*aborior*, to miscarry). Expulsion of the product of conception before the seventh month of uterogestation, or before it is viable. Abortion occurring between the fourth and the seventh month is often called miscarriage, the term a. being reserved to denote expulsion of the ovum prior to the fourth month. The causes of a. are referable either to the mother, and particularly to the uterus, or to the ovum and its dependencies. It most frequently occurs between the eighth and twelfth weeks of gestation. The causes of abortion may be conveniently arranged as follows:

| | | |
|---|---|---|
| Pathological causes. | Reflex. | Lactation, gastric irritation, neuralgia, rectal irritation, excessive purgation, operations. |
| | Systemic. | The acute specific fevers (particularly smallpox), chorea, inhalation of noxious gases, intestinal autotoxæmia, the action of ergot, cotton-root, and other drugs, plumbism and syphilis, the two latter especially of habitual abortion. |
| | Local. | Uterine flexions and tumors, endometritis and cervicitis, laceration of cervix, pelvic adhesions, diseases of the ovum or its membranes. |
| Accidental causes. | Physical. | Blows, falls, excessive coitus, etc. |
| | Psychical. | Fright, anxiety, fear, anger, etc. |

Symptoms are uterine hemorrhage with or without flakes of decidua, with intermitting labor-like pain. When it once takes place it is apt to recur in subsequent pregnancies about the same period. Abortion, occurring prior to the third month has been called *effluxion*. Treatment must vary according to constitution of the patient and causes. Horizontal posture and perfect quietude are indispensable. The term abortion is likewise applied to the product of untimely birth. **Accident'al a.**, one which occurs from accidental causes, neither habitual nor induced. **Artifi'cial a.**, induced a. **Chron'ic a.**, habitual a. **Crim'inal a.**, fœticide. **Embryon'al a.**, a. occurring between the seventieth and ninetieth days of pregnancy. **Fe'tal a.**, a. occurring between the third and sixth months. **Habit'ual a.**, a. occurring in each successive pregnancy at about the same period of gestation; is often due to syphilis of one or both parents, to some chronic intoxication, such as lead poisoning, or to the presence of adhesions permitting the enlargement of the uterus only to a certain point. **Incomplete' a.**, a. in which the placenta and membranes are not expelled with the fœtus. **Induced' a.**, a. produced intentionally by the physician for legitimate reasons. **Missed a.**, expulsion of fœtus some time after its death. **Ov'ular a.**, abortion taking place soon after conception. **Provoked' a.**, induced a. **Sponta'neous a.**, abortion occurring naturally; that is, without external violent artificial interference of any kind.

**Abor'tionist.** One who performs criminal abortion.

**Abor'tium.** Abortion.

**Abor'tive.** A drug having the property of causing abortion; abortifacient; ecbolic. Cutting short a disease, as abortive treatment; ectrotic. Imperfectly developed.

**Aborti'vum.** Abortive; abortifacient; abortion.

**Abort'ment.** Abortion.

**Abor'tus.** Abortion. **A. habitua'lis**, habitual abortion. **A. period'icus**, habitual abortion. **A. procura'tio**, the production of abortion.

**Abou'lia** or **Abouloma'nia** (*a*, priv., *boule*, will, *mania*, madness). A weakening or loss of will-power; indecision due to mental torpor.

**Abou'lic.** Relating to aboulia; also one suffering from aboulia.

**Abra'chia** (*a*, priv., *brachion*, arm). Absence of the arms, or of the anterior limbs in lower animals.

**Abrachiocepha'lia** (*a*, priv., *brachion*, arm, *kephale*, head). Absence of arms or anterior limbs and head.

**Abrachioceph'alus** (*a*, priv., *brachion*, arm, *kephale*, head). A monster without arms or head.

**Abra'chius** (*a*, priv., *brachion*, arm). A monster born without arms.

**Abrade'** (*ab*, from, *radere*, to scrape). To remove the superficial portions of the skin by friction; to excoriate.

**A'braham balm.** Vitex agnus castus, or chaste-tree. **A. man**, an impostor; originally an inmate of the Abram ward of Bedlam who was allowed to go outside and beg, and this occupation becoming so profitable other beggars pretended to be "Abraham men," in order to open the purses of the charitable; hence "to sham Abraham or Abram" is used for one feigning sickness or infirmity.

**Abranchia** (a-brang'ke-a) or **Abranchia'ta** (*a*, priv., *branchia*, gills). Animals without gills. An order, a section of *Annelidæ*, of which leeches and earthworms are examples; also vertebrates whose young have no gills.

**Abran'chiate** or **Abran'chious.** Pertaining to the *Abranchia*.

**Abra'sio.** Abrasion. **A. den'tium**, odontotripsis. **A. intestina'lis** or **intestino'rum**, ulceration, with loss of small shreds of substance, of the intestinal mucous membrane.

**Abra'sion** (*ab*, from, *rado*, to rasp). Superficial excoriation or ulceration of skin or mucous membrane. Wearing away of the teeth from mechanical causes.

**Abra'sor.** Instrument for scraping; raspatory.

**Abra'sus.** Abraded.

**Ab'rathan.** Artemisia abrotanum.

**A'bric acid.** Acid from jequirity or Abrus precatorius.

**Abrin'.** A yellowish, soluble powder obtained from Abrus precatorius or jequirity; it is very poisonous, one one-hundredth of a grain being fatal.

**Abro'ma angus'tum.** An Indian tree, the root of which is employed in dysmenorrhœa.

**Abro'motoun.** Ashantee plant the bruised leaves of which are used externally for boils.

**Abrong.** Chinese laxative and vermifuge grain.

**Abro'sia** (*a*, priv., *brosis*, food). Abstinence from food.

**Abrot'anum.** Artemisia abrotanum.

**Abrup'tion** (*abrumpo*, to break off). A violent fracture; rupture.

**Ab'rus precato'rius.** A small vine of tropical countries, ord. *Leguminosæ*. The root (abri radix) is sometimes used as a substitute for licorice—hence often called Indian licorice—and the leaves are sweet, mucilaginous demulcents. The seeds, of a scarlet color with black spot, are called jequirity beans, John Crow beans, love-peas, black-eyed Susans, jumble-beads, and prayer-beads (because used in making rosaries). Infusion of the seeds is used in the treatment of trachoma, in which it causes a severe substitutive inflammation. A paste made from the seeds has been used in India in sciatica, paralysis, and other nervous diseases.

**Absceden'tia** (*abscedo*, to depart). An old term for parts of the body, such as the bones, which were thought liable to ulceration in a disordered state of the system.

**Ab'scess** (*abs*, away, *cedo*, to go). A collection of pus in any part of the body. See *Pus* and *Sup-*

*puration.* **Alve'olar a.**, **A. of the breast**, **Bro'die's a.**, **Milk a.**, **Retropharyn'geal a.**, etc., see the qualifying word. **Acute' a.**, a. accompanying acute inflammation, usually attended by heat of the part and throbbing pain or tenderness on pressure. **Athero'matous a.**, see *Atheroma.* **Ca'seous a.**, one in which the content has become converted into a cheesy or curdy mass; a common change in glandular tuberculosis. **Chron'ic a.**, cold a. **Cir'cumscribed a.**, one of limited extent enclosed in a membranous sac or bounded by condensed and altered tissue. **Cold a.**, a purulent collection accompanying chronic inflammation, frequently of a tuberculous nature; the usual signs of inflammation are absent, and there is little or no pain, as a rule, unless the abscess is about to point. **Conges'tive a.**, an old term for gravitation or wandering a. **Constitu'tional a.**, a. occurring in the course of a general disease, such as tuberculosis. **Crit'ical a.**, one occurring in the course of an acute affection, formerly thought to be related to the coming on of the critical stage of the disease. **Diathe'sic** or **Diathet'ic a.**, constitutional gravitation a. **Diffuse' a.**, infiltrating a. **Dry a.**, one in which the pus has become absorbed or converted into a calcified mass. **Embol'ic a.**, metastatic a. **Emphysem'atous a.**, one containing gas. **Encyst'ed a.**, circumscribed a. **Fe'cal a.**, a. communicating with the bowel and containing fecal matter. **Gas a.**, one containing gas. **Gravita'tion a.**, a collection of pus situated in a part distant from that in which the causative morbid process exists; the course of the purulent stream is determined less by gravity than by the nature of the structures through which it passes, being guided by the bones or aponeuroses; a familiar example is the psoas abscess occurring in tuberculous spondylitis. **Hæmat'ic a.**, one occurring in a clot of effused blood. **Hemorrhag'ic a.**, an a. containing blood mixed with pus, in consequence of the erosion of an artery or vein. **Hypostat'ic a.**, gravitation a. **Idiopath'ic a.**, one occurring without any evident cause. **Metastat'ic a.**, one forming suddenly, sometimes without precursory signs of inflammation, in a part of the body remote from one in state of suppuration, a result of embolic transport of the peccant matter. **Mil'iary a.**, minute point of suppuration, usually multiple, often of embolic origin. **Mul'tiple ab'scesses**, a number of abscesses occurring simultaneously or successively in various parts of the body, the result of some constitutional fault, as in pyæmia. **Ossif'fluent a.**, a. associated with destructive bone disease. **Phleg'monous a.**, acute a. of cellular tissue. **Point'ing of an a.**, see *Pointing.* **Pri'mary a.**, a. occurring at the point of infection. **A. of proxim'ity**, one occurring near the seat of a pre-existing morbid process. **Pso'as a.**, a gravitation a. in the sheath of the psoas muscle. **Resid'ual a.**, one occurring in or about residues of former inflammations, as in adhesions, thickening, or other lowly organized products of previous inflammation. **A. root**, Polemonium reptans. **Sec'ondary a.**, consecutive or metastatic a. **Shirt'-button** or **shirt-stud a.**, a deep-seated a., as of the breast, eventually giving rise to a superficial subcutaneous a., communicating by a narrow passage with the deeper and larger a., the whole having the appearance of a shirt-stud. **Stercora'ceous** or **ster'coral a.**, fecal a. **Stitch a.**, suppuration occurring at point of insertion or in course of a stitch or suture. **Sympathet'ic a.**, a form of metastatic a. or a. of proximity; the peccant material is often transported by the lymphatic channels, as in bubo. **Symptomat'ic a.**, constitutional a. **Traumat'ic a.**, one resulting directly from an injury. **Trop'ical a.**, hepatic a. of tropical climates, usually of dysenteric origin. **Tympanit'ic a.**, emphysematous a. **U'rinary** or **u'rinous a.**, one connecting with some portion of the urinary tract, and containing urine mixed with pus. **Ver'minous a.**, one communicating with the bowel and containing intestinal worms; or a superficial a. or one connected with the nasal passages, containing larvæ of insects. **Wan'dering a.**, gravitation a.

**Abscess'io** or **Absces'sion.** Abscess.

**Ab'scess-root.** Polemonium reptans.

**Abscess'us.** Abscess. **A. arthrit'icus**, an old term denoting intestinal abscess (appendicitis?) supposed to be due to the gouty diathesis. **A. artic'uli**, suppurative joint disease; pus-joint; pyarthrosis. **A. bursa'lis**, suppurative bursitis. **A. cap'itis sanguin'eus neonato'rum**, cephalhæmatoma. **A. cer'ebri**, abscess of the brain; encephalopyosis. **A. congestio'nis** or **congesti'vus**, gravitation abscess. **A. embol'icus**, embolic abscess. **A. flatuo'sus**, emphysematous abscess. **A. follicula'ris**, follicular abscess. **A. frig'idus**, cold abscess. **A. gangrænes'cens** or **gangræno'sus**, gangrenous form of abscess, as seen in anthrax. **A. gingiva'rum**, parulis. **A. lac'teus**, mammary abscess. **A. lumba'lis**, **lumba'ris**, or **lumbo'rum**, lumbar abscess. **A. lymphat'icus**, abscess of lymphatic gland. **A. mam'mæ**, mammary abscess. **A. metastat'icus**, metastatic abscess. **A. nuclea'tus**, furunculus. **A. oc'uli**, hypopyon. **A. pec'toris**, empyema. **A. psoad'icus**, psoas abscess. **A. pulmo'num**, abscess of the lungs. **A. rena'lis**, renal abscess. **A. spirituo'sus**, aneurysm. **A. stercora'lis** or **stercoro'sus**, fecal abscess. **A. sudorip'arus**, abscess of a sweat gland. **A. thora'cis**, empyema. **A. urina'lis** or **urino'sus**, urinary abscess. **A. vermino'sus**, verminous abscess.

**Abscis'sæ.** Lines crossing other lines at right angles, forming bases of graphic records, as of pulse beats.

**Abscis'sio.** Abscission or cutting off. **A. oc'uli**, partial removal of the eyeball. **A. præpu'tii**, circumcision.

**Abscis'sion** (*ab*, off, *scindo*, to cut). Excision or extirpation of a part, especially a soft part, by cutting; fracture or injury of soft parts, with loss of substance. Diminution or loss of voice. Sudden and premature termination of disease by death. Suppression of function.

**Abscon'sio** (*abscondo*, to hide). Sinus; articular cavity of a bone.

**Ab'sence.** Absence of mind, mental abstraction, sometimes amounting to slight mental aberration.

**Ab'sinthe.** Wormwood; Artemisia absinthium; also liqueur made from the leaves of the plant.

**Absintheïn'**, **Absinthiïn'**, or **Absinthin'**. $C_{20}H_{28}O_4$. White bitter principle of wormwood; narcotic.

**Absin'thic acid.** An acid derived from absinthe; probably the same as succinic acid.

**Ab'sinthism.** Effects of indulgence in absinthe; the chief symptoms are hallucinations, peculiar contractions of the muscles of the lips and face, tremblings in the limbs, numbness, physical prostration, emaciation, giddiness, headache, and in advanced cases delirium, dementia, and paralyses, followed by death.

**Absin'thium** (Ph. U. S.). Artemisia absinthium; wormwood. The tops and leaves are the parts officially employed. Dose, gr. xxij–xlv (1.3–3.0). **A. alpi'num**, Swiss species of artemisia, used for making the liqueur absinthe. **A. mari'num** or **marit'imum**, Artemisia maritima. **A. mi'nus**, Artemisia pontica. **A. pon'ticum**, Artemisia pontica. **A. roma'num**, Artemisia pontica. **A. santon'icum**, Artemisia santonica. **A. vulga're**, Artemisia absinthium.

**Absin'thol.** $C_{10}H_{16}O$. Chief ingredient of oil of wormwood, isomeric with camphor.

**Ab'solute.** Complete, entire, perfect. **A. al'cohol**, alcohol containing not more than 1 per cent. of water. **A. hypermetro'pia**, hypermetropia of such degree that it is impossible to obtain distinct vision for distance. **A. tem'perature**, see *Temperature.* **A. ze'ro of tem'perature**, the absence of all heat, or the point at which this form of motion would cease to be, —237.7° C.

**Absorb'ent** (*ab*, from, *sorbeo*, to suck up). That which absorbs or causes absorption; medicine used for absorbing acidity in the stomach and bowels, as magnesia, chalk, etc.; any substance which, applied to moist or bleeding surfaces dries them or arrests the hemorrhage. **A. cot′ton,** cotton from which all oily matter has been abstracted. **A. ves′sels** and **glands,** those concerned in taking up nutrient material from the digestive canal—lacteals, and fluids from the tissues—lymphatics.

**Absorp′tio.** Absorption. **A. morbo′sa,** absorption of excretive matter into the circulation. **A. sa′na,** normal absorption of nutrient material.

**Absorptiom′eter.** A device for determining the amount of gas which can be absorbed by a definite quantity of a standard fluid; also an instrument for determining the thickness of a layer of fluid between two glass plates.

**Absorp′tion.** Act of absorbing, sucking up, or imbibing; function of absorbent vessels. External absorption obtains, from without the organs, materials intended for their composition; internal absorption, resorption, or absorption of decomposition takes up from the organs materials that have to be replaced. External absorption takes place through the external surface of the body, and also through the mucous membranes of the digestive and respiratory passages; hence the division of external absorption into *cutaneous, intestinal,* or *digestive,* and *pulmonary* or *respiratory.* Internal absorption is subdivided into: 1. *Molecular* or *interstitial, nutritive, organic,* or *decomposing,* taking up from each organ materials that constitute it, so that decomposition is always *in equilibrio* with deposition. 2. *Absorption of recrementitial secreted fluids,* such as fluid of serous membranes, synovia, etc. These would augment indefinitely if absorption did not remove them in the same proportion as that in which they are deposited. 3. *Absorption of part of the excrementitial secreted fluids,* such as bile, as they pass through the digestive canal. The agents of external absorption are veins and chyliferous vessels; of internal absorption, lymphatics. In chyliferous vessels and lymphatics fluid is always found to possess the same general properties; action of elaboration or selection must have taken place. Veins seem to exert no selection; any fluid possessing necessary tenuity passes through the coats of the vessel readily by imbibition, and proceeds along with the circulation. Watery fluids thus enter the blood when taken into the stomach. Substances requiring digestion may pass through the chyliferous vessels and thoracic duct. **A. band,** see *Spectrum.* **Disjunc′tive a.,** living part of tissue, in immediate connection with dead portion, the latter being thus detached, as in the separation of a slough. **A. lines,** see *Spectrum.* **Progres′sive a.,** a. caused apparently by interference by pressure with the nutrition of a part, as of deep-seated tumor approaching the surface and inducing absorption of interposed structures. **A. ra′tio,** see *Coefficient of extinction.* **A. spec′trum,** a spectrum showing absorption lines.

**Absorp′tive.** Absorbent.

**Absorp′tiveness** or **Absorptiv′ity.** Capability of absorbing.

**Abste′mious** (*abs,* from, *temetum,* wine). Abstaining from alcoholic liquors; temperate in food and drink.

**Absten′tio sterco′rum.** Constipation.

**Abster′gent** (*abstergeo,* to wipe). An agent which has the property of cleansing any part of the body, internal or external.

**Abstergen′tia, Abstersi′va,** or **Absterso′ria** (*abs,* from, *tergo,* to wipe). Detergents or abstergents, agents having cleansing qualities.

**Abster′sion.** Act of cleansing or purifying.

**Abster′sive.** Cleansing or purifying.

**Ab′stinence** (*abstineo,* to abstain). Fasting; privation, usually voluntary, of drink or food.

**Ab′stract** (*abstraho,* to draw away). Abstractum; formed by the evaporation of an alcoholic fluid extract to a dry powder. One part of an abstract equals in strength two parts of the drug or fluid extract and about ten parts (in most cases) of the tincture. Abstracts of aconite, belladonna, conium, digitalis, hyoscyamus, ignatia, jalap, nux vomica, podophyllum, senega, and valerian were formerly official in Ph. U. S.

**Abstrac′tion.** Taking away, as abstraction of blood; distillation; exclusive attention or concentration of the mind.

**Abstracti′tious** or **Abstrac′tive.** Possessing the capability of being abstracted without maceration or fermentation.

**Abstrac′tum** (pl. abstracta). Formerly the official name of *abstract* in Ph. U. S.

**Ab′sus.** Cassia growing in Egypt and India, employed as dry collyrium in endemic ophthalmia.

**Abter′minal** (*ab,* from, *terminus,* end). Term applied to an electric current passing from the end of a muscle, as the tendon, to its body or belly.

**Abu′lia Abu′lic, Abuloma′nia.** See *Aboulia,* etc.

**Abuse,** ab-uze′ (*abutor,* to consume utterly). To misuse; to make a bad or excessive use of.

**Abuse,** ab-use′ (*abutor,* to consume utterly). Improper or excessive use of, as abuse of alcohol. **Self-a.,** masturbation.

**Abu′ta.** Pareira brava.

**Abu′tilon avicen′næ** or **corda′tum.** Indian or yellow mallow; velvet leaf; ord. *Malvaceæ;* naturalized in United States; mucilaginous and demulcent.

**Abut′ment.** Support for a bridge formed by natural teeth. See *Bridge.*

**Abvacua′tio, Abvacua′tion** (*ab,* from, *vacuo,* to empty). Excessive or colliquative evacuation.

**Ac,** as a prefix, same as *Ad.*

**Acacan′thrax** (*a,* priv., *kakos,* bad, *anthrax*). Non-malignant anthrax.

**Aca′cia** (Ph. U. S.). Acaciæ gummi (Ph. Br.). Gum arabic or gum acacia; gummy exudation from Acacia senegal, and other species of acacia. The acacias form a genus of the suborder *Mimoseæ,* shrubs growing in tropical and subtropical countries. The gum occurs in commerce in irregular pieces, colorless or pale yellow, hard, brittle, of shining fracture, transparent, soluble in water but not in alcohol. Mucilaginous; chiefly used in pharmacy, but sometimes administered as a demulcent. See *Arabin.* Official preparations: *Mucilago acaciæ,* dose, ʒi–iv (4.0–16.0) or more; *syrupus acaciæ,* employed as a vehicle, with no definite dose. **A. acapulcen′sis,** Mexican gum, astringent. **A. adanso′nii,** from Senegambia, yielding Senegal gum. **A. al′bicans,** a species from Brazil, a source of kuisache gum. **A. al′bida,** also from Senegambia. **A. ama′ra,** Albizzia amara. **A. angi′co,** from S. America. **A. anthelmin′tica,** Albizzia anthelmintica. **A. arab′ica,** babul or babool tree of India; the bark is astringent and tonic. **Bas′tard a.,** Prunus spinosa. **A. capen′sis,** A. horrida. **A. cat′echu,** catechu. **A. cochliocar′pa,** tree of Brazil, a source of cortex brasiliensis. **A. concin′na,** species of India, emetic and expectorant. **A. decur′rens,** wattle tree, source of Australian gum. **A. ehrenberg′ii,** from Libya and Nubia, yielding gum arabic. **A. falca′ta,** tree of New South Wales, astringent bark of which is used to poison fish. **False a.,** Robinia pseudoacacia. **A. farnesia′na,** tree of W. Indies, yielding gum like gum arabic; astringent bark and leaves used in affections of bladder. **A. ferrugin′ea,** Indian tree, with astringent bark. **A. fis′tula,** source of Suakim gum, inferior variety of acacia. **A. german′ica,** Prunus spinosa. **A. grave′olens,** tree of India; bitter diaphoretic. **A. homalophyl′la,** from Australia, yielding gum used in diarrhœa. **A. hor′rida,** from S. Africa, yielding astringent Cape gum. **A. in′dica,** tamarindus. **A. jure′ma,** from Brazil; substitute for barbatimao bark. **A. lebbek′,** Arabian tree labach; leaves are used for fomentation in rheumatism. **A. leucophlœ′a,** astringent bark, source of kuteera gum; strong liquor is distilled from it. **A. nilot′ica,** an Egyptian species. **A. nio′po** or **niops′,** species of S. America; used as a substitute for tobacco, also as an exhilarating snuff. **A. nos′tras,**

Prunus sylvestris. **A. odoratis'sima,** tree of E. Indies; juice of bark is used in leprosy and ulcers. **A. orfo'ta,** Arabian species, resin of which is used in fumigation in epilepsy. **A. pycnan'tha,** source of Australian gum. **A. raddia'na,** species of Egyptian acacia, yielding galls from attacks of insects. **A. sas'sa,** Abyssinian species, yielding gum like gum arabic. **A. scan'dens,** plant is emetic; yields gum, lotion of which is applied in alopecia. **Senegal a.,** source of acacia. **A. specio'sa,** sirissa tree, parts of which are used externally in foul ulcers, leprosy, ophthalmia, etc. **A. stenocar'pa,** of Northern Africa, source of Suakim gum. **A. su'ma** or **sun'dra,** grows in India, yielding black catechu. **A. tenuifo'lia,** astringent buds and root of this W. Indian tree are used in diarrhœa and hemorrhages. **A. tor'tilis,** of Arabia, yields gum arabic. **A. ve'ra,** one of the sources of gum acacia. **A. ve'rek,** of Africa, source of acacia; it is another name for gum Senegal. **A. virgina'lis,** Pithecollobium avaremotemo. **A. zeylon'ica,** Hæmatoxylon campechianum.

**Aca'ciæ gum'mi** (Ph. Br.). Gum arabic.

**Acacin'.** Gum arabic.

**Ac'acos** or **Ac'acus** (*a*, priv., *kakos*, evil). Not malignant, Aphthæ.

**Ac'acu.** Tree of Brazil, sap of which is used in morphœa.

**Ac'ajou** or **Acaju'ba.** Anacardium occidentale or cashew tree; also gum extracted from the same.

**Acal'ypha** (*akalyphes*, uncovered). A genus of plants of the order *Euphorbiaceæ*. **A. betuli'na,** infusion of leaves employed in India as stomachic and in cholera. **Birch-leaved a.,** A. fruticosa. **A. carpinifo'lia,** plant of San Domingo; leaves are antispasmodic. **A. cilia'ta,** plant of Asia and Africa, applied, ground up, to relieve pain of chest. **A. frutico'sa,** shrub of India; alterative; used in dyspepsia, cholera, etc. **A. his'pida,** Caturus spiciflorus. **A. in'dica,** common plant of the gardens of India; infusion of root and decoction of leaves are cathartic. **A. menta'cea,** A. betulina. **A. prunifo'lia,** decoction used as vulnerary. **A. virgini'ca,** three-seeded mercury; indigenous; expectorant and diuretic.

**Acama'sia** (*a*, priv., *kamno*, to labor). Tolerance of labor; freedom from fatigue.

**Acamathe'sia** or **Acamathe'sis.** Dulness of intellect.

**Acam'atus** (*a*, priv., *kamno*, to labor). Untiring. One of good constitution and body.

**Acamp'sia** or **Acamp'sy** (*a*, priv., *kampsis*, flexion). Contraction or rigidity of limb.

**Acan'aca.** Diaphoretic antisyphilitic of E. Indies.

**Ac'anos.** Onopordon acanthium.

**Acan'tha** (*akantha*, spine or thorn). Vertebral column; spinous process of vertebra.

**Acan'thabole** or **Acanthab'olus.** Acanthobolus.

**Acanthæsthe'sia** or **Acanthesthe'sia** (*akantha*, thorn, *aisthesis*, sensation). A subjective pricking sensation; a form of paræsthesia.

**Acanthalzu'ca.** Echinops.

**Acan'thia lectula'ria.** Bedbug; cimex.

**Acanthichthyo'sis** (*akantha*, thorn, *ichthys*, fish). Ichthyosis spinosa.

**Acan'thion** (*akantha*, spine). Base of anterior nasal spine, a point used in cranial measurements.

**Acan'thium.** Onopordon acanthium.

**Acanthob'olus** (*akantha*, spine, *ballo*, to cast out). Forceps for removing extraneous substances from wounds.

**Acanthoceph'ala** (*akantha*, spine, *kephale*, head). Parasitic worms, with thorny or spinous heads.

**Acan'thoid.** Spinous; thorny.

**Acanthol'ysis** (*akantha*, prickle, *lysis*, loosening). Disease of prickle-cell layer of epidermis, with separation of upper layers. **A. bullo'sa,** an affection of the skin in which there is a tendency to the formation of blebs wherever the integument is bruised or rubbed.

**Acantho'ma.** Elevation of surface of skin from hyperplasia of prickle-cell layer.

**Acan'thomas'tich.** Gum from Astragalus gummifera.

**Acanthopel'vis** or **Acanthop'elys** (*akantha*, thorn, *pelyx*, basin). Pelvis narrowed by bony growth.

**Acantho'sis.** A generic name for any disease of the prickle-cell layer of the skin, as lichen planus, impetigo, pemphigus, etc.

**Acan'thus mol'lis.** Brankursine; bear's breech; mucilaginous and demulcent. **A. spino'sa,** of S. Europe, has similar properties. **A. vi'rus** or **vulga'ris,** A. mollis.

**Acapat'li.** Piper longum.

**Acap'sular.** Devoid of capsule.

**Acar'dia** (*a*, priv., *kardia*, heart). Absence of a heart.

**Acar'diac.** Without a heart.

**Acardi'acus.** A monster, usually parasitic on another fœtus, having no heart. **A. aceph'alus,** a monster consisting chiefly or entirely of pelvis and lower extremities. **A. acor'nus,** a monster consisting of head chiefly. **A. amor'phus,** an undifferentiated mass of tissue, covered with integument, parasitic on a fœtus. **A. an'ceps,** a monster consisting chiefly or entirely of trunk, with no heart or only a rudimentary one.

**Acardiohæ'mia** (*a*, priv., *kardia*, heart, *haima*, blood). Want of blood in the heart.

Acardiacus acephalus.

**Acardioner'via** (*a*, priv., *kardia*, heart, *neuron*, nerve). Want of nervous action in the heart.

**Acardiotroph'ia** (*a*, priv., *kardia*, heart, *trophe*, nourishment). Atrophy of the heart.

**Acar'dius.** Acardiacus.

**Acari'asis** (*acarus*, itch insect). Scabies.

**Acar'icide** (*acarus*, itch insect, *cædo*, to kill). An agent capable of killing the itch mite.

**Acarico'ba.** Brazilian name for Hydrocotyle umbellatum; aromatic; emetic.

**Ac'arid.** A mite. See *Acarus*.

**Acar'ida** or **Acari'na.** Order of *Arachnida*, including ticks and mites, in which head, thorax, and abdomen are fused in one mass.

**Acarino'sis** (*acarus*, mite). A skin disease due to parasites, as wood tick, itch mite, etc.

**Ac'arodermati'tis.** Inflammation of the skin caused by acarus.

**Ac'aroid.** A mite. **A. gum,** Botany Bay resin; employed in gastroenteric affections in doses of gr. v–xv (0.3–1.0).

**Ac'aron.** Myrica gale.

**Ac'aropho'bia** (*acarus*, itch mite, *phobos*, fear). Morbid dread of the itch.

**Acarotox'ic** (*acarus*, itch mite, *toxikon*, poison). Acaricide.

**Acar'pæ** (*a*, priv., *karpos*, fruit). Division of cutaneous diseases in which there is no "fruit" or production from the cutaneous surface, such, for example, as a tubercle, vesicle, or pustule. Lentigo, chloasma, argyria, and pityriasis belong to it.

**Acar'pia.** Unfruitfulness.

**Acar'pous.** Barren; devoid of elevations (in dermatology).

**Ac'arus** (*akares*, minute, tiny). Minute insect, one species of which, A. scabiei, is the exciting cause of itch. **A. america'nus,** Pulex penetrans. **A. autumna'lis,** harvest bug. **A. brach'ypus,** Sarcoptes scabiei. **A. ci'ro,** A. scabiei. **A. comedo'num,** Acarus folliculorum. **A. domes'ticus,** cheese mite. **A. dysente'riæ,** mite found in dysenteric evacuations. **A. exul'cerans,** A. scabiei. **A. folliculo'rum,** Demodex folliculorum; mange mite. **A. hor'dei,** barley mite, causing inflammation of the skin. **A. huma'nus,** A. scabiei. **A. ric'inus,** dog tick. **A.**

**sac'chari,** sugar acarus, occurring in sugar and causing grocers' itch. **A. scabie'i,** itch mite.

**Acatalep'sia** or **Acat'alepsy** (*a*, priv., *katalambano*, to comprehend). Uncertainty in diagnosis; formerly employed occasionally in the sense of dementia; epilepsy.

**Acatalep'tic.** Of uncertain diagnosis.

**Acat'alis.** Juniperus communis.

**Acat'amathe'sia** (*a*, priv., *katamanthano*, to understand). Excessive dulness of perception; loss of power to understand spoken language.

**Acatapha'sia** (*a*, priv., *kataphasis*, affirmation). The loss of power to form sentences, as contrasted with aphasia or the loss of power to use single words.

**Acatap'osis** (*a*, priv., *kataposis*, deglutition). Difficulty of swallowing; dysphagia.

**Acatasta'sia** (*a*, priv., *kathistemi*, to set in order). Irregularity, especially in the recurrence of the stages of relapsing and remittent fevers.

**Acatastat'ic.** An epithet for fevers, etc., irregular in periods or symptoms.

**Acate'ra.** Juniperus communis.

**Acathar'sia** (*a*, priv., *katharizo*, to purge). Sordes; impurities. Omission of a purgative. Absence of discharge, such as menses.

**Acathec'tic** (*a*, priv., *kathektikos*, containing). Not having the power of retaining. **A. jaun'dice,** see *Jaundice*.

**Acatsjaval'li.** Astringent aromatic Malabar plant used in hemicrania; Cassytha filiformis.

**Acau'dal** or **Acau'date** (*a*, priv., *cauda*, tail). Without a tail; deficient as to coccyx.

**Acawe'ria.** Ophioxylum.

**Acayi'ba.** Cashew; Anocardium occidentale.

**Accel'erans** (*accelero*, to hasten). Nerve from medulla to heart, increasing, when stimulated, the rapidity of action of this organ.

**Accelera'tion.** Increased motion or activity of functions, fluids, or muscular actions.

**Accel'erator.** Hastener. **A. nerves,** those which increase the rapidity of cardiac action. **A. par'tûs,** ecbolic; abortifacient. **A. sem'inis,** a. urinæ. **A. uri'næ,** muscle of penis; origin, fleshy, from sphincter ani and membranous part of urethra, and tendinous, from crus and beginning of corpus cavernosum penis, the muscles of both sides completely enclosing the bulb of the urethra; insertion into its fellow by a tendinous line running longitudinally along the middle of the bulb. Its use is to propel urine or semen forward.

**Accen'sio** (*accendo*, to kindle). Kindling or lighting up of inflammation; sensation of burning.

**Ac'cent** (*ad*, to, *cano*, to sing). Inflection or modification of the voice; stress of voice on certain syllables.

**Accent'uated.** Emphasized or unnaturally distinct, as cardiac sounds.

**Accentua'tion.** State of being accented.

**Ac'cess.** Accession, attack, paroxysm; admission to the sexual act.

**Accessiflex'or.** Auxiliary flexor muscles of the fingers and toes.

**Acces'sion** (*accedo*, to approach). Invasion, approach, or commencement of disease; access.

**Accesso'rium.** Appendage.

**Accesso'rius.** Accessory; spinal accessory nerve. **A. flexo'ris lon'gi digito'rum pe'dis,** flexor longus digitorum pedis profundus perforans (accessorius). **A. nerve,** see *Spinal accessory nerve*. **A. obtura-to'ris inter'ni,** gemelli muscles. **A. orbicula'ris supe'rior** and **infe'rior,** muscular fibres passing from the jaws and forming part of the corners of the mouth, accessory to the orbicularis oris muscle. **A. pe'dis hippocam'pi,** cornu ammonis. **A. ad sacro-lumba'lem,** see *Sacrolumbar muscle*. **A. saphe'ni exte'rius,** communicans peronei. **A. tricip'itis,** dorsoepitrochlearis. **A. Willis'ii,** spinal accessory nerve.

**Acces'sory.** Contributing to or accompanying, as accessory ligament, muscle, nerve, etc. **A. aud'itory nu'cleus,** ganglion of auditory nerve. **A. brach'ial mus'cle,** brachialis accessorius. **A. car'tilages,** small cartilages of the nose; sesamoid cartilages. **A. floc'culus,** small lobule of cerebellum on inferior peduncle. **A. glands of pan'creas,** glands of Brunner. **A. liv'er,** additional lobule of liver. **A. mus'cles,** see *Accessorius*. **A. nerve,** see *Spinal accessory nerve*. **A. nu'cleus,** nucleus in the anterior column of the cord whence arises the spinal accessory nerve. **A. ob'turator nerve,** occasional branch to hip-joint and pectineus muscle. **A. pancreat'ic duct,** occasional additional duct, opening into small intestine. **A. parot'id gland** small gland accompanying parotid duct, and commonly mere prolongation of parotid itself; see *Parotid gland*. **A. proc'ess,** tubercle at the base of transverse process of lumbar vertebra. **A. pyr'amid,** lobule on inferior surface of middle lobe of cerebellum. **A. si'nuses,** accessory nasal sinuses; cavities in the cranial bones lined with mucous membrane and communicating with the nose; these are: the frontal, sphenoidal, ethmoidal, and maxillary. **A. thy'roid glands,** small bodies near thyroid gland having similar appearance. **A. to the par va'gum,** spinal accessory nerve.

**Acces'sus.** Access; paroxysm; coitus.

**Ac'cidens** (*accido*, to happen). Symptom; accident.

**Ac'cident.** Casualty, unforeseen event, symptom. **A. neuro'sis,** one following accident or injury, with neurasthenic or hysterical symptoms.

**Accident'al.** That which happens unexpectedly. **A. abor'tion,** see *Abortion*. **A. an'us,** artificial anus. **A. col'ors,** complementary colors; for example, red and green, or blue and yellow. **A. hem'orrhage,** that occurring from the uterus during pregnancy, due to detachment of the placenta. **A. im'ages,** persistent impression on the retina. **A. tis'sue,** tissue present in a part where it is not normally found.

**Accident'alism.** Doctrine of disease founded on symptoms rather than causes.

**Accident'alist.** One who treats symptoms rather than causes.

**Accip'iter** (Latin word, meaning hawk). A bandage applied over the nose, so called from its likeness to the claw of a hawk. **A. quin'queceps,** same bandage with five heads. **A. tri'ceps,** one made with three heads.

**Acci'sa.** Leaves of Ilex paraguayensis.

**Acclimata'tion.** Acclimation.

**Accli'mated** or **Accli'matized.** Adapted to a new climate.

**Acclima'tion** or **Acclimatiza'tion.** Seasoning; act of becoming accustomed to a climate.

**Accli'matized.** Acclimated.

**Accli'vis.** Obliquus internus muscle.

**Accocay'.** Bark of Senegal, having febrifuge properties.

**Accommoda'tion.** Ability of the eye to adjust itself by change of refractive condition to different distances, so that vision may remain distinct. This is regulated by the ciliary muscle. Within a certain line of vision (*accommodation line*) no change of accommodation is required. Ability of the auditory apparatus to adjust itself to the perception of different tones above or below those ordinarily heard. Also mechanical adjustment of the fœtus to the canal during parturition. **Ab'solute a.,** separate accommodation of each eye. **Astheno'pia of a.,** see *Asthenopia*. **Histolog'ical a.,** changes in shape and function of cells produced by changes in structure, function, etc., of the tissues or organs. **A. line,** see above. **Mech'anism of a.,** method and apparatus of eye concerned in accommodation. **Neg'ative a.,** adjustment of the two eyes when passive or resting. **Paral'ysis of a.,** paralysis of ciliary muscle. **A. phos'phenes,** streaks of light visible in the dark after accommodation of the eyes. **Pos'itive a.,** a. for proximal points, caused by contraction of the ciliary muscle. **Range of a.** distance between the nearest and most remote points of distinct vision.

**A. re'flex,** Argyll-Robertson pupil. **Spasm of a.,** spasmodic contraction of the ciliary muscle. **Ten'sion of a.,** contraction of the ciliary muscle.

**Accom'modative.** Relating to accommodation. **A. astheno'pia,** see *Asthenopia.* **A. iridople'gia,** inability of the iris to respond to efforts at accommodation.

**Accom'paniment.** That which is joined to anything. **A. of the cat'aract,** term formerly used to denote a whitish, viscid substance surrounding the crystalline or capsular opacity, which, remaining after operation, caused secondary cataract.

**Accouchée,** ak-koo-shay' (F.). One delivered of a child.

**Accouchement,** ak-koosh-mon' (F.). Parturition.

**Accoucheur,** ak-koo-sher' (F.). One who practises the art of midwifery.

**Accoucheuse,** ak-koo-she(r)z' (F.). A female obstetrician; a midwife.

**Accrementi'tion.** Augmentation or growth by division or addition of similar material.

**Accrete'.** Grown together.

**Accre'tion** (*accresco,* to increase). Augmentation; increase by juxtaposition; adhesion.

**Accuba'tion** (*accubo,* to recline). Reclining position; taking to one's bed, as from sickness; parturition.

**Accu'bitus.** Lying of a person with another, as a young person with an old one, or a healthy person with one who is sick.

**Accu'mulator.** Electrical condenser; storage battery.

**Ace'dia** or **A'cedy** (*a,* priv., *kedos,* care). A mental disorder marked by carelessness, indifference, constant fatigue, and sometimes slight melancholy.

**Ace'lius.** Acœlius.

**Acel'la.** Axilla.

**A. C. E. mix'ture.** A mixture employed to produce general anæsthesia, composed of alcohol 1 part, chloroform 2 parts, ether 3 parts.

**Acenaph'thene.** $C_{12}H_{10}$. A hydrocarbon derivative of coal-tar.

**Acen'tric.** Not centric; not of central origin; peripheral.

**Aceogno'sia, Aceograph'ia, Aceol'ogy.** See *Acognosia,* etc.

**Acephalæ'mia** (*a,* priv., *kephale,* head, *haima,* blood). Anæmia of the brain.

**Acepha'lia** or **Aceph'alism.** See *Acephalus.*

**Acephalo-.** In composition, devoid of head.

**Acephalobra'chius** (*a,* priv., *kephale,* head, *brachion,* arm). A monster without head or arms. The condition is called *acephalobra'chia.*

**Acephalocar'dius** (*a,* priv., *kephale,* head, *kardia,* heart). A monster without a head or heart. The condition is called *acephalocar'dia.*

**Acephalochei'rus** or **Acephalochi'rus** (*a,* priv., *kephale,* head, *cheir,* hand). A monster without head or hands. The condition is called *acephalocheir'ia* or *acephalochir'ia.*

**Aceph'alocyst** (*akephalos,* headless, *kystis,* bag). Hydatiform vesicle without head or visible organs; bladder worm; frequently found in the liver. Generally it is the multiple acephalocyst, acephalocystis socialis or prolifera; at times the solitary acephalocyst, acephalocystis eremita or sterilis. The acephalocystis endogena, pillbox hydatid, has a firm coat and is composed of different layers, having numbers of smaller hydatids within them, and thrown off from the interior of the parent cyst. In the acephalocystis exogena of ruminant animals the young vesicles are developed from the exterior of parent vesicles.

**Acephalocys'tis.** Acephalocyst. **A. endog'ena, A. eremi'ta,** and **A. exog'ena,** see *Acephalocyst.* **A. multi'fida,** see *Parasites.* **A. pla'na,** concretions in tendinous and muscular sheaths. **A. prolif'era, A. socia'lis,** and **A. ster'ilis,** see *Acephalocyst.* **A. racemo'sa,** hydatid mole of the uterus.

**Acephalogas'ter** (*a,* priv., *kephale,* head, *gaster,* belly). Monster devoid of head, chest, and abdomen; or having the lower portion of the abdomen, but no chest or head. The condition is called *acephalogaste'ria* or *acephalogas'tria.*

**Acephalopo'dius** (*a,* priv., *kephale,* head, *pous,* foot). A monster devoid of head and feet. The condition is called *acephalopo'dia.*

**Acephalora'chia** or **Acephalorrha'chia** (*a,* priv., *kephale,* head, *rhachis,* spine). Monstrosity marked by the absence of head and spine.

**Acephalos'tomus** (*a,* priv., *kephale,* head, *stoma,* mouth). An acephalous monster, at the upper part of which there is an opening resembling a mouth. The condition is called *acephalosto'mia.*

**Acephalotho'rus** (*a,* priv., *kephale,* head, *thorax,* chest). A monster devoid of head and chest. The condition is called *acephalothora'cia.*

**Aceph'alous.** Headless, as acephalous monster.

**Aceph'alus** (*a,* priv., *kephale,* head). A headless monster; see cut under *Acardiacus.* The condition is *acepha'lia* or *aceph'alism.* **A. dibrach'ius,** headless monster having both upper limbs, but imperfect. **A. monobrach'ius,** headless monster with one upper limb. **A. sym'pus,** headless monster with conical termination of the trunk from fusion of the lower extremities.

**A'cer.** Generic name of maple trees, *Acerinæ,* **A. palmifo'lium,** A. saccharinum. **A. pennsylva'nicum,** striped maple, whistlewood, striped dogwood; a decoction of the bark is used internally and externally in cutaneous affections, and one of the leaves and twigs in nausea and vomiting. **A. ru'brum,** red or swamp maple; indigenous; inner bark is a mild astringent. **A. sacchari'num,** rock maple, sugar maple, contains sweet sap, which is the source of maple sugar.

**Acera'ceæ** or **Acerin'eæ.** A suborder of the natural order *Lapindaceæ;* the maples.

**A'ceras anthropoph'ora.** Green man, man orchis; leaves are sudorific.

**A'cerate.** A salt of aceric acid.

**Acera'tes decum'bens.** Plant of Southwestern States and Mexico, genus *Asclepiadeæ;* used for snake-bites. **A. longifo'lia,** long-leaved green milkweed; indigenous; diaphoretic.

**Acerato'sis** (*a,* priv., *keras,* horn). Defective development of corneous tissue.

**Aceratothe'rion.** Monster with defective development of corneous tissue.

**Acerb'** (*acer,* sharp). Acid, bitter, and astringent in taste, such as unripe fruits.

**Acerb'ity.** Acidity with astringency.

**Acer'cus** (*a,* priv., *kerkos,* tail). Monster devoid of tail or of coccyx.

**A'cerdol.** An oxidation product of potash and powdered manganese; an oxidizer and disinfectant.

**Acer'ic** (*acer,* maple tree). Relating to the maple tree, as aceric acid, which is obtained from the sap of the maple tree.

**Acervulo'ma.** Psammoma.

**Acer'vulus cer'ebri** (dim. of *acervus,* heap). See *Pineal gland.*

**Aces'cence** or **Aces'cency** (*acesco,* to grow sour). Disposition to acidity, as in wines.

**Ace'sia** or **Ac'esis.** Cure; medicament.

**Acesip'onus** (*akesis,* cure, *ponos,* pain). Anodyne.

**Aces'odyne** (*akesis,* cure, *odyne,* pain). Anodyne.

**Aces'tis.** Medicament.

**Acesto'ma.** A tumor of granulation tissue.

**Ace'ta medica'ta.** Medicated vinegars. The official vinegars in the Ph. U. S. are **Ace'tum o'pii** and **A. scil'læ.**

**A'cetable.** Acetabulum.

**Acetab'ula** (pl. of acetabulum). Cotyledons.

**Acetab'ular.** Relating to the acetabulum. **A. ar'tery,** branch of obturator artery to hip-joint. **A. bone,** rare bone at junction of pubes and acetabulum. **A. fos'sa,** fossa in acetabulum to which round ligament is attached.

**Acetab'uliform.** Shape of the acetabulum; cup-shaped.

**Acetab'ulum** (*acetum,* because it resembled a vinegar vessel). Measure containing one-eighth part of a modern pint; cup-shaped depression in the hip-bone to receive the head of the femur; lobe or cotyledon of the placentæ of ruminating animals. **A. hu'meri,** glenoid fossa of scapula. **A. mari'num,** umbilicus marinus.

**A'cetal.** $C_6H_{14}O_2$. Ethylidene ethylate, ethylidene diethyl ether; result of oxidation of ethylic alcohol; ethereal liquid, sp. gr. 0.831 at 68° F.; hypnotic.

**Acetal'dehyde.** Aldehyde.

**Acet'amid** or **Acetam'ide.** $CH_3CO.NH_2$. A white, crystalline substance resulting from the action of ammonia on acetic ether.

**Acetam'idoantipyrin'.** Yellow, soluble crystals prepared by the action of nitric acid on antipyrin, and reduction by zinc and acetic acid. Antipyretic in the same dose as antipyrin.

**Acetam'idoben'zoyleu'genol.** Acetaminol.

**Acetam'idometh'yl sal'icylate.** Used as a remedy in neuralgia. **A. phe'nol,** an oxidation product of acetanilid.

**Acetam'inol.** A white, crystalline powder produced by the action of phenol nitrobenzoylchloride on eugenol-sodium. Has been used in phthisis.

**Acetan'ilid, Acetanili'dum** (Ph. U. S.). $C_6H_5NH.C_2H_3O$. Phenylacetamid, antifebrin. Chemical result of the action of glacial acetic acid on pure aniline at a high temperature; white, crystalline powder, soluble in hot water, alcohol, and ether. Dose, gr. iij–vi (0.2–0.4) or more as an antipyretic. Toxic in large doses, sometimes depressant in small doses. **A. sal'icylate,** salifebrin.

**Ace'tas.** Acetate.

**A'cetate.** Salt formed by the union of acetic acid with an alkaline, earthy, or metallic base.

**Ace'tic.** Derived from or similar in properties to vinegar. **A. acid,** $CH_3CO.OH$, absolute acetic acid, acid of vinegar; derived from the oxidation of alcohol or the dry distillation of wood; strong acetous acid, radical vinegar; spirit of verdigris, when made from verdigris; concentrated acetic acid, prepared by decomposing an acetate and receiving acetic acid by distillation. Very pungent and grateful odor, acid and acrid taste. The acetic acid of the Ph. U. S. is a liquid containing 36 per cent. of absolute acetic acid. See *Acidum aceticum.* **Dilu'ted a. a.,** see *Acidum aceticum dilutum.* **Gla'cial a. a.,** see *Acidum aceticum glaciale.* **A. al'dehyde,** aldehyde. **A. e'ther,** see *Æther sulphuricus* and *Anæsthetics.*

**Acet'ica.** Preparations of vinegar.

**Ace'ticum martia'le.** Ferri acetas.

**Acetidin'.** $C_7H_{12}O_5$. Diacetin.

**Acetim'eter.** Acetometer.

**Acetin'.** A glycerin acetate. The triacetate is found in oil of Euonymus europæus.

**Ac'etite.** Salt of acetous acid.

**Aceto .** In compounds denotes the presence of acetic acid.

**A'cetoace'tic acid.** $C_4H_6O_3$. Diacetic acid. It may be excreted in the urine as such or as acetone.

**Acetol'uid.** Acet-toluid.

**Acet'omel.** Oxymel.

**Acetom'eter** (*acetum,* vinegar, *metron,* measure). Instrument for ascertaining the strength of commercial acetic acid. Such process is *acetom'etry.*

**Acetonæ'mia.** Condition of nervous derangement, peculiar odor of breath, etc., supposed to be due to the presence of acetone in the blood, it having, according to some writers, the property of breaking up blood corpuscles.

$H_3$ 6O.
3

**A'cetone.** $(CH_3)_2CO$. Dimethylketone. A limpid, colorless, inflammable liquid, with peculiarly penetrating and slightly empyreumatic odor. Its density in the liquid state is almost the same as that of alcohol; taste is analogous to that of peppermint; miscible in all proportions with water, alcohol, and ether; prepared by the distillation of wood and of the acetates; feeble anæsthetic; excitant in chronic bronchitis; used also in gout, rheumatism, and worms in doses of ♏60–90 (4.0–6.0) daily; is largely used in the manufacture of chloroform. The term is also employed to designate any member of the group to which this substance belongs chemically. **A. chlo'roform,** aneson. **A. collo'dion,** a flexible collodion, made of guncotton, ether, alcohol, acetone, and castor oil. **A. dieth'ylsul'phon,** sulphonal. **A. resorcin',** a combination of two molecules of resorcin and one of acetone; antiseptic.

**Acetoni'trate.** Salt of acetic and nitric acids.

**Acetoni'tril.** $C_2H_3N$. Methyl cyanide.

**Acetonu'ria.** Excess of acetone in urine, occurring in cancer, fevers, diabetes, alcoholism, etc.

**Aceto-orthotol'uid.** Acet-toluid.

**Acetophenetidin'.** Acetphenetidin.

**Acetophenilidin'.** Phenacetin.

**Acetophe'none.** Hypnone.

**Aceto'sa alpi'na.** Rumex alpinus. **A. arven'sis, A. nos'tras, A. officina'lis, A. oxal'idis, A. praten'sis,** Rumex acetosa. **A. roma'na, A. rotundifol'ia, A. scuta'ta,** Rumex scutatus. **A. vulga'ris,** Rumex acetosa.

**Acetosel'la.** Oxalis acetosella.

**Acetotar'trate.** A tartrate in which hydrogen is replaced by acetyl.

**Acetotox'im** or **Acetox'im.** $(CH_3)_2CNOH$. A soluble compound resulting from the action of hydroxylamide on acetone.

**Acet'ozone,** X Benzoyl-acetyl peroxide; on contact with water it undergoes hydrolysis and is split up into benzoyl hydrogen peroxide and acetyl hydrogen peroxide; said to be a powerful germicide and innocuous to the animal tissues. Given in typhoid fever, cholera, and dysentery in doses of gr. iij–v (0.2–0.32) several times daily; also applied locally.

**Acetpara-amidosal'ol.** Salophen.

**Acetparaphenetidin'.** Phenacetin.

**Acetphenetidin'.** Phenacetin; antipyretic.

**Acet-tol'uid.** $C_9H_{11}NO$. A coal-tar product; antipyretic: dose, gr. ij–x (0.13–0.65).

**Ace'tum.** Common vinegar (*acer,* sharp). Liquor obtained by acetous fermentation; pungent odor, pleasant acid taste. Any official preparation made with vinegar or acetic acid. It is refrigerant in fevers, antiseptic and antinarcotic. Dose, f℥j to f℥ij (4.0–8.0). Externally, it is stimulant and discutient. **A. acer'rimum,** distilled vinegar. **A. aceto'sum,** distilled vinegar. **A. an'glicum,** a. aromaticum. **A. antisep'ticum,** a. aromaticum. **A. aromat'icum,** thieves' vinegar, vinegar of the four thieves, Marseilles vinegar; aromatic herbs or oils infused or dissolved in vinegar or acetic acid, made of fresh aromatic herbs steeped in vinegar; used as a perfume. **A. berolinen'se,** a. aromaticum. **A. bezoard'icum,** a. aromaticum. **A. britan'nicum,** acetum. **A. camphora'tum,** camphorated vinegar. **A. canthar'idis,** vinegar of cantharides, a preparation of Ph. Br.; used as a prompt vesicant. **A. cardi'acum,** a. aromaticum. **A. cerevis'iæ,** vinegar. **A. col'chici,** vinegar of meadow saffron; formerly official in Ph. U. S.; it is used as a diuretic, and also in gout; dose, f℥ss to f℥iss (2.0–6.0). **A. commu'ne,** vinegar. **A. concentra'tum,** acetic acid or concentrated vinegar. **A. cru'dum,** acetum. **A. crystallisab'ile,** glacial acetic acid (see under *Acidum aceticum*). **A. destilla'tum,** see *Acidum aceticum.* **A. emet'icum,** antimony acetate. **A. empyreumat'icum,** wood vinegar. **A. gal'licum,** acetum. **A. glacia'le,** glacial acetic acid (see under *Acidum aceticum*). **A. ipecacuan'hæ** (Ph. Br.), vinegar of ipecac; dose, ♏v–xxx (0.32–2.0). **A. ligno'rum,** wood vinegar. **A. lithar'gyri,** solution of subacetate of lead in dilute acetic acid. **A. lobe'liæ,** vinegar of lobelia; dose, 30 to 60 drops or more (2.0–4.0); as emetic, f℥ss (15.0). **A. mul'sum dul'ce,** oxymel. **A. mylab'ridis** (Ph. Br.), vinegar of mylabris; employed as a vesicant in place of a. cantharidis. **A. o'pii** (Ph. U. S.), black drop made with diluted acetic acid and flavored with sugar and nutmeg; its strength is one grain of opium in nearly ten of the solution; dose, ♏v–xx (0.3–1.3). **A. phenyla'tum,** carbolated vinegar. **A. plum'bicum** or **saturni'num,**

solution of subacetate of lead. **A. prophylac′ticum,** a. aromaticum. **A. purifica′tum,** a. destillatum. **A. pu′rum,** distilled vinegar. **A. pyroligneo′sum,** wood vinegar. **A. quat′uor fu′rum** or **latro′num,** a. aromaticum. **A. radica′le,** acidum aceticum. **A. rosa′tum,** oxyrrhodinon. **A. ru′bi idœ′i,** raspberry vinegar. **A. sanguina′riæ,** vinegar of bloodroot; made by the action of diluted acetic acid on sanguinaria; dose, as expectorant, gtt. xv–xxx (1.0–2.0); as emetic, fʒiij–iv (12.0–16.0). **A. satur′ni,** solution of subacetate of lead in dilute acetic acid. **A. scil′læ** (Ph. Br.), vinegar of squill; made by the action of diluted acetic acid on squill; usually employed to make the syrup; dose is ♏x–xxx (0.6–2.0); diuretic, expectorant, and emetic. **A. scillit′icum,** a. scillæ. **A. theba′icum,** a. opii. **A. theriaca′le,** a. aromaticum. **A. urgin′eæ** (Ph. Br.), vinegar of Indian squill; dose, ♏x–xxx (0.65–2.0). **A. vi′ni,** vinegar.

**A′cetyl.** $C_2H_3O$. Hypothetical radical of acetic acid. The bromide, chloride, iodide, and oxide are the most important compounds. **A. salicyl′ic acid,** aspirin.

**Acetylam′idoantipyrin′.** An acetyl derivative of amidoantipyrin, having the properties of antipyrin.

**Acetylam′idophe′nol.** Acetanilid.

**Acet′ylene.** $C_2H_2$. A colorless, malodorous, luminous gas produced by combustion of ordinary illuminating gas and other hydrocarbons, or by the direct union of carbon and hydrogen by means of the electric spark. Commercially it is made from calcium carbide by the action of water.

**Acetylethoxyphe′nylu′rethane.** Thermodin.

**Acetyleth′ylphen′ylhydrazin′.** $C_8H_{10}N_2O$. Antipyretic.

**Acet′ylide.** Compound of acetylene with an element or radical.

**Acetylpara-am′idophe′nyl sal′icylate.** Salophen.

**Acetylpara-ethoxyphen′ylu′rethane.** Thermodin.

**Acetylparam′idosal′ol.** Salophen.

**Acetylparaox′yphen′ylu′rethane.** Neurodin.

**Acetylphenetidin′.** Phenacetin.

**Acetylphen′ylhydrazin′.** Pyrodin; hydracetin.

**Acetyltan′nin.** Tannigen.

**Acetylthy′mol.** $C_{12}H_{16}O_2$. Thymol acetate; antiseptic.

**Achaca′na.** Edible cactus of Peru.

**Achalybæ′mia** or **Achalybe′mia** (*a*, priv., *chalyps*, steel, *haima*, blood). Deficiency of iron in the blood.

**Achana′ca.** African sudorific and antisyphilitic plant.

**Achaovan′** or **Achoavan′.** Egyptian chamomile, used in jaundice. **A. ab′iat,** Cineraria maritima.

**Ache** (Gr., *achos*). Pain; to suffer pain.

**Ache′bone.** Innominate bone.

**Achei′lia** or **Achilia** (*a*, priv., *cheilos*, lip). Malformation consisting in deficiency of the lip or lips.

**Achei′lus** or **Achi′lus.** One without lips.

**Achei′rus** or **Achi′rus** (*a*, priv., *cheir*, hand). A monster devoid of hands. The condition is called *acheiria* or *achiria.*

**Achilia,** ah-ki′lea. Acheilia.

**Achille′a agera′tum** (after Achilles). Maudlin, sweet maudlin, maudlin tansy; ord. *Compositæ.* Same bitter and aromatic properties as tansy; used for dyspepsia, constipation, worms, etc. **A. ambig′ua,** A. millefolium. **A. atra′ta,** Alpine species used in diarrhœa, pneumonia, etc. **A. falca′ta,** leaves are used in Levant and the East in hypochondriasis. **A. her′ba ro′ta,** plant of S. Europe; essential oil is sudorific and emmenagogue. **A. i′va,** A. moschata. **A. lu′tea,** A. ageratum. **A. millefo′lium,** nosebleed, bastard pellitory, yarrow, or milfoil; herb and flowers of achillea have aromatic smell, rough, bitterish, somewhat pungent taste; bitter aromatic tonic, used in dyspepsia, flatulence, malarial fevers, hemorrhage, etc. Extract of plant, made with proof spirit and called *achilleine,* has been used by Italians in intermittent fever. Name achilleine is also given to alkaloid from Achillea millefolium and A. moschata; achilleic acid has also been obtained from it; glucoside, called achillein, has been obtained from some species of achillea. The active principle of the plant, when given in large dose, causes great irregularity of the heart's action. **A. moscha′ta,** Alpine plant; diaphoretic and stomachic tonic. Volatile oil, *esprit d'Iva,* is obtained from it in Switzerland; much prized for its musky odor; stimulant and antispasmodic. **A. myriophyl′lon,** A. millefolium. **A. os′sica,** A. millefolium. **A. ptar′mica,** sneezewort, bastard pellitory. Roots and flowers of this plant of Northern United States, Canada, Europe, and Asia have a hot, biting taste, approaching that of pyrethrum. Principal use is as a masticatory and sialagogue. **A. seta′cea,** Hungarian plant; tonic and stimulant. **A. visco′sa,** A. ageratum.

**Achille′ic acid.** See *Achillea millefolium.*

**Achillein′.** $C_{20}H_{38}N_2O_{15}$. See *Achillea millefolium.*

**Achil′les ten′don.** Achillis tendo.

**Achilletin′.** Substance produced by the action of dilute acids upon achillein.

**Achille′um.** Telephium.

**Achil′lis tendo.** Tendon of Achilles, Achilles tendon, heelstring; strong tendon of gastrocnemii muscles above the heel; so called because the heel was the only vulnerable part of Achilles; it is the largest tendon in the body.

**Achil′lobursi′tis.** Inflammation of the bursa beneath the Achilles tendon.

**Achil′lodyn′ia** (*odyne*, pain). A painful condition of the heel, due possibly to a local neuroma or to inflammation of the bursa beneath the Achilles tendon.

**Achillotenot′omy** or **Achillot′omy.** Division or section of tendo Achillis; usually performed subcutaneously.

**Achiria** (ah-ki′rea). Acheiria.

**Achlorhy′dria.** Anachlorhydria.

**Achlorop′sia** (*a*, priv., *chloros*, green color, *opsis*, sight). Inability to distinguish green.

**A′chlys.** Opacity of the cornea.

**Achmel′la.** Spilanthus acmella.

**Achne,** ak′ne. Lint; mucous flocculi seen in front of the cornea.

**Acho′lia** (*a*, priv., *chole*, bile). Deficiency or want of bile; obstruction to the escape of bile; an old term for Asiatic cholera.

**Achol′ic** or **A′cholous.** Deficient in or lacking bile.

**Achondropla′sia** or **Achondroplas′ty** (*a*, priv., *chondros*, cartilage, *plasso*, to form). Imperfect formation or development of cartilage. This defect results in dwarfism, marked by large head, short limbs, and great muscular development.

**Achondropla′siac.** Affected with or resulting from achondroplasia.

**A′chor.** Small superficial ulcerations or scaly eruption on the skin of the face and head. **A. bar′bæ,** sycosis. **A. cap′itis,** porrigo scutellatus, scabies capitis. **A. favo′sus,** favus. **A. granula′tus,** impetigo, followed by granular crust. **A. lactumino′sus,** a. larvalis. **A. mucif′luus** or **muco′sus,** favus; eczema with mucous discharge. **A. larva′lis** or **larva′tus,** porrigo larvalis. **A. muco′sus,** favus. **A. Schoenlein′ii,** tinea trichophytina. **A. scutella′tus,** seborrhœa sicca, porrigo larvalis, crusta lactea.

**Achord′al.** Formed separately from or away from the chorda dorsalis; sphenoethmoidal portion of base of skull.

**Achore′sis** (*a*, priv., *choreo*, to make room). Diminution of capacity of the bladder or other cavity.

**Achor′ia.** Achoresis; mammalia which are devoid of chorion.

**Acho′rion.** Fungous organism in the skin and hair follicles. **A. keratoph′agus,** fungus producing onychomycosis. **A. Lebert′ii,** see *Porrigo decalvans.* **A. Schoenlein′ii,** see *Porrigo favosa.*

**A′chras austra′lis** (*achras*, wild pear). Sapota. **A. bala′ta** or **dissec′ta,** species of *Sapotaceæ,* bruised leaves of which are applied in paralysis; fruit is said to aid digestion. **A. mammo'sa,** Sapota mammosa; American marmalade; Jamaica bully tree; mammee. Milky juice is emetic; externally caustic, used for warts. **A. mil'leri** or **mül'leri,** grows in Central America ; yields balata, from which bougies were made. **A. sapo'ta, zapo'ta,** or **zapo'tu,** sapota.

**A'chroa** or **Achroi'a** (*a*, priv., *chroa* or *chroia*, color of the skin). Paleness of cachectic condition.

**Achroiocythæ'mia** (*achroios*, colorless, *kytos*, cell, *haima*, blood). A form of anæmia characterized by a deficiency of hæmoglobin in the red corpuscles.

**Achro'ma, Achro'mia,** or **Achroma'sia** (*a*, priv., *chroma*, color). Partial privation of color of the skin; vitiligo; see *Albino*. **A. un'guium,** the presence of dead white macules on one or more of the nails, due to nutritional changes in the nail matrix. **A. vitili'go,** vitiligo, as in the pied negro.

**Achro'macyte** (*kytos*, cell). Decolorized erythrocyte, a phantom or shadow corpuscle.

**Achromader'ma** (*a*, priv., *chroma*, color, *derma*, skin). Leucoderma.

**Achromat'ic.** Devoid of color, or not producing it; lens constructed to correct aberration of refrangibility of common lenses is so termed. The crystalline lens of the eye is an achromatic lens.

**Achromatin'.** That portion of the cell nucleus which has no special affinity for coloring-matters, staining less deeply than the chromatin filaments.

**Achro'matism.** Absence of chromatic aberration.

**Achromatis'tous.** Having the unhealthy pallor of cachexia.

**Achromatop'sia, Achromatop'sis,** or **Achromatop'sy** (*a*, priv., *chroma*, color, *opsis*, vision). Color-blindness.

**Achromato'ses.** Cutaneous diseases attended with deficiency of pigment formation in the skin.

**Achro'mia** or **Achromoder'mia.** Albinism.

**Achro'mic.** Achromatic.

**Achromoder'ma** or **Achromoder'mia.** Leucoderma; albinism.

**Achromoph'ilous.** Not chromophilous.

**Achroödex'trine.** Dextrine which does not react by change of color to iodine.

**Achroötrich'ia** (*achroos*, colorless, *thrix*, hair). Deficiency or absence of pigment in the hair.

**Achy'lia** or **Achylo'sis** (*a*, priv., *chylos*, juice, chyle). Defective chylosis or formation of chyle. **A. gas'trica,** a disease of the stomach characterized by deficient formation of gastric juice.

**Achy'lous.** Without chyle; juiceless.

**Achymo'sis** (*a*, priv., *chymos*, juice, chyme). Defective chymification.

**Achy'mous.** Deficient in chyme or chyle.

**Achyran'thes as'pera** (*achyron*, chaff, *anthe*, flower). Species of *Achyrantheæ* growing in Egypt, India, Africa, etc., known as *cadelari;* diuretic and astringent. **A. ca'lea,** Mexican plant; febrifuge. **A. frutico'sa,** of East Indies, has similar properties to A. aspera. **A. globulifo'lia,** employed in Madagascar as an antisyphilitic. **A. lana'ta,** chaya root, diuretic, is derived from this species. **A. obtusifo'lia,** Indian species, with diuretic properties. **A. re'pens,** forty knot; indigenous plant; the decoction is diuretic in dropsy, dysuria, etc. **A. vir'idis,** leaves are emollient.

**Achy'ron** (Gr., bran). Furfur.

**Achyroph'orus** (*achyron*, chaff, *phoreo*, to bear). Apargioides; species of *Compositæ* eaten in Chile as food, *escorzonera*. **A. scorzone'ræ,** similarly used under same name. **A. sessiliflo'rus,** decoction of this New Granadan species is expectorant.

**Acic'ular** (*acicula*, needle). Pointed like a needle.

**Acic'ulus.** A bristle-like structure in plants.

**Acid,** as'id (L., *acidus*). Sharp; sour, especially as applied to odorous or sapid substances; a soluble, usually sour-tasting substance, electronegative, changing blue litmus to red, capable of saturating bases to form salts. Sharp and shrill, as the voice. **Ace'tic a., carbon'ic a., sulphu'ric a.,** etc., see the qualifying words and also, for the official acids, under *Acidum*. **A. albu'min,** a proteid which has been acted upon by a weak acid; it is soluble in weak acids or alkalies, but not in saline solutions or water, and is not coagulable by heat. **Am'ido-a.,** one containing the hypothetical amidogen, $NH_2$. **A.-fast,** a.-resisting. **Biba'sic** or **Diba'sic a.,** an acid capable of combining with two univalent basic radicals which displace its two hydrogen atoms. **Fat'ty a.,** an acid occurring in fats in combination with glycerin, and which, when heated with a strong alkali, like soda or potash, forms a soap; chemically a fatty acid is a monobasic acid which can be formed by the oxidation of a primary alcohol. **A. green,** Helvetia green, an anilin dye. **Inorgan'ic a.,** an a. which contains no carbon radical; carbonic acid itself, however, is regarded by some as an inorganic a. **Min'eral a.,** inorganic a. **Monoba'sic a.,** in chemistry, an a. capable of combining with only one univalent base to form a neutral salt. **Organ'ic a.,** an a. containing carbon, this substance being a constituent of all organic, *i. e.*, animal or vegetable, matter; but carbonic acid itself is classed by some among the inorganic acids. **Ox'acid** or **Ox'yacid,** an acid containing oxygen. **Polyba'sic a.,** one having more than three hydrogen atoms displaceable by an equal number of basic radicals. **A.-proof,** a.-resisting. **A. rad'ical,** element forming an acid when combined with hydrogen. **A.-resist'ing,** a term applied to a microorganism which, when once stained, is not readily deprived of its color by the acid decolorizing solutions. **Triba'sic a.,** an a. having three displaceable hydrogen atoms. **Wood a.,** wood vinegar.

**Acid'ic.** Applied to the acid element in a salt.

**Acidif'erous** (*acidum*, acid, *fero*, to bear). Containing or capable of being converted into an acid.

**Acidifi'able** (*acidum*, acid, *fio*, to become). Convertible into an acid.

**Acidifica'tion.** Change to an acid condition.

**Acid'ifying prin'ciple.** Name formerly given to oxygen, as it was supposed that oxygen was required to form acids.

**Acidim'eter** or **Acidom'eter** (*acidum*, acid, *metron*, measure). A device for determining the strength or purity of acids.

**Acidim'etry** or **Acidom'etry.** Measurement of the amount of acid. See *Acidometer*.

**Acidita'tio** or **Acidit'ies.** Sourness of the stomach; acidity.

**Acid'ity.** Acid condition; sourness, as of the stomach.

**Acidom'eter.** Acidimeter.

**Acidom'etry.** Acidimetry.

**Acidopeiras'tica** (*akis*, point, *peirazo*, to test). An old term for exploratory puncture.

**Acid'ophile.** Oxyphile.

**Acidos'teophyte** (*akis*, point, *osteon*, bone, *phyton*, growth). Pointed exostosis or osteophyte.

**Acid'ulate.** To render acidulous or slightly acid.

**Acid'ulous.** Possessing a sourish taste; containing carbonic acid gas. **A. water, sim'ple,** aqua acidi carbonici; soda-water, water impregnated with carbonic acid; there is no carbonate of sodium in it. **A. waters,** carbonated mineral waters having a pungent taste; sometimes called acidulæ.

**A'cidum.** Acid. **A. acet'icum** (Ph. U. S.), acetic acid; a colorless, volatile liquid of pungent smell and sharp taste; sp. gr. 1048; containing 36 per cent. of absolute acetic acid. The acetic acid of the Ph. Br. contains 33 per cent. of the absolute acid. Its vapor is stimulating in syncope, headache, etc., and the acid is also employed locally as a counterirritant. A strong acetic acid was formerly ordered by the London Ph.; it was prepared from wood, and was called vinegar of wood, improved distilled vinegar, pyroligneous acid, acidum lignorum. **A. a. absolu'tum,** see *Acetic acid*. **A. a. aromat'icum** or **camphora'tum,** aromatic spirit of vinegar, see *Acetum aromaticum*. **A. a. dilu'tum** (Ph. U. S.), diluted acetic acid, contains 6 per cent. of absolute acetic acid; it is used in the preparation of the official vinegars; dose, ♏xxx-ʒj (2.0-4.0). The dilute acetic acid of the Ph. Br. contains 4.27 per cent. of absolute acid. **A. a. e lig′no vena′le** or **empyreumat′icum**, pyroligneous acid. **A. a. for′te** or **for′tius**, absolute acetic acid. **A. a. glacia′le** (Ph. U. S. and Br.), glacial acetic acid, contains 99 per cent. of absolute acid; occurs in crystalline form; used externally as a caustic application to warts, corns, etc. **A. a. scillit′icum**, acetum scillæ. **A. a. ten′ue**, dilute acetic acid. **A. acetosel′læ**, oxalic acid. **A. aceto′sum**, acetum. **A. ad′ipis**, fatty acid. **A. aë′reum**, carbonic acid. **A. alcohol′icum**, acetic acid. **A. arsenio′sum** (Ph. Br.), arsenious acid, same as a. arsenosum. **A. arseno′sum** (Ph. U. S.), arsenous or arsenious acid, white arsenic; occurs as an opaque white or a clear, glassy substance, or in white powder; dose, gr. $\frac{1}{40}$–$\frac{1}{20}$ (0.0016–0.0032). **A. atmosphær′icum**, carbonic acid. **A. atrop′icum**, tropic acid. **A. azo′ticum**, nitric acid. **A. benzo′icum** (Ph. U. S. and Br.), benzoic acid, benzoyl hydrate; occurs as scaly or needle-like crystals, whitish or yellowish-white in color, becoming darker on exposure to light; slightly soluble (1:400) in water, very soluble in alcohol and oil; dose, gr. x–xl (0.65–2.6). **A. bo′ricum** (Ph. U. S. and Br.), boric or boracic acid; occurs in pearly white scales of greasy feel, having a cool, slightly bitter taste; soluble in water (1:25 cold, 1:3 boiling), in alcohol (1:25), and in glycerin (1:5); dose, gr. ij–xv (0.13–1.0). **A. bromhy′dricum**, hydrobromic acid. **A. borus′sicum**, hydrocyanic acid. **A. carbazot′icum**, picric acid. **A. cathart′icum**, see *Cassia senna* and *Rhamnus*. **A. chi′nicum**, quinic acid. **A. chlorhy′dricum**, hydrochloric acid. **A. chloroace′ticum**, dichloracetic acid. **A. chlorohydrargy′ricum**, corrosive sublimate. **A. chlorohydrogena′tum**, hydrochloric acid. **A. carbol′icum** (Ph. U. S.), carbolic acid, phenol (Ph. Br.), phenic acid, phenyl or phenylic alcohol, phenyl hydrate; obtained by distillation from coal-tar; occurs in colorless, sometimes slightly pinkish crystals, but becomes a permanent liquid on the addition of 10 per cent. water; is freely soluble; employed externally, undiluted as a caustic, diluted as an antiseptic; also internally in doses of gr. ½–1 (0.03–0.06). **A. c. cru′dum** (Ph. U. S.), crude or commercial carbolic acid, a colorless or reddish liquid, employed as a disinfectant. **A. chro′micum** (Ph. U. S. and Br.), chromic acid, chromic anhydride; occurs in reddish, acicular, deliquescent crystals; employed externally as a caustic. **A. cit′ricum** (Ph. U. S. and Br.), citric acid, the acid of oranges, lemons, and other citrous fruits; occurs in efflorescent and deliquescent crystals of intensely acid taste; dose, gr. v–xv (0.3–1.0). **A. creta′ceum**, carbonic acid. **A. cyanhy′dricum**, hydrocyanic acid. **A. elain′icum**, oleic acid. **A. fluo′ricum**, hydrofluoric acid. **A. formica′rum**, formic acid. **A. galac′ticum**, lactic acid. **A. gal′licum** (Ph. U. S. and Br.), gallic acid, $C_7H_6O_5$; occurs in yellowish-white crystals of bitter, astringent taste; obtained from galls or, more commonly, from tannic acid; employed internally as an astringent in diarrhœa, hemorrhage, etc.; dose, gr. ij-xl (0.13-2.6). **A. hydrobro′micum dilu′tum** (Ph. U. S. and Br.), dilute hydrobromic acid, contains 10 per cent. of hydrobromic acid; dose, ʒj-iv (4.0-16.0). **A. hydrocarbon′icum**, oxalic acid. **A. hydrochlo′ricum** (Ph. U. S. and Br.), hydrochloric, chlorhydric, or muriatic acid; a liquid containing 31.9 per cent. (Ph. Br. 31.79 per cent.) by weight of the pure acid; employed internally (generally in the dilute form) as a tonic and digestant; dose, ♏ij–x (0.13–0.65). **A. h. dilu′tum** (Ph. U. S. and Br.), diluted hydrochloric acid, contains 10.58 per cent. (Ph. Br. 10 per cent.) by weight of the pure acid; dose, ♏v–xxx (0.32–2.0). **A. h. pu′rum**, spirit of salt, aqueous solution of hydrochloric acid gas (HCl, prepared by heating sulphuric acid and sodium chloride). The commercial h. a. or muriatic a. is a fuming, golden-yellow liquid, and contains free chlorine, iron, and often arsenic. **A. hydrocyan′icum dilu′tum** (Ph. U. S. and Br.), diluted hydrocyanic or prussic acid; a colorless liquid containing 2 per cent. by weight of pure h. a.; dose, ♏j–v (0.06–0.32). **A. h.** (Scheele) is in the formulary of 1901 of the British Pharmaceutical Conference; it is of double the strength of a. h. dil., and is used in half the dose of the official preparation. **A. hydrosulphura′tum** or **hydrosulphu′ricum**, hydrogen sulphide. **A. hydro′icum**, hydrogen sulphide. **A. lac′ticum** (Ph. U. S. and Br.), lactic acid; a colorless, syrupy liquid containing 75 per cent. of pure l. a. or hydrogen lactate; obtained by lactic fermentation of milk sugar or grape sugar; employed externally as an application to the diphtheritic membrane, and internally in dyspepsia; dose, ♏x–ʒj (0.65–4.0). **A. lig′neum** or **lig′ni pyroleo′sum**, or **ligno′rum empyreumat′icum**, pyroligneous acid. **A. limo′nis** or **limo′num**, citric acid. **A. lith′icum**, uric acid. **A. ma′licum**, malic acid. **A. mari′næ** or **mari′num**, hydrochloric acid. **A. mephit′icum**, carbon dioxide. **A. ni′tri dulsifica′tum** or **vino′sum**, spiritus ætheris nitrosi. **A. ni′tricum** (Ph. U. S. and Br.), nitric acid, aqua fortis; a colorless liquid containing 68 per cent. (Ph. Br. 70 per cent.) by weight of pure n. a. or hydrogen nitrate; used internally in doses of ♏ij–v (0.13–0.32), and also externally as a caustic. **A. n. dilu′tum**, diluted nitric acid, contains 10 per cent. (Ph. Br. 17.44 per cent.) by weight of pure n. a.; employed internally as a stomachic tonic and hepatic stimulant in doses of ♏x–xxx (0.65–2.0). **A. n. fu′mans**, fuming nitric acid, contains about 90 per cent. pure n. a. with nitrous acid in saturated solution ; a reddish-brown liquid giving off reddish-yellow fumes; used as an escharotic. **A. n. tech′nicum**, commercial n. a., aqua fortis; contains about 60 per cent. pure n. a. **A. nitrohydrochlor′icum** (Ph. U. S.), nitrohydrochloric or nitromuriatic acid, aqua regia; a fuming yellow liquid, a mixture of hydrochloric and nitric acids in the proportion of 4.5 volumes of the former to 1 of the latter ; employed chiefly as a caustic, but sometimes given internally in doses of ♏j–iij (0.06–0.2). **A. n. dilu′tum** (Ph. U. S. and Br.), diluted nitrohydrochloric or nitromuriatic acid; a pale yellow or colorless liquid containing 1 volume of the strong acid in 3.5 volumes of water; employed as an hepatic tonic in doses of ♏x–xx (0.65–1.3). **A. nitro-nitro′sum**, fuming nitric acid. **A. nitroxan′thicum**, picric acid. **A. ole′icum** (Ph. U. S. and Br.), oleic acid; a brownish-yellow, oily liquid with a faint odor and a weakly acid reaction, insoluble in water, but soluble in alcohol, ether, chloroform, and the fixed oils; used in the preparation of oleates. **A. olein′icum**, a. oleicum. **A. orthophosphor′icum**, a. phosphoricum. **A. os′sium**, phosphoric acid. **A. peros′micum**, osmic acid. **A. phe′nicum** or **phenyl′icum** or **phenylo′sum**, carbolic acid. **A. phosphor′icum** (Ph. U. S.), phosphoric acid, a liquid containing not less than 85 per cent. absolute phosphoric a. The equivalent preparation of the Ph. Br. is called *acidum phosphoricum concentratum*, and contains 66.3 per cent. of the absolute acid. Dose, ♏ij–viij (0.13–0.5). **A. p. dilu′tum**, diluted phosphoric acid, contains 10 per cent. (Ph. Br. 13.8 per cent.) of absolute p. a; employed as a tonic and in dyspepsia, rickets, etc., in doses of ♏xv–ʒj (1.0–4.0). **A. po′micum**, malic acid. **A. pyroace′ticum**, pyroligneous acid. **A. pyrogal′licum**, pyrogallic acid. **A. pyrolig′neum**, pyroligneous acid. **A. pyroxyl′icum**, pyroligneous acid. **A. quercitan′nicum**, tannin. **A. sac′chari** or **sacchari′num**, oxalic acid. **A. salicyl′icum** (Ph. U. S. and Br.), salicylic acid; a white, crystalline powder or needle-shaped crystals, made from sodium carbolate or oil of wintergreen; employed in rheumatism (more commonly as a salicylate) in doses of gr. v–xv (0.3–1.0). **A. sa′lis** or **sa′lis culina′ris**, or **sa′lis mari′ni**, muriatic acid. **A. scytodeph′icum**, tannin. **A. sep′ticum**, nitric acid. **A. stear′icum** (Ph. U. S.), stearic acid; a white, solid (at ordinary temperature) mass, derived from animal fats; used in pharmacy. **A. stearin′icum**, a. stearicum. **A. stib′icum**, antimonic acid. **A. stibio′sum**, antimonious acid. **A. sulphur′icum** (Ph. U. S. and Br.), sulphuric acid, oil of vitriol; an oily liquid containing 92.5 per cent. (Ph. Br. 98 per cent.) absolute s. a.; dose, ♏j–ij (0.065–0.13). **A. s. alcoolisa′tum**, elixir acidum Halleri. **A. s. aromat′icum**, aromatic sulphuric acid, elixir of vitriol, contains 20 per cent. (Ph. Br. 13.8 per cent.) absolute acid, with tincture of ginger and oil of cinnamon, in alcohol ; used as a tonic in lead poisoning, etc., in doses of ♏v–xx( 0.32–1.3). **A. s. dilu′tum**, diluted sulphuric acid, contains 10 per cent. (Ph. Br. 13.65 per cent.) of absolute s. a.; dose, ♏x–xx (0.65–1.3). **A. s. fu′mans**, fuming sulphuric acid, Nordhausen sulphuric acid; used as an escharotic. **A. s. vena′le**, commercial sulphuric acid. **A. sulph′uris**, sulphuric acid. **A. s. volat′ile**, sulphurous acid. **A. sulphuro′sum** (Ph. U. S. and Br.), sulphurous acid; a liquid containing 6.4 per cent. (Ph. Br. 5 per cent.) sulphurous anhydride (usually called sulphurous acid gas) ; employed in dyspepsia in doses of ♏x–ʒj (0.65–4.0). **A. tan′nicum** (Ph. U. S. and Br.), tannic acid, tannin; a light yellow, amorphous powder, turning dark on exposure, derived from galls; employed externally as an astringent and styptic, and internally in diarrhœa and hemorrhage in doses of gr. ij–x (0.13–0.65). **A. tartar′icum** (Ph. U. S. and Br.), tartaric acid; a white powder, prepared from the crude cream of tartar in wine casks; employed as a refrigerant in doses of gr. v–xx (0.32–1.3). **A. thy′micum**, thymol. **A. trinitrophe′nicum**, picric acid. **A. uri′næ**, uric acid. **A. urolith′icum**, uric acid. **A. vitri′oli** or **vitriol′icum**, sulphuric acid. **A. vitriol′icum vino′sum**, elixir acidum Halleri. **A. zoö′ticum** or **zoötin′icum**, hydrocyanic acid.

**Acidur′gia** (*akis*, sharp instrument, *ergon*, work). An old term for operative surgery.

**A′cies** (steel). Eminence at one side of the foramen of Monro. Pupil of the eye. Keen eyesight. **A. digito′rum**, phalanges. **A. diur′na**, nyctalopia. **A. noctur′na**, hemeralopia.

**Acine′sia.** Akinesia.

**Acine′sic** or **Acinet′ic.** Akinetic.

**Acine′sis.** Akinesis.

**A′cini** (pl. of acinus). See *Corpora Malpighiana and Spleen.* **A. bilio′si**, acini or lobules of the liver. **A. glandulo′si**, acini of a gland. **A. inter′ni**, acini of Malpighi. **A. lie′nis**, corpuscles of the spleen. **A. of Malpi′ghi**, see *Corpora Malpighiana and Spleen.* **A. rena′les**, corpora Malpighiana.

**Acin′iform.** Like a bunch of grapes. **A. tu′nic**, the choroid, uvea, etc.

**A′cinos.** Species of thyme, formerly used internally as an astringent, and externally as an application to ulcers, etc.

**A′cinose** or **A′cinous.** Like grapes, as acinous lobules or acini. See *Acinus.*

**Acinotu′bular.** Glands having acini and tubules for secretion.

**A′cinus, A. glandulo′sus** (*acinus*, bunch of grapes). A glandiform corpuscle; smallest part of a racemose gland, in which secretion takes place and the excretory radicle arises; minute lobule of lung or liver; small, closed cavity in a ductless gland, such as the thyroid. Acini glandulosi are found in glands like the pancreas, arranged in clusters; such glands are called *glandulæ acinosæ, acinous glands.*

**A′cis** (*akis*, point). Sharp point; acute pain; bandage.

**Ack′erman's an′gles.** Abnormally acute angles at the base of the skull, observed in kyphosis under certain conditions, in hydrocephalus, and encephalocele.

**Aclas′tic** (*a*, priv., *klao*, to break). Not refracting.

**Aclei′dian** or **Acli′dian** (*a*, priv., *kleis*, clavicle). Devoid of clavicle or clavicles.

**Acleitocar′dia** (*a*, priv., *kleitos*, closed, *kardia*, heart). Cyanopathy or blue disease from imperfectly closed foramen ovale.

**Acmæamor′pha** (*akmaios*, in full bloom). Amorpha or intertrigo of adults.

**Acmæochloro′sis.** Chlorosis of adults.

**Acmæopolysar′cia.** Polysarcia or excessive obesity of adults.

**Acmas′tic** (*akme*, top, *astiktos*, unmarked). Continuous, as a fever which preserves an equal degree of intensity throughout its course.

**Ac′me** (*akme*, top). Vigor; period of disease at which the symptoms are most violent. *Arche* is the commencement, *anabasis* the period of increase, *acme* the height, *catabasis* the decline. Acne.

**Acme′la, Acme′lia, Acmel′la.** Spilanthus acmella. **A. linnæ′i**, plant of India and South America; sialagogue and antiscorbutic. **A. mauritia′na**, Spilanthus acmella. **A. re′pens**, grows in United States; has same properties as A. linnæi.

**Ac′mon.** Incus.

**Ac′ne** (probably from *akme*, point). Stonepock, whelk. Chronic inflammation of the sebaceous glands and surrounding tissues, accompanied by the formation of papules and pustules, usually appearing on the forehead, chin, breast, and back. **Ad′enoid a.**, a disseminated variety of a. vulgaris. **A. al′bida**, milium. **A. artificia′lis**, eruption due to the use of certain drugs, as iodine, bromine, etc. **A. atroph′ica**, a. varioliformis; a. accompanied with atrophy and subsequent scars; a form of lupus erythematosus. **A. broma′ta**, acne from the internal use of bromides. **A. cachectico′rum**, acne of cachectic or broken-down persons, occurring especially on the trunk or limbs. **A. cervi′cis**, inflammation of the follicles of the cervix uteri. **A. cilia′ris**, inflammation of the sebaceous glands of the edge of the eyelids. **A. coagmina′ta**, acne in which pustules are aggregated together. **A. contagio′sa**, pustular affection of horses. **A. cor′nea**, acne with indurated sebaceous matter; follicular ichthyosis. **A. dissemina′ta**, disseminated variety of a. vulgaris. **A. erythemato′sa**, a. rosacea. **A. exul′cerans**, a. beginning with irregular papules terminating in necrosis and cicatrices. **A. fronta′lis**, a. varioliformis. **A. granulo′sa**, a. cachecticorum. **A. horde′olans** or **hordeola′ris**, acne in which the pustules are like grains of barley. **A. hypertroph′ica**, acne accompanied with hypertrophy; hypertrophic form of a. rosacea. **A. indura′ta**, acne with hardened papules or tubercles. **A. ioda′ta**, acne from the internal use of iodine or iodides. **Ke′loid a.**, dermatitis papillaris capillitii. **A. kerato′sa**, variety of a. vulgaris, the hair follicles becoming horny. **Lu′poid a.**, a. frontalis; lupus miliaris. **A. medicamento′sa**, acne from the internal use of drugs. **A. ment′agra**, sycosis. **A. milia′ris**, milium; pustular acne rosacea. **A. mollus′cum**, molluscum contagiosum. **A. necrot′ica**, necrotic granuloma; acneiform paratuberculosis; a. varioliformis. **A. necroti′zans**, a. necrotica; a. frontalis. **A. papulo′sum**, papular form of acne. **A. parasit′ica**, an acneiform dermatitis, some forms of which are caused by pus cocci disseminated by the fingernails or other means. **A. pend′ulum**, molluscum pendulum. **A. picea′lis**, papular form of acne from the external use of tar. **A. pila′ris**, a. frontalis; a. necrotica. **A. puncta′ta**, papular form of acne with comedones. **A. pustulo′sa**, pustular form of acne that is usually met with, the pustules being aggregated together. **A. rhinophy′ma**, a. hypertrophica; a. rosacea. **A. ro′dens**, a. varioliformis; a. frontalis. **A. rosa′cea**, gutta rosea; a chronic dermatitis, especially of the nose, marked by redness, dilatation of the bloodvessels, thickened skin, and acne papules and pustules. **A. scorbu′tica**, a. associated with scurvy. **A. scrophuloso′rum**, a. cachecticorum. **A. seba′cea**, seborrhœa ; xeroderma. **A. seni′lis**, gutta rosea. **A. sim′plex**, acne. **A. sola′ris**, papular acne on parts of the body exposed to the sun. **A. strophulo′sa**, milium; strophulus albidus. **A. syco′sis**, sycosis. **A. syphilit′ica**, pustular syphilide; acne of the throat; follicular pharyngitis. **A. tar′si**, a. of the eyelid. **A. tubera′ta** or **tubercu-**

lo′sa, a. indurata. **A. umbilica′ta,** a. varioliformis. **A. urtica′ta,** an itching and painful form of a. frontalis. **A. variolifor′mis,** pustular form attended with eruption like smallpox; molluscum contagiosum; necrotic granuloma; a. frontalis. **A. viri′lis,** acne indurata. **A. vulga′ris,** term including three forms: simplex, indurata, and punctata.

**Ac′neform** or **Acne′iform.** Resembling acne.

**Acne′mia** (*a*, priv., *kneme*, leg). Absence or imperfect development of the legs.

**Acne′mus.** One affected with acnemia.

**Acnes′mus** (*a*, priv., *knesmos*, itching). Free from itching.

**Acnes′tis** (*a*, priv., *knao*, to scratch). Part of the spine extending in quadrupeds from between the shoulders to the loins; vertebral column; nettle.

**Ac′nida cannab′ina.** Virginia hemp.

**Acni′tis.** Necrotic granuloma; hydradenitis destruens suppurativa.

**Acocantherin′.** Ouabain.

**Acoccy′geus** (*a*, priv., *kokkyx*, coccyx). Devoid of coccyx; without tail.

**Acœ′lia** or **Acœlo′sis** (*a*, priv., *koilia*, cavity, belly). Absence of cavity; deficiency of abdomen.

**Acœ′lius.** Devoid of belly; one so emaciated as to appear to have no belly.

**Acoe′sis** (Gr.). Audition.

**Acogno′sia** (*akos*, remedy, *gnosis*, knowledge). Study of drugs.

**Acog′raphy** (*akos*, remedy, *grapho*, to describe). Description of drugs or remedies.

**Acoin′.** A white, crystalline powder derived from guanin; used as a local anæsthetic in solutions of 1:1000 to 1:100.

**Acola′sia** (*a*, priv., *kolazo*, to restrain). Intemperance, as of appetite or passions.

**Acolas′tic.** Intemperate; pertaining to acolasia.

**Acol′ogy** (*akos*, a remedy, *logos*, discourse). An old term for materia medica; therapeutics.

**Aco′lous** (*a*, priv., *kolon*, limb). Devoid of limbs or feet.

**Acolu′thia** (Gr.). Sequela.

**Acolyctine′.** Alkaloid from Aconitum lycoctonum.

**Aco′mas.** Name given to several trees in Guiana, the roots of which are used in gonorrhœa.

**Aco′mia** (*a*, priv., *kome*, hair). Want of hair, baldness, alopecia, acosmia.

**Ac′ona.** West Indian shrub; fruit is aromatic and stimulant.

**Acon′dylous** (*a*, priv., *kondylos*, joint). Not provided with joints.

**Aconel′la** or **Aconelline′.** Alkaloid from Aconitum napellus, resembling narcotine in composition.

**Aconine′.** A derivative from aconite, perhaps the same as napelline.

**Ac′onite.** See *Aconitum napellus*. **Amer′ican a.,** Aconitum uncinatum. **In′dian a.,** Aconitum ferox. **Moun′tain a.,** Aconitum neomontanum. **Nepal′ a.,** various species of aconite growing in Nepal. **Win′ter a.,** Eranthis hiemalis.

**Aconi′ti fo′lia.** Aconite leaves. **A. ra′dix,** aconite root.

**Aconi′tia.** Aconitine.

**Aconit′ic acid.** $C_6H_6O_6$. A tribasic, crystallized acid in aconite and other plants; when citric acid is decomposed by heat this acid is one of the results.

**Aconiti′na.** (Ph. Br.) Aconitine.

**Aconiti′næ olea′tum.** Oleate of aconitine; used externally in neuralgia. **A. unguen′tum,** ointment of aconitine; official in Ph. Br., containing 2 parts of aconitine in 100 of ointment.

**Aconitine′.** $C_{30}H_{47}NO_7$. White powder, soluble in chloroform, alcohol, and ether, insoluble in water; very poisonous; active principle of Aconitum napellus and other aconita; official in Ph. Br., but not in Ph. U. S. Numbness and tingling are produced by even small fractional doses; powerful cardiac sedative; it has been used internally, and externally as an oleate or ointment. Dose is gr. $\frac{1}{200}$–$\frac{1}{100}$ (0.0003–0.0006).

**Aconi′tum.** Official name in the Ph. U. S. for the tuber of A. napellus, ord. *Ranunculaceæ*. The Ph. Br. has two preparations, leaves and tuber (see *Aconitum napellus*). Various species of aconitum have been used in medicine in fevers, throat affections, inflammation of the lungs and bronchial tubes, etc.; they are all poisonous in different degrees. **A. altigalea′tum,** A. cammarum. **A. an′thora** or **anthoroid′eum,** salutary monkshood, wholesome wolfbane, yellow helmet-flower; root of this plant, growing in the Alps, is cathartic and anthelmintic. **A. barba′tum,** species from Siberia; root is stimulant, diaphoretic, diuretic. **A. bernhardia′num,** A. cammarum. **A. cam′marum,** resembles Aconitum napellus in properties. **A. candol′lei,** A. anthora. **A. chinen′se,** Chinese species, the root of which is used to poison arrows and as a local anæsthetic. **A. columbia′num,** A. anthora. **A. eu′lophum,** A. anthora. **A. fe′rox,** violent poison growing in Nepal; *bish* or *bikh poison* of that country; its effects are like those of Aconitum napellus. **A. fisch′eri,** a species growing in Japan and United States; very poisonous. **A. heterophyl′lum,** root of this Himalayan species has tonic and antiperiodic properties; the plant is eaten as a vegetable. **A. interme′dium,** A. neomontanum. **A. jacqui′ni,** A. anthora. **A. japon′icum,** species growing in Japan, root of which resembles in properties that of A. chinense. **A. kusnezo′vii,** A. cammarum. **A. lu′teum,** yellow aconite, A. lycoctonum. **A. lycoc′tonum,** great yellow wolfsbane; species growing in various parts of Europe; root is poisonous. **A. macran′thum,** A. cammarum. **A. multif′idum,** a species of aconite having edible roots. **A. napel′lus,** aconite, monkshood, or wolfsbane; the root, leaves, and flowering tops of this perennial herbaceous plant, indigenous in Asia and Northern Europe, are used medicinally; powerful sedative and anodyne. Leaves (aconiti folia) and root (aconiti radix) are both official in the Ph. Br., only the tuber (aconitum) in the Ph. U. S. Aconite is seldom given in substance, but usually in the form of abstract—dose, gr. $\frac{1}{4}$–$\frac{1}{2}$ (0.016–0.03); extract—dose, gr. $\frac{1}{6}$–$\frac{1}{4}$ (0.01–0.016); fluid extract—dose, ♏j–ij (0.06–0.13); or tincture—dose, ♏j–v (0.06–0.3). Fleming's tincture, a stronger preparation, is given in doses of ♏ss–ij (0.03–0.13); the tincture of the Ph. Br. is much weaker, being given in doses of ♏v–xv (0.3–1.0). Aconite is used to control inflammation and the accompanying fever, especially inflammation of the tonsils and pharynx; to reduce the pulse, and to subdue neuralgia. **A. nasu′tum,** A. fischeri. **A. nemoro′sum,** A. anthora. **A. neomonta′num,** mountain aconite of Europe; A. napellus. **A. ochroleu′cum,** non-poisonous Caucasian species. **A. palma′tum,** non-poisonous Himalayan species. **A. panicula′tum,** A. cammarum. **A. pon′ticum,** A. lycoctonum. **A. pyrena′icum,** species from Pyrenees, variety of A. lycoctonum. **A. racemo′sum,** Actæa spicata. **A. reclina′tum,** species growing in Southern United States. **A. rostra′tum,** A. cammarum. **A. rotundifo′lium,** species with edible roots. **A. salutif′erum,** A. anthora. **A. scan′dens,** A. uncinatum. **A. septentriona′le,** variety of A. lycoctonum growing in northern parts of Europe, and having poisonous root. **A. sinen′se,** Chinese aconite. **A. spica′tum,** variety of A. napellus. **A. stoerkea′num,** species of aconitum, sometimes gathered by mistake for A. napellus; the amount of alkaloid in it is small. **A. stric′tum,** variety of A. napellus. **A. uncina′tum,** wild monkshood; indigenous; said to have virtues similar to A. napellus. **A. vanab′ile,** A. napellus. **A. variega′tum,** A. cammarum. **A. viro′sum,** A. ferox. **A. vulga′rum,** A. napellus. **A. vulpa′ria,** A. lycoctonum.

**Aconure′sis.** Involuntary urination; enuresis.

**Acop′ic** (*a*, priv., *kopos*, fatigue). Fatigue relieving; analeptic.

**Acop′ria** or **Acopro′sis** (*a*, priv., *kopros*, excrement). Constipation; defect in fecal formation.

**A′cor** (*acer*, sour). Sourness; an old term for acid, as a. aceticus, acetic acid, etc. Acidity; in this sense usually qualified, as a. ventriculi.

**Acor'ea** (*a*, priv., *kore*, the pupil). Absence of the pupil of the eye.

**Acoretin'.** A resinous principle derived from Acorus calamus.

**Acor'ia** (*a*, priv., *koreo*, to satiate). Inordinate or canine appetite, which even large eating fails to satiate; the term has also been applied to the opposite state of moderation in eating.

**Acorin'.** Bitter principle of calamus.

**Acor'mus** (*a*, priv., *kormos*, trunk). Monster devoid of trunk.

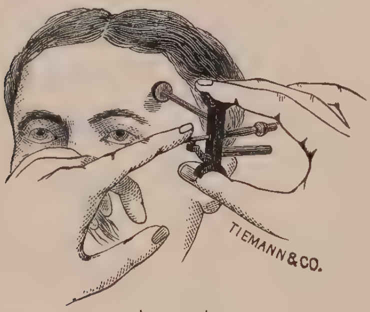
**A'corn.** Nut of Quercus alba and other oak trees. **Ju'piter's a.,** Fagus castanea. **Oil'y a.,** Guilandina moringa. **Sardin'ian a.,** Fagus castanea. **Sweet a.,** edible fruit of Quercus ballota.

**Ac'orus.** A genus of plants to which belongs the official *calamus* or sweet flag. **A. adulteri'nus,** iris pseudacorus. **A. aromat'icus,** A. calamus. **A. brasilien'sis,** A. calamus. **A. cal'amus,** sweet flag or acorus, flagroot, sweet cane, myrtle flag, sweet grass, sweet root, sweet rush; ord. *Aroideæ;* indigenous in N. America and Asia. Rhizome, *calamus* (Ph. U. S.), is a stomachic and carminative. **A. fal'sus,** Iris pseudacorus. **A. gramin'eus,** aromatic species growing in China, Japan, etc. **A. in'dicus,** A. gramineus. **A. odora'tus,** A. calamus. **A. palus'tris,** Iris pseudacorus. **A. terres'tris,** Chinese species; tonic and antispasmodic. **A. ve'rus,** A. calamus. **A. vulga'ris,** Iris pseudacorus.

**Acos'mia** (*a*, priv., *kosmos*, order, ornament). Disorder; irregularity in critical days, according to Galen, who uses the word *kosmos* for regularity in those days.

**Acoucro'ba.** Plant of Guinea used in smallpox.

**Acou'meter** or **Acouom'eter** (*akouo*, to hear, *metron*, measure). Instrument for measuring the acuity of hearing through bone conduction.



Acoumeter.

**Acou'metry.** Measurement of degree of hearing.

**Acouopho'nia** or **Acouoph'ony** (*akouo*, to hear, *phone*, sound). Auscultatory percussion; mode of auscultation, in which the observer places the ear or the bell of a stethoscope on the chest and analyzes the sound produced by percussion.

**Acouox'ylon** (*akouo*, to hear, *xylon*, wood). Stethoscope made of one piece of wood, devised by Niemeyer.

**Ac'ouphone.** An instrument constructed on the principle of the telephone, with receiver, ear-piece, and portable battery, for aiding the deaf to hear.

**Acoupho'nia.** Acouophonia.

**Acou'sia** (*akousia*, restraint). Involuntary action; also audition (from *akousis*, hearing).

**Acousim'eter.** Instrument for measuring the acuity of hearing.

**Acous'ma** (*akousma*, anything heard). Imaginary noise; depraved sense of hearing.

**Acousmat'ic.** Acoustic.

**Acousmet'ric, Acousimet'ric,** or **Acousmomet'ric** (*akousma*, thing heard, *metron*, measure). Relating to measurement of sense of hearing.

**Acous'tic** (*akoustikos*, relating to hearing). That which belongs to the ear or to hearing. **A. appara'tus,** see *Ear.* **A. crest,** crista acustica. **A. duct,** external auditory meatus. **A. hyste'ria,** hysterical state, with sudden, intense deafness, with abnormal nervous sensations. **A. med'icine,** one used in diseased audition. **A. nerve,** auditory nerve. **A. neurasthe'nia,** nervous exhaustion, with deafness as an added symptom to the usual train of phenomena. **A. re'flex,** see *Reflex.* **A. spot,** macula acustica. **A. stri'æ,** medullary striæ. **A. tu'bercle,** projection on the floor of the fourth ventricle of the brain.

**Acous'tica.** Remedies for impaired hearing.

**Acous'ticomallæ'us.** Laxator tympani muscle.

**Acous'ticon** (*akouo*, to hear). Apparatus designed to improve the hearing of deaf persons; having a sound-bell and vibratile membrane, and a metal tip to be introduced into the external auditory meatus.

**Acous'tics.** Part of physics treating of the theory of sounds.

**Acquired' diseas'es.** Adventitious diseases; diseases which occur after birth and are not dependent upon hereditary predisposition. **A. move'ments,** muscular actions that have become voluntary only after conscious effort.

**Acraconitine'.** Pseudaconitine.

**Acræ'pala** or **Acrai'pala** (*a*, priv., *kraipale*, debauch). Remedies against effects of a debauch.

**Acra'lea** (*akros*, at the extremity). Extreme parts of the body, as the head, hands, feet, nose, ears, etc.

**Acra'nia** (*a*, priv., *kranion*, cranium). Want of cranium, wholly or in part; monstrosity in which such condition exists.

**Acra'nial.** Having no skull.

**Acra'nius.** A monster in which the cranium is absent.

**Acra'sia** or **Ac'rasy** (*a*, priv., *krasis*, mixture). Intemperance; excess of any kind.

**Acrature'sis** (*akrateia*, not having power over, *ouresis*, the act of discharging urine). Inability to void urine, as from paralysis or atony of the bladder.

**Ac'ria** (neut. pl. of *acer*, sharp, pungent). Acrid or bitter articles, remedies, or poisons.

**Acribom'eter** (*akribes*, precise, *metron*, measurement). Instrument for measuring small objects.

**Ac'rid** (*acer*, sharp, pungent). Term applied to substances of hot, biting taste which occasion a disagreeable sense of irritation and constriction in the throat; or which when applied externally cause heat and irritation of the skin. **A. poi'sons,** see *Poisons.*

**Acridin'.** $C_{13}H_9N$. A synthetic alkaloid obtained by heating together anilin and salicylic aldehyde.

**Acrid'ity.** State of being acid or irritating.

**Acrid'ium.** Scammony.

**Acridoph'agy** (*akris*, a locust, *phago*, to eat). Eating of locusts, or disease in Ethiopia supposed to be caused by use of locusts as food, or by irritation of the skin from the action of locusts upon it.

**Ac'rimony** (*acer*, acrid). Imaginary acrid condition of blood, lymph, etc., which was conceived to cause many diseases. Irritation produced by a sore.

**Acrin'ia** (*a*, priv., *krino*, to separate). Diminution of quantity or total suspension of secretion.

**Ac'ris.** Sharp, bony prominence; locust; acrisia.

**Acris'ia** or **Ac'risis** (*a*, priv., *krisis*, judgment or crisis). Absence of crisis in disease.

**Ac'rita** (*a*, priv., *krino*, to separate). Lowest subdivision of vertebrate animals, having no discoverable nervous system. (Owen.)

**Acrit'ical** (*a*, priv., *krisis*, crisis). Taking place without crisis; not foretelling a crisis, as a critical symptom, etc.

**Acritochro'macy** (*a*, priv., *krino*, to choose, *chroma*, color). Color-blindness.

**Acritochromat'ic.** Color-blind.

**Acrivi'ola** (*acer*, sharp, *viola*, a violet). Tropæolum majus.

**Acro-** (*akron*, top, extremity). In composition, top or extremity.

**Acroæsthe'sia** (*akron*, top, *aisthesis*, sensation).

High degree of nervous sensibility, as in hysteria. Pain in the extremities.

**Acroanæsthe′sia** (*akron*, extremity, *a*, priv., *aisthesis*, sensation). Loss of sensation in the extremities.

**Acroarthri′tis** (*akron*, extremity, *arthron*, joint). Inflammation of one of the distal joints, knee or elbow or lower down.

**Acroasphyx′ia** (*akron*, extremity, *asphyxia*, an arrest of the pulse). Local asphyxia or gangrene in an extremity.

**Ac′roblasts** (*akros*, extreme, *blastos*, germ). Cells between ectoblast and endoblast.

**Acrobys′tia** (*akron*, top, *byo*, to cover). Prepuce, or extremity of prepuce. Condition of being uncircumcised.

**Acrobys′tic.** Preputial.

**Acrobyst′iolith** (*lithos*, stone). Preputial calculus.

**Acrobysti′tis.** Inflammation of prepuce, or of sheath of penis of horse.

**Acrocarpid′ium hispid′ulum.** Species of tonic, piperaceous, West Indian plants.

**Acrocepha′lia** or **Acroceph′aly** (*akron*, top, *kephale*, head). Unusual prominence at the top of the head; high or pyramidal skull.

**Acrocephal′ic** or **Acroceph′alous.** Term applied to heads unusually prominent on the top.

**Acroceph′alus.** One who is acrocephalic.

**Ac′rocheir** or **Ac′rochir** (*akron*, extremity, *cheir*, hand). Forearm; extremity of the hand or fingers.

**Acrochor′don** (*akros*, extreme, *chorde*, string). Tumor hanging by pedicle; pedunculated wart; enlarged sebaceous gland of eyelids, neck, etc.

**Acrocine′sis** (*akros*, extreme, *kinesis*, movement). Increased power of movement.

**Acroco′lia** (*akros*, *kolon*, member). Extreme parts of the body, as the head, hands, feet, nose, ears.

**Acroco′lium.** Acromion process.

**Acroco′mia lasiospath′a.** Brazilian tree, with edible fruit. **A. sclerocar′pa**, tree of West Indies and South America whose nut is used in catarrh.

**Acrocyano′sis** (*akron*, extremity, *kyanos*, dark blue). Impaired circulation, evidenced by blueness of the skin, in the hands and feet.

**Acrodac′tylum** (*akros*, top, *daktylos*, finger). Upper surface of the finger.

**Acrodiclid′ium cama′ra.** Indigenous in Brazil; wood is bitter, and fruit, ackawai nutmeg, is employed in dysentery.

**Ac′rodont** (*akros*, edge, *odous*, tooth). Having teeth attached to the edge of the jaw without alveoli.

**Acrodyn′ia** or **Acrod′yny** (*akron*, extremity, *odyne*, pain). Epidemic erythema; literally, pain in the extremities; painful affection of the wrists and ankles, with erythematous eruption and dark pigmentation, with nervous disorders, epidemic in 1828–29 in Paris; dengue; a condition like dengue, pellagra, or ergotism.

**Acrokine′sis.** Acrocinesis.

**Acrolein′** (*acer*, sharp, *oleum*, oil). $CH_2CHCOH$. Volatile liquid obtained in destructive distillation of glycerin.

**Acrolen′ion** (*akros*, top, *olene*, ulna). Olecranon process.

**Acroma′nia.** Incurable or hopeless insanity.

**Acromas′tium** (*akros*, top, *mastos*, breast). Nipple.

**Acromeg′aly** or **Acromega′lia** (*akron*, extremity, *megas*, large). Marie's disease, the chief characteristic of which is great hypertrophy of the hands, feet, face, etc., with thickening of soft parts; the muscles are sometimes atrophied. The disease may last for many years. There is enlargement of the bones, and also of the pituitary body, which last is credited by some as the cause of the disease.

**Acro′mia.** Acromion process.

**Acro′mial.** Relating to the acromion process. **A. an′gle**, the angle formed by the clavicle and the head of the humerus. **A. ar′tery**, external scapular artery; it arises from the anterior part of the axillary artery opposite the upper edge of the pectoralis minor, and divides into two branches, superior and inferior; the branches are distributed to the subclavius, serratus major anticus, first intercostal, deltoid, and pectoralis major muscles, the shoulder-joint, etc.; they anastomose with the superior scapular, thoracic, and circumflex arteries. **A. bur′sa**, the external a. bursa is the upper portion of the subdeltoid bursa; the internal the subcoracoid bursa. **A. nerves**, branches of the fourth cervical nerve distributed to the acromial region. **A. vein** has the same arrangement as the artery.

**Acromic′ria** (*akron*, extremity, *micros*, small). Atrophy of the hands, feet, face, etc., without change of shape; the antithesis of acromegaly.

**Acromioclavic′ular.** Belonging to the acromion and clavicle, as acromioclavicular articulation, acromioclavicular ligaments.

**Acromioclavicular′is.** A delicate muscle passing from the acromion process to the outer third of the clavicle.

**Acromiocor′acoid.** Belonging to the acromion and coracoid process, as the acromiocoracoid or coracoacromial ligaments; a triangular ligament between these processes.

**Acromiohumeral′is.** Belonging to the acromion and humerus; the deltoid muscle is so called.

**Acromiohy′oid.** Belonging to the acromion and the hyoid bone; a part of the omohyoid muscle is so called.

**Acro′mion** (*akros*, top, *omos*, shoulder). Process terminating the spine of the scapula and articulated with the clavicle. The deltoid muscle is attached to it.

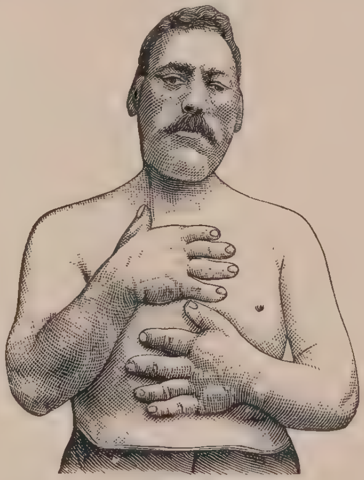
**Acromiorrheu′ma.** Rheumatism of the shoulder.

**Acromiothora′cic.** Belonging to the acromion and thorax. **A. ar′tery**, branch from the axillary muscle to the pectoralis, deltoid, and contiguous parts.

**Acromiotrape′zius.** A portion of the trapezius in relation with the acromion, developed as a special muscle in certain animals.

**Acro′mis** or **Acro′mium.** Acromion.

**Acromphal′ium**, **Acrom′phalus**, or **Achrom′phalon** (*akros*, extreme, *omphalos*, navel). Extremity of the umbilical cord remaining attached to the fœtus after birth; protuberance of the navel.



Acromegaly, showing the large face and hands. (Dercum.)

**Acromy′le** (*akros*, *myle*, patella). Patella.

**Ac′ron.** Extremity.

**Acronarcot′ic.** Irritant and narcotic, as an acronarcotic poison.

**Acroneuro′sis** (*akron*, extremity, *neuron*, nerve). A functional nervous affection of the extremities.

**Acro′nia** (mutilation). Amputation or mutilation of a part; monstrosity having such defect.

**Acronorrheu′ma.** Acromiorrheuma.

**Acronych'ia** (*akros*, top, *onyx*, nail). Extremity of the nail. **A. laurifo'lia,** rutaceous plant of Java, astringent bark of which is used in diarrhœa. **A. peduncula'ta,** species of E. Indies with edible fruit. **A. resino'sa,** Chinese plant containing a resin used externally in rheumatism.

**Ac'ronyx** (*akros*, top, *onyx*, nail). Growing in of the nail.

**Acroparæsthe'sia, Acroparesthe'sia** (*akron*, extremity, *para*, beyond, *aisthesis*, sensation). An affection characterized by numbness and stiffness of the extremities, without atrophy, paralysis, or pain; the prognosis is favorable; very pronounced paræsthesia, or paræsthesia of the extremities.

**Acroparal'ysis.** Palsy of the extremities.

**Acropathol'ogy.** Pathology of the extremities.

**Acrop'athy** (*akron*, extremity, *pathos*, disease). Disease of the extremities, as the feet or hands.

**Acropho'bia** (*akron*, top, *phobos*, fear). A morbid dread of being at great elevations; an old term for hydrophobia.

**Acroplethys'mograph.** Plethysmograph.

**Acropo'dium** (*akros*, top, *pous*, foot). Upper surface of the foot.

**Acropos'thia** or **Acropos'thion** (*akros*, top, *posthe*, prepuce). Prepuce.

**Acroposthi'tis.** Inflammation of the prepuce.

**Acrop'silon** (*akros*, top, *psilos*, naked). Extremity of the glans penis.

**Acro'ria** (*akroreia*, a mountain ridge). Vertex.

**Acrorrheu'ma** (*akron*, extremity, *rheuma*, flux, rheumatism). Rheumatism of the extremities.

**Acrospha'celus** (*akron*, extremity, *sphakelos*, gangrene). Gangrene or local asphyxia of the extremities.

**Acros'tichum au'reum.** Decoction of this Jamaica plant, ord. *Polypodiaceæ*, is used in dysentery and splenic disease, and externally for ulcers. **A. dichot'omum,** leaves of this Arabian tree are applied to burns. **A. fla'veus,** species from New Granada, having cathartic action. **A. furca'tum,** elk's horn; roots of this New Zealand species are edible. **A. huas'caro,** species from Peru, having diaphoretic and anthelmintic properties. **A. sorbifo'lium,** juice of this Jamaica tree is used as a local application in headache.

**Acros'toma** (*akros*, top, *stoma*, mouth). Entozoon found in amnion of cow.

**Acrotar'sium.** Upper part of tarsus in certain birds.

**Acrote'ria** (*akros*, top). The extremities; limbs.

**Acroteri'asis, Acroterio'sis,** or **Acroterias'mus** (*akroteria*, the extremities). Amputation or mutilation of the extremities; acroteriasis is also applied to absence of the hand or foot.

**Acrothy'mion, Acrothymo'sis,** or **Acrothym'ium** (*akros*, top, *thymon*, thyme). Conical, rugous, bloody wart; moist wart, like flower of thyme.

**Acrot'ic.** Relating to the glands of the skin, or simply to the surface; relating to acrotism.

**Acrot'ica.** Diseases affecting the secretory functions of the surface of the body; a morbid state of the fluids or emunctories opening on the surface.

**Ac'rotism** or **Acrotis'mus** (*a*, priv., *krotos*, pulse). Pulselessness; defective pulse beat.

**Acrotrophoneuro'sis** (*akron*, extremity, *trophe*, nourishment, *neuron*, nerve). An affection of the extremities due to disorder of the trophic nerves of the part.

**Ac'ryl al'dehyde.** Acroleine.

**Acryl'ic acid.** A monobasic liquid acid derived from acolcine.

**Act.** Effective exercise of a power or faculty. **Sex'ual a.,** coitus.

**Actæ'a.** A genus of herbs of the order *Ranunculaceæ*. **A. al'ba,** a variety of A. americana; white cohosh, white baneberry, necklaceweed, coral and pearl, Noah's ark, white bead; indigenous in United States; emetic and cathartic. **A. america'na,** there are two varieties, white and red cohosh, indigenous in the United States; it has the same properties as A. spicata. **A. brachypet'ala,** red variety of A. americana, growing in United States; has properties similar to A. spicata. **A. christophoria'na,** A. spicata. **A. cimicif'uga,** A. racemosa. **A. monog'yna,** A. racemosa. **A. ra'cemis longis'simis,** A. racemosa. **A. racemo'sa,** black snakeroot, richweed, cohosh, squawroot, rattleweed, black cohosh; a common plant in the United States. Under the name *Cimicifuga* (Ph. U. S.) are included the rhizome and rootlets of the plant. It is a stomachic tonic and expectorant, somewhat astringent, and an arterial and nervous sedative in rheumatism, bronchitis, catarrh, neuralgia, etc. **A. ru'bra,** red variety of A. americana, having properties similar to those of A. alba. **A. spica'ta,** baneberry, herb Christopher; perennial herbaceous European plant, the root resembling that of black hellebore; it is cathartic, sometimes emetic, and in overdoses powerfully irritant.

**Actinæsthe'sia** or **actinesthe'sia** (*aktis*, a ray, *aisthesis*, perception). Perception of light by some larvæ without visible organs of sight.

**Actin'ic** (*aktis*, a ray). Relating to actinism; inducing chemical action, as certain rays affecting salts of silver.

**Ac'tinism.** Power which a portion of the spectrum possesses to induce chemical action.

**Actinobo'lia** or **Actinob'olism.** Radiation; literally, emission of rays of light; transmission of will-power to various organs; hypnotism.

**Actinochem'istry.** Chemistry in its relation to actinism.

**Actinoclad'othrix** (*aktis*, ray, *klados*, branch, *thrix*, hair). Streptothrix actinomyces.

**Actinogas'tra** (*aktis*, a ray, *gaster*, stomach). Star fishes, having a radiated arrangement of the digestive organs.

**Actin'ogram** (*aktis*, ray, *gramma*, a writing). An impression produced on a sensitive photographic plate by the Röntgen rays; skiagraph.

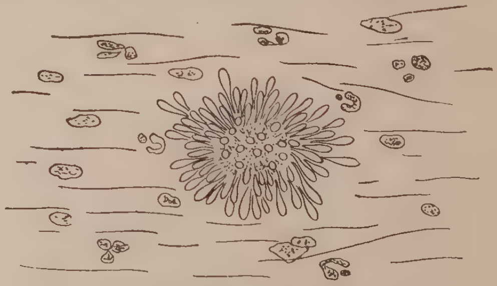
**Actin'ograph** (*aktis*, a ray, *grapho*, to write). Instrument for determining exact amount of actinism existing; skiagraph; an impression produced on a sensitive photographic plate by the Röntgen rays.

**Ac'tinoid** (*aktis*, ray, *eidos*, resemblance). Possessing a radiate form.

**Actinom'eris helianthoi'des.** Gravelweed, diabetes weed; indigenous plant, ord. *Compositæ;* formerly used in dropsy, diabetes, and gravel.

**Actinom'eter** (*aktis*, ray, *metron*, measure). Instrument devised to estimate the sun's rays or the amount of actinism present.

**Actinomy'ces** (*aktis*, a ray, *mykes*, mushroom). Ray fungus, so called from the radiating clusters of the spores; vegetable parasitic microorganisms, producing tumors of varying size in the jaws, lungs, ribs, vertebræ, etc., first observed in cattle; from them it is transmitted to man, inducing the condition to which the term *actinomycosis* is applied. **A. bo'vis,** species of actinomyces inducing actinomycosis of cattle.



Actinomycosis fungus in pus. × 5000. (Abbott.)

**Actinomyco'ma.** Tumor symptomatic of actinomycosis.

**Actinomyco'sis.** Chronic infectious sarcoma-like condition produced by actinomyces. There are tumors of various sizes in the jaws, tongue, lungs, ribs, and elsewhere, which may break down and give exit to a discharge containing the causal micro-organisms. The disease is transmitted from cattle by means of grain, straw, etc. The patient has hectic fever, emaciation, and debility. The treatment is surgical for the evacuation of the abscesses and antisepsis. When the lungs are affected successful treatment is problematical.

**Actinophthal′mic** (*aktis*, a ray, *ophthalmos*, eye). Condition of the eye in which an intense degree of reflection of light occurs from the reflecting layer of the choroid in some animals.

**Actinos′teophyte** (*aktis*, a ray, *osteon*, bone, *phyton*, growth). Osteophyte or bony growth having a radiated appearance.

**Actinother′apy** (*aktis*, ray, *therapeuo*, to treat). Employment of radio-activity in therapeutics; treatment by means of light rays, Röntgen rays, Becquerel rays, etc.

**Actinozo′a**, pl. of actinozoon (*aktis*, a ray, *zoon*, animal). Division of *Cœlenterata* in zoology, in which the digestive canal is separated from the outer wall by a space surrounding the viscera.

**Action**, ak′shun. Mode in which one object influences another; function. Animal actions are those occurring in the animal body—vital, those essential to life; physiological, those of healthy character; pathological or morbid, those of disease. **Af′ter-a.**, see *After*. **A. of arrest′**, inhibition. **Re′flex a.**, see *Reflex*.

**Ac′tive.** Energetic. In pathology it implies superabundant energy or strength; active symptoms are those of excitement. In therapeutics it signifies energetic or active treatment; drastic. In physiology it has a similar signification, functions being divided into active and passive. **A. prin′ciple**, see *Principle*. **A. spots**, cortical centres, which when stimulated are followed by certain muscular movements.

**Activ′ity.** Capability of action; vitality.

**Ac′tol.** $AgC_3H_5O_3 + H_2O$. Silver lactate; employed as an antiseptic in solutions of 1:8000 to 1:2000 in gonorrhœa and catarrhal affections of the upper air passages; also hypodermically in doses of gr. ⅙ (0.01) in erysipelas and pyæmia; internally in doses of gr. j (0.06).

**Ac′tual.** Acting immediately; term in connection with cauterization employed to denote the red-hot iron (actual cautery) or to heat in any form, in contradistinction to potential or virtual, term applied to caustics or escharotics.

**Actua′rius.** Title of dignity given to Byzantine physicians, corresponding to modern physician-in-ordinary.

**Ac′tus.** Act. **A. parturitio′nis**, parturition.

**Acuduc′tor** (*acus*, needle, *duco*, to lead). Needle-carrier, used in ligation of arteries.

**Acufi′lopressure** (*acus*, needle, *filum*, thread). Term used by Billroth for acupressure, holding the vessel between the needle and a closely applied ligature.

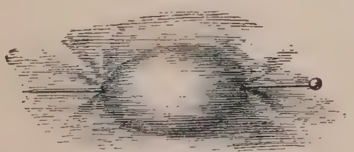
**Acu′itas** or **Acu′ity.** Sharpness. **Vis′ual a.** or **A. of vis′ion**, sharpness or acuteness of vision.

**Acu′men** (*acuo*, to sharpen). Mental acuteness; point; prominence or projection of bone; tuberosity. **A. na′si**, pinched condition of the nose in extreme debility, sometimes just before death.

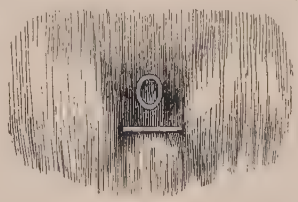
**Acu′meter** or **Acou′meter.** Instrument for measuring degree of hearing.

**Acu′minate.** Pointed.

**Acupres′sion** or **Ac′upressure** (*acus*, needle, *premo*, *pressum*, to press). Process for arresting hemorrhage, proposed by Sir James Y. Simpson, of Edinburgh, consisting in passing a needle or pin through the substance of the wound to close, by pressure with the middle portion of the needle, the tube of a bleeding vessel on the cardiac side of the bleeding point.



Acupressure on a cutaneous surface. (Erichsen.)

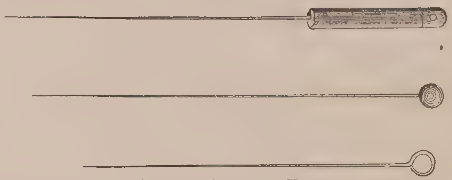


Acupressure on a raw surface. (Erichsen.)

**Acupuncta′tion, Acupunctua′tion**, or **Acupunctura′tion.** Acupuncture.

**Acupunct′urator.** An instrument for performing acupuncture.

**Ac′upuncture** (*acus*, needle, *punctura*, puncture). Puncturing of parts with a very fine needle or a bunch of needles; employed as a mode of counter-irritation in obstinate rheumatic affections, neuralgia, etc. It is a mode of infanticide in some countries, a needle being forced into the brain through the fontanelles, or into the spinal marrow, etc. **Elec′tric a.**, application of galvanism by means of needle electrodes introduced into the substance of the muscles.



Acupuncture needles.

**A′cus.** Needle; probe. Groove on the upper part of the transverse medullary lamina. **A. cannula′ta**, delicate trocar or hollow needle. **A. capita′ta**, a pin. **A. cataracta′ria**, cataract needle. **A. interpuncto′ria**, cataract needle. **A. invagina′ta**, form of needle used for counteropening; trocar. **A. moscha′ta**, Geranium maculatum. **A. ophthal′mica**, cataract needle. **A. paracentet′ica**, trocar. **A. pas to′ris**, shepherd's needle. **A. trique′tra vulga′ris**, trocar. **A. ven′eris**, Eryngium campestre.

**Acu′sia, Acusim′eter**, etc. See *Acousia*, etc.

**Acus′ticus.** Relating to hearing, as nervus acusticus, auditory nerve.

**Acute′** (Lat., *acutus*). Term applied to disease with a certain degree of severity, rapid progress, and short duration. Acute diseases were formerly subdivided into morbi acutissimi, very acute, lasting only three or four days; morbi subacutissimi, continuing seven days; and morbi subacuti, from twenty to forty days. Antithesis to *acute* is *chronic*. Acute when applied to pain, cries, etc., means sharp or intense.

**Acutenac′ulum** (*acus*, needle, *tenaculum*, holder). Form of needle tenaculum or holder employed in the ligation of arteries.

**Acutis′simus** (superl. of *acutus*). Very acute.

**Acutor′sion** (*acus*, needle, *torqueo*, to twist). Compression of a bloodvessel by twisting it with a needle such as is used in acupressure.

**Acu′tus.** Acute; also non-pregnant; sterile (from *a*, priv., and *kyo*, to be pregnant).

**Acyanoblep′sia** or **Acyanoblep′sy** (*a*, priv., *kyanos*, blue, *blepo*, to see). A form of color-blindness consisting in incapability of distinguishing blue; one so affected is *acyanoblep′tic*.

**Acyanop′sia** (*a*, priv., *kyanos*, blue, *ops*, eye). Blue-blindness; acyanoblepsia.

**Acyc′lia** (*a*, priv., *kyklos*, circle). Failure or suspension of circulation.

**Acye′sis** (*a*, priv., *kyesis*, pregnancy). Sterility; non-pregnant condition; condition requiring artificial means of delivery.

**Acyet′ic.** Relating to acyesis.

**A′cymon** (*a*, priv., *kyo*, to conceive). Sterile.

**Acyoblep′sia.** Acyanoblepsia.

**A′cyrus.** Arnica montana.

**Acys′tia** (*a*, priv., *kystis*, bladder). Absence of the urinary bladder.

**Acystiner′via, Acystoner′via,** or **Acystoneu′ria** (*a*, priv., *kystis*, bladder, *neuron*, nerve). Paralysis of the bladder.

**Acystoporid′ium.** A gregarine-like sporozoon nearly related to the hæmosporidia.

**Acysturatroph′ia** (*a*, priv., *kystis*, bladder, *ouron*, urine, *trophe*, nourishment). Atrophy of the bladder.

**Acysturonerv′ia** (*a*, priv., *kystis*, bladder, *ouron*, urine, *neuron*, nerve). Paralysis of the bladder.

**Ad** (Lat.). To; used in prescription-writing and found in certain anatomical terms; a common prefix.

**Adabada′ni.** Tree of British Guiana; bark is vesicant.

**Ad′aca.** Sphæranthus indicus; acrid and aromatic.

**Adac′rya** (*a*, priv., *dakryo*, to weep). Defective secretion of tears.

**Adactyl′ia** (*a*, priv., *daktylos*, finger). Absence of fingers. One having this condition is said to be *adac′tylous*. Such a limb is *adac′tyl*.

**Adæmo′nia.** Anxiety; depression; nostalgia or homesickness.

**Adako′dien.** Malabar plant used as an astringent and in diseases of the eyes.

**Ad′ali.** Malabar plant which Orientals regard as an antidote to snake-bites.

**Ad′am and Eve.** Orchis maculata; Aplectrum hiemale.

**Ad′amant** (*adamas*, diamond). Enamel of the teeth.

**Adamant′ine sub′stance** or **lay′er.** Enamel of the teeth.

**Adaman′toblast** (*adamas*, diamond, *blastos*, germ). Ameloblast.

**Adamkie′wicz, dem′ilunes of.** Crescentic cells beneath the neurilemma of nerve fibres.

**Ad′am's ap′ple.** Pomum Adami, projection of the thyroid cartilage in the neck. Citrus medica, fruit of Musa paradisiaca. **A.'s flan′nel,** mullein; Verbascum thapsus.

**Ad′ams's disease′.** Adams-Stokes disease. **A.'s for′ceps,** an instrument used in operation of straightening a deflected nasal septum. **A.'s opera′tion,** operation practised by Mr. W. Adams, of England, in ankylosis of hip-joint, by subcutaneous section of neck of thigh-bone; also operation for division of the bands of fascia in Dupuytren's contraction by the subcutaneous method, the sections being made at many points; also Alexander-Adams operation. **A.'s saw,** saw with slender blade and serrated edge of limited extent, for subcutaneous division of bone.

**Adams-Stokes disease′.** Abnormal slowness of the pulse with syncopal or epileptoid attack, supposed to be due to basilar and vertebral arteriosclerosis.

**Adanso′nia digita′ta** (after M. Adanson, French naturalist). African plant, baobab, from fruit of which—monkey bread—a refreshing drink is made; bark has been used as a substitute for cinchona; leaves are used in dysentery, hæmoptysis, etc.; all parts are mucilaginous. **A. grego′rii,** cream of tartar tree of Australia, so called from its taste.

**Adansonine′.** Bitter alkaloid derived from leaves of Adansonia digitata, employed as a febrifuge.

**Adapta′tion.** Accommodation of eye to varying degrees of light (also termed *adaptation of the retina*). Acclimatization. Coaptation, as of fractured bone.

**Adap′ter** (*ad*, to, *apto*, to fit). Tube employed for various purposes in pharmaceutical operations; attachment for centring or throwing out of centre the illuminator of a microscope.

**Adari′go** or **Adar′nech.** Orpiment.

**Adarticula′tio** (*ad*, to, *articulo*, to join). Arthrodia.

**Adaxo′ma** (*adaxomai*, to sting). Intense burning pain.

**Adcliv′ity.** Spine or projection. **A. of tib′ia,** spine of tibia.

**Ad cu′tem abdom′inis (arte′ria).** Superficial artery of the abdomen, branch of crural or femoral, arising at lower part of Poupart's ligament, ascending toward the umbilicus, being distributed to the integuments.

**Addepha′gia** or **Adepha′gia** (*adden*, to one's fill, *phago*, to eat). Voraciousness; voracious appetite in children affected with worms. Boulimia: gluttony.

**Ad′der's spear** or **tongue.** Ophioglossum vulgatum. **Yel′low a.'s t.,** Erythronium americanum. **A.'s wort,** snakeweed; Polygonum bistorta.

**Addic′tion** (*addico*, to devote). Subjugation to a practice or habit; specifically, a drug-habit, as addiction to morphine.

**Addiment′.** Term originally employed to designate the substance now called complement.

**Ad′dison's anæ′mia.** Pernicious anæmia. **A.'s disease′,** bronzed-skin disease; suprarenal cachexia; the leading characteristics are anæmia, general languor and debility, remarkable feebleness of the heart's action, irritability of the stomach, and a peculiar bronzed skin, first described by Dr. Thomas Addison, of London, as connected with a diseased condition of the suprarenal capsules; death occurs from exhaustion. **A.'s che′loid** or **ke′loid,** morphœa.

**Additamen′tum.** Addition: epiphysis; prolongation of lambdoidal and squamous sutures of skull. **A. co′li,** vermiform appendix of cæcum. **A. neca′tum,** olecranon. **A. ad sacrolumba′lem,** see *Sacrolumbalis*. **A. ul′næ,** radius. **A. unca′tum ul′næ,** olecranon.

**Addu′cens** (*ad* to, *duco*, to draw). Drawing toward the axis of the body. **A. hu′meri,** pectoralis major. **A. oc′uli,** rectus oculi internus.

**Adduc′tion.** Action by which parts are drawn toward the axis of the body. Muscles executing it are called *adductors*.

**Adduc′tor an′guli o′ris.** Accessory muscle of orbicularis oris. **A. au′ris,** part of platysma muscle attached to auricle of ear; zygomaticoauricularis; temporoauricularis. **A. bre′vis,** see *Adductors of thigh*. **A. dig′iti ter′tii pe′dis,** second plantar interosseous muscle. **A. dig′iti quin′ti,** opponens minimi digiti. **A. fem′oris pri′mus,** a. longus. **A. fem′oris secun′dus,** adductor brevis. **A. fem′oris ter′tius et quar′tus,** adductor magnus. **A. grac′ilis,** gracilis muscle. **A. hallu′cis,** muscle of sole of foot; a. pollicis pedis, or oblique head only, at origin of same muscle. **A. in′dicis pe′dis,** first dorsal interosseous muscle of foot; it is, however, an abductor. **A. lon′gus fem′oris,** see *Adductors of thigh*. **A. mag′nus,** see *Adductors of thigh*. **A. me′dii dig′iti pe′dis,** first plantar interosseous muscle. **A. me′dius au′ris,** levator auris brevis. **A. metacar′pi min′imi dig′iti,** situated between adductor and flexor, next to metacarpal bone; arises, fleshy, from unciform process of os unciforme and contiguous part of the annular ligament of the wrist, and is inserted, tendinous and fleshy, into the forepart of the metacarpal bone of the little finger. **A. min′imi dig′iti,** prior minimi digiti; opponens minimi digiti. **A. ad min′imum dig′itum,** adductor pollicis manus. **A. min′imus,** portion of adductor magnus muscle above the superior profunda artery. **A. obli′quus hallu′cis,** adductor of great toe of ape. **A. oc′uli,** rectus oculi internus. **A. os′sis metacar′pi dig′iti auricula′ris** or **A. o. m. d. ma′nûs,** opponens minimi digiti. **A. pectine′us,** pectineus muscle. **A. pol′licis ma′nûs,** muscle arising, fleshy, from almost the whole length of the metacarpal bone of the middle finger, and inserted into the inner part of the root of the first bone of the thumb. **A. pol′licis pe′dis** arises by a long, thin tendon from the under part of the os calcis, os cuboides, os cuneiforme externum, and root of metatarsal bone of the second toe; it is divided into two fleshy portions, and is inserted into the external sesamoid bone and root of the metatarsal bone of the great toe. **A. pri′mus,** a. longus. **A. pros′tatæ,** levator prostatæ. **A. pupil′læ,** rectus internus oculi. **A. quar′tus,** a. minimus. **A. secun′dus,** a. brevis. **A. ter′tii dig′iti pe′dis,** prior tertii digiti pedis. **A. ter′tius,** a. magnus. **A. tibia′lis,** semimembranosus and semitendinosus muscles. **A. transversa′lis hallu′cis,** adductor of the great toe in apes. **A. tri′ceps fem′oris,** adductor mass of the thigh, see *Adductors of the thigh.* **A. tu′bercle,** eminence on the os femoris for attachment of the tendon of the adductor magnus.

**Adduc′tors of the thigh.** Three in number, by some anatomists united into one muscle—triceps adductor femoris. 1. *Adductor longus femoris* arises by strong tendon from the upper and fore part of the os pubis and ligament of the symphysis, at the inner side of the pectinalis; runs downward and outward, and is inserted by a broad, flat tendon into the middle of the linea aspera. 2. *Adductor brevis* arises, tendinous, from the os pubis, at the side of the symphysis, below and behind the last muscle; runs obliquely outward, and is inserted by a short, flat tendon into the inner and upper part of the linea aspera, from a little below the trochanter minor to the beginning of the insertion of the adductor longus. 3. *Adductor magnus* is much larger than either of the others; arises from the ramus of the pubis, that of the ischium, and the tuber ischii, and is inserted into the whole length of the linea aspera, near the lower part of which it is pierced by an oblique fibrous canal, through which the crural artery and vein pass.

**Adelomor′phous** (*adelos,* invisible, *morphe,* shape). Of an indistinct shape; term applied to columnar cells lining the secretory portion of the glands of the stomach.

**Adel′phia** or **Adel′phism** (*adelphos,* brother). Monstrosity double anteriorly or posteriorly.

**Adel′photaxy** (*adelphos,* brother, *taxis,* order). Arrangement or distribution of cells in certain definite relations.

**Ademo′nia** or **Ademos′yne.** Nostalgia.

**A′den** (acorn). A gland.

**A′den** (a town in Arabia) **fe′ver.** Dengue. **A. ul′cer,** a form of ulcer of the foot and leg met with in tropical countries; known under other names, as Cochin China ulcer, Yemen ulcer, etc.

**Adenal′gia** (*aden,* gland, *algos,* pain). Glandular pain.

**Adenal′gic.** Relating to adenalgia.

**Adenan′dra.** South African plant; stimulant, diuretic, and sedative expectorant.

**Adenan′thera pavoni′na.** Mandsjadi or mandsiadi. Root is emetic; leaves are used in rheumatism and seeds in epilepsy.

**Adenasthe′nia** (*aden,* gland, *astheneia,* weakness). Deficient glandular secretion. **A. gas′trica,** dyspepsia due to deficient secretion of gastric juice.

**Aden′dric** (*a,* priv., *dendron,* tree). Devoid of dendrons or branching prolongations, as certain nerve cells.

**Adenec′tomy** (*aden,* gland, *ektome,* excision). Excision of a gland.

**Adenecto′pia** (*aden,* gland, *ektopos,* out of place). Dislocation or unusual location of a gland.

**Adenemphrax′is** (*aden,* gland, *emphraxis,* obstruction). Glandular obstruction.

**Ade′nia** (*aden,* a gland). Adenitis; Hodgkin's disease. **A. venena′ta,** tree of Arabia with caustic juice; climbing plant of Africa with vesicant properties.

**Aden′iform** (*aden,* gland, *forma,* form). Adenoid.

**Adenin′.** $C_5H_5N_5$. Alkaloid substance or leucomaïn, obtained from glandular structures, as the pancreas, from the liver and the urine of leukæmic patients, etc., and from the decomposition of nuclein. It occurs in clear crystals, slightly soluble in cold water, more so in hot. **A. hypoxanthin′,** $C_5H_5N_5+C_5H_4N_4O$, leucomaïn obtained by making a hot, watery solution of equal parts of the two bases and allowing it to cool.

**Adeni′tis** (*aden,* gland, + *itis*). Glandular inflammation. **A. blennorrho′ica,** gonorrhœal bubo. **A. inguina′lis,** bubo. **A. lymphat′ica,** inflammation of lymphatic gland; lymphadenitis. **A. palpebra′rum contagio′sa,** trachoma. **A. universa′lis,** general inflammation of lymphatic glands. **A. vene′rea,** venereal bubo. **A. vul′vovagina′lis,** inflammation of the vulvovaginal gland.

**Adeniza′tion.** Adenoid degeneration.

**Ad′enoblasts** (*aden,* gland, *blastos,* germ). Formative cells of glands.

**Adenocarcino′ma.** Degeneration of adenoid structure into carcinoma; adenoid cancer.

**Ad′enocele** (*aden,* gland, *kele,* hernia, tumor). Cystic glandular tumor; adenocystoma.

**Adenocelluli′tis.** Inflammation of cellular tissue surrounding a gland and of the gland itself.

**Adenocheirapsol′ogy** or **Adenochirapsol′ogy** (*aden,* gland, *cheir,* hand, *hapto,* to lay hold of, *logos,* description). The old doctrine of curing scrofula or king's evil by royal touch.

**Adenochon′drius** (*aden,* gland, *chondros,* cartilage). Relating to gland and cartilage; tumefaction of glands and cartilages of joints.

**Adenochondro′ma.** A neoplasm of mixed adenoma and chondroma.

**Adenocysto′ma.** Cystic tumor taking its growth from a new formation of glandular structure; adenoma with formation of cysts.

**Adenoder′mia** (*aden,* gland, *derma,* skin). Disease of the glands of the skin.

**Adeno′des** (*aden,* gland, *eidos,* appearance). Resembling a gland; adenoid.

**Adenodias′tasis** (*aden,* gland, *diastasis,* separation). Abnormal separation or division of the lobes of a gland; dislocation of a gland.

**Adenodiastat′ic** (*aden,* gland, *diastasis,* separation). Relating to adenodiastasis.

**Adenodyn′ia** (*aden,* gland, *odyne,* pain). Glandular pain; adenalgia.

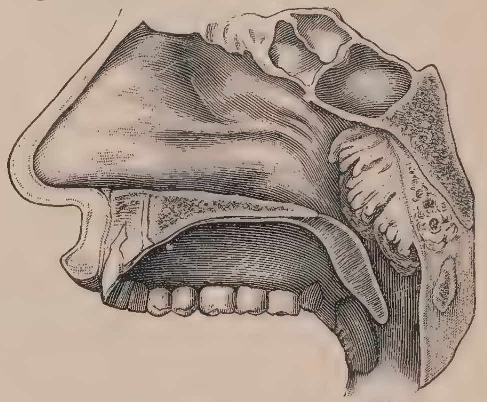
**Adenofibro′ma.** Fibroma of glands; adenoma with fibrous structure.

**Adenogen′esis** (*aden,* gland, *genesis,* formation). Formation of glands or glandular structures.

**Adenog′raphy** (*aden,* gland, *grapho,* to describe). Part of anatomy describing glands.

**Adenohypersthe′nia** (*aden,* gland, *hyper,* over, *sthenos,* power). Excessive glandular secretion. **A. gas′trica,** dyspepsia due to excessive secretion of gastric juice.

**Ad′enoid** (*aden,* gland, *eidos,* form). Resembling or relating to a gland. **A. bod′y,** an old name for the prostate gland. **A. can′cer,** adenocarcinoma. **A. disease′,** Hodgkin's disease. **A. growth,** a. tumor; a. vegetations. **A. mus′cle,** small, detached portion of inferior constrictor muscle placed on each side of the thyroid gland. **A. retic′ulum** or **A. tiss′ue,**



Adenoid vegetations. (Zuckerkandl.)

lymphoid or retiform tissue; tissue composing follicles of lymphatic glands, Malpighian corpuscles of spleen, Peyer's glands, solitary glands of intestine, thymus gland, etc., possessing the same general structure everywhere. **A. tu'mor**, adenoma. **A. vegeta'tions**, overgrowth of adenoid tissue, especially of that in the nasopharynx, the pharyngeal tonsil; this is a common cause of mouth-breathing, with its attendant deafness, deformity of the face, impaired intellect, etc.

**Ad'enoids** (pl.). Adenoid vegetations.

**Adenol'ogy** (*aden*, gland, *logos*, description). Treatise on glands; description of glands.

**Adenolymphi'tis.** Lymphadenitis.

**Adenolymph'ocele.** Enlargement of lymphatics connected with a gland; cystic dilatation of lymphatic glands.

**Adenolympho'ma.** Hodgkin's disease; lymphadenoma.

**Adeno'ma** (*aden*, gland, + *oma*). Adenoid tumor; glandular growth or hypertrophy of gland texture. **A'cinous a.**, a. of racemose glands. **A. carcinoma-to'sum**, adenocarcinoma. **Cys'tic a.**, a. with cysts. **A. des'truens**, a destructive form of a., usually occurring in the stomach. **A. fibro'sum**, fibrous growth in a gland. **A. lupifor'me**, lupus erythematosus. **A. malig'num**, adenocarcinoma or adenosarcoma. **A. myomato'sum**, a. complicated with myoma; myoma developed in a gland. **A. myxomato'sum**, a. complicated with myxoma; myxoma developed in a gland. **A. racemo'sum**, acinous a. **A. sarcomato'sum**, a. complicated with sarcoma; sarcoma developed in a gland. **A. seba'ceum**, a. of the skin having structure like sebaceous gland. **A. sim'plex**, glandular hyperplasia. **A. sudorip'arum**, a. of skin resembling sweat glands in structure. **Tu'bular a.**, a. of glandular structure of mucous membranes; tumor whose structure resembles that of a tubular gland.

**Adenomala'cia** (*aden*, gland, *malakia*, softening). Softening of the glands.

**Adeno'matome.** An instrument for the removal of adenoid growths.

**Adenomenin'geal** (*aden*, gland, *meninx*, membrane). Relating to glands of a membrane. **A. fe'ver**, typhoid fever.

**Adenomesenteri'tis.** Inflammation of mesenteric glands.

**Adenomyo'ma.** A neoplasm of mixed muscular and glandular structure; myomatous adenoma.

**Adenomyxo'ma.** Tumor composed of adenoma and myxoma.

**Adenomyxosarco'ma.** Myxosarcoma affecting a gland; combined adenomyxoma and sarcoma.

**Adenonco'sis** or **Adenon'cus** (*aden*, gland, *onkos*, tumor). Glandular enlargement; adenophyma.

**Adenoner'vous fe'ver.** Plague.

**Ad'enoneure** (*aden*, gland, *neuron*, nerve). A neuron concerned with the secreting function of a gland.

**Adenoneurot'ic.** Relating to glands and nerves.

**Adenop'athy.** Glandular disease, especially of the lymphatics; bubo.

**Adenopharyn'geal mus'cle.** Fleshy fibres passing from the constrictor pharyngis inferior to the thyroid gland.

**Adenopharyngi'tis.** Inflammation of the tonsils and pharynx.

**Adenophleg'mon** (*aden*, gland, *phlegmone*, inflammation). Intense inflammation of a lymphatic gland.

**Adenoph'ora tracheloi'des.** Root of this Chinese plant is expectorant. **A. verticilla'ta** has similar properties.

**Adenophthal'mia** or **Adenophthalmi'tis.** Ophthalmia tarsi.

**Adenophy'ma** (*aden*, gland, *phyma*, tumor). Swelling of a gland; glandiform ganglion. By some used to signify soft glandular swelling; adenoncus is one of harder character. **A. inguina'le**, bubo.

**Adenosarco'ma.** Sarcoma of lymphatic gland, or combination of sarcoma and adenoma. **Cys'tic a.**, a. with cystic degeneration.

**Ad'enosar'corrhab'domyo'ma.** A neoplasm of mixed adenoma, sarcoma, and rhabdomyoma.

**Adenoscirrhus**, ad-en-o-skir'rus or ad-en-o-sir'rus (*aden*, gland, *skirrhos*, induration). Scirrhous induration of a gland; adenoma complicated with scirrhus.

**Adenosclero'sis** (*aden*, gland, *skleros*, hard). Induration of a gland; adenoscirrhus.

**Ad'enose.** Glandular. Like a gland.

**Adeno'sis.** Disease of a gland. Hodgkin's disease. **A. scrophulo'sa**, scrofula.

**Adenos'tyles alpi'na.** Alpine plant, ord. *Compositæ*, leaves of which were employed to allay cough. **A. gla'bra**, of S. Europe, has similar properties.

**Adeno'sus.** Glandular.

**Adenosynchitoni'tis** (*aden*, gland, *synchiton* (?), conjunctiva, + *itis*). Ophthalmia neonatorum; inflammation of the Meibomian glands.

**Adenot'omy** (*aden*, gland, *tome*, incision). Dissection of a gland or glands.

**Adenoty'phoid fe'ver** or **Adenoty'phus.** Typhoid fever; Malta or Mediterranean fever.

**Ad'enous.** Adenoid.

**Adenyl'ic acid.** An acid obtained from the thymus gland.

**Adenylim'ide.** Adenin.

**Adenylox'ide.** Hypoxanthin.

**Adepha'gia** (*adeps*, fat, *phago*, to eat). Boulimia.

**Ad'eps.** Lard. Formerly unguentum was often called adeps, from its usual base; hence such terms as a. hydrargyri nitrate medicatus, lard medicated with nitrate of mercury, now called unguentum hydrargyri nitratis, a. oxido zinci medicatus, unguentum zinci oxidi, etc. In Ph. U. S. internal fat of abdomen of Sus scrofa, or the hog, free from saline matter; prepared by melting and straining. This is called *rendering*. It is emollient, but chiefly used for forming ointments and plasters. **A. anseri'nus** or **an'seris**, goose grease; emollient; emetic. **A. benzoina'tus** (Ph. U. S.) or **benzoa'tus** (Ph. Br.), benzoinated lard, contains 2 per cent. (in Ph. Br. 3 per cent.) benzoin; used as a base for ointments. **A. col'li equi'ni**, fat from the neck of the horse, used by veterinary surgeons. **A. la'næ** (Ph. Br.), wool fat; the purified cholesterin of sheep's wool. **A. la'næ hydro'sus** (Ph. U. S. and Br.), lanolin, purified fat of sheep's wool mixed with not more than 30 per cent. of water; used as a base for ointments. **A. myris'ticæ** or **A. nucis'tæ**, expressed oil of nutmeg. **A. ovil'li** or **o'vis**, mutton suet. **A. oxygena'tus**, oxygenated lard, from the action of nitric acid on lard; used in skin diseases. **A. pe'dum tau'ri**, neat's-foot oil. **A. petro'lei**, petrolatum. **A. por'ci** or **porci'nus**, hog's lard. **A. præpara'tus**, purified hog's lard. **A. stibia'tus**, tartar-emetic ointment. **A. suil'lus**, hog's lard. **A. suil'lus cura'tus**, or **præpara'tus**, prepared lard.

**Ader'mia** (*a*, priv., *derma*, skin). Absence or deficiency of skin.

**Adermogen'esis** (*a*, priv., *derma*, skin, *genesis*, origin). Imperfect or arrested development of the skin.

**Ades'mia balsamif'era.** Species of leguminous plant employed in Chili as vulnerary.

**Adhato'da.** Malabar nut tree, ord. *Acanthaceæ*. Leaves, flowers, and root are antispasmodic; employed in thoracic affections, in asthma, and in India as an emmenagogue and for expelling dead fœtus in abortion. **A. tranquebarien'sis**, Indian plant, contused leaves of which are applied to bruises. **A. vas'ica**, Justicia adhatoda.

**Adhe'rent.** Abnormally attached by pathological growth.

**Adhe'sion.** Union of parts; when pathological, usually in the plural; see *Adhesions*. **Pri'mary a.**, primary union; term used in surgery (*per primam intentionem*, by first intention) to denote the healing of a wound without granulation or suppuration. **Sec'ondary a.**, secondary union; healing of a wound (*per secundam intentionem*, by second intention) by the opposing granulating surfaces becoming united.

**Adhe'sions.** Pathological formations of organized bands of lymph connecting neighboring organs, as in pleurisy or peritonitis.

**Adhe'sive.** Sticking, uniting. **A. inflamma'tion,** inflammation terminating by adhesion between inflamed and previously separated surfaces **A. plas'ter,** emplastrum resinæ.

**Adhe'sol.** A mixture of alpha-naphthol, balsam of tolu, benzoin, copal, and oil of thyme dissolved in ether; its action and uses are similar to those of collodion.

**Adhibit'ion.** Employment of a remedy.

**Adian'tum** or **Adian'thum** (*a*, priv., *diaino*, to grow wet, from leaves not being easily moistened). A genus of ferns, ord. *Filices;* several species are used medicinally. **A. æthiop'icum,** S. African plant, infusion of which is emollient in bronchial and pulmonary affections. **A. al'bum,** Asplenium ruta muraria. **A. au'reum,** Polytrichum. **A. canaden'se,** A. pedatum. **A. capil'lus ven'eris,** maidenhair; European plant of feeble aromatic and demulcent properties. **A. coriandrifo'lium,** A. capillus veneris. **A. fra'gile,** species growing in Jamaica, used in pulmonary affections. **A. melanocau'lon,** species growing in E. Indies; tonic. **A. ni'grum,** A. capillus veneris. **A. pa'tens,** A. pedatum. **A. peda'tum,** Canada maidenhair, American maidenhair, rock fern, sweet fern; aromatic and demulcent. **A. ru'brum,** Asplenium trichomanoides. **A. ten'erum,** species of S. America, with same medicinal properties as A. capillus veneris. **A. trapezifor'me,** species from Mexico and S. America, with expectorant properties. **A. ve'rum ni'grum,** A. capillus veneris. **A. vulga're,** A. capillus veneris.

**Adiapha'nia** (*a*, priv., *diaphaneia*, transparency). Cataract.

**Adiaphore'sis** or **Adiaphoro'sis** (*a*, priv., *diaphoreo*, to perspire). Deficiency or suppression of perspiration.

**Adi'aplast** (*a*, priv., *dia*, through, *plasso*, to form). Abortion, the fœtus being imperfectly developed.

**Adiapneus'tia** (*a*, priv., *dia*, through, *pneo*, to breathe). Defect or suppression of perspiration.

**Adiarrhœ'a** (*a*, priv., *diarrheo*, to flow). Retention of any excretion; constipation.

**Adiar'throtos** (*a*, priv., *diarthrosis*, articulation). Not jointed; inarticulate as to speech.

**Adiather'mic** (*a*, priv., *dia*, through, *therme*, heat). Not admitting of passage of heat.

**Adiathe'sia** or **Adiath'esis** (*a*, priv., *diathesis*). An acquired condition; not congenital.

**Adiathe'sic** or **Adiathet'ic** (*diathesis*, constitution or disposition). Occurring without any antecedent diathesis, as adiathetic diseases.

**Ad'ice.** Common nettle.

**Adietet'ic.** Not suitable for food. Not careful as to proper diet.

**Adipa'tus** (*adeps*, fat). Fatty.

**Ad'ipic ac'id.** $C_6H_{10}O_4$. Dibasic product of oxidation of fatty acids.

**Adipocel'lular.** Consisting of or relating to fatty and cellular tissues.

**Adipoce'ra.** Adipocere. **A. ceto'sa,** spermaceti.

**Ad'ipocere** (*adeps*, fat, *cera*, wax). Corpse fat; grave wax. A sort of soap, formed from the decomposition of animal matter under certain conditions. It is a combination of fatty acids and alkaline earths, chiefly ammonium manganate. The human body, when it has been for some weeks in water, often assumes this appearance. The same name has been applied to cholesterin.

**Adipocer'iform.** Like adipocere.

**Adipofibro'ma.** Fibrolipoma.

**Adipogenous,** ad-i-poj'en-ous (*adeps*, fat, *gennao*, to create). Producing fat.

**Adipo'ma** (*adeps*, fat, +*oma*). Fatty tumor, such as lipoma.

**Ad'ipose** (*adeps*, fat). That which relates to fat; fatty, as adipose membrane. **A. ar'teries,** capsular arteries; branches from the thoracic aorta to adipose tissue of the heart. **A. cap'sule,** layer of fat, surrounding the kidney as a means of support. **A. sarco'ma of Ab'ernethy,** a suety or fatty tumor enclosed in a capsule of areolar substance, connected by minute vessels; chiefly found on the trunk. **A. tis'sue,** fat cells united by connective tissue in all parts of the body.

**Adipo'sis** (*adeps*, lard, +*osis*). Obesity. **A. doloro'sa,** Dercum's disease; a nervous disease marked by the presence of painful masses of fat in the subcutaneous tissues, chiefly of the extremities, of adults. **A. hepat'ica,** fatty liver, fatty degeneration of the liver; disease of the liver dependent on accumulation of fat in its secreting cells; the gland is dull yellow, generally greasy and flabby; if degeneration is excessive it may impede circulation in the capillaries and obstruct the excretion of bile.

**Adipos'itas** or **Adipos'ity.** Adiposis. **A. cor'dis,** fatty heart.

**Adiposu'ria** (*adeps*, fat, *ouron*, urine). Fatty urine.

**Adipo'sus** or **Ad'ipous.** Fatty; adipose.

**Adip'sia** or **Ad'ipsy** (*a*, priv., *dipsa*, thirst). Absence of thirst.

**Adip'sic.** Relieving thirst; relating to adipsia.

**Adip'sos.** Licorice.

**Adip'sous.** Not thirsty; adipsic.

**Ad'itus** (entrance). Entrance to a canal or cavity. **A. ad an'trum,** entrance to the mastoid antrum from the tympanum. **A. ad aquæduc'tum Fallo'pii,** entrance to the Fallopian canal. **A. ad aquæduc'tum Syl'vii,** entrance to the aqueduct of Sylvius. **A. ad infundib'ulum,** vulva; entrance from the third ventricle of the brain to the infundibulum. **A. laryn'gis,** superior or pharyngeal orifice of the larynx.

**Adiv'ie ami'da.** Jatropha curcas.

**Adjunc'tive** (*ad*, to, *jungo*, to join). Joining; term used in surgery to denote preservation of a part.

**Adjus'ter.** Instrument for the adjustment of parts, as in dislocations, fractures, displacements, etc.

**Adjust'ment.** Process of raising or lowering the tube in a microscope in order to focus the object; also the part of the instrument used for such purpose; regulation or fitting together of parts, as in dislocations, fractures, displacements, etc.

**Adjuto'rium.** Adjuvant; humerus.

**Ad'juvant** (*adjuvo*, to aid). Medicine introduced into a prescription to aid the operation of the principal ingredient; whatever assists in the removal or prevention of disease.

**Admax'illary.** Adjacent to or associated with the jaw or neighboring structures. **A. glands,** accessory salivary or parotid glands.

**Adminic'ulum** (*ad*, to, *manus*, hand). Prop; support; anything aiding the action of a remedy. **A. lin'eæ al'bæ,** ligament of the lineæ albæ.

**Admor'tal** (*ad*, to, *mors*, death). Term applied to a current of electricity passing from living tissues to a dead muscle.

**Adnas'cence** (*ad*, to, *nascor*, to grow). Morbid adhesion or growing together, as of the eyelids.

**Ad'nate** (*ad*, to, *nascor*, to grow). Grown together; strictly speaking, congenitally so. **A. tu'nic,** conjunctiva; vaginal coat of testicle.

**Adner'val.** In the direction of a nerve, applied to electrical currents in a muscle.

**Adneu'ral.** In contact with a nerve.

**Adnex'a** (pl. of adnexum, from *ad*, to, *necto*, to tie). Appendages. **A. oc'uli,** accessory parts of the eye, as the lids, lacrymal gland, etc. **A. u'teri,** uterine appendages, as the ovaries and tubes.

**Adnexi'tis.** Inflammation of the uterine adnexa.

**Adoles'cence** (*adolesco*, to grow). Youth; period between puberty and that at which the body acquires its full development, in man between the 14th and 25th years, and in woman between the

12th and 21st. The period varies in different countries.

**Adoles'cent.** Youth; one at the period of adolescence.

**Ado'lia.** Malabar plant, whose leaves are used in labor.

**Adonidin'.** $C_{24}H_{40}O_9$. Bitter, uncrystallizable glucoside obtained from all parts of Adonis vernalis; regulates the action of the heart, increases arterial pressure, and augments diuresis, resembling digitalis in action. Dose, gr. $\frac{1}{12}$–$\frac{1}{6}$ (0.005–0.01) in a day. It has no so-called accumulative action.

**Adonin'.** $C_{20}H_{40}O_9$. Active principle of Adonis amurensis; its action is similar to but weaker than that of adonidin.

**Ado'nis æstiva'lis.** Pheasant's eye, European species of *Ranunculaceæ;* vesicant, and used internally, in infusion of seeds, in colic; also used as a cardiac stimulant, like A. vernalis. **A. amuren'sis,** an Asiatic species, similar in action to A. vernalis; the source of Adonin. **A. anom'ala,** leaves are vesicant. **A. apenni'na,** leaves are vesicant and are also used internally to produce abortion. **A. capen'sis,** species from Cape of Good Hope, leaves of which are used as a substitute for cantharides. **A. cupania'na,** species growing in Sicily; active principle resembles adonidin, and is used as substitute for it. **A. grac'ilis,** leaves of this S. African plant are vesicant. **A. verna'lis,** indigenous in south of Europe, growing in the United States; usually prescribed in the form of adonidin, or of infusion, aqueous extract, or tincture; dose, ♏x–xxx (0.65–2.0); see *Adonidin.* The roots are purgative.

**Ado'ral** (*ad,* to, *os,* mouth). Near or connected with the mouth.

**Adoscula'tion** (*ad,* to, *osculor,* to kiss). Impregnation without complete penetration; articulation in a cavity.

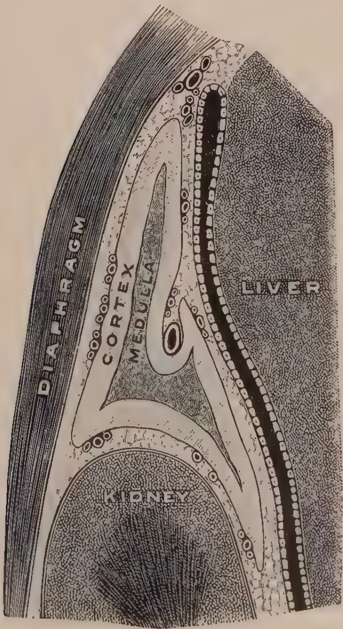
**Adox'a moschatelli'na.** Musk crow's foot, growing in Europe and America; ord. *Caprifoliaceæ;* antispasmodic.

**Ad'ragant.** Gum tragacanth.

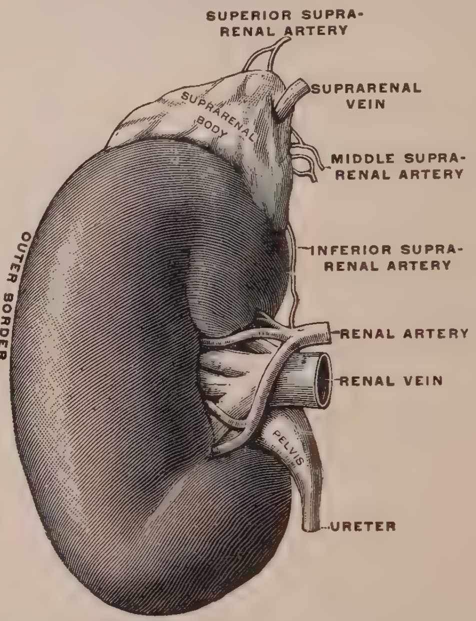
**Adraganthin'.** Tragacanthin.

**Adrec'tal.** At or near the rectum.

**Adre'nal** (*ad,* to, *ren,* kidney). Attached to or near the kidney; suprarenal. **A. body,** suprarenal capsule, a triangular body covering the upper part of each kidney; see *Capsule, supravenal.* **A. system,** the adrenal body, thyroid gland, and anterior pituitary body, considered as the active agents in all oxidation processes within the organism (Sajous).



Sagittal section of the right adrenal body. (Gerrish, after Testut.)



Right adrenal body and kidney viewed from in front. (Gerrish, after Testut.)

**Adrenalin'.** The proprietary name of a preparation of the suprarenal gland. See *Suprarenal extract.*

**Adrenoxin'.** The adrenal secretion; term proposed by Sajous as indicating its supposed oxidation function.

**Ad'rue.** Root of Cyperus articulatus, anthelmintic, antiemetic aromatic of the West Indies.

**Adscen'sus.** Determination of blood to the head.

**Adsorp'tion** (*ad,* to, *sorbeo,* to suck). Process by which a substance takes up into its pores liquids or gases through mechanical action; also the attraction of gases to the surface of fluids.

**Adspec'tion** (*ad,* to, *specio,* to see). Examination or inspection, as of an organ or patient.

**Adsper'sio** (*adspergo,* to sprinkle). Sprinkling with water, as spray, or dusting with fine powder.

**Adsper'sus.** Spotted.

**Adspira'tio** (*ad, spiro,* to breathe). Aspiration; inspiration.

**Ad'stans** (*ad,* near, *sto,* to stand). Accessory (organ); prostate gland.

**Ad'stites glandulo'si.** Prostate gland.

**Adstric'tion** (*ad, stringo,* to bind). Astringent action; ligation; constipation.

**Adstricto'ria** or **Adstringen'tia.** Astringents.

**Adstric'tory.** Astringent.

**Adstrin'gens.** Astringent. **A. Fothergil'lii,** kino.

**Adulas'so.** Shrub in India used locally in gout.

**Adul'sa vasa'ca.** E. Indian plant whose leaves and stems are used in respiratory affections.

**Adult'** (Lat., *adultus*). One who has reached full or legal age. **A. age,** virility, manhood; age succeeding adolescence and preceding old age.

**Adultera'tion.** Falsification; fraudulent addition of other matters to food, drugs, etc., for purposes of profit or deception.

**Adunca'tio un'guium.** Curvature of nails; onychogryphosis.

**Adus'tion.** Burn; cauterization.

**Advance'ment.** Operation for strabismus, usually accompanied with tenotomy, in which the unaffected tendon is also cut and brought forward or advanced to a better position to control the ball. **Cap′sular a.**, advancing by operation the attachment of a part of the capsule of Tenon in front of its normal location. **A. of round lig′aments**, Alexander's operation. **Ten′dinous a.**, advancement.

**Ad′vehens** (*ad*, to, *veho*, to carry). Going to a part, as a nerve or vessel.

**Adventi′tia** (full form is tunica adventitia, adventitious coat). External coat of the bloodvessels; neurilemma. **A. capilla′ris**, external coat of capillary vessels.

**Adventi′tious.** Accidental, unusual, or acquired, as opposed to hereditary; not properly belonging to an organ or a tissue. **A. coat**, see *Adventitia*. **A. disea′ses**, acquired diseases. **A. mem′brane**, false membrane. **A. mur′murs**, accidental or acquired sounds heard on auscultation of the heart.

**Ady′ao.** Shrub used locally for headache, colic, etc.

**Adyna′mia** or **Adyn′amy** (*a*, priv., *dynamis*, strength). Weakness or want of power; debility of vital or muscular powers, as in typhoid fever. Some nosologists have grouped such diseases under the name *Adynamiæ*. **A. viri′lis**, impotence.

**Adynam′ic** (*a*, priv., *dynamis*, strength). Affected with debility of vital powers; weak; asthenic. **A. fe′ver**, typhoid or other depressant form of fever. **A. sink′ing**, sinking or loss of power, observed in adynamic diseases.

**Adynam′icoatax′ic.** Impaired in mental or bodily vigor and in power of muscular coordination.

**Adynatocra′sia** (*a*, priv., *dynatos*, strong, *krasis*, mixing). Abnormal looseness of texture of organic parts of body.

**Adynoner′vous fe′ver.** Typhoid fever; plague.

**Aë′by, plane of.** Imaginary line supposed to pass through nasion and basion perpendicular to the middle plane.

**Æcid′ium** (*aikia*, injury). Wheal.

**Ædœ′a** (*aidoia*, genitals). Genital organs.

**Ædœal′ogy** or **Ædœol′ogy** (*aidoia*, the genitals, *logos*, description). Treatise on organs of generation.

**Ædœi′tis** or **Ædœiti′tis** (*aidoia*, the genitals, + *itis*). Inflammation of genital organs. **Æ. gangræno′sa**, colpocace.

**Ædœoma′nia.** Nymphomania.

**Ædœopsophe′sis** (*aidoia*, the genitals, *psopheo*, to make a noise). Emission of wind by urethra in man, or vagina in woman. **Æ. uteri′na**, physometra.

**Ædœopto′sis** (*aidoia*, the genitals, *ptosis*, falling). Prolapse of the genital organs or bladder.

**Ægagropi′la** or **Ægagropi′lus** (*aigagros*, rock goat, *pilos*, hair). Ball composed of hairs found in the stomach of some animals.

**Æ′gias** (*aigis*, goat's skin). Ulcer or speck on the transparent cornea.

**Æ′gilops** or **Æ′gylops** (*aix*, a goat, *ops*, eye). Goat-eye, an abscess or ulcer at inner angle of eye, sometimes penetrating to lacrymal sac, constituting fistula lacrymalis; inflammation of lacrymal duct.

**Ægine′tia in′dica.** Malabar plant, used as an antiscorbutic.

**Ægiph′ila** (*aix*, goat, *phileo*, to love). S. American plant, used for snake-bites.

**Æg′le mar′melos** (*aigle*, splendor). Covolam.

**Ægobronchoph′ony** (*aix*, goat, *bronchia*, *phone*, sound). Egophony.

**Ægo′ceras.** Trigonella fœnum.

**Ægol′ethron** or **Ægol′ethros.** Goatsbane, Ranunculus ficaria.

**Æ′gony.** Egophony.

**Ægon′ychon.** Lithospermum officinale.

**Ægoph′ony.** Egophony.

**Ægopo′dium podagra′ria.** Goutweed or goutwort, ashweed, English masterwort, herb Gerard; Ligusticum podagraria.

**Ægritu′do** or **Ægrota′tio** (*æger*, sick). Sickness; disease. **Æ. ventric′uli**, nausea; vomiting.

**Æ′grotat** (Latin word, meaning "he is sick"). Medical certificate in English colleges to show that a student is unfit for duty.

**Ægyp′tia.** Epithet for several medicines mentioned by older medical writers. **Æ. moscha′ta**, Hibiscus abelmoschus. **Æ. stypte′ria**, Egyptian alum. **Æ. ul′cera**, Egyptian ulcers; ulcers of fauces and tonsils, once common in Egypt and Syria.

**Ægypti′acum** or **Ægyp′tion.** Preparation of vinegar, honey, and verdigris, formerly used by veterinary surgeons as a detergent.

**Ægyp′tius pes′sus.** Egyptian pessary; pessary of honey, turpentine, butter, oil of lily or of rose, and saffron and verdigris.

**Ælurop′sis** (*ailouros*, cat, *opsis*, vision). Cat's-eye, seen in Mongolians, in whom the palpebral fissure is oblique.

**Æ′nas a′fer.** Spanish coleopterous insect employed for vesication.

**Æolan′thus sua′vis.** Brazilian plant, ord. *Labiatæ;* diuretic.

**Æolec′thyma** (*aiolos*, of different colors, *ecthyma*). Smallpox.

**Æol′lion.** Chickenpox.

**Æoloder′mous.** Having skin of varying hue, as in nettle rash.

**Æquim′anous** (*æquus*, equal, *manus*, hand). Ambidextrous.

**Æquiv′ocus.** Equivocal.

**A′ër.** Air. **A. dephlogistica′tus**, oxygen. **A. ingen′itus** or **inna′tus**, air in cavity of tympanum. **A. mephit′icus**, carbon dioxide. **A. pu′rus**, oxygen. **A. vita′lis**, oxygen; vital air.

**A′ërate.** To furnish with fresh air; to ventilate; to supply oxygen to the blood through the lungs.

**Aëra′tion.** Act of supplying with fresh air or oxygen; converting venous blood into arterial; ventilation. **A. of blood**, oxygenation of blood.

**Aërendocar′dia.** Presence of air in the heart.

**Aërenterecta′sia** or **Aërenterec′tasis** (*aer*, air, *enteron*, intestine, *ektasis*, dilatation). Tympanites; flatulence.

**Aëreth′mia.** Emphysema.

**Aërhæmocto′nia** (*aer*, air, *haima*, blood, *ktonos*, killing). Death caused by the entrance of air into a bloodvessel.

**Aë′rial.** Relating to, consisting of, or resembling air; through the air as a medium, as *aërial conduction*, *aërial disinfection*, etc. **A. fis′tula**, fistula having communication with the air passages, as from a wound.

**Aërif′erous.** Conveying air, applied to the air tubes, as the trachea and bronchi.

**Aërifica′tion.** Act of converting into air or of introducing air. **A. of lung**, pulmonary emphysema.

**Aëriflux′us.** Discharge of gas and fetid emanations from the sick; flatulence.

**Aër′iform.** Possessing the nature or form of air or gas.

**A′ërobe** (*aer*, air, *bios*, life). A microorganism requiring oxygen for its growth.

**Aëro′bia** (pl. of aërobion). Aërobic microorganisms.

**Aëro′bian.** Aërobic.

**Aëro′bic** (*aer*, air, *bios*, life). Term applied to organisms, such as some pathogenic bacteria, which require air or oxygen for their existence and growth.

**Aëro′bion.** A microorganism requiring air or oxygen in order to live and grow. **Fac′ultative a.**, an anaërobe which has acquired the power of living in an atmosphere containing oxygen.

**Aërobios′copy** (*aer*, air, *bios*, life, *skopeo*, to examine). Examination of the air for the detection of bacteria. The apparatus used for this purpose is called an *aërobi′oscope*.

**Aërobio′sis** (*aer*, air, *bios*, life). Existence in an atmosphere containing oxygen.

**Aërobiot′ic.** Aërobic.

**Aëro′bious.** Aërobic.

**A′ërocele** (*aer*, air, *kele*, tumor). An air tumor.

**Aërocol′pos** (*aer*, air, *kolpos*, vagina). Air or gas in the vagina.

**Aëroco′mia sclerocar′pa.** Astringent S. American plant, used in leucorrhœa, diarrhœa, etc.

**Aërocys′toscope** (*aer*, air, *kystis*, bladder, *skopeo*, to examine). An instrument by means of which the interior of the bladder can be inspected after it has first been distended with air.

**Aërocystos′copy.** Inspection of the interior of the bladder with the aërocystoscope or aëro-urethroscope.

**Aërodermecta′sia** (*aer*, air, *derma*, skin, *ektasis*, dilatation). Emphysema.

**Aërodynam′ics** (*aer*, air, *dynamis*, power). Science treating of the motion of air and its mechanical effects while in motion.

**Aëroenterecta′sia.** Tympanites.

**Aërohydrop′athy** (*aer*, air, *hydor*, water, *pathos*, affection). Treatment of disease by air and water.

**Aërol′ogy** (*aer*, air, *logos*, description). Part of physics treating of air, its qualities, uses, and action.

**Aëro′meli.** Fraxinus ornus.

**Aërom′eter** (*aer*, air, *metron*, measure). Apparatus for measuring the density of air or gases.

**Aëromi′crobe** or **Aëromicro′bion** (*aer*, air, *mikros*, small, *bios*, life). Aërobion.

**Aëroperito′nia.** Peritoneal emphysema; tympanites.

**Aëropha′gia** or **Aëroph′agy** (*aer*, air, *phago*, to eat). Air swallowing; audible, continuous, spasmodic swallowing of air, as in hysteria.

**Aëropho′bia** (*aer*, air, *phobos*, fear). Dread of a draught; a symptom often accompanying hydrophobia, hysteria, and other affections.

**A′ërophone** (*aer*, air, *phone*, sound). Apparatus for intensifying the sound waves.

**A′ërophore** (*aer*, air, *phero*, to carry). Apparatus for conveying air to the lungs for the purpose of resuscitating newborn children.

**Aëroph′orous.** Carrying or holding air; effervescent.

**A′ërophyte** (*aer*, air, *phyton*, plant). Plant growing and existing entirely in air, like some kinds of orchid.

**Aëropleu′ria.** Pneumothorax.

**Aëropneumonecta′sia** (*aer*, air, *pneumon*, lung, *ektasis*, dilatation). Pulmonary emphysema.

**Aërorrha′chia** or **Aërorrha′chis** (*aer*, air, *rhachis*, spine). Accumulation of air in the spinal canal.

**Aëros′copy** (*aer*, air, *skopeo*, to see). Examination of the air and matters, especially microorganisms, contained in it; the apparatus used is called an *aër′oscope.*

**Aëro′sis.** Pneumatosis, tympanites.

**Aërostat′ics** (*aer*, air, *statike*, statics). Science treating of the equilibrium of elastic fluids.

**Aërother′apy** or **Aërotherapeu′tics.** Application of air or gases as a means of treatment, sometimes with varying pressure.

**Aërother′mal** (*aer*, air, *thermos*, hot). Relating to the use of hot air, as in the treatment of joint affections.

**Aërotho′rax.** Pneumothorax.

**Aërotonom′eter** (*aer*, air, *tonos*, tension, *metron*, measure). Instrument for determining the tension of gases in the blood.

**Aërotym′panal.** Term applied to the conduction of sound through the air and the drum of the ear.

**Aëro-urethros′copy.** Examination of the urethra and sometimes the bladder, after dilatation by means of air; the apparatus employed in this examination is called an *aëro-ure′throscope.*

**Aërover′ter.** See *Aërteriversion.*

**Aëroxero′tes** (*xeros*, dry). Dryness of the air.

**Aërozo′a** (*aer*, air, *zoon*, animal). Animals requiring air for their existence.

**Aërteriver′sion** (*aer*, air, *tereo*, to hold, *verto*, to turn). Mode of checking hemorrhage by eversion of the cut extremity of an artery, self-invagination of the vessel, and fixation of the parts with a needle. The cannulated double hook employed to facilitate this manœuver is called an *aërover′ter.*

**Aëru′a.** E. Indian plant; root is used in strangury.

**Æru′ginous** (*ærugo*, verdigris). Resembling verdigris in color, as bile when discharged from the stomach.

**Æru′go** (Lat.). Verdigris; rust of any metal. **Æ. crystallisa′ta**, acetate of copper. **Æ. fer′ri**, ferri subcarbonas. **Æ. plum′bi**, plumbi subcarbonas.

**Ærum′na.** Mental anxiety or worry.

**Æschrolal′ia** (*aischros*, indecent, *laleo*, to speak). Employment by the insane of obscene words and expressions.

**Æschromythe′sis** (use of obscene language). Verbal obscenity of delirious conditions.

**Æschynom′ene** (sensitiveness) **as′pera.** A plant of E. Indies, used in dropsy. **Æ. grandiflo′ra**, plant of E. Indies, having antipyretic properties.

**Æsculin′.** $C_{15}H_{16}O+2H_2O_9$. White, soluble crystalline glucoside, obtained from bark of various species of Æsculus; antiperiodic.

**Æs′culus.** Genus of plants, ord. *Sapindaceæ*, of which the following have been used medicinally: **Æ. glab′ra**, Ohio buckeye, fetid buckeye; used in congestion of the liver. **Æ. hippocas′tanum**, horse-chestnut, buckeye; native of Persia and India; bark has been advised as a substitute for cinchona; bark and fruit are astringent; externally, it has been employed in gangrene; oil of the seed is used for embrocation in gout and rheumatism. **Æ. macrostach′ya**, shrub of Southern States, having edible fruit. **Æ. pav′ia**, red buckeye of Southern United States; bark is antipyretic; fruit causes tetanic symptoms, like strychnine. **Æ. rubicun′da**, Æ. pavia.

**Æsta′tes** (*æstas*, summer). Ephelides; lentigo; freckles.

**Æsthe′ma** (*aisthema*, sensation). Apparatus of the senses.

**Æsthematol′ogy** (*aisthema*, sensation, *logos*, discourse). Doctrine of or treatise on the senses or apparatus of the senses.

**Æsthemator′ganon** (*aisthema*, sensation, *organon*, organ). Organ of sensation or of one of the senses.

**Æsthe′sia** or **Æsthe′sis** (*aisthesis*, sensation). Faculty of being affected by sensation. Perception; feeling; sensibility.

**Æsthesim′eter.** Æsthesiometer.

**Æsthesin′.** Anhydrous compound occurring in the tissue of the brain.

**Æsthe′sioblast** (*aisthesis*, sensation, *blastos*, germ). A ganglionic cell in the embryo.

**Æsthesiogen′ic** (*aisthesis*, sensation, *gennao*, to produce). Term applied to agents having special influence upon sensation or sensibility.

**Æsthesiog′raphy** (*aisthesis*, sensation, *graphe*, description). Description of sensorial apparatus.

**Æsthesiol′ogy** (*aisthesis*, sensation, *logos*, discourse). Science of sensation or the senses.

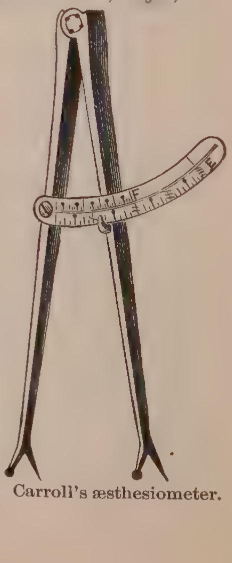
**Æsthesioma′nia.** Mania accompanied with perversion or disorder of the moral sense.

**Æsthe′siomene.** See *Esthiomene.*

**Æsthesiom′eter** (*aisthesis*, sensation, *metron*, measure). Measurer of sensation; instrument of beam compass kind to indicate the distance at which two points can be distinguished when brought in contact with any portion of the cutaneous surface; such measurement is called *æsthesiom′etry.*

**Æsthesioneu′ra.** A sensory neuron.

**Æsthesioneuro′sis.** A disorder of the nervous system involving sensation



Carroll's æsthesiometer.

or the senses. **Vis′ceral æ.,** a sensory affection of the internal organs.

**Æsthesod′ic** (*aisthesis,* sensation, *hodos,* way). Having faculty of conveying sensation; gray matter of the cord has been called an æsthesodic substance, being the path of sensory impressions. *Kinesodic* (conveying motion) is the antithesis to *æsthesodic.*

**Æsthet′ic.** Relation to sensation.

**Æsthet′ics.** Science of sensation.

**Æsthophysiol′ogy.** Physiology of the senses.

**Æs′tival.** Relating to summer. See *Estival.*

**Æstiva′tion.** Dormancy of animal life during summer.

**Æs′tivo-autum′nal.** Summer-autumn; applied to malarial fevers. See *Estivo-autumnal.*

**Æs′tus.** Heat. **Æ. volat′icus,** sudden heat; scorching or flushing of the face.

**Æ′tal.** Belonging to any age, as *ætal changes of the teeth* in dentition.

**Æ′tas.** Age. **Æ. bo′na,** adolescence. **Æ. decrep′ita,** decrepitude. **Æ. firma′ta,** period of full vitality. **Æ. in′euns,** childhood. **Æ. infir′ma,** old age. **Æ. ingraves′cens,** approaching old age. **Æ. in′tegra,** full adolescence. **Æ. ma′la,** old age. **Æ. matu′ra,** manhood. **Æ. me′dia,** middle age. **Æ. provec′ta,** old age. **Æ. pueri′lis,** boyhood. **Æ. senec′ta** or **seni′lis,** old age. **Æ. viri′lis,** adult age.

**Æ′ther** (*aither,* the upper air). (Ph. U. S. and Br.) $(C_2H_5)_2O$. Ether, sulphuric ether, ethyl oxide; a colorless, inflammable, volatile liquid (obtained by distillation from a mixture of alcohol and strong sulphuric acid), of penetrating and fragrant odor and hot, pungent taste; it contains about 96 per cent. of absolute ether. Its chief employment is to produce general anæsthesia by inhalation, but it is also given internally as a diffusible stimulant in doses of ♏x–ʒj (0.6–4.0), and is used externally as a refrigerant. **Æ. ace′ticus** or **aceto′sus** (Ph. U. S. and Br.), acetic ether, ethyl acetate; contains 98.5 per cent. of absolute acetic ether and 1.5 per cent. of alcohol; dose, ♏v–xxx (0.3–2.0). **Æ. alcohol′icus,** spiritus ætheris. **Æ. ammoniaca′lis** or **ammoniaca′tus,** ether with ammonia. **Æ. am′ylonitro′sus** or **amyl′icus nitro′sus,** amyl nitrite. **Æ. anæsthet′icus** or **Æ. Aran′ii,** colorless liquid made by acting upon ethyl chloride with chlorine; prepared by Dr. Aran; see *Æther hydrochloricus.* **Æ. azo′ticus,** æ. nitrosus. **Æ. benzo′icus,** benzoic ether; ethyl benzoate. **Æ. broma′tus,** ethyl bromide. **Æ. bromhy′dricus,** ethyl bromide; hydrobromic ether. **Æ. butyr′icus,** ethyl butyrate. **Æ. cantharida′tus,** ethereal extract of cantharides; liquor epispasticus. **Æ. chlora′tus,** hydrochloric ether. **Æ. chlora′tus alcohol′icus,** spiritus ætheris. **Æ. chlorhy′dricus** or **chlorohy′dricus,** hydrochloric ether; ethyl chloride. **Æ. c. chlora′tus,** æ. anæstheticus. **Æ. chlo′ricus,** chloric ether; chloroform. **Æ. cyp′ricus,** ethereal solution of copper sulphate; used in epilepsy. **Æ. ferra′tus,** compound of iron and ether. **Æ. for′micus** or **formi′cicus,** formic ether; ethyl formate. **Æ. for′tior,** stronger ether, the former Ph. U. S. name for sulphuric ether. **Æ. Frobe′nii,** ethylic ether, after the chemist Frobenius. **Æ. hy′dricus,** ethylic ether. **Æ. hydrio′dicus,** hydriodic or iodhydric ether, iodide of ethyl; obtained by mixing alcohol, iodine, and phosphorus and distilling; used for inhalation; ethyl iodide. **Æ. hydrobro′micus,** hydrobromic ether; ethyl bromide. **Æ. hydrochlo′ricus,** hydrochloric ether, muriatic, chlorohydric, or marine ether; muriate of ethylen; ethyl chloride, $C_2H_5Cl$, made by the action of muriatic acid on alcohol; colorless liquid, used as a local anæsthetic on account of its frigorific effects, in dentistry, minor surgery, facial neuralgia, etc. A chlorinated chlorohydric or muriatic ether, æ. muriaticus trichloratus, æ. anæstheticus, formed by the action of chlorine on chlorohydric ether, has also been used as a local anæsthetic. **Æ. hydrocyan′icus,** hydrocyanic or prussic ether, hydrocyanate or cyanide of ethylen or ethyl; has been given in whooping-cough as a substitute for hydrocyanic acid; dose, 6 drops. **Æ. ioda′tus,** ethyl iodide; iodine dissolved in ether. **Æ. iodhy′dricus,** hydriodic ether; ethyl iodide. **Æ. ligno′sus,** acetone. **Æ. lo′tus,** washed ether; ethylic ether deprived of alcohol by washing with water. **Æ. martia′lis,** tinctura sulphurico-ætherea ferri. **Æ. mercuria′lis,** ethereal solution of corrosive sublimate. **Æ. methyl′icus,** methylic ether. **Æ. muriat′icus,** æ. hydrochloricus. **Æ. ni′trico-alcohol′icus,** spiritus ætheris nitrosi. **Æ. ni′tricus,** nitric ether. **Æ. ni′tricus alcoolisa′tus,** spiritus ætheris nitrosi. **Æ. nitro′sus,** nitrous ether, ethyl nitrite, see *Spiritus ætheris nitrosi.* **Æ. petro′lei,** rhigolene. **Æ. phosphora′tus,** a colorless liquid made by infusing phosphorus in ether. **Æ. phosphor′icus,** ethylic ether; made by decomposing alcohol with phosphoric acid. **Æ. pruss′icus,** æ. hydrocyanicus. **Æ. pu′rus,** pure ether. **Æ. pyroace′ticus,** acetone. **Æ. rectifica′tus,** stronger ether. **Æ. spirituo′sus,** ethylic ether, spiritus ætheris. **Æ. sulphu′ricus,** see *Æther.* **Æ. sulphu′ricus ac′idus,** elixir acidum Halleri. **Æ. sulphu′ricus alcoolisa′tus** or **cum alcoho′le,** spiritus ætheris. **Æ. terebinthina′tus,** terebinthinated ether; made by mixing alcohol, spirit of turpentine, concentrated nitric acid, and distilling; employed externally and internally in biliary calculi, rheumatism, etc., in doses of ♏x–xx (0.6–1.2) in honey or yolk of egg. **Æ. valerian′icus,** valerianic ether; ethyl valerianate. **Æ. vitri′oli** or **vitriol′icus,** æ. sulphuricus.

**Æthe′rea.** Term given formerly to preparations of ether. **Æ. her′ba,** Eryngium maritimum.

**Æthe′reus** or **Æthe′rius.** Relating to ether; ethereal.

**Æthero′lea.** Volatile oils.

**Æthiopifica′tion, Æthiopis′mus** (*aithiops,* an Ethiopian, *facio,* to make). Mummy-like coloring of the skin induced by the use of mercurial or sulphur ointment, or of nitrate of silver internally, and seen in bodies poisoned by arsenic.

**Æthiopoprocal′ymma** (*aithiops, prokalymma,* a veil). Hottentot apron.

**Æ′thiops** (*aitho,* to burn, *ops,* countenance). Black or burnt countenance; Ethiopian; negro. Ancient name of certain black oxides and sulphurets of metals. **Æ. al′bus,** albino; hydrargyrum cum cretâ. **Æ. alcalisa′tus,** hydrargyrum cum cretâ. **Æ. anima′lis,** impure animal charcoal; also pigment layer of the choroid. **Æ. antimonia′lis,** compound of ethiops mineral and sulphide of antimony. **Æ. creta′ceus,** hydrargyrum cum cretâ. **Æ. fer′ricus,** æ. martialis. **Æ. martia′lis,** martial ethiops; black deutoxide of iron, once in repute as a tonic. **Æ. mercuria′lis, minera′lis,** or **narcot′icus,** hydrargyri sulphuretum nigrum. **Æ. per se,** hydrargyri oxidum cinereum. **Æ. pur′gans,** mercury with jalap. **Æ. sacchara′tus,** hydrargyri saccharatum. **Æ. vegetab′ilis,** Fucus vesiculosus.

**Æthiop′sis.** Salvia sclarea.

**Æ′thogen** (*aithos,* burning heat, *gennao,* to produce). Ethogen; compound of boron and nitrogen, which gives a very brilliant light when heated with the blowpipe.

**Æthu′sa** (*aitho,* to burn). Ammi, Sison ammi. **Æ. cyna′pium,** fool's parsley, ord. *Umbelliferæ;* poisonous European plant mistaken for true parsley, producing vomiting, giddiness, sopor, and at times fatal results; diuretic and emmenagogue. **Æ. me′um,** spignel, baldmoney; the root has been advised as a carminative, stomachic, etc.

**Æthusine′.** Poisonous alkaloid, active principle of Æthusa cynapium.

**Æ′thyl.** See *Ethyl.* **Æ. bro′midum,** ethyl bromide. **Æ. chlor′idum,** ethyl chloride. **Æ. io′didum,** ethyl iodide.

**Æthylal′dehyde.** Acetaldehyde.

**Æthyle′num.** Ethylene. **Æ. bichlora′tum** or **bichlor′idum,** ethylene bichloride. **Æ. chlora′tum,** ethylene bichloride.

**Æthylide′num.** Ethylidene, ethidene. **Æ. bichlora′tum,** ethylidene chloride. **Æ. chlora′tum,** ethylidene chloride.

**Æth′ylum.** See *Ethyl.* **Æ. broma′tum,** ethyl bromide. **Æ. chlora′tum,** ethyl chloride. **Æ. ioda′tum,** ethyl iodide.

**Æ′tioi phle′bes.** Temporal veins.

**Ætiological** or **Etiological** (e-ti-o-loj′i-cal). Pertaining to etiology.

**Ætiol′ogist** or **Etiol′ogist.** One who investigates causes of disease.

**Ætiol′ogy** or **Etiol′ogy** (*aitia*, cause, *logos*, discourse). Science of the causes of disease.

**Ætion′ymous** (*aitia*, cause, *onoma*, name). Named according to cause, as lead paralysis, mercurial tremor, etc.

**Aëti′tes** (*aetos*, an eagle). Eaglestone; formerly supposed to facilitate delivery if bound on the thigh, and to prevent abortion if bound on the arm.

**Æton′ychum.** Lithospermum.

**Afeb′rile** (*a*, priv., *febris*, fever). Without fever.

**Affec′tio** (*affecto*, to move or influence). Affection, disease. **A. arthrit′ica cor′dis,** cardiagra. **A. eveli′aca,** obstruction of the bowels. **A. hypochondri′aca,** hypochondriasis. **A. hyster′ica,** hysteria. **A. sarmat′ica,** plica. **A. scorbu′tica pustulo′sa,** pemphigus. **A. tympanit′ica,** tympanites. **A. uteri′na,** hysteria.

**Affec′tion.** Mode in which mind or body is affected or modified; disease.

**Affec′tive.** That which affects, touches, etc. **A. fac′ulties,** functions dependent upon organization of the brain, comprising sentiments, affections, etc. **A. insan′ity,** emotional insanity.

**Affec′tus.** Morbid condition; passion. **A. an′imi,** affections of the mind. **A. fau′cium pes′tilens,** cynanche maligna. **A. flatulen′tus,** hypochondriasis. **A. hydero′des,** dropsy. **A. hyster′icus,** hysteria. **A. implica′tus,** disease complicated with other affections. **A. mag′nus,** epilepsy. **A. melanchol′icus,** melancholy. **A. præcordia′lis,** hypochondriasis. **A. spasmod′icoconvulsi′vus labio′rum,** facial neuralgia.

**Af′ferent** (*affero*, to carry). Centripetal; esodic; the opposite of efferent; conveying inward, as from periphery to centre. **A. lymphat′ic,** a vessel entering a lymphatic gland. **A. nerve,** nerve conveying impressions to nervous centres; sensory nerve. **A. ves′sel,** vessel conveying contents to central portions of the body.

**Affin′ity.** In chemistry, the attraction occurring between heterogeneous substances, resulting in the formation of compounds; in medicine this term implies the predilection shown by diseases to affect certain parts. **A. of aggrega′tion,** attraction and cohesion. **Chem′ical a.,** the attractive force between the atoms of certain substances which leads them to unite and form a new substance; the same as compound a. **A. of composi′tion,** tendency of several substances to combine and form new matter without affecting any compound existing before. **Com′pound a.,** chemical a. **Divel′lent a.,** term denoting the force leading to the formation of new compounds through decomposition of the old ones. **Elec′tive a.,** affinity shown by one body for combining with a certain other. **Interme′diate a.,** affinity by which a substance is capable of causing direct combination with other substances which possess no affinity for one another. **Quies′cent a.,** affinity which keeps the dissimilar elements of a compound united.

**Affla′tus** (*ad*, to, *flo*, to blow). Expulsion of flatus; belching; formerly denoted a sudden attack of erysipelas.

**Af′fluence** or **Af′flux** (*affluo*, to flow to). Flow or determination of humors, particularly of blood, toward a part; accumulation of fluid in a part or organ; fluxion.

**Af′fluent.** Flowing toward a part or organ, or accumulating in it.

**Affune′na.** Plant of Guinea with purgative properties.

**Affuse′** (*affundo*, to pour upon). To sprinkle.

**Affu′sio** (*ad*, to, *fundo*, to pour). Affusion or suffusion; infusion; cataract. **A. frig′ida,** cold affusion. **A. oc′uli,** cataract. **A. orbicula′ris,** placenta.

**Affu′sion.** Action of pouring liquid on any body. Affusions, cold and warm, are used in different diseases. Cold affusion consists in placing the patient in a tub and pouring cold water over him, then wiping him dry and putting him to bed.

**Af′oba.** Plant of Guinea used for scabies.

**Afœta′lis.** Without fœtus.

**Af′rican date-mark.** Biskra button. **A. fe′ver,** malignant malarial fever. **A. leech,** leech from Algiers, in Africa. **A. leth′argy,** fatal sleep disease or sleeping sickness, to which negroes of West Africa are subject, sleepiness being the chief symptom; the arachnoid membrane is found on post-mortem examination to be hyperæmic. **A. sleep disease,** A. lethargy.

**Af′ter-ac′tion.** Brief negative variation in electric current after spasm of a muscle. **A.-birth,** placenta, umbilical cord, and membranes, one or all, expelled after birth of child. **A.-brain,** fifth cerebral vesicle of embryo; metencephalon. **A.-bur′then,** or **A.-bur′den,** after-birth. **A.-cat′aract,** secondary cataract. **A.-damp,** irrespirable gases (nitrogen and carbonic acid) following the explosion of fire-damp. **A.-im′ages,** impressions remaining upon the retina after illuminated object is removed; when the image is simply prolonged, the after-image is said to be positive; when seen in complementary colors, negative. **A.-milk,** strippings, see *Milk*. **A.-pains,** pains after labor, resulting from uterine contractions. **A.-percep′tion,** appreciation of impression on sensory organs after withdrawal of cause producing it. **A.-produc′tion,** neoplasm or new formation. **A.-sensa′tion,** continuance of impression after withdrawal of the stimulating cause. **A.-shaft,** hollow in the small of the back. **A.-sound,** continuance of the perception of sound in the organ of hearing after the waves producing it have ceased. **A.-taste,** a taste persisting after the exciting cause has been removed. **A.-treat′ment,** subsequent treatment of a case, as after operation. **A.-vis′ion,** the continued retinal impression of an object after it has disappeared.

**Agalacta′tio** or **Agalac′tia** (*a*, priv., *gala*, milk). Absence of milk in the mammæ; defective lactation.

**Agalac′tous.** Without milk; not naturally nursed (referring to infant). Having the property of checking lactation.

**A′gal-a′gal.** Agar-agar.

**Agala′sia.** Agalactia. **A. contagio′sa,** epidemic disease attacking sheep and goats, in which there is a diminution or absence of secretion of milk.

**Agal′lochum.** Aloeswood; eaglewood. Resinous, aromatic wood of E. Indies.

**Agalorrhœ′a** (*a*, priv., *gala*, milk, *rheo*, to flow). Stoppage of secretion of milk.

**Agam′ic** (*a*, priv., *gamos*, marriage). Without sex; relating to asexual reproduction; generating without impregnation.

**Agamogen′esis** (*a*, priv., *gamos*, marriage, *genesis*, generation). Reproduction without sexual intercourse.

**Agamogenet′ic.** Produced without sexual intercourse.

**Agamone′ma** (*a*, priv., *gamos*, marriage, *nema*, thread). Germs of nematode worms.

**Agamone′matode.** Larval condition of *Agamonema*, existing in the intestinal canal or peritoneal cavity of some animals.

**Ag′amous.** Without sexual organs; agamic; reproducing without intercourse, as in budding; cryptogamous.

**Aganglion′ic.** Without ganglia.

**Aganobleph′aron** (*aganos*, mild, *blepharon*, eyelid). Abnormal adhesion of the eyelids.

**Aganosta′kis.** The ophthalmoscope has been so called, after a Greek physician who claimed to have invented it.

**A′gar** or **A′gar-a′gar.** Japanese or Bengal isinglass, consisting of dried seaweed, used as food;

species of algæ used as a medium for bacterial cultures, and in medicine to make suppositories.

**Ag'aric.** A mushroom; see *Agaricus*. **A. acid,** agaricin. **A. of oak,** Agaricus chirurgorum. **Ed'ible a.,** Agaricus edulis. **White a.,** Agaricus albus.

**Agari'cic** or **Agaricin'ic acid.** Agaricin.

**Agaricin'.** Active principle of various species of agaricus; given in night-sweats of phthisis; dose, gr. $\frac{1}{20}$ (0.003).

**Agarici'num.** Agaricin.

**Agar'icus.** Genus of mushrooms, some of which are edible, others poisonous. The edible variety has received several names—A. campestris, A. edulis, A. arvensis, A. sylvaticus, A. odoratus. **A. al'bus,** white agaric, Polypous officinalis; parasitic fungus on the European larch; cathartic and emetic, used in the night-sweats of phthisis; dose, gr. xxx–ʒj (2.0–4.0). **A. arven'sis,** an edible variety. **A. auranti'acus,** delicate variety of the genus *Amanitæ* that must not be confounded with A. pseudo-aurantiacus, which is very poisonous. **A. auriculæfor'mis,** Peziza auricula. **A. campes'tris,** an edible variety. **A. chirurgo'rum,** variously called spunk, amadou, punk, agaric of the oak, touchwood, boletus, female agaric, tinder; has been used as moxa. **A. edu'lis,** A. campestris. **A. ignia'rius,** A. albus. **A. lar'icis,** A. albus. **A. musca'rius,** fly agaric, fungus Amanita muscaria, growing in Europe, from which the alkaloid muscarine is obtained. **A. neca'tor,** poisonous variety. **A. præpara'tus,** A. chirurgorum. **A. pseudo-auranti'acus,** poisonous fungus of the genus *Amanitæ*. **A. quer'cus** or **querci'nus,** A. chirurgorum. **A. sylvat'icus,** A. campestris.

**Agas'ter** (*a*, priv., *gaster*, stomach). One devoid of stomach or alimentary canal.

**Agas'tric.** Without digestive organs.

**Agastroneu'ria** or **Agastroner'via** (*a*, priv., *gaster*, stomach, *neuron*, nerve). Want of nervous action or power in the stomach.

**Agastrono'mia** (*a*, priv., *gaster*, stomach, *nomos*, rule). Agastronervia.

**Agastrozo'a** (*a*, priv., *gaster*, stomach, *zoon*, animal). Agastric animals.

**Agasyl'lis gal'banum.** Bubon galbanum.

**Agathin'.** Salicyl - aldehyde - methyl - phenyl - hydrazone. Small white leaflets, insoluble in water; used in sciatica, neuralgia, and rheumatism; analgesic and antithermic; dose, gr. viij (0.5).

**Ag'athis damar'ra.** Pinus damarra.

**Agatho'des angustifo'lia.** Plant, ord. *Gentianaceæ*, the bitter root of which is tonic and antipyretic.

**Agathophyl'lum aromat'icum.** Tree of Madagascar; fruit is stimulant; leaves are condiment.

**Agathos'ma crena'ta.** Diosma crenata.

**Agatho'tes chirayit'a.** Gentiana chirayta.

**Aga've** (*agauos*, admirable). Genus of plants, ord. *Amyrillidaceæ*, of which several have been used in medicine. **A. america'na,** American agave, American aloe, century plant, maguey. This plant of tropical America is diuretic, antisyphilitic, laxative, and emmenagogue. **A. lu'tea,** species growing in Mexico; from juice of the leaves a pectoral syrup is prepared. **A. mexica'na,** juice is diuretic, laxative, and emmenagogue. **A. potato'rum,** Mexican plant, same properties as A. salmiana. **A. ramo'sa,** A. americana. **A. salmia'na,** species of agave growing in Mexico; leaves are rubefacient; root is diuretic; sweet juice of plant, *aguamiel*, is called pulque when fermented; when the pulque is distilled a brandy is obtained, called *mezcal* or *aguardiente de maguey*. **A. virgin'ica,** rattlesnake's master, false aloe; grows in Southern States; root very bitter; has been used in tincture as a carminative in colic, and as a remedy for bites of serpents.

**Age.** Period of life; time that has elapsed since birth. Five ages are often designated: 1. First infancy, infantia. 2. Second infancy, pueritia. 3. Adolescence. 4. Adult or virile age, manhood or womanhood. 5. Old age. **A. of consent',** legal age of consent to sexual intercourse; it varies in different places, but is usually about sixteen years for females. **A. of matu'rity,** adult or virile age. **A. of pu'berty,** see *Puberty*.

**Agelæ'a emet'ica.** Madagascar plant; leaves are emetic. **A. lamarck'ii,** Madagascar plant; used in dysentery and gonorrhœa.

**Agenei'os** (*a*, priv., *geneion*, beard). Beardless.

**Agene'sia** or **Agen'esis** (*a*, priv., *genesis*, generation). Impotence; imperfect development of any part. **Cer'ebral a.,** imperfect development of the brain in the fœtus. **A. rec'ti,** imperforate anus.

**Agene'sic** (*a*, priv., *genesis*, generation). Sterile or impotent.

**Agenoso'mus** (*a*, priv., *gennao*, to generate, *soma*, body). Monster with fissure and eventration in the lower part of the abdomen—the urinary or sexual apparatus is absent or very rudimentary. Condition is called *agenoso'ma* or *agenoso'mia*.

**A'gent** (*ago*, to act). Any power producing or tending to produce an effect on the body. Morbific agents are causes of disease; therapeutical agents, means of treating it.

**Agera'sia** or **Ager'asy** (*a*, priv., *geras*, old age). Vigorous old age.

**Ager'atum.** Achillea ageratum. **A. altis'simum,** Eupatorium ageratoides. **A. ptar'micum,** plant having sialagogue and errhine properties.

**Ageu'sia, Ageu'sis,** or **Ageus'tia** (*a*, priv., *geusis*, taste). Diminution or loss of taste.

**Ag'ger.** Prominence or projection. **A. auric'ulæ,** ridge on middle surface of outer ear, on which is inserted retrahens aurem muscle. **A. na'si,** rudiment of nasal turbinate bone of lower animals, seen in man at the anterior free extremity of the middle turbinate bone. **A. perpendicula'ris,** a. auriculæ. **A. pontic'ulus,** a. auriculæ. **A. valvula'rum,** projection at the base of the valve of a vein.

**Agglom'erate** or **Agglom'erated** (*agglomero*, to collect together). Collected together; a term applied to tumors or glands in aggregation. **A. glands,** glands of Peyer.

**Agglu'tinant** (*ad*, to, *glutinare, to paste*). Joining or gluing together; remedies considered capable of uniting divided parts; plasters adhering strongly to the skin and certain bandages are so termed.

**Agglu'tinate.** To reunite, as the lips of a wound.

**Agglutina'tio.** Agglutination. **A. maxil'læ infe-rio'ris,** lockjaw. **A. pilo'rum,** cure of ingrowing lashes by the application of glutinous material.

**Agglutina'tion.** First degree of adhesion. Action of agglutinants. The healing of wounds, either immediate direct union, or mediate union effected by the pouring out of an agglutinative material. **A. test,** see *Widal test*.

**Agglu'tinative.** Having the power of producing adhesion, as collodion, etc.

**Agglutinin'.** Material present in the blood serum in cases of infectious disease which has the property, when added to a culture of the bacteria producing the disease, of causing these to clump together. See *Widal test*.

**Aggluti'tio.** Obstruction of the œsophagus; dysphagia.

**Aggrava'tion.** Increase in severity of disease.

**Ag'gregate** or **Ag'gregated** (*aggrego*, to flock together). Massed together. **A. glands,** those which are in clusters, such as Peyer's glands. **A. pills,** a term formerly used to denote pills which were believed to contain the properties of a number of medicines, and to supply their place.

**Agita'tion** (*ago*, to act). Constant and fatiguing motion of the body or distressing restlessness; mental inquietude; shaking of liquids to ensure thorough mixing of the ingredients.

**Agita'tor cau'dæ.** Muscular fascicle, especially of the lower animals, passing from side of coccyx and last sacral vertebra to femur.

**Aglobu'lia** or **Aglob'ulism** (*a*, priv., *globulus*, globule). Anæmia; diminution in number of red blood corpuscles.

**Aglos'sia** or **Aglot'tia** (*a*, priv., *glossa*, tongue).

Malformation consisting in want of tongue; dumbness.

**Aglossos′toma** (*a*, priv., *glossa*, tongue, *stoma*, mouth). A monster having a mouth without a tongue.

**Aglos′sus.** Without a tongue.

**Agluti′tion** (*a*, priv., *glutio*, to swallow). Hybrid term designating impossibility of swallowing.

**Ag′ma** or **Ag′me.** Fracture.

**Agmatol′ogy** (*agma*, fracture, *logos*, description). Science of fractures.

**Ag′mina digito′rum ma′nûs** (*agmen*, phalanx). Phalanges of fingers. **A. membra′na**, amnion. **A. Pey′eri**, Peyer's glands.

**Ag′minate.** Grouped together. **A. fol′licles** or **glands**, Peyer's glands.

**Ag′nail.** Hangnail; whitlow.

**Agna′thia** (*a*, priv., *gnathos*, jaw). Malformation consisting in want of the jaw, especially of the lower jaw.

Agnathus synotus.

**Agna′thus.** One with congenital absence of the jaw.

**Agnin′.** Fatty matter obtained from wool; lanolin.

**Agni′na membra′na** (*agnus*, lamb). Amnion.

**Agnœ′a** or **Agnoi′a** (*agnoia*, ignorance). Condition in which a patient does not recognize individuals or objects about him.

**Agnolin′.** Lanolin.

**Agno′sia** (*a*, priv., *gnosia*, perception). Agnæa.

**Ag′nus cas′tus.** Vitex or chaste tree. **A. christ′us**, Ricinus communis.

**Agom′eter** (*ago*, to draw, *metron*, measure). An appliance for determining electrical resistance; a rheostat.

**Agomphi′asis** or **Agompho′sis** (*a*, priv., *gomphios*, a molar tooth). Looseness of the teeth.

**Agom′phious.** Without teeth.

**A′gon** (*agon*, struggle). Agony; last struggle before death; Cichorium intybus.

**Ago′nia** (*agon*, struggle). Agony. Also (*agonos*, barren) sterility. **A. bark**, bark of Plumifera lancifolia; used in fevers.

**Agoniadin′.** A glucoside obtained from Plumifera lancifolia; used in malarial fever in doses of gr. ij–iv (0.13–0.26).

**Agoni′zans.** One who is moribund.

**Ag′onos** (*agonos*, barren). Sterile; impotent. Unborn

**Ag′ony** (*agon*, struggle). Throe; death struggle; the final struggle of life, characterized by a great change in the features, gradual abolition of sensation and motion, loss of voice, dryness or lividity of the tongue and lips, rattling in the throat, small and intermittent pulse, and coldness of the extremities. Intense suffering.

**Agorapho′bia** (*agora*, market-place, *phobos*, fear). Nervous condition marked by fear of open spaces.

**Agoriadin′.** $C_{10}H_{14}O_6$. Glucoside from the bark of agoriada, of Brazil; antiperiodic.

**Ag′ra** (seizure). A suffix, as in odontagra, toothache, podagra, gout, etc.

**Agræ′mia** or **Agre′mia** (*agra*, seizure, *haima*, blood). Altered condition of the blood in gout.

**Agram′matism** (*a*, priv., *gramma*, letter). Incapacity to form words grammatically or to group them intelligibly in a sentence.

**Agraph′ia** or **Ag′raphy** (*a*, priv., *grapho*, to write). Form of cerebral disorder in which there is, as in aphasia as regards speech, total or partial inability to express ideas by written symbols. **A. acus′tica**, acoustic a., inability to write what has been dictated. **A. amnemon′ica**, amnemonic a., inability to write connectedly or so as to make sense. **A. atax′ica**, inability to write, owing to muscular incoordination. **Au′ditory a.**, a. acustica. **A. litera′lis**, literal or absolute a.; inability to form letters. **Mo′tor a.**, a. ataxica. **Mu′sical a.**, inability, as a result of disease, to write musical characters. **A. op′tica**, optical a.; inability to write from copy, though the patient can take down from dictation; inability to recall the appearance of written words. **Sen′sory a.**, a. optica. **A. verba′lis**, verbal a., in which letters are formed, but words are improperly formed or connected. **Vis′ual a.**, a. optica, see *Aphasia*.

**Ag′ria** (*agrios*, wild). Term applied to several severe forms of skin disease, as herpes, lichen, etc.; malignant pustule; holly.

**Agriam′pelos** (*agrios*, wild, *ampelos*, vine). White bryony.

**Agrielco′sis** (*agrios*, wild, *helkosis*, ulceration). Malignant ulceration.

**Agrimo′nia.** Agrimony, cocklebur, stickwort, ord. *Rosaceæ*, including A. eupatoria or A. odorata, A. officinalis or vulgaris, and A. parviflora, small-flowered or sweet-scented agrimony; mild astringent and stomachic; dose, in powder, gr. xx–ʒj (1.3–4.0).

**Ag′rimony.** Agrimonia. **Hemp a.**, Eupatorium cannabinum. **Small-flow′ered a.**, Agrimonia parviflora. **Sweet-scent′ed a.**, Agrimonia parviflora.

**Agriocas′tanum.** Bunium bulbocastanum, lycoperdon; tuber.

**Agriocina′ra.** Sempervivum tectorum.

**Agriococcimele′a.** Prunus spinosa.

**Agriophy′ma** (*agrios*, wild, *phyma*, growth). Malignant tumor.

**Agriopso′ra** (*agrios*, wild, *psora*, itch). Obstinate scabies.

**Agriothy′mia** (*agrios*, wild, *thymos*, wrath). Ferocious, maniacal, or homicidal insanity. **A. hydrophob′ica**, maniacal form of rabies.

**Agripal′ma gal′lis.** Leonurus cardiaca.

**Agrip′pa.** One born by the feet. The family of Agrippa is said to have obtained its name from this circumstance. Foot presentation.

**Ag′rom.** Disease of India in which the tongue becomes rough and cracked.

**Agroma′nia** (*agros*, field, *mania*, madness). Morbid impulse to wander in solitudes.

**Agrop′yrum lævis′simum, pun′gens,** or **re′pens.** Triticum repens.

**Agrostem′ma githa′go.** Lychnis githago; the corn cockle, the seeds of which contain a poisonous sapotoxin-like substance. These seeds are sometimes accidentally mixed with cereal preparations and then cause a condition called gigathism.

**Agros′tis.** Bryonia alba. **A. verticilla′ta**, Andropogon muricatus.

**Agru′na** or **Agrunel′a.** Prunus spinosa.

**Agryp′nia** (Gr.). Insomnia.

**Agrypnoco′ma.** Unconscious delirium; coma vigil.

**Agrypno′des.** Characterized by sleeplessness, as certain fevers.

**Agryp′nos** or **Agryp′nus.** Sleepless; vigilant.

**Agrypnot′ic.** Producing wakefulness; remedy for stupor; antihypnotic.

**A′gue** (Gothic, *agis*, trembling). Intermittent fever; often used in the sense of chill or rigor. **Brass-found′ers′** or **brass a.**, series of morbid phenomena, resembling ague, in those exposed to the fumes of deflagrating zinc in brass foundries. **Brow a.**, frontal neuralgia, usually ascribed to malaria. **A. cake**, enlarged spleen in malaria, distinctly felt by external examination. **Cat′enating a.**, one linked with other diseases. **Dead a.**, dumb a. **A. drop, taste′less**, Fowler's solution. **Dumb a.**, masked intermittent fever. **Face a.**, facial neuralgia, often malarial. **Fever and a.**, intermittent fever. **A. fit**, paroxysm of ague. **Free a.**, Laurus sassafras. **A. grass**, Aletris farinosa. **Irreg′ular a.**, masked intermittent fever. **Lar′val** or **la′tent a.**, intermittent fever without chill or without well-defined paroxysms. **Leap′ing a.**, a psychosis in which there is an impulse to dance or move about in a fantastic manner; see *Mania, dancing*. **Masked a.**, latent a. **A. plant,** transparent, cottony flocks in urine, scarcely visible to the eye, said to be found in cases of intermittent fever. **Quar'tan a.**, intermittent fever with paroxysms recurring every third day. **Quin'tan a.**, a. the paroxysms of which recur every fourth day. **Quotid'ian a.**, daily recurring intermittent fever. **A. root,** Aletris farinosa. **A. spell,** paroxysm of intermittent fever; spell or charm to prevent it. **Ter'tian a.**, intermittent fever with paroxysms recurring every other day. **Third-day a.**, tertian a. **A. tree,** Laurus sassafras. **A. weed,** Eupatorium perfoliatum.

**A'guish.** Slightly affected with malaria; malarial.

**A'gul.** Thorny shrub of Persia and Mesopotamia, affording manna; leaves are purgative.

**Agy'rias** (*agyrma*, collection). Opacity of crystalline; cataract.

**Ah.** Symbol for hypermetropic astigmatism.

**Ahl'feld's sign.** Tetanic uterine contractions occurring after the third month of gestation.

**Ahm.** Symbol for mixed astigmatism with hypermetropia predominating.

**Ahu'ber.** Fruit of Juniperus phœnicea; used internally in gastralgia, and externally, infused in oil, in rheumatism.

**Ahyp'nia** (*a*, priv., *hypnos*, sleep). Insomnia.

**Ai.** Gascon name for tumefaction of fibrosynovial grooves of tendons; frequently noticed in external radial tendons of abductor longus and extensor brevis pollicis, and accompanied by peculiar crepitation. Name *ai* doubtless denotes outcry or expression of pain of patient.

**Aichmopho'bia** (*aichme*, point, *phobos*, fear). Morbid fear of pins or other sharp-pointed objects.

**Ailan'thic** or **Ailan'tic acid.** Acid found in bark of Ailanthus excelsa.

**Ailan'thus excel'sa.** Tree of India and Ceylon whose bark resembles quassia in bitter tonic properties. **A. glandulo'sa,** Chinese sumach, tree of heaven; native of China, well known in the United States as a shade tree, flowers of which have a strong, peculiar odor; powdered bark, dose gr. viij–x (0.5–0.6), is anthelminthic and purgative. **A. integrifo'lia,** A. excelsa. **A. malabar'ica,** tree of India, juice of which is used in dysentery and dyspepsia, and as a tonic and antipyretic.

**Ail'ing.** Sick; sickly.

**Ail'ment.** Disease.

**Ain'hum** (in Brazil, to saw). Dactylolysis; spontaneous amputation of little toes, sometimes great toe, unaccompanied by other affection or constitutional derangement; met with chiefly or only in negroes. It occurs on the W. coast of Africa and in S. America.

**Aiodine** (a-i'o-din). A thyroid-gland preparation containing a small percentage of iodine; used in myxœdema.

**Air** (Gr., *aer*). Respirable gas; atmospheric air; invisible, transparent, inodorous, insipid, ponderable, compressible, and elastic fluid, which under the form of the atmosphere surrounds the earth to an indefinite height. It is essentially composed of two mixed but not chemically united gases, oxygen and nitrogen, in the proportion of about 21 volumes of the former to 79 of the latter. Oxygen is the vital portion, but nitrogen is necessary to dilute it. Air also contains a small portion of carbonic acid gas, 0.05 per cent.; argon, 1 per cent.; ammonia, ozone, aqueous vapor, different terrestrial emanations, etc. When inspired, the oxygen of the air unites with the carbon in the blood and is exhaled as carbonic-acid gas. Its effects upon the body vary according to its density, temperature, moisture, etc. The weight of air is 14.47 times that of hydrogen; water weighs 773 times as much as air. **A.-bath,** method of applying air to the surface of the body. **A.-bed,** rubber or canvas bag that may be inflated for the sick or injured to lie upon. **A.-blad'der,** swim-bladder, swimming bladder, the swim; abdominal organ in many fishes, sometimes communicating by a duct, ductus pneumaticus, with the alimentary canal. Its contents are the elements of atmospheric air, but in different proportions. **A.-cells,** a. vesicles of the lungs. **A.-cham'ber,** folliculus aëris. **Complement'al** or **complement'ary a.**, a. that can be inhaled after ordinary inspiration is completed. **A.-conduc'tion,** conduction of sound to the central organ of hearing in the ordinary way as opposed to *bone conduction*, which see. **A.-cure,** treatment of disease by means of compressed or rarefied air or by a change of climate. **A.-cush'ion,** air-tight cushion that may be inflated. **Dephlogis'ticated a.**, oxygen. **A.-douche,** inflation of the middle ear by blowing in air. **A.-dress'ing,** dressing open to air. **A.-em'bolism,** obstruction of the bloodvessels by air. **Expired' a.**, a. forced from the lungs in the act of expiration. **Factit'ious a.**, carbonic acid. **Fixed a.**, carbonic acid. **A.-hun'ger,** profound dyspnœa, as in Kussmaul's respiration in diabetic coma. **Liq'uid a.**, a. in liquid form, reduced to that state by the application of intense cold and pressure; its tendency is constantly to return to the gaseous form, and in so doing it absorbs a great amount of heat; it has been used in medicine as a cauterant for malignant growths, etc. **Mephit'ic a.**, carbonic acid; nitrogen. **A.-pass'ages,** nasal passages, mouth, larynx, trachea, bronchi, etc., through which air passes to the lungs; the *upper a.-p.* include the portion of the respiratory tract above the larynx. **A.-pes'sary,** air-tight rubber pessary filled with air. **A.-poise,** apparatus for determining the weight of the air. **A.-pump,** machine for exhausting the air in a closed vessel. **Reserve' a.**, supplemental air. **Resid'ual a.**, a. remaining in the lungs after forced expiration. **A.-sacs,** see *Lung*. **Sol'id a. of Hales,** carbonic acid. **Sta'tionary a.**, residual a. in the lungs to which tidal air gives oxygen and from which it takes carbonic acid. **Supplement'al** or **supplement'ary a.**, a. that can be exhaled after ordinary expiration. **A.-thermom'eter,** thermometer in which air is used in place of mercury or alcohol to denote changes in temperature. **Ti'dal a.**, a. inspired and expired during each respiration. **A.-ves'icles,** air-cells. **Vi'tal a.**, oxygen.

**Airen'.** Fermented cow's milk of Tartary.

**Air'ol.** $BiC_6H_2(OH)_4COOI$. Bismuth oxyiodogallate; a greenish, odorless, tasteless powder, used as an astringent antiseptic dusting-powder for wounds, ulcers, etc. Internally it is used as an astringent in doses of gr. v–x (0.32–0.65).

**Aitch'bone.** Buttock bone in cattle.

**Ai'zoon.** Sempervivum tectorum. **A. canarien'se,** species native to the Canary Islands; its ashes are used in scurvy.

**Aj'uga.** Genus of plants, ord. *Labiatæ*. **A. chamæ'pitys,** ground pine; abortifacient, diuretic, and aperient; Teucrium chamæpitys. **A. decum'bens,** used for ague in Himalaya. **A. i'va,** species growing in Europe; used by Arabs in cholera. **A. pyramida'lis,** upright bugles, middle consound, mountain bugle; bitter, astringent tonic. **A. rep'tans,** common bugle; leaves are astringent; formerly used in phthisis.

**Akamathe'sia** or **Akamathe'sis.** Akatamathesia; dulness of intellect.

**Akan'tha** (a spine or thorn). Vertebral column; spinous process of vertebra. In composition, spine.

**Akanthæsthe'sia** (*akantha*, thorn, *aisthesis*, sensation). Perverted sensibility, in which there seems to be pressure of a sharp point on the surface.

**Akan'thion.** Point on middle line in measurement of the skull, at base of the anterior nasal spine.

**Akanthoceph'ala** (*akantha*, thorn, *kephale*, head). Parasitic worm, found in lower animals especially.

**Akan'thoid.** Thorny or spinous.

**Akanthol'ysis** (*akantha*, spine, *lysis*, loosening). Disease characterized by loosening or separation of the cells of the mucous layer of the epidermis.

**Akantho'ma.** Morbid growth of prickle-cell layer of the epidermis.

**Akanthop'elys** (*akantha*, spine, *pelyx*, basin). Pelvis having bony growths projecting into its cavity.

**Akantho′sis.** Disease of prickle-cell layer of epidermis, as lichen planus, impetigo, pemphigus, etc.

**Akan′thous.** Spinous or thorny.

**Akas′ga.** Ordeal used in west coast of Africa and Java (*nkasga*, pain or hurt); colorless, amorphous substance obtained from bark of plant of family *Loganiaceæ* by treating with alcohol and evaporating. It is an alkaloid—*akasgia, akasgine, akazgia,* or *akazgine,* resembling strychnine.

**Akat′alis** and **Akate′ra.** Berries of juniper tree.

**Akatamathe′sia** or **Akatamathe′sis** (*a,* priv., *katamanthano,* to understand). Dulness of intellect.

**Akatapha′sia** (*a,* priv., *kataphasis,* affirmation). Want of power or facility to form or articulate a sentence.

**Ake′bia quina′ta.** Species of *Lardizabaleæ* growing in Japan; fruit is emollient.

**Akeratodiapha′nia** or **Akeratodiaph′any** (*a,* priv., *keras,* horn, *diaphanes,* transparent). Opacity of the cornea.

**Akerato′sis** (*a,* priv., *keras,* horn). Imperfect growth of horny tissue.

**Akesto′ma** (*akestomai,* to heal). Granulation tissue.

**Akine′sia** or **Akine′sis** (*a,* priv., *kinesis,* motion). Rest; immobility; interval between systole and diastole of heart. Under term akinesis are included paralytic neuroses, or those characterized by defect of motive power. **Re′flex a.,** diminution or loss of reaction in the reflex mechanisms situated in the different parts of the nervous system.

**Akine′sic.** Relating to akinesia or immobility or paralysis of motion.

**Ak′ne.** Acne.

**Akne′mia** (*a,* priv., *kneme,* leg). Absence of legs.

**Akol′ogy** (*akos,* remedy, *logos,* description). Materia medica; operative surgery.

**Ak′roblast** (*akron,* top, *blastema,* growth). Tissue of germinal wall.

**Akrokine′sis** (*akron,* top, *kinesis,* movement). Increased power of movement.

**Akroposthi′tis** (*akron,* top, *posthe,* foreskin). Inflammation of the prepuce.

**Ak′sis.** Intermittent fever.

**Aktinomy′ces.** Actinomyces.

**Akyanoblep′sia** (*a,* priv., *kyanos,* blue, *blepo,* to see). Blue-blindness.

**Akyanop′sia** (*a,* priv., *kyanos,* blue, *ops.* eye). Blue-blindness.

**Akye′sis** (*a,* priv., *kyesis,* pregnancy). Sterility; non-pregnant condition.

**A′la** (Lat., wing). Term often used by anatomists for parts which project like a wing from the median line, as ala nasi; also axilla, pavilion of ear, pterygium, arm, shoulder-blade. See also *Alæ.* **A. al′ba latera′lis,** eminence on floor of fourth ventricle. **A. al′ba media′lis,** hypoglossal area. **A. auric′ulæ** or **au′ris,** pinna of ear. **A. cine′rea,** triangular space on floor of fourth ventricle corresponding to nuclei of pneumogastric and glossopharyngeal nerves. **A. ethmoida′lis,** alar process of ethmoid bone. **A. par′va Ingras′siæ,** spine of sphenoid bone. **A. pon′tis,** posterior portion of roof of fourth ventricle. **A. u′vulæ,** a band of gray matter on under surface of cerebellum between uvula and amygdalæ. **A. vespertilio′nis,** part of broad ligament of uterus between Fallopian tube and ovarian ligament.

**Alabas′ter.** A native granular sulphate of calcium; a white, stalactitic carbonate of calcium; used in ointment as a discutient, and in dentifrices.

**Alac′tia.** Agalactia.

**A′læ** (pl. of *ala,* wing). **A. descenden′tes,** pterygoid processes of the sphenoid. **A. diaphrag′matis,** three divisions of central tendon of diaphragm. **A. for′nicis,** posterior crura or pillars of fornix. **A. inter′næ mino′res clitor′idis,** nymphæ. **A. lob′uli centra′lis,** processes of matter passing from central lobule of cerebellum to lateral hemispheres. **A. mag′næ,** processes projecting laterally from body of sphenoid bone. **A. majo′res,** greater wings of sphenoid; labia majora. **A. min′imæ,** small processes from upper surface of sphenoid. **A. mino′res,** labia minora. **A. mulie′bres mino′res,** labia minora. **A. na′rium** or **na′si,** lateral parts of nose. **A. orbita′les,** lesser wings of sphenoid. **A. palati′næ,** pterygoid processes of sphenoid. **A. par′væ,** lesser wings of sphenoid. **A. pterygoi′deæ,** pterygoid processes of sphenoid. **A. puden′di,** labia pudendi. **A. pulmo′num,** lobes of the lungs. **A. of sac′rum,** lateral portions of that bone. **A. sphenoida′les,** wings of sphenoid; two pairs of lateral processes proceeding from the body of the sphenoid bone; the *greater wings* articulate posteriorly with the petrous and squamous portions of the temporal bone, anteriorly with the frontal, parietal, and malar bones; the *lesser wings* assist in forming the posterior portion of the roof of the orbit, articulating with the frontal bone. **A. spi′næ nasa′lis,** processes on each side of nasal spine of frontal bone. **A. tempora′les,** greater wings of sphenoid. **A. u′vulæ,** delicate osseous laminæ from back part of uvula of cerebellum to the amygdalæ. **A. of vo′mer,** semielliptical ledges on that bone, receiving between them rostrum of sphenoid. **A. vul′væ,** labia.

**Ala′gas.** Sacrum coccyx.

**Alal′ia** (*a,* priv., *laleo,* to speak). Loss of power to express ideas in spoken words. See *Aphasia.*

**Alanfu′ta.** Arabian name of vein between the chin and lower lip, which was opened in case of fetor of breath.

**Alan′gium decapet′alum, A. lamarck′ii,** and **A. metapet′alum.** Indian plants, hydragogue carthartics, used in dropsy.

**Alanin′.** Amidopropionic acid.

**Al′anson's method.** Circular amputation, one incision being made down to the muscles, another through the muscular mass directly down to the bone.

**Alant′ cam′phor.** Helenine.

**Alantin′.** Inulin.

**Alan′tol.** Inulol.

**Al′aos.** Obscure form of tabes.

**A′lar.** Wing-like; relating to shoulder or axilla. **A. car′tilages,** cartilages forming sides of nose at lower part. **A. lig′aments,** folds of synovial membrane of knee-joint passing downward and outward from patella. **A. mus′cles,** pterygoid muscles. **A. odon′toid lig′aments,** thick ligaments from odontoid process of axis to condyles of occipital bone. **A. pro′cess,** two little processes from forepart of ethmoidal crest. **A. thora′cic ar′tery,** small branch from axillary artery to glands of axilla. **A. veins,** superficial veins at fold of arm.

**Ala′ria os′sa.** Wing-like processes of the sphenoid bone.

**A′late.** With wings.

**Alatern′us commu′nis** or **latifo′lius.** Rhamnus alaternus.

**Al′ba.** White nervous substance. **A. sclerot′ica,** sclerotic coat of the eye.

**Alba′daran.** Sesamoid bone of the metatarsophalangeal joint of the great toe.

**Al′baræs** or **Al′baras al′ba.** Lepra alphoides. **A. ni′gra,** lepra nigricans.

**Al′baros.** Lepra alphoides.

**Albe′do ret′inæ** (*albus,* white). Œdema of retina. **A. un′guium,** whitish, semilunar portion of the root of the nail, or lunula, situated above the part where the epidermis terminates.

**Al′bert's disease′.** Achillodynia.

**Albes′cent** (*albus,* white). Moderately whitish; becoming white.

**Al′bicans** (*albico,* to grow white). Whitish, as corpora albicantia at the base of the brain.

**Albidu′ria** (*albus,* white, *urina,* urine). Whitish or pale urine; albuminuria.

**Albi′na** or **Albi′ness.** Female albino.

**Albi′ni's nod′ules.** Minute projections sometimes existing on the edge of the auriculoventricular valves in children.

**Al′binism.** Leucopathy; the state of being an albino; deficiency of pigment, most noticeable in the skin, hair, and eyes.

**Albinis'mus.** Albinism. **A. partia'lis,** partial or localized albinism, seen especially in negroes. **A. universa'lis,** albinism.

**Albinis'tic.** Albinotic.

**Albi'no** (*albus,* white). Portuguese word applied to individuals who have skin and hair white, iris very pale, bordering on red, and eyes so sensitive that they cannot bear the light of day.

**Albi'noism.** Albinism.

**Albinot'ic.** Relating to or affected with albinism.

**Albinu'ria.** Albuminuria; also pale urine.

**Albiz'zia anthelmin'tica.** Abyssinia tree, bark of which, *besenna, kumada, mesenna,* is tæniafuge.

**Al'bolene.** A petroleum derivative used as a base for cerates, ointments, etc. **Liq'uid a.,** a fluid form used as a solvent for remedies applied in the form of vapor or spray.

**Al'bor.** Whiteness or paleness, as of urine. **A. cu'tis,** achromatosis. **A. nati'vus,** albinism. **A. o'vi,** white of egg.

**Albugin'ea** (*albus,* white). White, fibrous investing tissue of a part or organ; also called *tunica albuginea.* **A. epididym'idis,** fibrous coat of epididymis. **A. lien'is,** white, elastic fibrous tissue investing spleen, beneath the serous coat. **A. oc'uli,** sclerotic coat. **A. ova'rii,** tunica albuginea of ovary, layer of fibrous tissue below the epithelial covering. **A. pe'nis,** white, fibrous investment of penis; see *Cavernous bodies.* **A. re'num,** capsule of kidneys. **A. testic'uli** or **tes'tis,** strong, fibrous resisting membrane immediately enveloping the testicle, having at its upper part an enlargement, corpus highmorianum. From its inner surface it sends off flat, filiform prolongations or septa, between which are seminiferous vessels. Externally it is covered by the tunica vaginalis testis.

**Albugin'eal.** Albugineous. **A. mem'brane,** fascia separating fat of the orbit from the middle and posterior parts of the eyeball.

**Albugin'eous.** Term applied to white textures, humors, etc. **A. fi'bre,** name given by Chaussier to what he considered one of the four elementary fibres, tenacious, elastic, but little extensible, and of shining, satiny appearance. It forms fasciæ or fasciculi, constituting tendons, articular ligaments, and aponeuroses; hence name albugineous membranes, given to fibrous membranes, albugineous tissue, etc. **A. hu'mor,** aqueous humor of the eye. **A. tu'nic,** albuginea or tunica albuginea.

**Albugini'tis.** Inflammation of white, fibrous tissue or of any tunica albuginea; orchitis. Gout and rheumatism have been regarded as species of albuginitis.

**Albu'go** (*albus,* white). White opacity of the cornea; leucoma; achromia unguium. **A. oc'uli** or **oculo'rum,** leucoma; white of the eye. **A. o'vi,** white of egg.

**Albukalin'.** $C_8H_{16}N_2O_6+H_2O$. Substance detected in cases of leukæmia.

**Al'bula** (*albus,* white). Albugo; leucoma.

**Al'bum ca'nis.** Album græcum. **A. ce'ti,** spermaceti. **A. græ'cum,** white dung of the dog, consisting almost wholly of phosphate and carbonate of lime, derived from bones used as food. Formerly applied as a discutient gargle in quinsies, and as an antiepileptic; now used by tanners. **A. hispan'icum,** subnitrate of bismuth. **A. ni'grum,** excrement of mouse, once used medicinally. **A. oc'uli,** sclera of the eye. **A. o'vi,** white of egg.

**Albu'men** (*albus,* white). White of egg; also the principle of which this substance is almost entirely composed, spelled more correctly *albumin.* White of egg is used in pharmacy for suspending oils in water, etc.

**Albu'min.** Immediate nitrogenous principle of animals and vegetables; liquid, coagulating at about 140° F. Animal albumin is found in blood, chyle, serous and synovial fluids, brain, liquor amnii, white of egg, etc. Vegetable albumin is found in the seeds and juices of many plants. There is not much difference in chemical composition between animal and vegetable albumin, fibrin, and casein. Native albumins are soluble in water, and not precipitated by alkaline carbonates, chloride of sodium, or by dilute acids. Solutions of albumin are coagulated by heating at 150° to 165° F. Serum albumin amounts to about 4.5 per cent. in human serum. The proportion of albumin in the body may be thus given:

| *Substance.* | *Parts per* 1000. |
|---|---|
| Cerebrospinal fluid | 0.9 |
| Aqueous humor | 1.4 |
| Liquor amnii | 7.0 |
| Intestinal juice | 9.5 |
| Pericardial fluid | 23.6 |
| Lymph | 24.6 |
| Pancreatic juice | 33.3 |
| Synovia | 39.1 |
| Milk | 39.4 |
| Chyle | 40.9 |
| Spinal cord | 74.9 |
| Brain | 86.3 |
| Liver | 117.4 |
| Muscle | 161.8 |
| Blood | 195.6 |
| Middle coat of arteries | 273.3 |
| Crystalline lens | 383.0 |

For tests of albumin in urine, see *Urine.* **Acid a.,** see *Acid.* **Al'kali a.,** see *Alkali.* **An'imal a.,** see under the prime. **Bence-Jones a.,** an allotropic form of a. found in cyclic albuminuria. **Blood a.,** serum a. **Casein'iform a.,** a. coagulable by strong acids, but not by heat. **Cir'culating a.,** a. found in the fluids of the body. **Derived' a.,** a. which has been modified by chemical reagents. **Egg a.,** albumen. **Float'ing a.,** circulating a. **Liv'ing a.,** protoplasm. **Na'tive a.,** a. occurring in a natural condition in animal tissues and fluids. **A. oc'uli,** the sclera of the eye. **Organ'ic a.,** that which exists in any organ, constituting an important element of the same. **A. o'vi,** albumen. **A. pep'tone,** albumose. **Sal'ivary a.,** ptyalin. **Se'rum a.,** form of a. found in the blood; it closely resembles egg albumin. **Veg'etable a.,** see under the prime.

**Albu'minate.** Salt resulting from the union of albumin with a base. **A. of mer'cury** has been used hypodermically in syphilis; **a. of iron** in chlorosis and anæmia.

**Albuminatu'ria.** Excretion of albuminates in excess in the urine.

**Albuminif'erous** (*albumin + fero,* to bear). Producing albumin.

**Albuminim'eter** (*albumin + metron,* to measure). Apparatus for measuring the quantity of albumin in the urine or other liquid. Process is called *albuminim'etry.*

**Albuminin'.** White, non-nitrogenous material of wall of cell containing albumin.

**Albuminip'arous** (*albumin + pario,* to bring forth). Producing albumin.

**Albuminiza'tion.** Conversion into albumin.

**Albu'minoid** (*albumin + eidos,* resemblance). Resembling albumin, as fibrin, casein, etc.; term applied to aliments in the same sense as proteinous. Albuminoid substances are non-crystalline, amorphous colloids, resembling in chemical reactions so-called proteids or albuminous constituents of blood, lymph, and chyle. They are composed of carbon, hydrogen, oxygen, nitrogen, and sulphur. They exist in a fluid state, and include mucin, chondrin, gelatin, keratin and neurokeratin, nuclein and kindred substances. Type of substances of this class is albumen or white of egg. **A. ammo'nia,** ammonia obtained from water or air by undergoing distillation with an alkali. **A. degenera'tion** or **disease',** amyloid degeneration.

**Albuminom'eter.** Albuminimeter.

**Albu'minone.** Peptone; a substance resembling a proteose; an albuminoid derivative soluble in alcohol and not coagulable by heat.

**Albuminorrhœ′a** (*albumin*+*rhoia*, flow). Albuminuria.

**Albu′minose.** An albuminous substance in the first stage of conversion into peptone; substance into which albumin is converted by the decomposition of fibrin by weak acid or gastric juice; albumose.

**Albumino′sis.** Condition of the blood in which the ratio of albumin is increased, as in typhoid fever, variola, rubeola, etc.

**Albu′minous.** Containing or resembling albumin. **A. degenera′tion,** lardaceous or waxy disease or degeneration of organs, see *Amyloid degeneration.* **A. gland,** gland in which the alveoli are lined with albuminous cells, as the parotid gland. **A. infiltra′tion,** degeneration in which cells become distended with albuminous granules. **A. sarco′ma,** giant-celled sarcoma.

**Albu′min-pep′tone.** Albumose.

**Albuminuret′ica.** Substances producing albuminuria.

**Albuminu′ria** (*albumin*+*ouron*, urine). Condition in which the urine contains albumin, the presence of which is indicated by coagulation on the application of adequate heat, nitric acid, etc. **A. of adoles′cence,** cyclic a. **Adventi′tious a.,** physiological a. **Bam′berger's a.,** dyscrasic a. occurring in anæmia. **Car′diac a.,** a. associated with valvular disease. **Cy′clic a.,** periodical daily appearance of a small quantity of albumin in the urine, seen chiefly in adolescents. **Dyscra′sic a.,** a. dependent on faulty condition of the blood, and not on disease of the kidney. **False a.,** physiological a. **Fat′ty a.,** chyluria. **Func′tional a.,** cyclic a. **A. gravida′rum,** a. of pregnant women. **Hæmatog′enous a.,** dyscrasic a. **Intrin′sic a.,** true a. **Mixed a.,** intrinsic and pseudo-a. occurring at the same time. **Nephrog′enous a.,** a. dependent upon disease of the kidney. **Paroxys′mal a.,** cyclic a. **Physiolog′ical a.,** temporary a. after the taking of food, emotion, etc., or in newborn children. **Pseu′do-a.,** physiological a. **Spas′tic a.,** a. following convulsions. **Tox′ic a.,** a. dependent on the presence of poison in the system. **True a.,** that which is due to the pathological excretion of serum albumin. **Tran′sient a.,** cyclic a.

**Albuminu′ric.** Relating or appertaining to albuminuria, as albuminuric retinitis. A person suffering from albuminuria.

**Albumosæ′mia.** The presence of albumose in the blood, as in *Kahler's disease,* which see.

**Al′bumose.** It is believed that during gastric digestion the first action on albumins produces parapeptone, then an intermediate substance, to which the name of albumose is given, before full change to peptone occurs. Globulin undergoes similar change into globulose, casein into caseose, and soluble proteose includes all three.

**Albumosu′ria.** Presence of albumose or peptone formed during digestion in the urine.

**Al′caest** or **Al′cahest.** Liquor; a fancied universal solvent, capable of reducing every body to its elements or removing every swelling.

**Alcales′cence.** Alkalescence.

**Al′cali.** Alkali.

**Alcap′ton, Alcaptonu′ria.** See *Alkapton, Alkaptonuria.*

**Al′cea.** Hibiscus abelmoschus. **A. ægypti′aca villo′sa,** Hibiscus abelmoschus. **A. in′dica,** Hibiscus abelmoschus. **A. ro′sea,** common hollyhock, hoc, hocks; emollient, like althæa.

**Al′ces cor′nu** (elk's horn). Hartshorn.

**Alchemil′la.** Lady's mantle, ord. *Rosaceæ.* Formerly in great repute as an astringent in hemorrhage; also tonic. **A. alpi′na,** silvery lady's mantle; same properties as alchemilla. **A. arven′sis,** parsley piert; an infusion of an ounce of the plant to a pint of water has been used in strangury. **A. vulga′ris,** alchemilla.

**Al′chemist.** One pretending to alchemy.

**Al′chemy.** Formerly synonymous with chemistry, but from the seventh century applied to the endeavor to discover a universal remedy, elixir of life, and the mode of transmuting the baser metals into gold—philosopher's stone.

**Alchitram** (al′kit-ram) or **Alchitu′ra.** Tar; resin.

**Alchornea** (al-kor′ne-ah) **corda′ta.** Euphorbiaceous plant of Senegal and vicinity; sudorific. **A. iricura′na,** species from Brazil, used in sore throat. **A. latifo′lia,** species growing in Jamaica; diaphoretic; see *Alcornoque.*

**Alcoc′alum.** Artichoke; cynara.

**Al′cock's canal′.** Canal made by separation of the layers of the obturator fascia; the pudic nerve and bloodvessels occupy it.

**Al′cohol** (*al,* the, *koh'l,* Arabic word formerly used for an impalpable powder, and signifying very subtile, much divided). Ethylic alcohol, spirit of wine. Peculiar liquid, generated for most part in vegetable juices and infusions by vinous or alcoholic fermentation; now applied to highly rectified spirit of wine. In the Ph. U. S. alcohol is rectified spirit, of specific gravity 0.820 at 15.6° C. or 60° F. It is composed of 91 per cent. by weight of ethylic alcohol, $C_2H_6O$, and 9 per cent. by weight of water. The official name of alcohol in the Ph. Br. is spiritus rectificatus. The term alcohol is used generically for a series of compounds of C, H, and O, derived from a hydrocarbon by replacing one or more atoms of hydrogen by an equal number of the group HO. Alcohol is a volatile, inflammable liquid, lighter than water, of warm, acrid taste, colorless, transparent, and of a pungent, aromatic smell. It is a product of distillation of vinous liquors. It is miscible with water in all proportions, and is a direct solvent of resins, balsams, and various other vegetable principles; hence it is used in different states of concentration in the preparation of elixirs, tinctures, essences, etc. It is also used as a preservative of anatomical specimens. Locally it is applied as a refrigerant, astringent, and antiseptic. Internally alcohol acts as a powerful stimulus; as such, in dilute form, it is used in the prevention and cure of disease; in larger quantities it is a depressant narcotic poison. It is usually given in the form of wine, whiskey, or brandy; its habitual and inordinate use is the cause of many serious affections, of a chronic character especially. **Ab′solute a.,** a. absolutum; a. containing not more than 1 per cent. of water. **A. ace′ti,** acetic acid. **Al′lyl** or **allyl′ic a.,** $C_3H_5OH$, a colorless, inflammable liquid, the product of the distillation of glycerin and oxalic acid. **Am′yl** or **amyl′ic a.,** $C_5H_{11}O$, a. amylicum; one of eight isomeric bodies, the chief constituent of fusel oil, grain oil, potato spirit; a heavy liquid, soluble in alcohol, but not in water, produced by the continuance of fermentation of starch; it is hypnotic, and has been so used in mental diseases; it is poisonous and a dangerous adulterant of whiskey. **Anhy′drous a.,** a. with no admixture of water. **Aromat′ic a.,** one in which a part of the hydrogen has been replaced by phenyl. **Caus′tic a.,** sodium alcoholate or ethylate, a white powder readily decomposing on contact with moisture into alcohol and caustic soda; used as an escharotic. **A. dehydrogena′tum,** aldehyde. **Deo′dorized a.,** a. deodoratum (Ph. U. S.), a liquid containing 92.5 per cent. by weight of absolute a. in which the fusel oil, etc., has been destroyed; used for pharmaceutical purposes. **Dilu′ted a.,** a. dilutum (Ph. U. S.), composed of equal volumes of alcohol and water, 41 per cent. by weight of the former and 59 per cent. of the latter. **Eth′yl** or **ethyl′ic a.,** a. ethylicum, ordinary a.; this is the type of a series, the principal of which are methylic, amylic, propylic, and butylic alcohols, the two first-named being of therapeutic interest. **A. fort′ius,** strong alcohol, sp. gr. 0.817, official in the Ph. U. S. of 1870. **Gly′ceric a.,** glycerin. **Mesit′ic a.,** acetone. **Meth′yl** or **methyl′ic a.,** $CH_3OH$, wood a.; a colorless, inflammable liquid obtained by the destructive distillation of wood; it is sometimes used as an intoxicant, and then frequently results in blindness. **Phen′yl** or **phenyl′ic a.,** carbolic acid. **Pyrolig′-**

neous a., methyl a. **Pyroxyl'ic a.**, methyl a. **A. terebin'thinæ**, oil of turpentine. **A. vi'ni**, ordinary a. **Wood a.**, methyl a.

**Al'coholate.** Crystallizable substance formed by the combination of alcohol with a saline.

**Alcohol'ature.** Alcoholic tincture; a name given to certain preparations consisting of alcohol charged, by maceration, with the soluble principles of fresh plants; the properties of such plants would suffer by drying or pressing.

**Alcohol'ic.** Spirituous; relating to or containing alcohol, as an alcoholic drink or remedy; an habitual drinker to excess. **A. atax'ia** or **at'axy**, condition produced by alcohol, resembling tabes dorsalis. **A. co'ma**, coma from over-indulgence in alcoholic liquors. **A. ex'tract**, product of evaporation of alcoholic tinctures, alcohol being employed with substances insoluble in water, as resins, etc. **A. ma'nia**, mania-a-potu. **A. pseudota'bes**, alcoholic ataxia.

**Alcohol'ica.** Medicines whose activity depends upon alcohol.

**Alcoholim'eter.** Alcoholometer.

**Al'coholism.** Series of morbid phenomena produced by the abuse of alcoholic liquors, as gastritis, loss of appetite, nervous irritation, delirium tremens, etc.

**Alcoholiza'tion.** Process of rendering alcoholic, either by converting into alcohol or mixing with alcohol.

**Alcoholoma'nia.** Alcoholophilia.

**Alcoholom'eter.** Instrument for ascertaining the amount of alcohol in a liquid by measuring its specific gravity, the process being called *alcoholom'etry* or *alcoholim'etry*.

**Alcoholophil'ia** (*alcohol* + *phileo*, to love). Uncontrollable impulse for the use of alcoholic liquors.

**Al'cöol.** Alcohol.

**Alcöola'tum.** Tincture. **A. fra'grans**, cologne water. **A. vulnera'rium**, remedy for bruises and other injuries, prepared by macerating and distilling nearly twenty different plants.

**Alcornin'.** Fatty principle from alcornoque bark.

**Alcornoque**, al-kor-noke' (after Alchorne, English botanist). Bark of Alchornea latifolia of Jamaica and S. America, used in phthisis; it is bitter, tonic, diaphoretic, and slightly astringent; also bark of Bowdichia virgilioides. **A. of Brazil'**, Bowdichia major.

**Alcyo'neum** or **Alcyo'nium.** Bastard sponge. The ashes were formerly employed as a dentifrice and to favor the growth of hair in alopecia.

**Al'dehyde** (abridged from *alcohol dehydratum*, or *dehydrogenatum*, alcohol deprived of hydrogen). Ethyl aldehyde or ethyldehyde, a volatile, pungent liquid, $CH_3COH$, produced by the oxidation of ethylic alcohol with a limited supply of oxygen, two atoms of hydrogen being removed. Has been used as an anæsthetic. It is also intoxicant. On further oxidation it is converted into acetic acid. Also a generic name for the products of the first stage of the oxidation of all the alcohols—bodies intermediate between alcohols and acids. **Ace'tic a.**, ethyl a. **Amyl'ic a.**, $C_4H_9$.CHO, valeraldehyde, a product of the oxidation of wood alcohol. **Anis'ic a.**, $C_8H_8O_2$, a colorless oil obtained by the oxidation of the oil of anise, oil of fennel, and other essential oils with dilute $HNO_3$. **Benzo'ic a.**, oil of bitter almonds. **Cinnam'ic a.**, $C_9H_8O$, a colorless oil obtained from oils of cinnamon and cassia. **Col'lidine a.**, oily, odorous liquid resulting from the distillation of aldehyde. **Eth'yl a.**, see the prime. **For'mic a.**, $CH_2O$, a powerful antiseptic, very destructive to pathogenic microorganisms in very weak solution. **Protocatechu'ic a.**, a soluble substance obtained from pyrocatechin by the action of chloroform upon it. **A. res'in**, a resinous body formed when aldehyde and potash are heated together. **Salicyl'ic a.**, $C_6H_4$(OH)CHO, an aromatic soluble oil derived from volatile oils of spiræa.

**Aldehy'dum trichlora'tum.** Chloral hydrate, formed by the displacement of three atoms of hydrogen in ethyl aldehyde.

**Al'der.** Ordinary name of genus *Alnus*. **Amer'ican a.**, Alnus serratula. **A. bark**, bark of Alnus serratula and Alnus glutinosa. **Black a.** or **Buck'thorn a.**, Rhamnus frangula, Prinos. **Europe'an a.**, Alnus glutinosa. **Swamp a.**, Alnus incana. **Tag a.**, Alnus incana. **White a.**, Clethra alnifolia.

**Al'dose.** A saccharine substance, such as dextrose, having the composition of an aldehyde, produced by the oxidation of a hexatomic alcohol.

**Aldox'imes.** Substances resulting from combining aldehydes or ketones and free hydroxylamine.

**Ale.** Alcoholic beverage produced by rapid fermentation, at a high temperature, of an infusion of malt in hops. It contains 4 to 7 per cent. of alcohol.

**Ale-berry.** A beverage made by boiling ale with spice and sugar and sops of bread; given to invalids.

**Ale'cithal** (*a*, priv., *lekithos*, yolk of egg). Having no separate yolk; a term applied to ova in which segmentation goes on uniformly and with even distribution of yolk.

**Alector'ius lap'is** (*alektor*, cock). A stone supposed to exist in the stomach of the cock or capon; marvellous properties were attributed to it.

**Aleip'sis.** Anointing; steatosis. **A. auc'ta**, hypersteatosis. **A. diminu'ta**, asteatosis.

**Alem'bic.** Moorshead; utensil made of glass, metal, or earthenware, adapted for distillation; a still.

**Alem'broth.** Sal alembroth; product of the sublimation of a mixture of corrosive sublimate and sal ammoniac; employed as a stimulant.

**Alep'po boil, A. but'ton, A. e'vil, A. pus'tule, A. ul'cer.** Terms applied to an endemic cutaneous affection in Syria and Africa, characterized by one or more tubercles on the face or limbs, which soften and become covered with a scar. Ulcerations formed are long in healing, and generally leave a mark. It is usually left to itself, but is said to be benefited by crucial incisions into the tubercle prior to the period of softening. The disease appears to be anthracoid in its character. **A. galls**, best commercial variety of galls. **A. worm'seed**, Artemisia santonica.

**Aletrin'.** A resinous extract obtained from Aletris farinosa; cathartic in doses of gr. i–iij (0.06–0.2).

**Al'etris.** A genus of plants, ord. *Hæmoderaceæ*. Stargrass, starwort, blazing star, aloeroot, bittergrass, blackroot, unicornroot, agueroot, aguegrass, colicroot, devil's bit, mealy starwort. Root is intense and permanent bitter; tonic, emetic, and cathartic. There are two species, *A. alba* or *farinosa* and *A. aurea*, with similar properties.

**Aletu'do.** Corpulence.

**Aleucocyto'sis.** Leucopenia; arrested or diminished formation of leucocytes.

**Aleukæ'mia.** Deficiency of white corpuscles in the blood.

**Aleuri'tes corda'ta.** Tung tree of China, used medicinally. **A. gome'sii**, euphorbiaceous plant of Brazil, oil of which is purgative. **A. molucca'na**, species growing in Molucca and Java, having a purgative nut. **A. tri'loba**, akhrout, candlenut, or candleberry tree, ord. *Euphorbiaceæ;* plant common in Hawaii and other islands in the Southern seas; also in East and West Indies. Oil of the fruit—kukui oil in Hawaii, kekune oil in Ceylon, known in Jamaica as Spanish walnut oil, and in India as Belgaum walnut oil—is cathartic, resembling castor oil in its action.

**Aleu'ronat.** A vegetable albumin for the use of diabetic sufferers.

**Alexan'der-Ad'ams opera'tion.** Alexander's operation.

**Alexan'der's opera'tion.** Alexander-Adams operation. Operation devised by Dr. W. Alexander, of Liverpool, England, by which the round ligaments of the uterus are shortened in cases of prolapse, retroversion, or retroversion combined with retroflexion of that organ. Under the view that they become lengthened in such displacements, he dissects down to them, and, drawing them well out through the external abdominal ring and fastening them, replaces the uterus in its normal position.

**Alex′ia** (*a*, priv., *lexis*, word). Form of organic lesion of the speech centres in which there is inability to read; word-blindness. **Mo′tor a.**, ability to understand but not to articulate what is read. **Op′tical a.**, pathological inability to understand written or printed characters. **Sen′sory a.**, optical a. **Vis′ual a.**, optical a.

**Alexin′** (*alexis*, help). A general term formerly employed to denote a defensive proteid, existing naturally in the body (*sozin*) or formed during the process of acquiring immunity to special diseases (*phylaxin*), which possesses the property of destroying pathogenic microbes (*mycosozin*, *mycophylaxin*) or of neutralizing their toxins (*toxosozin*, *toxophylaxin*). It is now usually restricted to the germicidal or bacteriolytic substance in the serum, the substance which neutralizes toxins being called antitoxin. Bordet uses the word as synonymous with Ehrlich's complement.

**Alexiphar′mic** (*alexo*, to repel, *pharmakon*, poison). Term formerly used for medicines proper for expelling morbific principles or preventing the bad effects of poisons taken inwardly.

**Alexipyret′ic** (*alexo*, to repel, *pyretos*, fever). Febrifuge; antipyretic.

**Alexite′ria** (*alexeter*, a defender). Originally used synonymously with remedies. A term formerly applied to medicines that counteract poisons placed in contact with the exterior of the body, in contradistinction to alexipharmics; antidotes.

**Alexiter′ic.** Antidotal.

**Alex′ocyte.** An amphophile leucocyte believed to contain or to form alexins.

**Al′ga mari′na.** Seawrack; Pila marina. **A. of the mouth**, microscopic vegetable parasite noticed in aphthous condition of the mouth, and even in the buccal secretions of healthy persons.

**Algæsthe′sis** (*algos*, pain, *aisthesis*, sensation). A painful sensation or disease attended with such.

**Algaro′bia.** Resin from A. glandulosa. **A. ferrugin′ea**, plant of India, bark of which is stimulant. **A. glandulo′sa**, small leguminous tree of South America, from which mesquite gum is obtained. **A. leucophœ′a** has similar properties.

**Al′garoth** (from V. Algarotti, a Veronese physician). Flowers of antimony; antimonious oxychloride; has been used in the preparation of tartrate of antimony and potassium, and as an emetic, purgative, and diaphoretic.

**Al′gebra.** Fracture; also its treatment by the surgeon.

**Alge′do** (*algos*, pain). Violent pain about the neck of the bladder or testicles, occasionally occurring in gonorrhœa; stoppage of gonorrhœal discharge.

**Algefa′cient** (*algeo*, to feel cold, *facio*, to make). Refrigerant.

**Alge′sia** (*algesis*, sense of pain). Sensibility to pain; excessive pain.

**Algesichronom′eter** (*algesis*, pain, *chronos*, time, *metron*, measure). Instrument to measure the time elapsing between the application of a painful stimulus and the appreciation of it by the nervous system.

**Algesim′eter** (*algesis*, pain, *metron*, measure). Instrument to indicate the amount of cutaneous sensibility.

**Algesthe′sis** (*algos*, pain, *aisthesis*, sensation). Sensibility to pain; a painful sensation.

**Alget′ic.** Painful.

**Al′gia.** As suffix denotes pain, as *neuralgia*, pain of a nerve; *cephalalgia*, headache. Astringent.

**Al′gid** (*algidus*, cold). Cold. **A. chol′era**, Asiatic cholera. **A. fe′ver**, fever accompanied with coldness; pernicious intermittent, accompanied by icy coldness, often fatal.

**Al′gidism, Algid′ity**, or **Al′gidness.** Coldness; chilliness.

**Algin′.** Albuminoid substance obtained in the separation of iodine from algæ.

**Algin′ic acid.** Organic acid derived from algæ; it forms alginates with metals, such as iron and arsenic (alginoid iron and arsenic), and with strychnine (alginoid strychnine).

**Algogene′sia** or **Algogen′esis** (*algos*, pain, *genesis*, origin). Production of pain through the influence of the mind, as from recollection of previous pain.

**Algogen′ic** or **Algogenet′ic** (*algos*, pain, *genesis*, origin). Relating to algogenesia; one affected by this condition.

**Al′goid cells.** Cells resembling lower algæ, noticed in the discharges in chronic diarrhœa.

**Algolag′nia** (*algos*, pain, *lagneia*, lewdness). Sadism, a form of sexual perversion associated with an impulse to inflict pain on one of the opposite sex.

**Algom′eter.** Instrument for determining acuteness of sensation of pain.

**Algopho′bia** (*algos*, pain, *phobos*, fear). Morbid dread of pain.

**Algopsycha′lia** (*algos*, pain, *psyche*, mind). Melancholia with hallucinations of sight and hearing.

**Al′gor.** Rigor; chilliness. **A. mor′tis**, coldness of the body after death. **A. progressi′vus**, sclerema neonatorum.

**Alha′gi.** Thorny shrub of Persia and Mesopotamia, from which manna is derived; leaves are purgative. **A. mauro′rum**, Hebrew manna, native of Egypt, Syria, Persia, and India; from the leaves and branches a saccharine substance is obtained, called turanjeban, which many pharmacologists identify with Hebrew manna.

**Al′ibert's disease′** or **che′loid.** True cheloid; fungoid mycosis.

**Alibil′ity** (*alo*, to nourish). Capability of supplying nourishment.

**Al′ible.** Nutritious.

**Al′ices** (*alizo*, to sprinkle). Spots preceding the eruption of smallpox.

**Aliena′tio** (*alienus*, strange). Anomaly; irregularity. **A. men′tis**, insanity. **A. par′tis**, gangrene of any part.

**Aliena′tion, men′tal.** Insanity.

**Aliena′tus.** Insane; gangrenous.

**A′lienist.** Physician who devotes special attention to insanity and the insane.

**Al′iform** (*ala*, wing, *forma*, shape). Wing-like; pterygoid. **A. mus′cles**, pterygoid muscles.

**Alimel′læ.** Parotid gland.

**Al′iment** (*alo*, to nourish). Food; any substance which, if introduced into the system, is capable of nourishing it and repairing its losses. A classification of aliments or foods is usually founded on the chemical analysis of the different principles contained in them. The following, by Yeo, presents a systematic arrangement of them:

| | |
|---|---|
| Nitrogenous. | 1. *Albumins.* Nitrogenous substances having the same or nearly the same chemical composition as albumin. Examples: albumin, fibrin, syntonin, myosin, globulin, casein, from the animal kingdom; glutin and legumin, from the vegetable kingdom. |
| | 2. *Albuminoids.* Subordinate nitrogenous substances referred to this class and known as gelatinous substances: gelatin, keratin, chondrin. |
| Non-nitrogenous. | 3. *Fats* or *hydrocarbons*, containing carbon, hydrogen, and oxygen, the proportion of oxygen being insufficient to convert all the hydrogen into water. Examples: olein, stearin, palmitin (butter is a familiar one). |

| | |
|---|---|
| Non-nitrogenous. | 4. *Carbohydrates* contain carbon, hydrogen, and oxygen, the two latter elements in the proportions to form water. Examples: starch, dextrin, cane sugar, grape sugar, lactose, or milk sugar. The *vegetable acids*, oxalic, tartaric, citric, malic, acetic, and lactic, are by some authors referred to this class. |
| Minerals. | 5. *Minerals:* Water, salts, sodium and potassium chlorides, calcium and magnesium phosphates, iron, etc. |

**Alimen'tal.** Nutritious.

**Alimen'tary.** Nutritious; relating to food. **A. bo'lus,** food in the mouth, just ready to be swallowed. **A. canal', duct, tract,** or **tube,** the digestive canal, beginning at the mouth and ending at the anus. **A. sys'tem,** the alimentary tract together with the liver and other organs concerned in digestion and absorption.

**Alimenta'tion.** Act or power of nourishing; feeding. **Artifi'cial a.,** feeding of those unable to receive food in the usual way. **Cu'rative a.,** treatment by food without medicine. **Io'dic a.,** giving of iodine internally in combination with bread and other farinaceous substances. **Or'gans of a.,** those concerned in the digestion and absorption of food. **Rec'tal a.,** feeding by the rectum, as by nutrient injections.

**Alimen'tiveness.** A phrenological term denoting instinct for taking food; also the centre in the brain where pleasurable gustatory sensations and the impulse to eat are located.

**Alimentother'apy.** Dietetic treatment.

**Alina'sal.** Relating to the alæ of the nose.

**Aliphat'ic** (*aleiphar*, oil). Relating to the fatty series of hydrocarbons.

**Alis'ma.** A genus of aquatic plants, ord. *Alismaceæ.* **A. america'na,** variety of A. plantago. **A. graminifo'lia,** A. plantago. **A. lanceola'ta,** A. plantago. **A. planta'go,** water plantain; grows in swampy places in Europe and the United States; fresh root is acrid; dried leaves are vesicant; the leaves have been proposed as a substitute for uva ursi.

**Alisphe'noid.** Portion of the skull including the greater wing and external pterygoid plate of the sphenoid bone. **A. a'rea,** area of the skull separated from the squamosotemporal area by the sphenosquamous suture.

**Alisphenoidal'ia.** Greater wings of sphenoid bone.

**Alitu'ra** (*alo*, to nourish). Nutrition.

**Alizarin'.** $C_{14}H_8O_4$. Coloring-matter of madder, used for staining microscopic preparations; now made synthetically from anthracene. **A. yel'low,** gallactophenone.

**Al'kahest.** Alcaest.

**Alkales'cence.** Condition in which a fluid becomes alkaline. **A. of the hu'mors,** an old notion of the humorists; can only occur during putrid fermentation of animal matters containing nitrogen and producing ammonia.

**Alkales'cent.** Possessing properties of an alkali.

**Al'kali,** pl. alkalis or alkalies (Arab., *al*, the, *kali*, soda; plant containing a large quantity of soda). Electropositive substance, soluble in water, possessing generally acrid, caustic taste, turning syrup of violets green, and restoring to blue infusion of litmus which has been reddened by acids; reddening yellow of turmeric, and uniting with acids to form salts, and with certain fats to form soaps. In medicine potassa, soda, ammonia, and lithia are the chief alkalies used; soda, lithia, and potassa are fixed alkalies, ammonia is a volatile alkali. **A. albu'min,** a proteid which has been acted upon by a weak alkali; it becomes soluble in weak acids or alkalies, insoluble in water or saline solution, and not coagulable by heat. **Caus'tic a.,** pure soda or potassa in solid form. **Fixed a.,** soda, potassa, and lithia as distinguished from ammonia. **Veg'etable a.,** potassa. **A. met'al,** one whose oxide unites with water to form an alkali. **Vol'atile a.,** ammonia as distinguished from soda, potassa, and lithia.

**Al'kaligene** (*alkali+gennao*, to generate). Nitrogen.

**Alkaligenous,** al-kal-ij'en-us. Producing alkali.

**Alkalim'eter** (*alkali+metron*, measure). Apparatus for determining the amount of alkaline matter in any substance. The process is termed *alkalim'etry.*

**Al'kaline.** Having properties, especially the reaction, of an alkali. **A. baths,** baths of sodium bicarbonate, borax, etc., dissolved in water; used in eczema, psoriasis, urticaria, etc. **A. earths,** baryta, lime, magnesia, and strontia. **A. reac'tion,** the conversion of red litmus-paper to blue. **A. tide,** diminished acidity of the urine during the process of digestion.

**Alkalin'ity.** Quality of being alkaline.

**Alkalinu'ria.** Alkaline condition of the urine.

**Alkaliza'tion** or **Alkaliniza'tion.** Process of rendering a substance alkaline.

**Al'kaloid** (*alkali + eidos*, form). Literally, resembling an alkali. The name has, however, been given to nitrogenous organic alkalies to distinguish them from mineral, from which they differ in composition and properties; they all contain nitrogen. They are of great value on account of their medicinal and therapeutic action. The most important are the following, according to Simon:

*Liquid and volatile alkaloids.*

| | | |
|---|---|---|
| Sparteine . . . | $C_{15}H_{26}N_2$ | Scoparius. |
| Coniine . . . . | $C_8H_{17}N$ | Conium maculatum. |
| Nicotine . . . . | $C_{10}H_{14}N_2$ | Tobacco plant. |

*Solid and fixed alkaloids.*

| | | | |
|---|---|---|---|
| Morphine . . . | $C_{17}H_{19}NO_3$ | 10.00 p. c. | In opium. The percentages given are an average, but vary widely. |
| Codeine . . . | $C_{18}H_{21}HO_3$ | 0.25 “ | |
| Thebaine . . . | $C_{19}H_{21}NO_3$ | 0.15 “ | |
| Papaverine . . | $C_{21}H_{21}NO_4$ | 1.00 “ | |
| Narcotine . . . | $C_{22}H_{23}NO_7$ | 1.30 “ | |
| Narceine . . . | $C_{23}H_{29}NO_9$ | 0.70 “ | |
| Pseudomorphine | $C_{17}H_{19}NO_4$ | less than 0.1 p. c. | |
| Protopine . . . | $C_{20}H_{19}NO_5$ | | |
| Codamine . . . | $C_{30}H_{23}NO_4$ | | |
| Laudamine . . | $C_{21}H_{27}NO_4$ | | |
| Meconidine . . | $C_{21}H_{23}NO_4$ | | |
| Cryptopine . . | $C_{21}H_{23}NO_5$ | | |
| Laudanosine . . | $C_{21}H_{27}NO_4$ | | |
| Quinine . . . | $C_{20}H_{24}N_2O_2+3H_2O$ | | In cinchona bark. |
| Cinchonine . . | $C_{19}H_{22}N_2O$ | | |
| Quinidine . . . | isomere to quinine | | |
| Cinchonidine . . | isomere to cinchonine | | |
| Strychnine . . . | $C_{21}H_{22}N_2O_2$ | | In nux vomica. |
| Brucine . . . . | $C_{23}H_{26}N_2O_4+(4H_2O)$ | | |
| Atropine . . . | $C_{17}H_{23}NO_3$ | | In solanaceæ. |
| Hyoscyamine . . | $C_{17}H_{23}NO_3$ | | |
| Hyoscine . . . | $C_{17}H_{21}NO_4$ | | |
| Cocaine . . . . | $C_{17}H_{21}NO_4$ | | Erythroxylon coca. |
| Veratrine . . . | ? | | Asagræa officinalis. |
| Aconitine . . . | $C_{33}H_{45}NO_{12}$ | | Aconitum napellus. |
| Colchicine . . . | $C_{22}H_{25}NO_6$ | | Colchicum autumnale. |
| Berberine . . . | $C_{20}H_{17}NO_4$ | | Berberis vulgaris. |
| Hydrastine . . | $C_{21}H_{21}NO_6$ | | Hydrastis canadensis. |
| Hydrastinine . . | $C_{11}H_{11}NO_2$ | | |
| Physostigmine . | $C_{15}H_{21}N_3O_2$ | | Calabar bean. |
| Pilocarpine . . | $C_{11}H_{16}N_2O_2$ | | Pilocarpus. |
| Caffeine . . . | $C_8H_{10}N_4O_2+H_2O$ | | Coffee, tea. |
| Theobromine . . | $C_7H_8N_4O_2$ | | Theobroma cacao. |

**An'imal a.,** one derived from the animal tissues, existing naturally, as a *leucomain*, or formed in the process of decomposition, as a *ptomain* (see these words). **Artifi'cial a.,** one made artificially by chemical processes. **Cadav'eric a.,** a ptomain. **Nat'ural a.,** one derived from the tissues of a plant. **Putrefac'tive a.,** a ptomain. **Synthet'ic a.,** an artificial a.

**Alkalom'etry.** Dosimetry.

**Al'kanet.** The root of Alkanna tinctora (incorrectly called anchusa), which yields a red dye.

**Alkanin'.** Red coloring-matter of alkanet; used for staining and in pharmacy.

**Alkap'ton.** An amorphous, nitrogenous substance, resembling glucose, sometimes found in the urine, probably identical with homogentisinic acid; its presence is indicated by a greenish-blue color of brief duration developed upon the addition of a small amount of a dilute solution of ferric chloride; its source is believed to be tyrosin.

**Alkaptonu′ria.** Excretion of alkapton in the urine. It is believed to be an expression of a form of intestinal putrefaction or of some abnormal condition of metabolism.

**Alkarsin′.** Oily, poisonous liquid produced by the action of arsenic trioxide on potassium acetate; protoxide of cacodyl.

**Al′kasal.** Aluminum-potassium salicylate; antiseptic and astringent.

**Alker′mes.** Celebrated stimulant electuary, named from kermes contained in it; kermes.

**Alker′va.** Recently drawn castor oil.

**Al′kitran.** Cedria.

**Al′kohol.** Alcohol.

**Al′kophyr.** A form of peptone soluble in alcohol.

**Alkox′id** or **Alkox′ide.** A compound of alcohol and a metallic base.

**Al′kyl.** A univalent alcohol radical, such as ethyl or methyl.

**Al′kylene.** A bivalent alcohol radical.

**Alkylhal′oid** or **Alkyl′ogen.** A halogen salt of alkyl radicals.

**Allachæsthe′sia** (*allache*, elsewhere, *aisthesis*, sensation). A condition in which sensation is felt elsewhere than at the point touched; transferred sensation.

**Allæsthe′sia** (*allos*, other, *aisthesis*, sensation). See *Allochiria.*

**Allaman′da** (after Allamand, Leyden naturalist). Shrub of Guiana, infusion of whose leaves has been used in colic and colica pictonum.

**Al′lan-Burns's lig′ament.** Hey's ligament.

**Allanti′asis** (*allas*, sausage). Sausage poisoning, from putrefactive ptomains. See *Botulism.*

**Allanto′ic.** Belonging or relating to the allantois. **A. acid,** amnic or amniotic acid; peculiar acid found in liquor of allantois of the cow. **A. ar′teries,** umbilical arteries. **A. flu′id,** liquor amnii.

**Allan′toid.** Relating to the allantois. **A. mem′brane** or **ves′icle,** allantois.

**Allantoin′.** $C_4H_6N_4O_3$. Substance found sometimes in minute quantities in allantoic fluid and in urine; it may be obtained from uric acid by oxidation.

**Allan′tois** (*allas*, sausage, *eidos*, shape). A structure developed as a hollow, ventral outgrowth of the hinder portion of the primitive intestine of the embryo; its walls consist of the hypoblastic and splanchnopleural layers (Gray). In some animals it is called the allantoid or urinary vesicle of the fœtus, a sort of elongated bladder between the chorion and amnion, thrown out from the caudal extremity of the embryo, and communicating with the bladder by the urachus. As the allantois is developed, its walls become very vascular and contain ramifications of what become umbilical artery and vein, which, by elongation of the allantois, are brought through the villi of the chorion into indirect communication with the vessels of the mother. The inferior part of the allantois becomes the bladder; other portions the urachus.

**Allantotox′icon** or **Allantotox′icum** (*allas*, sausage, *toxicon*, poison). Sausage poison; poison developed in putrid sausages, especially when made of blood and liver.

**Allan′tum.** Allantoin.

**Al′larton's opera′tion.** See *Lithotomy.*

**Alla′sia pay′os.** Cucurbitaceous plant of Southern Africa, leaves of which are said to be parturifacient.

**Allax′is** (*allasso*, to change). Change; transformation.

**Allelu′ia.** Wood sorrel, Oxalis acetosella.

**Allevamen′tum.** Alleviation; means of relief.

**Allevia′tion** (*allevare*, to lighten). Process of relieving pain.

**Al′lex.** Thumb; big toe. See *Hallux.*

**All′flower-wa′ter.** Cow's urine; once used as a purgative.

**All′good.** Chenopodium bonus-Henricus.

**Allia′ceous** (*allium*, garlic). Belonging to garlic; as alliaceous odor.

**Allia′ria.** Jack-in-the-hedge, stinking hedge-mustard, hedge-garlic, sauce-alone; ord. *Cruciferæ.* Plant formerly used in asthma and dyspnœa; reputed to be diaphoretic, diuretic, and antiscorbutic.

**Al′ligator-jaw for′ceps.** Instrument with wide jaws and long sliding handles, used to seize foreign bodies in the urethra and other passages.

**Al′lingham's ul′cer.** Anal fissure.

**Al′lis's sign.** A diagnostic symptom of fracture of neck of femur, being a relaxed condition of the fascia lata between the crista ilii and trochanter major.

**Al′lium.** Garlic, ord. *Liliaceæ,* native of Sicily. Bulbs or cloves have a strong, penetrating odor, and a sweetish, biting, caustic taste, and contain a pungent, volatile oil, allyl sulphide. Bulb of A. sativum is official in Ph. U. S.; dose, gr. xxx–ʒij (2.0–8.0). Internally it is stimulant, diuretic, expectorant, diaphoretic, and anthelmintic; externally, rubefacient, maturative, and repellent. It is applied as rubefacient to the chest in croup. Virtues of genus *Allium* depend upon acrid principle soluble in water, alcohol, acids, and alkalies. **A. ampelopra′sum** or **ascen′dens,** species of European allium, used as diuretic, emmenagogue, and antidote to snake-bites. **A. ascalon′icum,** shallot. **A. canaden′se,** meadow garlic, wild garlic; indigenous; has same properties as A. sativum. **A. ce′pa,** common onion; acrid, stimulating, and possessing little nutriment. Onions have been used as stimulants, diuretics, and anthelmintics; boiled or roasted, as emollient cataplasm; fresh root is rubefacient; expressed juice has been used in otalgia and rheumatism. **A. cer′nuum,** wild onion; indigenous; medicinal properties similar to others of this class. **A. fistulo′sum,** Welsh onion, rock onion, of Northern Europe; edible. **A. gal′licum,** Portulaca. **A. leptophyl′lum,** edible species of E. Indies. **A. mo′ly,** garden garlic of S. of France; aperient. **A. moscha′tum,** species growing in S. of France; diuretic. **A. obli′quum** and **A. o′dorum** are edible European species. **A. olera′ceum,** field garlic; bulb is diuretic. **A. plantagin′eum,** A. victoriale. **A. por′rum,** leek or porret, possesses the same property as onion as an edible and a medicine. **A. red′olens,** Teucrium scordium. **A. sati′vum,** see the prime. **A. schoenopra′sum,** chive, chives, or cive; properties of bulb similar to those of garlic. **A. uligino′sum,** species in Asia, used externally in toothache; internally, in hemorrhage, spermatorrhœa, etc. **A. ursi′num,** species of Siberia and Central Europe; antiscorbutic, diuretic, anthelmintic. **A. victoria′le** or **victoria′lis,** root which, when dried, loses alliaceous smell and taste; has been used to allay abdominal spasms of pregnant women. **A. vulga′re,** A. sativum.

**Alloche′zia** (*allos*, another, *chezo*, to go to stool). Discharge of extraneous matters from the bowels; discharge of fæces by an abnormal opening.

**Allochir′ia** (*allos*, another, *cheir*, hand). A form of transferred sensation in which an impression in one part is felt in the corresponding part on the other side of the body; a symptom noted in tabes dorsalis and other spinal diseases, and in hysteria.

**Allo′choös.** Talking in a wild and delirious manner.

**Allochro′ic** or **Alloch′roous** (*allos*, another, *chroma*, color). Changing color; varying in color. Condition is called *alloch′roism.*

**Allochroma′sia.** Change in color; color-blindness.

**Allocinet′ic** or **Allokinet′ic** (*allos*, another, *kinesis*, motion). Acting in response to external impressions from without on motor nerves.

**Allœomor′phia** or **Allœomorpho′sis** (*alloios*, different, *morphe*, shape). Change of form; metamorphosis.

**Allœo′sis.** Constitutional alteration; mental disturbance.

**Allœot′ic.** Producing constitutional change. See *Alterative.*

**Allogotroph′ia** (*allos*, another, *trophe*, nourishment). Act of nourishing one portion of the body by material derived from another portion.

**Allolal′ia** (*allos*, another, *lalia*, speech). Disorder of speech. One so affected is *allol′alous.*

**Allomor′phism.** Allœomorphia.

**Al′lopath, Allop′athist** (*allos*, another, *pathos*, affection). One who believes in or practises allopathy.

**Allopath′ic.** Relating to allopathy; in common speech to the ordinary rational method of medical practice, in contradistinction to homœopathy.

**Allop′athy** (*allos*, another, *pathos*, disease). Method of treatment in which remedial agents are employed the action of which produces symptoms different from those observed in the sick person; opposite to homœopathy. A term incorrectly employed as a name for rational or regular medication, by those who do not understand the principles of the latter.

**Alloph′asis** (*allos*, another, *phao*, to say). Delirium.

**Allorhyth′mia, Allorrhyth′mia,** or **Alloryth′mia** (*allos*, another, *rhythmos*, rhythm). Variation in ryhthm of the pulse.

**Alloso′rus cris′pus.** Rock-brake; decoction is expectorant.

**Allosteato′des** (*allos*, another, *stear*, suet). Alteration of the sebaceous secretion of the skin.

**Allotoxin′** (*allos*, another, *toxikon*, poison). A defensive substance formed in the economy, which serves as an antidote to the toxic products of pathogenic bacteria.

**Allotriaposte′ma** (*allotrios*, foreign, *apostema*, abscess). Abscess containing a foreign body.

**Allotriodon′tia** (*allotrios*, foreign, *odous*, tooth). Transplantation of teeth; insertion of false teeth; unusual position of teeth.

**Allotrioëc′crisis** (*allotrios* + *ekkrisis*, secretion). Separation of extraneous matters from the body in disease.

**Allotriogeus′tia** (*allotrios*, foreign, *geusis*, taste). Perversion of taste.

**Allotriolithi′asis** (*allotrios*, foreign, *lithiasis*, calculus). Formation of calculus from foreign material or in an unusual position.

**Allotrioph′agy** (*allotrios*, foreign, *phago*, to eat). Inclination or taste for articles not suitable for food. One so addicted is an *allotrioph′agist.* See *Pica.*

**Allotriotex′is** (*allotrios*, foreign, *texis*, parturition). Bringing forth a monster.

**Allotriu′ria** (*allotrios*, foreign, *ouron*, urine). Admixture of foreign matters with urine.

**Allotroph′ic** (*allos*, another, *trophe*, nourishment). Perverted in nutrition; lacking nutritive qualities; affecting nutrition in an unusual manner.

**Allotrop′ic.** Relating to allotropism.

**Allot′ropism** or **Allot′ropy** (*allos*, another, *tropos*, turn or change). Term of chemistry to express the property possessed by certain bodies of existing under different forms: carbon, for example, furnishes three forms—plumbago, charcoal, diamond.

**Allotryl′ic** (*allotrios*, foreign, *hyle*, matter). Caused by extraneous matter or principles; as allotrylic diseases.

**Allox′an.** $C_4H_2N_2O_4$. Result of the action of nitric acid or nascent chlorine on uric acid at a low temperature; found occasionally in mucus of intestine in catarrhal enteritis.

**Alloxan′ic acid.** Acid obtained by treating alloxan with alkalies.

**Alloxanthin′** or **Alloxantin′.** $C_8H_4N_4O_7+3H_2O$. A white, crystalline substance resulting from the action of very dilute nitric acid or uric acid on alloxan.

**Alloxin′.** An alloxuric base.

**Allox′ur base** or **bod′y** (*allos*, other, *oxys*, acid, *ouron*, urine). Alloxuric or purin base.

**Alloxuræ′mia.** The presence of alloxur bodies in the blood.

**Alloxu′ric base.** One of several bases related to uric acid, such as adenin, guanin, hypoxanthin, and xanthin; they are derived from nuclein, and are converted into uric acid by oxidation.

**Alloy′.** A compound of metals combined in a state of fusion. **Fu′sible a.,** in dentistry an alloy which melts at or below the temperature of boiling water (100° C., 212° F.); including cadmium, bismuth, and other metals of low fusing point.

**All′spice.** Berries of Myrtus pimenta. **A. bush,** Laurus benzoin. **Caroli′na a.,** calycanthus. **Japan′ a.,** Chimonanthus fragrans. **A. tree,** pimenta; calycanthus. **Wild a.,** Laurus benzoin.

**Allucina′tio.** Hallucination.

**Al′lus** or **Al′lux.** Great toe.

**Al′lyl.** $C_3H_5$. Univalent alcohol radical, base of the oils of alliaceous plants. **A. al′cohol,** $C_3H_6O$, propenyl alcohol, liquid obtained by distilling a mixture of glycerin and oxalic acid. **A. al′dehyde,** acrolein. **A. cy′anide,** sinamin. **Mus′tard oil a.,** $CSNC_3H_5$, the chief constituent of mustard oil; an odorous, vesicant liquid. **A. pseudothiocy′anate,** mustard oil a. **A. sul′phide,** $(C_3H_5)2S$, oil of garlic; used as an enema in cholera; the sterilized oil is employed subcutaneously in phthisis. **A. sulphocar′bamide,** see *Thiosinamin.* **A. sulphocy′anate,** mustard oil a. **A. sulphoüre′a,** see *Thiosinamin.* **A. thiocar′bamide,** mustard oil a. **A. thiocy′anate,** mustard oil a. **A. thioë′ther,** a. sulphide. **A. thioüre′a,** see *Thiosinamin.* **A. tribro′mide,** $C_3H_5Br_3$, tribromhydrin; yellowish fluid, sp. gr. 2.430; sedative and antispasmodic in hysteria, asthma, whooping-cough etc.; dose, 5 drops (0.3), two or three times daily, in capsules.

**Allyl′amine.** $NH_2(C_3H_5)$. If one atom of allyl be substituted for one of H in ammonia this liquid results; it causes sneezing and flow of tears when inhaled.

**Allyl′ic.** Relating to allyl.

**Almen's′ test for blood.** The addition of freshly prepared tincture of guaiacum and ozonized ether gives a blue color if blood be present in the matter examined.

**Al′mond.** Amygdala. Fruit of Prunus communis. See *Amygdalin.* **Bit′ter a.,** amygdala amara. **A. cake,** amygdalæ placenta. **A. confec′tion,** pulvis amygdalæ compositus. **A. of the ear,** tonsil. **A. earth,** Arachis hypogæa. **Jor′dan a.,** see *Amygdala.* **A. legu′min,** amandin. **A. milk,** mistura amygdalæ. **A. mix′ture,** mistura amygdalæ. **A. oil,** oleum amygdalæ. **A. pow′der,** amygdalæ placenta. **Sweet a.,** amygdala dulcis. **A. of the throat,** tonsil.

**Alnuin′.** An alterative and tonic derived from the tincture of American alder, Alnus serrulata; dose, gr. ij–x (0.13–0.65).

**Al′nus.** Alder. **A. commu′nis,** A. glutinosa. **A. fran′gula,** Rhamnus frangula. **A. glau′ca,** A. incana. **A. glutino′sa,** European alder; bark and leaves are astringent and bitter; hence employed in intermittents and as tonic and astringent—dose, gr. viij–xij (0.52–0.78); and externally leaves are applied to sweating feet, and to the breast as an antigalactic. **A. inca′na,** tag alder, plant common in United States and Canada; bark is used, externally and internally, as a hæmostatic in all forms of hemorrhage. **A. ni′gra,** Rhamnus frangula. **A. serrula′ta,** American alder, has similar properties to A. glutinosa.

**Aloca′sia monta′na.** E. Indian variety of genus *Colocasia;* juice is stimulant and rubefacient.

**Alo′chia** (*a*, priv., *lochia*, lochia). Absence of lochial discharge.

**Al′oe** or **Al′oë** (Arab.). A genus of plants, ord. *Liliaceæ.* **A. africa′na,** Cape aloes. **A. america′na,** Agave americana. **A. barbaden′sis,** Aloes vera. **A. caballi′na,** horse aloes, fetid aloes; used chiefly for horses; collected in Spain and Portugal, and very coarse. **A. capen′sis,** Cape aloes. **A. dioscor′idis,** Barbadoes aloes. **False a.,** Agave virginica. **A. fe′-**

rox, Cape aloes. **A. hepat′ica**, A. vera, Bombay or Barbadoes aloes; disagreeable taste and odor; cathartic. **A. lu′cida**, Socotrine aloes. **A. natalen′sis**, Natal aloes. **A. perfolia′ta**, a source of Cape aloes. **A. per′ryi**, a source of Socotrine aloes. **A. purifica′ta**, purified aloes. **A. root**, Aletris farinosa. **A. socotri′na**, A. perryi, the source of the official (Ph. U. S. and Br.) Socotrine aloes; dose of inspissated juice of the leaves, gr. ij–x (0.13–0.65). **A. spica′ta**, Cape aloes. **A. variega′ta**, Mexican species of aloes; juice is cathartic and anthelmintic. **A. ve′ra**, A. hepatica, the source of the official (Ph. U. S. and Br.) Barbadoes aloes; dose of the inspissated juice of the leaves, gr. ij–x (0.13–0.65). **A. vulga′ris**, Indian and African plant, cultivated in West Indies; important source of Barbadoes aloes.

**Al′oes.** Inspissated juice of the leaves of the aloe. **Amer′ican a.**, Agave americana. **Barba′does a.**, Aloe hepatica. **Bas′tard a.**, Agave americana. **Beth′elsdorf a.**, Cape aloes. **Blue a.**, Agave americana. **Bombay′ a.**, A. hepatica. **Cab′alline a.**, A. caballina. **Cape a.**, shining aloes; cheap and excellent form of aloes, collected at Cape of Good Hope from Aloe ferox, A. africana, A. spicata, and other species; the finest kind, collected at Bethelsdorf, is called Bethelsdorf aloes. **Cen′tury a.**, Agave americana. **East In′dia a.**, Socotrine a. **Fet′id a.**, caballine a. **A. guinien′sis**, caballine a. **Hepat′ic a.**, A. vera. **Horse a.**, caballine a. **In′dian a.**, Bombay aloes. **Insol′uble a.**, aloes resin. **Liv′er a.**, Aloe hepatica. **Natal′ a.**, variety of aloes from Natal. **Pu′rified a.**, a. purified by the action of alcohol. **A. res′in**, resinous substance deposited from hot-water solution of aloes on cooling; supposed to be cause of griping produced by aloes. **A. root**, Aletris farinosa. **Shin′ing a.**, Cape aloes. **Soc′otrine** or **Socoto′ra a.**, Turkey or East India aloes, is the best species; it is cathartic, warm, and stimulating; emmenagogue, anthelmintic, and stomachic; as a cathartic it affects the rectum chiefly; dose, as a cathartic, gr. v–xx (0.33–1.33) in pill. Chief constituent is aloin, a glucoside, named, according to kind of aloes, socaloin, barbadaloin, etc. **Translu′cent a.**, Socotrine a. **Tur′key a.**, Socotrine a. **Turkistan′ a.**, Bombay a. **A. wood**, agallochum; various plants have been credited with the production of this wood, which when burned gives rise to a stimulating perfume. **Zan′zibar a.**, Socotrine a.

**Aloësin′.** Aloïn.

**Aloët′ic.** Preparation containing aloes. **A. acid**, $C_7H_2(NO_2)_2O$, is obtained from aloes by acting upon it with nitric acid.

**Aloëtin′.** An uncrystallizable principle of aloes. See *Aloin*.

**Aloëx′ylon** (*xylon*, wood). Agallochum; aloes-wood.

**Alo′gia** (*a*, priv., *logos*, word). Impossibility of speaking, from defect in formation of ideas.

**Alogot′rophy** (*alogos*, disproportionate, *trophe*, nutrition). Irregular nutrition; irregular manner in which nutrition of the bones is effected in rickets.

**Al′ogous** (*a*, priv., *logos*, discourse). Unable to speak; not clear in ideas.

**Aloïn′.** Name given to a bitter glucoside obtained from different varieties of aloes, and hence called barbaloin, socaloin, etc.; dose as a cathartic, gr. ss–iij (0.032–0.2). The soluble, uncrystallizable principle of which aloes mainly consists is called aloëtin, the dose of which is slightly less than that of aloes.

**Aloma′nia** (*hals*, salt). A morbid craving for salt.

**Alonette's′ amputa′tion.** Hip-joint amputation by semicircular flaps; see *Amputation*.

**Alop′eces** (*alopex*, fox, being strong in that animal). Psoas muscles.

**Alope′cia** (*alopex*, fox, from resemblance to mange in this animal). Baldness; falling off or loss of hair. When confined to the crown of the head it is called calvities, although the terms are often used synonymously. When congenital it is called *atrichia* or *alopecia adnata;* falling off of hair in old age is termed *alopecia senilis*. **A. adna′ta**, congenital a. **A. a′rea or area′ta**, porrigo decalvans. **A. circumscrip′ta**, porrigo decalvans. **A. congen′ita**, congenital a. **A. follicular′is**, folliculitis decalvans. **A. furfura′cea**, pityriasis capitis. **A. local′is**, a. localized at the site of an injury or in the distribution of a nerve, then called a. neuritica. **Nat′ural a.**, a. senilis. **A. neurit′ica**, a localis. **A. neurot′ica**, baldness produced by disease of the nervous system. **A. orbicular′is**, a. circumscripta. **A. partial′is**, porrigo decalvans. **A. pityroi′des** or **pityro′des**, baldness from parasitic growth; pityriasis capitis. **A. præseni′lis**, premature loss of hair before old age. **Prem′ature a.**, a. præsenilis. **A. seni′lis**, alopecia of old persons. **A. sim′plex**, a. præsenilis. **A. syphilit′ica**, alopecia of syphilitic origin. **A. trichophyt′ica**, loss of hair from Tinea trichophytina. **A. un′guis**, onychoptosis. **A. universal′is**, general loss of hair over the entire body.

**Alo′sa menhad′en.** Menhaden fish, oil of which has been used, like cod-liver oil, internally.

**Alouette′** (Fr.). A devise for inducing sleep. It consists of a series of revolving mirrors reflecting a pencil of light; the monotony of the vibrating glitter fatigues the eyes, which close and sleep follows.

**Aloxanthin′.** $C_{15}H_{10}O_6$. Yellow substance derived from Aloe vera.

**Al′pha.** The first letter of the Greek alphabet; in chemical notation is prefixed to certain names to denote that the substance is the first of a series of isomerous modifications of the same compound.

**Alpha-an′gle.** The angle formed by the intersection of the line of vision and the optic axis.

**Alpha-cre′osote.** Mixture of constituents of creosote, containing 25 per cent. of crystalline guaiacol.

**Al′pha-eucaine′.** See *Eucaine*.

**Alpha-eu′nol.** A preparation of naphthol and eucalyptol, used in the treatment of skin diseases.

**Al′pha-gran′ules.** Eosinophile or oxyphile granules found in polymorphonuclear leucocytes and sometimes, in disease, in the eosinophile myelocytes.

**Alpha-guai′acol.** A form of guaiacol made synthetically, having the same therapeutic action.

**Alpha-leu′cocyte.** Leucocyte undergoing decomposition during the coagulation of the blood.

**Alpha-naph′thol.** A form of naphthol; antiseptic, but seldom used in medicine.

**Alpha-naphtholcarbon′ic acid.** Alpha-oxynaphthoic acid.

**Alpha-naphtholtolu′ic acid.** Phenylacetic acid.

**Alpha-naph′thyl sal′icylate.** Alphol.

**Al′pha-oxynaph′thoic acid.** Disinfectant obtained from naphthol.

**Al′pha-res′in.** Term applied to one of the two resins of colophony.

**Al′pha-tro′pein.** A derivative of hyoscine and scopolamine.

**Alphelas′ma** (*alphos*, leprosy). Disease of the mucous membrane of the mouth and lips, characterized by grayish-white spots.

**Alphen′ic.** White barley sugar.

**Alphodeopsori′asis** (*alphos*, leprosy). Psoriasis having appearance of leprosy.

**Alphoder′mia** (*alphos*, leprosy, *derma*, skin). Achromatosis; albinism.

**Al′phol.** $C_{17}H_{12}O_3$. A salicylic ether of alpha-naphthol, an isomer of betol. It has properties similar to salol when given in acute articular rheumatism and gonorrhœal cystitis. Dose of powder, gr. viij–xv (0.5–1.0) or more.

**Alphon′sin.** Bullet forceps, called from inventor, Alphonso Ferri, of Naples.

**Al′phos** or **Al′phus** (*alphos*, leprosy). Lepra alphoides, psoriasis, vitiligo. **A. achromato′sis**, albinism. **A. æthiop′icus**, albinism. **A. a′grius**, psoriasis agria. **A. confer′tus**, herpes scrophulosus. **A. gutta′tus**, psoriasis guttata. **A. leu′ce**, vitiligo with white spots. **A. lin′guæ**, eruptive lingual disease, like psoriasis. **A. papulo′sus**, psoriasis. **A. puncta′tus**, punctate or pointed form of psoriasis. **A. pustulo′sus**, pustular psoriasis. **A. spar′sus**, scattered form of ecthyma. **A. universa'lis,** general psoriasis.

**Alpho'sis.** Albinism. A gradual loss of pigment.

**Al'phous.** Relating to lepra alphoides.

**Alpin'ia allu'ghas.** Plant growing in India; anodyne, emmenagogue, and antiarthritic. **A. aromat'ica,** species growing in Guiana; carminative. **A. cardamo'mum,** Amomum cardamomum. **A. exalta'ta,** Renealmia exaltata. **A. galan'ga,** Maranta galanga. **A. racemo'sa,** species of Guiana and West Indies; root is used as external application to cancerous tumors and ulcers. **A. tubula'ta,** Renealmia exaltata.

**Alseodaph'ne ama'ra.** Species of lauraceous plant of Brazil; bark is aromatic tonic. **A. cymba'rum,** Brazilian tree, bark of which is bitter, aromatic tonic; yields laurel oil, used in joint affections. **A. opif'era,** from bark of which a balsam is procured, used externally for rheumatism.

**Alsid'ium blodget'ti.** Grows in North America; used in scrofula and phthisis. **A. helminthochor'ton,** Corallina corsicana.

**Alsi'ne avicula'rum** or **me'dia,** or **vulga'ris.** Mouse-ear, chickweed, chickenwort; ord. *Caryophyllaceæ.* This plant boiled may be eaten like spinach, and externally is used as an emollient poultice.

**Al'sol.** Aluminum acetotartrate; used externally as a substitute for corrosive sublimate, carbolic acid, salicylic acid, and potassium chlorate as a disinfectant astringent in diseases of the mouth and pharynx, in 1 per cent. solution.

**Alstonamine'.** Alkaloid derived from bark of Alstonia spectabilis.

**Alsto'nia** (after Prof. C. Alston, of Edinburgh) or **A. constric'ta.** Native quinine, Australian fever tree; bitter bark of Australia, ord. *Apocynaceæ.* Species of a. growing in Australia, the bark of which is antiperiodic. **A. schola'ris,** devil-tree; tree of the East Indies, from which dita-bark is obtained; used in dysentery. **A. spectab'ilis,** tree indigenous to Java; antiperiodic. **A. theæfor'mis,** Santa Fé tea; plant of New Mexico, leaves of which are used as tea. **A. venena'ta,** species of East Indies, having poisonous juice.

**Alstonicine', Alstonidine',** or **Alstonine'.** Alkaloids from alstonia bark; antiperiodic and stimulant.

**Alstroeme'ria.** Source of Talcuahana arrowroot; several species yield arrowroot.

**Al'ter** (*alter,* other). To begin menstruation. To castrate.

**Al'terant.** Alterative.

**Altera'tion.** Any change, as in expression of countenance, structure of organ, or nature of fluids excreted, as milk, urine, etc. Intense thirst in disease. Castration.

**Al'terative.** Agent producing a salutary change in disease by improving the nutrition of the body, without exciting sensible evacuation or any very marked action on individual organs; such remedies have hence been called eutrophics, or improvers of nutrition. The chief alteratives are arsenic, iodine, cod-liver oil, gold, and mercury. Formerly also that which causes thirst. **Ner'vous a.,** term given to substances whose use is followed by changes in the cerebrum, accompanied by disturbance of the intellectual faculties.

**Al'tered.** Castrated.

**Alter'nate.** Opposite; successive. **A. genera'tion,** the alternation in successive generations of sexual and asexual forms, or of individuals seemingly of two unlike species. **A. hemiple'gia,** paralysis of one side of the face, accompanied with paralysis of the limb on the opposite side.

**Al'ternating.** Passing from one state or place to another and back again. **A. cur'rents,** in electricity, currents which are constantly changing from direct to reversed.

**Alterna'tion.** The act of alternating or passing back and forth. **A. of genera'tion,** difference in progeny from parents of same species, with reproduction afterward of original form.

**Althæ'a** or **A. officina'lis.** Marshmallow, ord. *Malvaceæ.* Leaves, *Althææ folia,* and root, *Althææ radix,* contain much mucilage; are emollient and demulcent. Althæa (Ph. U. S.) is the root of Althæa officinalis.

**Altheine'.** $C_4H_8N_2O_3$. An alkaloid, apparently identical with asparagine, derived from marshmallow root; it has a sedative action and has also been employed as a diuretic in ascites and gout.

**Alt'man's gran'ules.** Round bodies derived from cells and growing by increment of fat around them.

**Al'ula** (dim. of *ala,* wing). Little wing.

**Al'um.** A double salt formed by the union of a sulphate of aluminum, manganese, iron, or chromium, and one of an alkali, such as ammonium or potassium. Ordinary alum is the double sulphate of aluminum and potassium. See *Alumen.* **Ammo'nia,** or **ammoni'acal a.,** alumini et ammonii sulphas (official in the Ph. Br.). **Ammoniofer'ric a.,** ferri et ammonii sulphas. **Burnt a.,** alumen exsiccatum. **Car'mine a.,** fluid used for staining, made of carmine boiled in solution of alum. **A. cat'aplasm,** coagulum aluminis. **Con'centrated a.,** aluminum sulphate. **A. curd,** coagulum aluminis. **Dried a.,** alumen exsiccatum. **Eng'lish a.,** common alum. **A. oint'ment,** ointment consisting of turpentine, lard, and powdered alum. **Pat'ent a.,** aluminum sulphate. **Potas'sium a.** (Ph. Br.), alumen. **A. poul'tice,** coagulum aluminis. **Rock a.,** alumen. **A. root,** astringent root of Heuchera americana and Geranium maculatum, see *Geranium* and *Heuchera.* **A.-water,** solution of alum in water. **A. whey,** liquid separated when milk is coagulated by powdered alum.

**Alu'men** (Ph. U. S.). $Al_2(SO_4)_3+K_2SO_4+24H_2O$. Alum, sulphate of aluminum and potassium; potash or potassium alum. Has a sweetish taste; soluble in water; astringent and emetic. Dose, as an emetic, a teaspoonful (4.0); as an astringent, gr. v–xx (0.3–1.3). Used externally in solution and as a gargle. **A. ammo'nio-fer'ricum,** sulphate of iron and ammonium; astringent. **A. calcina'tum,** dried or burnt alum. **A. cati'num,** potash of commerce. **A. commu'ne,** common alum, English alum, rock alum, the variety usually employed; generally in large, white, semi-transparent masses; has a sweetish, styptic taste; effloresces in air, and is soluble in water. **A. crystalli'num,** common alum. **A. exsicca'tum,** burnt alum, dried alum; alum melted in an earthen vessel until ebullition ceases, the water of crystallization being driven off; is escharotic. **A. factit'ium,** common alum. **A. fæ'cum,** see *Potash.* **A. kinosa'tum,** pulvis sulphatis aluminæ compositus. **A. ru'peum,** a. commune. **A. sicca'tum,** alumen exsiccatum. **A. us'tum,** a. exsiccatum.

**Alu'mina.** Oxide of aluminum, used as an astringent in diarrhœa and dysentery. **A. acet'ica,** alumini acetas. **A. depura'ta,** argilla pura. **A. pu'ra,** argilla pura.

**Alu'mini ace'tas.** Aluminum acetate. Deliquescent salt, having same properties as aluminum sulphate. Has been used externally in parasitic skin diseases and as an antiseptic. **A. acetogly'ceras,** antiseptic and astringent in diseases of the nasopharynx. **A. acetotar'tras,** alsol; disinfectant and astringent; non-poisonous; substitute for corrosive sublimate, potassium chlorate, and carbolic acid, and in gargles, washes, etc. **A. et ammo'nii sal'icylas,** see *Salumin.* **A. et ammo'nii sul'phas** (Ph. Br.), sulphate of aluminum and ammonium, ammonia alum; the term alum was at one time officially applied to this salt. **A. beta-naph'tholdisul'phonas,** see *Alumnol.* **A. boroform'as,** a soluble salt formed by mixing alumina with formic and boric acids and water; used as a substitute for alumnol, etc., as a disinfecting astringent. **A. borotan'nas,** a disinfecting astringent, employed under the name *Cutol;* it is a mixture of solutions of tannin, borax, and aluminum sulphate, and is not soluble. **A. borotannicotar'tras** or **borotannotar'tras,** soluble cutol; a disinfecting astringent, being the borotannate made soluble by addition of tartaric acid. **A. borotar′tras**, used as an astringent and disinfectant; see *Boral*. **A. brom′idum**, used as a gargle in throat affections, usually in combination with the chloride. **A. chlo′ridum**, $Al_2Cl_6$, colorless, deliquescent salt; disinfectant. **A. gal′las**, see *Gallol*. **A. hy′dras** (Ph. U. S.), hydrate of aluminum, a white powder; mild astringent for external use. **A. hydrox′idum**, a. hydras. **A. naphtholsul′phonas**, alumnol. **A. ni′tras**, $Al_2(NO_3)_6$, solution is used in the treatment of pruritus vulvæ. **A. ox′idum**, argilla pura. **A. paraphenolsul′phonas**, see *Sozol*. **A. et potas′sii hypersul′phas, sul′phas**, or **supersul′phas**, alumen. **A. et potas′sii paraphe′nolsul′phonas**, an antiseptic astringent procured by saturating paraphenol-sulphonic acid with a solution of potassium aluminate; used externally. **A. sal′icylas**, see *Salumin*. **A. sozoï′odas**, used as an antiseptic wash. **A. sul′phas** (Ph. U. S.), sulphate of aluminum, a white, granular powder or crystalline mass, made by the direct combination of alumina and sulphuric acid, or by double decomposition from sulphate of aluminum and carbonate of sodium; dissolving precipitate in dilute sulphuric acid. Deliquescent salt, antiseptic and detergent to ulcers, astringent, escharotic, and disinfectant; is used as an injection in fetid abscesses, leucorrhœa, etc., and as a gargle in throat affections; chiefly used to preserve dead bodies, a strong solution—one pound in two pints of water—being injected into the arteries. **A. sulphocar′bolas**, sozal. **A. tan′nas**, tannal. **A. tan′nicotar′tras** or **tan′notar′tras**, a soluble double salt, used as an astringent in the form of spray or gargle; see *Tannal*.

**Alumin′ium.** Aluminum.

**Alumino′sis.** Condition of bronchial irritation noticed in workers in porcelain, the dust of clay used being deposited in the lungs.

**Alu′minum.** A lustrous, silvery white metal, symbol Al, atomic weight 27.1. Many of its salts are used in medicine, usually as astringents and antiseptics. See under *Alumini*.

**Alum′nol.** Aluminum beta-naphtholdisulphonate, or naphtholsulphonate. Derived from the action of naphthol-sulphonic acid on aluminum hydroxide, or decomposition of barium naphtholsulphonate with aluminum sulphate. Red powder; used externally in powder, solution, or ointment, as an antiseptic and astringent in wounds, gonorrhœa, skin diseases, soft chancres, balanitis, middle-ear disease, etc.

**Alvear′ium** (*alveus*, cavity). External auditory canal.

**Al′veloz** or **Al′veoloz.** Syrupy juice from Euphorbia heterodoxia, suggested as a topical suppurative application in cancer; also diuretic.

**Alveoden′tal.** Alveolodental; relating to the alveoli and the teeth, as alveodental periosteum.

**Alve′olar.** Having small cavities; relating to the alveoli or sockets of the teeth. **A. ab′scess**, parulis. **A. an′gle**, the angle formed by the horizontal line of the head intersecting a line drawn from a point beneath the nasal spine to the alveolar point; used in craniometry. **A. ar′ches**, arches formed by the borders of the two jaws, which are hollowed by alveoli. **A. ar′tery**, supramaxillary artery, arises from the internal maxillary, descends behind the tuberosity of the upper jaw, and gives branches to the upper molar teeth, gums, periosteum, membrane of the maxillary sinus, and buccinator muscle. **A. bor′der**, part of jaws hollowed by alveoli. **A. can′cer**, colloid cancer. **A. ducts**, minute canals passing from terminal bronchioles to pulmonary air-vesicles. **A. in′dex**, see *Index*. **A. mem′brane**, delicate membrane between the teeth and alveoli, formed by a portion of the sac or follicle enclosing the tooth before it pierces the gum; has been called alveolodental periosteum. **A. nerves**, dental branches of the maxillary nerves. **A. pas′sages**, terminal branches of the bronchioles. **A. plates**, inner and outer walls of the alveolar processes. **A. point**, central point in front of the upper alveolar arch, used in measurements of the skull. **A. pro′cess**, thick border of the upper and lower jaw, pierced with sockets of the teeth. **A. ridge**, continuous elevation formed by the summit of the alveolar process. **A. sarco′ma**, form of sarcoma in which the cells are arranged in alveoli. **A. struc′ture**, name given to honeycomb depressions in the mucous membrane of the stomach and other parts of the alimentary canal. **A. veins**, have similar distribution with the artery.

**Alveolar′ium.** External auditory canal.

**Alve′olate.** Full of small cavities.

**Alve′oli.** See *Alveolus*.

**Alve′oliform.** Having small spaces or alveoli.

**Alveoli′tis.** Inflammation of the socket of a tooth.

**Alveolocondyl′ean ang′le** and **plane.** Angles and planes in facial measurement taken with alveolar arch and condyles of occipital bone as chief points.

**Alve′olocuta′neous mus′cle.** Orbicularis oris.

**Alve′oloden′tal perios′teum.** Alveolar membrane or periodonteum.

**Alve′olola′bial mus′cle.** Buccinator muscle; molaris externus and internus.

**Alve′ololin′gual groove.** Groove between the lower jaw and the tongue.

**Alve′olomax′illary mus′cle.** Buccinator.

**Alve′olona′sal mus′cle.** Depressor alæ nasi.

**Alve′olus.** One of the sockets of the teeth, into which they are, as it were, driven; their size and shape are determined by the teeth which they receive; they are pierced at the apex by small holes, giving passage to the dental vessels and nerves. Air sac in the lungs. Honeycomb depression in the mucous membrane of the stomach and other parts of the alimentary canal. A ventricle of the larynx. One of many small spaces in the lymphatic glands formed by trabeculæ and containing adenoid tissue.

**Alvergniat's′ pump.** A mercurial air-pump for removing gases from the lungs; also for determining the amount of gaseous matters in the blood.

**Al′veus.** Auricle or ventricle of the heart; auge. **A. ampulles′cens** or **ampullo′sus**, thoracic duct; receptaculum chyli. **A. commu′nis**, see *Semicircular canals*. **A. hippocam′pi**, medullary layer covering the hippocampus major. **A. laryn′geus**, sacculus laryngis. **A. pulmo′nis**, air-cell of lung; one connected with infundibulum of lung is called terminal alveolus. **A. urogenita′lis**, prostatic vesicle. **A. utriculo′sus**, utricle.

**Al′vi adstric′tio** or **astric′tio.** Constipation. **A. excre′tio**, defecation. **A. flux′us** or **flux′us aquo′sus** or **lax′itas** or **proflu′vium**, diarrhœa.

**Al′vine** (*alvus*, abdomen). Relating to the abdomen or bowels, as alvine discharges, alvine flux. **A. concre′tion**, intestinal calculus.

**Al′vus.** Abdomen; uterus. Excrement; diarrhœa. **A. adstric′ta** or **astric′ta**, constipation. **A. ci′ta**, diarrhœa. **A. coac′ta**, constipation. **A. compac′ta** or **compres′sa** or **constipa′ta**, constipation. **A. du′ra**, constipation. **A. flu′ens** or **flu′ida** or **fu′sa** or **liq′uida** or **mol′lis**, diarrhœa. **A. re′nis** or **re′num**, pelvis of the kidney. **A. seg′nis**, constipation. **A. solu′ta**, diarrhœa. **A. suppres′sa** or **tar′da** or **te′nax**, constipation. **A. vir′idis**, dejection.

**Alym′phia** (*a*, priv., *lympha*, lymph). Deficiency of lymph.

**Alys′sum.** A genus of plants of the order *Cruciferæ*, several species of which have been used in the treatment of insanity and hydrophobia. **A. plin′ii**, Galium mollugo.

**Alys′sus** (*a*, priv., *lyssa*, fury). Antihydrophobic.

**Alyx′ia aromat′ica** or **reinward′ii** or **stella′ta.** Plant, aromatic bark of which resembles Canella alba; antipyretic.

**Am.** Myopic astigmatism.

**Amab′ile** (lovely). Lacuna or depression in the upper lip.

**Am′acrine** (*a*, priv., *makros*, large, *is*, a nerve fibre). Without axis-cylinder process or seemingly so, as the cells of the retina.

**Am′adou.** Fungus, agaric or touchwood, used to stop hemorrhage and as dressing for wounds.

**Amal′gam.** A compound of one or more metals with mercury, used in dentistry for filling teeth. Mercury with one metal forms a *binary amalgam;* with two metals a *ternary amalgam;* with three metals a *quaternary amalgam.* An alloy of silver and tin forms the basis of all ternary and quaternary amalgams. **Cop′per a.,** alloy of equal parts of precipitated copper and mercury, softened by heat; it is inserted into tooth-cavities, where it undergoes hardening. **Palla′dium a.,** alloy of metallic palladium and mercury, used for the same purpose as copper amalgam.

**Amalgama′tion.** Mixture of races.

**Aman′din.** Albuminous substance in sweet almonds.

**Amani′ta musca′ria.** Agaricus muscarius.

**Amani′tæ.** Mushrooms.

**Amanitine′.** Agaricine.

**Ama′ra.** Bitters. **A. alkaloid′ea,** bitter alkaloids. **A. aromat′ica** or **cal′ida,** aromatic bitter tonics. **A. dul′cis,** dulcamara. **A. tetan′ica,** tetanic bitters, as strychnine.

**Amar′acus.** Origanum or marjoram.

**Amar′æ.** Bitters. See *Amarus.* Depressions in the outer ear.

**Amaran′thus** or **Amaran′tus.** Genus of herbs of the order *Amaranthaceæ,* several species of which are used in medicine. **A. campes′tris,** demulcent. **A. cauda′tus,** astringent. **A. cer′nua,** astringent. **A. deb′ilis,** antisyphilitic. **A. hypochondri′acus,** prince's feather; astringent. **A. spica′tus,** diuretic. **A. spino′sa,** an Indian shrub, the fresh root of which is used in gonorrhœa.

**Amargosin′.** Active principle of amargoso bark, goatbush, Castela erector, a plant of Texas and Northern Mexico. The bark is used as a febrifuge and astringent tonic.

**Am′aril.** Assumed toxin of yellow fever.

**Amarine′.** $C_2H_{18}O_2$. An alkaloid from bitter almonds.

**Amarthri′tis.** General gouty inflammation of the joints.

**Amar′ulence.** Bitterness.

**Ama′rus** or **Ama′rum.** Bitter. The bitter principle of vegetables is the great natural tonic, and hence bitters, so termed collectively, belong to the class of tonics.

**Amaryl′lis belladon′na.** Belladonna lily; emetic. **A. eques′tris,** poisonous West Indian plant. **A. formosis′sima,** Mexican plant, bulbs of which are emetic. **A. zeylon′ica,** Asiatic species; bulb is diuretic.

**Amarythrin′** (*amarus,* bitter, + *erythrin*). Bitter extract derived from erythrin.

**Amase′sis** or **Amaste′sis** (*a,* priv., *masesis,* mastication). Impeded or impracticable mastication.

**Amas′tia** (*a,* priv., *mastos,* breast). Absence of breast; absence of nipple.

**Amath′ia.** Amazia.

**Amato′rium.** Lacuna or depression on the upper lip. **A. venefic′ium,** philter.

**Amato′rius mus′culus.** Oblique muscle of the eye.

**Amauro′sis** (*amauros,* obscure, + *osis*). Formerly called drop serene, gutta serena, black cataract, nervous blindness, and then defined as a diminution or complete loss of sight, generally owing to loss of power of the optic nerve or retina—optic anæsthesia—from primary or degenerative atrophy of that nerve; but the ophthalmoscope has shown that these cases are usually referable to diseases of the choroid, retina, or optic nerve. At the present day amaurosis seems to be a synonym for total blindness. **Albuminu′ric a.,** a. due to retinitis of albuminuria. **A. alcohol′ica,** a. due to excessive use of alcohol. **A. arthrit′ica,** a. due to gout. **A. aton′ica,** a. from debility. **Cat's-eye a.,** see *Amaurotic cat's-eye.* **Cer′ebral a.** or **A. compressio′nis,** a. from pressure on the optic nerve. **A. conges-ti′va,** a. from congestion of the brain. **Diabe′tic a.,** a. due to diabetic retinitis. **A. dimidia′ta,** hemiopia. **Diur′nal a.,** hemeralopia. **A. epilep′tica,** a. occurring during an epileptic seizure. **Epilep′ti-form** or **epilep′toid a.,** retinal epilepsy, being a sudden attack of blindness, not necessarily occurring in epileptics. **A. exanthemat′ica,** a. accompanying eruptive diseases. **A. gravida′rum,** a. occurring in the puerperal state. **A. intermit′tens,** a. accompanying intermittent fever. **A. lactan′tium,** a. occurring during lactation. **Noctur′nal a.,** nyctalopia. **A. partia′lis fu′gax,** form of transient obscuration of vision happening alone or in connection with migraine. **Re′flex a.,** a. due to irritation of sensory nerve. **A. spina′lis,** a. due to lesion of the spinal cord. **Subur′ral a.,** temporary a., occurring sometimes in acute gastritis. **Tobac′co a.,** a. due to the excessive use of tobacco; tobacco amblyopia. **A. uræ′mica,** a. due to renal disease.

**Amaurot′ic.** Affected with amaurosis. **A. cat's-eye,** amaurotic affection, with remarkable change of color in the pupil, presenting, apparently in the fundus of the eye, a lighter tint instead of the natural clear black. It is due to morbid growths or deposit from inflammation.

**Amaxopho′bia** (*amaxa,* wagon, *phobos,* fear). Morbid dread of riding in a wagon or car.

**Ama′zia** (*a,* priv., *mazos,* breast). Absence of one or both breasts.

**Am′bar** or **Am′barum** or **A. cinerit′ium.** Ambergris.

**Am′be** (*ambaino,* to ascend). Border of orbit; superficial eminence or crest on a bone; old surgical machine for reducing dislocations of the shoulder.

**Ambelan′ia a′cida.** Fruit is eaten in French Guiana as a cure for dysentery.

**Am′ber.** Succinum. **Cam′phor a.,** volatile resin of camphor. **Gray a.,** ambergris. **Liq′uid a.,** see *Liquidamber styraciflua.* **Yel′low a.,** succinum.

**Am′bergris.** Gray amber; concrete substance of consistence of wax, cineritious color, and exhaling a pleasant odor. It is probably formed in the intestine of the spermaceti whale, and voided with its excrement. It is antispasmodic and excitant, and employed as a perfume.

**Ambidex′ter** (*ambo,* both, *dexter,* right). One who uses both hands with equal facility. Such a person is *ambidex′trous;* the condition is *ambidexter′ity* or *ambidex′trousness.*

**Ambile′vous** (*ambo,* both, *lævus,* left). Opposite condition to ambidextrous.

**Ambio′pia** (*ambo,* both, *ops,* eye). Double vision.

**Am′bitus.** Circumference. **A. cerebel′li,** space including cerebellum, medulla oblongata, and pons Varolii. **A. genita′lis mulie′bris,** vestibule of the genital organs of the female.

**Amblot′ic.** Abortive; producing abortion.

**Amblyaph′ia** (*amblys,* dull, *haphe,* touch). Dulness of the sense of touch.

**Am′blyope.** One affected with amblyopia.

**Amblyo′pia** (*amblys,* dull, *ops,* eye). Feebleness of sight. Impairment of vision caused by irregularities in the nervous system or circulation, congenital or from mechanical injury, poisons, etc. The term is now usually restricted to those cases of weak sight in which there is no organic lesion; the condition may be congenital. **A. amaurot′ica,** blindness from atrophy of the nervous apparatus of vision. **A. exanop′sia,** a. from non-use of the eye when excluded for any length of time from binocular vision. **A. centra′lis sim′plex,** simple variety of a., with slight hyperæmic condition of disk and obscured edges. **A. crepuscula′ris,** nyctalopia. **Crossed a.,** unilateral a. with hemianæsthesia of the same side of the body. **A. diabet′ica,** a. occurring in diabetes; usually slight hyperæmia is visible. **A. dissito′rum,** myopia. **A. glycosu′rica,** a. diabetica. **Lead a.,** a. saturnina. **A. lu′minis,** hemeralopia. **A. meridia′na,** hemeralopia. **A. nicotia′na,** tobacco a. **Noctur′nal a.,** nyctalopia. **Post-mar′ital a.,** a. due to excessive sexual indulgence. **A. potato′rum,** amblyopia of drunkards; alcoholic amblyopia. **A.**

**proximo'rum**, presbyopia. **A. saturni'na**, a. from lead poisoning. **Tobac'co a.**, a. from abuse of tobacco; resembles alcoholic amblyopia. **Uræ'mic a.**, form of the disease due to uræmic blood poisoning, such as occurs in Bright's disease.

**Amblyop'ic.** Relating to or affected with amblyopia.

**Ambocep'tor.** Immune-body; so called because of its double function of uniting with the receptor in the protoplasm of the cell and also with the complement, this double action being effected by means of two haptophore groups.

**Ambol'ic.** Abortive; producing abortion.

**Am'bon** (*ambon*, raised rim of shield or dish). Fibrocartilaginous ring surrounding articular cavity, as glenoid cavity of the scapula, acetabulum, etc.; superciliary arch; circumference of orbit of eye.

**Amboy'na butt'on** or **pim'ple.** Syphiliform disease, at one time epidemic in the island of Amboyna.

**Am'bra.** Amber.

**Ambre'ic acid.** Acid produced by treating ambrein with nitric acid.

**Ambreïn'.** Constituent of ambergris resembling cholesterin.

**Ambri'na.** Chenopodium.

**Ambro'sia** (*ambrotos*, immortal). Genus of *Compositæ*. Food which makes immortal, or food of the gods; Chenopodium botrys. **A. artemisiæfo'lia**, hogweed, bitterweed, Roman wormwood; grows in North America; astringent and antiperiodic. **A. ela'tior,** ragweed. **A. marit'ima**, plant growing on the shores of the Levant, having a pleasant, bitter, aromatic taste; given in infusion as a tonic and antispasmodic. **A. trif'ida,** horseweed, richweed, horsemint, horsecane, bitterweed, great or tall ragweed, wild hemp; indigenous in all parts of the United States; astringent, stimulant, antiperiodic; infusion has been used locally in mercurial salivation.

**Ambulac'ral** (*ambulacrum*, private walk). Relating to locomotion.

**Am'bulance** (*ambulo*, to walk). Military hospital attached to an army and moving along with it. Vehicle for conveyance of sick and wounded.

**Am'bulans** or **Am'bulant.** Ambulatory.

**Ambula'tion** (*ambulo*, to walk). Act of walking.

**Am'bulative** or **Am'bulatory.** Term applied to a morbid affection, such as erysipelas, when it skips from one part to another; or to typhoid fever in which the patient is not confined to bed—walking typhoid. When blisters are applied successively on different parts of the body they are called ambulatory blisters. Ambulatory clinic is one in which lecturer and auditors walk from bed to bed.

**Am'buli.** Indian aquatic herb, having sweet smell. Decoction is very bitter and an excellent febrifuge; taken in milk in cases of vertigo.

**Am'bulo** (to walk). Painful distention of the abdomen, which shifts about, due to flatulence.

**Am'bury.** Tumor containing blood; a term employed in veterinary medicine.

**Ambus'tial.** Caused by a burn.

**Ambus'tio, Ambus'tion,** or **Ambus'tum** (*ambi*, around, *uro*, to burn). Burn or scald; blister from a burn. **A. ex frig'ore,** frost-bite.

**Ambu'ya-em'bo.** Creeping aristolochia of Brazil, decoction of which is used in obstructions; also in fumigation and in baths as a tonic.

**Am'cher.** Antiscorbutic, employed in India; made from green mangoes.

**Ame'ba, Ame'bic.** See *Amœba*.

**Ame'leia** (carelessness). Apathy.

**Ame'li.** Malabar shrub; decoction of its leaves is used to relieve colic; its roots, boiled in oil, to repel tumors.

**Ame'lia** (*a*, priv., *melos*, member). Monstrosity characterized by partial or entire absence of limbs.

**Amelifica'tion.** The process of dental enamel formation.

**Amelin'** or **Ammelin'.** Cyanurdiamic acid.

**Amel'oblast.** An enamel-cell; a differentiated epithelial cell which builds up dental enamel.

**Amend'ment.** Decrease of severity of disease.

**Ame'nia** (*a*, priv., *men*, mouth). Amenorrhœa; emmenagogues.

**Amenoma'nia.** Amœomania.

**Amenorrhœ'a** (*a*, priv., *men*, month, *rheo*, to flow). Suppression of the menses. This suppression is commonly symptomatic, and hence chief attention must be paid to the cause. Usually there is an atonic state of the system generally, and hence chalybeates and other tonics are advisable. Two great varieties of amenorrhœa are commonly reckoned: 1. Retention of the menses when menses do not appear at the usual age. 2. Suppression, in which catamenia are obstructed in their regular periods of recurrence. This is the usual significance of the term. The menstrual blood may also be extravasated, but not evacuated. **A. diffic'ilis,** dysmenorrhœa. **A. emansio'nis,** retention of the menses. **A. hymen'ica,** a. due to imperforate hymen. **Ova'rian a.,** a. due to non-ovulation. **A. partia'lis,** dysmenorrhœa. **Prim'itive a.,** non-appearance of the menses at puberty. **A. suppressio'nis,** obstruction of the regular period of recurrence of the menses.

**Amenorrhœ'al.** Relating to amenorrhœa.

**A'mens** (*a*, priv., *mens*, mind). Insanity.

**A'ment.** An idiot.

**Amen'tia** (*a*, priv., *mens*, mind). Imbecility; dementia. **A. congen'ita,** idiotism. **A. ingen'ita,** idiotism. **A. microcephal'ica,** a. from deficiency of brain matter. **A. seni'lis,** dementia of the aged. **A. traumat'ica,** a. from injury.

**Amer'ican bal'sam.** Balsam of Peru. **A. hemp,** Cannabis sativa. **A. plague,** yellow fever. **A. sen'na,** Cassia marilandica.

**Ameris'tic** (*a*, priv., *meros*, part). Non-segmented; not divided into parts.

**Ametabol'ic** (*a*, priv., *metabole*, change). Not undergoing alteration, as of tissue in nutrition or secretion; not producing such change.

**Ame'tria** (*a*, priv., *metron*, measure). Intemperance. Absence of uterus (*a*, priv., *metra*, uterus).

**Ametrohæ'mia** (*a*, priv., *metra*, uterus, and *haima*, blood). Amenorrhœa; uterine anæmia.

**Ametrom'eter.** Instrument devised for measuring the degree of ametropia.

**A'metrope.** One affected with ametropia.

**Ametro'pia** (*a*, priv., *metron*, measure, *ops*, eye). Abnormal condition of the dioptric media of the eye, in which parallel rays of light are not exactly focused on the retina when the eye is at rest. It includes *myopia, presbyopia, hypermetropia*, and *astigmatism*, which see.

**Ametrop'ic.** Relating to ametropia.

**Amet'rous** (*a*, priv., *metra*, uterus). Without uterus.

**Amh.** Denotes mixed astigmatism with predominating myopia.

**Amianthinop'sy** (*a*, priv., *ianthinos*, violet, *ops*, eye). Blindness as to violet color.

**Amian'thium muscætox'icum.** Fly poison, fall poison; indigenous; narcotic poison.

**Ami'ci's disk** or **stri'a.** See *Krause's disk*.

**Amicro'bic.** Not connected with or dependent upon microbes.

**Amic'ulum** (*amicio*, to wrap around). Amnion.

**Am'ide.** By substituting for one or more atoms of hydrogen in ammonia ($NH_3$) one or more acid radicals, or combinations of them, we obtain a number of other substances; these are called *primary, secondary*, or *tertiary* amides, according as one, two, or three atoms of H have been replaced by the acid radical. The amides are electropositive. See *Amine*. Amide is also used as a synonym of amidogen, $NH_2$.

**Amidin'.** Starch changed by heat. **Insol'uble a.,** amylin. **Sol'uble a.,** amylodextrin. **Tegmen'tary a.,** amylin.

**Am'ido-.** A prefix denoting that the hydrogen in the substance has been replaced by amidogen, $NH_2$. **A.-ace'tic acid,** see *Glycin*. **A.-acephenetidin',** see *Phenocoll*. **A.-acid,** any acid containing the hypothetical radical $NH_2$. **A.-antipyrin',** when nitrous acid is added to antipyrin, isonitroso-antipyrin results, and this, when reduced, produces this substance. **A.-ben′zene,** anilin. **A.-ben′zol,** anilin. **A.-capro′ic acid,** leucin. **A.-cephalin′,** see *Cephalin.* **A.-cinnam′ic es′ters,** derivatives of cinnamic acid; they are anæsthetic and antiseptic. **A.-for′mic acid,** carbamic acid. **A.-gly′cerol,** a substance obtained by boiling sereain with dilute sulphuric acid. **A.-guai′acol,** result of the reduction of nitroguaiacol by zinc and muriatic acid, etc.; a coloring agent, also used medicinally like guaiacol. **A.-myelin′,** see *Myelin.* **A.-succin′amide,** asparagin. **A.-succin′ic acid,** aspartic acid. **A.-sulphopyru′ric acid,** cystin.

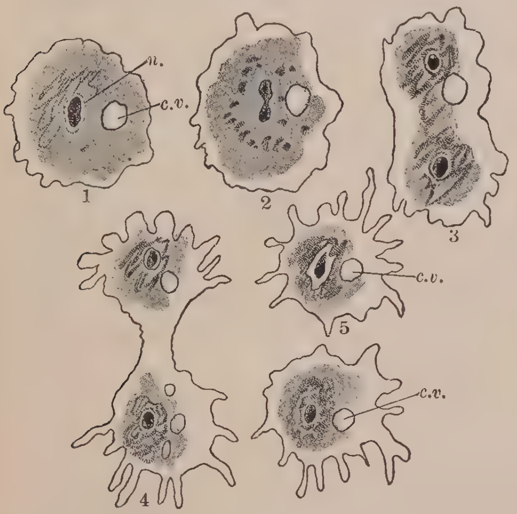
**Amid′ogen.** Hypothetical radical of ammonium, $NH_2$.

**Amidulin′.** Soluble starch.

**Amim′ia** (*a*, priv., *mimos*, gesture). Aphasia with want of power to employ signs or gestures. **Amne′sic a.,** ability to make gestures, but without appreciation of their meaning. **Atax′ic a.,** inability to make gestures of any kind.

**Am′ine.** A substance resulting from the substitution for one or more atoms of H in ammonia of a basic radical. The amines are electropositive. See *Amide.*

**Amito′sis** (*a*, priv., *mitos*, thread). Direct division of cells, without preliminary mitosis.



Amitosis, or direct cell division. *n.*, nucleus; *c.v.*, contractile vacuole; 1–5, successive stages of division of the amœba. (Hall.)

**Amitot′ic.** Relating to the direct division of cells.

**Amman′ia** or **Amman′ia vesicato′ria.** Herbaceous E. Indian plant, used for vesication.

**Am′melide.** $C_3H_4N_4O_2$. A white substance obtained by boiling melanin with acids or bases.

**Am′mi.** Bishop's weed. Genus of *Umbelliferæ.* Seeds are aromatic and pungent, carminative, diuretic, tonic, and stomachic. **A. beribe′ri,** ammi. **A. cicutæfo′lium,** ammi. **A. cop′ticum,** Carus ajowan. **A. ma′jus,** ammi. **A. ve′rum,** see *Sison ammi.* **A. visna′ga,** el kallah; variety of S. Europe, from which kellin is obtained; seeds in decoction are used in rheumatism and uric-acid calculi, the leaves for poultices, the fruit as an astringent lotion. **A. vulga′re,** ammi.

**Am′mism, Ammocho′sia,** or **Ammocho′sis** (*ammos*, sand, *cheo*, to pour). Putting the body in hot sand for the cure of disease.

**Ammonæ′mia.** Ammoniæmia.

**Ammo′nia.** $NH_3$. An alkaline gas, so called because obtained principally by decomposing sal ammoniac (chloride of ammonium) by lime. This gas is colorless, transparent, elastic, of pungent, characteristic odor, and acrid, urinous taste. It turns the syrup of violets green, and its specific gravity is 0.589. When inhaled, largely diluted with common air, it is a powerful irritant; when unmixed it instantly induces suffocation. It is soluble in water or alcohol. The Ph. U. S. preparations are: *Aqua ammoniæ*, dose, ♏v–xxx (0.3–2.0), and *aqua ammoniæ fortior*, not used internally; *linamentum ammoniæ*, used locally as a counterirritant; *spiritus ammoniæ*, dose, ♏x–ʒj (0.65–4.0); and *spiritus ammoniæ aromaticus*, dose, ♏x–ʒj (0.65–4.0).

**Ammo′niac.** Relating to ammonia; ammoniacal. **Gum a.,** *ammoniacum* (Ph. U. S. and Br.), from the temple of Ammon, in Lybia, from near which it was originally brought. A gum resin, concrete juice of Dorema ammoniacum of Persia; also gum resin of Ferula tingitana. The latter is the ammoniacum of commerce. It is in irregular, dry masses, yellow externally, whitish within; its odor is peculiar and not ungrateful; taste nauseous, sweet, and bitter. It forms a white emulsion with water; is soluble in vinegar, partially so in alcohol, ether, and solutions of the alkalies. It is expectorant, antispasmodic, discutient, and resolvent; used also in the formation of certain plasters. Dose, gr. x–xxx (0.65–2.0), in emulsion. **A. mix′ture,** mistura ammoniaci. **A. plas′ter,** emplastrum ammoniaci. **Sal a.,** ammonii chloridum.

**Ammoni′acal.** Ammoniac; relating to ammonia. **A. amal′gam,** substance resulting from subjecting a salt of ammonia to galvanism in contact with mercury. **A. fermenta′tion,** decomposition of urine resulting in the formation of ammonia. **A. gas,** ammonia. **A. salt,** a combination of ammonia and an acid without the substitution of hydrogen, as in ordinary salts. **A. u′rine,** urine which is undergoing ammoniacal fermentation.

**Ammoni′acum** (Ph. U. S. and Br.). See *Ammoniac.*

**Ammo′niæ ace′tas, A. ben′zoas,** etc. See *Ammonii acetas, Ammonii benzoas,* etc.

**Ammoniæ′mia** (*ammonia* + *haima*, blood). Condition of the blood in which it contains an excess of ammonia — a grave disease, usually dependent on retention or extravasation of urine. Sometimes uræmia coexists with it.

**Ammo′niated.** Containing or combined with ammonia, as ammoniated copper, etc.

**Ammo′nii ace′tas.** Ammonium acetate; diaphoretic. Dose of the solution, formerly called *spiritus Mindereri*, ʒj–℥j (4.0–32.0). **A. arse′nas,** ammonium arsenate. **A. ben′zoas** (Ph. U. S.), ammonium benzoate, has been prescribed for the removal of gouty deposits of sodium urate in the joints; it is regarded as a good diuretic; dose, gr. x–xxx (0.65–2.0). **A. bicarbo′nas,** ammonium bicarbonate, has the same properties as the carbonate, and is more palatable; dose, gr. v–xx (0.3–1.3). **A. bibo′ras** and **A. bo′ras,** ammonium biborate and ammonium borate, made by dissolving boracic acid in heated water of ammonia; used in renal colic, catarrh of the bladder, phthisis, etc. **A. bro′midum** (Ph. U. S.), ammonium bromide; white, granular salt, becoming yellow on exposure, prepared by acting on bromide of iron with water of ammonia; its medical effects are similar to those of bromide of potassium; dose, gr. x–ʒj (0.65–4.0); see *Bromides.* **A. cam′phoras,** ammonium camphorate, occurs in white, soluble crystals; employed as a nerve sedative in doses of gr. ij–iv (0.13–0.26). **A. car′bamas,** ammonium carbamate, formed by the action of carbon dioxide on gaseous ammonia. **A. carbo′nas,** (Ph. U. S.), ammonium carbonate, salt of bones, salt of wood-soot, salt of urine, volatile sal ammoniac, baker's salt, concrete or mild, volatile alkali, sal volatile, smelling salt. A white, striated, crystalline mass; odor and taste pungent and ammoniacal; soluble in two parts of water; insoluble in alcohol; effloresces in the air. It is stimulant, antacid, diaphoretic, expectorant, and antispasmodic. Dose, gr. ij–x (0.13–0.65), in plenty of water. Ammonium carbonate is at times used to form stimulating effervescing draughts with lemon juice, crystallized tartaric acid, and crystallized citric acid. Ammonium carbonate is the usual smelling salts. When a few drops of aqua ammoniæ fortior are added to it coarsely powdered, and some volatile oil, it forms Preston salts. **A. chlo′ridum** (Ph. U. S.), muriate of ammonia, ammonium chloride, sal ammoniac, a saline formed by the combination of muriatic acid with ammonia. It is also prepared, in great quantities, by adding sulphuric acid to the volatile alkali obtained from soot, bones, etc., mixing this with common salt, and subliming. Ammonium chloride is inodorous, but has an acrid, pungent, bitterish, and urinous taste. Three parts of cold water dissolve one; it is soluble also in 4.5 parts of alcohol. It is aperient, diuretic, tonic, and resolvent. Dose, gr. v–xv (0.3–1.0). Externally it is employed, producing cold during its solution, in inflammations, etc. It is also inhaled in chronic catarrh. *Ammonii chloridum purificatum*, purified ammonium chloride, is made by dissolving chloride of ammonium in water by the aid of heat, adding water of ammonia, filtering, and evaporating. **A. cit′ras**, ammonium citrate; made by saturating lemon or lime juice, or a solution of citric acid, with carbonate of ammonium. It may also be made extemporaneously and taken in an effervescent state. **A. cy′anas**, ammonium cyanate, a crystalline substance, isomeric with urea. **A. embel′as**, ammonium embelate, $C_9H_{13}O_2NH_4$, salt of an acid derived from Embelia ribes; an efficient tæniafuge in doses of gr. ij–x (0.13–0.65). **A. fluor′idum**, ammonium fluoride, has been used as an antipyretic and locally in splenomegaly. **A. for′mas**, ammonium formate, has been recommended as a nerve tonic. **A. glycyrrhi′zas**, ammonium glycyrrhizate; used to mask the taste of quinine in solution. **A. hydri′odas**, ammonium iodide. **A. hydrochlo′ras**, ammonium chloride. **A. hydrosul′phas** or **hydrosulphure′tum**, ammonium sulphide, formerly given in the form of *liquor fumans Boylii*. **A. ich′thyolosul′phonas**, ichthyol. **A. io′didum** or **iodure′tum** (Ph. U. S.), ammonium iodide, a white, crystalline powder, becoming yellowish on exposure; deliquescent. This salt is formed by mixing potassium iodide and ammonium sulphate, adding boiling distilled water, and, after cooling, alcohol, mixing them well, passing them through a cold funnel, and pouring on the salt a mixture of alcohol and water, and evaporating. Internally its effects are similar to those of iodide of potassium; dose, gr. i–iij (0.06–0.18). It is applied in the form of ointment in lepra, psoriasis, etc. **A. ni′tras** (Ph. U. S.), ammonium nitrate, a deliquescent salt, occurring usually in fused masses or long, colorless crystals; used in the manufacture of nitrogen monoxide gas. **A. nitrosul′phas**, ammonium nitrosulphate, a salt formed by passing nitric oxide through a solution of ammonium sulphate; has been used in typhoid fever. **A. phos′phas**, ammonium phosphoricum, ammonium phosphate. This salt has been recommended as an excitant, diaphoretic, and discutient, and also as a remedy for gout and rheumatism, as a solvent of uric-acid calculus, and for diseases, acute and chronic, connected directly with the so-called uric-acid diathesis. Dose, gr. x–xl (0.65–2.6). **A. pi′cras**, ammonium picrate, an explosive yellow salt, antiperiodic, prepared by evaporating a solution of picric acid containing a slight excess of ammonia; dose, gr. ¼ (0.015). **A. sal′icylas**, ammonium salicylate, a salt having similar properties to salicylates, prepared by the evaporation of a neutralized solution of salicylic acid and ammonia; dose, gr. ij–x (0.13–0.65). **A. sul′phas**, ammonium sulphate, formed by adding sulphuric acid either to sal ammoniac or to ammoniacal liquor; its properties are like those of ammonium chloride. **A. sulpho-ichthyol′as**, ichthyol. **A. sulphure′tum**, ammonium sulphide, a salt of very fetid odor, nauseous and styptic taste, and dark yellowish-green color. It is reputed to be sedative, nauseating, and emetic, and has been given in diabetes and diseases of increased excitement, in the preparation called *liquor fumans Boylii*. **A. tart′ras**, ammonium tartrate, diaphoretic and diuretic, but not much used. **A. u′ras**, ammonium urate, a white powder which has been given in tuberculosis in doses of gr. ss–v (0.03–0.3); it has also been used externally in skin diseases. **A. valeria′nas** (Ph. U. S.), ammonium valerianate, a salt obtained by causing gaseous ammonia, disengaged from ammonium chloride by lime, to pass into valerianic acid until the latter is neutralized, and crystallizing. It occurs in crystalline plates; is used like valerian, valerianic acid, and the other valerianates, in neuropathic affections. Dose, gr. x–xv (0.65–1.0).

**Ammonio-.** A prefix signifying ammoniated.

**Ammo′nium.** $NH_4$. The assumed radical of ammonia, never yet isolated in a free state. The various salts are given under *Ammonii*.

**Ammoniu′ret.** Term applied to supposed compounds of ammonia with metallic oxide.

**Ammoniu′ria.** Presence of ammonia in excessive amount in the urine.

**Am′monol.** A coal-tar antipyretic, analgesic and antiseptic, ammoniophenylacetamide; dose, gr. v–x (0.3–0.65). **A. sal′icylate**, used like the preceding, in the same dose.

**Ammother′apy** (*ammos*, sand, *therapeuo*, to cure). Treatment of disease by sand baths.

**Amnemon′ic** (*a*, priv., *mnemonikos*, pertaining to memory). Amnesic.

**Amnemos′yne** (*a*, priv., *mnemosyne*, memory). Amnesia.

**Amne′sia** (Gr., forgetfulness). Loss of memory; symptom in many diseases. **A. acus′tica**, loss of memory of spoken words; word-deafness; mind-deafness. **Au′ditory a.**, a. acustica. **A. olfacto′ria**, loss of memory of smell. **A. op′tica**, loss of memory of things seen, due to cause seated in the visual centres of the brain. **A. seni′lis**, loss of memory of old people. **A. temulen′tia**, a. due to alcoholism. **A. traumat′ica**, a. from injury. **Ver′bal a.**, loss of memory of words. **Vis′ual a.**, word-blindness; mind-blindness.

**Amne′sic.** Relating to or affected with amnesia. **A. apha′sia**, see *Aphasia*.

**Am′nial** or **Am′nic.** Amniotic. **A. acid**, amniotic acid.

**Amnii′tis.** Amnitis.

**Amniocho′rial.** Relating to both amnion and chorion.

**Amnioclep′sis** (*amnion* + *klepto*, to steal). Premature escape of liquor amnii.

**Am′nion.** Innermost enveloping membrane of the fœtus, thin and transparent; its inner layer is derived from the epiblast, outer layer from the mesoblast. Its external surface is united to the chorion by areolar and vascular filaments. Its polished inner surface is in contact with the fœtus and liquor amnii. **Drop′sy of the a.**, hydramnion. **False a.**, outer layer of the primary amnion lining the internal surface of the original vitelline membrane; it becomes absorbed later. Membrane in birds similar to the chorion in higher animals. **True a.**, inner layer of the amnion.

**Amniona′ta.** Amniota.

**Amnion′ic.** Amniotic.

**Amniorrhœ′a** (*amnion* + *rheo*, to flow). Discharge of liquor amnii.

**Amnio′ta.** Animals having an amnion, as reptiles, birds, and mammalia.

**Amniot′ic.** Relating or appertaining to the amnion. **A. acid**, peculiar acid in liquor amnii of cow. **A. cav′ity**, space over back of embryo, containing a clear fluid, the liquor amnii. **A. fluid**, serous fluid between amnion and fœtus. **A. fold**, blastodermic fold around the embryo, associated with growth of the amnion and with after-separation of the amnion and chorion. **A. sac**, amnion.

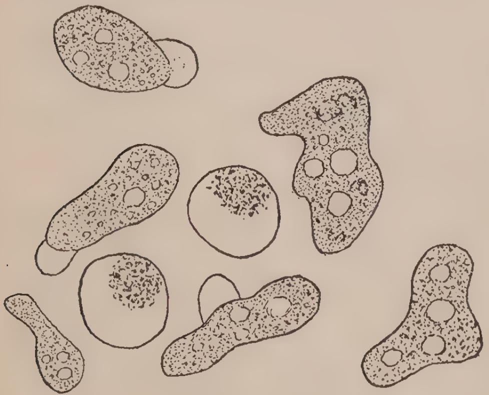
**Amnioti′tis.** Inflammation of the amnion.

**Am′niotome** (*amnion* + *tome*, incision). Instrument for puncturing the membranes in labor.

**Amni′tis.** Inflammation of the amnion.

**Amock′.** Running amok or amuck; an acute, homicidal mania, occurring among Malays, in which the subject runs wild, striking with a knife any one who crosses his path; after the attack is over no recollection of it remains in the subject's mind.

**Amœ′ba** (*amoibe*, change). Rhizopodion, a small mass of structureless protoplasm, with or without a distinct cell wall, capable of protruding and retracting short, blunt processes, called pseudopodia. Those with cell wall are the *Testacea*, those without cell wall the *Nuda;* the parasitic forms are found in the latter suborder. **A. bucca′lis,** species of amœba found in deposit on the teeth or in the cavity of the mouth. **A. co′li,** species seen in dysenteric dejections, in simple diarrhœa, and also at times in the stools in health. **A. denta′lis,** A. buccalis. **A. dysenter′iæ,** a. found in dysentery. **A. fe′lis,** A. dysenteriæ. **A. intesti′ni vulga′ris,** A. coli, nonpathogenic a. found in the intestine in apparently healthy persons. **A. mala′riæ,** Plasmodium malariæ. **A. meleag′ridis,** form of a. causing dysentery of turkeys, and also found in maxillary osteomyelitis. **A. mi′tis,** a. found in the intestine in some forms of simple diarrhœa, but apparently different from A. dysenteriæ. **A. urogenita′lis,** species noticed in urinary and vaginal secretions.



Amœba coli.

**Amœ′bic.** Relating to amœbæ, as amœbic dysentery.

**Amœ′bicide.** Having power to destroy amœbæ; applied to remedies employed with this object.

**Amœ′boid, Amœ′biform,** or **Amœ′bal.** Term applied to minute protoplasmic cells having spontaneous movements similar to those of the amœba, as pus cells, white corpuscles, etc.

**Amœbosporid′ium.** Name given to a supposed parasite of cancerous growths.

**Amœbu′ria.** Condition in which amœbæ, probably A. coli, are found in the urine.

**Amœnoma′nia** (*amœnus*, agreeable + *mania*). Insanity with hallucinations of a pleasing character.

**Amok′.** Amock.

**Amo′mum.** Genus of plants, ord. *Scitamineæ.* **A. alpin′ia,** species of Guiana and West Indies; root is used externally for ulcers and cancers. **A. ama′rum,** Chinese species; aromatic. **A. aromat′icum,** source of Bengal cardamom. **A. cardamo′mum,** Elettaria repens, lesser, true, or official cardamom, ord. *Zingiberaceæ.* The fruit, cardamomum (Ph. U. S.), of this plant of E. Indies, Java, and Sumatra has an agreeable, aromatic odor and pungent, grateful taste. It is carminative and stomachic, but chiefly used to give warmth to other remedies. Dose, gr. v–xx (0.3–1.3). Cluster or round cardamom of Sumatra, Java, etc., yields round cardamom, Cardamomum rotundum, of the shops. **A. compac′tum** or **dioscor′idis,** Elettaria cardamomum. **A. globo′sum,** Chinese variety, from which round Chinese cardamom is obtained; used for nausea, diarrhœa, and enteralgia. **A. gra′na paradi′si,** greater cardamom seeds, grains of paradise, resemble cardamomum in properties; they are extremely hot. **A. max′imum,** great-winged amomum, yields fruit known as Java or Nepal cardamoms, Bengal cardamoms, etc. **A. melegue′ta** or **meleguet′ta,** variety of W. Africa; seeds are known as meleguetta pepper. **A. monta′num,** see *Cassumuniar.* **A. pimen′ta,** see *Myrtus pimenta.* **A. racemo′sum,** cardamom seeds arranged in native clusters. **A. re′pens,** Elettaria cardamomum. **A. subula′tum,** grows in India; source of winged Bengal cardamom. **A. sylves′tre,** see *Cassumuniar.* **A. ve′rum,** A. cardamomum. **A. villo′sum,** Chinese and E. Indian variety; stomachic. **A. xanthoi′des,** indigenous in Siam; bastard cardamom is derived from it. **A. zerum′bet,** see *Cassumuniar.* **A. zin′giber,** ginger, black and white ginger, zingiber (Ph. U. S.), are all the rhizome of same plant, Zingiber officinale, the difference depending upon the mode of preparing them. Odor of ginger is aromatic; taste warm, aromatic, and acrid. It yields its virtues to alcohol and in a great degree to water; it is carminative, stimulant, and sialagogue; dose, gr. x–xxx (0.65–2.0). Preserved ginger is a condiment, with all the virtues of ginger.

**A′mor.** Love. **A. insa′nus,** erotomania. **A. ven′eris,** erotomania.

**Amoro′sus mus′culus.** Obliquus superior oculi.

**Amor′pha** (*a*, priv., *morphe*, form). Eruption on skin having no definite appearance; macula; intertrigo. Diseases which have no definite pathological condition. **A. frutico′sa,** bastard indigo of southern coast of U. S.; root used for toothache. **A. vulga′ris,** intertrigo.

**Amor′phia** or **Amor′phism.** Deformity; shapelessness; not having crystalline formation.

**Amorphophal′lus.** Genus of *Araceæ*, several species of which are used in medicine, chiefly in E. Indies.

**Amor′phous** (*a*, priv., *morphe*, form). Without form or crystalline condition; without definite form, as a monstrosity. **A. phos′phorus,** see *Phosphorus.* **A. quinine′,** see *Quinine.*

**Amor′phus.** A monster without definite shape.

**Amo′tio.** Separation or detachment. **A. ret′inæ,** detachment of the retina.

**Am′pac.** E. Indian tree, leaves of which are detergent. Odoriferous resin is obtained from it.

**Ampelodes′mos te′nax.** This plant of Algeria, Sicily, and Italy yields a variety of ergot.

**Ampeloleu′ce.** Bryonia alba.

**Ampelopsin′.** An extract of the bark and twigs of the Virginia creeper; tonic and expectorant in doses of gr. ij–iv (0.13–0.26).

**Ampelop′sis** (*ampelos*, grape, *opsis*, appearance). Genus of plants, ord. *Vitaceæ.* **A. bot′ryta,** diuretic root of S. African species. **A. quinquefo′lia,** Virginia creeper, American ivy, five-leaved ivy, woody climber; indigenous climbing plant; bark and twigs are used in dropsy; they are also expectorant; dose of fluid extract, ʒss–j (2.0–4.0).

**Am′pelos.** Vine; Vitis vinifera. **A. ag′ria,** Bryonia alba. **A. idæ′a,** Vaccinium vitis idæa. **A. melæ′na,** Tamus communis. **A. oinoph′orus,** Vitis vinifera.

**Ampelother′apy** (*ampelos*, grape, *therapeuo*, to cure). Grape cure.

**Amper′age.** Strength of the electrical current expressed in ampères.

**Ampère,** ahm-pair′ (French scientist). Unit of strength of the electrical current; it is that afforded by a force of one volt against the resistance of one ohm.

**Ampèremeter** (ahm-pair′me-ter). An instrument for determining the number of ampères in an electrical current.

**Amphamphot′erodiop′sia** or **Amphamphoterodiplo′pia** (*amphi*, about, *amphoteros*, on both sides, *diploos*, double, *ops*, sight). Condition of vision in which objects are seen double with each eye.

**Amphemer′ina.** An old term for quotidian intermittent, or hectic fever. **A. arthrit′ica, A. bilio′sa, A. cardi′aca, A. dysenter′ica, A. lith′ica, A.**

**paludo'sa, A. singultuo'sa**, etc., were terms used to indicate the existence of joint symptoms, bilious complications, heart symptoms, dysentery, calculous affections, swamp fever, hiccough, etc., with the quotidian type of fever. **A. hunga'rica**, fever resembling typhus, seen in Hungary. **A. tussiculo'sa**, whooping-cough.

**Amphiarthro'dial.** Relating to amphiarthrosis.

**Amphiarthro'sis** (*amphi*, on both sides, *arthrosis*, articulation). Mixed articulation in which corresponding surfaces of bones are united in an intimate manner by an intermediate body, allowing but slight motion; such as junction of bodies of vertebræ by means of intervertebral cartilages; also joint without fibrous tissue between the surfaces, ligaments regulating the motion.

**Amphias'ter** (*amphi*, about, *aster*, star). Period during indirect division of the nucleus, when there occurs a double star-like distribution of protoplasm around the spindle of the nucleus. (See cut under *Mitosis*.)

**Amphib'ia** (*amphi*, both, *bios*, life). Animals capable of living on land and in water, as frogs. Such animals are said to be *amphib'ious*.

**Amphiblas'tic** (*amphi*, on both sides, *blastos*, germ). Term applied to segmentation of the ovum, cells of various sizes resulting.

**Amphiblas'tula.** A developing ovum in the postmorular stage, with segments of different sizes. See *Blastula* and *Amphimonerula*.

**Amphibles'trocarcino'ma.** Cancer of the retina.

**Amphiblestrodapoplex'ia.** Apoplexy of the retina or retinal hemorrhage.

**Amphiblestrodatro'phia.** Atrophy of the retina.

**Amphibles'troid.** Reticular; like the retina. **A. mem'brane**, retina.

**Amphiblestroidi'tis** (*amphiblestron*, covering or net, *eidos*, resemblance, + *itis*). Inflammation of the retina.

**Amphiblestroidomala'cia** or **Amphiblestromala'cia** (*amphiblestroides*, retina, *malakia*, softening). Softening of the retina.

**Amphibo'lia.** Amphibolic period.

**Amphibol'ic** or **Amphib'olous** (*amphibolos*, doubtful). Hesitating or irregular, as applied to certain stages of fever; also doubtful, as *amphibolic period*, the critical period of a disease when the prognosis is doubtful.

**Amphibran'chia.** Tonsils and pharynx.

**Amphicœ'lous** (*amphi*, on both sides, *koilos*, hollow). Concave on both sides, as a vertebra.

**Amphicra'nia** (*amphi*, on both sides, *kranion*, skull). Headache on both sides; antithesis to hemicrania.

**Amphicreatin'.** Amphikreatin.

**Amphicreatinin'.** Amphikreatinin.

**Amphicyt'ula.** A developing ovum in the premorular stage, with segments of unequal size. See *Cytula* and *Amphimonerula*.

**Amphides'mous** (*amphi*, on both sides, *desmos*, ligament). Having a double ligament.

**Amphid'eum** (*amphi*, on both sides, *deo*, to bind). Outermost margin of the cervix uteri; labium uteri.

**Amphidex'ius** (*amphi*, both, *dexios*, right). Ambidextrous.

**Amphidiarthro'sis** (*amphi*, on both sides, *diarthrosis*, movable joint). Articulation that partakes both of ginglymus and arthrodia, as the temporomaxillary articulation.

**Amphidiplo'pia.** Double vision with each eye.

**Amphies'ma cor'dis.** Pericardium.

**Amphigas'trula.** The developing ovum in an early (gastrula) stage, with segments of unequal size. See *Gastrula* and *Amphimonerula*.

**Amphigo'nia** or **Amphig'ony** (*amphi*, on both sides, *gone*, generation). Sexual generation.

**Amphikreatin'.** $C_9H_{19}N_7O_4$. Leucomain of the kreatinin group, and resembling kreatin in properties.

**Amphikreatinin'.** A leucomain from muscle, resembling kreatin.

**Amphimer'ina.** Amphemerina.

**Amphimer'inos** or **Amphimer'inus.** Quotidian.

**Amphimet'rion** or **Amphimet'rium** (*amphi*, around, *metra*, uterus). Parts in proximity to the uterus.

**Amphimicro'bia** (*amphi*, on both sides). Microbes that can be developed in media in which oxygen is either present or absent.

**Amphimix'is** (*amphi*, on both sides, *mixis*, mixture). The union of the two elements in reproduction.

**Amphimoner'ula.** The human ovum in an early (monerula) stage of development. The successive stages resulting from unequal segmentation are amphimonerula, amphicytula, amphimorula, amphiblastula, and amphigastrula. See *Monerula*.

**Amphimor'ula.** The developing ovum in a stage in which it consists of a mulberry-like mass of cleavage cells of unequal size. See *Morula* and *Amphimonerula*.

**Am'phiont** (*amphi*, on both sides, *on*, being). Form of malarial parasite produced by sexual generation.

**Amphipha'gia** (*phago*, to eat). Ability to eat various kinds of food.

**Am'phiplex.** Perineum.

**Amphipyrenin'.** Material composing the nuclear membrane.

**Amphisbæ'næ** (*amphisbaina*, a fabled serpent). Serpentine, a term applied to the venæ amphisbænæ, veins of the abdomen passing between the uterus and the mammæ.

**Amphis'celous** (*amphi*, on both sides, *skelos*, leg). Capable of using both lower limbs.

**Amphisphal'sis** (*amphi*, on both sides, *sphallo*, to wander). Movement of circumduction used in reducing luxations.

**Amphis'tomous.** Possessing a cup at each end; term applied to amphistoma.

**Amphis'tomum** (*amphi*, on both sides, *stoma*, mouth, double mouth). A genus of trematode parasitic worms infesting the intestinal tract of mammals. **A. hom'inis**, an occasional parasite of man.

**Amphithe'atre.** Semicircular room for lectures and operations in colleges or hospitals.

**Amphit'richous.** Term applied to bacteria having a flagellum at each end.

**Amphodon'ta** (*amphi*, on both sides, *odous*, tooth). Animals having teeth in both jaws.

**Amphopep'tone.** A mixture of the antipeptone and hypothetical hemipeptone formed during peptic digestion.

**Amphophil'ic** or **Amphoph'ilous** (*amphi*, both, *phileo*, to love). That which takes both acid and basic stains.

**Amphor'ic** (*amphora*, a bottle). Resembling the sound made by blowing across the mouth of an empty bottle or that elicited on tapping an empty, nearly closed vessel. **A. breath'ing**, a. respiration. **A. bub'ble**, sound resembling that of air forcing itself into a bottle as fluid is being poured out, sometimes heard in hydropneumothorax. **A. ech'o**, a. voice. **A. percus'sion**, a. resonance. **A. res'onance**, hollow, musical, reverberating sound elicited by percussion over a cavity. **A. respira'tion**, in auscultation resembling the sound made by blowing over the orifice of a bottle. **A. voice**, hollow, musical voice sounds heard in auscultation, as if one were speaking across the open mouth of an empty bottle. **A. whis'per**, a whispering sound of the same quality as the amphoric voice sound.

**Amphoter'ic** or **Amphot'erous** (*amphoteros*, both). Neither acid nor alkaline; glucose, for example. Both acid and alkaline in reaction, as the urine at times.

**Amphoterodiop'sia** or **Amphoterodiplo'pia** (*amphoteros*, on both sides). Double vision of both eyes. See *Diplopia*.

**Amplexa'tio** (*amplecto*, to interweave). Coition.

**Amplexa'tion.** Method used in treating a fractured clavicle by means of a bandage or plaster.

**Amplex′us.** Coition.

**Amplia′tion** (*amplus*, full). Enlargement by distention or dilatation.

**Amplifica′tion** (*amplus*, large, *facio*, to make). Morbid extension or enlargement. In microscopy, enlargement of the area of vision.

**Amplio′pia.** Partial loss or dimness of vision.

**Am′plitude.** Fulness, as of the pulse, of dimension, etc. **A. of accommoda′tion,** the entire range of the accommodative function of the eye exercised in looking at the farthest point and the nearest point of distinct vision.

**Ampo′sis.** Absorption or disappearance of fluid in the body.

**Ampul′la,** pl. ampullæ (bottle). Flask-like dilatation of a canal. Blister. Embryonic state of the heart, brain, and liver. In pharmacy, a receiver. **Bry′ant's a.,** distention, apparent or real, of an artery above the seat of a ligature. **A. canalic′uli lacryma′lis,** enlarged portion of the lacrymal canal. **A. chylif′era** or **chy′li,** receptaculum chyli. **A. duc′tûs lactif′eri,** expansion of the milk duct near its termination in the nipple. **A. of Fallo′pian tube,** external half of that tube. **Hen′le's a.,** a. of vas deferens. **A. lactif′era,** a. ductus lactiferi. **Lie′berkühn's a.,** blind extremity of lactiferous vessel in intestinal villus. **A. of mam′mary gland,** a. lactifera. **A. of op′tic nerve,** enlargement around the anterior part of that nerve. **A. os′sea,** pyriform expansion at the end of each semicircular canal. **A. of rec′tum,** dilated portion of the rectum near its termination. **A. of semicir′cular canals′,** elliptical enlargement at the termination of each of the semicircular canals; cavitas elliptica. **A. of vagi′na,** upper part of that canal. **A. of vas def′erens,** expansion in the vicinity of the seminal vesicle before its termination in the ejaculatory duct **A. of Va′ter,** ampulla formed by the orifice of the pancreatic duct in the duodenum.

**Ampulla′ceous.** Dilated or swollen; having full abdomen; bullar.

**Ampull′ula** (dim. of ampulla). Lymphatic sac at end of intestinal villus.

**Am′putate** (*amputo*, to cut off). To cut off a limb or portion of a limb, or any prominent or important part, as breast, penis, uterus, uvula, etc.

**Amputa′tio** (*amputo*, to cut off). Amputation. **A. vo′cis,** aphonia.

**Amputa′tion.** Operation of separating, by means of a cutting instrument, a limb or part of a limb or projecting part, as the mamma, penis, etc., from the rest of the body. In case of a tumor the term excision, removal, or extirpation is more commonly used. **Alonette's′ a.,** a. at hip-joint by a semicircular outer flap to trochanter major and internal flap from within outward. **Bau′dens's a.,** a. of knee by oval flaps, the knee-joint being disarticulated by an elliptical incision. **Béclard's′ a.,** a. of the hip by transfixion, the posterior flap being made first. **Ber′ger's a.,** the best form of amputation by interscapulothoracic method, there being two flaps, one antero-inferior or pectoro-axillary, the other posterosuperior or cervicoscapular. **Blood′less a.,** a. with little or no loss of blood, as by the use of the Esmarch bandage. **Car′den's a.,** a. including skin flap and circular division of muscle; combination, therefore, of circular and flap operations. **Car′pal a.,** a. of the hand through carpus. **Carpora′dial a.,** a. at the wrist-joint. **Cen′tral a.,** a. leaving cicatrix in centre of the stump. **Cho′part's a.,** operation called after Chopart, French surgeon, consisting in removing the foot in cases of caries or injury of the metatarsal, cuneiform, cuboid, and scaphoid bones, so as to leave merely the astragalus and calcaneum, the principal flap being obtained from the sole of the foot. **Cir′cular a.,** that in which the integuments and muscles are divided circularly, without leaving separate flaps. In circular skin-flap amputation the skin is divided by a circular incision and dissected back to point at which circular division of the soft parts is to be made. **Coat-sleeve a.,** form of circular amputation having external covering long and puckered together with tape to avoid stitches. **Congen′ital a.,** a. which has occurred during fœtal life. **Consec′utive a.,** a., performed even later than secondary a., as in cases of abscess. **A. in contigu′ity,** a. at an articulation. **A. in continu′ity,** a. at any point other than an articulation. **Cox′ofem′oral a.,** a. at the hip-joint. **Cuta′neous a.,** a. in which flaps are made of cutaneous tissue, see *Circular a.* **Diclas′tic a.,** operation comprising forcible fracture of the bone and amputation with the écraseur. **Doub′le-flap a.,** a. with two flaps. **Dry a.,** bloodless a. **Dubreuil's′ a.,** external flap amputation at the wrist-joint, providing a substantial covering for the bones. **Du′puytren's a.,** a form of a. at the shoulder-joint in which two rounded flaps are made from the external and internal parts of the arm; the former by transfixion with a narrow-bladed knife at the back part, two inches behind acromion process; the humerus being then disarticulated, an inner flap is made by an incision from within outward. **Duval's′ a.,** supramalleolar amputation by oblique elliptical incision. **Eccen′tric a.,** a. leaving cicatrix out of central part of stump. **Ellip′tical a.,** a. in which flap and wound are both rounded, so as to have an elliptical appearance. **Farabeuf's′ a.,** a. at the elbow-joint by anterior elliptical method; a. of the great toe by internal plantar flap method; subastragaloid amputation by a large internal and plantar flap; also amputation of the foot by same method; amputation of the leg by a large external flap. **Fer′gusson's a.,** Pirogoff's a., modified so as to retain the malleoli, the calcaneum being brought between them. **Flap a.,** a. leaving one or two flaps to cover stump when limb has been removed. **Flap′less a.,** when amount of soft parts is not enough to cover the bone, and the parts must heal by granulation. **Forbes's a.,** Chopart's a. modified by separating cuneiform bones from scaphoid and sawing through cuboid. **Gal′vanocaustic a.,** slow a. of the soft parts by galvanocautery wire and sawing of the bone. **Grit′ti's a.,** a. at the knee-joint by bringing the prepared surfaces of the patella and femur into apposition, the patella being retained in anterior flap. **Guérin's′ a.,** a. at elbow-joint by single external flap. **Guth′rie's a.,** Béclard's hip-joint a., modified by cutting flap from without inward; operation by oval method for amputation at neck of humerus. **Guyon's′ a.,** supramalleolar amputation by oblique elliptical incision. **Han′cock's a.,** modification of subastragaloid, tuberosity of os calcis being saved and turned up to be united to lower surface of astragalus, from which slice of bone is taken. **Hey's a.,** a. of leg by large posterior flap, see *Lisfranc's a.* **Imme′diate a.,** a. made within a few hours after injury. **Interme′diary** or **interme′diate a.,** mediate a. **Interscap′ulothoracic a.,** operation involving removal of the upper limb, together with the scapula and outer two-thirds of the clavicle, without disarticulation at the shoulder-joint; see *Berger's a.* **Intradeltoid′ean a.,** French operation, in which the bone is sawn through between the tuberosities of the humerus and the insertions of the pectoralis major and latissimus dorsi. **Intrapyret′ic a.,** mediate a. **Intra-u′terine a.,** spontaneous a., congenital a., occurring during fœtal life from constriction of the umbilical cord or other pressure. **Joint a.,** a. when the limb is removed at an articulation. **Jor′dan's a.,** a. at hip-joint, the bone being first enucleated and the limb cut through at any desired point. **Lane's a.,** a. by disarticulation at the knee-joint. **Lang′enbeck's a.,** a. by cutting double flaps from without inward. **Lar′rey's a.,** a. at shoulder-joint, incision being made downward from acromion process, and spiral incisions at front and back of arm, meeting on interior part. **Lee's a.,** Teale's a., modified by taking long flap from back part of leg. **Le Fort's a.,** Pirogoff's a., modified by dividing upper portion of os calcis from point of insertion of tendo Achillis, so as to give a larger mass for the heel to rest upon. **Lenoir's′ a.,** modified circular supramalleolar a. **Lis′franc's a.**, a. of foot by disarticulation of metatarsal bones from tarsal; Hey's a. differs from this by saving as much of metatarsal bones as disease or injury will allow. Also a. at shoulder-joint, the flaps being made by transfixion, the head of the humerus disarticulated, and the internal flap made from within outward. **Lis′ter's a.**, modification of Teale's double rectangular flap a., the anterior flap not being as much longer than the posterior as in that a. **Lowd′ham's a.**, method of a. by single flap. **Ma′jor a.**, a. of large or important limbs or at important joints. **Malgaigne's′ a.**, a. of foot, leaving only astragalus; a form of oval a., having one longitudinal incision proceeding from the spiral incisions below; a. of the arm by a single rounded flap, usually from the flexor surface. **Me′diate a.**, a. performed after the subsidence of the shock and before the occurrence of suppuration; also called intermediary a. **Mediotar′sal a.**, Chopart's a. **Mi′nor a.**, one not involving important structures, as a. at ends of fingers or toes. **Mixed a.**, Carden's a. **Mul′tiple a.**, a. performed several times on one person. **Musculocuta′neous a.**, one in which the flap is made up of both skin and muscular tissue. **Nat′ural a.**, spontaneous a. **A. neuro′ma**, see *Neuroma*. **Oblique′** or **o′val a.**, a. made in such way as to present oval appearance of wound, flap of one side being received into space on opposite side made by special incisions. **Osteoplas′tic a.**, a. in which osseous surfaces are retained in apposition, see *Pirogoff's a.* **Pan′coast's a.**, a. at the knee-joint; anteriorly a short, oval flap in which the patella is retained, and two flaps laterally and posteriorly, meeting about the centre of the popliteal space. **Pannic′ulate a.**, flap a. **Par′tial a.**, a. of part of a limb or bone. **Patholog′ical a.**, a. performed on account of disease. **Per′rin's a.**, oval operation in subastragaloid amputation. **Pir′ogoff's a.**, mode of amputating at the ankle, consisting in retaining a portion of the calcaneum, to impart greater length and rotundity to the stump. **A. at point of elec′tion**, a. performed at an advantageous point. **Pol′lock's a.**, a. at the knee-joint, the latter being disarticulated by a long anterior flap. **Pri′mary a.**, a. performed almost immediately after injury, before inflammatory complications have appeared. *Secondary amputations* are those performed after suppuration has occurred. **Rack′et a.**, oval a. **Rav′aton's a.**, prototype of the double-flap a. (1739). **Rectang′ular a.**, Teale's a. **Roux's a.**, differs from Syme's in flap being made from the inner and under side of the heel. **Scoutet′ten's a.**, oval method. **Sec′ondary a.**, see *Primary a.* **Sédillot's′ a.**, an a. somewhat like that of Syme, except that the flap is made from the internal and plantar surfaces of the foot and ankle. **Skin-flap a.**, tegumentary a. **Stephen Smith's a.**, a. at the knee-joint by disarticulation with lateral hooded flaps. **Soupart's′ a.**, a. by elliptical method, as at the elbow-joint. **Spence's a.**, modification of Larrey's a., the longitudinal incision being made on the internal part of the arm in amputation at the shoulder-joint. **Sponta′neous a.**, intra-uterine a. or a. from mortification. **Stokes's a.**, modification of Gritti's, so that medullary canal of bone is not exposed. **Subastrag′alar** or **subastrag′aloid a.**, French operation, made by heel flap as in Syme's a. and dorsal flap as in Chopart's a., the foot being removed by opening the joints between the scaphoid and astragalus, and disarticulating between the latter and the os calcis. **Subperios′teal a.**, variety of a. in which the periosteal flaps are folded over the sawn end of the bone, so that danger of necrosis may be averted. **Supravag′inal a. of u′terus**, a. of the body of the uterus. **Syme's a.**, removal of foot at ankle-joint, taking off the articular surfaces of the bones of the leg above the malleoli, covering for osseous surfaces being provided from integument of heel; modification of Carden's a., the flaps of skin being crescentic. **Syn′chronous a.**, multiple a. **Tavignot's′ a.**, a. of the leg by a large posterior flap. **Teale's a.**, rectangular a.; modification of flap operation, in which there is one long anterior skin and muscular flap and a short posterior. **Tegumen′tary a.**, a. in which flaps are made of cutaneous tissues. **Tibiotar′sal a.**, a. at the ankle-joint. **Traumat′ic a.**, a. performed on account of injury. **Tripier's′ a.**, modification of Chopart's a. of the foot, making a wide horizontal section of the os calcis, providing an excellent flap, and giving a broad and level basis of support. **U′terovag′inal a.**, hystero-oöphorectomy. **Vermale's′ a.**, double-flap a. by transfixion; a. of the thigh by lateral flaps. **Verneuil's′ a.**, subastragaloid a. by disarticulation of the little toe with its metatarsal bone by an oval or racket incision. **Whar′ton's a.**, modification of Teale's a., having only one flap and bone, being sawn across.

**Amuck′.** Amock.

**Amu′sia** (*amousia*, lack of education, especially artistic). Musical aphasia. **Mo′tor a.**, inability to express musical sounds and ideas, either vocally, *vocal amusia;* instrumentally, *instrumental amusia;* or in writing, *musical agraphia.* **Sen′sory a.**, inability to understand musical sounds or ideas, either when music is heard, *tone-deafness*, or when written music is seen, *note-blindness.*

**Amussat's′ opera′tion for artific′ial a′nus.** See *Colotomy.* **A.'s valve**, see *Gall-bladder.*

**Amus′sis** (workman's level). Part of posterior commissure of brain, formed by median fissure passing through it.

**Amyasthe′nia** (*a*, priv., *mys*, muscle, *asthenia*, weakness). Muscular debility.

**Amyasthen′ic.** Tending to or affected with muscular debility.

**Am′ycha** or **Amyx′is** (*amysso*, to scratch). Excoriation; scarification.

**Amyc′tic.** Medicine which stimulates the skin; caustic, corrosive.

**Amydri′asis.** Mydriasis.

**Amyelencepha′lia** (*a*, priv., *myelos*, marrow, *enkephalos*, brain). Monstrosity characterized by absence of the spinal cord and brain; such monstrosity is said to be *amyelenceph′alous.*

**Amye′lia** (*a*, priv., *myelos*, marrow). Monstrosity with absence of the spinal cord.

**Amyelin′ic.** Term applied to nerve fibres devoid of medullary sheath, and to neuromata made up of such fibres.

**Amyeloner′via** or **Amyeloneu′ria** (*a*, priv., *myelos*, marrow, *neuron*, nerve). Paralysis or deficient action of the spinal cord.

**Amyelot′rophy** (*a*, priv., *muelos*, marrow, *trophe*, nourishment. Atrophy of the spinal cord.

**Amy′elus** (*a*, priv., *myelos*, marrow). A monster lacking the spinal cord.

**Amyenceph′aly.** Amyelencephalia.

**Amyg′dala.** (Ph. U. S.) The almond, of which there are two kinds, *Amygdala amara* and *Amygdala dulcis*, obtained from two varieties of Amygdalus communis, A. sativa or Prunus amygdalus, almond tree, native of Barbary, ord. *Amygdaleæ.* Taste of Amygdala dulcis, Jordan almond, is soft and sweet; that of A. amara, bitter; both yield, by expression, a sweet, bland oil. Bitter almonds contain prussic acid; they are chiefly used for forming emulsions. See *Amygdalus.* The faucial tonsil. The tonsil, lobule, or prominence of the cerebellum, amygdala cerebelli, from its resemblance to an enlarged tonsil. A small collection of cortical substance in the extremity of the descending cornu of the lateral ventricle of the brain.

**Amygdalec′tomy.** Excision of the tonsil.

**Amyg′dalic acid.** When amygdalin is partially decomposed by boiling with an alkali this acid results.

**Amygdalin′.** Glucoside contained in bitter almonds, cherry-laurel leaves, seeds of peaches, plums, etc., together with an albuminoid ferment called emulsin or synaptase, by which, in presence of heat and moisture, amygdalin is decomposed into hydrocyanic acid, oil of bitter almonds, and dextroglucose.

**Amyg′daline.** Tonsillar.

**Amygdali′tis.** Tonsillitis; quinsy.

**Amyg′daloglos′sus.** Continuation of fibres of the palatoglossus muscle, passing from the tongue to the tonsil; elevates the base of the tongue.

**Amyg′daloid.** Almond-shaped; resembling a tonsil. **A. fos′sa,** space between the pillars of the fauces in which the tonsil rests. **A. nu′cleus,** a small collection of gray matter in the extremity of the descending cornu of the lateral ventricle of the brain. **A. tu′bercle,** prominence over the amygdaloid nucleus.

**Amyg′dalolith.** Tonsillar calculus or concretion.

**Amygdalon′cus** (*amygdala,* tonsil, *onkos,* tumor). Swelling of the tonsil.

**Amygdalop′athy.** Disease of the tonsil.

**Amygdalophenin′.** A derivative of pyramidophenol; a whitish, crystalline powder possessing antiarthritic properties; dose, gr. xv (1.0).

**Amygdalopleth′ora.** Congestion of the tonsil.

**Amyg′dalotome** (*amygdala,* tonsil, *tome,* incision). Tonsillotome, or instrument for cutting off part or whole of the tonsil.

**Amygdalot′omy.** Excision of a portion of or incision into the tonsil.

**Amyg′dalus.** The almond tree. See *Amygdala.* **A. commu′nis,** Prunus amygdalus, source of the official *amygdala,* which see. **A. per′sica,** common peach tree. Leaves and flowers have been considered laxative; they are bitter and aromatic. The fruit, peach, is a pleasant and wholesome summer fruit when ripe; the kernels, amygdalæ persicæ, as well as flowers, contain prussic acid. **A. sati′va,** A. communis.

**Amyg′mus** (*amysso,* to scratch). Scarification.

**Am′ykos.** Compound of boric acid and thymol; used as a wash in gonorrhœa and catarrhal conditions.

**Am′yl** (*amylum,* starch, so called because first obtained from alcohol formed in the fermentation of starchy matter). $C_5H_{11}$. Hypothetical radical of homologous series, which includes methyl, ethyl, propyl, etc. Several of its compounds have therapeutic value. See also *Amylum.* **A. ac′etate,** similar in its properties to nitrate and iodide, though weaker. **A. al′cohol,** fusel oil, see *Alcohol.* **A. chlor′ide,** a colorless fluid, employed as an anæsthetic; too slow and profound in effects for ordinary practice. **Hy′drate of a.** or **hy′drated ox′ide of a.,** fusel oil. **A. hy′dride** or **hy′druret,** $C_5H_{12}$, hydramyl, pentane; a colorless, volatile liquid, said to be lightest known; proposed as an anæsthetic by Prof. J. Y. Simpson. Mixed with ether it may be employed in the form of spray as a local anæsthetic, but for inhalation it is dangerous. **A. i′odide** is said to resemble amylic alcohol in its effects. An animal under its influence moves for some time in a circle, whether spontaneously or under excitation. It does not produce insensibility to pain. **A. ni′trate,** liquid derived from amylic alcohol. **A. ni′trite,** $C_5H_{11}NO_2$, amyl nitris (Ph. U. S. and Br.), inflammable, volatile, ethereal fluid, containing about 80 per cent. of pure amyl nitrite; has the odor of over-ripe pears, and is antiseptic; produced by the action of nitrous acid on amylic alcohol. It is readily absorbed by the mucous membranes and areolar tissue, producing immediately violent action of the heart. It dilates the capillaries and reduces arterial pressure by inducing vasomotor paralysis. Consciousness is not destroyed by it. It must be inhaled in very small doses, three to five drops at a time. Its efficacy in angina pectoris and respiratory neuroses is well established. It is also employed to cut short epileptic attacks and paroxysms of intermittent fever. It is an antidote to chloral and chloroform. Dose per os or hypodermically, ♏ss–ij (0.03–0.12). **A. vale′rianate,** $C_5H_{11}.C_5H_9O_2$, apple oil, iso-amyl-valerianate; a colorless, volatile liquid, prepared by the action of valerianic acid on amylic alcohol; a solvent of cholesterin and therefore recommended in the treatment of gallstones; dose, ♏i–v (0.06–0.3).

**Amyla′cea** (*amylum,* starch). Starchy articles of diet.

**Amyla′ceous.** Having the nature of or containing starch; starchy, starch-like. **A. bod′ies,** corpora amylacea.

**Amylam′ine.** $(C_5H_{11})NH_2$. Colorless, poisonous liquid resulting from the action of potassa on cyanate of amyl. It is also formed during the fermentation of yeast, and is sometimes present in cod-liver oil. There are two other amylamines, differing from this in having one or two atoms less H. **A. hydrochlo′rate,** $C_5H_{11}NH_2Cl$, soluble, crystalline salt, employed as an antiperiodic.

**Am′ylase.** One of a group of enzymes having the power to convert starch into sugar, such as granulose, glucose, and maltase.

**Am′ylene.** $C_5H_{10}$. A volatile liquid, prepared by distilling amylic alcohol with a concentrated solution of chloride of zinc, sp. gr. 0.655 at 10° C; has been used as an anæsthetic, but is more dangerous than chloroform. **A. chlo′ral,** oily liquid resulting from the fusion of chloral and amylene hydrate; used as a hypnotic. **A. gly′col,** a. hydrate. **A. hy′drate,** $C_5H_{10}+H_2O$, dimethylethylcarbinol, tertiary amylic alcohol, is a clear, soluble, oily liquid, with a penetrating, camphoraceous odor, sp. gr. 0.812, soluble in water and freely miscible with alcohol, glycerin, and oils; used as a hypnotic in doses of ♏xv–ʒj (1.0–4.0).

**Amyleniza′tion.** Producing anæsthesia by amylene.

**Amyl′ic.** Containing amyl. **A. acid,** $C_5H_{10}O_2$. When amylic alcohol is acted upon by oxidizing agents it loses 2H and gains O; properties identical with valerianic acid. **A. al′cohol,** $C_5H_{12}O$, fusel oil, see *Alcohol.*

**Amylin′.** Starch cellulose.

**Amyl′ium chlo′ride.** Amylamine hydrochlorate. **A. nitro′sum,** amyl nitrite.

**Am′ylocar′bol.** An antiseptic soap made of carbolic acid and amylic acid.

**Am′ylodextrin′.** Erythrodextrin.

**Amyl′oform.** A substitute for iodoform, made by the reaction of formaldehyde and starch; antiseptic.

**Amyl′ogen** (*amylon,* starch, *genesis,* formation). Soluble starch.

**Am′yloid** (*amylon,* starch, *eidos,* resemblance). Resembling starch; glycogen. **A. bod′ies,** see *Corpora amylacea.* **A. degenera′tion** or **infiltra′tion,** pathological condition in which a firm, waxy substance is present in the tissues, not responding to chemical agents and resisting putrefaction; it usually occurs in the abdominal organs; see *Lardaceous.* **A. sub′stance,** lardacein.

**Amyloido′sis.** Amyloid degeneration.

**Am′yloids.** Non-nitrogenous aliments—starch, sugar, and their allies.

**Amylol′ysis** (*amylon,* starch, *lysis,* solution). Transformation of starch into glucose by decomposition of the former; to such ferment as the saliva or pancreatic juice the term *amylolyt′ic* is applied.

**Amyloni′trous e′ther.** Amyl nitrite.

**A′myloplast.** A starch-forming corpuscle. See *Leucoplast.*

**Amylopsin′.** Ferment from pancreatic juice, resembling ptyalin, converting starch into sugar.

**Amylo′ses.** Materials like starch; group including starch, dextrin, glycogen, cellulose, etc.

**Amylox′ydum nitro′sum.** Amyl nitrite.

**Am′ylum.** (Ph. U. S.) $C_6H_{10}O_5$. Starch, starch of wheat, farina; fecula of seed of Triticum vulgare, inodorous and insipid, white and friable; insoluble in cold water and alcohol, but forming with boiling water a strong, semitransparent jelly; demulcent. It is dusted on excoriated surfaces as an absorbent of irritating secretions. Free iodine is a delicate test for starch, giving a deep blue color when added to a solution containing it. Starch is met with abundantly in all cereal grains, in the stalks of many palms, in some lichens, and in many tuberous roots. It is converted by dilute acids or diastase into dextrin and dextrose. **A. al′bum**, wheat-starch. **A. america′num**, arrowroot. **A. can′næ** or **canna′ceum**, tous-les-mois. **A. cur′cumæ**, East Indian arrowroot. **A. ioda′tum**, iodide of starch. **A. ma′idis**, corn-starch. **A. manihot′icum**, tapioca. **A. maranta′ceum**, arrowroot. **A. nitro′sum**, amyl nitrite. **A. ory′zæ**, rice-starch. **A. palma′ceum**, sago. **A. quer′neum**, racahout. **A. sa′gi**, sago. **A. sola′ni**, potato-starch. **A. tritic′eum**, amylum. **A. trit′ici**, amylum.

**Amyocar′dia** (*a*, priv., *mys*, muscle, *kardia*, heart). Feeble muscular action of the heart.

**Amyosthe′nia** (*a*, priv., *mys*, muscle, *sthenos*, strength). Defective power of muscular contraction. Medicine capable of diminishing muscular power is an *amyosthen′ic*.

**Amyotax′ia** (*a*, priv., *mys*, muscle, *taxis*, order). Disordered muscular action, as in athetosis.

**Amyotroph′ia** or **Amyot′rophy.** Atrophy of muscle or muscles. **A. spina′lis progressi′va**, progressive muscular atrophy.

**Amyotroph′ic lat′eral sclero′sis.** Progressive muscular atrophy, due to sclerosis of the lateral columns of the spinal cord. **A. paral′ysis**, paralysis due to muscular atrophy.

**Am′yous** (*a*, *mys*, muscle). Deficient in muscular development or power.

**Amyrin′.** Resinous constituent of elemi.

**Am′yris.** A genus of trees yielding resinous products. **A. balsamif′era**, rosewood, white candlewood; exudes a resinous balsam. **A. caran′na**, source of balsamic resin, Caranna or Manila elemi. **A. elemif′era**, plant whence gum elemi is obtained; gum or resin is brought from East and West Indies; softish, transparent, whitish color, and strong though not unpleasant smell; used in ointment and plasters. **A. gileaden′sis**, plant growing in Africa and Arabia, said to yield balm of Gilead. **A. opobal′samum**, plant from which is obtained balsam of Mecca, balsam or balm of Gilead, by incisions; juice of fruit is called carpobalsamum, that of wood and branches xylobalsamum; it has the properties of the milder terebinthinates. **A. plumie′ri**, West Indian plant yielding elemi resin. **A. tomento′sa**, Fagara octandra.

**Am′ytose.** Material like starch; one of a group including starch, dextrin, glycogen, cellulose, etc.

**Amyx′ia** (*a*, priv., *myxa*, mucus). Deficiency or absence of mucus.

**Amyx′is.** Excoriation; scarification.

**A′na.** Of each; used in prescriptions as well as ā and āā, its abbreviations; as prefix it means in, through, upward, above, in opposition to *cata;* also, again, repetition, like the English *re*.

**Anab′asis** (*anabaino*, to ascend). First period of disease, or that of increase. **A. aphyl′la**, species of *Chenopodiaceæ*, used in leprosy. **A. tamariscifo′lia**, used in S. Europe as an anthelmintic; source of chouan.

**Ana′bexis** (*ana*, up, *besso*, to cough). Expectoration; ptyalism.

**Anabio′sis** (*ana*, again, *biosis*, life). Restoration of life or vital power; faculty possessed by certain organisms after being dried and heated and apparently devoid of vitality.

**Anabiot′ic.** Coming to life again; having the faculty of being restored to vitality and vigor.

**Anablep′sis** (*ana*, again, *blepo*, to see). Restoration of sight.

**Anab′ole** (*anaballo*, to cast up). Evacuation upward; act of ejecting by the mouth; it includes exspuition, expectoration, regurgitation, and vomiting.

**Anabol′ergy** (*anaballo*, to cast up, *ergon*, work). The amount of work expended in the process of anabolism.

**Anabol′ic.** Relating to anabolism.

**Anabolin′.** Any matter formed during the process of anabolism.

**Anab′olism** (*anaballo*, to cast up). Process of building up, the opposite of katabolism; the process of assimilation or of building up living matter.

**Anabrochis′mus** (*ana*, up, *brochos*, running knot). Operation for removing eyelashes when they irritate the eye, by means of hair knotted around them. Removal of a tumor by ligation.

**Anabro′sis** (an eating up). Corrosion; erosion.

**Anabrot′ic.** Corrosive.

**Anacamp′tic** (*anakampto*, to bend back). Reflecting rays of sound or light.

**Anacamptom′eter.** Instrument to measure the amount of spasmodic movement of the knee in knee clonus.

**Anacardia′ceæ.** The sumacs.

**Anacar′dic acid.** Crystalline derivative from the cashewnut, Anacardium occidentale, possessing anthelmintic properties.

**Anacar′dium latifo′lium.** Semecarpus anacardium. **A. na′num** has properties like those of A. occidentale, vesicant. **A. occidenta′le**, cashew of W. Indies; oil of cashewnut is an active caustic, used especially for warts, etc. Gum resembling gum Arabic, cashew gum, exudes from the bark. The bark is used in syphilis; astringent oil from the nut in ophthalmia. **A. orienta′le**, Avicennia tomentosa.

**Anacatadid′ymus** (*ana*, above, *kata*, below, *didymos*, twin). A twin monster, partly united in the trunk.

**Anacathar′sis** (*ana*, up, *kathaireo*, to purge). Vomiting; purgation upward; expectoration.

**Anacathar′tic.** Producing expectoration or vomiting. Expectorant, emetic, or sternutatory medicine.

**Anaces′tos** (*a*, priv., *akeomai*, to cure). Incurable.

**Anachlorhy′dria.** Absence of hydrochloric acid in the gastric juice.

**Anachon′chylism.** Gargling.

**Anachremp′sis** (*ana*, up, *chrempsis*, spitting). Exspuition; expectoration.

**Anacid′ity.** Deficiency or suppression of acid secretion, as of the gastric juice.

**Anacine′ma** or **Anacine′sis** (*ana*, up, *kineo*, to move). Evacuation upward, as by expectoration or vomiting. Exercise by upward movement of the arms.

**Anaclasim′eter.** An instrument devised for determining the degree of refraction in ophthalmoscopy.

**Anac′lasis** or **Anaclas′mus.** Refracture of bones or breaking up ankylosed joints; reflection or refraction of light or sound.

**Anaclas′tic.** Relating to reflected light or sound.

**Anaclas′tics.** Dioptrics.

**Anac′lisis.** Decubitus, or position in bed of a sick person.

**Anacolle′ma** (that which is glued on). Healing medicine; frontal bandage.

**Anacolu′thia** (*a*, priv., *akolouthos*, consequent). Incoherence.

**Anacon′chylism** (*anakonchyliazo*, to gargle). Gargling.

**Anac′ope.** Nausea.

**Anacrot′ic** or **Anac′rotous** (*ana*, again, *krotos*, clapping of hands). Relating to anacrotism in the pulse beat or sphygmographic curve. **A. limb**, the ascending curve in a sphygmographic tracing showing anacrotism.

**Anac′rotism.** Oscillation in the expansion of an artery, as shown in the sphygmographic tracing; it occurs usually in dilatation and hypertrophy of the left ventricle of the heart or after ligation of an artery.

**Anacte′sis** (regaining). Restoration of strength or health.

**Anacu′sis.** Loss of hearing.

**Anacycle′sis.** Circulation; circulation in cells.

**Anacyc′lus au′reus.** Plant, ord. *Compositæ*, growing in Europe; stomachic. **A. officina′rum**, pellitory of the shops in Germany. **A. pyre′thrum**, Anthemis pyrethrum.

**Anade′nia** or **Anad′eny** (*a*, priv., *aden*, gland). Absence or deficiency of glands, usually of the stomach, with consequent disturbance of function. **A. ventric′uli,** specifically, absence of gastric glands and impaired digestion resulting therefrom.

**Anades′ma** (*anadesme,* fillet for the head). Fascia; bandage.

**Anadicrot′ic** (*ana,* up, *dis,* twice, *krotos,* clapping). Relating to anadicrotism.

**Anadic′rotism.** Double dicrotism; condition shown by two notches in the ascending curve of the sphygmograph before the acme is reached.

**Anadid′ymus** (*ana,* above, *didymos,* twin). Double monster joined in the lower portion.

**Anadiplo′sis** (*ana,* again, *diploo,* to double). Redoubling occurring in paroxysm of double intermittent.

**Anadip′sia** (*ana,* intensive, *dipsos,* thirst). Intense thirst.

**Anado′sis.** An old term, denoting variously vomiting; congestion of blood toward the upper parts of the body; chylification.

**Anad′rome** (*anadrome,* ascension). Transport of humor or pain from a lower to an upper part; globus hystericus.

**Anad′romous.** Ascending from the lower to the upper part of the body.

**Anædœ′us** (*a,* priv., *aidoia,* organs of generation). Monster devoid of sexual organs.

**Anæ′ma** (*a,* priv., *haima,* blood). Bloodless animals, as intestinal worms.

**Anæma′sia** or **Anæ′masis.** Fatal disease of mules, anæmia being the main symptom; anæmia.

**Anæmatopoie′sis** (*a,* priv., *haima,* blood, *poieo,* to make). Impeded or obstructed hæmatosis.

**Anæmato′sis** (*a,* priv., *haima,* blood). Defective hæmatosis; anæmia, especially pernicious anæmia.

**Anæ′mia** or **Ane′mia** (*a,* priv., *haima,* blood). Bloodlessness; deficiency of blood; opposite condition to plethora or hyperæmia. The essential character of the blood in anæmia is diminution in number of the red corpuscles, also of albumin, the serum containing a disproportionate amount of water. The chief symptoms are debility, palpitation, sometimes a functional systolic murmur, and pallor of the skin and mucous membranes. **Acute′ a.,** deficiency in the amount of blood consequent upon a profuse hemorrhage. **Ad′dison's a.,** pernicious a. **Bier′mer's a.,** pernicious a. **Cer′ebral a.,** deficiency of the supply of blood to the brain. **Chlorot′ic a.,** a. associated with chlorosis. **Cytogen′ic a.,** pernicious a. **Essen′tial a.,** progressive pernicious a. **Fe′cal a.,** a. associated with constipation. **Ganglion′ic a.,** pernicious a. **Gen′eral a.,** a. of the general system, as distinguished from local a.; oligæmia, achroiocythæmia, hydræmia. **Glob′ular a.,** a. from deficiency of red corpuscles. **Hemorrhag′ic a.,** acute a. **Idiopath′ic a.,** progressive pernicious a. **A. infan′tum pseudoleukæ′mica,** form of a. with enlargement of the spleen, leucocytosis, etc., occurring in children. **Ixod′ic a.,** Texas cattle fever. **A. liena′lis,** splenic a. **Lo′cal a.,** deficiency of blood in a portion only of the body, due to ligature of a vessel, pressure from a tumor or the like, embolism or thrombosis, or some vasomotor disturbance; ischæmia. **Lymphat′ic a.,** Hodgkin's disease, see *Pseudoleukæmia.* **Mala′rial a.,** a. associated with splenomegaly in malarial cachexia. **Malig′nant a.,** pernicious a. **Mi′ners' a.,** a. due to ankylostoma duodenale in the intestine. **Myelog′enous a.,** pernicious a. **Palu′dal a.,** malarial a. **Pas′sive a.,** a. from mechanical pressure. **Perni′cious a.,** form of extreme anæmia, advancing steadily or with slight remissions to fatal result. **Pri′mary a.,** idiopathic a. **Progres′sive perni′cious a.,** pernicious a. **Pul′monary a.,** a. of lungs, as in emphysema. **Ret′inal a.,** local a. of the retina. **Sec′ondary a.,** a. associated with some cachexia, as the malarial or cancerous, or due to frequently recurring hemorrhages. **Se′nile a.,** a. of old persons, with diminution of albumin and red corpuscles and increase of fibrin. **Spi′nal a.,** a. of the spinal cord, affecting sensation and motion. **A. splen′ica,** a. associated with idiopathic enlargement of the spleen, but without lymphatic enlargement. **Symptomat′ic a.,** secondary a. **Tun′nel a.,** ankylostomiasis.

**Anæ′mic** or **Ane′mic.** Relating to anæmia; exsanguine. **A. mur′mur,** gentle murmur in the anæmic heard on auscultation at the base of the heart over the large vessels. **A. protru′sion of eye′balls,** exophthalmic goitre.

**Anæmot′rophy.** Insufficient blood formation.

**Anæmyd′ria** (*a,* priv., *haima,* blood, *hydor,* water). Condition of the blood in which there is a diminished quantity of serum.

**Anæret′ic** (*anaireo,* to destroy). Any agent corrosive or destructive to the tissues.

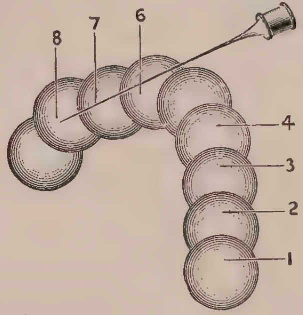
**Anaëro′bia,** pl. of anaërobion (*a,* priv., *aer,* air, *bios,* life). Microorganisms which do not require oxygen for their existence, or whose life is destroyed by it. Such bodies are said to be *anaëro′bic.* **Fac′ultative a.,** a. which are naturally aërobic, but have acquired the faculty of growing without oxygen.

**Anaëro′bian** or **Anaëro′bic.** Relating to anaërobiosis.

**Anaërobio′sis** (*a,* priv., *aer,* air, *bios,* life). Life in an oxygenless medium.

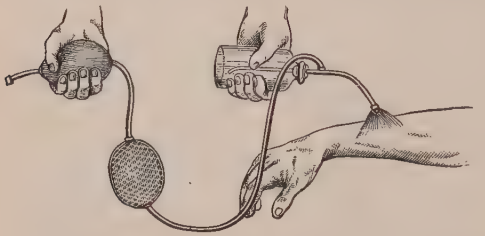
**Ana′ëroplasty** (*a,* priv., *aer,* air, *plasso,* to form). Treatment of wounds under water not exposed to air.

**Anæsthe′sia** or **Anesthe′sia** (*a,* priv., *aisthanomai,* to feel). Privation of sensation, and especially of that of touch; paralysis of sensibility. It may be general or partial and is almost always symptomatic, or it may be the result of the application of a general or local anæsthetic. **A. acus′tica,** deafness. **A. angeiospas′tica,** a. from spasm of bloodvessels. **Bul′bar a.,** a. from a lesion of the pons or medulla oblongata. **Cen′tral a.,** a. from disease or injury of the central nervous system. **Cer′ebral a.,** a. from disease or injury of the brain. **Crossed a.,** a. of one side, due to injury of the other side of the spinal cord. **Disso′ciated a.,** loss of the sense of pain and of temperature changes, the sense of touch being still preserved. **A. doloro′sa,** loss of sensibility of part, with pain due to a lesion in the nerve trunk, but referred to the periphery. **Gen′eral,** a. of the whole of the body. **Gir′dle a.,** a. in a zone around the body. **A. gustato′ria** or **lin′guæ,** loss of the sense of taste. **Infiltra′tion a.,** local a. induced by the subcutaneous injection of large amounts of a weak anæsthetic solution, the cellular tissue in the field of operation being thoroughly permeated by the fluid. **Lo′cal a.,** a. of a circumscribed part or region; surgically it is induced by the action of cold, the application of cocaine, etc., the infiltration method, and—less strictly local—by the method of spinal anæsthetization. **Med′ullary a.,** spinal a. **Mixed a.,** general a. induced by the successive action of more than one agent, as of nitrous oxide gas and ether. **Mus′cular a.,** loss of muscular sense, as in tabes dorsalis. **A. nascen′tium,** asphyxia of newborn. **A. olfacto′ria,** anosmia. **Op′tic a.,** amaurosis. **Periph′eral a.,** a. from influences affecting the

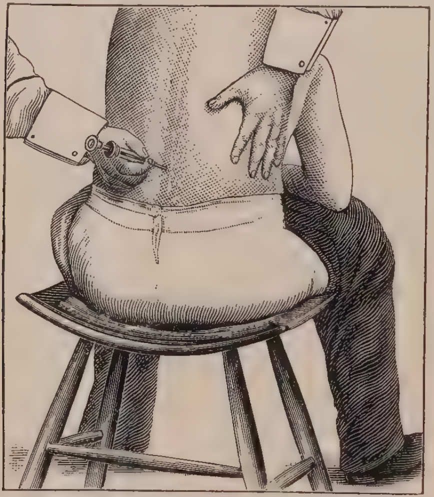


Infiltration anæsthesia; the needle is inserted at each successive point as numbered until the line of anæsthesia is complete. (Hare.)

end-organs of muscles. **Pri′mary a.**, a. which occurs soon after the administration of a general anæsthetic, before consciousness is lost; it is evanescent, but sufficiently prolonged to allow of the painless incision into a furuncle or abscess. **Psy′chic a.**, modified sensibility of a part interfering with the appreciation of the nature of the objects felt. **Rec′tal a.**, a. produced by the injection of ether or other anæsthetic agent into the bowel. **A. sexua′lis,** absence of sexual passion. **Spi′nal a.**, a. due to a lesion of the spinal cord; also a. induced by the injection of a cocaine or other anæsthetic solution into the subarachnoid space of the vertebral canal. **A. by sugges′tion,** hypnotism. **Sur′gical a.**, formerly this term meant complete and profound a. from the action of an anæsthetic, as during operation; now it is applied to a., either local or general, induced for the prevention of pain during a surgical operation. **Tac′tile a.**, loss of dulness of the sense of touch. **A. unilatera′lis,** hemianæsthesia.



Local anæsthesia induced by the application of rhigolene spray



Spinal anæsthesia by injection into the subarachnoid space of a cocaine solution through a needle introduced between the last two lumbar vertebræ. (Hare.)

**Anæsthesim′eter** or **Anæsthesiom′eter** (*anæsthesia*+*metron*, measure). Instrument for measuring the quantity of anæsthetic employed or degree of anæsthesia.

**Anæsthet′ic** or **Anesthet′ic.** Relating to privation of feeling. Agent that prevents feeling, or that produces such effect by being received into the lungs in the form of vapor or gas, and passing with the blood to the nervous centres on which its action is exerted. The intellectual faculties first feel the influence, intoxication supervening, with imperfect power of regulating movements; the sensory ganglia become afterward or simultaneously affected, sensation and motion are suspended, and ultimately, if the quantity inhaled be sufficient, the medulla oblongata has its actions suspended or destroyed, respiration ceases, and death results. Some anæsthetics, when applied to a part, deaden the sensibility or benumb it, and thus act as *local anæsthetics;* intense cold, cocaine, carbolic acid, and eucaine are the chief of these. The chief general anæsthetics are ether, chloroform, nitrous oxide, bromoform, tetrachloride of carbon, bichloride of methylene, paraldehyde, bichloride of ethidene, and ethyl bromide.

**Anæs′thetist** or **Anæs′thetizer.** The administrator of the agent to induce general anæsthesia.

**Anæsthetiza′tion.** Condition of the nervous system induced by anæsthetics. Employment of an agent for such purposes. To *anæsthetize* or *anesthetize* is to employ such agents.

**Anæsthetolep′ra.** Anæsthetic leprosy.

**Anæsthet′ospasm.** Convulsive motion with unconsciousness.

**Anagal′lis.** Red pimpernel, scarlet pimpernel, shepherd's sundial, chickweed, ord. *Primulaceæ.* Common European plant; reputed antispasmodic and stomachic. **A. aquat′ica,** Veronica beccabunga. **A. arven′sis,** pimpernel; herb of W. United States, used in rheumatism. **A. cæru′lea** has similar properties.

**Anagen′esis** (*ana*, again, *gennao*, to generate). Regeneration or separation of tissue; growing again.

**Anag′nate** (*a*, priv., *gnathos*, jaw). Not having a jaw.

**Anagnos′takis** (after the Greek physician who claimed to have invented it). Ophthalmoscope.

**An′agraph** (*anagrapho*, to inscribe). Prescription.

**Anagyrine′.** An alkaloid of Anagyris fœtida, resembling lobeline in its action.

**Anag′yris, Anag′yrus,** or **A. fœt′ida.** Stinking-bean trefoil, ord. *Leguminosæ;* native of Italy. Leaves are powerfully purgative; juice is diuretic; seeds are emetic.

**Anaixe′sis** (*anaisso*, to begin afresh). Return of a disease.

**Anakine′sis** (swinging, excitement). Agitation; fusion, as of germs.

**Anak′lasis.** Anaclasis.

**Anaku′sia** or **Anaku′sis** (*a*, priv., *akouo*, to hear). Complete loss of hearing.

**A′nal.** Relating or appertaining to the anus, as anal region, anal fascia. **A. re′flex,** see *Reflex.*

**Analep′sia, Analep′sis,** or **An′alepsy** (*analepsis*, a refreshing). Convalescence; restoration to strength after disease; support given to fractured extremity, as by suspension.

**Analep′tic.** Restorative, as medicine or food adapted to recruit strength during disease or convalescence.

**Anal′gene.** $C_{18}H_{16}N_2O_2$. A white powder, antineuralgic and antipyretic; dose, gr. v–xv (0.3–1.0).

**Analge′sia** or **Anal′gia** (*a*, priv., *algesis*, sense of pain). Insensibility to pain, but not to tactile and other impressions. **A. alge′ra** (*algeros*, painful), the occurrence in a part of neuralgic sensations combined with insensibility to stimuli ordinarily provoking pain.

**Analge′sic** or **Analget′ic.** Insensible to pain; also an agent for the relief of pain; anodyne.

**Analgesin′.** Antipyrin.

**Analgin′.** Creolin.

**Anal′ogous** (*analogos*, comformable). Resembling or conforming in certain particulars to something else. **A. tis′sues,** diseased tissues resembling normal elementary tissues.

**An′alogue.** Part in one organized being having the same function as part in another organized being.

**Analthet′ic** (*a*, priv., *althesso*, to heal). Incurable.

**Anal′ysis** (*ana*, back, *lyo*, to loose). Resolution of anything into its component parts; an examination to determine the composition of any given substance. **Colorimet′ric a.**, qualitative a. by means of color tests. **Densimet′ric a.**, estimation of the amount of matter in solution by finding the specific gravity of the fluid. **Gasomet′ric a.**, eudiometry, gasometry; chemical analysis for estimating the volume of gases in different specimens of atmosphere. **Gravimet′ric a.**, quantitative a., obtained by weighing bodies or their products. **Organ′ic a.**, analysis of organic substances. **Polariscop′ic a.**, see *Polariscope*. **Prismat′ic a.**, spectrum analysis. **Prox′imate a.**, a. to determine the proximate principles of a body. **Qual′itative a.**, determination of the number and character of elements composing a body. **Quan′titative a.**, determination of the proportionate amounts of the elements composing a body. **Spectroscop′ic** or **spec′trum a.**, see *Spectrum*. **Ul′timate a.**, a. to ascertain the ultimate constituents of a compound. **Volumet′ric a.**, quantitative a. by determining the components by volume.

**An′alyst.** One who makes an analysis.

**Analyt′ical.** Relating to analysis, as analytical chemistry.

**An′alyzer.** One of the parts of a polariscope.

**Anamintin′.** Principle derived from picrotoxin.

**Anamir′ta.** Genus of *Menispermaceæ*. **A. coc′ulus, A. panicula′ta,** Menispermum cocculus.

**Anamirtin′.** $C_{19}H_{36}O_2$. A derivative from Anamirta cocculus.

**Anamne′sia** or **Anamne′sis** (*anamnesis*, remembrance). The early history of a disease.

**Anamnes′tic.** Relating to the earlier history of a disease; a remedy or method for improving the memory.

**Anamnio′ta** (*a*, priv., *amnion*). Amphibious or other animals without amnion.

**Anamniot′ic.** Without an amnion.

**Anamorpho′sis** (*ana*, again, *morphe*, shape). Term used in optics to denote the means by which a distorted image is returned to its original shape.

**Anan′as.** Bromelia ananas; pineapple. **A. ova′ta,** Bromelia ananas. **Wild, broad-leaved a.,** Bromelia pinguin.

**Anan′dria** (*a*, priv., *aner*, a man). Want of manliness; impotence (male); emasculation. The individual is *anan′der*.

**Anapeirat′ic** (*anapeirasthai*, to repeat an exercise). Due to continuous muscular exercise; writers' cramp, for instance, is a form of spasm of coordination of the muscles engaged in writing, and therefore an anapeiratic disease.

**Anaphalakro′sis** (*anaphalakros*, bald - headed). Baldness, especially of the front of the head.

**Anaphalanti′asis** or **Anaphalanto′ma.** Loss of hair of the eyebrows; baldness.

**An′aphase.** Divergence of two sets of daughter chromosomes toward the poles of the spindle.

**An′aphe** or **Anaph′ia** (*a*, priv., *haphe*, touch). Loss of the tactile sense; also exaggeration of the same.

**Anaphore′sis.** Deficiency of perspiration.

**Anaphoret′ic.** Checking perspiration.

**Anapho′ria** (*ana*, up, *phoreo*, to carry). Tendency of the visual axes of both eyes to assume too hign a plane; anophoria.

**Anaphrodis′ia** (*a*, priv., *Aphrodite*, Venus). Absence of venereal appetite.

**Anaphrodis′iac.** Without sexual desire; also medicine which diminishes sexual desire. The chief articles of this class are ice, cold baths, local and general, bromides of potassium and ammonium, iodide of potassium, conium, camphor, digitalis, purgatives, nauseants, bleeding.

**Anaph′rodite.** One who is anaphrodisiac.

**Anaphrodit′ic.** Reproduced without intercourse of sexes.

**Anaphrod′itism.** Anaphrodisia.

**Anaphrod′itous.** Without sexual desire.

**Anaph′thia.** Anaudia.

**Anap′lasis** or **Anaplas′mus** (*anaplasso*, to restore). Restoration; union or consolidation of a fractured bone.

**Anaplas′tic** or **Anaplasmat′ic.** Epithet applied to the art of restoring lost parts or normal shape, as anaplastic surgery; see *Plastic*. Agent increasing the amount of plastic matter in the blood.

**An′aplasty.** See *Plastic surgery*.

**Anaplero′sis** (*anapleroo*, to fill up). Repletion; surgical therapeutics supplying parts that are wanting or lost substance; granulation and cicatrization.

**Anaplerot′ic.** Tending or relating to repletion or supply of lost parts; promoting granulation in the healing of a wound.

**Anapleu′sis.** Looseness of exfoliated bone or of a tooth.

**Anaplo′sis** (*anaploo*, to unfold). Growth.

**Anapneu′sis.** Respiration; cessation of pain.

**Anap′noe.** Respiration.

**Anap′nograph** (*anapnoe*+*grapho*, to describe). Apparatus on the principle of the sphygmograph to register the speed, pressure, and quantity of aërial currents in the respiratory tracts.

**Anap′noic** (*anapnoe*, breathing). Restoring power of breathing; relating to respiration.

**Anapnom′eter.** Spirometer; anapnograph.

**Anapod′isis** or **Anapodis′mus.** Retroversion.

**Anapoph′ysis** (*ana*, back, *apophysis*, outgrowth). Inferior posterior tubercle or apophysis on the lumbar vertebræ.

**Anapto′sis** (*ana*, back, *ptosis*, falling). Relapse.

**Anap′tysis.** Expectoration.

**Anarcotine′.** $C_{22}H_{23}N_7O$. Narcotine.

**Anari′na.** Absence or loss of nostrils.

**Anarith′mia.** Pathological inability to count.

**Anar′rhaphe.** Operation for entropion by suture.

**Anar′rhinon** or **Anar′rhinum.** Sternutatory.

**Anar′thria** (*a*, priv., *arthron*, articulation). Absence of limbs or joints; defect in articulate speech. **A. litera′lis,** defective articulation of letters; stammering. **A. syllaba′ris,** defective articulation or pronunciation of syllables.

**Anar′thrus.** Without joint; inarticulate.

**Anasar′ca** (*ana*, through, *sarx*, flesh). General dropsy; dropsy of the subcutaneous cellular tissue. Commonly it manifests itself first by swelling around the ankles; it is characterized by tumefaction of the subcutaneous tissue of the limbs, abdomen, thorax, and even face, with paleness and dryness of the skin and pitting when pressed upon. It is usually associated with ascites and hydrothorax. At times the symptoms are acute and the effusion sudden, constituting what has been variously called dermatochysis, hydrops anasarca acutus, œdema calidum, œdema acutum, febrile œdema. **A. america′na,** sleeping sickness of South America, with distention of the abdomen. **Essen′tial a.,** a. dependent on disorder of nutrition. **A. gravida′rum,** œdema of pregnant women. **A. hyster′icum,** anathymiasis. **Prim′itive a.,** essential a. **A. pulmo′num,** œdema of the lungs. **A. sero′sa,** phlegmasia dolens. **Symptomat′ic a.,** a. due to other disease, as of the heart.

**Anasar′cous.** Dropsical; relating to anasarca.

**Anaso′mia.** Adhesion between body and ilmbs.

**Anaspad′ia** or **Anaspad′ias** (*ana*, up, *spao*, to draw). Condition in which the urethra opens on the upper surface of the penis; epispadias.

**Anastal′tic** (*ana*, up, *stello*, to contract). Ascending (referring to nervous current); styptic.

**Anasta′sis** (*anistemi*, to rise up). Afflux of blood toward the upper part of the body; convalescence.

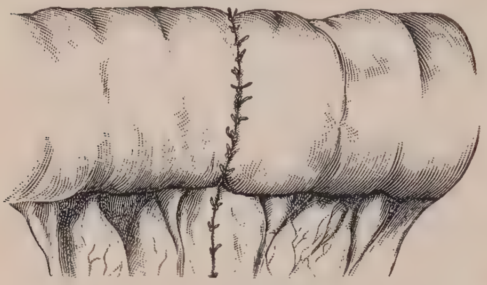
**An′astate.** A product of anabolism.

**Anastat′ic.** Relating to recovery; restorative.

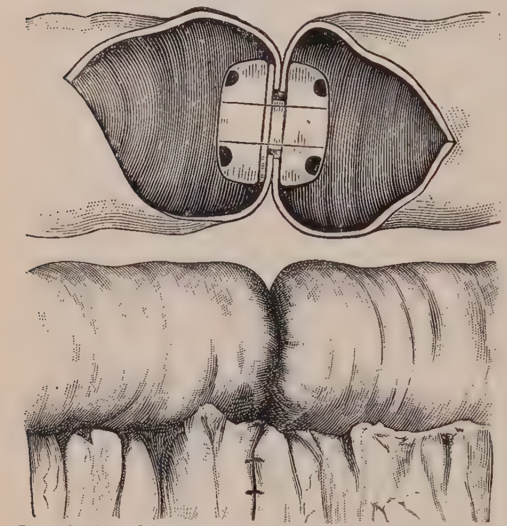
**Anas′tole** (*ana*, up, *stello*, to draw back). Retraction, as of the edges of a wound.

**Anastomose′.** To cause anastomosis.

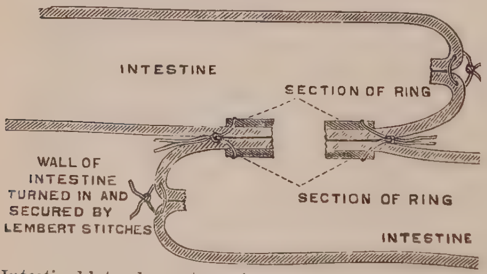
**Anastomo′sis** (*anastomoo*, to furnish with a mouth). Inosculation. Communication between two vessels. Interlacing of the nerves. The formation of an artificial communication between two parts or cavities. **A. aneurysmat′ica,** telangiectasia. **Intes′tinal a.,** establishment of a communication between two portions of intestine not usually continuous; originally the term was used only to denote communication through the walls of two segments brought side by side—*lateral* anastomosis, but it is now applied as well to *end-to-end* anastomosis, a process of resection of the intestine, in which the resected ends are approximated and held in place by suture, and perforated decalcified bone plates, catgut rings, or metallic buttons. **Ja'cobson's a.**, see *Petrosal ganglion*.



Intestinal anastomosis by end-to-end suture. (Richardson.)



Intestinal end-to-end anastomosis by means of the Murphy button. (Richardson.)



Intestinal lateral anastomosis by means of bone plates. (Roberts.)

**Anastomot'ic.** Belonging or relating to anastomosis. **A. arch**, arch formed by the union of two vessels. **A. ar'tery**, branch from brachial around the elbow; branch of obturator on inner side of crural ring; branch from femoral around knee-joint; branch of peroneal; branch of spinal accessory. **A. vein**, see *Anastomotica magna vein*.

**Anastomot'ica mag'na.** Branch of the brachial artery, coming off a little above the elbow, and bestowing branches to brachialis internus, to under edge of triceps, and to muscles, ligaments, etc., about the elbow-joint; branch of femoral artery supplying the knee-joint. **A. m. vein**, vein forming communication between veins and sinuses in the brain.

**Anatherapeu'sis.** Treatment by progressively increased doses.

**Anathrep'sis** (*ana*, again, *trepho*, to nourish). Renewal of nutrition, as in restoration to health.

**Anat'ole** (*anatole*, coming forth). Growth; lunula of the nail.

**Anatom'ical.** Relating or appertaining to anatomy; structural. **A. posi'tion**, erect posture with the palms of the hands looking forward.

**Anat'omism.** Study of arrangement of parts, to explain phenomena of the organism.

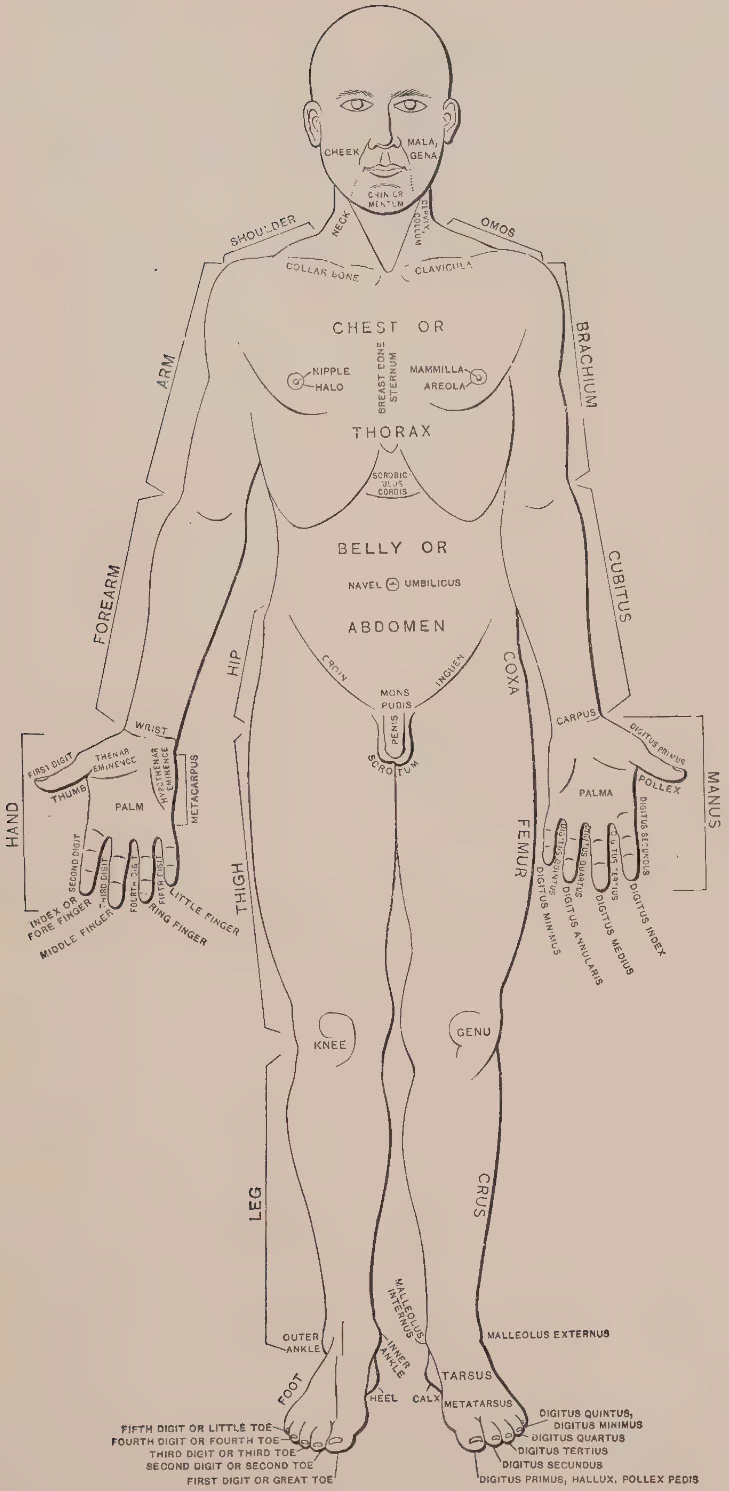
**Anat'omist.** One who occupies himself with anatomy or dissection; one versed in anatomy. **A.'s snuff-box**, depression at root of thumb between extensor tendons.

**Anatomog'raphy.** Treatise on anatomy.

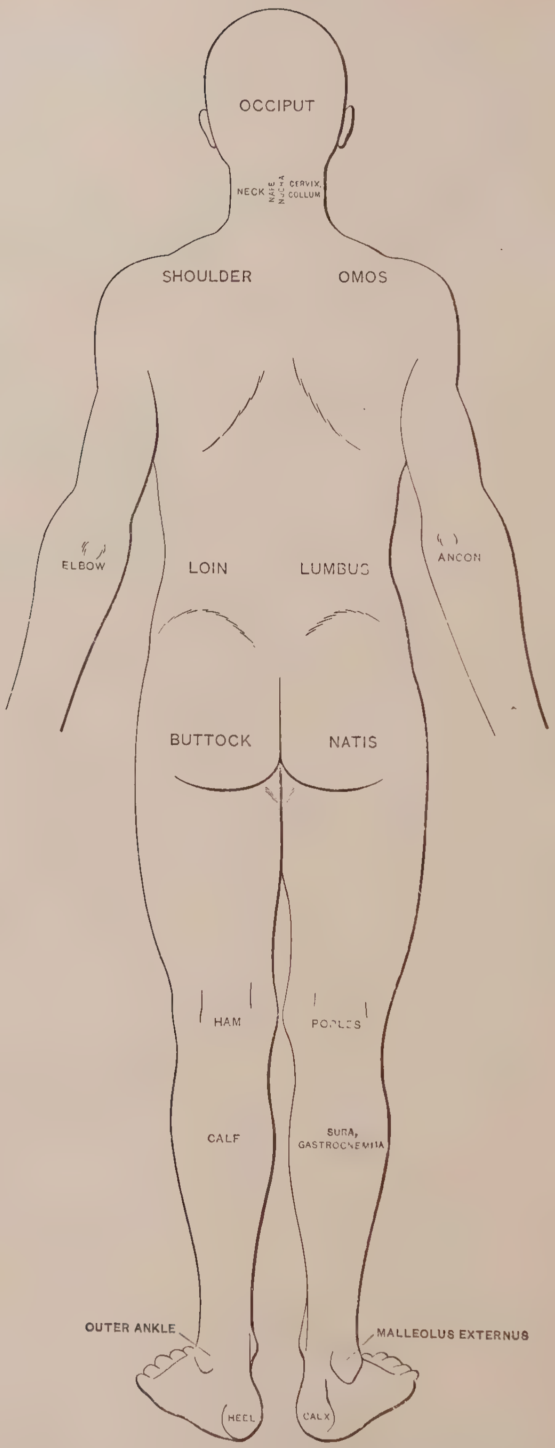
**Anat'omy** (*ana*, up, *tome*, cutting). Dissection; study and knowledge of all the apparent properties of organized bodies. It is the science of organization, and includes, according to some, every mechanical decomposition, even of inorganic bodies; thus, crystallography is the anatomy of crystallized minerals. Anatomy has also been called morphology, somatology, somatotomy, organology, etc. It assumes different names, according as the study is confined to one organized being or to a species or class of beings; thus, *androtomy* or *anthropotomy* or *anthropography* or *anthroposomatology* is the anatomy of man; *zoötomy, comparative*, or *animal anatomy*, that of other species of the animal kingdom; *veterinary anatomy*, anatomy of domestic animals. But when the word is used abstractly it means *human anatomy*, particularly the study of organs in a healthy state. Anatomy of fœtal development has been called *anatomy of the fœtus* or *of evolution*. *Physiological anatomy* investigates structure, with special view to function.

The anatomy of the diseased human body is *pathological* or *morbid anatomy*; when applied to medical jurisprudence, *forensic anatomy*. Several organs possessing similarity of structure and formed of the same tissues have been grouped into systems or genera of organs; the study of such systems is *general anatomy*, or *morphotomy*, while the study of each organ in particular is *descriptive* or *special anatomy*—*anthropomorphology*. *Gross* or *macroscopic anatomy* is that part of anatomy which can be studied without the aid of the microscope. Histology is applied to *anatomy of the tissues*, called also *textural*, *minute*, or *microscopic anatomy*, *micranotomia*. See *Histology*. Descriptive anatomy has been divided into *skeletology*, comprising *osteology* and *syndesmology*; and *sarcology*, subdivided into *myology*, *neurology*, *angiology*, *adenology*, *splanchnology*, and *dermology*. *Surface anatomy* is the study of the outer aspect of the body and its delimitation into regions or parts. (See the Plates, and also Plates under Regio.) *Surgical anatomy*, *medicochirurgical anatomy*, *topographical*, *relational*, or *regional anatomy*, is the particular and relative study of organs, bones, muscles, nerves, vessels, etc., with which it is indispensable to be acquainted before performing operations.

*Analogical anatomy* is the comparative study of each organ in different animals or in different classes of animals. *Homological anatomy* examines the relations to each other of different parts of the same individual. *Transcendental* or *philosophical anatomy* inquires into the mode, plan, or model upon which the animal frame or organs are formed. *Artificial anatomy* is the art of modelling and representing, in wax or other substance, different organs or different parts of the human body in a sound or diseased state. *Artistic* or *plastic anatomy* is the study of anatomy from an artistic point of view. *Physiognomonic anatomy* is a branch of artistic anatomy dealing especially with the expression. *Phytotomy* or *phytanatomy* is the anatomy of vegetables. *Pictorial anatomy* is anatomy artistically illustrated. *Clastic anatomy* (*klao*, to break) is the formation of models in such sort that they can be broken or separated in pieces.



Front view of a man in the anatomical position, illustrating the surface anatomy. On one lateral half the parts are labelled in English, on the other in Latin. The right upper limb is drawn away from the trunk in order to show the arm more fully than is possible when it hangs perpendicularly. (F. H. Gerrish.)



Back view of a man in the anatomical position, illustrating the surface anatomy. On one lateral half the names of the parts are given in English, on the other in Latin. (F. H. Gerrish.)

**Anatre′sia.** Patency; absence of stricture.

**Anatricrot′ic** (*ana*, up, *treis*, three, *krotos*, clapping). Relating to or marked by anatricrotism.

**Anatric′rotism.** The appearance in a single beat of the pulse of two appreciable minor expansions preceding the main expansion; a wave of the pulse with three breaks on the ascent.

**Anatrip′sis.** Therapeutic use of friction.

**Anatripsol′ogy** (*anatripsis*, friction, *logos*, discourse). Science of friction as a remedy.

**Anatrip′tic.** Remedy used by inunction.

**Anau′dia** (*a*, priv., *aude*, speech). Dumbness; catalepsy.

**Anax′on.** A nerve cell in which there is apparently no axis-cylinder process.

**Anazot′ic** (*a*, priv., *azote*, nitrogen). Devoid or deprived of nitrogen.

**Anazotu′ria.** Deficiency of urea in urine.

**An′azyme.** A compound of boric and carbolic acids; has been used as a substitute for iodoform in surgical dressings.

**Anchie′ta salutar′is.** Vegetable mercury, ord. *Violaceæ;* climbing plant from Brazil; emetic and cathartic; alterative in syphilis.

**An′chilops** (*anchi*, near, *ops*, eye). Inflammation of lacrymal sac.

**An′chorage.** Fixation of a part or organ, as the uterus, floating kidney, etc.; fixation of the initial portion of a dental filling.

**Anchora′lis proces′sus.** Coracoid process.

**Anchu′sa angustifo′lia.** A. officinalis. **A. incarna′ta,** A. officinalis. **A. lycopsoi′des,** A. officinalis. **A. officina′lis,** garden alkanet or bugloss. **A. tincto′ria,** Dyer's bugloss, Dyer's alkanet, orchanet; European plant, used to give a red color to ointments.

**Anchu′sic acid** or **Anchusin′.** Alkanin.

**Anchylo-.** For words thus beginning, see *Ankylo-*.

**An′con.** Elbow; olecranon process.

**An′conad.** Toward the elbow.

**Anconag′ra** (*agra*, a seizure). Gout of the elbow.

**An′conal.** Relating to the elbow or olecranon. **A. as′pect,** aspect toward the side on which the ancon or elbow is situated.

**Anco′neal.** Anconal. **A. fos′sa,** the olecranon fossa of the humerus.

**Ancone′us.** Term once applied to every muscle attached to the olecranon, and called great external, internal, and small anconei muscles. The first three are portions of the same muscle, *triceps brachialis;* the last has alone retained the name. It is the *aconeus minor*, *aconeus* or *cubitalis Riolani*, *epicondylocubitalis*, *brevis cubiti*, of different authors, and is situated at the upper and back part of the forearm. It arises from the external condyle of the os humeri, and is inserted into the posterior edge of the upper third of the ulna. It aids in extension of the forearm. **A. bre′vis,** inner head of the triceps; outer head, according to others. **A. epitrochlea′ris,** muscle passing from the internal condyle of the humerus to the olecranon. **A. exter′nus,** see *Triceps extensor cubiti*. **A. inter′nus,** see *Triceps extensor cubiti*. **A. lon′gus,** long head of triceps extensor cubiti. **A. mag′nus,** outer head of triceps. **A. ma′jor,** see *Triceps extensor cubiti*. **A. min′imus,** a. epitrochlearis. **A. mi′nor,** anconeus. **A. par′vus,** anconeus. **A. profun′dus,** inner head of triceps. **A. quar′tus,** anconeus. **A. quin′tus,** fascia between the tendon of the long head of the triceps and the latissimus dorsi muscles. **A. sex′tus,** a. epitrochlearis. **A. ter′tius,** a. epitrochlearis.

**Anconocace,** an-ko-nok′as-e. Pain or gout in the elbow.

**An′conoid** (*ankon*, elbow, *eidos*, shape). Shaped like an elbow.

**An′cus** (*ankon*, elbow). One who cannot extend his arms completely; deformity from luxation of the humerus or forearm.

**An′cyroid** (*ankyra*, anchor, *eidos*, resemblance). Shaped like the fluke of an anchor. **A. cav′ity,** digital cavity, posterior prolongation or horn of the lateral ventricle of the brain. **A. pro′cess,** coracoid process.

**An′da as′su.** Laxative expressed oil from the seed of a Chilian plant. **A. gome′sii,** native tree of Brazil, ord. *Euphorbiaceæ*. Cathartic oil, oil of anda, is obtained from the seeds by pressure. Fruit is an oval nut, containing two seeds having the taste of chestnut, but cathartic and emetic. Shell is astringent in diarrhœa, etc.

**An′dernach's os′sicles.** Wormian bones.

**An′dersch, gan′glion of.** Petrous ganglion.

**An′derson's pill.** Compound gamboge pill.

**Andi′ra anthelmin′tica.** Brazil tree, ord. *Leguminosæ*, seeds of which are anthelmintic. **A. araro′ba,** Goa powder is obtained from this Brazilian tree. **A. excel′sa,** bark, wood, and fruit are all employed; the bark in intermittent fever. **A. ib′ai,** Geoffræa vermifuga. **A. iner′mis,** cabbage tree of West Indies; G. inermis. **A. racemo′sa,** G. inermis. **A. retu′sa,** Surinam cabbage tree; anthelmintic. **A. surinamen′sis,** G. surinamensis.

**Andirin′.** Bitter extractive from Andira anthelmintica.

**An′dol-an′dol.** Large Chinese fly; tincture is used in China and Java as a powerful vesicant.

**Andralogome′lia** (*aner*, gen. *andros*, man, *alogos*, brute, *melos*, limb). Monstrosity combining the body of a man with the limbs of a brute.

**An′dral's decu′bitus.** Position of relief in bed taken by pleuritic patient at an early period of the disease, the pain being diminished when he lies on the unaffected side of the body.

**Andranot′omy** or **Androt′omy** (*aner*, man, *ana*, up, *tome*, cutting). Human anatomy.

**Andrei′a** or **Andri′a.** Adult age; manhood. **A. mu′lier,** female hermaphrodite.

**Androar′ium** (*aner*, man, *oarion*, ovary). Testicle.

**Androgalactozē′mia.** Secretion or discharge of milk in the male.

**Androgenei′a** or **Androgeni′a** (*aner*, man, *genesis*, generation). Procreation of males.

**Androg′raphis panicula′ta.** Kariyal andrographides; Indian plant, stalk and root of which are tonic and stomachic, especially in dyspepsia with constipation.

**Androgynal** (an-droj′-e-nal). Hermaphroditic.

**An′drogyne** (*aner*, man, *gyne*, woman). An hermaphrodite; effeminate man.

**Androgyn′ia,** **Androg′ynism,** or **Androg′yny.** Hermaphrodism.

**Androg′ynos.** Androgyne.

**Androg′ynous.** Androgynal.

**Androl′ogy** (*aner*, man, *logos*, description). The science of the diseases peculiar to men; a little-used word, coined after the analogy of "gynecology," to denote the study of the male genito-urinary diseases.

**Andro′ma.** Form of elephantiasis of the scrotum, endemic in Southern Asia.

**Androma′nia.** Nymphomania.

**Androm′eda arbo′rea.** Sorrel-tree, sour-tree, sourwood, elk-tree, elkwood, sorrel-wood, sour-leaf. Small, indigenous tree, ord. *Ericaceæ*, found as far as the southern limits of Georgia and Alabama; seldom north of Virginia. Sour leaves are refrigerant and astringent, and make a kind of lemonade, given in fevers. **A. japon′ica,** native of China and Japan, of toxicological interest only; contains a poisonous glucoside, asebotoxin. **A. maria′na,** broad-leaved moorwort, kill-lamb, lamb-killer, stagger-bush. Decoction of this indigenous plant has been employed as a wash in affection of negroes of Southern United States, called toe itch or ground itch. **A. nit′ida,** sourwood, sorrel tree, indigenous; properties like those of A. arborea. **A. polyfo′lia,** wild rosemary of America, Europe, and Asia; leaves are acronarcotic.

**Andromedotoxin′.** White, crystallized poison from andromeda; has an inhibitory action on the centres of respiration.

**Andrometoxin′.** The poisonous (narcotic) principle of mountain laurel.

**Andropho′bia** (*aner*, man, *phobos*, fear). Insane ear of men.

**Androphonoma′nia** (*aner*, man, *phonos*, murder + *mania*). Homicidal insanity.

**Andropo′gon bicor′nis.** Junctus odoratus. **A. citra′tus,** Junctus odoratus. **A. citriodo′rus,** Junctus odoratus, Nardus indica. **A. marti′ni,** ginger-grass, Indian species, yielding rubefacient, volatile oil. **A. murica′tus,** root of this plant, from Bombay, is aromatic and bitterish; used as a perfume and to drive away insects; also excitant and diaphoretic. **A. nar′dus,** Calamus alexandrinus, Nardus indica. **A. pachno′des,** variety of A. schœnanthus, Indian plant, yielding oil of ginger-grass. **A. schœnan′thus,** Junctus odoratus. **A. squarro′sus,** A. muricatus.

**Androsymphy′sia** or **Androsym′physis.** Monstrosity marked by fusion of male fœtuses or male genital apparatus.

**Ane′bus** (*a*, priv., *hebe*, puberty). One who has not reached puberty.

**Anec′risis** (*a*, priv., *ekkrisis*, secretion). Absence or suppression of secretion.

**Anecta′sia** or **Anec′tasis** (*a*, priv., *ektasis*, distention). Diminution in size of any part or organ.

**Anectasin′.** A vasoconstrictor bacterial toxin.

**Anelec′tric.** Not electrifiable; parting easily with electricity; conductor.

**Anelec′trode.** Positive pole of galvanic battery.

**Anelectroton′ic.** Relating to anelectrotonus.

**Anelectroto′nus.** Lessened excitability of nerve at the positive pole when traversed by a constant current of electricity.

**Anel’s′ opera′tion.** Operation of ligation of an aneurysm on proximal side of aneurysmal sac. **A.’s probe** or **sound,** probe for insertion into lacrymal puncta. **A.’s syr′inge,** delicate syringe for the injection of fluids into the lacrymal duct.

**Ane′mia, Ane′mic.** Anæmia; anæmic.

**Anemiop′sis califor′nica.** South American plant, rhizome of which is used in malaria and dysentery.

**Anem′one** (*anemos*, wind). Genus of plants, ord. *Ranunculaceæ*. Windflower. **A. cer′nua** has similar properties to A. pulsatilla. **A. colli′na,** A. pulsatilla. **A. corona′ria,** European plant; root is purgative and applied in diseases of the eye; herb in ulcers and skin diseases. **A. hepat′ica,** Hepatica triloba. **A. interme′dia,** A. pulsatilla. **A. nemoro′sa,** wood anemone; herb and flowers are poisonous, acrid, corrosive, and rubefacient. **A. pa′tens,** indigenous; possesses properties similar to those of A. nemorosa. **A. praten′sis,** meadow anemone; this European plant has properties similar to the preceding. **A. pulsatil′la,** pasque flower; possesses properties like those of A. nemorosa. **A. ru′bra,** A. pratensis. **True-leaved a.,** Thalictum anemonoides. **A. sylves′tris,** A. pratensis.

**Anemonin′.** $C_{15}H_{12}O_6$. Principle from Anemone pulsatilla, resembling aconitine; used in asthma, bronchitis, etc., and as an anodyne, in doses of gr. ½–j (0.03–0.06).

**Anem′onol.** Oil of anemone; powerful volatile oil from various anemones, causing vesication.

**Anem′ony.** Anemone.

**Anemop′athy** (*anemos*, air, *pathos*, disease). Treatment of disease by inhalation.

**Anemop′sis califor′nica.** Yerba mansa. Leaves of this herb of Western United States and Mexico are stimulant and astringent, and applied externally to venereal sores.

**Anencephalæ′mia** or **Anencephalohæ′mia** (*a*, priv., *enkephalos*, encephalon, *haima*, blood). Deficiency of blood in the brain. Syncope.

**Anencephal′ia.** See *Anencephalus.*

**Anencephal′ic.** Anencephalous.

**Anenceph′alism.** See *Anencephalus.*

**Anencephaloneu′ria** or **Anencephaloner′via** (*a*, priv., *enkephalos*, encephalon, *neuron*, nerve). Defective nervous action in the encephalon.

**Anencephalot′rophy** (*a*, priv., *enkephalos*, encephalon, *trophe*, nourishment). Atrophy of the brain.

Anencephalus.

**Anenceph′alus** (*a*, priv., *enkephalos*, brain). Devoid of brain; a monster in which there is entire absence of brain. One which has part only of the brain is a *paracephalus.*

**Anenerga′sia** or **Anener′gia** (*a*, priv., *ergon*, work). Debility.

**Anen′tera** (*a*, priv., *enteron*, intestine). Infusoria devoid of intestines.

**Anenteræ′mia** (*a*, priv., *enteron*, intestine, *haima*, blood). Anæmia of the intestines.

**Anentera′ta** (*a*, priv., *enteron*, intestine). Without intestines. See *Anenterelmintha.*

**Anen′terate.** Without intestines.

**Anenterelmin′tha** (*a*, priv., *enteron*, intestine, and *helmins*, worm). Worms unprovided with intestinal canal.

**Anenteroner′via** or **Annyteroneu′ria** (*a*, priv., *enteron*, intestine, *neuron*, nerve). Atony of the intestines. **A. saturni′na** is due to lead poisoning.

**Anenterot′rophy** (*a*, priv., *enteron*, intestine, *trophe*, nourishment). Defective nutrition of the intestines.

**Anen′terous.** Possessing no intestinal canal; anenterate.

**Anep′ia** (*anepes*, without speech). Defect or loss of speech.

**Anepic′ritus** (*a*, priv., *epikrisis*, judgment). Of deficient mental power.

**Anepiplo′ic** (*a*, priv., *epiploon*, omentum). Devoid of omentum.

**Anepis′chesis** (*a*, priv., *epischesis*, retention). Incontinence of urine.

**Anepithy′mia** (*a*, priv., *epithymia*, desire). Loss of appetite, as hunger, thirst, venery, etc. **A. chloro′sis,** chlorosis.

**Anerethi′sia** (*a*, priv., *erethizo*, to irritate). Defect of irritability, as of muscle or nerve.

**Aner′gia.** Want of energy.

**Aner′gic.** Abnormally passive; incapable of work, as a. dementia or a. stupor.

**An′eroid** (*a*, priv., *neros*, moist). Free from moisture; without fluid. **A. barom′eter,** see *Barometer.*

**Aner′via.** Paralysis; defect of nervous power.

**Anerythroblep′sia** (*a*, priv., *erythros*, red, *blepo*, to see). Color-blindness as to red.

**Anerythrop′sia** (*a*, priv., *erythros*, red, *opsis*, vision). Anerythroblepsia.

**Ane′sia** or **Ane′sis** (*anienai*, to relax). Remission, as of fevers.

**Anesin′** or **An′esone.** Acetone chloroform; employed in the production of infiltration anæsthesia in a 1 per cent. solution; has also been given as a hypnotic in doses of gr. viiss–xv (0.5–1.0).

**Anesthe′sia.** Anæsthesia.

**An′et.** Dill, anethum, or carum graveolens.

**An′ethene.** $C_{10}H_{16}$. A constituent of oil of dills.

**An′ethol.** $C_{10}H_{12}O$. Principal component of oils of fennel and anise.

**Ane′thum.** Fœniculum capillaceum, fennel or finckle, anet, sweet fennel, ord. *Umbelliferæ.* The fruit, fœniculum, has an aromatic odor and warm, sweetish taste; it is carminative. Oil—*oleum fœniculi*, oil of fennel—is official, dose, ♏j–v (0.06–0.3); root is pectoral and diuretic; the water of fennel, aqua fœniculi, is given as an excipient in doses of ʒj–℥j (4.0–32.0). **A. fœnic′ulum,** anethum. **A. grave′olens,** dill; native of south of Europe; seeds, anethi fructus, are stimulant and carminative. Distilled water, aqua anethi, dill-water, and oil, oleum anethi, oil of dill, are official in some pharmacopœias. **A. pastina′ca,** Pastinaca sativa. **A. piperi′tum,** anethum. **A. seg′etum,** anethum.

**Anet′ic.** Anodyne; remitting.

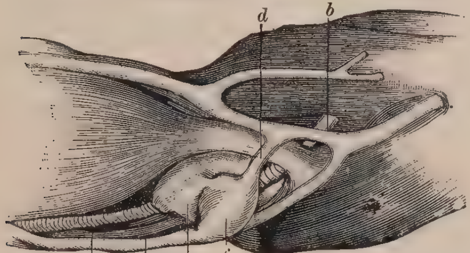
**Ane′tus.** An old name for intermittent fever. **A. quarta′nus,** quartan. **A. quotidia′nus,** quotidian. **A. tertia′nus,** tertian fever.

**Aneu′ria** (*a*, priv., *neuron*, nerve). Paralysis; defect of nervous power.

**An′eurysm** (*ana*, up, *euryno*, to dilate). Tumor produced by rupture or dilatation of the coats of an artery; the term has been extended also to dilatation of the heart. (Often improperly spelled *aneurism.*) There are various kinds of aneurysm; the following are the chief:

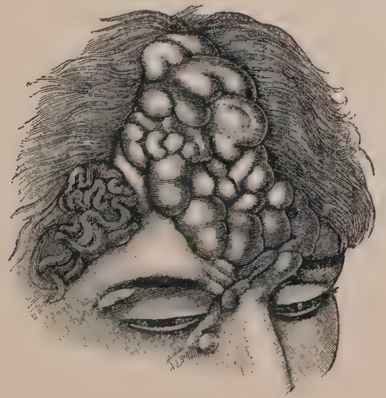
I. When the blood which forms the tumor is enclosed within the dilated coats of the artery. This is the *true aneurysm, ectatic aneurysm, aneurysma verum, hernia arteriarum.*

II. When the blood has escaped from the opened artery it is called *spurious* or *false aneurysm, aneurysma spurium, ruptura arteriæ, arteriorrhexis, arteriodialysis, ecchymoma arteriosum.* This is divided into three varieties: 1. *Diffused false aneurysm,* which occurs immediately after division or rupture of an artery, and consists of extravasation of blood into the areolar texture. 2. *Circumscribed false aneurysm,* in which the blood issues from the vessel some time after receipt of the wound, and forms itself a sac in the neighboring areolar tissue. 3. *Aneurysm by anastomosis, varicose* or *racemose aneurysm, arteriovenous aneurysm, phlebarteriodialysis, aneurysma venoso-arteriosum, varicosum,* or *racemosum angioma arteriale racemosum,* which may arise from simultaneous wounding of an artery and vein, the arterial blood passing into the vein and producing a varicose state of it, or by increase of arterial tissue and dilatation and elongation of the artery.



Arteriovenous aneurysm at bend of elbow. *a*, brachial artery; *b*, radial artery; *c*, basilic vein; *d*, median basilic vein; *e*, aneurysmal sac; *f*, dilated vein. (Lenois.)

III. *Mixed aneurysm* is that arising from dilatation of one or two of the coats, with division or rupture of the other. Some authors have made two varieties of this: 1. *Mixed external aneurysm,* when the internal and middle coats are ruptured and the areolar is dilated. 2. *Mixed internal aneurysm,* in which the internal coat is dilated and protrudes, like a hernial sac, through the ruptured middle and outer coats. This variety has been called *hernial aneurysm.*



Cirsoid aneurysm. (Bruns.)

A *sacciform* or *sacculated aneurysm, aneurysma sacculatum,* consists of a distinct sac or bag, having a comparatively narrow channel of communication with the artery. A *fusiform, cylindroid, tubular,* or *tubulated aneurysm, aneurysma fusiforme,* is one formed by dilatation of all the coats of the vessel and elongation of the affected part of the artery. A *cirsoid aneurysm* is a condition in which a portion of an artery becomes elongated, dilated, and tortuous.

Aneurysms have been termed *traumatic, aneurysma ex vulnere,* or *exogenous* and *spontaneous,* according as they may have been caused by a wound or have originated spontaneously. The latter, when originating from lesions of the inner coats of arteries, have been termed *endogenous.* They also receive the name of the vessel implicated, as *carotid aneurysm, aortic aneurysm,* etc.

Aneurysms have also been divided into *internal* and *external.* The internal aneurysms are situated in the great splanchnic cavities, and occur in the heart and great vessels of the chest, abdomen, etc. Their diagnosis is difficult, and they are often inaccessible to surgical treatment. External aneurysms are situated near the surface of the head, neck, and limbs, and are distinctly pulsatory.

Aneurysms may be caused by atheromatous or other degenerations of the artery, embolism, syphilis, external injury, wounds, etc., predisposition being established by age, sex, occupation, etc. Sometimes a number of arteries are affected, constituting an *aneurysmal diathesis.*

Aneurysms are generally of slow growth and chronic existence, being governed in this by the duration of the exciting cause, the force of the circulation, condition of the aneurysmal sac, etc.

Aneurysms, especially the internal, may be combated by rest and debilitant treatment, on the plan of Valsalva, consisting in repeated bloodletting, with food enough merely to support life. The local treatment of aneurysm consists in the use of digital or mechanical compression, ligation of the artery, manipulation, injection into the sac of styptic solutions (dangerous), the introduction of a long, fine wire, with or without the use of electricity, or the latter alone, the administration of gelatin per os or subcutaneously, etc.

**An′eurysm by anastomo′sis, A. anastomot′icum.** For this and other varieties of aneurysm not found here, see under the prime, or the qualifying word (abdominal, aortic, etc.). **Ampul′lary a.,** sacculated a. **Bérard's′ a.,** varicose a. surrounding a vein. **Bone a.,** osteo-aneurysm. **Branch′ing a.,** cirsoid a. **Car′diac a.,** a. of the heart. **Cir′soid a.,** a dilated, elongated, and tortuous condition of a segment of an artery. **Com′pound a.,** mixed a. **Consec′utive a.,** diffuse or diffused a., see under *Aneurysm.* **Cys′tic a.,** sacculated form of a. **Cystogen′ic a.,** a. from bursting of a cyst into an artery. **Dissect′ing a.,** aneurysma dissecans, is one in which, owing to rupture of the inner and middle coats of an artery, the blood makes itself a channel between these coats and the outer coat. In many cases the lesion appears to consist in separation of the laminæ of the middle coat, between which the blood forms itself a channel. It occurs in old persons, particularly in women. **Embol′ic a.,** a. of small artery from plugging by an embolus. **Encys′ted a.,** circumscribed a. **A. by ero′sion,** aneurysmal varix. **A. of the heart,** cardionchus, cardieurysma, cardianeurysma, has been divided into active and passive. The active forms are scarcely aneurysms, as they commonly consist of increased thickness of the parietes of the heart, diminishing its cavity instead of increasing it. The term *hypertrophy of the heart* better indicates their character. Passive aneurysm, cardiectasis, better expressed by the term *dilatation of the heart,* on the contrary, is attended with extenuation of the parietes of the organ and enlargement of the cavities. The impulse is feebler than usual. Both sounds are widely transmitted over the thorax, and are not much fainter at a distance from their point of origin. Partial or true aneurysm of the heart, cardiectasis partialis, aneurysma consecutivum cordis, is sometimes, but rarely, seen. **Her′nial a.**, form of a. in which the inner coat of the artery protrudes through the ruptured outer coat. **Intracra′nial a.**, a. of the basilar, anterior cerebral, internal carotid, or other artery within the cranium. **Lat′eral a.**, one projecting from the side of an artery, not fusiform. **Med′ical a.**, internal a., one not amenable to surgical treatment. **Mil′iary a.**, minute a., usually multiple, of the arterioles (of the brain chiefly), resulting from atheroma or senile changes, and often causing apoplexy by rupture. **Mixed a.**, see under the prime. **A. nee′dle,** a flat needle or probe used for the passage of a ligature about the artery preparatory to its occlusion in aneurysm. **Park's a.**, arteriovenous a., with communication between the artery and two neighboring veins. **Pott's a.**, aneurysmal varix. **Ra′cemose,** cirsoid or varicose a., see under *Aneurysm.* **Val′vular a.**, a. affecting the valves of the heart; pouch-like projections of the valves into the auricles. **Ver′minous a.**, a. containing filaria or other hæmatozoa.

**Aneurys′mal** or **Aneurysmat′ic.** That which belongs to aneurysm. **A. can′cer**, telangiectatic cancer. **A. cyst,** sort of pouch formed by dilatation of the coats of an artery in which the blood forming the aneurysmal tumor is contained. **A. diath′esis**, general condition, such as atheroma, predisposing to the formation of aneurysms. **A. sac,** a. cyst. **A. tu′mor,** aneurysm. **A. var′ix,** arteriovenous aneurysm without intervening sac.

**Aneurys′moid.** Resembling an aneurysm.

**Aneuthana′sia** (*a*, priv., *euthanasia*, easy death). Painful death.

**Anfractuos′ity** (*an*, around, *frango*, to break). Groove or furrow; sinuous depression or sulcus, of greater or less depth, like those separating the convolutions of the brain from each other. **Cer′ebral a.**, one of a number of narrow sulci or fissures, deeper on the convexity of the brain than at the base, lined by prolongations of the pia mater. **Ethmoid′al a.**, ethmoidal cell.

**Anfrac′tuous.** Sinuous; tortuous.

**Anfrac′tus.** Anfractuosity. **A. cer′ebri,** cerebral anfractuosity.

**Angat′ra.** Disease of Madagascar, with zonular pain in the head and abdomen, accompanied by wasting.

**Angei-.** For words thus beginning, see *Angi-*.

**Angei′a.** Vessels. **A. pneumot′ica,** an ancient term for arteries.

**Angeiitis,** an-gi-e′tis. Inflammation of vessels.

**Angel′ic acid.** Crystalline acid from angelica root, croton oil, etc. **A. root,** root of Angelica lucida.

**Angel′ica.** Order *Umbelliferæ*, native of Lapland; root, stalk, leaves, and seed are aromatic and carminative; sweetmeat is made of the root. **A. archangel′ica,** angelica. **A. atropurpu′rea,** masterwort; indigenous species; virtues same as those of angelica of Europe. **A. levist′icum,** Ligusticum levisticum. **A. lu′cida,** angelic root, bellyache root, nendo, white-root; indigenous plant, root of which is aromatic, stomachic, and tonic; also Ligusticum actæifolium. **A. nen′do,** Ligusticum actæifolium. **A. officina′lis,** imperatoria. **A. paludapifo′lia,** Ligusticum levisticum. **A. root,** root of angelica and imperatoria. **A. sati′va,** A. sylvestris. **A. sylves′tris,** wild angelica, possesses similar properties to A. lucida, but in an inferior degree; the seeds, powdered and put into the hair, are used to destroy lice. **A. tree,** Aralia spinosa. **A. triquina′ta,** Angelica atropurpurea.

**Angelicin′.** Resin extracted from angelica root.

**Angeli′næ cor′tex.** Bark of a Grenada tree; anthelmintic and cathartic.

**An′gel's wing.** Flaring of the shoulder-blade with deformity of the spine.

**Angidiecta′sia.** Telangiectasia.

**Angidiospon′gus** (*angeion*, small vessel, *spongos*, fungus). Hæmatodes fungus.

**Angiecta′sia** or **Angiec′tasis** (*angeion*, vessel, *ektasis*, dilatation). Dilatation of vessels. See *Telangiectasis.* **A. capilla′ris,** vascular nævus. **A. veno′sa,** varix.

**Angiecto′ma.** Swelling caused by dilatation of vessels.

**Angiecto′pia** (*angeion*, vessel, *ek*, out of, *topos*, place). Condition in which vessels are out of their natural situation or take an abnormal course.

**Angielco′sis** (*angeion*, vessel, *helkos*, ulcer). Ulceration of blood-vessels.

**Angiemphrax′is** (*angeion*, vessel, *emphraxis*, obstruction). Obstruction of vessels.

**Angien′chyma** (*angeion*, vessel, *enchyma*, infusion). Vascular membrane or tissue.

**Angieurys′ma** (*angeion*, vessel, *eurysma*, dilatation). Dilatation of vessels; angiectasis.

**Angiï′tis.** Inflammation of vessels.

**Angi′na** (*ancho*, choke). Sense of suffocation; sore throat. Inflammation of the supradiaphragmatic portion of the alimentary canal and of the air passages. Latin writers applied the term to every disease in which deglutition or respiration was affected, provided such affection was above the stomach and lungs. Angina of the moribund was dysphagia or difficult deglutition preceding death. A painful heart spasm. **A. accesso′ria,** retropharyngeal abscess. **A. acu′ta,** catarrhal sore throat. **A. angino′sa,** scarlatina anginosa. **A. aphtho′sa,** aphthæ. **A. aquo′sa,** œdema of the glottis. **A. arthrit′ica,** sore throat occurring as a manifestation of the "uric-acid diathesis." **Benign′ croup′ous a.**, herpetic pharyngitis. **A. bronchia′lis,** bronchitis. **A. cani′na,** croup. **A. cantato′rum,** singers' sore throat. **A. carbuncula′ris,** carbuncle of the throat. **A. cardi′aca,** a. pectoris. **A. catarrha′lis,** catarrhal inflammation of the mucous membrane of the pharynx, soft palate, uvula, and tonsils. **A. clerico′rum,** clergymen's sore throat. **A. convulsi′va,** œsophagismus. **A. cor′dis,** a. pectoris. **A. cru′ris,** intermittent claudication, an affection characterized by attacks of intense paroxysmal pain in the leg, with local cyanosis and a limping gait; the cause lies in obstructed circulation in the affected limb by reason of arteriosclerosis or atheroma. **A. diphther′ica** or **diphtherit′ica,** diphtheritic inflammation of the fauces and palate. **Diph′theroid a.**, a form of membranous tonsillitis associated with the constant presence of Bacillus fusiformis; B. diphtheriæ is absent. **A. epidem′ica,** cynanche maligna. **A. epiglottide′a,** epiglottitis. **A. erysipelato′sa,** erythematous or erysipelatous sore throat. **A. exsudato′ria,** cynanche trachealis. **A. exter′na,** cynanche parotidea. **A. fau′cium,** isthmitis. **A. fau′cium exsudati′va,** diphtheritic pharyngitis. **A. fau′cium malig′na,** cynanche maligna; diphtheria. **Fi′brinous a.**, diphtheroid sore throat. **A. folliculo′sa,** follicular tonsillitis or pharyngitis. **A. gangræno′sa,** cynanche maligna. **A. glandulo′sa** or **granulo′sa,** follicular pharyngitis or tonsillitis. **Hog′skin a.**, pharyngitis diphtheritica. **A. hu′mida,** cynanche trachealis. **A. infan′tum,** croup. **A. inflammato′ria,** cynanche; cynanche trachealis. **A. inter′na,** croup. **A. lacuna′ris,** inflammation of lacunæ of the tonsil. **A. larynge′a,** laryngitis. **A. larynge′a œdemato′sa,** œdema of the glottis. **A. lingua′ria,** glossitis. **A. Ludovi′ci** or **Ludwig′ii** (after Ludwig, of Stuttgard, who first fully described it), phlegmonous inflammation of the floor of the mouth and the intermuscular and subcutaneous connective tissue of the submaxillary region, sometimes terminating in diffuse gangrene and sloughing. **A. malig′na,** diphtheritic pharyngitis. **A. maxilla′ris,** cynanche parotidea. **A. membrana′cea** or **membrano′sa,** membranous croup. **A. mi′tis,** isthmitis. **A. morbillo′sa,** catarrhal sore throat accompanying measles. **A. nasa′lis,** inflammation of the posterior portion of the Schneiderian membrane lining the nose; acute posterior nasal catarrh. **Nosoco′mic a.**, pharyngitis ulcerosa. **A. œdemato′sa,** œdema of the glottis. **A. palati′na,** inflammation of the velum palati. **A. paralyt′ica,** diphtheritic paralysis. **A. parotide′a exter′na,** mumps. **A. pec′toris,** diaphragmatic gout, suffocative breast-pang, cardiac apnœa, neuralgia of the heart; a disease, principal symptoms of which are violent pain about the sternum, extending toward the shoulder, especially the left, anxiety, great dyspnœa, and sense of suffocation, diminished frequency of pulse with alteration of volume and rhythm, pallor, cold sweat, and sense of approaching death. It is primarily a vasomotor affection of great danger, often connected with valvular disease, embolism or ossification of the coronary arteries, or other morbid condition of the heart. Name also of an acutely painful intermittent affection of the heart, seeming to differ from true angina pectoris more in the fact that it is not of discoverable organic cause than in its nature or treatment. The following is the modern classification of the affections grouped under this name: 1. *Angina vasomotoria* or *pseudo-angina.* 2. *Angina pectoris gravior,* of which two varieties are recognized, *secondary cardiac angina* and *primary cardiac angina* (syncope anginosa of Parry), in which the pathological cause of the affection is entirely within the heart substance. The most powerful stimulating and narcotic antispasmodics are required during the paroxysm of angina pectoris; friction and hot applications externally; nitrite of amyl by inhalation or nitroglycerin internally. **A. pellicula′ris,** diphtheritic pharyngitis. **A. pernicio′sa,** cynanche trachealis. **A. pestilentia′lis,** diphtheria. **A. phlegmono′sa,** acute inflammation of tonsils, with tendency to suppuration; quinsy. **A. plas′tica,** diphtheria. **A. polypo′sa,** cynanche trachealis. **A. pseudomembrano′sa,** diphtheritic pharyngitis. **A. pulpo′sa,** cynanche trachealis. **Pulta′ceous a.,** tonsilitis with white or grayish patches. **A. rheumat′ica,** a. arthritica. **A. sanguin′ea,** cynanche tonsillaris. **A. scarlatino′sa,** severe sore throat occurring in scarlet fever. **A. sero′sa,** catarrhal a.; œdema of the glottis. **A. sic′ca,** chronic inflammation of the pharynx, with distressing sense of dryness and heat. **A. sim′plex,** catarrhal sore throat. **A. spasmod′ica** or **spast′ica,** asthma thymicum; laryngismus stridulus. **A. squirro′sa,** difficulty of deglutition from scirrhous disorganization of the pharynx or œsophagus, or from enlarged tonsils. **A. strangulato′ria,** cynanche trachealis. **A. strepito′sa,** cynanche trachealis. **Streptococ′cus** or **Streptococ′cal a.,** inflammatory sore throat due to the demonstrable presence of streptococci. **A. strid′ula,** laryngismus stridulus; membranous croup. **A. suffocato′ria,** cynanche trachealis. **A. synocha′lis,** tonsillitis. **A. syphilit′ica,** syphilis affecting the throat. **A. thy′mica,** laryngismus stridulus; thymic asthma. **A. thyroi′dea,** inflammation of the thyroid gland. **A. tonsilla′ris,** tonsillitis. **Tox′ic a.,** dependent on poisoning or blood poisoning. **A. trachea′lis,** cynanche trachealis. **A. cum tumo′re,** tonsillitis. **A. ulcero′sa,** cynanche maligna; pharyngitis ulcerosa. **A. uvula′ris,** staphylœdema; uvulitis. **A. vasomoto′ria,** a. pectoris. **Vin′cent′s a.,** a diphtheroid sore throat due to the presence of a fusiform bacillus often in symbiosis with a spirillum.

**An′ginal.** Relating to angina.

**Anginopho′bia.** A morbid and causeless dread of angina pectoris.

**An′ginose, An′ginous,** or **An′ginoid.** Relating to angina, as anginose scarlatina.

**Angioasthe′nia.** Want of tone in the arteries.

**Angioatax′ia.** Irregularity in vascular tension.

**An′gioblast.** A mesoblastic cell taking part in the formation of the vessels.

**Angiocardiokinet′ic** (*angeion,* vessel, *kardia,* heart, *kinesis,* motion). An agent or remedy affecting the movements of the heart and blood-vessels.

**Angiocardi′tis.** Inflammation of the heart and great vessels.

**Angiocaver′nous.** Relating to or resembling angioma cavernosum.

**Angiocholi′tis** (*angeion,* vessel, *chole,* bile). Inflammation of the bile-ducts.

**Angioder′ma pigmento′sum.** Atrophoderma pigmentosum.

**Angio′des.** Full of vessels.

**Angiodesmo′sis** (*angeion,* vessel, *desme,* band). Trophic disease of the corium and subcutaneous connective tissue, due to constriction of the cutaneous blood-vessels or lymphatics.

**Angiodias′tasis** (*angeion,* vessel, *diastasis,* separation). Angiectasis; dilatation or abnormal position of the vessels; a gaping of the divided end of a vessel.

**Angiodystro′phia** or **Angiodys′trophy.** Any disease of the vessels. **Ova′rian a.,** disease of the ovary, due primarily to vascular lesions of that organ.

**Angioelephanti′asis.** Elephantiasis of the connective-tissue layer of the skin, extending thence to the surface; elephantiasis telangiectodes.

**Angioepidermido′sis** (*angeion,* vessel, *epi,* upon, *derma,* skin). Affection of the skin characterized by trophic changes in the epidermis, with derangement of superficial blood-vessels.

**Angiogen′esis** or **Angiogeny** (an-je-oj′en-e). Formation of vessels.

**Angioglio′ma.** Vascular glioma of the spinal cord.

**An′giograph.** Sphygmograph.

**Angiog′raphy.** Description of the vessels; use of the sphygmograph.

**Angiohydrog′raphy** or **Angiohydrol′ogy.** Description of the lymphatic vessels.

**An′gioid.** Resembling a blood-vessel or lymph-vessel. **A. streaks,** pigmentary striæ, resembling blood-vessels, seen in the retina after hemorrhage in the part.

**Angioi′tis.** Angeitis.

**Angiokerato′ma.** Rare cutaneous affection, commencing with red specks, which become prominent and hard; being due to dilatation or new formation of blood-vessels.

**Angioleuci′tis.** Inflammation of the lymphatic vessels; lymphangitis.

**Angiolipo′ma.** A mixed angioma and lipoma.

**An′giolith** (*lithos,* stone). Phlebolith.

**Angiolith′ic.** Characterized by calcareous degeneration of the vessels. **A. sarco′ma,** psammoma.

**Angiol′ogy.** The anatomy, physiology, and pathology of the vessels, including arteriology, phlebology, and angiohydrology.

**Angiolymphi′tis.** Angioleucitis.

**Angiolympho′ma.** A neoplasm formed of lymphatics.

**Angio′ma.** A vascular tumor composed mainly of newly formed blood-vessels or of blood-vessels with newly formed elements in their walls. **A. arteria′le,** cirsoid aneurysm. **A. atroph′icum,** xeroderma pigmentosum. **A. capilla′re,** nævus; telangiectasis. **A. caverno′sum,** form of angioma in which there are communicating cavities between the vessels. **Congen′ital a.,** nævus. **A. elephanti′acum,** angioelephantiasis. **Infec′tive a.,** a. serpiginosum. **A. lipomato′des,** angioelephantiasis. **A. lymphat′icum,** lymphangioma. **A. neurot′icum,** angioelephantiasis. **A. pigmento′sum,** nævus pigmentosus. **A. pigmento′sum et atroph′icum,** xeroderma pigmentosum. **Plex′iform a.,** a common form of a. of the skin in which the capillaries are dilated and tortuous. **A. racemo′sum,** cirsoid aneurysm. **A. serpigino′sum,** a disorder of the skin characterized by the appearance of minute bright reddish points, due to increased vascularity, usually grouped in annular patches. **A. sim′plex,** nævus. **A. telangiectat′icum,** a. with dilated blood-vessels. **A. tubero′sum,** lipogenous form of a. **A. varico′sum,** venous telangiectasis. **A. veno′sum,** a. cavernosum. **A. verruco′sum,** nævus verrucosus.

**Angiomala′cia** or **Angiomala′kia.** Softening of the walls of the vessels.

**Angio′matous.** Relating to or resembling an angioma.

**Angiom′eter.** Instrument for measuring the capacity and tension of the vessels.

**Angiomyocar′diac.** Relating to blood-vessels supplying the cardiac muscles.

**Angiomyo′ma.** A vascular erectile muscular tumor.

**Angiomyosarco′ma.** A mixed myoma and sarcoma of very vascular character.

**Angioneoplas′ma.** Angioma; vascular tumor.

**Angioneurec′tomy.** Excision of the nerves and vessels of a part; specifically, exsection of most of the components of the spermatic cord for the relief of enlarged prostate.

**Angioneu′ro-œde′ma.** Angioneurotic œdema.

**Angioneurosin′.** Nitroglycerin.

**Angioneuro′sis.** Neurosis of the bloodvessels of a part, as of the skin, spinal cord, cortex of the brain, etc. Herpes zoster is a vasomotor neurosis in the superficial cutaneous layers—an exanthematous angioneurosis.

**Angioneurot′ic.** Relating to angioneurosis. **A. œde′ma,** circumscribed œdema due to vasomotor disturbance.

**Angioneurot′omy.** Division of the vessels and nerves of a part.

**Angiono′ma.** Vascular growth; applied also, generically, to aneurysm, erectile tumors, and varix.

**Angiopancreati′tis.** Inflammation of the vascular structures of the pancreas.

**Angioparal′ysis.** Paralysis of vasomotor nerves.

**Angioparalyt′ic.** Relating to angioparalysis.

**Angiopar′esis.** Slight or partial vasomotor paralysis.

**Angioparet′ic.** Relating to angioparesis.

**Angiopath′ia** or **Angiop′athy** (*angeion,* vessel, *pathos,* disease). Disease affecting the vessels, especially the bloodvessels.

**Angiopath′ic.** Relating to a vascular disorder.

**Angiopla′nia** (*angeion,* vessel, *plane,* wandering). Anomaly in structure or distribution of vessels.

**Angioplas′tic** (*plasso,* to form). Forming new vessels.

**Angiorrha′gia** (*angeion,* vessel, *regnymi,* to burst). Active hemorrhage.

**Angiorrhex′is** (*rhexis,* rupture). Rupture of a vessel.

**Angiorrhœ′a** (*rheo,* to flow). Passive hemorrhage.

**Angiosarco′ma.** Vascular sarcoma.

**Angiosclero′sis.** Induration of the walls of the vessels, especially the blood-vessels.

**An′gioscope** (*angeion + skopeo,* to see). Instrument in the nature of a microscope for examining the capillary vessels.

**Angios′copy.** Examination of the arterioles and capillaries.

**Angiosiali′tis** (*sialon,* saliva). Inflammation of a salivary duct.

**Angio′sis.** Disease or morbid condition of vessels.

**An′giospasm.** Vasomotor spasm.

**Angiospas′tic.** Relating to vasomotor spasm.

**Angiosteno′sis** (*stenosis,* contraction). Narrowing or contraction of the vessels.

**Angiosteo′sis** or **Angiosto′sis.** Ossification of vessels.

**Angios′trophe** or **Angios′trophy** (*strepho,* to turn). See *Torsion.*

**Angiosym′physis.** Union or close apposition of vessels.

**Angiosynize′sis** (*synizesis,* falling together). Collapse of blood-vessels.

**Angiot′asis** (*tasis,* tension). Tension of vessels.

**Angiotat′ic.** Relating to tension of vessels.

**Angiotelecta′sia** or **Angiotelec′tasis** (*angeion,* vessel, *telos,* end, *ektasis,* extension, dilatation). Dilatation of the arterioles and capillary vessels. See *Telangiectasia.*

**An′giotome.** Vascular segment of the embryo.

**Angiot′omy.** Dissection or anatomy of vessels.

**An′giotribe** (*tribo,* to crush). A powerful instrument for crushing the tissues and compressing the contained vessels, in order to arrest hemorrhage.

**Angiotrip′sy.** Arrest of hemorrhage by means of the angiotribe.

**An′gle** (Lat., *angulus*). Space included between two lines or planes which intersect. The angles of medical significance are those chiefly of anatomy, craniometry, and optics. **A. of aberra′tion, Acro′mial a., Al′pha a.,** etc., see the qualifying words.

**Ang′nail.** Hangnail.

**Ango′la seed.** Jequirity.

**An′gona,** properly **An′chona** (*ancho,* to choke). Globus hystericus.

**Angophra′sia** (*ancho,* to choke, *phrasis,* speech). Defective speech, in which certain sounds are drawled or dwelt upon at greater length than others; occurs in paralytic dementia.

**An′gor.** Extreme anxiety accompanied with painful constriction at the epigastrium, often with palpitation and oppression. **A. fau′cium,** isthmitis. **A. pec′toris,** angina pectoris.

**Angostu′ra bark.** See *Cusparia.*

**Angræ′cum carina′tum.** Juice of this E. Indian plant is purgative and anthelmintic. **A. fra′grans,** plant indigenous to Isle of Bourbon and Mauritius, whose leaves, under the name of *faham,* have been used as a substitute for Chinese tea.

**An′gry.** Inflamed.

**Anguil′lula.** Genus of nematoid worms, *Anguillidæ.* **A. intestina′lis,** form of intestinal worm. **A. stercora′lis,** worm found in the intestines in some forms of tropical diarrhœa.

**An′guish.** Angor; agony. **Feb′rile a.,** combination of weariness, pain, weakness, etc., affecting the head and neck, generally observed at the commencement of a fever.

**An′gular.** Relating to an angle. **A. ap′erture,** angle formed by the rays of light at the focal point of a microscope. **A. ar′tery and vein,** facial artery and vein, because they pass under the angle of the jaw, and especially the terminations of these vessels, because they pass by the greater angle of the eye. **A. convolu′tion** or **gy′rus,** cerebral convolution connecting the supertemporal and meditemporal gyri. **A. nerve,** filament furnished by the inferior maxillary passing near the greater angle of the eye. **A. proc′esses** of the frontal bone are seated near the angles of the eyes.

**Angular′is scap′ulæ.** Levator scapulæ muscle.

**Angula′tion.** The formation of sharp flexures in the bowel, causing constipation.

**An′gulilabial′is.** Depressor anguli oris muscle.

**An′gulus.** Angle. **A. cost′æ,** angle of the rib. **A. eth′molacryma′lis,** ethmolacrymal angle. **A. fronta′lis,** anterior superior angle of the parietal bone. **A. Ludovi′ci,** Louis's angle. **A. ocula′ris,** canthus of the eye. **A. oc′uli,** corner or canthus of the eye. **A. op′ticus,** visual angle. **A. o′ris,** angle of the mouth. **A. præcordia′lis,** subcostal angle. **A. veno′sus,** angle of junction of the internal jugular and subclavian veins. **A. visua′lis** or **viso′rius,** visual angle.

**Angusta′tio** (*angustus,* narrow). Narrowing, stenosis, stricture. **A. cor′dis,** systole.

**Angus′tia.** Anxiety; narrowness, strait, constriction; narrow portion of the lacrymal canal. **A. abdomina′lis pel′vis,** brim of the pelvis. **A. perinæa′lis,** outlet of the pelvis; inferior pelvic strait. **A. præcordio′rum,** asthma. **A. tym′pani,** isthmus of the tympanum. **A. uri′næ,** strangury.

**Angustu′ra.** Cusparia febrifuga; Galipea cusparia. **A. bark,** see *Cusparia.* **False a.** or **A. spu′ria,** Brucia antidysenterica; Strychnos nux vomica. **A. trifolia′ta,** Cusparia febrifuga.

**Angusturine′.** $C_{10}H_{40}NO_{14}$. Bitter alkaloid of cusparia.

**Anhæmato′sia** or **Anhæmato′sis.** Deficient blood formation or aëration; anæmia.

**Anhalonine′.** A powerfully toxic alkaloid, resembling strychnine, obtained from Anhalonium lewinii, a cactus of Mexico; employed as a heart stimulant and in asthma and angina pectoris.

**Anhaph′ia.** Anaphia.

**Anhedo′nia** (*a,* priv., *hedone,* pleasure). Morbid mental state in which what formerly gave pleasure no longer does so.

**Anhela'tio** or **Anhela'tion** (*anhelo*, to pant). Panting, gasping, short and rapid breathing; sometimes employed synonymously with asthma.

**Anhel'itus.** Anhelation; asthma.

**Anhe'lous.** Asthmatic; dyspnœic; out of breath.

**Anhepatogen'ic** or **Anhepatog'enous.** Not due to causes referable to the liver.

**Anhidro'sis** (*a*, priv., *hidroo*, to perspire). Deficient or absent secretion of sweat.

**Anhidrot'ic.** Checking or suppressing the secretion of sweat; also any agent or drug having such property. These drugs act directly upon the sweat glands and the nervous mechanism of sweat secretion, or on the circulation. The chief remedies of this class are the mineral acids, atropine and belladonna, white agaric, fly agaric, muscarine, hyoscyamus, strychnine, quinine, picrotoxin, and zinc salts.

**Anhis'tous** or **Anhist'ic** (*a*, priv., *histos*, organic texture). Anorganic; amorphous; without definite shape or structure. Tunica decidua uteri is termed an anhistous membrane.

**Anhydræ'mia** (*a*, priv., *hydor*, water, *haima*, blood). Condition of the blood in which there is a diminished quantity of serum.

**Anhy'dride** (*a*, priv., *hydor*, water). Name given to chemical combinations which may be regarded as water in which the hydrogen has been replaced by an acid or basic radical; the latter are called usually metallic oxides, the name anhydride being retained for the acid substitutions.

**Anhydroglycochlo'ral.** Chloralose.

**Anhydromye'lia** (*a*, priv., *hydor*, water, *myelos*, marrow). Deficiency or absence of the cerebrospinal fluid.

**Anhy'drous** (*a*, priv., *hydor*, water). Devoid of water, as a. alcohol, absolute alcohol.

**Anhys'tera** (*a*, priv., *hystera*, uterus). Absence of the uterus; ametria.

**Anianthinop'sia** or **anian'thinopsy** (*a*, priv., *ianthinos*, violet, *opsis*, vision). Color-blind to violet.

**Anidro'sis.** Anhidrosis.

**Anidrot'ic.** Anhidrotic.

**An'ile** (*anus*, old woman). Senile.

**Anile'ma** or **Anile'sis** (*aneileo*, to roll up). Borborygmus; tormina.

**Anil'ic ac'id.** Indigotic acid, formed by treating indigo with nitric acid.

**An'ilide.** Phenylamide.

**An'ilin** or **Aniline'.** $C_6H_7N$. Amidobenzol, phenylamin; an oily liquid prepared from coal-tar, sp. gr. 1.036. It distils over when finely pulverized indigo is decomposed by a concentrated solution of potassa in a retort. Its chief value is due to beautiful coloring-matters derived from it. Inhalation of it by workmen has sometimes produced symptoms of poisoning, such as neuralgia, giddiness, vomiting, cyanosis, insensibility, etc., and contact of anilin colors with the skin occasionally produces a peculiar eruption. When given internally or by inhalation it acts upon the central nervous system, producing muscular excitation. **A. blue,** deep blue dye, useful for staining. **A. cam'phorate,** a soluble antipyretic salt. **A. red,** magenta. **A. sul'phate** has been prescribed in nervous disorders, as chorea and epilepsy; dose, gr. j (0.06) three times a day, gradually increased.

**Anilin'ophile.** Staining readily with anilin dyes.

**Anilipyrin'.** Combination of one part of acetanilid and two parts of antipyrin; antipyretic and analgesic. Dose, gr. viiss (0.5).

**An'ilism.** Chronic anilin poisoning. See *Anilin*.

**Anil'itas** or **Anil'ity** (*anus*, old woman). Dementia senilis; senility.

**An'ima** (Lat., soul). Mind. Principle of intellectual and moral manifestations; principle of life, that of plants being termed anima vegetativa; that of man, anima sensitiva; consciousness. Anima of Stahl was a fancied intelligent principle supposed to preside over the phenomena of life. See *Animist*. Anima also meant active principle of a drug. **A. articulo'rum,** hermodactylus. **A. bru'ta,** the principle of life and intelligence in the lower animals. **A. hep'atis,** ferri sulphas. **A. pulmo'num,** crocus. **A. rhe'i,** infusum rhei. **A. vegetati'va,** plastic force.

**An'imal.** An animated being. Most animals have the power of locomotion; some merely execute partial movements, such as contraction and dilatation. It is often difficult to determine what is an animal characteristic. The study of animals is called zoölogy. See *Animal kingdom*. As an adjective, that which concerns or belongs to an animal. **A. acid,** acid contained in the bodies of animals. **A. al'kaloid,** leucomain, ptomain. **A. char'coal,** boneblack; product of the calcination of bones. **A. chem'istry,** chemistry of animal bodies. **A. econ'omy,** see *Economy*. **A. ex'tracts,** see *Organotherapy*. **A. food,** this kind of food is rich in albuminous or nitrogenous substances, and contains also fat; it is more digestible than vegetable food. Fresh beef contains, according to Moleschott:

| | | |
|---|---|---|
| Water | 73.4 | parts. |
| *Nitrogenous substances:* | | |
| Soluble albumin and gelatin | 2.25 | " |
| Insoluble albumin and gelatin | 15.2 | " |
| *Gelatinous substances:* | 3.3 | " |
| Extractives | 1.38 | " |
| Kreatin | 0.068 | " |
| Mineral matter or ash | 1.6 | " |

**A. heat,** caloric constantly formed in the body of the living animal, by which it preserves nearly the same temperature, whatever may be that of the medium in which it is placed. It takes place over the whole body, in the production of carbonic acid and in other oxidyzing processes, and in changes in nutrition. **A. king'dom** comprises all animated beings; they may be classified as follows (according to Claus):

| *Vertebrata:* | *Invertebrata:* |
|---|---|
| Pisces, | Protozoa, |
| Amphibia, | Cœlenterata, |
| Reptilia, | Echinodermata, |
| Aves, | Vermes, |
| Mammalia. | Arthropoda, |
| | Mollusca, |
| | Molluscoidea, |
| | Tunicata. |

**A. lay'er,** serous layer of blastodermic vesicle. **A mag'netism,** mesmerism, hypnotism, etc.; see *Magnetism*. **A. mus'cles,** voluntary muscles. **A. oil,** fetid oil obtained by the decomposition of animal matters, which when purified is used as a stimulant; fat contained in fat vesicles. **A. spir'it** or **A. spir'its,** a corporeal ether, believed by Galen to travel along the nerves, conveying sensory and motor impulses between the nervous centres and the periphery.

**Animal'cula** (pl. of animalculum) **semina'lia** or **spermat'ica.** Spermatozoa.

**Animal'cule** (dim. of animal). Small animal, well seen only by the microscope. **Pro'teus a.,** amœba. **Sem'inal** or **spermat'ic a.,** spermatozoon.

**Animal'culist.** An adherent of animalculism, or one who explains physiological or pathological phenomena by means of animalcules; one who believes the embryo to be formed from so-called spermatic animalcules; an adherent of the theory of encasement in the male; spermatist, seminist.

**Animal'culovism** (*animalculum + ovum*). Old term for belief that conception results from the union of spermatozoon and ovum.

**Animal'culum.** Animalcule. Spermatozoon.

**Animal'ity.** Aggregate of qualities which distinguish the animal.

**Animaliza'tion.** Transformation of food into living substance; assimilation.

**An'imate** (*animo*, to give life). To excite or render active, as to animate a blister, that is, to excite it; to suppurate.

**Anima'tio.** Animation. **A. fœ'tûs,** quickening.

**Anima'tion.** Act of animating; state of being alive or enlivened; quickening; acute mania. **Suspend'ed a.,** asphyxia.

**An′ime** or **An′imi.** Resin obtained from trunk of Hymenæa courbaril. **A. cour′baril** and **A. stilbocar′pa,** South American trees, ord. *Fabaceæ,* used as a uterine remedy.

**An′imist.** One who adheres to animism, referring the phenomena of both normal and disordered conditions to the soul, under the view that it is endeavoring to expel the deranging cause.

**An′ion** (*ana,* upward, *ion,* going). Electronegative element, so called because it appears at the anode when set free by electrolysis.

**Anirid′ia** or **Aniridis′mus.** Absence of iris.

**Anisal′ol.** The phenyl ester of anisic acid; analgesic in dose of gr. vijss–xv (0.5–1.0).

**An′isate.** A salt of anisic acid.

**Anisa′tus** or **An′isated.** Containing anise.

**Aniscalp′tor** (*anus*+*scalpo,* to scratch). Latissimus dorsi muscle.

**Anischu′ria.** Incontinence of urine.

**An′ise.** See *Anisum.* **Chinese′** or **star a.,** Illicium anisatum, I. floridanum.

**An′iseed.** Anisum.

**Anis′ic acid.** Result of oxidation of anethol; antiseptic and antipyretic, used internally in the anisate of sodium. **A. cam′phor,** anethol.

**Anisine′.** $C_{22}H_{24}N_2O_3$. An alkaloid derived from anise.

**Anisoco′ria** (*anisos,* unequal, *kore,* pupil). Unequal size of pupils of the two eyes.

**Anisocyto′sis** (*anisos,* inequality, *kytos,* cell). Irregularity in size of associated cells, especially of red blood cells.

**Anisodac′tylous** (*anisos,* unequal, *daktylos,* finger). Having fingers unequal in length.

**Anisodon′tous** (*anisos,* unequal, *odous,* tooth). Having teeth of unequal length.

**Aniso′dus lu′ridus.** Plant of Nepal, narcotic, and resembling belladonna and tobacco; dilating the pupil.

**An′isol.** $C_7H_8O$. Phenylmethylether.

**Anisolmeth′yl phen′ate.** Anethol.

**Anisome′lia** (*anisos,* unequal, *melos,* limb). Inequality in the shape or size of the limbs.

**Aniso′metrope** (*anisos,* unequal, *metron,* measure, *ops,* eye). One affected with anisometropia.

**Anisometro′pia.** Inequality in refraction in the two eyes. One so affected is *anisometrop′ic.*

**An′isone.** Acetone chloroform.

**Anisophyl′lum ipecacuan′ha** (*anisos,* unequal, *phyllon,* leaf). Euphorbia ipecacuanha.

**Aniso′pia.** Unequal power of vision in the two eyes.

**Anisos′thenes** (*anisos,* unequal, *sthenos,* strength). Unequal in strength; epithet applied to muscular contractility which is sometimes augmented in certain muscles only, flexors, for example.

**Anisosthen′ic.** Inequality of strength, said of muscles on the two sides of the body.

**Anisotachys,** an-is-ot′ak-is (*anisos,* unequal, *tachys,* quick). Epithet for pulse when quick and unequal.

**Anisot′ropal, Anisotrop′ic,** or **Anisot′ropous** (*anisos,* unequal, *trepo,* to turn). Not having the same power in every direction; said of crystals having unequal refraction in different axes.

**Ani′sum.** (Ph. U. S.) Aniseed; the fruit of Pimpinella anisum; dose, gr. v–x (0.32–0.65). **A. africa′num frutes′cens,** Bubon galbanum. **A. frutico′sum galbanif′erum,** Bubon galbanum. **A. officina′le,** Pimpinella anisum. **A. sinen′se** or **A. stella′tum,** illicium anisatum. **A. vulga′re,** Pimpinella anisum.

**Anisu′ric acid.** $C_{10}H_{11}NO_2$. Acid analogous to hippuric acid excreted in the urine after use of anise.

**Aniter′sor** (*anus, tergo,* to wipe). Latissimus dorsi muscle.

**Anitin′.** Ichthyosulphonic acid, a brown powder possessing germicidal properties.

**An′itol.** A germicidal mixture of anitin, cresol, carbolic acid, etc.

**Anitrog′enous.** Non-nitrogenous.

**An′kle.** Portion of lower extremity included between the leg and foot. See *Astragalus* and *Malleolus.* **A.-bone,** astragalus. **A. clo′nus** or **jerk,** a series of uniform spasmodic contractions of the ankle-joint when the extensors of that joint are put continuously on the stretch; more marked in hysteria and lateral sclerosis. **A.-joint,** articulation between the tibia and fibula above and on sides, and the astragalus below; regulated by three ligaments. **Tai′lor's a.,** enlarged bursa over the extremity of the fibula, caused by pressure in the mode of sitting practised by tailors.

**Ank′let.** Bandage or leather band to surround the ankle.

**An′kuroid.** Ankyroid.

**Ankylente′ria** (*ankylosis*+*enteron,* intestine). Adhesion or growing together of the intestines.

**Ankylo-** (*ankylos,* crooked). A prefix denoting bent or angular; also, by a reflex of meaning from ankylosis, stiff or adherent.

**Ankylobleph′aron** (*blepharon,* eyelid). Adhesions between the free edges of the eyelids or between the eyelids and globe of the eye. **A. adna′tum,** congenital a.

**Ankylochei′lia** or **Anchylochi′lia** (*cheilos,* lip). Adhesion of the lips.

**Ankylocol′pus** (*kolpos,* vagina). Atresia of the vagina or vulva.

**Ankyloco′re** (*kore,* pupil). Adhesion and occlusion of the pupil.

**Ankylod′ere** or **Ankylod′eris** (*ankylos,* crooked, *dere,* neck). Wryneck.

**Ankylodon′tia** (*ankylos,* crooked, *odous,* tooth). Irregular position of the teeth in the jaws. Fusion of two or more teeth.

**Ankyloglos′sia** (*ankylos,* crooked, *glossa,* tongue) Impeded motion of the tongue from adhesion between it and the gums, or shortness of the frænum. Latter affection constitutes tongue-tie, lingua frænata, requiring the frænum to be divided with scissors.

**Ankyloglos′sotome** (*ankyloglossia,* tongue-tie, *tome,* incision). Instrument used in operation for tongue-tie.

**Ankylome′le.** A curved probe; fusion of the lower limbs.

**Ankylomeris′mus** (*ankylos,* crooked, *meros,* a part). Morbid adhesion between parts.

**Ankylopo′dia** (*pous,* foot). Ankylosis of the foot at the ankle-joint.

**Ankyloproc′tia** or **Ankyloproc′ton** (*proctos,* anus). Stricture of the anus or rectum.

**Ankylorrhin′ia** (*rhis,* nose). Morbid union of parietes of the nose.

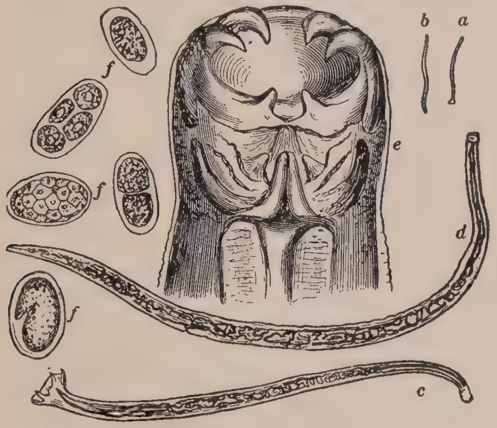
**An′kylose.** To put into a condition of ankylosis or to become stiffened; said of joints.

**An′kylosed.** In a condition of ankylosis.

**Ankylo′sis** (*ankylos,* crooked). Joining of two parts by bony union; synostosis. Firm union of any character. Stiff joint; an affection in which there is great difficulty or even impossibility of moving a diarthrodial articulation the result of morbid adhesion between the articulating surfaces. It is so called because the limb commonly remains constantly flexed. Ankylosis is complete or true when there is bony union of the articular extremities. In incomplete or false ankylosis there is fibrous union only, the degree or strength of which determines the greater or less immobility of the joint. **Artific′ial a.,** a. effected by surgical means. **Bo′ny a.,** complete or true a., due to actual osseous union of the articular ends of the bone. **Cap′sular a.,** stiffness of a joint from morbid change in the capsular ligament. **Complete′ a.,** bony a. **Extra-artic′ular** or **extracap′sular a.,** false a., caused by thickening or rigidity of the structures external to a joint. **False a.,** a. caused by fibrous bands, either intra-articular or extra-articular. **Fi′brous a.,** false a. **Incomplete′ a.,** false a. **Intra-artic′ular** or **intracap′sular a.,** a. resulting from adhesions formed within the joint. **Ligamen′tous a.,** false a.

**Mus′cular a.**, stiffness due to contracted muscles. **A. spu′ria** or **spu′rious a.**, false a. **True a.**, bony a. **A. ve′ra**, bony a.

**Ankylos′toma** (*ankylos*, hooked, *stoma*, mouth). Dochmius, Uncinaria, hook-worm. A genus of nematoid worm of the family *Strongylidæ*. **A. america′num**, a form infesting the intestines of man in tropical and subtropical America, producing symptoms similar to those of A. duodenale. **A. duodena′le**, an intestinal parasite infesting man; it sucks blood from the intestinal mucous membrane, inducing a grave form of anæmia called ankylostomiasis.



Ankylostoma duodenale. *a*, male, natural size; *b*, female, natural size; *c*, male, magnified; *d*, female, magnified; *e*, head; *f*, eggs. (v. Jaksch.)

**Ankylostomi′asis.** Morbid condition from loss of blood due to the presence in the intestine of Ankylostoma americanum or A. duodenale, observed frequently in miners—hence called *miners' anæmia*—and workers in tunnels; it is exceedingly common in Egypt, and is also of frequent occurrence in tropical and subtropical America. The disease is attended with morbid heart-sounds, dropsy, and the general symptoms of grave anæmia. Called also uncinariasis, dochmiasis, and hook-worm disease.

**Ankylos′tomum.** Ankylostoma.

**Ankylo′tia** (*ankylosis* + *ous*, the ear). Adhesions between the walls of the external auditory meatus.

**Ankylot′ic.** Causing or relating to ankylosis.

**An′kylotome.** Instrument for dividing adhesions in tongue-tie or ankylosis of various kinds.

**Ankylure′thria.** Stricture of the urethra.

**An′kyrism** (*ankyra*, hook). Operation of hooking bones together by suture; also the articulation of bones by hooking together, as palatine process and upper jaw.

**An′kyroid.** Ancyroid.

**Annat′to.** Bixa orellana, ord. *Bixaceæ*, from the seeds of which a dye is obtained. See *Terra orleana.*

**Annec′tent.** Connecting. **A. convolu′tions**, small cerebral convolutions acting as bridges between larger ones.

**Annesle′a grandiflo′ra.** Mucilaginous and astringent shrub of Mexico, used in diarrhœa and dysentery and bronchial affections.

**Annex′a** (*annecto*, to annex). Appendages.

**Annexi′tis.** Inflammation of the uterine appendages.

**An′ni** (years) **climacter′ici.** See *Climacteric.* **A. crit′ici**, or **decreto′rii**, or **fata′les**, or **genethli′aci**, or **grada′rii**, or **hebdomad′ici**, or **hero′ici**, or **natalit′ii**, or **scala′res**, or **scan′siles**, climacteric years.

**Annidalin′.** Dithymol triiodide, a substitute for aristol (dithymol diiodide).

**Annihila′tion** (*ad*, to, *nihil*, nothing). Excessive fatigue, debility, or syncope. Utter destruction.

**Annota′tio.** Preludes to attack of intermittent fever, as yawning, stretching, somnolency, chilliness, etc.

**Annot′to.** Annatto.

**An′nuens** (nodding). Rectus capitis internus minor muscle.

**Annui′tio** (*annuo*, to nod to). Nodding.

**An′nular** (*annulus*, ring). Relating to a ring or having shape or functions of a ring. **A. bone**, scroll-shaped bone, affording attachment to the membrana tympani, part of the temporal bone in the adult. **A. car′tilage**, cricoid cartilage. **A. constric′tions**, nodes of Ranvier, constrictions in the course of medullated nerve fibres. **A. fing′er**, ring finger; fourth finger, so called from the wedding-ring being worn thereon; of old it was believed that there is a vein of direct communication between the ring finger and the heart. **A. gan′glion**, see *Ciliary ganglion*. **A. lig′ament**, transverse ligament, crucial ligament; a strong ligamentous band, arching across area of ring of atlas from a rough tubercle upon inner surface of one articular process to a similar tubercle on the other. It retains the odontoid process of the axis in connection with the anterior arch of the atlas. **A. lig′ament of ra′dius**, strong fibrocartilaginous band, forming, with the lesser sigmoid cavity of the ulna, a kind of ring, in which the head of the radius turns with facility. **A. lig′ament of sta′pes**, ligament uniting stapes to edge of fenestra ovalis. **A. lig′aments of the car′pus** are two in number. One, *anterior*, is a broad, fibrous quadrilateral band, extending transversely before the carpus, and forming a gutter, made by the wrist, into a canal; it keeps the tendons of the flexor muscles, median nerve, etc., applied against the carpus. The *posterior* ligament is situated transversely behind the joint of the hand, and covers the sheaths of tendon passing to the back of the hand; its fibres are white and shining, and are attached externally to the inferior and outer part of the radius, internally to the ulna and os pisiforme. **A. lig′aments of the tar′sus** are two in number. The *anterior* is quadrilateral, and extends transversely above the instep, and embraces the tendons of the extensor muscles of the toes, the tibialis anticus, and the peroneus anticus. The *internal* is broader than the other, descends from the malleolus internus to the posterior and inner part of the os calcis, with which it forms a kind of canal, enclosing the sheaths of the tendons of the tibialis posticus, flexor longus digitorum pedis, and flexor longus pollicis pedis, as well as the plantar vessels and nerves. **A. mus′cle of Mül′ler**, name given to bundles of circular fibres on the anterior side and the anterior and internal angles of the ciliary muscle. **A. myeli′tis**, inflammation of the whole circumference of the spinal cord. **A. pro′cess** or **protu′berance**, pons Varolii. **A. vein** is situated between the ring and little fingers; the older physicians recommended it to be opened in diseases of the spleen.

**Annular′is.** Annular; ring finger; cricoid. **A. a′ni**, sphincter ani.

**An′nuli cartilagin′ei.** Rings of the trachea and bronchial tubes. **A. cartilagino′si tra′cheæ**, rings of the trachea. **A. fibrocartilagin′ei**, fibrocartilaginous or festooned rings; tough, tendinous tracts in the heart, two of which, anterior, are situated to the right and left of the aortic opening; and one posterior, which runs backward from the aorta to the border of the auriculoventricular septum, where it splits into two slender crura. **A. of Bött′cher**, edge of the lamina reticularis around the head-plates of the rods of Corti in the internal ear.

**An′nulus.** Ring. **A. abdomina′lis** or **abdom′inis**, inguinal ring. **A. al′bidus**, ciliary muscle. **A. arthrit′icus**, infiltration of the conjunctival border in elderly persons. **A. cartilagin′eus**, fibrous ring connecting the membrana tympani with the tympanic plate. **A. cellulo′sus**, ciliary ligament. **A. cilia′ris**, ciliary ligament. **A. conjuncti′væ**, slight circular swelling formed by sclerotic conjunctiva at the edge of the cornea, especially in old people; extending a little over the cornea, particularly at its upper margin. **A. crura′lis**, crural ring. **A. crura′lis exter′-**

**nus,** saphenous opening. **A. er′rans,** a. migrans. **A. fibro′sus,** fibrous portion of the intervertebral cartilage; ring around the auriculoventricular valves; ring of fibrous membrane connecting the membrana tympani with the tympanic plate. **A. fos′sæ ova′lis,** see *Oval fossa.* **A. ganglifor′mis,** ciliary ligament. **A. inguina′lis** inguinal ring. **A. interauricula′ris,** ring between the cardiac auricles. **A. i′ridis,** ring of the iris. **A. ligamento′sus,** ligaments of the pubes. **A. membra′næ tym′pani,** tympanic plate. **A. mi′grans,** eruptive disease of the tongue, which spreads in rings over the surface. **A. os′seus,** tympanic plate. **A. ova′lis,** margin of fossa ovalis, in the right auricle. **A. proces′sus,** pons Varolii. **A. re′pens,** herpes circinatus; trichophytosis. **A. seni′lis,** arcus senilis. **A. tendino′sus,** a. cartilagineus. **A. tra′cheæ,** a tracheal ring. **A. tympan′icus,** tympanic plate. **A. umbilica′lis,** umbilical ring. **A. valvulo′sus,** ring made by the union of the bases of the tricuspid valves of the heart. **A. ventric′uli,** pylorus. **A. Vieusse′nii,** a. ovalis.

**Anocaverno′sus.** Accelerator urinæ muscle.

**Anocheilos′chisis** (*ano,* upper, *cheilos,* lip, *schisis,* cleaving). Fissure of the upper lip, as in harelip, or operation for its relief.

**Anococcyg′eal.** Relating to anus and coccyx, as anococcygeal nerve, from coccygeal plexus. **A. lig′ament** or **raph′e,** fibrous septum from anus to coccyx.

**An′odal.** Relating to the anode. **A. clo′sure contrac′tion,** muscular contraction occurring at the anode at the moment of closure of the circuit. **A. o′pening contrac′tion,** muscular contraction occurring at the anode when the circuit is opened.

**An′ode** (*ana,* up, *hodos,* way). Positive pole of an electric battery; the point where the current enters the electrolyte.

**Ano′dia** (*a,* priv., *ode,* song). Unconnected, dissonant mode of speech.

**Anod′ic.** Relating to anode. Tending upward. Epithet applied to ascending course of nervous action.

**Anod′mia** (*a,* priv., *odme,* smell). Anosmia.

**Anodon′tia** (*a,* priv., *odous,* tooth). Absence of teeth.

**An′odus.** Without teeth.

**An′odyne** (*a,* priv., *odyne,* pain). Relieving pain, or any agent which relieves pain, as opium, belladonna, etc.; acting by blunting the sensibility of the encephalon or that of the peripheral nerve terminations. **Hoff′man's a.,** spiritus ætheris compositus.

**Anodyn′ia.** Cessation or absence of pain.

**Anod′ynum.** Anodyne. **A. hypnot′icum,** hypnotic.

**Anoë′sia** or **Anoë′tia** (want of sense). Idiocy; dementia. **A. adstric′ta,** melancholy.

**Anoët′ic.** Inconceivable. Demented.

**Anoi′a.** Anoësia.

**An′ol.** $C_9H_{10}O$. A substance derived from anethol by heating with an alkaline hydrate or oxide.

**Anoma′lia.** Anomaly. **A. nervo′rum,** nervous diathesis.

**Anomaloceph′alous.** Having an irregularly shaped head.

**Anomalot′rophies** (*anomalos,* irregular, *trophe,* nourishment). Class of diseases consisting in modifications of nutrition of organs.

**Anom′alous** (*a,* priv., *homalos,* average). Irregular; contrary to rule; abnormal. **A. glands,** glands not having any outlet. **A. mus′cle,** slender muscle lying upon the superior maxillary bone beneath the levator labii superioris alæque nasi.

**Anom′alus.** See *Anomalous muscle.*

**Anom′aly** (*a,* priv., *homalos,* average). Abnormality, abnormity, irregularity; exception to usual rule; deviation from specific type. Something unusual in the symptoms or course of a disease.

**Ano′mia.** Loss of power to give objects their correct name or to recognize them through any of the organs of sense.

**Anom′matus** (*a,* priv., *omma,* eye). Anophthalmus.

**Anomoceph′alus** (*a,* priv., *nomos,* rule, *kephale,* head. One whose head is deformed.

**Ano′mous** (*a,* priv., *omos,* shoulder). Devoid of shoulders.

**Anom′phalous** (*a,* priv., *omphalos,* navel). Devoid of navel.

**Ano′na cherimo′lia.** Cherimoya; grows in Peru and Mexico; seeds used as emetic and cathartic. **A. murica′ta,** sour sop; the unripe fruit is used as an astringent in diarrhœa, dysentery, etc. **A. reticula′ta,** custard-apple; indigenous in West Indies; astringent. **A. squamo′sa,** sweet sop; grows in Malay Islands and tropical America; astringent. **A. tril′oba,** see *Carica papaya.* **A. tripet′ala,** cherimoya.

**Anonych′ia** (*a,* priv., *onyx,* nail). Absence of nails; a rare congenital defect.

**Anon′ymous** (*a,* priv., *onoma,* name). Having no name; innominate.

**Anoöp′sia** (*ano,* upward, *ops,* eye). Strabismus in an upward direction.

**Anoph′eles** (*anopheles,* injurious). A genus of mosquitos in which the malarial parasite passes through its extracorporeal cycle of development; the malarial mosquito. (See Plate under *Mosquito.*)

**Anopho′ria** (*ano,* up, *phero,* to bear). Condition of vision in which both visual axes have a tendency to rise too high; anaphoria.

**Anophthal′mia** (*a,* priv., *ophthalmos,* eye). Congenital absence of the eyeballs. **A. cyclop′ica,** condition of a cyclocephalus in which there is very imperfect development of the socket of the eye and a rudimentary or entirely absent orbit.

**Anophthal′mus.** One born without eyes.

**Ano′pia** (*a,* priv., *opsis,* vision). Monstrosity in which the eye and orbit are wanting; blindness.

**Anop′sia** or **An′opsy.** Loss of sight; upward strabismus.

**Anor′chia** or **Anor′chism** (*a,* priv., *orchis,* testicle). Congenital absence of the testicles. **A. unilatera′lis,** absence of one testicle; monorchia.

**Anorch′us.** One devoid of testes, or in whom cryptorchidism exists.

**Anorec′tal.** Pertaining to both anus and rectum.

**Anorex′ia** (*a,* priv., *orexis,* appetite). Diminution or absence of appetite. **A. mirab′ilis,** fasting. **A. nervo′sa,** functional loss of appetite, often difficult to overcome and amounting to a grave neurosis.

**Anorgan′ic.** Devoid of organs or organization.

**Anor′mal.** Abnormal.

**Anor′thic** (*a,* priv., *orthos,* straight). Not straight; crooked.

**Anorthog′raphy** (*a,* priv., *orthos,* correct, *grapho,* to write). Pathological loss of power to write correctly; motor agraphia.

**Anortho′pia** (*a,* priv., *orthos,* upright, *opsis,* vision). Strabismus; obliquity of vision.

**Anortho′sis** (*a,* priv., *orthos,* upright). Absence of erectile power or erectility.

**Anos′mia** or **Anosmo′sia** (*a,* priv., *osme,* sense of smell). Loss of smell; perversion of smell.

**Anosphra′sia** (*a,* priv., *osphrasia,* smell). Anosmia.

**Anospi′nal.** Relating to the anus and spine. **A. cen′tre,** nervous centre regulating process of defecation, situated in the lumbar region.

**Anosto′sis** (*a,* priv., *osteon,* bone). Deficiency in bony matter or in bone structure; defective development of bone. **A. interstitia′lis,** atrophy of bone of old persons.

**Ano′tia** (*a,* priv., *ous,* ear). Congenital absence of the ears.

**Anotro′pia** (*ano,* up, *trope,* turning). Anophoria; upward turning of the eyes.

**Ano′tus** (*a,* priv., *ous,* ear). Monster having no ears.

**Anoves′ical.** Belonging to the anus and bladder.

**Anoxæ′mia** or **Anoxyhæ′mia** (*a,* priv., *oxys,* acid, *haima,* blood). Deficiency of oxygen in the blood.

**Anoxæ′mic** or **Anoxyhæ′mic.** Affected with or resulting from deficient aëration of the blood.

**An′ozol.** A mixture of thymol and iodoform (deodorizing the latter), used in surgical dressings.

**An′sa** (Lat., handle of a vessel). That which is curved in the form of a handle; a loop or anything resembling a loop. **A. atlan′tis,** loop formed by branches of the first and second cervical nerves. **A. cap′itis,** zygomatic process. **A. centrifuga′lis** and **A. centripeta′lis,** terms given to the root fibres of a spinal nerve according to the direction they take to or from the centre. **A. cervica′lis,** loop formed by branches of the cervical nerves. **A. coccyg′ea,** a. sacralis. **A. hæmosta′tica,** loop used for acupressure. **A. Hal′leri,** communicating nerve between the facial and glossopharyngeal. **A. Hen′lii,** portion of uriniferous tubule. **A. hypoglos′si,** communication between the hypoglossal nerve and the second and third cervical nerves. **A. intergenicula′ris,** band of fibres connecting geniculate bodies. **A. intestina′lis,** loop or portion of intestine supported by the mesentery and describing a curved line. **A. lenticula′ris** or **lentifor′mis,** loop of fibres passing outward beneath the thalamus and entering the lenticular nucleus. **A. lumba′lis,** loop formed by branches of the lumbar nerves. **A. peduncula′ris,** substantia innominata. **A. Reil′lei,** lemniscus. **A. sacra′lis,** loop between the sacral nerves. **A. subclavia′lis** or **A. Vieussen′ii,** nervous branches passing from the lower cervical ganglion of the great sympathetic to the first dorsal ganglion in front of the subclavian artery, forming a loop around the vessel called after Vieussens, and supplying it with offsets. **A. Wrisber′gii,** loop of communication between the right sympathetic and the pneumogastric; also a loop between the phrenic and descendens noni branch of the hypoglossal.

**Ansa′tus.** Looped like nervous fibres; pedunculated.

**An′serine** (*anser,* a goose). Resembling a goose or its plucked skin. **A. disease′,** condition in which there exists emaciation of the extremities, with marked projection of the tendons. **A. skin,** gooseflesh, horrida cutis.

**Ant acid.** Formic acid.

**Antac′id** or **Antiäc′id.** Correcting acidity; a remedy which diminishes or counteracts acidity in the stomach, intestines, or urine.

**Antacidin′.** Saccharate of lime.

**Antag′onism** (*anti,* against, *agonizomai,* to strive). Opposed action, as of muscles acting in contrary directions, or of drugs which exert contrary effects. Antagonism of drugs may be chemical or physiological; often, but not always, a drug is antidotal to the poisonous effects of its antagonist; but, on the other hand, a drug which is antidotal to another is not necessarily antagonistic to it; thus potassium permanganate is antidotal to morphine, but is not antagonistic to it in its action in the economy. The following list exhibits the most striking illustrations of antagonism (Brunton):

| *Drug.* | *Antagonist.* |
|---|---|
| Aconitine | Atropine,<br>Digitalin,<br>Strychnine. |
| Alcohol | Strychnine. |
| Ammonium chloride | Chloral. |
| Atropine | Aconitine,<br>Bromal hydrate,<br>Chloral hydrate,<br>Hydrocyanic acid,<br>Jaborandi,<br>Muscarine,<br>Morphine,<br>Physostigmine,<br>Phytolacca,<br>Pilocarpine,<br>Quinine. |
| Barium | Sodium sulphate,<br>Potassium salts. |
| Bromal hydrate | Atropine. |
| Brucine<br>Calabarine<br>Carbolic acid | Chloral. |
| Chloral | Ammonium chloride,<br>Atropine,<br>Brucine,<br>Calabarine,<br>Carbolic acid,<br>Codeine,<br>Physostigma,<br>Picrotoxin,<br>Strychnine,<br>Thebaine. |
| Chloroform | Amyl nitrite. |
| Cocaine | Morphine. |
| Codeine | Chloral. |
| Digitalin | Aconitine,<br>Muscarine,<br>Saponin. |
| Gelsemium | Opium,<br>Atropine. |
| Morphine | Atropine,<br>Caffeine,<br>Chloroform,<br>Cocaine,<br>Daturine,<br>Hyoscyamine,<br>Nicotine,<br>Physostigma. |
| Muscarine | Atropine. |
| Opium | Atropine,<br>Gelsemium,<br>Veratrum viride. |
| Physostigma | Atropine,<br>Chloral,<br>Morphine. |
| Saponin | Digitalin. |
| Strychnine | Alcohol,<br>Chloral,<br>Hydrocyanic acid,<br>Nicotine,<br>Nitrite of amyl. |
| Thebaine | Chloral. |

**Antag′onist.** A muscle whose action produces an effect contrary to that of another muscle, as in the action of flexors and extensors; every muscle has its antagonist. Some drugs are antagonists to others.

**Antagonis′tic.** Mutually opposing, as antagonistic muscles or drugs.

**Antag′onize.** To oppose; to nullify the effect of.

**Antal′gic** (*anti,* against, *algos,* pain). Anodyne.

**Antal′kaline.** Reducing or neutralizing alkalinity; specifically, a drug with such property.

**Antanaclas′tic** (*antanaklasis,* reflection). Reflecting light.

**Antaphrodis′iac, Antaphrodit′ic,** or **Anaphrodis′iac** (*anti,* against, *aphrodisiakos,* aphrodisiac). Drug or other agent which blunts the venereal appetite.

**Antapod′osis** (*antapodidomi,* to return in exchange). Succession and return of febrile periods.

**Antapoplec′tic.** Relieving or preventing apoplexy.

**Antarthrit′ic.** Relieving arthritis or gout.

**Antasthen′ic.** Tonic.

**Antasthmat′ic.** Relieving asthma.

**Antatroph′ic** (*anti,* against, *atrophia,* atrophy). Relieving or preventing atrophy.

**An′te** (Lat.). Before; as a prefix, before, fore. **A. mor′tem,** before death. **A. par′tum,** before delivery, as ante-partum hemorrhage.

**Antebrachial,** an-te-bra′ke-al (*ante,* before, *brachium,* arm). Relating to the forearm.

**Antebra′chium.** Forearm.

**Antecar′dium.** The præcordium.

**Antece′dents** (*ante,* before, *cedo,* to go). Precursory or warning symptoms or history of disease.

**Antecor′nu.** One of the cornua of the lateral ventricle.

**Antecurv′ature.** Curving forward, as in anteflexion.

**Anteflex′ed.** In a state of anteflexion.

**Anteflex'ion** or **Anteflex'ure** (*ante*, before, *flecto*, to bend). Bending forward. **A. of the u'terus,** bending of that organ so that the fundus, the cervix, or both, are bent more or less sharply forward. The cervix may be normal in position and the body of the uterus flexed, or the body normal and the cervix flexed, or both cervix and body flexed forward. See *Anteversion*.

**Antehe'lix.** Anthelix.

**Antela'bia** (*ante*, before, *labia*, lips). Extremity of the lips. See *Procheilon* and *Prolabia*.

**Anteloca'tion.** Forward dislocation.

**Antemet'ic.** Antiemetic.

**Antenna'ria dioi'ca.** Genus of *Diœcia*, everlasting, catsfoot, ord. *Compositæ;* common European plant used in hemorrhage, cough, diarrhœa, etc. **A. margarita'cea,** Gnaphalium margaritaceum. **A. plantaginifo'lia,** plantain, life everlasting, cudweed, has similar properties to A. dioica.

**Antephial'tic** (*ephialtes*, nightmare). Remedy for nightmare.

**Antepilep'tic.** Antiepileptic.

**Antepo'nens** (*antepono*, to set before). Anticipating.

**Anteprostat'ic.** In front of the prostate, as anteprostatic gland, an accessory gland occupying position stated.

**Antepyret'ic.** Before the appearance of fever.

**Antereth'ic** (*anti*, against, *eretho*, to irritate). Soothing or calming.

**Anterid'ium.** Microgametocyte; flagellate form of the malarial parasite.

**Ante'rior** (*ante*, before). Situated before. Generally, anterior is applied to parts situated in front of the median line, the body being in the erect posture, with the face and palms of the hands turned forward and the feet applied longitudinally together. The term *anterior* is applied by way of distinction to numerous arteries, veins, muscles, nerves, regions, etc., of which there are two or more of the same name. **A. aur'is** or **auric'ulæ,** small muscle passing from the posterior part of the zygoma to the helix, which draws the ear forward and upward. **A. cham'ber of eye,** see *Eye*. **A. elas'tic lam'ina,** Bowman's layer of the cornea. **A. fontanelle',** space in the skull of the fœtus between the frontal and parietal bones. **A. mal'lei,** laxator tympani. **A. na'si,** pyramidalis nasi. **A. poliomyeli'tis,** inflammation of the anterior cornua of the spinal cord.

**An'terofixa'tion.** Fixation or attachment in front, as a. of the uterus.

**An'terograde.** Stepping or moving forward.

**An'tero-inter'nal.** Anterior and to the inner side.

**An'terolat'eral.** In front and to one side. **A. groove,** the depression in the spinal cord where the anterior roots of the nerves emerge.

**Anteropari'etal.** Relating to the anterior portion of the parietal bone. **A. a'rea,** the portion of the cranium just in front of the parietal eminence. **A. gy'rus,** precentral gyrus.

**Anteroposte'rior.** Cephalocaudal; from front to back.

**Anterospi'nal.** Relating to or affecting the anterior portion of the spinal cord, as *anterospinal paralysis* or poliomyelitis.

**Anterot'ic.** Antaphrodisiac.

**Antester'num.** First segment of the sternum; the manubrium.

**Antever'sion** (*ante*, forward, *verto*, to turn). Displacement or tipping forward as a whole, without bending. In *anteversion of the uterus* the fundus is turned toward the symphysis pubis, while the os is directed toward the sacrum; but the organ is not bent upon itself.

**Anthelit'ragus** or **Anthelitra'gicus.** Antitragicus muscle, one of the proper muscles of pavilion of ear.

**Ant'helix.** Eminence on cartilage of ear, in front of helix and extending from concha to groove of helix, where it bifurcates; antitragicus muscle.

**Anthel'mia.** Spigelia marylandica, so called from its action on worms.

**Anthelmin'tic** (*anti*, against, *helmins*, worm). A remedy which destroys or expels worms, or prevents their formation and development. Anthelmintics are *mechanical* and *true*. To the former belong emetics, cathartics, mucuna, etc.; to the latter, oleum terebinthinæ, chenopodium, spigelia, filix mas, etc. An anthelmintic that destroys worms is properly a *vermicide;* one that expels them, dead or alive, a *vermifuge*.

The principal vermicides are:

1. For threadworms: local injections of alum, iron, quassia, lime-water, eucalyptol, sodium chloride, tannic acid, catechu, kino, rhatany, hæmatoxylon.

2. For roundworms: santonin and santonica.

3. For tapeworms: areca nut, filix mas, kamala, kousso, pomegranate, pelletierine, turpentine, chloroform.

The chief vermifuges are castor-oil, scammony, rhubarb, with ammonium chloride, bitter tonics, etc., as adjuncts in the treatment.

**An'themis.** (Ph. U. S.) Anthemis nobilis; anthemidis flores (Ph. Br.); chamomile. **A. arven'sis,** sometimes used to adulterate more important varieties. **A. cot'ula,** mayflower, mayweed, stinking chamomile, wild chamomile, dog's fennel, dilly, dilweed, fieldweed, pissweed, ord. *Compositæ*. This plant, cotula, of very disagreeable smell and taste, has been used in hysterical affections. **A. fœt'ida,** A. cotula. **A. no'bilis,** chamomile. Leaves and flowers have strong smell, and bitter, nauseous taste. The flowers are chiefly used; they possess tonic and stomachic properties, and are a pleasant and cheap bitter. A simple infusion is taken to produce or assist vomiting. Externally, they are used in fomentations. *Oil of chamomile, oleum anthemidis,* possesses the aromatic, but not the bitter and tonic properties of the plant. **A. noveboracen'sis,** A. cotula. **A. odora'ta,** A. cotula. **A. pyr'ethrum,** Spanish chamomile, pellitory of Spain. The root, pyrethrum, hot and acrid, is used as a masticatory in toothache, rheumatism of the face, paralysis of the tongue, etc., and as a sialagogue. Pellitory of the shops in Germany is derived from Anacyclus officinarum, cultivated in Thuringia for medicinal purposes. Flowers of Pyrethrum carneum and P. roseum, growing on the Caucasian mountains, form Caucasian or Persian insect powder, fatal to insects. **A. tincto'ria,** dyer's chamomile; European plant of bitter and astringent taste; stomachic. **A. vulga'ris,** Matricaria chamomilla; A. nobilis.

**Anthemorrhag'ic.** Antihemorrhagic; hæmostatic.

**An'ther.** The male, pollen-bearing part of a flower.

**Anthoma'nia** (*anthos*, flower, + *mania*). A morbid passion for flowers.

**An'thony's fire.** Erysipelas.

**Anthopho'bia** (*anthos*, flower, *phobos*, fear). A morbid dislike of flowers.

**Anthoris'ma.** A tumor without defined margin.

**Anthoxanthin'.** Yellow coloring-matter found in yellow flowers and several fruits.

**Anthracæ'mia.** Anthrax; specifically, wool-sorters' disease, a general infection due to the presence of anthrax bacilli in the blood.

**An'thracene.** $C_{14}H_{10}$. A hydrocarbon obtained by distillation of coal-tar; used in the manufacture of dyes, and has been recommended as a remedy for pruritus.

**Anthra'cia** (*anthrax*, coal). Eruption of carbuncles; inflammatory tumors imperfectly suppurating, with indurated edges and sordid and sanious core; anthracosis. **A. pes'tis,** plague. **A. ru'bula,** frambœsia.

**Anthra'cic.** Relating to anthrax.

**Anthra'ciform.** Anthracoid.

**Anthraci'na.** Melanotic cancer.

**Anthracin'.** Anthracene; also a toxin formed in cultures of anthrax bacilli.

**Anthracno'sis.** A black rot attacking vines.

**An'thracoid** (*anthrax* + *eidos*, resemblance). Resembling anthrax or anthracia.

**Anthraco'ma.** Anthrax; carbuncle.

**Anthracom'eter** (*anthrax*, carbon, *metron*, measure). Instrument for measuring the amount of carbonic acid in the atmosphere and in the breath. The process is *anthracom'etry*.

**Anthraconecro'sis** (*anthrax* + *nekros*, corpse). Transformation into carbonaceous mass, as in gangrene of old people. See *Sphacelus*.

**Anthracophlyc'tis** (*anthrax* + *phlyctis*, phlyctæna). Malignant pustule; anthrax.

**Anthraco'sia** or **Anthraco'sis.** Species of carbuncle attacking eyelids and globe of the eye, or carbuncle of any kind; also, black lung of coal-miners, induced by carbonaceous accumulation in the lungs. When breaking-down of lung tissue results from it, black phthisis, coal-miners' phthisis, exists. **A. pulmo'num,** see *Pneumokoniosis*.

**Anthracoty'phus** (*anthrax* + *typhus*). Plague. Typhus fever complicated with carbuncles.

**Anthragal'lol.** $C_{14}H_8O_5$. A substance obtained by the mutual reactions of sulphuric, gallic, and benzoic acids.

**Anthrakok'ali** (*anthrax*, coal, *kali*, potassa). An old remedy for cutaneous diseases, formed by dissolving potassium carbonate in boiling water and adding slaked lime; the filtered liquor was then evaporated and levigated coal added, and the mixture stirred until a black, homogeneous powder resulted.

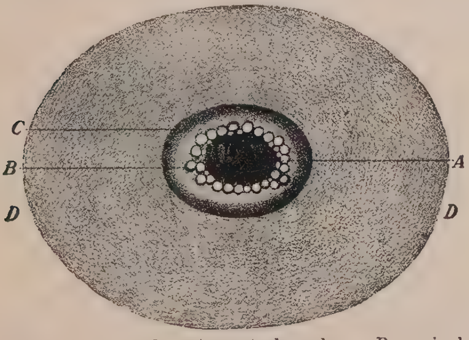
**Anthrako'sis.** Anthracosis.

**An'thranol.** $C_{14}H_{10}O$. A substance derived from anthraquinone.

**Anthraquinone'.** $C_{14}H_8O_2$. A substance derived by the oxidation of anthracene.

**Anthrarobin'.** A product of the reduction of alizarin and purpurin, receiving name from its similarity of composition to chrysarobin; a yellowish-white powder, insoluble in water; has been used in psoriasis, pityriasis, herpes, and other skin diseases.

**An'thrax** (Gr., coal). Carbuncle. A specific disease marked by inflammation, essentially gangrenous, of the cellular tissue and skin, attended with sloughing, in animals, especially sheep and cattle, and occasionally in man. Other names for the disease are: contagious or malignant anthrax, cacanthrax, anthracion, vesicula gangrænescens, anthracophlyctis, pustula maligna, malignant vesicle, splenic fever, and wool-sorters' disease. It is characterized at the outset by a vesication or bleb filled with sero-sanguinolent fluid, under which a small induration is formed, surrounded by areolar inflammation, which becomes gangrenous. Later grave general symptoms supervene, and the affection usually terminates in collapse and death. It is caused by the presence in the blood and tissues of a distinct specific bacillus, Bacillus anthracis, similar in appearance to B. subtilis found in hay infusions and a microbe found in butyric fermentation. The spores of anthrax bacilli are very resistant to the action of many powerfully germicidal substances. Among the substances most inimical to the anthrax germ is carbolic acid, and injection of this into the initial lesion of anthrax, the malignant pustule, has sometimes apparently prevented the occurrence of general symptoms. An intestinal form of the disease occurs, probably induced by eating the flesh or drinking the milk of infected animals. **A. al'bumoses,** albumoses formed in cultures of the anthrax bacillus. **Apoplec'tic a.,** splenic apoplexy of domestic animals. **A. bacil'lus,** see *Bacillus anthracis*. **A. carbun'culus,** carbuncle. **Conta'gious a.,** see *Anthrax*. **Furun'cular a.,** circumscribed a. with boils. **A. intestina'lis,** see *Anthrax*. **Gloss a.,** symptomatic a. **Malig'nant a.,** see *Anthrax*. **A. œde'ma,** diffused œdematous or erysipelatous form. **A. pulmo'num,** necropneumonia. **Symptomat'ic a.,** a serious and often fatal disease of cattle, attended with subcutaneous emphysema and circumscribed œdematous swellings, formerly confounded with malignant anthrax; it is caused by the B. anthracis symptomatici, an organism which is not pathogenic in man.



Malignant pustule. *A*, central eschar; *B*, vesicular areola; *C*, peripheral infiltration; *D*, œdematous skin. (Charcot.)

**Anthris'cus.** Cerefolium, Scandix cerefolium. **A. hu'milis, A. proc'erus,** Chærophyllum sylvestre. **A. sylves'tris,** wild chervil. **A. vulga'ris,** a plant growing in Europe, which yields a narcotic poison.

**An'throl.** $C_{14}H_{10}O$. A substance derived from anthracene-sulphonic acid.

**Anthrop'ic** (*anthropos*, man). Relating to man.

**Anthropo-** (*anthropos*, man). A prefix, meaning man.

**Anthropobiol'ogy.** The life-history of man.

**Anthropogen'esis, Anthropog'eny,** or **Anthropog'ony** (*anthropos*, man, *genesis*, generation). Geneanthropy; human origin and evolution.

**Anthropogen'ic** or **Anthropogenet'ic.** Relating to anthropogenesis.

**Anthropog'raphy** (*anthropos*, man, *graphe*, description). Anthropology; description of human race.

**Anthropohistog'raphy** (*anthropos*, man, *histos*, texture, *grapho*, to write). Description of various tissues of the body.

**An'thropoid** (*anthropos*, man, *eidos*, resemblance). Resembling man, as the ape.

**Anthrop'olite** or **Anthrop'olith** (*anthropos*, man, *lithos*, stone). Petrification of the human body or its parts; morbid concretions in the human body.

**Anthropolog'ical.** Relating to anthropology.

**Anthropol'ogy** (*anthropos*, man, *logos*, discourse). Science of man, including his origin, development, structure, history, racial characteristics, and relation to other animals.

**Anthropomag'netism.** See *Magnetism, animal*.

**Anthropomet'allism.** Hypnotism induced by the use of metals.

**Anthropomet'ric** or **Anthropomet'rical.** Relating to the science of human measurements.

**Anthropom'etry** (*anthropos*, man, *metron*, measure). Measurement of weight, dimensions, etc., of different parts of the human body.

**Anthropomorphog'raphy** (*anthropos*, man, *morphe*, shape, *grapho*, to write). Description of form of various organs of the human body.

**Anthropomorphol'ogy** (*anthropos*, man, *morphe*, form, *logos*, discourse). Descriptive anatomy.

**Anthropomor'phous** (*anthropos*, man, *morphe*, shape). Resembling man in shape.

**Anthropon'omy** (*anthropos*, man, *nomos*, law). Law of human action.

**Anthroponosol'ogy** (*anthropos*, man, *nosos*, disease, *logos*, description). Human nosology.

**Anthropoph'agus** (*anthropos*, man, *phago*, to eat). A cannibal.

**Anthropoph'agy.** Cannibalism; an insane impulse toward cannibalism, usually associated with sexual perversion.

**Anthropopho'bia** (*anthropos*, man, *phobos*, fear). A morbid dread of human society, especially of crowds.

**Anthropos'copy.** Judging of the character, etc., by the external markings and configuration of the human body.]

**Anthroposomatol'ogy** (*anthropos*, man, *soma*, body, *logos*, discourse). Science of the human body.

**Anthropother'apy** (*anthropos*, man, *therapeia*, treatment). Treatment of the diseases of man.

**Anthropot'omy.** Human anatomy; dissection of the human body. The dissector is called an *anthropot'omist.*

**Anthropotoxin'.** A poisonous substance contained in the expired air.

**Anthydrop'ic.** Preventing or relieving dropsy.

**Anthypnot'ic.** Antihypnotic.

**Anthypochon'driac.** Remedy for hypochondriasis.

**Anthyster'ic.** Antihysteric.

**Anti-** (Gr., against). As a prefix, generally signifies antagonism. When prefixed to an adjective referring to any disease it signifies a remedy for that disease; thus antiarthritic, a remedy for gout, anticatarrhal, a remedy for catarrh, etc. Definitions of such words not found in the following may be formed by reference to the adjectival part of the compound.

**Anti'ades** (Gr.). Tonsils.

**Antiadi'tis.** Tonsillitis.

**Antial'bumate.** Result of action of dilute muriatic acid on albumin; continued digestion converts it into *antialbumide.*

**Antial'bumide.** Considered to form, with hemialbumin, albumin. It is itself formed when a weak acid, such as muriatic acid, is used in digesting albumin.

**Antialbu'min.** There exist in the proteid molecule two substances preformed, *antialbumin* and *hemialbumin.* These are converted during digestion into *antialbumose* and *hemialbumose,* as an intermediate step to the conversion into *antipeptone* and *hemipeptone.*

**Antial'bumose.** See *Antialbumin.*

**Antial'gic** (*algos*, pain). Relieving pain.

**Antiaphrodis'iac.** Anaphrodisiac.

**Antiarin'.** $C_{14}H_{20}O_5$. Crystallizable, poisonous principle derived from Upas antior, East Indian and Javanese arrow poison. Antiarin paralyzes the cardiac muscle and stimulates the vasomotor centres.

**Antiar'is toxica'ria.** Upas tree; juice is a powerful poison, used in skin diseases.

**Antiarsenin'.** A protective substance, the formation of which is effected by repeated injection of minute doses of arsenic.

**Antiarthrin'.** A product of saligenin and tannic acid, used in gout and rheumatism in dose of gr. xv (1.0).

**Antiarthrit'ic** or **Antarthrit'ic.** Remedy for gout.

**Antiasthmat'ic.** Remedy for asthma.

**Antibacte'rial.** Anything that acts in opposition to the development of bacteria; also in opposition to the bacterial theory of disease.

**Antibech'icus** or **Antibech'ic** (*anti*, against, *bex*, cough). Expectorant checking cough.

**Antibil'ious.** Checking secretion of bile; relieving biliousness.

**Antibiot'ic** (*anti*, against, *bios*, life). Destroying life.

**An'tibodies.** Bactericidal and antitoxic substances preëxisting in the cells, or developed in them in response to the stimulus of the introduction of foreign cells into the animal organism; such bodies are called variously, according to their specific action, antitoxins, cytotoxins, agglutinins, precipitins, etc.

**Antibra'chial.** Concerning the forearm; more properly written *antebrachial.*

**Antibro'mic** (*anti*, against, *bromos*, fetor). Deodorizer or deodorant.

**Anticachec'tic.** Remedy against cachexy or morbid constitutional tendency.

**Antical'culous.** Antilithic.

**Anticancrin'.** Cancroin.

**Anticar'dia** or **Anticar'dium** (*kardia*, heart). Pit of the stomach; scrobiculus cordis.

**Anticatar'rhal.** Remedy for catarrh.

**Anticaus'tic.** Destroying or relieving action of caustic.

**Anticephalal'gic** (*kephalalgia*, headache). Remedy against headache.

**An'ticheir** (*anti*, against, *cheir*, hand). Thumb.

**Anticheirospas'mus.** Spasm of the thumb.

**Anticheirotet'anus.** Spasmodic contraction of the thumb, seen during epileptic attacks.

**Anticheirot'onus.** Spasmodic turning in of the thumb.

**Antichlorot'ic.** Preventing or relieving chlorosis.

**Anticholerin'.** A protective substance formed in cultures of the cholera bacillus.

**Antic'ipating** (*ante*, before, *capio*, to take). Epithet applied to a condition in which periodical phenomena recur at progressively shorter intervals, as in anticipating intermittent.

**Anticli'nal.** Inclined in opposite directions. **A. ver'tebra,** the vertebra in mammalia which forms the transition from vertebræ with spinous processes directed downward to those with spinous processes directed backward; the tenth dorsal vertebra in man.

**Anticne'mion** or **Anticne'mium** (*kneme*, leg). Shin.

**Anticnesmat'ic** (*anti*, against, *knesma*, itching). Anything that relieves itching.

**Anticol'ic.** That which relieves colic.

**Anticomplement'.** A body in immune serum, analogous, in its relation to the complement, to antitoxin.

**Anticonta'gionist.** One who disbelieves in contagion.

**An'ticor.** Carbuncle of chest in domestic animals.

**Anticornutin'** and **Anticoroin'.** Antiseptic mixtures of various metallic sulphates.

**Antic'teric** (*anti*, against, *ikteros*, jaundice). Remedy for jaundice.

**Anti'cus.** Anterior; a word of frequent occurrence in anatomical terms.

**Antidiabetin'.** Glycosolveol; one of three mixtures of saccharin and mannite used in diabetes in place of sugar.

**Antidiarrhœ'ic.** Remedy for diarrhœa.

**Antidin'ic** (*anti*, against, *dinos*, vertigo). Relieving vertigo.

**Antidiphtherin'.** A colorless liquid obtained from cultures of the diphtheria bacillus; has been used as a local application in diphtheria.

**Antidiphtherit'ic.** A remedy for diphtheria. **A. se'rum,** diphtheria antitoxin; dose, for immunization, 500–1000 units; for treatment, 1000–5000 units.

**An'tidotal.** Relating to an antidote.

**Antidota'rium.** Dispensatory; pharmacopœia; a treatise on antidotes.

**An'tidote** (*anti*, against, *didomi*, to give). Originally any internal remedy; now synonymous with counterpoison, and signifying any remedy capable of combating the effects of a poison. See *Poisons.* Also, as a verb, to counteract or antagonize any drug or poison. **Chem'ical a.,** one which acts by uniting with the poison to form a harmless compound, as acids with alkalies. **Physiolog'ical a.,** one that exerts an effect upon the system contrary to that of the poison; see *Antagonism.*

**An'tidotism.** Antagonism of drugs.

**Antidynam'ic** (*dynamis*, force). Debilitant.

**An'tidyne** (*anti*, against, *odyne*, pain). Anodyne.

**Antidyscrat'ic.** Anything that relieves dyscrasiæ or morbid conditions.

**Antidysenter'ic.** Relieving dysentery.

**Antidysu'ric.** Counteracting strangury.

**Antiemet'ic** or **Antemet'ic.** Remedy for vomiting. **A. root,** adrue; the root of Cyperus articulatus.

**Antien'zyme.** Any substance antagonistic to the digestive enzymes or ferments.

**Antiephial'tic** (*ephialtes*, nightmare). Preventing nightmare.

**Antiepilep'tic.** Remedy for epilepsy.

**Antife'brile** (*anti*, against, *febris*, fever). Reducing fever; febrifuge; antipyretic.

**Antifebrin'.** $C_8H_9NO$. Acetanilid.

**Antifer'ment** or **Antifermen'tative.** Preventing or arresting fermentation.

**Antigalac'tagogue** (*anti*, against, *gala*, milk, *agoge*, bringing). Diminishing secretion of milk.

**Antigalac'tic.** Antigalactagogue.

**Antihæmolysin'.** An antibody which protects the erythrocytes from the action of bacterial hæmolytic products.

**Antihec'tic.** Anything relieving hectic fever.

**Antihe'lix.** Anthelix.

**Antihelmin'tic.** Anthelmintic.

**Antihemorrhag'ic.** Hemostatic; styptic.

**Antihidrot'ic** (*anti*, against, *hidrosis*, sweat). Anhidrotic.

**Antihydrop'ic** (*anti*, against, *hydrops*, dropsy). Remedy for dropsy.

**Antihydropin'.** Principle derived from cockroach, used in dropsy in doses of gr. x–xv (0.65–1.0).

**Antihypnot'ic.** Anthypnotic.

**Antihypochon'driac.** Anthypochondriac.

**Antihyster'ic.** Anthysteric.

**Antiic'teric.** Anticteric.

**Antikam'nia.** A proprietary remedy, supposed to be a mixture of acetanilid, caffeine, and sodium bicarbonate; used for the same purpose as acetanilid, in the same or slightly larger doses.

**Antilactes'cent** or **Antilac'tic.** Antigalactic.

**Antilep'sis** (*anti*, against, *lambano*, to seize). Mode of securing bandages, etc., from slipping. Treatment by revulsion or derivation. Attack of sickness.

**Antilep'tic.** Revulsive.

**Antilith'ic** (*lithos*, stone). Substance that prevents the formation of calculi in the urinary organs, or that dissolves them when formed.

**Antilo'bium** (*anti*, opposite, *lobion*, lobe of ear). Antitragus; tragus.

**Antilœ'mic** (*loimos*, plague). Remedy for plague or for pestilence.

**Antiluet'ic.** Antisyphilitic.

**Antilypyrin'.** Antipyrin, 2 parts, and acetanilid, 1 part, mixed while hot; analgesic and antipyretic in dose of gr. vij (0.5).

**Antilysin'.** An antibody formed in the blood of an immunized animal, the action of which is to neutralize the lysin formed by the bacteria of the disease in question, thus giving play to the action of the antitoxin of the disease.

**Antil'ysis.** Action of an antilysin.

**Antilys'sic** (*anti*, against, *lyssa*, rabies). Antihydrophobic.

**Antilyt'ic.** Relating to antilysis.

**Antimellin'.** A glucoside obtained from jambul.

**Antimephit'ic.** Destructive of mephitic or deleterious gases or exhalations.

**An'timere.** Segment of the embryonic body, the planes defining which are at right angles to the longitudinal axis.

**Antimetro'pia** (*anti*, opposite, *metron*, measure, *ops*, eye). Opposite conditions of ametropia in the two eyes, one being myopic, the other hypermetropic.

**Antimiasmat'ic.** Remedy against the so-called miasmatic affections.

**Antimicro'bic.** Acting in opposition to the life and growth of bacteria.

**An'timonate.** Antimoniate.

**Antimo'nial.** Composition into which antimony enters; preparation of antimony. **A. oint'ment,** unguentum antimonii. **A. plas'ter,** emplastrum antimonii. **A. pow'der,** peroxide of antimony combined with phosphate of calcium; pulvis antimonialis; a preparation long esteemed as a febrifuge, but uncertain in its action; dose, gr. vij (0.5). **A. wine,** vinum antimonii.

**Antimo'niate.** Salt formed by the combination of antimonic acid with a base.

**Antimon'ic acid.** $HSbO_3+2H_2O$. Occurs in the form of a white powder.

**An'timonide** or **Antimoni'uret.** A combination of antimony with another element.

**Antimo'nii arse'nias.** Arseniate of antimony, see *Antimony*. **A. bu'tyrum,** antimonium muriatum. **A. calx,** antimonium diaphoreticum. **A. cerus'sa,** antimonium diaphoreticum. **A. chlo'ridum,** antimonium muriatum. **A. io'didum,** iodide of antimony. **A. mu'rias,** antimonium muriatum. **A. o'leum,** antimonium muriatum. **A. ox'idum,** see *Algaroth*. **A. oxychlo'ridum,** oxychloride of antimony. **A. oxysulphure'tum,** a. sulphuretum rubrum. **A. pentasul'phidum,** a. sulphuretum. **A. et potas'sii tar'tras** (Ph. U. S.), antimonium tartaratum, oxytartrate of antimony and potassium, tartarized antimony, tartrate of antimony and potassium, potassiotartrate of antimony, emetic tartar, tartar emetic, $2KSbOC_4H_4O_6H_2O$ (made by boiling oxide of antimony and powdered acid tartrate of potassium in distilled water, filtering, and crystallizing); tartarized antimony is emetic, sometimes cathartic and diaphoretic; externally rubefacient, and in form of ointment more especially—*unguentum antimonii*—used to cause pustulation; dose, as emetic, gr. ss–j (0.032–0.065); as diaphoretic and expectorant, gr. $\frac{1}{20}$–$\frac{1}{10}$ (0.0032–0.006). **A. potas'siotar'tras,** a. et potassii tartras. **A. reg'ulus medicina'lis,** antimonium medicinale. **A. sal,** antimonium tartarizatum. **A. sul'phidum,** $Sb_2S_3$, antimony sulphide or sulphuret, antimonii sulphidum (Ph. U. S.), a dark gray mass or a grayish-black powder, is the native sulphide of antimony purified by fusion. Diaphoretic and alterative; used in veterinary practice almost entirely. When prepared for medicinal use by trituration and levigation it forms antimonii sulphidum purificatum (Ph. U. S.). Dose, gr. $\frac{1}{4}$–j (0.016–0.065). **A. sulphure'tum præcipita'tum,** antimonium sulphuratum (Ph. Br.), golden sulphur or golden sulphuret of antimony, is alterative, diaphoretic, and emetic; like kermes mineral, but much weaker. **A. sulphure'tum ru'brum,** red sulphuret of antimony, kermes mineral; not much used medicinally; resembles antimonium sulphide in action, but is stronger. Antimonii oxysulphuretum is a powder of purplish-brown color; emetic, diaphoretic, and cathartic; used in chronic rheumatism and skin diseases. **A. tar'tras,** antimonium tartarizatum. **A. vit'rum,** glass of antimony, semivitreous oxide of antimony; has been used for preparing tartarized antimony and antimonial wine.

**Antimo'nious acid.** Antimonium diaphoreticum. **A. chlo'ride,** antimonium muriatum. **A. oxychlo'ride,** algaroth.

**Antimo'nium.** Metallic antimony, sometimes called regulus of antimony, is not official in Ph. U. S. or Br. Exists in nature uncombined, or as oxide, or united with sulphur. Common or crude or black antimony or sulphuret of antimony. Sulphuret of antimony is the ore from which all the preparations of antimony are formed. When prepared for use it forms *antimonii sulphidum*, which see. **A. al'bum,** bismuth. **A. calcina'tum,** antimonium diaphoreticum. **A. chlora'tum solu'tum,** antimonium muriatum. **A. cru'dum,** antimonium. **A. diaphoret'icum,** diaphoretic antimony, antimonious acid, mineral bezoard, mineral diaphoretic, peroxide of antimony, deutoxide of antimony; made by the action of common antimony and purified nitre. Not used in medicine, being too uncertain. **A. emet'icum,** antimonii et potassii tartras. **A. medicina'le,** medicinal regulus of antimony; made by the action of subcarbonate of potassium and chloride of sodium or antimonium sulphuratum, and conceived to be more active than common antimony. **A. muria'tum,** butter of antimony, muriate of antimony, antimonious chloride; chloride or chloruret, sesquichloride or terchloride of antimony; a caustic, but not much used as such; dissolved in hydrochloric acid it forms liquor antimonii chloridi, solution of chloride of antimony, of a previous Ph. Br., from which oxide of antimony was prepared. **A. ni'grum purifica'tum** purified black antimony, is the native sulphate of antimony, purified from siliceous matter by fusion and reduced to fine powder; it is used in

pharmacy, not in medicine. **A. sal′itum,** antimonium muriatum. **A. sulphura′tum,** see *Antimonii sulphuretum precipitatum.* **A. tartara′tum** (Ph. Br.) or **A. tartariza′tum,** antimonii et potassii tartras. **A. vitrifac′tum,** antimonii vitrum.

**An′timony.** Antimonium. **A. ar′senate,** made by adding alkaline arsenate to terchloride of antimony; given in heart affections and nervous diseases in dose of gr. $\frac{1}{100}$ (0.0006). **A. ar′senite,** formed by digesting antimony in concentrated solution of arsenous acid. **But′ter of a.,** antimonium muriatum. **Chlo′ride of a.,** antimonium muriatum. **Com′mon a.,** antimonium. **Crude a.,** antimonium. **Deutox′ide of a.,** antimonium diaphoreticum. **Flow′ers of a.,** algaroth. **Glass of a.,** antimonii vitrum. **A. i′odide,** made by heating together antimony and iodine; alterative. **Mu′riate of a.,** antimonium muriatum. **O′leate of a.,** see *Oleates.* **Ox′ide of a.,** see *Algaroth.* **Oxysul′phide of a.,** kermes mineral. **Pen′tasul′phide of a.,** antimonium sulphuratum. **Pentox′ide of a.,** combines with bases to form antimoniates. **Perox′ide of a.,** antimonium diaphoreticum. **A. and potas′sium tar′trate** or **Potas′siotar′trate of a.,** antimonii et potassii tartras. **Sesquichlo′ride of a.,** antimonium muriatum. **Tar′tarized a.,** antimonii et potassii tartras. **Terchlo′ride of a.,** see *Algaroth.* **Trisul′phide of a.,** antimonii sulphidum. **Veg′etable a.,** Eupatorium perfoliatum.

**Antimucorin′.** An antiseptic mixture of metallic sulphates.

**Antimyce′tic** or **Antimycot′ic** (*mykes,* fungus). Destroying or retarding the growth of microorganisms.

**Antimydriat′ic.** Preventing dilatation of the pupil.

**Antinarcot′ic.** Opposed to the action of narcotics.

**Antinephrit′ic.** Remedy for nephritis.

**Antinervin′.** A compound of salicylanilid and bromacetanilid, given in neuralgia in dose of gr. xv (1.0).

**Antineuropath′ic** or **Antineurot′ic.** Remedy against nervous disorders.

**Antin′iad.** Toward the antinion.

**Antin′ial.** Epithet for aspect toward the antinion, or space between the eyebrows.

**Antin′ion** (*anti,* opposite, *inion,* nape of the neck). Anterior pole of the skull, opposite the occipital ridge; point farthest from the inion.

**Antinonnin′.** Potassium dinitrocreosotate; employed in ½ to 5 per cent. solution for the destruction of molds, the preservation of wood, and the prevention of fermentation and dry-rot.

**Antinosin′.** Tetraiodophenolphthalein, a sodium salt of nosophen; used as an antiseptic directly applied to lupus and chancre, or in 1 to 2 per cent. solution for the mouth, eye, etc.

**Antiodontal′gic** or **Antodontal′gic** (*odontalgia,* toothache). Remedy for toothache.

**Antioto′mia** (*antias,* tonsil, *tome,* incision). Tonsillotomy.

**Antiparasit′ic** (*anti,* against, *parasitos,* parasite). Parasiticide or agent that destroys parasites.

**Antiparasitin′.** A preparation of antinonnin, for the destruction of animal parasites.

**Antiparas′tata** (*anti,* opposite, *parastata,* the prostate). Cowper's glands.

**Antiparastati′tis.** Inflammation of Cowper's glands.

**Antipath′ic.** Opposite, contrary; palliative.

**Antip′athy** (*anti,* against, *pathos,* affection). Aversion; natural repugnance to any person or thing; antagonism, as of drugs; palliation.

**Antipedic′ulous.** Having the property of destroying lice; antiphtheiriac.

**Antipep′tone.** A final product of proteid digestion; a composite substance derived from the further digestion of antialbumose.

**Antiperiod′ic.** Remedy which possesses the power of arresting or diminishing the severity of morbid periodical movements; quinine, for instance, in intermittents. The chief antiperiodics are cinchona bark and its alkaloids, arsenic, salicylic acid, salicylates, salicin, bebeeru bark and its alkaloid, and eucalyptol.

**Antiperistal′sis** (*anti,* opposite, *peristello,* to contract). Reversed action of the intestine, whereby its content is propelled in an upward direction.

**Antiperistal′tic.** Relating to antiperistalsis; also an agent arresting or diminishing peristalsis.

**Antiperis′tasis** (*anti,* against, *peristasis,* standing about). Opposition of two contrary qualities, augmenting the force of one.

**Antiper′nius** (*pernio,* chilblain). Remedy against chilblain.

**Antiperonesporin′.** An antiseptic mixture of metallic sulphates.

**Antiphar′mac.** Alexipharmic.

**Antiphar′macum** (*anti,* against, *pharmakon,* poison). Antidote.

**Antiphar′mic.** Antidotal.

**Antiphlogis′tic** (*anti,* against, *phlego,* to burn). Opposed to or checking inflammation, as a. remedies, a. regimen, etc.

**Antiphtheir′iac** (*phtheir,* a louse). Destructive of lice.

**Antiphthis′ic** or **Antiphthis′ical** (*phthisis,* consumption). Opposed to phthisis.

**Antiphthisin′.** Sozalbumose, a substance derived from cultures of the tubercle bacillus; has been used in the treatment of tuberculosis.

**Antiphysa′ic, Antiphyset′ic,** or **Antiphys′ic** (*anti,* against, *physa,* wind in the stomach). A remedy for flatulence.

**Antiplas′tic** (*plastikos,* formative). Not favorable to healing; agent that diminishes the quantity of plastic matter in the blood.

**Antipleurit′ic.** A remedy for pleurisy.

**Antipneumococ′cic** or **Antipneumococ′cus se′rum.** Pane's serum, containing pneumonia antitoxin; used hypodermically in doses of ʒij–v (8.0–20.0).

**Antipneumon′ic.** Remedy for pneumonia.

**Antipneumotoxin′.** A protective proteid formed in the serum during an invasion of pneumococci; pneumonia antitoxin.

**Antipodag′ric** (*podagra,* gout). Remedy for gout.

**Antiprax′ia, Antiprax′is,** or **An′tipraxy** (*anti,* opposite, *prasso,* to act). Contrary symptoms or functions in the same patient; contrary action of drugs according to dose.

**Antiprostat′ic glands.** Anteprostatic glands; glands of Littré and Cowper.

**Antiprurit′ic.** Relieving itching.

**Antipsor′ic** (*psora,* itch). A remedy for the itch.

**Antipu′trid** or **Antiputres′cent.** Antiseptic.

**Antipy′ic** (*pyon,* pus). Preventing suppuration.

**Antipyonin′.** Sodium polyborate or tetraborate, an antiseptic used in ophthalmic surgery.

**Antipyre′sis.** Treatment of the symptom of fever.

**Antipyret′ic** (*anti,* against, *pyretos,* fever). Febrifuge; an agent for reducing fever. Such remedies act either by lessening the production of heat or by increasing the loss of heat. Those which lessen the production of heat do so by acting upon the thermic nervous centre by lowering metabolic activity (quinine), by depressing the circulation (digitalis), or by reducing the amount (bloodletting, purging) or antidoting the effects (specific sera) of the toxic agents of the disease. Those which increase the loss of heat act by dilating the cutaneous vessels (nitrous ether, hot sponging), by increasing perspiration and consequently evaporation (sudorifics), or by abstracting heat from the body (cold bathing).

**Antipyrin′.** $C_{11}H_{12}N_2O$. Variously called, chemically, dimethylphenylpyrazolon dehydrodimethylphenylpyrazin, phenazone, methozin, and dimethyloxychinizin. A grayish-white, soluble, crystalline powder, one of the products of destructive distillation of coal-tar, and regarded as the type of the synthetic or coal-tar antipyretics and analgesics. Dose, gr. v–x (0.32–0.65). It is a heart depressant, and should be prescribed with caution. Externally applied it is antiseptic and hæmostatic. **A. amyg′dalate,** used in pertussis in doses of gr. i–v (0.065–0.32). **A. ben′zoate,** benzopyrin; dose, gr. v–xx (0.32–1.3). **A. bichlo′ral** or **dichlo′ral,** hypnal; dichloralantipyrin; used for its combined hypnotic and analgesic effects. **A. man′delate,** tussol; a. phenylglycolate; used in pertussis in doses of gr. i–v (0.065–0.32). **A. metaoxyben′zoate** and **paraoxyben′zoate,** salts of a. with the respective acids; the first liquid, the second crystalline. **A. phenylgly′colate,** a. mandelate. **A. sal′icylate,** salipyrin; a white, crystalline powder, used in neuralgia, rheumatism, and dysmenorrhœa in doses of gr. v–xx (0.32–1.3). **A. sal′ol,** used locally as an antiseptic and hæmostatic. **A. tan′nate,** a yellowish, insoluble powder containing about one-third antipyrin.

**Antipyrinoma′nia.** Addiction to antipyrin; the antipyrin habit.

**Antipyrot′ic** (*anti,* against, *pyr,* fire). A remedy for burns; also for pyrosis or water-brash.

**Antirab′ic.** An agent employed in the prevention or cure of rabies.

**Antirachit′ic** or **Antirrhachit′ic.** An agent for the prevention or cure of rickets.

**Antirheumat′ic.** Remedy for rheumatism.

**Antirhi′num.** A genus of plants of the order *Scrophulariaceæ.* **A. auricula′tum,** A. elatine. **A. elati′ne,** fluellen, or female speedwell, was formerly used against scurvy and chronic ulcers. **A. hedera′ceum,** A. linaria. **A. hederæfo′lium,** A. linaria. **A. lina′ria,** common toad-flax; the leaves have a bitterish taste, and are diuretic and cathartic; an ointment is made from them for hemorrhoids. **A. vulgar′is,** A. linaria.

**Antirrhe′oscope** (*antirrheo,* to go contrary to, *skopeo,* to see). Instrument for artificially producing visual vertigo by motion of spirals on revolving cylinders started by turning a disk.

**Antiscab′ious.** Antipsoric.

**Antiscirrhous,** an-te-skir′rus. Anticancerous

**Antiscolet′ic** or **Antisco′lic** (*anti,* against, *skolex,* worm). Anthelmintic.

**Antiscorbu′tic.** Preventing or relieving scurvy.

**Antisepsin′.** $C_6H_4BrNHC_2H_3O$. Asepsin; a name given to monabromacetanilid, or parabromacetanilid, or bromphenylacetanilid, produced by the action of bromine on a solution of acetanilid in glacial acetic acid; antiseptic, antipyretic, analgesic; dose, gr. v–vijss (0.32–0.5); also the serum of animals which have been treated with iodine terchloride.

**Antisep′sis** (*anti,* against, *sepsis,* putrefaction). The prevention of putrefactive and inflammatory processes by the destruction and exclusion of the pathogenic microorganisms upon which these processes depend; also used synonymously with asepsis, which properly means the simple absence of putrefaction and the maintenance of this condition by the exclusion of pyogenic organisms. Prevention of decay and putrefaction by the employment of antiseptics, which arrest the development of microorganisms, on which decay and putrefaction depend, or completely destroy them. The condition resulting from the use of antiseptics is called *antiseptic′ity.*

**Antisep′tic** (*anti,* against, *septikos,* putrid). Any substance having the power to prevent or destroy putrefaction, accomplishing this by the exclusion or destruction of the bacteria causing such putrefaction. See the list of antiseptics below, under *A. surgery.* **A. dres′sings,** dressings for wounds that prevent the formation or introduction of septic materials. **A. gauze,** very sheer cotton cloth, cheesecloth, impregnated with some antiseptic, such as corrosive sublimate, carbolic acid, salicylic acid, iodoform, etc., fixed by means of paraffin; used in antiseptic dressings. **A. lig′ature,** ligature made of catgut or other material which has been made aseptic by saturation with antiseptic solutions or boiling. **A. sur′gery,** surgical procedures undertaken with certain precautions looking to the exclusion of microorganisms from the seat of operation. It was formerly believed that the source of pyogenic bacteria was the air, hence the influence of this should be counterbalanced by keeping the field of operation covered with a carbolic acid spray. This was advocated by Joseph Lister, the first practical exponent of antiseptic surgery, but has now been abandoned. More modern views regard as the chief sources of infection the hands of the surgeon and his assistants, the skin of the patient, and the instruments, sponges, and dressings employed. The absolute cleanliness of those thus engaged and of the field of operation is the first consideration. The instruments, sponges, etc., are made aseptic by boiling and immersion in strong solutions of corrosive sublimate or other germicidal substances. The following are some of the germicidal substances more commonly employed in antiseptic surgery:

*Aristol,* non-toxic germicide, used as substitute for iodoform, and similarly employed for chronic and syphilitic and scrofulous ulcers.

*Beta-naphthol,* in solution, 1:2500, for irrigating cavities, cleansing instruments and the surgeon's hands.

*Boric acid,* as a detergent, in 5 to 25 per cent. solution, to mucous surfaces and extensive cavities; to superficial wounds, in ointment, 1 part of boric acid to 5 parts of vaselin or cosmolin; a lotion of salicylic acid 2 parts, and boric acid 12 parts, in hot water 1000 parts, may be used as a safe application in the bladder or cavity of the peritoneum.

*Carbolic acid,* in solution, 1:20 or 1:40, for sterilizing instruments, the latter also for irrigation of wounds and washing sponges, with careful attention to the possibilities of carbolic acid poisoning, and to the susceptibility of children to its effects in even moderate strength of solution.

*Chloride of zinc,* in solution (gr. xxx or xl to fʒj of water), in infected, poisoned, or dissecting wounds.

*Corrosive sublimate,* in solution in water, 1 : 500 to 1 : 1000, for irrigation and disinfection of the hands and skin; 1:2000 is the strength usually employed; 1:4000 in children; 1:5000 or 1:10,000 when used in large cavities. Symptoms of poisoning must be guarded against.

*Creolin,* used like carbolic acid, but non-poisonous and unirritating to the skin, in emulsion with water (2 to 5 per cent.), in which it is not soluble.

*Double cyanide of mercury and zinc,* used for infiltrating gauze, according to the method of Lister.

*Iodoform,* in powder as a dressing to wounds and ulcers; in iodoform gauze, iodoform collodion (gr. xlviij to ℥j of collodion), in ethereal solution, in glycerin (ʒj to ʒx of glycerin), etc.

*Lysol,* a creosol preparation resembling carbolic acid, but less toxic; efficient in 1 to 2 per cent. solution.

*Methyl-violet or pyoktanin,* in solution, 1 : 1000 or 1:2000, for suppurating wounds and ulcers; it is not toxic; for sterilizing instruments, 1:10,000.

*Peroxide of hydrogen,* in 15-volume solution, undiluted, or diluted to about 10 per cent., for sterilizing sinuses and suppurating cavities, into which it may be injected by a syringe or a form of spray.

*Potassium permanganate,* in solution, about ʒj or more to f℥j of water; f℥j of this solution in Oj of water, making a solution 1:1000; used in disinfecting foul wounds and ulcers, for surgeon's hands, washing sponges, etc.

*Sulphocarbolate of zinc* may be used like chloride of zinc, for the same purposes and in the same strength.

**Antisep′ticism.** Principles of antisepsis and antiseptic treatment.

**Antiseptic′ity.** See *Antisepsis.*

**Antiseptin′.** A mixture of zinc sulphate and iodide, thymol, and boric acid; used externally as an antiseptic application.

**Antisep′tol.** Cinchonine iodosulphate; a reddish, odorless powder, used as a substitute for iodoform.

**Antisial′ic** or **Antisial′agogue** (*anti*, against, *sialon*, saliva, *ago*, to expel). Remedy against ptyalism or excessive salivation.

**Antis′pasis** (*anti*, contrary, *spao*, to draw). Derivation; revulsion.

**Antispasmin′.** A mixture of narceine-sodium and sodium salicylate; antispasmodic and sedative in doses of gr. ss–ij (0.032–0.13).

**Antispasmod′ic.** An agent designed to prevent or check spasm. Antispasmodics are employed in such affections as hysteria, epilepsy, chorea, asthma, and spasm of the blood-vessels. Examples of antispasmodics are the bromides, zinc salts, musk, castor, sumbul, valerian, asafetida, ammoniac, chloroform, ether, camphor, belladonna, and nitrite of amyl.

**Antispas′tic** (*anti*, contrary, *spao*, to draw). Antispasmodic; derivative; revulsive.

**Antisquam′ic** (*anti*, against, *squama*, a scale). An agent checking or relieving cutaneous affections of a scaly form.

**Antistaphylococ′cic** or **Antistaphylococ′cus se′rum.** A fluid containing staphyloccocus antitoxin; employed by hypodermic injection in the treatment of infection with this organism in doses of ʒj–jss (4.0–6.0).

**Antis′tasis** (*antistasis*, opposition). Antagonism.

**Antister′num** (*anti*, opposite, *sternon*, sternum). Back; part of the spinal column opposite the sternum.

**Antistreptococ′cic** or **Antistreptococ′cus se′rum.** Marmorek's serum; a fluid containing streptococcus antitoxin, used hypodermically in dose of ʒijss–℥j (10.0–32.0), in the treatment of erysipelas, puerperal fever, and other septic conditions.

**Antistru′mous** (*struma*, scrofula, goitre). Antiscrofulous; concerned in the prevention or cure of goitre.

**Antisu′doral** or **Antisudorif′ic** (*sudor*, sweat). Remedy that diminishes sweat.

**Antisyphilit′ic.** Relieving or curing syphilis.

**Antitetan′ic se′rum.** Tetanus antitoxin, employed subcutaneously in doses of ʒij–℥j (8.0–32.0).

**Antitetrazin′.** A quinine derivative, used in neuralgia in doses of gr. ij–iv (0.13–0.26).

**Antith′enar** (*anti*, opposite, *thenar*, palm of hand or sole of the foot). Opponens pollicis and adductor pollicis manûs or pedis muscles. **A. em′inence,** inner border of palm of hand.

**Antither′mic** (*anti*, opposed to, *therme*, heat). Cooling; antipyretic.

**Antithermin′,** Phenylhydrazin-levulinic acid; colorless crystals, soluble in boiling water or alcohol; an antipyretic and analgesic coal-tar derivative; dose, gr. ij–vijss (0.13–0.5).

**Antitox′ic.** Antidotal; relating to an antitoxin.

**Antitoxin′.** An agent that destroys or counteracts a toxin or bacterial poison in the system. A defensive proteid, formed in the body during infection and present in the blood of immunized animals, which possesses the property of combining with the toxin elaborated by the infecting microorganism, and so rendering it innocuous. See *Side-chain theory*, under *Chain*. Antitoxins of various diseases are artificially produced by injecting animals, usually horses, with increasing doses of specific bacterial cultures, and the serum containing the antitoxin is employed in the prevention or cure of the infection caused by the same organism. The best known of the antitoxins is that of diphtheria; but antitoxins of tetanus, cholera, plague, typhoid fever, pneumonia, streptococcal and staphylococcal infections, tuberculosis, and other diseases have been used with varying success. **Artific′ial a.,** one produced by an electric current passing through a bacterial culture. **A. u′nit,** the amount of antitoxin needed to neutralize ten times the fatal dose of the corresponding toxin when the two are simultaneously injected into a guinea-pig.

**Antitrag′icus** or **Antitra′geus.** A small muscle, the existence of which is not constant, occupying the space between the antitragus and the anthelix.

**Antit′ragus.** A conical eminence on the pavilion of the ear opposite the tragus.

**Antitris′mus.** Tonic spasmodic action of the muscles of the mouth, preventing its closure.

**Antituberculot′ic** or **Antituber′culous.** Designed to arrest the progress of tuberculosis. **A. se′rum,** antiphthisical serum, used hypodermically in doses of ♏x–ʒj (0.65–4.0).

**Antitussin′.** A synthetic preparation, used in pertussis and externally in surgical dressings as an antiseptic.

**Antity′phoid.** Tending to prevent or cure typhoid fever. **A. se′rum,** an antitoxic serum used as a prophylactic and curative remedy in typhoid fever.

**Antityp′ical.** Antiperiodic; not regular.

**Antiurat′ic.** Preventing gouty deposits.

**Antivaccina′tionist.** One opposed to the practice of vaccination.

**Antivenene′.** The active principle of antivenomous serum.

**Antiven′omous.** Antidotal to serpent venom. **A. se′rum**, Calmette's serum; obtained from animals that have been rendered artificially immune against the venom of serpents by repeated injections of the same in increasing doses.

**Antivene′real.** Preventing or curing venereal disease.

**Antivermic′ular.** Antiperistaltic.

**Antiver′minous** (*vermis*, worm). Anthelmintic.

**Antivivisec′tion.** Opposition to experimentation on animals. One who is opposed to such experimentation is called an *antivivisec′tionist.*

**Antizymot′ic** or **Antizy′mic.** Antiseptic; checking or preventing fermentation or putrefaction.

**Ant′ler cells.** Cells of Purkinje.

**Antodontal′gic.** Relieving toothache.

**Antorgas′tic.** Checking orgasm, especially the venereal.

**Anto′zone.** Hydrogen peroxide.

**Antozostomat′ic** (*anti*, against, *ozostomos*, one with bad breath). Capable of correcting bad breath or disagreeable taste.

**An′tracele.** The presence of serous fluid in an antrum, especially that of Highmore.

**An′tral.** Cavernous. Relating to an antrum, as that of Highmore.

**Antrec′tomy.** Excision of the walls of an antrum; specifically, of the mastoid antrum.

**Antri′tis.** Inflammation of a cavity, particularly the antrum of Highmore.

**An′trocele.** Antracele.

**Antrophlogo′sis** (*antrum* + *phlogosis*, inflammation). Antritis.

**An′trophore** (*antron*, cavity, *phoros*, conveying). Soluble medicated gelatin bougie.

**Antrorrhon′chus.** Cavernous rhonchus.

**An′troscope** (*antrum* + *skopeo*, to examine). An apparatus for inspection of the condition of the maxillary antrum by means of electrical transillumination. The process is called *antros′copy.*

**An′trotome** (*antrum* + *tome*, incision). An instrument for cutting through the wall of an antrum, usually the mastoid or maxillary. The operation is called *antrot′omy.*

**Antrotympani′tis** (*antrum* + *tympanum* + *itis*). Inflammation of the middle ear.

**Antrover′sio.** Anteversion.

**An′trum** (*antron*, a cavern). ✓Name given to certain cavities, as in bones, etc., entrance to which is usually through a comparatively narrow aperture. **A. au′ris,** tympanum. **A. buccino′sum,** cochlea; labyrinth. **Car′diac a.,** dilatation of the œsophagus above the diaphragm. **A. denta′le,** pulp cavity of tooth. **A. duodena′le,** upper dilated portion of the duodenum. **A. ethmoida′le,** ethmoid cells. **A. fron-**

ta'le, frontal sinus. **A. ge'næ**, antrum of Highmore. **A. of High'more**, maxillary sinus; a deep cavity in the substance of the superior maxillary bone communicating with the middle meatus of the nose and lined by a prolongation of the Schneiderian membrane. **A. of Malacarne'**, posterior perforated space of the cerebrum. **A. mastoi'deum**, mastoid cells. **A. maxil'læ** or **maxilla're**, antrum of Highmore. **A. olfacti'vum**, ethmoid cells. **A. petro'sum**, meatus auditorius internus. **A. pylo'ricum** or **pylo'ri**, pyloric portion of the stomach. **A. sphenoida'le**, sphenoidal sinus. **A. tu'bæ**, sacciform enlargement of the oviduct.

**Antyl'lus, opera'tion of.** Treatment of an aneurysm by opening it, removing clots, and ligating the artery above and below the sac.

**A'nulus** (dim. of anus). See *Anus, Fossette.*

**Anure'sis** or **Anu'ria** (*a*, priv., *oureo*, to pass urine). Absence or deficiency of urine; retention of urine.

**Anuret'ic** or **Anu'ric.** Relating to or affected with anuria.

**A'nus** (circle). Circular opening at the inferior extremity of the rectum by which the excrement is expelled; fundament. Anterior orifice of the aqueduct of Sylvius, called also foramen commune posterius, supposed to form a communication between the back part of the third ventricle and the lateral ventricles. **Abnor'mal** or **artific'ial a.**, opening made artificially to supply the place of the natural anus. **A. cer'ebri**, see *Anus.* **De'vious a.**, preternatural a. **Imper'forate a.**, malformation in which there is no natural anus. **Infundib'uliform a.**, condition of the anus in which the natural folds are obliterated. **A. no'thus**, artificial a. **Preternat'ural a.**, an opening, other than the normal anus, giving issue to fæces. **A. of Rusco'ni**, minute opening in the blastoderm of the ova of amphibious animals. **A. vestibular'is**, a preternatural anus opening at the vulva, called also *a. vulvovaginalis.*

**An'usol.** The iodoresin sulphonate of bismuth, used for pruritus ani.

**An'vil.** Incus; one of the ossicles of the middle ear.

**Anxi'etas.** Anxiety. **A. præcordio'rum**, restlessness and agitation, with general indisposition and a distressing sense of oppression at the epigastrium. **A. tibia'rum**, restlessness of the lower extremities, noticed in some nervous affections.

**Anx'is.** Constriction.

**Anytin'.** A 33 per cent. solution of sulpho-ichthyolic acid in water.

**An'ytol.** A combination of anytin with cresol, etc.

**A. O. C.** Abbreviation for anodal opening contraction. See *Anodal.*

**Aochle'sia** (*a*, priv., *ochlos*, disturbance). Tranquility; calmness. Catalepsy.

**Aor'ta.** Hæmal axis; name given by Aristotle to the chief artery of the body. Probably Hippocrates meant by *aortai* the bronchi and their ramifications. The aorta is the common trunk of the arteries of the body; arises from the left ventricle of the heart, about opposite the fifth dorsal vertebra, passes upward (*ascending aorta*), forms a great arch, and descends across the left of the spine (*descending aorta*) until it reaches the middle of the fourth or fifth lumbar vertebra, where it bifurcates to give origin to the common iliac arteries. The aorta is sometimes divided into *thoracic* or *pectoral* and *abdominal.* (See Plate under *Artery.*) **Abdom'inal a.**, the part of the a. below the diaphragm. **Arch of the a.**, the transverse portion of the a. between the ascending a. and the descending a.; it gives off the innominate and the left carotid and subclavian arteries. **Ascend'ing a.**, the first section of the aorta, between the heart and the arch. **Car'diac a.**, part of embryonic vascular apparatus, giving rise to the aortic arches. **Com'mon a.**, portion of the aorta in the lower animals included between heart and the point of division into anterior and posterior a. **Descend'ing a.**, the third portion of the a., between the arch and the point of bifurcation. **Dor'sal a.** embryonic aorta from the union of primitive aortæ. **Infe'rior a.**, abdominal a. **Pec'toral a.**, thoracic a. **Pericar'diac a.**, ascending a. **Poste'rior a.**, posterior branch of common a. **Prim'itive a.**, part of a. between origin and point of departure of first branch. *Primitive aortæ* of the embryo are the inferior vertebral anterior branches from the cardiac aorta, joining to form the dorsal aorta. **Primor'dial a.**, dorsal a. **Right a.**, embryonic portion of the bulb of the a., afterward forming the pulmonary artery. **Root of the a.**, origin of a. from the heart. **Si'nuses of the a.**, sinuses of Valsalva. **Subver'tebral a.**, dorsal a. **Supe'rior a.**, thoracic a. **System'ic a.**, left aorta; in embryo, an arrangement of vessels which afterward form the aorta. **Thora'cic a.**, that portion of the a., including the ascending a., the arch, and part of the descending a., which is contained in the thoracic cavity.

**Aor'tal** or **Aor'tic.** Relating to the aorta. **A. arch**, see *Aorta.* **A. arch'es**, embryonic arches developing into large vessels. **A. car'tilage**, second costal cartilage over the valves of the aorta. **A. curve**, a. arch. **A. fora'men**, elliptical opening in the middle line posteriorly behind the diaphragm, through which the aorta passes with the vena azygos major and the thoracic duct. **A. insuffi'ciency**, imperfect closure of the aortic valves. **A. mur'mur**, murmur denoting disease of the aortic valves. **A. notch**, mark in the sphygmographic tracing indicating closure of the aortic valves. **A. or'ifice**, orifice between the left ventricle and the aorta. **A. plex'us**, plexus of sympathetic nervous matter around the abdominal aorta. **A. seg'ment**, anterior portion of the mitral valve. **A. sin'uses**, sinuses of Valsalva. **A. valves**, semilunar valves at the opening of the left ventricle into the aorta. **A. ven'tricle**, left ventricle of the heart. **A. ves'tibule**, part of the left ventricle of the heart in the vicinity of the aortic opening.

**Aortarc'tia** (*arcto*, to constrict). Narrowness or constriction of the aorta.

**Aortecta'sia** or **Aortec'tasis** (*ektasis*, dilatation). Dilatation of the aorta.

**Aorteurys'ma.** Aneurysm of the aorta. On careful auscultation over the dorsal vertebræ a bellows sound, with deep and not always perceptible impulse, may be detected.

**Aorti'tis.** Inflammation of the aorta.

**Aortomala'cia** or **Aortomala'kia.** Softening of the aorta.

**Aortosteno'sis.** Abnormal narrowness of the aorta.

**Aor'tron.** Lobe of the lungs.

**Aos'mic** (*a*, priv., *osme*, smell). Devoid of odor.

**Ao'tus** (*a*, priv., *ous*, ear). Monster devoid of ears.

**Apaconitine'.** Apoaconitine.

**Apag'ma** (*apo*, from, *ago*, to remove). Abduction. Separation of the fractured ends of a bone.

**Apago'ge** (*apo*, from, *ago*, to lead). Defecation. Abduction.

**Apalach'ine** or **A. gal'lis.** Ilex vomitoria.

**Apal'lage** or **Apallax'is** (*apallatto*, to get rid of). Change, generally from disease to health.

**Apalot'ica** (*apalotes*, softness). Fortuitous lesions or deformities affecting soft parts.

**Apanas'tema** (elevation). Small wart-like growth on the conjunctiva.

**Apan'dria** (*apo*, from, *aner*, a man). Androphobia; a morbid aversion to the male sex.

**Apanthe'sis** or **Apanthis'mus** (*apo*, from, *antheo*, to flower). Obliteration of parts no longer serviceable, as of the ductus venosus and ductus arteriosus of fetal existence; stuprum.

**Apanthro'pia** or **Apan'thropy** (*apo*, from, *anthropos*, man). Anthropophobia; a morbid aversion to human beings.

**Apari'ne** or **A. his'pida.** Galium aparine.

**Aparthro'sis** (*ap*, from, *arthroo*, to articulate). Diarthrosis; disarticulation.

**Ap'athy** (*a*, priv., *pathos*, affection). Suspension of moral feelings, taking place in severe physical or in mental diseases.

**Apatropine'.** A substance resulting from the action of fuming nitric acid upon atropine.

**Ape.** A monkey, one of the family of *Simiidæ* most resembling man. **A. fis'sure,** the exoccipital fissure; a deep dorso-occipital fissure, resembling one present in the brain of the ape. **A. hand,** deformity resulting from complete atrophy of the thumb muscles.

**Apeche'ma** (Gr., an echo). Action of reflecting sound. Counter-fissure, counter-blow.

**Apectoceph'alus.** Acephalothorus.

**Apel'la** (*a*, priv., *pellis*, skin). One whose prepuce does not cover the glans; retraction or smallness of any other soft appendage.

**Apel'lous.** Devoid of skin; circumcised.

**Apep'sia** (*a*, priv., *pepto*, to digest). Dyspepsia.

**Apep'tic.** Dyspeptic; not digesting.

**Apereux'is** (Gr.). Belching up of wind.

**Ape'riens** or **Ape'rient** (*aperio*, to open). Laxative; medicine gently opening the bowels. Formerly a substance or a muscle supposed to have the power of opening any of the passages.

**Aper'inous** (*a*, priv., *pera*, purse). Devoid of scrotum.

**Aperiod'ic.** Not periodical.

**Aperistal'sis.** Absence of vermicular movement of the intestines.

**Aper'itive** or **Aper'tive.** An appetizer; an aperient.

**Aperit'ropal** (*a*, priv., *peritrope*, turning about). Growing abnormally.

**Apertom'eter.** An instrument for measuring the angular aperture of a microscopic objective.

**Aper'tor** (*aperio*, to open). Having power to open. **A. oc'uli,** levator palpebræ superioris.

**Aperto'rium.** Instrument for dilating the os uteri during labor; speculum.

**Apertur'a.** Mouth or opening. **A. ante'rior ventric'uli ter'tii cer'ebri,** vulva cerebri. **A. aquæduc'tus coch'leæ,** opening of aqueduct of cochlea on temporal bone. **A. chor'dæ,** opening internally for canal of chorda tympani. **A. decli'vis,** anus. **A. cana'lis inguina'lis,** inguinal ring. **A. na'rium,** see *Nares*. **A. pel'vis supe'rior,** see *Pelvis*. **A. spina'lis,** vertebral foramen. **A. thora'cis,** opening of thorax (upper or lower). **A. uteri'na,** uterine extremity of the Fallopian tube.

**Ap'erture.** Opening. See *Apertura*, *Opening*, *Foramen*, *Ring*. **An'gle of a., An'gular a., A. of the lens,** the angle made by the most divergent rays passing from the central point of the object viewed through the lens of a microscope. **Mas'toid a.,** opening between the tympanic cavity and mastoid cells. **Umbil'ical a.,** opening in the embryonic alimentary canal at the point of union with the umbilical vesicle.

**Apeuthys'menon** (*apeuthyno*, to straighten). Rectum.

**A'pex.** Point or extremity of a part, as of tongue, nose, etc. **A. beat,** the impulse of the heart seen or felt in the chest wall at the moment of cystole, see *Heart*. **A. cor'dis,** apex of heart. **A. lin'guæ,** proglossis. **A. mur'mur,** murmur heard over apex of heart. **A. prostat'icus,** anterior extremity of the prostate. **A. pulmo'nis,** apex of the lung. **A. root,** terminal portion of a tooth root.

**Apha'cia.** Aphakia.

**Apha'cic.** Without crystalline lens.

**Aphære'sia** or **Aphære'sis.** Extirpation. Hemorrhage.

**Apha'gia** (*a*, priv., *phago*, to eat). Inability to swallow.

**Apha'kia** (*a*, priv., *phakos*, lens). Absence of the crystalline lens, as after operations for cataract.

**Apha'kic.** Without crystalline lens.

**Aphalangi'asis** (*a*, priv., *phalanx*, phalanx). Stage of anæsthetic leprosy, in which the fingers fall off joint by joint.

**Aphan'isis** or **Aphanis'mus** (Gr., disappearance). Fainting; marasmus.

**Aphanocnido'sis** (*aphanes*, obscure, *knidosis*, stinging). Obscure or recurrent urticaria.

**Apha'sia** (*a*, priv., *phemi*, to say). Partial or complete loss of the use of language by the tongue, ear, or pen. It may result from passive congestion of the brain, from apoplexy, softening of the brain from embolism, or from pressure of a foreign growth. It may occur alone or be accompanied by hemiplegia, usually on the right side of the body; it has been ascribed to a lesion of the left third frontal convolution. It has been proposed to assign more precise terminology for various forms of defective speech: thus, *alogia*, loss of speech from defective intellection; *amnesia*, *amnesic*, *amnestic*, or *amnemonic aphasia*, from defective memory of words; *aphemia*, from defect in the special faculty of language, patient being able to think and write, but not to speak; *alalia*, from defective articulation; *aphasia* being restricted to cases in which one can think, but cannot speak or write, while *agraphia* includes those who can think and speak, but cannnot write; *alexia*, those who have lost the power to read; *apraxia*, those who can no longer interpret the language of gestures; and *amimia*, those who cannot express ideas by gestures; in *paraphasia* words are misused and misplaced in the sentence, making speech often unintelligible. **Amne'sic, amnes'tic,** or **amnemon'ic a.,** loss of memory of words. **Aneu'ral a.,** ataxic a. **A. atac'tica** or **Atax'ic a.,** want of power to coordinate words in articulation, the ability to understand spoken words and to read and write being preserved. **Bro'ca's a.,** ataxic a. **Commissu'ral a.,** want of power to connect words with ideas, due to lesion of commissural fibres connecting the brain centres. **Conduc'tion a.,** commissural a. **Cor'tical a.,** sensory a. **Func'tional a.,** a. not connected with an actual lesion of the brain. **Grash'ey's a.,** see *Grashey*. **In'sular a.,** a. due to a lesion of the island of Reil. **Mixed a.,** a combination of motor and sensory a. **Mo'tor a.,** ataxic a. **Mu'sical a.,** loss of the power to give expression to musical ideas. **Sen'sory a.,** amnesic a.; word-deafness. **Subcor'tical a.,** conduction a. **To'tal a.,** mixed a. **Wer'nicke's a.,** sensory a.

**Apha'sic.** Relating to aphasia. One affected with aphasia.

**Aph'edra** (*hedra*, fundament). Anus.

**Aphed'ria.** Menses.

**Aphel'xia** (*phelko*, to abstract). Revery; absentmindedness. **A. inten'ta,** abstraction of mind. **A. otio'sa,** brown study. **A. so'cors,** absence of mind.

**Aphe'mia** (*a*, priv., *phemi*, to say). Inability to name objects through loss of memory of the muscular movements of articulate speech; ataxic aphasia.

**Aphe'mic.** Relating to aphemia; one affected with aphemia.

**Aphere'sis** or **Aphære'sis** (*aphaireo*, to take away). Amputation. **A. san'guinis,** excessive hemorrhage.

**Aph'eter.** That which discharges or sets free; applied to an assumed catastate which decomposes inogen and so excites muscular action.

**Aphilan'thropy** (*a*, priv., *phileo*, to love, *anthropos*, man). Dislike or avoidance of the company of man.

**Aphlegman'tous** (*a*, priv., *phlegma*, inflammation). Antiphlogistic.

**Aphlogis'tic** (*a*, priv., *phlox*, flame). Without inflammation.

**Apho'nia** (*a*, priv., *phone*, voice). Aphony; privation of voice or of sounds that should be produced in the glottis. When it is part of a catarrh or a cold it is commonly of little consequence; when produced by causes acting on the nervous system, as powerful emotion, or without appreciable lesion of the vocal apparatus, *laryngoparalysis*, *aphonia paralytica*, it frequently resists all remedies. **A. albuminu'rica,** a. dependent on albuminuria. **A. catarrha'lis,** a. clericorum. **Cen'tric a.,** a. from disease or injury of the central nervous system. **A. clerico'rum,** clergymen's sore throat. **A. ebrio'rum,** a. of drunkards. **Glot'tic** or **laryn'geal a.,** a. from lesion of the muscles of the tongue or vocal bands. **A. hippocrat'ica,** coma. **A. paralyt'ica,** centric a. **A. paranoi'ca,** obstinate silence of the insane. **Periph'eral a.,** a. from external causes; that is, not dependent on disease or injury of the central nervous system. **A.**

**spas′tica**, asthma thymicum, due to spasm of the tensor muscles of the larynx. **A. surdo′rum**, dumbness from deafness.

**Apho′nic** or **Aph′onous.** Without voice; relating to aphonia.

**Aph′ony.** Aphonia.

**Aphora′ma** or **Aphore′ma** (*amphorao*, to have in view). Projection or prominence of the eyes.

**Aphore′sis** (*a*, priv., *phoresis*, carrying). Separation or removal of part by amputation or excision.

**Aphor′ia** (*a*, priv., *phero*, to bear). Sterility in the female.

**Aphor′ic** or **Aph′orous.** Sterile.

**Aphose′** (*a*, priv., *phos*, light). Subjective impression of a shadow.

**Aphra′sia** (*a*, priv., *phrazo*, to tell). Want of ability to form phrases or express one's self in connected sentence. **A. paranoi′ca**, aphonia paranoica.

**Aphre′nia** (*a*, priv., *phren*, mind). Dementia.

**Aphre′nous.** Insane.

**Aphrodescin′** (*aphrodes*, frothy). Glucoside from Æsculus hippocastanum.

**Aphrodis′ia** (*Aphrodite*, Venus). Venereal desire; pudenda; coition; puberty.

**Aphrodis′iac.** Exciting to venereal desire.

**Aphrodisiog′raphy** (*grapho*, to describe). Description of the pleasures of love or of venereal diseases.

**Aphrodis′ius mor′bus.** Syphilis.

**Aphrodi′te** (Venus). Venereal appetite.

**Aphrone′sis** (*aphroneo*, to be silly). Madness. Want of judgment.

**Aphro′nia.** Cerebral apoplexy.

**Aphros′yne** (*aphros*, foolish). Delirium; insanity.

**Aph′thæ**, pl. of aphtha (Gr., eruption). Thrush or sore mouth, white thrush, milk thrush, soor. Roundish, pearl-colored vesicles, confined to the lips, mouth, and intestinal canal, and generally terminating in curd-like sloughs. Condition is also called thrush fungus, pultaceous inflammation of the mouth, and generally receives two divisions, *mild* or *discreet*, and *malignant* or *black thrush*. Common thrush is of no consequence, requiring merely the use of absorbent laxatives. The malignant variety is rare, of more serious character, and accompanied with typhoid symptoms, typhus aphthoideus. Aphthæ are due to a special microscopic vegetable parasite formation, *Oïdium albicans* or *Mycoderma vini;* hence the disease was called *aphthophyton*. **A. adulto′rum**, aphthous stomatitis. **A. angino′sæ**, aphthæ of the throat. **Bed′nar's a.**, the occurrence of yellow spots on the mucous membrane covering the posterior lateral border of the hard palate, in infants. **Cachec′tic a.**, malignant thrush, a. with severe constitutional symptoms. **Chron′ic a.**, psilosis or a. tropicæ. **Conta′gious a.**, foot-and-mouth disease. **A. epizoöt′icæ**, foot-and-mouth disease; aphthous fever. **A. præpu′tii**, herpes præputii. **A. serpen′tes**, cancer aquaticus. **A. trop′icæ**, psilosis, a form of aphthous inflammation of the mouth with catarrh of the stomach and bowels, occurring in some parts of tropical Asia and Africa. **A. vene′reæ**, mucous patches.

**Aph′thaphyte** (*aphthæ* + *phyton*, a vegetable). Oïdium albicans; parasitic vegetable growth observed in aphthæ.

**Aphthenx′ia** or **Aphthenx′is** (*aphthenkto*, speechless). Central aphasia.

**Aphtho′des** or **Aphthoi′des** (*aphthe* + *œidos*, appearance). Aphthous-like; belonging to aphthæ.

**Aph′thoid.** Like aphthæ.

**Aphthon′gia** (*a*, priv., *phthongos*, sound). Spasmodic aphonia, due to contraction of muscles to which the hypoglossal nerve is distributed.

**Aphthoph′yton.** Aphthaphyte.

**Aph′thous.** Relating to aphthæ; complicated with aphthæ. **A. fe′ver**, foot-and-mouth disease. **A. sore throat**, herpetic pharyngitis.

**Aphyl′lon uniflo′rium.** Cancer root; square root; astringent.

**Aphys′iopurpurin′.** An animal pigment.

**Apias′trum** (*apis*, bee). Melissa; wild parsley.

**Ap′ical** Relating to the apex. **A. fora′men**, opening at the apex of a tooth root which transmits the nerve and blood-vessels to the dental pulp. **A. space**, space between the apex of a root and the alveolar wall, occupied by the thickest portion of the dental periosteum.

**Apiin′.** $C_{27}H_{22}O_{16}$. White powder from Petroselinum sativum, resembling pectic acid.

**Apilep′sia.** Cerebral apoplexy.

**Ap′inoid can′cer** (*apines*, free from dirt, because of the smoothness of its section). Schirrhus.

**A′piol.** Parsley oil. Yellowish, oily liquid, $C_{12}H_{14}O_4$, obtained from Apium petroselinum, or parsley, which has been used as an antiperiodic in intermittent fever, amenorrhœa and dysmenorrhœa, and in night-sweats of phthisis, in doses of 5 to 10 drops (0.32–0.65).

**Apiolin′.** A derivative of Apium petroselinum; a stimulant emmenagogue, given in doses of ♏iij (0.2).

**Ap′ion.** Decomposition product of apiol.

**Apio′nia** (*a*, priv., *pion*, fat). Leanness.

**A′pios** and **A. tubero′sa.** Pyrus communis; groundnut, wild bean, sagaban. Root is used as food.

**Apipho′bia** (*apis*, bee, *phobos*, fear). A morbid fear of bees, wasps, and hornets.

**A′pis.** Powdered bee, once used as a diuretic.

**Apisin′.** Poison of bee.

**Ap′ium** or **A. grave′olens.** Smallage, ord. *Umbelliferæ*. **A. am′mi**, ammi. **A. ani′sum**, Pimpinella anisum. **A. car′vi**, carum; plants, roots, and seeds are aperient and carminative; celery is a variety. **A. horten′se**, A. graveolens. **A. monta′num**, Athamanta aureoselinum. **A. officina′rum**, A. graveolens. **A. paluda′pium**, A. graveolens. **A. palus′tre**, A. graveolens. **A. petræ′um**, Bubon macedonicum. **A. petroseli′num**, common parsley; root, *petroselinum*, and seeds are diuretic and aperient. See *Apiol*. **A. sati′vum**, Petroselinum sativum. **A. silves′tre**, mint. **A. si′num**, Sium nodiflorum. **A. vulga′re**, A. graveolens.

**Aplacen′tal.** Not having placenta.

**Aplana′sia** (*a*, priv., *planao*, to wander). Absence of spherical aberration.

**Aplanat′ic.** Not having any spherical aberration. **A. fo′cus**, focus of a lens, the rays issuing from which do not undergo spherical aberration as they pass through it. **A. lens**, rectilinear lens, corrected for aberration. **A. search′er**, lenses so arranged in a microscope as to correct aberration.

**Aplan′atism.** Absence of spherical aberration.

**Apla′sia** (*a*, priv., *plasis*, formation). Defective development or nutrition; congenital atrophy.

**Aplas′tic** (*a*, priv., *plastos*, molded). Not capable of forming; not organizable; structureless. **A. el′ement**, one unsusceptible of further organization. **A. lymph**, material not coagulable or organizable; a product of disease or inflammation.

**Apleu′ria.** Absence of ribs.

**Apleu′ros** (*a*, priv., *pleuron*, a rib). One without ribs.

**Aplot′omy** (*aploos*, simple, *tome*, incision). Simple incision.

**Apne′a.** Apnœa.

**Apneumat′ic** (*a*, priv., *pneuma*, air). Without air.

**Apneumato′sis** (*a*, priv., *pneumatoo*, to distend with wind). Deficient inflation of lungs. Atelectasis.

**Apneu′mia** (*a*, priv., *pneumon*, lung). Monstrosity in which there is absence of lungs.

**Apneumoner′via** or **Apneumoneu′ria** (*a*, priv., *pneumon*, lung, *neuron*, nerve). Want of nervous action in the lungs.

**Apneus′tia.** Apnœa; asphyxia.

**Apnœ′a** (*a*, priv., *pneo*, to respire). Absence of respiration, due to non-excitation of the respiratory nerve centre. **Car′diac a.**, a. from heart disease; angina pectoris. **A. infan′tum**, asthma thymicum. **A. neonato′rum**, asphyxia of the newborn.

**Apnœasphyx′ia.** Asphyxia.

**Apnœ′ic.** Relating to apnœa.

**Ap'nus** (*a*, priv., *pneo*, to breathe). One in whom respiration is so slight that it seems suspended.

**Apoaconitine'.** $C_{33}H_{41}NO_{11}$. Alkaloid derived from aconitine by dehydration. It closely resembles aconitine.

**Apoatropine'.** Alkaloid derived from atropine by the action of nitric acid, ammonia, and chloroform.

**Apocatas'tasis** (Gr). Restoration; subsidence, as of a tumor.

**Apocathar'sis** (a clearing away). Catharsis.

**Apocathar'tic.** Cathartic.

**Apoceno'sis** (*apokenoo*, to empty quite). Morbid flux; discharge.

**Apocenot'ic.** Producing increased evacuation.

**Apochore'ma** (*apochoreo*, to pass off). Excretion.

**Apochremp'sis** (*chremptomai*, to hawk and spit). Expuition.

**Apochrœo'sis.** Blanching.

**Apochromat'ic** (*apo*, from, *chroma*, color). Absolutely achromatic; applied to lenses with high correction of aberrations.

**Apoch'ysis** (a pouring off). Cataract.

**Apoclas'ma** (*apo*, from, *klao*, to break). Abduction; separation of fragments of bone.

**Apoclei'sis** (*apokleio*, to shut out). Disgust; want of appetite.

**Apocodeine'.** $C_{18}H_{19}NO_2$. An alkaloid derived from codeine and possessing similar action. **A. hydrochlo'ride**, a brown, amorphous powder, expectorant in dose of gr. $\frac{1}{10}$–j (0.006–0.06), and in larger dose said to be emetic.

**Apoc'ope** (*apo*, from, *kope*, act of cutting). Abscission; wound with loss of substance; fracture with loss of part of bone; amputation.

**Apoc'opus.** Castrated.

**Apocrous'tic** or **Apocrus'tic.** Astringent; repellent; refrigerant.

**Apocye'sis** (*apo*, from, *kyeo*, to be pregnant). Parturition.

**Apocynein'.** Glucoside from apocynum.

**Apocynin'.** Amorphous resinous substance derived from apocynum, like digitalin in its properties.

**Apo'cynum androsæmifo'lium.** Dog's bane, bitter dog's bane, milkweed, bitterroot, honeybloom, catchfly, flytrap, American ipecac, ord. *Apocynaceæ*. The root of this American plant is emetocathartic, diuretic, and diaphoretic. **A. cannab'inum** (*apocynum*, Ph. U. S.), popularly called Canadian hemp; not to be confounded with Indian hemp (Cannabis indica). The root of this American plant is emetic, cathartic, diaphoretic, and diuretic; given in dropsy; dose, gr. v–xxx (0.32–2.0). **A. hypericefo'lium**, variety of A. cannabinum, which, as well as A. androsæmifolium, abounds in milky juice, which when applied to the skin produces a troublesome eruption resembling flea-bites. **A. No'væ Ang'liæ hirsu'tum**, Asclepias tuberosa. **A. or'ange**, Asclepias tuberosa. **A. scan'dens**, Allamanda. **A. vene'tum**, plant of S. Europe; root is emetocathartic.

**Ap'odal** (*a*, priv., *pous*, foot). Without feet.

**Apodemial'gia** (*apodemia*, journey, *algos*, pain). Homesickness, or, more correctly, the opposite desire to leave one's country.

**Apo'dia** (*a*, priv., *pous*, a foot). Monstrosity marked by absence of feet.

**Apodicinchonine'.** Alkaloid from cinchonine and cinchonidine.

**Apodipo'sis.** Steatosis.

**Ap'odous** (*a*, priv., *pous*, foot). Devoid of feet.

**Apogalactis'mus** (*apo*, from, *gala*, milk). Weaning.

**Apogalak'tos.** Child that has been weaned.

**Apogeu'sis** or **Apogeus'tia** (*apo*, from, *geusis*, taste). Loss, absence, or defect in sense of taste.

**Apohy'al.** Relating to the anterior cornua of the hyoid; earliest formation of the styloid cornua of the hyoid.

**Apokenot'ic** (*apokenoo*, to empty quite). Apocenosis.

**Apo'lar.** Without pole or process, said of nerve cells.

**Apolep'isis** or **Apolepis'mus** (*apo*, from, *lepis*, a scale). Desquamation.

**Apolep'sis** or **Apolep'sia** (*apolambano*, to retain). Retention; suppression; epilepsy.

**Apolex'is** (*apolego*, to cease). Old age; decrepitude.

**Apolino'sis** (*apo*, from, *linon*, flaxen thread). Mode of operating for fistula in ano by thread or ligature.

**Apolipsin'.** A coal-tar derivative having analgesic and antipyretic properties.

**Apollina'ris.** Effervescing water from mineral springs in Prussia. **A. alter'cum**, hyoscyamus.

**Apolysin'.** Monophenetidin citric acid; a white, crystalline powder, antipyretic and analgesic in doses of gr. vij–xxx (0.5–2.0)

**Apomorphine'.** $C_{17}H_{17}O_2N$. Alkaloid prepared by action of strong solution of hydrochloric acid, at high temperature, upon morphine, or by treating morphine with a solution of chloride of zinc at 120° C. *Amorphinæ hydrochloras* (Ph. U. S. and Br.), chloride or hydrochlorate of apomorphine, the salt generally used, is a white, crystalline, soluble powder; it is a direct emetic in doses of gr. $\frac{1}{10}$–$\frac{1}{5}$ (0.006–0.013); expectorant in doses of gr. $\frac{1}{100}$–$\frac{1}{50}$ (0.0006–0.0013).

**Apomyelin'.** $C_{54}H_{109}N_2PO_9$. Organic principle, obtained from the brain of man.

**Aponeurog'raphy** (*aponeurosis* + *graphe*, description). Description of aponeuroses.

**Aponeurol'ogy** or **Aponeurosiol'ogy** (*aponeurosis* + *logos*, discourse). Anatomy of aponeuroses or of fasciæ.

**Aponeuro'sis** or **Aponevro'sis** (*apo*, from, *neuron*, nerve). The ancients called every white part *neuron*, and regarded an aponeurosis as a nervous expansion. Aponeuroses are white, shining membranes, very resisting, and composed of fibres interlaced. Some are continuous with muscular fibres, and differ from tendons only by their flat form. They are called *aponeuroses of insertion* when at the extremity of a muscle attaching it to bone; *aponeuroses of intersection* if they interrupt the continuity of a muscle and are continuous on both sides with muscular fibres; others, surrounding the muscle and preventing its displacement, are called *enveloping aponeuroses; aponeuroses of investment* are such as belong to the distribution of fascia on a part or limb; *aponeuroses of origin* are septa between muscles from which fibres come off. **Abdom'inal a.**, abdominal fascia. **A'nal a.**, anal fascia. **Antebra'chial a.**, a. of arm continued on forearm. **A. bicip'itis**, fascia of biceps. **Bra'chial a.**, a. surrounding muscles of arm. **Cer'vical a.**, fascia of neck; cervical fascia. **Coro'nal a.**, galea aponeurotica capitis, a tendinous expansion uniting the frontal and occipital portions of the occipitofrontalis muscle. **A. cra'nii**, aponeurosis of the skull. **Cru'ral a.** or **A. cru'ris**, fascia lata. **Del'toid a.**, continuation of brachial a. over deltoid muscle. **A. of di'aphragm**, central tendon of diaphragm. **A. dorsa'lis**, dorsal fascia or aponeurosis. **Epicra'nial a.**, coronal a. **A. of exter'nal oblique' mus'cle**, fibrous expansion of this muscle, forming Poupart's and Gimbernat's ligaments. **Fem'oral a.**, fascia lata. **A. of fore'arm**, antebrachial a. **Il'iac a.**, iliac fascia. **A. of inter'nal oblique' mus'cle**, fibrous expansion of this muscle. **Interspi'nous a.**, fascia attached to the spinous processes of the vertebræ. **A. lumba'ris**, lumbar fascia. **A. occip'itofronta'lis**, epicranial a. **A. or'bito-ocula'ris**, fascia separating orbital fat from middle and posterior portions of eyeball. **Pal'mar a.**, fascia of palm of hand. **Pel'vic a.**, pelvic fascia. **Perine'al a.**, perineal fascia. **A. of phar'ynx**, fibrous tissue forming the walls of the pharynx; it is strong above where it is attached to the base of the skull, but thinner below where it is covered with muscles. **Plan'tar a.**, plantar fascia. **Subscap'ular a.**, subscapular fascia. **Supraspi'nous a.**, fascia roofing over the supraspinous fossa of the scapula. **A. tempora'lis**, temporal fascia. **A. vertebra'lis**, lumbar fascia; a. covering the erector spinæ muscle. **A. vola'ris**, palmar fascia.

**Aponeurosi′tis.** Inflammation of an aponeurosis.

**Aponeurot′ic.** Relating to an aponeurosis.

**Apon′eurotome** (*aponeurosis*+*tome*, incision). Instrument, as bistoury, for dividing an aponeurosis.

**Aponeurot′omy.** Dissection or division of an aponeurosis.

**Apo′nia** (*a*, priv., *ponos*, pain). Freedom from pain.

**Aponip′sis** (*aponipto*, to wash clean). Ablution.

**Aponœ′a** or **Aponoi′a** (*apo*, from, *nous*, mind). Dementia.

**Ap′onous** (*a*, priv., *ponos*, pain). Free from pain; not causing pain.

**Apophlegmat′ic** (*apophlegmatizo*, to remove mucus). Producing discharge of mucus.

**Apophlegmat′isant.** Apophlegmatic; expectorant.

**Apoph′ysary** or **Apophys′ial.** Relating to or resembling an apophysis. **A. points,** spinous processes of the vertebræ corresponding to the origin of painful nerves in neuralgia, spinal irritation, and myalgia.

**Apoph′ysis** (an offshot). Appendix; a small projecting part of any organ; a process of bone having no independent centre of ossification. (A process of bone formed from an independent centre of ossification, and long separated from the body of the bone by intervening cartilage, is called *epiphysis*). Apophyses or processes are at times distinguished by epithets expressive of their form, as coracoid, styloid, etc.; others are called trochanter, tuberosity, etc. **Acro′mial a.,** acromion. **An′cyroid a.,** coracoid process. **Artic′ular a.,** articular process. **Bas′ilar a.,** basilar process of the occipital bone. **A. cer′ebri,** pituitary body. **Cli′noid a.,** clinoid process. **Cor′acoid a.,** coracoid process. **En′siform a.,** ensiform process. **False a.,** an epiphysis. **A. gra′cilis,** processus gracilis of the malleus. **A. of Ingras′sias,** lesser ala of the sphenoid bone. **A. lenticula′ris,** orbicular process of incus. **Ma′lar a.,** malar process. **A. mamilla′ris,** olfactory bulb. **Mas′toid a.** or **A. maxilla′ris,** mastoid process. **Odon′toid a.,** odontoid process. **Pter′ygoid a.,** pterygoid process. **A. ravia′na** or **A. of Rau,** processus gracilis of malleus. **Sphenoid′al a.,** sphenoidal process of nasal bone. **Sty′loid a.,** styloid process. **Transverse′ a.,** transverse process. **Vag′inal a.,** vaginal process. **Zygomat′ic a.,** zygomatic process.

**Apoplane′sis** or **Apoplan′ia** (*apoplanao*, to lead astray). Deviation of fluids into vessels or location not intended for them.

**Apoplec′ta.** Internal jugular vein.

**Apoplec′tic** (Gr., *apoplektikos*). Relating to apoplexy; one predisposed to apoplexy; remedy in apoplexy. The term is applied not only to a seizure but also to the constitution or temperament (*architectura apoplectica, habitus apoplecticus* or *quadratus* or *torosus*) predisposing to it and to symptoms characterizing apoplexy, as a. sleep or a. stroke. The jugular veins have been called *apoplectic veins, venæ apoplecticæ.* **A. cell,** the cavity remaining in the encephalon after the effusion of blood and subsequent absorption. **A. conges′tion of the brain,** usually a form of epilepsy, sudden in its attack, and with passing slight apoplectic symptoms. **A. cyst,** cyst around the blood clots after hemorrhage in the brain. **A. fo′cus,** point of greatest collection of blood in hemorrhage of the brain or internal organs.

**Apoplec′tiform** or **Apoplec′toid.** Resembling apoplexy. **A. deaf′ness,** Ménière's disease.

**Apoplectig′enous** (*apoplexia* + *gennao*, to produce). Producing apoplexy.

**Apoplex′ia.** Apoplexy. **A. capilla′ris,** capillary apoplexy. **A. catalep′sia** or **catalep′tica,** catalepsy. **A. cerebra′lis** or **cer′ebri,** see *Apoplexy.* **A. choroi′dea,** see *Choroid.* **A. cor′dis,** hæmocardiorrhagia. **A. epilep′tica,** coma with epileptiform phenomena. **A. for′tis,** sudden and violent apoplexy. **A. ful′minans,** fulminant apoplexy. **A. hæmorrhag′ica,** apoplexy. **A. hepat′ica,** hepatorrhagia. **A. hydrocephal′ica,** hydrocephalus internus. **A. interarachnoidea′lis,** meningeal apoplexy. **A. intermeningea′lis,** meningeal apoplexy. **A. intestina′lis neonato′rum,** melæna neonatorum. **A. lac′tea,** milk apoplexy. **A. medulla′ris** or **medul′læ spina′lis,** apoplexia myelitica. **A. menin′gea** or **meningea′lis,** meningeal apoplexy. **A. mephit′ica,** mephitic apoplexy. **A. myelit′ica,** hemorrhage into the spinal cord; spinal apoplexy. **A. neonato′rum,** meningeal apoplexy of newborn; asphyxia neonatorum. **A. nervo′sa,** nervous apoplexy. **A. nervo′sa traumat′ica,** concussion of the brain. **A. oc′uli,** hæmophthalmia. **A. pituito′sa,** serous apoplexy. **A. placen′tæ,** placental apoplexy. **A. pulmona′lis** or **pulmo′num,** pulmonary apoplexy, see *Hæmoptysis.* **A. rachia′lis,** a. myelitica. **A. rena′lis,** renal apoplexy. **A. ret′inæ,** retinal hemorrhage. **A. sanguin′ea,** see *Apoplexy.* **A. sero′sa,** serous apoplexy. **A. sim′plex,** nervous apoplexy. **A. spasmod′ica,** nervous apoplexy. **A. spina′lis,** a. myelitica. **A. suspirio′sa,** apoplexy with sighing respiration. **A. temulen′ta,** alcoholic coma. **A. tex′tus cellulo′si,** hemorrhage into connective tissue. **A. traumat′ica,** cerebral hemorrhage from injury. **A. tuba′rum,** hemorrhage into the Fallopian tubes. **A. vaporo′sa,** hysterical apoplexy. **A. venena′ta,** apoplexy from poisoning. **A. ve′ra,** sanguineous apoplexy. **A. vermino′sa,** apoplectiform symptoms caused by the presence of intestinal worms.

**Ap′oplexy** (*apoplesso*, to strike with violence). Interstitial hemorrhage; effusion of blood occurring suddenly into the substance of an organ or tissue, as the brain, lung, etc. Apoplexy and cerebral hemorrhage were formerly considered synonymous, under the names *cerebral apoplexy* or *hemorrhage* and *sanguineous apoplexy*, characterized by diminution or loss of sensation and mental manifestation, by cessation, more or less complete, of motion, and by a comatose state, circulation and respiration continuing. The symptoms are generally caused by pressure upon the brain from either turgescence of the vessels or extravasation of blood. Cerebral apoplexy may occur, however, without intracranial extravasation, although there is usually disease of the cerebral blood-vessels; and cerebral hemorrhage may not be attended with apoplectiform phenomena. Apoplexy formerly denoted (and is sometimes still so used) a comatose condition resulting from pressure on the brain from any cause tending to produce cerebral congestion, such as immoderate use of stimulants, degeneration of nervous and vascular structures, valvular disease of the heart, etc. Congestive apoplexy implies hyperæmia of the brain or its membranes. The general prognosis is unfavorable, especially when apoplexy occurs after the age of thirty-five years. When accompanied with hard, full pulse and flushed countenance it is called *sanguineous apoplexy;* when with feeble pulse and pale countenance and evidences of serous effusion, *serous apoplexy.* Embolic apoplexy, apoplectiform cerebral embolism, results from plugging up of the cerebral vessels with emboli, an anæmic condition of the brain resulting from insufficient blood supply. In nervous apoplexy no lesion whatever may be perceptible on dissection, although the patient may have died under the characteristic phenomena of apoplexy. **Amphibles′troid a.,** retinal a. **Arte′rial a.,** a. from rupture of an artery. **Arthrit′ic a.,** a. occurring in one suffering from gout or rheumatism, and formerly thought to be due to such disease. **Asthen′ic a.,** a. from debility. **Bul′bar a.,** hemorrhage into the pons. **Cap′illary a.,** rupture of capillary vessels, with effusion. **Car′diac a.,** a. of the heart, from extravasation of blood into the heart cavities. **Cer′ebral a.,** see *Apoplexy.* **Cho′roid** or **choroid′al a.,** hemorrhage into the choroid coat of the eye. **Conges′tive a.,** see *Apoplexy.* **Consec′utive a.,** a. from suppression of usual hemorrhage or evacuation. **Cuta′neous a.,** hemorrhage on the surface of the body; purpura hæmorrhagica. **Embol′ic a.,** see *Apoplexy* and *Embolism.* **Enton′ic a.,** apoplexia fortis. **Epilep′tic a.,** coma and epileptiform phenomena from brain disease. **Essen′tial a.,** see *Apoplexy.* **Ful′minant a.,** a. occurring suddenly and of very violent character. **Gout′y a.**, arthritic a. **A. of heart**, cardiohæmorrhagia. **Heat a.**, sunstroke. **Hemorrhag′ic a.**, sanguineous a.; see *Apoplexy*. **Hepat′ic a.**, hemorrhage into substance of the liver. **Hydrocephal′ic a.**, coma due to hydrocephalus. **Idiopath′ic a.**, a. from effusion into the brain. **Ingraves′cent a.**, slowly increasing symptoms of a., produced by a gradual intracranial hemorrhage. **Interlob′ular a.**, hemorrhage between lobes of the lung. **Intramenin′geal** or **Menin′geal a.**, hemorrhage from meninges of the brain or spinal marrow, generally into the great cavity of the arachnoid. **Mephit′ic a.**, a. from inhalation of noxious vapors. **Metastat′ic a.**, a. from assumed metastasis, as in gout or rheumatism. **Milk a.**, a. due to metastasis of milk. **Mus′cular a.**, hemorrhage into muscular tissue. **Narcot′ic a.**, a. from narcotic poisoning. **Ner′vous a.**, the occurrence of symptoms of apoplexy without appreciable lesions. **Ova′rian a.**, pelvic hæmatocele. **Pancreat′ic a.**, hemorrhage into the pancreas. **Partu′rient a.**, vitular fever of cows. **Pas′sive a.**, asthenic a. **Pitu′itous a.**, serous a. **Placen′tal a.**, hemorrhage into the placenta. **Pon′tal, pon′tile,** or **pon′tine a.**, bulbar a. **Puer′peral a.**, vitular fever of cows. **Pul′monary a.**, hemorrhage from capillaries of the lungs into cells, tubes, tissues, etc. **Re′nal a.**, effusion of blood into the substance of the kidney. **Ret′inal a.**, retinitis apoplectica. **Rheumat′ic a.**, cerebral rheumatism. **Sanguin′eous a.**, see *Apoplexy*. **Se′rous a.**, see *Apoplexy*. **Sim′ple a.**, nervous a. **Spi′nal a.**, apoplexia myelitica. **Splen′ic a.**, hemorrhage of the spleen; splenic fever. **Subconjuncti′val a.**, hemorrhage beneath the conjunctiva. **Thun′dering a.**, intense and rapidly fatal form of apoplexy. **Tox′ic a.**, narcotic or mephitic a. **Traumat′ic a.**, a. from injury. **U′terine a.**, hemorrhage into structure of the uterus. **Ve′nous a.**, hemorrhage from venous congestion. **Verm′inous a.**, apoplectiform symptoms due to presence of worms in the intestines. **Vit′ular a.**, vitular fever of cows.

**Apopnœ′a** (*apopneo*, to exhale). Expiration.

**Apopsych′ia** (*psyche*, breath of life). Syncope.

**Apoquinamine′.** Amorphous alkaloid obtained by boiling quinamine or quinamidine with hydrochloric acid; isomeric with homocinchonine.

**Aporetin′.** Resinous material obtained from rhubarb.

**Apo′ria** (*aporos*, without exit). Malaise; difficulty of diagnosis, prognosis, or treatment.

**Aporrhino′sis** (*apo*, from, *rhis*, nose). Discharge from the nose.

**Apos′chasis** or **Aposchas′mus** (*aposchazo*, to scarify). Scarification; superficial incision; blood-letting.

**Aposepedin′** (*apo*, from, *sepedon*, putrefaction). Impure leucin, a result of putrefaction of protein substances.

**Aposep′sia** or **Aposep′sis.** Putrefaction.

**Apo′sia** (*a*, priv., *posis*, drink). Absence of thirst.

**Aposi′tia** (*apo*, from, *sitos*, food). Aversion for food; loss of appetite.

**Aposit′ic.** Destroying appetite or suspending hunger.

**Apospas′mus** (*apospao*, to tear or lacerate). Solution of continuity, especially of ligaments.

**Apospas′tic.** Derivative; counterirritant; pulling apart.

**Apostag′ma** or **Apostalag′ma** (*apostalazo*, to drop). Errant or wandering abscess.

**Aposta′sia** or **Apos′tasis** (Gr.). Separation of fragments of bone; ending of disease by critical discharges.

**Apostax′is** (*apostazo*, to distil from). Defluxion, as of blood from the nose.

**Ap′ostem** or **Aposte′ma** (*aphistemi*, to recede from). Affection in which parts, previously in contact, are separated by fluid collected between them; abscess; cystic tumor; tumor in general. **A. cer′ebri**, suppuration of the brain. **A. empye′ma**, empyema. **A. paru′lis**, parulis. **A. phalan′gis**, small abscess on the finger. **A. psoat′icum**, lumbar abscess. **A. vento′sum**, subcutaneous emphysema.

**Apostemat′ic.** Relating to abscess; disposed to suppurate.

**Apostema′tion.** Formation of an abscess.

**Apos′thia** (*a*, priv., *posthe*, prepuce). Absence of prepuce.

**Apos′thume.** Abscess; apostema.

**Apostol′i's method.** Treatment of uterine fibroids by electrolysis.

**Apos′trophe** (*apostrepho*, to turn away). Aversion or disgust for food; direction of humors toward other parts.

**Aposyringe′sis** or **Aposyringo′sis** (*syrinx*, fistula). Formation of fistula.

**Apot′elesm** or **Apotel′esma** (*telesma*, completion). Result or termination of disease.

**Apotex′is.** Wasting away; phthisis.

**Apothana′sia** (*thanatos*, death). Positive cessation of life.

**Apothe′ca** (*apotheke*, a storehouse). Place where things are kept, and therefore a shop; hence, place wherein medicines are kept; apothecary shop.

**Apoth′ecaries′ Com′pany.** A society established in London in 1617, which has the authority to grant licenses to practise medicine. **A. weight**, see *Weights and Measures*.

**Apoth′ecary.** Pharmaceutist, pharmacist, druggist. In every country except Great Britain apothecary means one who sells drugs, makes up prescriptions, etc., a chemist; in addition to these offices, which, indeed, they rarely exercise except in the case of their own patients, the apothecaries in England form a privileged class of practitioners—a kind of subphysician. See *Surgeon-apothecary*.

**Ap′othem** or **Ap′otheme.** A deposit which forms when an extract is redissolved in water, or when vegetable solutions are boiled with access of air.

**Apoth′esis** (*apotithemi*, to put up). Giving proper position to fractured limb after reduction.

**Apoth′eter.** A repositor of the prolapsed umbilical cord.

**Ap′ozem, Apoze′ma,** or **Apoze′sis.** Decoction.

**Apozeu′sis** (Gr., separation). Separation or detachment of diseased parts.

**Appara′tus** (*ad*, to, *paro*, to prepare). Collection of instruments, etc., for an operation; methodical arrangement of instruments and objects necessary for operation or dressing; case or drawers in which apparatus is arranged, *capsa chirurgica*. The term was also formerly used to designate the various operations for stone in the bladder. In physiology, apparatus is a collection of organs, all working toward the same end, as digestive apparatus. **Acous′tic a.**, auditory a. **A. al′tus**, high or suprapubic operation of lithotomy. **Aud′itory a.**, organs and canals of the external, middle, and internal ear. **A. chirur′gicus**, surgical appliances, instruments etc. **Diges′tive a.**, parts concerned in digestion. **Gen′erative** or **gen′ital a.**, genital organs, male or female. **Gen′ito-u′rinary a.**, combined genital and urinary organs. **Gus′tatory a.**, nervous distribution to the tongue, concerned in taste. **A. hypogas′tricus**, a. altus. **Immo′bilizing a.**, dressing whose object is to render a part immovable. **Immov′able a.**, immovable bandage for fractures, generally formed by impregnating the bandage with some substance, as starch, plaster-of-Paris, or liquid glass, which becomes solid and retains the parts in situ. **Induc′tion a.**, a. intended for use of induced electricity. **Lac′rymal a.**, parts concerned in the secretion and passage of tears, as lacrymal glands, canaliculi, lacrymal sac, and nasal duct. **A. latera′lis**, lateral lithotomy. **A. ligamento′sus col′li**, occipito-axoid ligament. **Locomo′tor a.**, organs concerned in locomotion. **A. mag′nus** or **ma′jor**, median lithotomy. **A. mi′nor**, lateral lithotomy. **Olfac′tory a.**, cavities of the nose and olfactory nerves distributed to them. **Respi′ratory a.**, organs concerned in respiration, as the larynx, trachea, bronchial tubes, and lungs. **Secre′tory a.**, glands with their nerves and blood supply concerned in secretion. **Segmen′tal a.**, embryonic structures associated with the formation of the urinary and genital organs. **Sex′ual a.**, generative a. **Spray a.**, atomizer. **Sudorip′arous a.**, sweat glands with their nerves and blood-vessels. **Suspen′sion a.**, mechanism for suspending any part of the body. **Tac′tile a.**, nervous distribution connected with touch. **U′rinary a.**, organs and canals concerned in urination. **Urogen′ital a.**, genito-urinary a. **Uropoiet′ic a.**, the kidneys primarily, but the term is often extended to cover the entire urinary tract. **Vis′ual a.**, organs of vision; the eye and its appendages. **Vo′cal a.**, the larynx and parts associated with it which are concerned in the production of sound.

**Appen′dage.** A supplementary or accessory part; any part projecting away from the axis of the body or organ; appendix. **Auric′ular a.**, round prominence on cartilage of ear; a dog-ear projection of the auricles of the heart. **Cæ′cal a.**, appendix vermiformis. **Cau′dal a.**, tail. **Epiplo′ic a.**, appendicula epiploica. **A. of the eye**, eyebrows, eyelids, or lacrymal apparatus. **Fe′tal a.**, placenta, cord, amnion, or chorion. **Il′eocæ′cal a.**, appendix vermiformis. **A. of o′vary**, parovarium. **Pitu′itary a.**, pituitary body. **A. of the skin**, nails, hair, or glandular apparatus of skin. **A. of the u′terus**, ovaries, Fallopian tubes, or ligaments. **Vermic′ular a.**, appendix vermiformis.

**Appendal′gia** (*appendix* + *algos*, pain). Pain in the region of the vermiform appendix.

**Appendec′tomy** or **Appendicec′tomy** (*appendix* + *ektome*, excision). Operation for the removal of the vermiform appendix.

**Appen′dical.** Relating to an appendix, usually the vermiform appendix.

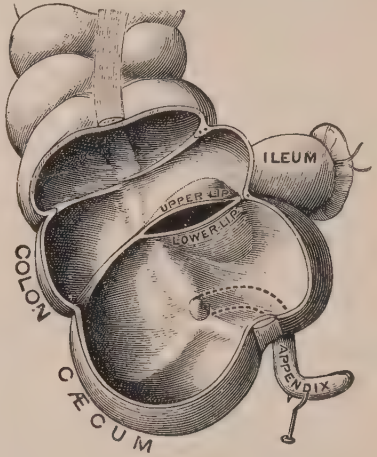
**Appen′dices**, pl. of appendix.

**Appendici′tis.** Inflammation of the vermiform appendix of the cæcum. **Chron′ic a.**, long-continued, low-grade inflammation of the vermiform appendix, interrupted from time to time by acute exacerbations; relapsing or recurrent a. **A. oblit′erans**, form of chronic a. in which there is a progressive obliteration of the lumen of the appendix from fibrous new growth, contraction, or plastic peritonitis. **Pu′rulent a.**, suppurative a. **Recur′rent a.**, chronic a. with frequent acute exacerbations. **Relap′sing a.**, chronic a. with occasional acute exacerbations, the patient in the intervals being apparently in perfect health. **Sup′purative a.**, acute a. in which the inflammation has gone on to suppuration and abscess formation.

**Appendic′ula** (dim. of appendix; pl. appendiculæ). A small appendage or appendix. **A. cer′ebri**, the pituitary gland. **A. epiplo′ica** or **A. pinguedinosa**, epiploic appendage, one of a number of prolongations of the peritoneum beyond the surface of the great intestine, analogous in texture and arrangement to the omentum; usually referred to in the plural, appendiculæ epiploicæ or pinguedinosæ. **A. vermifor′mis cæ′ci**, appendix vermiformis.

**Appendic′ular.** Appendical.

**Appen′dix** (*appendo*, to hang to or from). Any part adhering to an organ or continuous with it, as if added to it; appendage; apophysis; when the word is employed without qualification the appendix vermiformis is usually meant. **Auric′ular a.**, auricular appendage. **A. cæ′ci**, appendix vermiformis. **A. cer′ebri**, pituitary gland. **A. ad cer′ebrum**, cerebellum. **A. ensiform′is**, xiphoid cartilage. **A. to epidid′ymis**, vasculum aberrans. **A. gland′ulæ pituita′riæ**, anterior lobule of pituitary body. **A. gland′ulæ thyroi′deæ**, accessory thyroid gland. **A. lobula′ris**, flocculus. **A. suprasphenoida′lis**, pituitary body. **Testic′ular a.**, a minute projection from the head of the epididymis. **U′terine a.**, see *Appendage*. **A. ventric′uli**, duodenum; pituitary body. **A. vermicula′ris cæ′ci** a. vermiformis. **A. vermifor′mis** or **verm′iform a.**, vermicular process, size of a goose-quill, from three to ten inches in length, hanging from the extremity of the cæcum; its functions, if it has any, are unknown. **A. vesi′cæ**, see *Bladder, sacculated*. **Xi′phoid a.**, xiphoid cartilage.



Cavity of the cæcum, showing the vermiform appendix. The two lips of the ileocæcal valve and the opening and tip of the appendix are shown. (Gerrish, after Testut.)

**Appercep′tion.** Conscious appreciation of external sensations; appreciative perception.

**Ap′petence** or **Ap′petency** (*ad*, to *peto*, to seek, to desire). Ardent desire for any object; appetite.

**Ap′petite.** Internal sensation; a call for the exercise of certain functions, especially digestion and generation (venereal appetite). Desire for food, caused by real want, is called hunger, for solid food, or thirst, for liquid food. Hunger and appetite are not synonymous, although generally so considered. **Canine′ a.**, cynorexia; bulimia; a voracious appetite. **Mor′bid** or **pervert′ed a.**, unnatural a., usually from disease; see *Limosis*. **Sex′ual** or **Vene′real a.**, venereal desire; instinctive feeling attracting the sexes toward each other to effect the work of reproduction.

**Ap′petitive.** Having or causing desire.

**Ap′planate** (*planus*, flat). Flattened horizontally.

**Applana′tio cor′neæ** or **Applana′tion.** Flattening of the cornea.

**Ap′ple.** The tree Pyrus malus or its fruit. See *Malum, Pyrus malus*. **A. acid**, malic acid. **Ad′am′s a.**, pomum Adami. **Bal′sam a.**, fruit of Momordica balsamina. **Bit′ter a.**, Cucumis colocynthis. **Curasso′a a.**, Aurantium curassaventium. **Dead Sea a.**, see *Quercus infectoria*. **Dev′il′s a.**, fruit of Mandragora. **A. eye**, exophthalmia, see *Melon*. **A. of the eye**, pupil. **A. head**, the broad, thick skull of a dwarf. **Mad a.**, see *Quercus infectoria*. **Man′drake a.**, fruit of Mandragora. **May a.**, Podophyllum peltatum. **A. oil**, valerianate of amyl. **A. of Peru′**, Datura stramonium. **A. root**, Euphorbia corollata. **A. of Sod′om**, see *Quercus infectoria*. **A. tea**, slice two large, not over-ripe apples and pour over a pint of boiling water; after an hour pour off fluid and sweeten with sugar. **Thorn a.**, Datura stramonium. **A. tree**, Pyrus malus. **A. water**, apple tea.

**Appli′ance.** Application; apparatus; remedy.

**Applica′ta**, pl. of applicatum (*applico*, to apply). Objects applied immediately to the surface of the body, as clothes, cosmetics, baths, dressings, etc.

**Applica′tion.** Attention; act of applying one thing to another, as apparatus, bandage, blister, etc.; also the thing applied.

**Ap′plicator.** Instrument for applying remedies, as to the uterus or urethra.

**Appol′ito′s su′ture.** An intestinal suture with double thread passed through all the coats.

**Apposi′tion.** Contact of parts, as edges of wound, fragments of bone, etc.; growth or addition to parts; prosthesis; anaplerosis.

**Apprehen′sio** (*apprehendo*, to take). Catalepsy.

**Approx′imal** (*ad*, to, *proximus*, nearest). Relating to contiguity, said, for example, of the surface of a tooth adjoining another tooth.

**Approx′imate** (*ad*, to, *proximus*, nearest). To place close together, as the teeth, edges of a wound or fracture, etc.

**Approxima′tion.** An old system of quackery in which it was pretended to cure disease by making it pass from man into some animal or vegetable by immediate contact.

**Aprax′ia** (*a*, priv., *praxis*, action). Defective memory as to objects in general, their uses, and methods of action. See *Mind-blindness.*

**A′pricot.** Prunus armeniaca.

**Aproc′tia** or **Aprocto′sis** (*a*, priv., *proktos*, anus). Imperforation of the anus.

**Aproc′tous.** Having an imperforate anus.

**A′pron.** Omentum; fatty wall of the abdomen. **Hot′tentot** or **puden′dal a.**, a great elongation of the labia minora and prepuce of the clitoris.

**Aprosex′ia** (*a*, priv., *prosecho*, to fix the attention). Want of power to fix the attention upon any particular subject or line of thought; it may be due to nervous exhaustion or to deafness dependent upon nasal catarrh or adenoid vegetations.

**Aproso′pia** (*a*, priv., *prosopon*, face). Monstrosity in which the face is deficient or absent.

**Aproso′pus.** A monster without face.

**Apselaphe′sia** or **Apselaphe′sis** (*a*, priv., *pselaphao*, to feel). Privation of touch or sense of resistance, sense of pain still remaining; seen in degeneration of posterior columns of the cord.

**Apsithu′ria** or **Apsithyr′ia** (*a*, priv., *psithyros*, whisper). Loss of power to whisper from spasm of the larynx. **Persist′ing a.**, xerostomia.

**Apsych′ia, Ap′sychy,** or **Apsyx′ia** (*a*, priv., *psyche*, soul, breath). Syncope; loss of consciousness.

**Aptyal′ia** or **Apty′alism** (*a*, priv., *ptyalon*, saliva). Diminished or abolished excretion of saliva.

**Aptys′tus** (*a*, priv., *ptyo*, to spit). Devoid of expectoration; epithet given to pleurisies, for instance, in which there is no expectoration.

**A′pus** (*a*, priv., *pous*, foot). A monster without legs or without feet.

**Apy′etous** (*a*, priv., *pyon*, pus). Not suppurative; without pus.

**Apyknomor′phous** (*a*, priv., *pyknos*, dense, *morphe*, shape). Term applied to a cell which has no regular system of staining, owing, it is assumed, to want of compactness of the staining elements.

**Apyonin′.** Yellow pyoktanin.

**Apy′ous.** Apyetous.

**Apyrenæ′mata** (*a*, priv., *pyren*, a fruit pit, *haima*, blood). Vertebrata with non-nucleated, colored blood corpuscles, as the mammalia.

**Apyret′ic** (*a*, priv., *pyr*, fever). Without fever; non-febrile; afebrile. Urticaria is sometimes called an apyretic exanthem. **A. in′terval,** the period in an intermittent or relapsing fever in which the temperature is normal. **A. stage,** the non-febrile stage of a disease such as relapsing fever.

**Apyrex′ia.** Absence of fever; condition of intermittent or of relapsing fever between the paroxysms; cessation of febrile condition in acute diseases.

**Apyrex′ial.** Without fever.

**Ap′yrous** (*a*, priv., *pyr*, fire). Refractory to heat.

**A′qua.** Water. In the Ph. U. S. an aqueous solution of a volatile substance, either a gas or one of the essential oils; in the Ph. Br. only the latter comes under the head of aqua, the solution of a gaseous substance being termed a liquor. For terms not found in the following list, see under *Liquor*. **A. acidi carbon′ici,** simple acidulous water; soda-water. **A. acid′ula hydrosulphura′ta,** Naples water (factitious). **A. acid′ula sim′plex,** simple acidulous water. **A. acus′tica,** liquor Cotunnii. **A. aëra′ta,** simple acidulous water; aërated water. **A. alkali′na oxymuriat′ica,** eau de Javelle. **A. ammo′niæ** (Ph. U. S.), contains 10 per cent. of ammonia in solution; dose, ♏xv–ʒj (1.0–4.0). **A. a. caus′tica,** a. a. fortior. **A. a. for′tior** (Ph. U. S.), contains 28 per cent. ammonia; not given internally. **A. am′nii,** liquor amnii. **A. amyg′dalæ ama′ræ** (Ph. U. S. and Br.) or **amygdala′rum concentra′ta,** water of bitter almonds; formerly made by bruising bitter almonds and adding spring water and alcohol and then distilling; now made by dissolving 1 part of oil of bitter almonds in 999 parts of distilled water; used instead of aqua laurocerasi and hydrocyanic acid in doses of ʒj–ij (4.0–8.0). **A. ane′thi** (Ph. Br.), a solution of oleum anethi, dill-water; dose, ℥ss–ij (16.0–64.0). **A. ani′si** (Ph. U. S. and Br.), anise-water, a solution of oleum anisi, carminative; dose, ʒj–℥j (4.0–32.0). **A. ani′si for′tis,** spiritus anisi. **A. audito′ria,** liquor Cotunnii. **A. auran′tii flo′rum** (Ph. U. S. and Br.), orange-flower water, made by diluting the stronger water with an equal volume of distilled water; dose, ʒj–℥j (4.0–32.0). **A. a. f. for′tior,** stronger or triple orange-flower water, a saturated solution of oleum aurantii florum; dose, ʒss–℥ss (2.0–16.0). **A. azo′tica oxygena′ta,** aqua nitrogenii protoxidi. **A. balsam′ica arteria′lis,** aqua Binellii. **A. benedic′ta,** liquor calcis. **A. benedic′ta compos′ita,** liquor calcis compositus. **A. benedic′ta Rulan′di,** vinum antimonii tartarizati. **A. Binel′lii,** creosote-water; Binelli's styptic. **A. Brocchier′ii,** Brocchieri or Brocchiari water; Brocchieri's styptic; a supposed styptic, but devoid of efficacy. **A. bromoform′i,** solution of one minim of bromoform in two ounces of water; dose, ℥j–iv (32.0–128.0). **A. bul′liens,** boiling water. **A. calca′riæ us′tæ,** lime-water. **A. cal′cica,** lime-water. **A. cal′cis,** lime-water. **A. cal′cis compos′ita,** liquor calcis compositus. **A. cam′phoræ,** camphor-water, contains about 0.8 per cent. of camphor; dose, ʒj–iv (4.0–16.0). **A. carbona′tis so′dæ acid′ula** or **a. carbon′ica,** simple acidulous water. **A. carmelita′na** or **Carmelitar′um,** compound spirit of melissa. **A. car′ui** (Ph. Br.), caraway-water; carminative in dose of ℥j–ij (32.0–64.0). **A. cas′siæ,** canella-water; solution of oil of Laurus cassiæ; carminative; dose, ℥ss–j (16.0–32.0). **A. catapulta′rum,** arquebusade water; a vulnerary water distilled from various aromatic plants. **A. chalybea′ta,** ferruginous water. **A. chlo′ri** (Ph. U. S.), chlorine-water; a 0.4 per cent. solution of chlorine; antiseptic; dose, ʒj–ij (4.0–8.0); also employed as a disinfectant. **A. chloroform′i** (Ph. U. S. and Br.), chloroform-water; saturated solution of chloroform in water; dose, ʒj–℥j (4.0–32.0). **A. cinnamo′mi** (Ph. U. S. and Br.), cinnamon-water; a 0.2 per cent. solution of oleum cinnamomi; carminative; dose, ʒj–℥j (4.0–32.0). **A. cinnamo′mi for′tis,** spiritus cinnamomi. **A. cœru′lea,** solution of ammoniated copper. **A. cologni-en′sis,** Cologne water. **A. colora′ta,** colored water; a prescription in which simple colored water is contained; used as a *placebo*. **A. commu′nis,** ordinary water. **A creoso′ti** (Ph. U. S.), creosote-water; contains about 1 per cent. of creosote; antiseptic; dose, ʒj–℥j (4.0–32.0). **A. cresol′ica,** a solution of 1 part of crude cresol in 18 of water (Ph. G.) or of 22 parts of liquid cresol in 1000 of water (Ph. Aus.). **A. depura′ta,** purified water. **A. destilla′ta,** distilled water. **A. fer′rea** or **ferro′sa,** chalybeate water. **A. fer′vens,** hot water. **A. fluvia′lis** or **fluviat′ilis,** river water. **A. fœnic′uli** (Ph. U. S. and Br.), fennel-water; contains about 0.2 per cent. of oil of fennel; carminative; dose, ʒj–℥j (4.0–32.0). **A. fonta′na,** spring water. **A. for′tis,** nitric acid. **A. frig′ida,** cold water. **A. Goular′di,** liquor plumbi subacetatis dilutus. **A. hæmostat′ica Paglia′ri,** Pagliari's hæmostatic. **A. hamamel′idis,** witch-hazel water or extract of witch-hazel, see *Extractum hamamelidis fluidum*. **A. hepat′ica,** hydrosulphuretted water. **A. hordea′ta,** decoctum hordei. **A. hungar′ica,** spiritus rosmarinus. **A. hydroge′nii diox′idi** (Ph. U. S.), solution of hydrogen dioxide or peroxide ($H_2O_2$), containing, when freshly prepared, about 3 per cent. by weight of the pure gas, corresponding to about 10 volumes of available oxygen; antiseptic; dose, ʒj–ij (4.0–

8.0). **A. im′brium**, rain water. **A. inter′cus**, anasarca. **A. in′ter cu′tem**, anasarca. **A. javellen′sis**, Javelle water. **A. ka′li**, liquor potassæ. **A. labyrin′thi**, liquor of Cotunnius; fluid in membranous labyrinth of ear; perilymph. **A. lac′tis**, serum lactis. **A. ex la′cû**, lake water. **A. laurocer′asi** (Ph. Br.), cherry-laurel water; used as a menstruum and to meet the same indications as dilute hydrocyanic acid; dose, ♏x–xxx (0.65–2.0). **A. laxati′va viennen′sis**, infusum sennæ compositum. **A. lu′ciæ**, spiritus ammoniæ succinatus. **A. mari′na**, sea water. **A. medica′ta**, mineral water. **A. melis′sæ**, melissa-water. **A. mel′lis**, hydromel. **A. men′thæ piperi′tæ** (Ph. U. S. and Br.), peppermint-water; contains about 0.2 per cent. of oleum menthæ piperitæ; carminative menstruum; dose, ʒj–℥j (4.0–32.0). **A. men′thæ piperi′tæ spirituo′sa**, spiritus menthæ piperitæ. **A. men′thæ pule′gii**, pennyroyal-water. **A. men′thæ vir′idis** (Ph. U. S. and Br.), spearmint-water; contains about 0.2 per cent. of oleum menthæ iridis; carminative menstruum; dose, ʒj–℥j (4.0–32.0). **A. men′thæ vulga′ris spirituo′sa**, spiritus menthæ viridis. **A. mercuria′lis**, black wash. **A. minera′lis**, mineral water. **A. mirab′ilis**, spiritus pimentæ. **A. Montero′sis**, creosote-water. **A. Morgag′nii**, liquor Morgagnii; a transparent, slightly viscid fluid found between the crystalline lens of the eye and its capsule. **A. mul′sa**, hydromel. **A. na′phi**, orange-flower water. **A. na′tro efferves′cens**, so-called soda-water; simple acidulous water. **A. nephrit′ica**, spiritus myristicæ. **A. nicotia′na**, see *Nicotiana aqua*. **A. ni′gra**, black wash. **A. nitrogen′ii protox′idi**, protoxide of nitrogen water; oxygenous aërated water; a solution of protoxide of nitrogen, said to contain five times its own bulk of gas; recommended in nervous conditions, dyspepsia, etc.; also used in cholera and to counteract evil consequences of a debauch. **A. niva′ta**, snow water. **A. nu′cis moscha′tæ**, spiritus myristicæ. **A. oc′uli**, the aqueous humor. **A. ophthal′mica**, any wash for the eyes, especially liquor zinci sulphatis cum camphorâ. **A. oxygena′ta**, water containing oxygen in solution. **A. oxymuriat′ica**, chlorine-water. **A. Paglia′rii**, Pagliari's hæmostatic. **A. paludo′sa**, marsh water. **A. pe′dum**, urine. **A. pericar′dii**, the pericardial fluid, see *Pericardium*. **A. phageden′ica**, black wash. **A. pi′cea** or **pi′cis**, tar-water; tar 1 part in water 200 parts; dose, a glassful. **A. pimen′tæ** (Ph. Br.); pimenta or allspice water; a solution of oleum pimentæ; carminative; dose, ℥ss–ij (16.0–64.0). **A. pis′sæ**, a. picea; tar-water. **A. pluvia′lis**, rain water. **A. pule′gii**, pennyroyal-water, see *Mentha pulegium*. **A. pule′gii spirituo′sa**, spiritus pulegii. **A. pu′ra**, pure water; distilled water. **A. putea′lis** or **ex pu′teo**, well water. **A. Rabel′li**, elixir acidum Halleri. **A. rapha′ni compos′ita**, spiritus armoraciæ compositus. **A. rega′lis** or **re′gia**, nitromuriatic acid. **A. regi′næ hunga′ricæ**, spiritus rosmarini. **A. ro′sæ** (Ph. U. S. and Br.), rose-water; made by mixing equal volumes of stronger rose-water and distilled water; used as a menstruum; dose, ʒj–℥j (4.0–32.0). **A. r. for′tior**, stronger rose-water; a saturated solution of oleum rosæ; dose, ʒss-iv (2.0–16.0). **A. salu′bris**, mineral water. **A. sambu′ci**, elder-flower water. **A. sapphari′na**, liquor cupri ammoniati. **A. satur′ni** or **saturni′na**, liquor plumbi subacetatis dilutus. **A. sclopeta′ria**, a. catapultarum. **A. sedati′va**, camphorated ammoniacal lotion. **A. Seid′litz**, artificial Seidlitz water. **A. so′dæ efferves′cens**, acidulous water. **A. sote′ria**, mineral water. **A. sty′gia**, nitromuriatic acid. **A. styp′tica**, liquor cupri sulphatis compositus. **A. sulphura′ta sim′plex**, hydrosulphuretted water. **A. sulphure′ti ammo′niæ**, liquor fumans Boylii. **A. thedia′na**, a. catapultarum. **A. til′iæ**, tilia-water. **A. tofa′na**, liquor arsenicalis; used by a celebrated Italian poisoner of the seventeenth century bearing this name. **A. tos′ti pa′nis**, toast-water. **A. traumat′ica Thede′nii**, a. catapultarum. **A. vi′tæ**, brandy. **A. vitriol′ica cœru′lea**, solutio sulphatis cupri composita. **A. vulnera′ria**, a. catapultarum.

**Aquacapsuli′tis.** Cyclitis; serous iritis; dotted keratitis. A badly compounded term formerly used to denote inflammation of the capsule of the aqueous humor or anterior chamber of the eye.

**Aquæduc′tus** (*aqua*, water, *duco*, to lead). Aqueduct. Properly, canal for conducting water. Anatomists have used the term to designate certain canals. **A. cer′ebri**, infundibulum of the brain. **A. coch′leæ**, very narrow canal proceeding from the tympanic scala of the trochlea to the posterior edge of the pars petrosa. **A. communicatio′nis**, small passage at the junction of the mastoid and petrous portions of the temporal bone. **A. Cotun′nii**, a. vestibuli. **A. endolymphat′icus**, a small, horizontal depression leading to the a. vestibuli. **A. Fallo′pii**, aqueduct of Fallopius; facial canal; a canal in the pars petrosa of the temporal bone, extending from the meatus auditorius internus to the foramen stylomastoideum and giving passage to the facial nerve. **A. Syl′vii**, canal forming communication between the third and fourth ventricles of the brain. **A. Syl′vii au′ris**, aquæductus vestibuli. **A. tempora′lis**, canal occasionally found in the petrous portion of the temporal bone. **A. vestib′uli**, canal of Cotunnius; this begins in the vestibule, near the common orifice of the two semicircular canals, and opens at the posterior surface of the pars petrosa.

**Aqualic′ulus** (dim. of *aqualis*, wash-basin). An old term for that portion of the abdomen between the umbilicus and the pubes.

**Aquamembrani′tis.** Aquacapsulitis.

**Aquapunc′ture.** Puncture of the skin by jets of water; used as means of revulsion in neuralgia, muscular rheumatism, etc.

**Aq′ueduct.** See *Aquæductus*.

**A′queous** (*aqua*, water). Watery. **A. can′cer**, noma. **A. cham′bers**, see *A. humor of the eye*. **A. ex′tracts**, extracts of drugs made with water as a menstruum. **A. hu′mor of the eye**, albugineous humor; limpid fluid filling the two chambers of the eye from cornea to crystalline, and, consequently, in contact with the two surfaces of the iris; sp. gr. 1.0003. It contains albumin, chloride of sodium, and phosphate of lime in small quantity, and is enveloped in a fine membrane—membrane of aqueous humor, posterior elastic lamina of Bowman, membrane of Demours or of Descemet (these last terms are by some appropriated to the third layer of the cornea). It is small in quantity.

**Aquidu′cous** (*aqua*, water, *duco*, to lead). Hydragogue.

**Aquif′erous** (*aqua*, water, *ferro*, to carry). Conducting water.

**Aquifo′lium.** Ilex aquifolium. **A. fo′liis decid′uis**, prinos.

**Aq′uila.** Calomel; sulphur; excrement of eagle, formerly used medicinally. **A. mercu′rii**, calomel.

**Aq′uilæ ve′næ.** Temporal veins.

**Aquila′ria agal′locha.** Aloeswood; East Indian tree. **A. malaccen′sis**, Cochin Chinese tree, from which eaglewood is derived.

**Aquile′gia** (*aquila*, eagle, from fancied resemblance). Common colombine or columbine, ord. *Ranunculaceæ*. Seeds, herb, and flowers were used in jaundice and cutaneous diseases. **A. alpi′na**, aquilegia. **A. canaden′sis**, wild columbine; indigenous; seeds are tonic, sudorific, diuretic, emmenagogue. **A. sylves′tris**, aquilegia. **A. vulga′ris**, aquilegia.

**Aquili′cia sambuci′na** (*aqua*, water, *elicio*, to attract). East Indian plant, decoction of the root of which is used to allay heartburn.

**Aquip′arous** (*aqua*, water, *pario*, to bring forth). Epithet for glands, like the parotid, secreting much water, in contradistinction to submaxillary glands, which are muciparous or mucus-secreting.

**Aquocapsuli′tis** or **Aquomembrani′tis.** Aquacapsulitis or aquamembranitis.

**Aquos′ity.** Moisture; wateriness.

**Aquo′sus.** Aqueous.

**Aq′uula** (dim of *aqua*, water). Ceratocele. Hydatid. Hydroa, bleb. Crystalline lens. **A. acus′tica** or **auditu′ra**, liquor of Cotunnius; perilymph. **A. labyrin′thi**, endolymph. **A. Morgagn′ii**, minute amount of fluid between the crystalline lens and its capsule. **A. vit′rea auditi′va**, vitreous humor of the ear.

**Ar′abic acid.** See *Arabin.* **Gum a.**, see *Acacia.*

**Ar′abide.** A compound formed by the union of other acids with arabin.

**Arabin′.** $(C_6H_{10}O_5)_2+H_2O$. Pure gum; a peculiar proximate principle of gum arabic, cherry gum, sugar-beet; arabic acid, the essential element of gum arabic, which is said to be a calcium salt of arabic acid.

**Ar′abinose.** $C_6H_{12}O_6$. A crystallizable sugar, formed by the action of dilute sulphuric acid on arabic acid.

**Ar′abis.** One or two species of this plant, genus *Arabideæ*, have volatile principle with properties similar to oil of mustard. Erysimum barbarea.

**Ar′abite.** $C_5H_{12}O_5$. A derivative of arabinose subjected to the action of sodium amalgam.

**Arac′a.** Weak alcoholic liquor prepared from kumyss.

**Arach′.** Arack.

**Ar′achis africa′na** or **america′na** or **hypogæ′a**, groundnut, peanut, earth-almond, erroneously called pistachio nut in the South; pindars of West Indies, ord. *Leguminosæ.* Cultivated in the Southern United States. Seeds are oily and much eaten.

**Arachni′tis**, properly **Arachnoïdi′tis** or **Arachnoeï′tis.** Inflammation of the arachnoid membrane. **Rhachid′ian** or **spi′nal a.**, spinal meningitis.

**Arach′noid** (*arachne*, spider's web, *eidos*, form). Like a spider's web; relating to the arachnoid membrane; also used alone to denote the arachnoid membrane of the brain. **A. apoph′yses**, name formerly given to nerve filaments. **A. canal′**, formed by extension of the arachnoid membrane over the transverse and longitudinal fissures of the brain. **A. cav′ity**, space between the arachnoid and dura mater. **Cer′ebral a.**, a. membrane. **A. cyst**, hæmatoma of the dura mater. **A. of eye**, lining membrane of cavity supposed to exist between the sclerotic and choroid. **Inter′nal a.**, ependyma. **A. mem′brane**, name of several thin membranes resembling spider-webs. Membrane of vitreous humor, *tunica hyaloidea*, was formerly so called. Membrane of brain between the dura mater and pia mater, a serous membrane composed of two layers: external layer, confounded, in the greater part of its extent, with the dura mater, and, like it, lining the interior of the cranium and spinal canal; internal layer, extended over the brain, from which it is separated by the pia mater, without passing into the sinuosities between the convolutions, and penetrating into the interior of the brain by an opening at its posterior part under the corpus callosum. It forms part of the investing sheath of the nerves passing from the encephalic cavities. It envelops and protects the brain, and secretes fluid that keeps it in a state best adapted for its functions. The arachnoid is arranged on the spinal cord as on the brain, the subarachnoid space being filled with its fluid to protect the cord. **Pari′etal a** layer of the a. membrane attached to the dura mater. **A. sheath**, arachnoid sheath of the cranial nerves. **A. space**, space beneath the dura mater. **Spi′nal a.**, part of the a. membrane within the spinal canal. **A. tu′nic**, a. membrane. **A. vil′li**, glands of Pacchioni. **Vis′ceral a.**, inner layer of the a. membrane.

**Arachnoi′dea.** Arachnoid. **A. cer′ebri** or **cerebra′lis**, see *Arachnoid membrane.* **A. len′tis**, capsule of the crystalline lens. **A. medul′læ spina′lis**, spinal arachnoid membrane. **A. oc′uli**, arachnoid of the eye.

**Arachnoidi′tis** or **Arachnoï′tis.** Arachnitis.

**Arachnopi′a.** The arachnoid and pia considered as one membrane.

**Arack′**, **Ar′rack**, or **Rack.** Spirituous liquor made in the East, often from rice, sometimes from molasses, fermented along with the juice of the cocoanut; frequently from toddy, the juice flowing from the cocoanut tree by incision, and from dates and other substances.

**Aræo′ma** (*araios*, porous). Interstice.

**Aræom′eter.** Areometer.

**Aræosar′cous** (*araios*, thin, *sarx*, flesh). Having lean flesh.

**Ara′lia canaden′sis.** Panax quinquefolium. **A. edu′lis**, plant of China and Japan, used in chlorosis, menstrual derangement, and puerperal diseases. **A. his′pida**, dwarf elder; diuretic and used in decoction in dropsy. **A. nudicau′lis**, small spikenard, wild liquorice, sweet root, false or wild sarsaparilla; American plant; mild stimulant, diaphoretic, tonic, and alterative, and recommended as a substitute for sarsaparilla. **A. palma′ta**, leaves and bark were formerly used in gonorrhœa. **A. quinquefo′lia**, Panax quinquefolium. **A. racemo′sa**, American spikenard, pettymorrel; has the same properties as A. nudicaulis. **A. spino′sa**, angelica tree, prickly ash, toothache tree, spikenard tree, prickly elder, shotbush, pigeon tree; berries and tincture have been employed in toothache; spirituous infusion has been used in colic; plant is diaphoretic, bark and leaves are emetocathartic.

**Aran′-Duchenne′s′ disease′.** Progressive muscular atrophy.

**Aran′ea.** Spider. **A. taren′tula**, see *Tarentula.*

**Aran′eæ te′la.** Spider's web; cobweb; formerly much employed externally as a mechanical styptic, internally in intermittents. Arachnoid membrane.

**Araneo′sus.** Thread-like; term used to express extreme weakness of pulse, the movement resembling that of a delicate net raised by the wind.

**Ara′neous.** Cobweb-like. **A. mem′brane**, arachnoid. **A. u′rine**, a term applied to urine loaded with filaments like cobwebs.

**Ara′neum.** Araneæ tela. **A. ul′cus**, old name for malignant, gangrenous ulcer of the legs.

**Aran's′ disease′.** Progressive muscular atrophy. **A.'s green can′cer**, chloroma; lymphomatous affection of the orbit, seriously involving the general lymphatic system. **A.'s law**, that fracture of the base of the skull occurs from traumatism of the vault and involves a larger surface by irradiation.

**Aran′tius's bod′y** or **nod′ule.** Fibrous nodule on the semilunar valves. **A.'s canal′**, ductus venosus. **A.'s cav′ity**, ventricle of Arantius. **A.'s lig′ament**, ligament formed by obliteration of the canal or duct of Arantius. **A.'s ven′tricle**, a small cavity, lined with gray substance, at the point of the calamus scriptorius.

**Araro′ba.** Goa powder; pulverulent substance found in the trunk of Andira araroba, angiar of Brazil; employed in cutaneous affections. See *Chrysarobin.*

**Arat′rum** (Lat., plough). Vomer.

**Ar′bor** (Lat., tree). When used alone, signifies the arbor vitæ of the cerebellum. **A. ben′ivi**, Benjamin. **A. camphorif′era**, camphor tree. **A. Dian′æ**, Diana or silver tree; arborescent amalgam of silver due to the action of mercury on silver nitrate. **A. febrif′uga**, Cinchona officinalis. **A. in′dica**, Laurus cassia. **A. ma′ris**, coral. **A. medulla′ris**, A. vitæ. **A. satur′ni**, lead tree; arborescent precipitate of lead, produced by mixing zinc with a solution of lead acetate. **A. thurif′era**, Juniperus lycia. **A. toxica′ria**, Antiaris toxicaria. **A. tulipif′era**, Liriodendron tulipifera. **A. u′teri viv′ificans**, arborescent striæ in cervix uteri. **A. vi′tæ** (tree of life), Thuya occidentalis. **A. v. of the cerebel′lum**, arborescent appearance seen on cutting the cerebellum longitudinally; resulting from particular arrangement of white substance with the cineritious. **A. v. of the u′terus**, folds in the mucous membrane producing arborescent striæ in the cervix uteri.

**Ar′bores.** Morbid alteration of the skin preceding ulceration; a form of morphœa.

**Arboriza′tion.** Figure resembling the branching of a tree or plant; capillary vessels, when injected, as in inflammation, frequently have this appearance.

**Arbus'cula gummif'era brazilien'sis.** Hypericum bacciferum.

**Arbutin'.** $C_{24}H_{32}O_{14}+H_2O$. Crystallizable glucoside derived from uva ursi and other plants, and having diuretic properties; dose, gr. v–xv (0.32–1.0).

**Ar'butus.** A. unedo. **A. menzie'sii,** madroño tree of the Pacific coast; the bark is astringent. **Trail'ing a.,** A. uva ursi; Epigæa repens. **A. u'nedo,** strawberry tree, arbute tree, ord. *Ericaceæ;* grows along the Mediterranean; all parts of the plant are used medicinally; a decoction of the leaves is astringent, used in diarrhœa; the berries are antidyspeptic and narcotic, diuretic, and laxative. **A. u'va ur'si,** trailing arbutus, bear's whortleberry or bearberry, mountain-box, redberry, upland cranberry, foxberry, checkerberry. Leaves, *uva ursi* (Ph. U. S.), tonic and astringent, have been employed chiefly in diseases of the urinary organs, and also as parturifacient; dose of powder, gr. xv–xxx (1.0–2.0).

**Arc.** Any part of the body resembling an arch in form, as arc or arch of the colon, transverse portion of that intestine; arc, or arch, or cross of the aorta, a turn which the aorta takes in the thorax. See *Arch.* **Binau'ral a.,** measurement over the head taken from one external meatus to the other.

**Ar'ca arcano'rum.** Mercury. **A. cor'dis,** pericardium.

**Arca'num** (*arca,* chest). Secret, nostrum, quack, or empirical medicine; remedy whose composition is kept secret, but which is reputed to possess great efficacy. **A. coralli'num,** hydrargyri nitrico-oxidum. **A. duplica'tum,** potassii sulphas. **A. tar'tari,** potassii acetas.

**Arch.** Arc. **Alve'olar a.,** alveolar process of the jaws. **Anostomot'ic a.,** union of two vessels anastomosing by curved line, as the vessels of the mesentery. **A. of aor'ta,** see *Arc* and *Aorta.* **Aor'tic a.,** one of five arteries in human embryonic life connecting the cardiac and dorsal aortæ. **Ax'illary a.,** one of several muscular bundles passing in the axilla from the latissimus dorsi to the pectoralis major tendon; also arch formed by the axillary fascia and other parts. **Bran'chial a.,** the third, fourth and fifth postoral arches, passing in early embryonic life from each side of the front of the head, are so called; one of the osseous arches on which the gills rest. **Cephal'ic a.,** postoral a. **A. of co'lon,** transverse colon. **Contrac'tion a.,** operation of lessening the radius of the dental arch. **A. of Cor'ti,** arch of pillars of the organ of Corti over the membrana basilaris. **Cor'tical a.,** portion between one cortical column of the kidney and another. **Cos'tal a.,** arch of the ribs. **Cru'ral a.,** Poupart's ligament. **Cu'bital a.,** arch of anterior carpal artery at the knee in some animals. **Den'tal a.,** alveolar a.; curved line of teeth. **Epencephal'ic a.,** bones covering the epencephalon, constituting the occipital bone. **A. of Fallo'pius,** Poupart's ligament. **Fem'oral a.,** Poupart's ligament. **A. of foot,** one of the arches formed by the bones of the foot. **Frontohæ'mal a.,** tympanomaxillary a. **Gill a.,** branchial a. **Glu'teal a.,** see *Gluteal aponeurosis.* **Hæ'mal a.,** see *Hæmal.* **Hy'oid a.,** second of the early series of ridges from each side of the front part of the embryonic head, giving origin to the lesser cornua of the hyoid, styloid bone, and stapes; stylohyoid arch. **Infe'rior max'illary a.,** upper ridge forming the back part of the mouth in the embryo. **Infraver'tebral a.,** hæmal a. **In'guinal a.,** Poupart's ligament. **Ischiad'ic a.,** space between the posterior portion of the ischia in the horse. **Is'chiosa'cral a.,** sitting a. **A. of jaw,** inferior maxillary a. **Ju'gal a.,** zygomatic arch. **Laryn'geal a.,** a. in embryo from which are developed parts of the larynx and trachea. **Lat'eral supe'rior a.,** osseous covering of the cerebrum, cerebellum, and medulla oblongata. **Limb a.,** one of two arches formed by the scapulæ and clavicles and by the pelvic bones. **Lin'gual a.,** hyoid a. **Mandib'ular a.,** inferior maxillary a. **Max'illary a.,** inferior maxillary a.; palatomaxillary a. **Mesencephal'ic a.,** arch of bone from parts of the sphenoid, parietal, and mastoid bones. **Na'sal a.,** a. formed by the nasal bones. **Na'sohæ'mal a.,** hæmal a. of the frontal vertebra in fishes. **Neu'ral a.,** postaxial part of vertebra which encloses the medullary canal. **Neurofron'tal a.,** bony arch constituting neural a. of frontomandibular vertebra. **Neurona'sal a.,** bony a. constituting neural a. of nasal vertebra. **Neu'ro-occip'ital a.,** epencephalic a. **Neuropari'etal a.,** mesencephalic a. **Occip'ital a.,** cartilaginous a. forming lateral parietes of skull in some animals. **Occip'itohæ'mal a.,** shoulder-girdle, formed by scapulæ and clavicles, constituting hæmal arch of occipital vertebra. **Or'bital a.,** superior edge of orbit. **Osteoblas'tic a.,** one of the arches which the osteoblasts produce in the stage of osseous development. **Pal'atine a.** or **A. of the pal'ate,** one of two arches, anterior and posterior, on each side of the throat. The anterior a. arises from the middle of the velum palati at the side of the uvula, and is fixed to the edge of the base of the tongue. The posterior a. has its origin from the side of the uvula, and is inserted into the side of the pharynx. The tonsils lie between the arches. **Pal'atomax'illary a.,** bony a. constituting hæmal arch of the nasal vertebra. **Pal'mar a.,** see *Palmar.* **Pari'etohæmal a.,** bony a. constituting hæmal a. of the parietal vertebra. **Pec'toral a.,** occipitohæmal a. **Pel'vic a.,** bony a. between portions of the osseous pelvis; pelvic bones constituting hæmal arches of the sacral vertebræ. **Pharyn'geal a.,** an a. constituting with its fellow the fifth pair of branchial arches. **Plan'tar a.,** see *Plantar artery.* **Posto'ral a.,** a falciform ridge from each side of the front part of the head in early embryonic life. **Prosencephal'ic a.,** nasofrontal a. **A. of pu'bes,** see *Pubic arch.* **Rhinencephal'ic a.,** neuronasal a. **Scap'ular a.,** occipitohæmal a. **Se'nile a.,** arcus senilis. **Sit'ting a.,** a. of portions of pelvic bones on which persons sit. **Spread'ing a.,** operation of increasing the radius of the dental a. **Stand'ing a.,** a. formed by the sacrum and bones connected with the hip-joint. **Stylohy'oid a.,** hyoid a. **Subax'ial a.,** postoral a. **Subor'bital a.,** zygomatic a. **Subpu'bic a.,** see *Subpubic.* **Supercil'iary a.,** superciliary ridge. **Supe'rior ver'tebral a.,** neural a. **Supracar'pal a.,** analogue in animals of the superficial palmar arch in man. **Supraor'bital a.,** orbital a. **Supraver'tebral a.,** neural a. **Tem'poral a.,** zygomatic a. **Thyrohy'oid a.,** third of postoral arches from which the greater portion of the hyoid bone is formed. **Trabec'ular a.,** a. made by the junction of the middle trabeculæ of the cranium, containing the pituitary gland and infundibulum. **Ver'tebral a.,** neural a., hæmal a.; see *Vertebræ.* **Vis'ceral a.,** postoral a.; one of the embryonic outgrowths from which the upper and lower jaws are developed. **Zygomat'ic a.,** see *Zygomatic.*

**Archangel'ica.** Lamium album. **A. atropurpu'rea,** grows in United States; tonic, stimulant, diaphoretic. **A. officina'lis,** angelica. **A. sati'va,** a source of angelica root.

**Archebio'sis** (*arche,* beginning, *bios,* life). Production of living organisms from non-living materials; abiogenesis; spontaneous generation.

**Archegony,** ar-keg'o-ne (*arche,* beginning, *gonos,* race). Spontaneous generation, archebiosis, abiogenesis.

**Archenceph'ala** (*arche,* beginning, *enkephalos,* brain). Man, as having the highest type of brain.

**Archen'teron** (*arche,* beginning, *enteron,* intestine). Primitive embryonic intestinal tube.

**Ar'cheocyte** (*arche,* beginning, *kytos,* cell). A detached amœboid cell; wandering cell.

**Archespo'rium** (*arche,* beginning, *sporos,* seed). Cell giving rise to spore mother cells.

**Ar'chetype** (*arche,* beginning, *typos,* type). Ideal type of structure or organ, with which all others can be compared.

**Archiamphias'ter** (*arche,* beginning, *amphi,* about, *aster,* star). A diaster from which polar bodies are formed.

**Archia'ter** (*archos,* chief, *iatros,* physician). Physician to a prince or king; chief physician.

**Ar′chiblast** (*arche*, beginning, *blastos*, germ). Tissue which was *ab initio* part of composition of embryo; areola containing germinal vesicle, as opposed to the parablast or that part which is concerned in nutrition only; epiblast.

**Archiblas′tic.** Relating to the archiblast.

**Archiblasto′ma.** A tumor made up of archiblastic material; carcinoma, neuroma, and epithelioma are examples of this class of neoplasms.

**Archiblas′tula.** A primitive vesicle which, by invagination of its walls, develops into an archigastrula; one of the series of archiforms in the development of the embryo. See *Archigastrula*.

**Ar′chicyte** (*kytos*, cell). The ovum after impregnation and prior to the beginning of segmentation.

**Archicyt′ula.** The second in the series of archiforms, developed from the archimonerula by the reappearance of a nucleus. See *Archigastrula*.

**Ar′chiform.** Term applied to a series of transformations of the ovum occurring during embryonic development. See *Archigastrula*.

**Archigas′ter.** The alimentary canal in the embryo.

**Archigas′trula.** A cup-shaped figure occurring in the development of the embryo in some of the lower forms of animal life, the last of the series of archiforms resulting from pelvigenetic segmentation, beginning with the archimonerula and continuing through the archicytula, archimorula, and archiblastula.

**Archigen′esis** or **Archig′ony.** Spontaneous generation; archebiosis.

**Ar′chil.** Reddish-purple coloring-matter from Roccella and other lichens; used for staining animal tissues.

**Archimoner′ula.** The first stage of development of the egg in some of the lower forms of animal life in which there is as yet no distinction between the nutritive and the formative portions of the yolk; the embryo passes by successive stages by means of segmentation to the *archigastrula*, which see.

**Archimor′ula.** The globular or mulberry-like mass of cells, found in the course of development of some of the form of animal life beneath the vertebrata, which results from continued segmentation of the yolk, between the archicytula and archiblastula in the series. See *Archigastrula*.

**Archineph′ric** (*arche*, beginning, *nephros*, kidney). Relating to the archinephron, or primitive kidney. **A. duct**, duct of archineon.

**Archineph′ron.** First embryonic type of kidney, subsequently becoming divided into Wolffian body, pronephros in front of that body, and kidney proper.

**Archineu′ron.** The primitive or embryonic neuron, or one from which originates a nerve impulse.

**Ar′chiplasm** or **Archiplas′ma.** The cytoplasm of an impregnated ovum.

**Ar′chistome** (*arche*, beginning, *stoma*, mouth). Opening through the primitive streak, first perceptible indication of embryonic development, into the cavity of the innermost germ layer; blastopore.

**Architectu′ra apoplec′tica.** Apoplectic build.

**Archi′tis** (*archos*, rectum). Inflammation of anus or rectum.

**Ar′chocele** (*archos*, rectum, *kele*, rupture). Prolapse of the rectum; proctocele. **Vag′inal a.**, hernia of the rectum into the vagina.

**Archocystocolposyr′inx** (*archos*, rectum, *kystis*, bladder, *kolpos*, vagina, *syrinx*, a pipe). Rectovesicovaginal fistula.

**Archocystosyr′inx.** Fistula of anus and urinary bladder.

**Archopto′sis.** Prolapse of the rectum.

**Archorrha′gia.** Hemorrhage from the anus.

**Archorrhœ′a.** Discharge or passive hemorrhage from the rectum.

**Ar′chos.** Anus; rectum.

**Archostegno′ma, Archostegno′sis,** or **Archosteno′sis** (*stegnoo*, to constrict). Stricture of the rectum.

**Archosyr′inx** (*syrinx*, a pipe). Fistula in ano. Rectal syringe.

**Ar′ciform** (*arcus*, bow, *forma*, shape). Arcuate; curved like a bow; epithet given to certain fibres, *fibræ arciformes*, of the anterior pyramids of the medulla oblongata, which take a curved course around the inferior extremity of each corpus olivare and ascend toward the cerebellum. **A. band of Sol′ly,** arciform fibres passing across the pyramid of the medulla oblongata beneath the corpus olivare.

**Arcta′tion** (*arcto*, to make narrow). Contraction of a natural opening or canal, especially the vulva, orifice of the uterus, or intestinal canal; constipation; reunion by suture or infibulation.

**Arctitu′do.** Arctation.

**Arc′tium** or **A. lap′pa.** Burdock. The root, lappa, is diuretic; seed, cathartic. It has been used in diseases of the skin and in syphilis. Dose of the fluid extract, ♏x–xxx (0.65–2.0). Called also *Arctium barda′na, ma′jus, mi′nus,* and *tomento′sum.*

**Ar′ctopus echina′tus.** South African plant, ord. *Umbelliferæ;* demulcent and diuretic. Decoction of root is employed in syphilis, leprosy, and chronic cutaneous affections.

**Arctostaph′ylos.** Manzanita. California shrub, having the same properties as A. uva ursi. **A. u′va ur′si,** Arbutus uva ursi. Several other species of arctostaphylos grow in Mexico—A. discolor, A. pungens, A. tomentosa, with similar properties.

**Arctu′ra** (*arcto*, to press close). Effects of a nail grown into the flesh. Arctation. **A. un′guium,** growing in or inversion of the nails, see *Onychogryphosis.*

**Arcua′lis.** Arched; name given to corona arcualis and ossa arcualia.

**Arc′uate.** Arched. **A. com′missure,** posterior optic commissure. **A. em′inence,** prominence of semicircular canal on the temporal bone. **A. fascic′ulus,** bundle of fibres passing from the frontal lobe through the insula to the occipital lobe. **A. fi′bres,** fibres in the medulla oblongata passing from the anterior median fissure to the olivary body and cerebellum. **A. forma′tion,** a term applied to the more deeply lying a. fibres. **A. lig′ament,** name given several ligaments from their shape, as those of the diaphragm, pubes, and wrist. **A. nu′cleus,** small mass of gray matter on the surface of the anterior pyramid.

**Arcua′tion** (*arcus*, bow). Gibbosity or projection, as of the sternum anteriorly; curvature of bone.

**Ar′cula,** pl. arculæ (dim. of *arca*, press or chest). Orbit. **A. cor′dis,** pericardium.

**Ar′culus** (dim. of *arcus*, arch). Small arch; cradle; semicircular box or basket for preventing bedclothes from coming in contact with affected parts.

**Ar′cus.** Arc or arch. **A. aor′tæ,** arch of the aorta. **A. arteria′rum,** arches of branches of the renal artery in the kidney. **A. arterio′sus ma′nûs,** palmar arch. **A. a. pal′pebræ,** palpebral arch along the edge of the eyelid. **A. a. pe′dis,** plantar arch. **A. atlan′tis,** arch of atlas. **A. axilla′ris,** arch of axillary artery. **A. brachia′lis,** arch of brachial artery. **A. car′pi dorsa′lis,** posterior carpal arch. **A. co′li intesti′ni,** transverse colon. **A. cor′neæ,** a. senilis. **A. crura′lis,** Poupart's ligament. **A. c. profun′dus,** deep crural arch. **A. denta′lis,** dental arch. **A. fau′cium,** arch of the palate. **A. glossopalati′nus,** anterior column of the fauces. **A. hi′licus,** branch of renal artery sending branches to the pelvis of the kidney. **A. hypoglos′si,** arch of hypoglossal nerve. **A. juga′lis,** zygomatic arch. **A. juvenal′is,** a ring-shaped corneal opacity occurring in young persons, but resembling the arcus senilis. **A. lingua′lis,** a. glossopalatinus. **A. ma′jor ventric′uli,** great curvature of the stomach. **A. mala′ris,** a. jugalis. **A. medulla′ris,** fornix. **A. mi′nor ventric′uli,** lesser curvature of the stomach. **A. palati′nus,** anterior and posterior columns of the fauces, and mucous fold passing from the soft palate to the epiglottis. **A. palatoglos′sus,** a. glossopalatinus. **A. palat′opharynge′us,** posterior column of fauces. **A. palma′ris,** palmar arch. **A. pharynge′us,** a. palatopharyngeus. **A. pharyn′goepiglot′ticus,** folds of mucous membrane from the pharynx to the epiglottis. **A. pharyn′gopalati′nus,** a. palatopharyngeus. **A. planta′ris,** plantar arch. **A. poplite′us,** arcuate popliteal ligament. **A. pu′bis,** pubic arch. **A. seni′lis,** lunar-shaped opacity at the edge of the cornea in advanced life, regarded as a symptom of fatty degeneration; gerontoxon. **A. s. len′tis,** an opaque circle often seen in elderly persons near the equator of the crystalline lens. **A. spira′lis,** arch of Corti. **A. subpu′bicus,** pubic arch. **A. supercilia′ris,** superciliary arch. **A. superficia′lis vo′læ,** superficial palmar arch. **A. supraorbita′lis,** supraorbital arch. **A. tar′seus,** tarsal arch. **A. tar′si oc′uli,** a. arteriosus palpebræ. **A. thy′rocartilagin′eus,** arch formed by the superior thyroid arteries over the thyroid cartilage. **A. tonsilla′ris,** isthmus of fauces. **A. trachea′lis ante′rior,** arch formed by the inferior thyroid arteries over the trachea. **A. un′guium,** lunula, see *Nail*. **A. vasculo′si,** arches of branches of the renal artery in the kidney. **A. veno′sus,** arch connecting anterior jugular veins in neck; venous arch in the palm of the hand; venous arch over the back of the fingers. **A. vertebra′lis,** vertebral arch. **A. viscera′lis,** lower ring of typical vertebra, in which are enclosed viscera and important vessels. **A. vola′ris,** palmar arch. **A. zygomat′icus,** zygomatic arch.

**Ar′dent** (*ardeo*, to burn). Hot, fiery, burning. **A. fe′ver,** intense fever; inflammatory fever. **A. spir′its,** the stronger alcoholic liquors.

**Ar′dor.** Heat; feeling of violent heat. **A. febri′lis,** hot period of fever. **A. stom′achi,** pyrosis. **A. uri′næ,** scalding sensation occasioned by urine passing over the inflamed mucous membrane of the urethra or over the neck of the bladder. **A. vene′reus,** venereal heat; sexual desire. **A. ventric′uli,** heartburn; cardialgia; pyrosis.

**A′rea** (Lat.). A flat limited space or surface: used without qualifying word to denote alopecia areata. **A. acus′tica,** auditory a. **Alisphenoi′dal a.,** part of the skull occupied by the great wing of the sphenoid bone. **Antropari′etal a.,** portion of the parietal bone in front of the parietal eminence. **Aud′itory a.,** a. in the second primary cerebral convolution, supposed to be associated with audition. **Bro′ca's a.,** gray matter between the middle olfactory root and the callosal peduncle. **A. Cel′si,** porrigo decalvans or alopecia areata. **A. centra′lis,** retinal spot in animals similar to the yellow spot in man. **A. circumscrip′ta,** a form of alopecia areata. **Cohn′heim's a.,** section of a muscle column seen on transverse section. **Cord a.,** that portion of the brain, lesion of which determines secondary spinal degeneration. **A. cribro′sa,** small orifices at the bottom of the internal auditory meatus, through which pass branches of the auditory nerve. **A. crura′lis,** an area of no particular significance at the base of the brain between the pons and the optic chiasm. **Dan′gerous a.,** the ciliary region of the eye. **A. dif′fluens,** alopecia areata. **Ellip′tical a.,** the surface of the corpus olivare. **A. embryona′lis,** a. germinativa. **Exci′table** or **excitomo′tor a.,** motor a. **Fe′tal a.,** a. germinativa. **Fron′tal a.,** convex surface of the frontal bone. **Frontopari′etal a.,** frontal lobe of the brain with the ascending parietal convolution. **Ger′minal a.,** or **A. germinati′va,** germinal spot; a localized accumulation of cells or blastospheres on the blastodermic membrane indicating the position of the future embryo. **Hy′aline a.,** a clear zone surrounding one of the collections of cells in elastic cartilage. **A. hypoglos′si,** inferior extremity of fasciculus teres, floor of fourth ventricle. **A. intercrura′lis** or **interpeduncular′is,** the area bounded by the cerebral peduncles. **John′ston's a.,** a. Celsi. **Midfron′tal a.,** a subdivision of the upper frontal a., made by a line passing from the orbit through the frontal eminence. **Mo′tor a.,** motor centre in the anterior and posterior central convolutions of the brain. **Non-nu′cleated a.,** spaces between vascular endothelial cells. **A. nummula′ta,** form of alopecia areata. **Occip′ital a.,** portion of the occipital bone above the superior curved line; the brain surface beneath the occipital bone. **A. opa′ca** or **opaque′ a.,** opaque circle around area pellucida, deriving its color from the white yolk beneath the blastoderm; outer zone of the blastoderm, from which fetal membranes are developed. **A. ophi′asis,** calvities; porrigo decalvans. **A. op′tica,** field of vision. **A. orienta′lis,** a form of alopecia areata. **A. ova′lis,** oval area on the lower lateral portion of the surface of the cerebellum to the outer side of the elliptical a. **A. pari′etotempora′lis,** a. covering the temporal lobe with a portion of the parietal lobe behind the motor a. **A. pellu′cida,** elliptical depression in the ovum, filled with clear fluid, in the centre of which is the germ. **Posteropari′etal a.,** portion of the parietal bone behind the parietal eminence. **Postpon′tile a.,** a. of the combined elliptical and oval areas on the under surface of the metencephalon. **Prechiasmat′ic a.,** the basal surface of the brain in front of the optic chiasm. **Rolan′dic a.,** motor a. of the brain. **Sen′sory** or **senso′rial a.,** the parietotemporal a. of the brain. **Sep′tal a.,** inner surface of laminæ of septum lucida. **A. ser′pens** or **serpigino′sa,** spreading form of alopecia areata. **A. of skull,** one of several regions of the cranium indicating the positions of the cerebral convolutions beneath. **Squamo′sotem′poral a.,** squamous portion of the temporal bone. **Superofron′tal a.,** a subdivision of the upper frontal a. made by a line passing from the orbit through the frontal eminence. **Tem′poral a.,** small a. just behind the outer canthus of the eye and above the temporal fossa. **Transpa′rent a.,** a. pellucida. **A. tyr′ia,** alopecia areata. **A. va′gi,** triangular space on the floor of the fourth ventricle. **A. vasculo′sa,** the part of the germinal area where the first development of blood-vessels takes place. **A. vitelli′na,** part of blastodermic vesicle on outside of area vasculosa.

**Are′ca.** Fruit—areca nut, betel nut—of Areca catechu, ord. *Palmæ;* astringent, anthelmintic, and tonic. It enters into composition of betel, an Oriental masticatory; seed is astringent.

**Arecaine′.** $C_7H_{11}NO_2+H_2O$. A toxic alkaloid from areca nut; anthelmintic.

**Arecaline′.** $C_8H_{13}NO_2$. Alkaloid from seeds of Areca catechu; a soluble liquid; anthelmintic; poisonous, having an action on the heart similar to muscarine; dose, gr. $\frac{1}{12}$ (0.005). **A. hydrobro′mate,** used as a laxative vermifuge in veterinary practice; also possesses miotic properties. **A. hydrochlo′rate,** a soluble salt, the usual form of administration of this alkaloid.

**Arena′ria ru′bra.** Plant, ord. *Caryophylleæ;* common near Algiers, growing in sandy soils, and hence called sabline; used in Sicily and Malta, in decoction, in vesical catarrh and gravel.

**Arena′tion.** Therapeutic employment of the sand bath.

**Aren′ga saccharif′era.** By incision of this Indian tree juice is obtained, used under name of toddy; a kind of sago is obtained from the pith.

**Aren′ula** (dim. of *arena*, sand). Gravel.

**Are′ola** (dim. of *area*). Interstices between fibres composing organs, or those existing between laminæ or between vessels interlacing with each other; also, colored circle surrounding the nipple, *areola mammæ* or *papillaris*, which becomes much darker during pregnancy; circle surrounding certain vesicles, pustules, etc., as of smallpox, vaccina, etc; nucleus of a cell. **A. of breast,** see *Areola*. **A. of Chaussier′,** zone around malignant pustule. **A. embryona′lis,** embryonic area. **A. mam′mæ,** a. of breast, see *Areola*. **A. of nip′ple,** see *Areola*. **A. papil′læ** or **papilla′ris,** a. of breast, see *Areola*. **Sec′ond** or **sec′ondary a.,** a second a. mammæ outside of the first, seen in pregnancy. **Tu′bercles of the a.,** see *Mamma*. **A. umbilica′lis,** dark zone around the umbilicus, especially during pregnancy.

**Are′olar.** Appertaining to an areola; containing small interstices. **A. can′cer,** colloid cancer. **A. exhala′tions,** recrementitial secretions effected within the organs of sense, as aqueous, crystalline, and vitreous humors, etc., or in the areolar tissue of parenchymatous and other structures. **A. spaces,** open places in the spongy part of bones. **A. tis′sue,** cellular tissue.

**Are′olate.** Divided into areolæ.

**Areom′eter** (*araios*, light in weight, *metron*, measure). Variously called aræometer, hydrometer, pycnometer, granimeter, aërostatic balance; instrument first employed to take the specific gravity of fluids lighter than water; now used for liquids generally.

**Areom′etry.** Science or method of measuring the specific gravity of fluids.

**Arethu′sa bulbo′sa.** Indigenous; bruised bulbs are used in toothache and as cataplasms to tumors.

**Argamblyo′pia** (*argos*, idle + *amblyopia*). Impairment of vision from disuse.

**Ar′gema** (*argos*, white). White spot or ulceration of the cornea; leucoma.

**Argemo′ne mexica′na.** Thorn poppy, prickly poppy, yellow thistle. Native of Mexico, but naturalized elsewhere. Ord. *Papaveraceæ*. Juice, resembling gamboge, is hydragogue. Seeds are used in the West Indies as a substitute for ipecacuanha. It has a cathartic oil—shealkanta oil, Karwah thistle oil—yielded in large quantity by the seeds, like castor oil in action. Flowers are hypnotic.

**Argentam′ide.** An antiseptic silver preparation.

**Argentam′ine.** Ethylenediamine-silver phosphate solution, employed externally as an antiseptic astringent in ophthalmia and gonorrhœa in 1: 4000 solution.

**Argenta′tion.** Mercurial injection of anatomical specimen; staining of microscopic preparation with nitrate of silver; constitutional effects of that salt.

**Argen′ti** (gen. of *argentum*, silver). **A. albu′minas,** albuminate of silver, largin; used as a local antiseptic in aqueous solutions of 1 : 500 to 1 : 75. **A. brom′idum,** bromide of silver; dose, gr. ¼–½ (0.016–0.032). **A. chlor′idum,** chloride or muriate of silver, formerly employed in the treatment of syphilis and as an alterative, in doses of gr. ss–iij (0.032–0.2). **A. cit′ras,** citrate of silver, itrol; used as a local antiseptic in aqueous solutions of 1: 4000 to 1 : 1000. This preparation has been used in syphilis. **A. cyan′idum** (Ph. U. S.), cyanide of silver, is not given medicinally, its only use being in the manufacture of hydrocyanic acid. **A. eos′olas,** eosolate of silver; employed externally in gonorrhœa and in the treatment of skin diseases. **A. fluor′idum,** fluoride of silver; used locally as a caustic and antiseptic. **A. io′didum** (Ph. U. S.), iodide of silver; a light yellow powder, becoming greenish-yellow on exposure to light; has been employed as an alterative in doses of gr. ¼–ij (0.016–0.13). **A. lac′tas,** lactate of silver, actol; used locally as an antiseptic and also internally in doses of gr. ss–j (0.032–0.065). **A. ni′tras** (Ph. U. S. and Br.), nitrate of silver; prepared by the action of nitric acid on silver. It occurs in clear, colorless crystals, which become dark on exposure to light or on contact with organic matters. It is employed locally, pure or in varying degrees of dilution, as a caustic, stimulant, counterirritant, and antiseptic; internally it is given in gastroenteric and nervous diseases in doses of gr. ⅙–½ (0.01–0.032). **A. n. dilu′tus** (Ph. U. S.), **A. n. mitiga′tus** (Ph. Br.), dilute nitrate of silver, mitigated caustic, is the fused nitrate, melted with equal weight of potassium nitrate, and is used in ophthalmic surgery. **A. n. fu′sus** (Ph. U. S.), molded nitrate of silver, lunar caustic in sticks, in the form of a white cone or pencil, is employed externally as a caustic. **A. n. indura′tus** (Ph. Br.), toughened nitrate of silver or lunar caustic, contains 5 per cent. of potassium nitrate, added in order to make the pencil less brittle; its use is the same as a. n. fusus. **A. ox′idum** (Ph. U. S. and Br.), oxide of silver, is used as a tonic and astringent in many affections of the stomach and bowels, also in epilepsy and neuralgia, in doses of gr. ss–j (0.032–0.065); also externally, in the form of ointment, to venereal sores. **A. oxychin′olinsul′phonas,** oxychinolinsulphonate of silver, see *Argentol*. **A. sulphocar′bolas,** sulphocarbolate of silver; used externally as an antiseptic in ophthalmia and gonorrhœa.

**Argen′tic.** Containing silver or one of its preparations; caused by silver, as argentic stomatitis.

**Ar′gentine.** Pertaining to silver, as argentine solution or solution of salt of silver.

**Ar′gentol.** Oxychinolinsulphonate of silver, a compound of quinaseptol and silver; a yellowish powder, astringent and antiseptic; used locally as a substitute for iodoform, and in the treatment of gonorrhœa, in solutions of 1 : 1000 to 1 : 500; also in a 2 per cent. ointment.

**Argentonin′.** A preparation of silver used in ophthalmic practice.

**Argen′tum.** Silver. Solid metal of a shining, white appearance, crystallizable in triangular pyramids; fusible a little above a red heat, and volatilizable; sp. gr. 10.4, symbol, Ag. Its salts are used in medicine and as antiseptics, and the metal itself, in the form of wire and of leaf, is employed in surgery. **A. divi′sum,** metallic silver, in very fine powder, has been recommended internally in syphilis. **A. folia′tum,** silver-leaf. **A. fugiti′vum fu′sum, liq′uidum,** or **mob′ile,** quicksilver. **A. purifica′tum,** refined silver; pure metallic silver. **A. vi′vum,** quicksilver.

**Argil′la,** clay. **A. acet′ica,** alumini acetas. **A. bo′lus fla′va,** terra Lemnia. **A. bo′lus ru′bra,** Armenian bole. **A. hydra′ta,** a. pura. **A. ka′li sulphu′rica,** alumen. **A. ni′trica,** aluminum nitrate. **A. pal′lida,** bolus alba. **A. pu′ra,** prepared by drying alum and exposing it to red heat until sulphuric acid is driven off; used in indigestion as antacid, and in vomiting and diarrhœa with acidity; burnt alum. **A. sulphu′rica alcalis′ta,** alumen. **A. sulphu′rica us′ta,** alumen exsiccatum. **A. vitriola′ta,** alumen.

**Argilla′ceous.** Clayey. **A. earth,** alumina; has been used in indigestion as antacid.

**Arginin′.** $C_6H_{14}N_4O_2$. Substance produced by the action of hydrochloric acid on protein; allied to kreatinin. It is also obtained from the seeds of plants of the genus *Lupinus*.

**Ar′gol.** Crude cream of tartar. **A. red** or **white,** potassii supertartras impurus.

**Ar′gon.** Inert gaseous matter (symbol, A), constituting 1 or 2 per cent. of atmospheric air.

**Argonin′.** A white powder made by the action of silver nitrate on sodium and casein; antiseptic and disinfectant; used in solution for gonorrhœa (2 to 10 per cent.) and for ophthalmia neonatorum (2 to 3 per cent.).

**Argumen′tum integrita′tis.** Hymen.

**Ar′gyll-Rob′ertson pu′pil** or **sign.** Small pupil which fails to contract under the influence of light, but responds to efforts at accommodation; reflex iridoplegia; absence of pupil reflex.

**Argyr′ia, Argyri′asis,** or **Argyro′sis** (*argyros*, silver). Discoloration of skin and deposit of silver in internal organs, occasioned by long-continued internal use of nitrate of silver

**Ar′gyrol.** Silver vitelline; an organic salt of silver, non-irritant, powerfully antiseptic.

**Arhinencepha′lia.** See *Arrhinencephalia*.

**Arhin′ia.** See *Arrhinia*.

**Arhyth′mia.** Arrhythmia; irregularity, as of the cardiac pulsations

**Arhyth′mic.** Arrhythmic; relating to arrhythmia, not regular or rhythmic; said of the pulse.

**Ari′ca.** Bark from Cinchona pubescens of Peru.

**Arici′na** or **Aricine′** (from Arica in S. America). Alkaloid in Cusco and cuprea barks similar in properties to quinine.

**Arid′ity** (*aridus*, dry). Dryness of any organ, as the skin or tongue; lanuginous appearance of the hair, as if covered with dust.

**Aridu′ra** (dryness). Wasting or emaciation; hectic fever; marasmus; atrophy. **A. cor′dis,** atrophy of the heart. **A. hep′atis,** atrophy of the liver.

**Aril′lus myris′ticæ.** Mace.

**Ar′istol.** Dithymoldiiodide; annidalin. Red, amorphous powder resulting from the decomposition of a solution of iodine in iodide of potassium by an alcoholic solution of thymol. It is employed as an inodorous substitute for iodoform in its external application.

**Aristolo′chia** (*aristos*, best, *locheia*, parturition, because supposed to aid parturition). Birthwort, ord. *Aristolochiaceæ*. **A. anguici′da,** juice of root said to paralyze or kill snakes; hence its name, "snake-killer." **A. biloba′ta,** leaves used in West Indies as a remedy for itch; root is emmenagogue. **A. bractea′ta,** Indian variety; cathartic, emmenagogue, anthelmintic. **A. ca′va,** Fumaria bulbosa. **A. clemati′tis,** upright birthwort; the root is stimulant and emmenagogue, and used in amenorrhœa, chlorosis, gout, and rheumatism. **A. contor′ta,** root is purgative and anthelmintic. **A. cret′ica,** A. clematitis. **A. faba′cea,** Fumaria bulbosa. **A. fragrantis′sima,** stems used in Mexico under the name guaco in intermittent fevers and affections of the abdomen. **A. grandiflo′ra,** leaves of this plant of Jamaica and Guatemala are used for gout and rheumatism; the plant in dropsy and dyspepsia. **A. hasta′ta,** A. serpentaria. **A. hirsu′ta,** A. serpentaria. **A. in′dica,** root of this Indian shrub is used in gout, intermittent fever, amenorrhœa, etc. **A. lon′ga,** long birthwort; virtues are the same as those of A. clematitis. **A. mexica′na,** Mexican species; antispasmodic. **A. odoratis′sima,** Mexican species; tonic, stimulant, diaphoretic. **A. pal′lida,** grows in S. Europe; used in asthma, gout, amenorrhœa, etc. **A. pistolo′chia,** aromatic odor and acrid, bitter taste; properties same as those of A. clematitis. **A. reticula′ta,** A. serpentaria. **A. rotun′da,** round birthwort; virtues are the same as those of A. clematitis. **A. sagitta′ta,** employed indiscriminately with A. serpentaria. **A. serpenta′ria,** serpentaria, Virginia snakeroot, serpentary root, snakeroot birthwort, snakeweed, snagrel. Virtues of the root, *serpentaria* (Ph. U. S.), tonic, stimulant, diuretic, and diaphoretic; employed in debility, intermittents, etc. Dose of the fluid extract, ♏x–xxx (0.65–2.0); of the tincture, ʒj–ij (4.0–8.0). Aristolochia hirsuta, A. hastata, and A. reticulata or Red River snakeroot, indigenous, are employed indiscriminately with A. serpentaria under the name serpentaria or Virginia snakeroot; the virtues appear to reside in a bitter extractive called serpentarin. **A. si′pho,** Dutchman's pipe, has virtues like those of A. serpentaria. **A. ten′uis,** A. clematitis. **A. tomento′sa,** indigenous, has virtues like those of A. serpentaria. **A. trif′ida,** A. trilobata. **A. triloba′ta,** plant of Surinam and Jamaica, possessing the general virtues of aristolochiaceæ. **A. vulga′ris rotun′da,** Fumaria bulbosa.

**Aristolo′chic.** A remedy supposed to promote the flow of lochia or to expel the placenta.

**Aristolochin′.** Bitter substance from the root of Aristolochia clematitis and A. serpentaria.

**Aristote′lia.** Leaves of this Chilian plant are used in the preparation of a wash for ulcers, particularly those of the mouth; the plant is antipyretic.

**Ar′istotle, exper′iment of.** Sensation of the presence of two substances when a single substance is placed under the crossed fingers.

**Aristrocar′dia** (*aristeros*, left, *kardia*, heart). Displacement or deviation of heart leftward.

**Arithmoma′nia.** Morbid impulse to count or to work out arithmetical problems.

**Ar′kyochrome** (*arkys*, a net, *chroma*, color). A cell in which the stainable portion is arranged in a reticular manner.

**Arlt's recess′** or **si′nus.** A minute depression in the lacrymal sac. **A.'s tracho′ma,** granular conjunctivitis.

**Arm.** Part of the body between the shoulder and the wrist, or, anatomically, between the shoulder and the elbow only; also the forelimb of any mammal. **A. bone,** humerus. **A. cen′tre,** motor centre for the arm, located in the middle third of the anterior and posterior central convolutions. **Golf a., ten′nis a.,** etc., a form of neurosis of the arm, similar to writers' cramp, occurring sometimes in persons engaging too strenuously in these sports. **A. jerk** or **re′flex,** muscular contraction produced by striking the tendon of the biceps at the elbow, or that of the triceps muscle above the olecranon; see *Reflex*.

**Armamenta′rium** or **Armar′ium** (*armo*, to equip). Arsenal; the material equipment of the practitioner—drugs, instruments, etc. **A. chirur′gicum,** collection of surgical instruments. **A. luci′næ,** collection of obstetrical instruments. **A. portab′ile,** portable case of instruments.

**Arman′ni-Ehr′lich's degenera′tion.** Hyaline change in the epithelium of Henle's loop, occurring in diabetes.

**Ar′mature.** The keeper of a magnet; a piece of soft iron kept in contact with both poles of a magnet in order to prevent loss of magnetic force.

**Ar′me.** Physiological or mechanical union of parts; suture, as of the cranium.

**Armed.** Fortified with some other substance, as an instrument armed with caustic; having an armature.

**Arme′nian bole.** See *Bole*.

**Arme′ria vulga′ris.** Sea pink; thrift; European species; leaves are astringent in diarrhœa and menorrhagia, and used as gargles.

**Armil′læ ma′nûs membrano′sæ** (*armilla*, bracelet). Annular ligaments of carpus. **A. ner′vi trigem′ini,** ganglion of Gasser.

**Ar′mor.** Condom.

**Armora′cia.** Fresh root of Cochlearia armoracia. Armoraciæ radix, horseradish root. Internally, stimulant; externally, rubefacient; employed as a condiment.

**Ar′mus.** Humerus; arm; shoulder. **A. sum′mus,** acromion.

**Ar′my itch.** Itching skin diseases of soldiers, such as scabies, ptheiriasis, etc.

**Arnal′dia.** Disease once prevalent in England, accompanied with loss of hair; by some supposed to have been syphilis.

**Ar′nica monta′na.** Arnica, leopard's bane, mountain arnica, accident plant, ord. *Compositæ*. Plant and flowers, *Arnicæ flores* (Ph. U. S.), and root, *Arnicæ radix* (Ph. U. S. and Br.), are narcotic, cardiac stimulant, emmenagogue, diaphoretic, diuretic, etc., and as such have been given in amaurosis, paralysis and other nervous affections, rheumatism, gout, chlorosis, etc. Dose of the tincture of the root or flowers, ♏x–xxx (0.65–2.0); of the extract of the root, gr iij–v (0.2–0.32); of the fluid extract of the root, ♏v–x (0.32–0.65). Its chief employment is as an embrocation to sprains, etc. **A. mol′lis** and **A. nudicau′lis** are supposed to have medicinal virtues like the last. **A. plauen′sis,** Arnica montana. **A. spu′ria,** Inula dysenterica. **A. sueden′sis,** Inula dysenterica.

**Arnicin′.** $C_{26}H_{30}O_4$. Glucoside derived from the leaves and flowers of Arnica montana; not used medicinally.

**Arnoglos′sum.** Plantago.

**Ar′nold's bun′dle** or **fascic′ulus.** Frontal tract of basal part of crural cerebri. **A.'s canal′,** minute canal in petrous bone for A.'s nerve. **A.'s fold,** semilunar fold of mucous membrane in lacrymal sac. **A.'s gang′lion,** otic ganglion. **A.'s ground plex′us,** network of nerves from axis-cylinders of non-medullated nerve fibres in non-striated muscular tissue. **A.'s innom′inate canal′,** canal in base of skull for transmission of single nerve formed by superficial and deep petrosal branches. **A.'s lig′ament,** ligament between the body of the incus and the roof of the tympanum. **A.'s mem′brane,** pigmentary layer of iris. **A.'s nerve,** auricular branch of pneumogastric nerve. **A.'s oper′culum,** operculum of the insula or island of Reil. **A.'s recur′rent nerve,** a sensory branch of the ophthalmic portion of the trigeminal nerve, passing to the tentorium cerebelli and back part of falx cerebri. **A.'s stra'tum reticula'tum,** nervous network made by fibres passing between the occipital lobe and the optic thalamus.

**Ar'nott's dila'tor.** An instrument for dilating urethral strictures.

**Aro'ma.** Odorous part of plants; emanation, frequently imponderable, from bodies acting on the organ of smell and varying with body exhaling it; the agreeable odor of articles of food and drink.

**Aromaden'dron.** Species of magnoliaceous plant of Java; used as a tonic and antihysteric.

**Aromat'ic.** Spicy; of pleasant odor or flavor; any odoriferous substance from the vegetable kingdom containing much volatile oil or light resin. Aromatics are used in perfumes, in seasoning, and embalming; in medicine they are stimulants, as ginger, cinnamon, mint, etc. A term applied to several confections, spirits, powders, vinegars, wines, etc. **A. acids,** acids of benzene group of hydrocarbons. **A. al'cohol,** one in which part of the hydrogen has been replaced by phenyl. **A. bark,** bark of Canella alba, having a pleasant, fragrant smell. **A. group,** series of hydrocarbons, $C_{10}H_{16}$, in composition. **A. pow'der,** compound cinnamon powder; nutmeg and cardamom, each 1 part, cinnamon and ginger, each 2 parts. **A. spe'cies,** collection of a number of aromatic leaves or powders, used as a fomentation, usually warmed, over a painful spot. **A. sulphu'ric acid,** acidum sulphuricum aromaticum. **A. vin'egar,** aromatic oil dissolved in vinegar.

**Aro'matize.** To add to a mixture or potion some aromatic to mask the taste or render it more agreeable.

**Aromine'.** A fragrant alkaloid sometimes obtained from urine.

**Ar'rack.** Arack.

**Arrec'tor.** Erector.

**Arrecto'res pilo'rum** (erectors of hairs). Unstriped muscular fibres in the skin which act in producing goose-flesh by erecting the hair.

**Arrenoto'cia.** Arrhenotocia.

**Arrep'tio.** Insanity.

**Arrest'.** Action of checking or stopping.

**Arrest'ed.** Term applied in obstetrics to head of child when delayed in cavity of pelvis.

**Ar'rhen.** Male.

**Arrhenoto'cia** or **Arrhenot'oky** (*arrhen*, male, *tokos*, parturition). The bearing of males only.

**Arrhenot'ocous.** Giving birth to males only.

**Ar'rhepis** (*arrhepes*, motionless). Eleventh dorsal vertebra.

**Arrheumat'ic.** Free from rheumatism.

**Arrhinencephal'ia** (*a*, priv., *rhis*, nose, *enkephalon*, brain). Monstrosity with absence of the rhinencephalon or olfactory lobes; cyclopia.

**Arrhin'ia** (*a*, priv., *rhis*, nose). Absence of nose.

**Ar'rhinus.** Having the nose absent or defective.

**Arrhœ'a** (*a*, priv., *rheo*, to flow). Suppression of any discharge; amenorrhœa.

**Arrhoste'ma** or **Arrhos'tia** (*arrhosteo*, to lose strength). Disease; debility.

**Arrhyth'mia** (*a*, priv., *rhythmos*, rhythm). Want of rhythm. **A. cor'dis,** irregular action of the heart.

**Arrhyth'mic** or **Arrhyth'mous.** Irregular in rhythm.

**Arro'sion.** Ulceration or erosion.

**Ar'row ar'um.** Pellandra virginica. **A. caus'tic,** see *Caustic.* **A. head** or **A. leaf,** Sagittaria variabilis. **A. poi'son,** different kinds of arrow poison have been used in different regions; thus in New Granada the skin of a batrachian has yielded *batrachine;* from the Erythrophlœum guinense, *bourane,* used by natives of Africa; *curare, ourari,* or *woorara,* by those of South America; juice of African tulip, Hæmanthus toxicarius, and *ouabaio,* from carissa, by the East coast Africans.

**Ar'rowroot.** Fecula of rhizome of Maranta arundinacea, ord. *Marantaceæ,* which, like all feculæ, is emollient and nutritive when prepared with water, milk, etc. *Florida arrowroot, coonti* or *coontie,* is derived from Zamia integrifolia or Z. pumila, sugar pine, ord. *Cycadaceæ; Bermuda arrowroot* is obtained from Maranta arundinacea; *Talcahuana arrowroot* from Alstroemeria, family *Amaryllidaceæ* of tropical America and extratropical Australia; *Brazilian* from Manihot utilissima. Excellent arrowroot is prepared in the East Indies from the root of Maranta indica, of Curcuma angustifolia, and C. leucorrhiza, ord. *Zingiberaceæ; Tahiti arrowroot* from Tacca oceanica and T. pinnatifida. Used as a bland and nutritious article of diet.

**Arryth'mia.** Arrhythmia.

**Arsa'cum** or **Arsa'tum.** Satyriasis; nymphomania.

**Ar'senal.** Armamentarium.

**Arsenamin'.** Arsenuretted hydrogen or arsenous hydride.

**Ar'senas.** Arsenate.

**Ar'senate.** Salt formed by the combination of arsenic acid with a salifiable base. **A. of ammo'nium,** $(NH_4)_2H,AsO_4$, a preparation which has been employed in inveterate cutaneous diseases. **A. of i'ron,** ferrous arsenate; ferri arsenas; this preparation has been applied externally to cancerous ulcers; it has also been given internally in cancerous affections, in dose of gr. $\frac{1}{12}$ (0.005), and in chronic cutaneous diseases. **A. of potas'sium,** properties the same as those of arsenous acid; it is seldom used. **A. of quinine',** antiperiodic in dose of gr. $\frac{1}{4}$ (0.016). **A. of so'dium,** sodii arsenas (Ph. U. S.); made by mixing powdered arsenous acid, nitrate of sodium, and dried carbonate of sodium, heating until effervescence ceases, and putting the fused salt when solidified into boiling water, filtering, and crystallizing. It is the basis of Pearson's solution, *liquor arsenicalis Pearsonii,* which has a strength of 0.1 per cent.; dose, gtt. xx (1.2). *Liquor sodii arsenatis* (Ph. U. S. and Br.), solution of arsenate of sodium, a 1 per cent. solution, ten times the strength of Pearson's solution.

**Arsen'hæmol.** Hæmol in combination with 1 per cent. of arsenic trioxide; dose, gr. j–iij (0.065–0.20).

**Arse'nias.** Arsenate.

**Arseni'asis.** Chronic poisoning by arsenic.

**Ar'senic.** Arsenicum; arsenum. A solid metal, sp. gr. 5.88, symbol As; of a steel-gray color, granular texture, very brittle, volatilizing before melting, very combustible and acidifiable; not dangerous of itself, but by virtue of the facility with which it absorbs oxygen. Arsenic, popularly so called, generally signifies arsenic trioxide or arsenous acid; see *Arsenicum album.* **A. acid,** $H_3AsO_4$, is not to be confounded with arsenous acid. **A. disul'phide,** realgar. **A. hydrochlo'ride solution,** liquor arsenici chloridi. **I'odide of a.,** arseni iodidum (Ph. U. S.); formed by the combination of arsenic and iodine; applied externally in tuberculous cutaneous affections especially; internally in dose of gr. $\frac{1}{20}$–$\frac{1}{10}$ (0.0032–0.0065) in similar affections. **I'odide of a. and mer'cury,** double iodide of mercury and arsenic; iodoarsenite of mercury. A compound proposed as more efficacious than either iodide of arsenic or iodide of mercury, and given in the form of liquor arseni et hydrargyri iodidi (Donovan's solution, from its proposer). It is made by dissolving equal weights of teriodide of arsenic and mercuric or red iodide in a measured quantity of distilled water; dose, ♏j–iij (0.06–0.18). It has been used successfully in many cutaneous diseases, such as psoriasis, impetigo, porrigo, pityriasis, and venereal skin diseases. **Ox'ide of a.,** white arsenic or simply arsenic, see *Arsenicum album;* arsenic oxide, as distinguished from arsenous oxide, is properly arsenic pentoxide, $As_2O_5$. **A. pentox'ide,** see the preceding. **Red sul'phuret of a.,** realgar. **Triox'ide of a.,** ordinary arsenic, see *Arsenicum album.* **A. trisul'phide,** orpiment. **White a.,** arsenicum album, arsenic trioxide, acidum arsenosum.

**Arsen'ical.** Relating or appertaining to or containing arsenic. **A. green,** acetoarsenite of copper. **A. paste,** mixture of arsenous acid and cocaine hydrochlorate made into a paste with an essential oil; used to destroy the vitality of the dental pulp.

**A. pow′der of Frère Côme** and of **Justamond′**, see *Powder, arsenical*. **A. rash,** eczema arsenicale; produced by the chronic use of arsenic. **A. solu′tion,** see *Arsenate of sodium* and *Liquor potassii arsenitis*.

**Arsen′icalism.** Peculiar gastroenteric symptoms, œdema, etc., caused by large doses of arsenical preparations or their chronic use.

**Arsenici′asis** or **Arcen′icism.** Poisoning by arsenic.

**Arsen′icized.** Term applied to substances containing arsenic.

**Arsenicoph′agy** (*arsenic* + *phago*, to eat). Arsenic-eating; this is extensively practised in certain regions under the idea that it favors nutrition and improves respiration.

**Arsen′icum.** Arsenic. **A. al′bum,** $As_2O_3$, white arsenic, oxide of arsenic, arsenic trioxide, ratsbane, acidum arsenosum (Ph. U. S.), acidum arseniosum (Ph. Br.), arsenous acid. Commercial arsenic occurs in compact white masses, of vitreous aspect, opaque, acrid and nauseous taste, volatilizable by heat and exhaling odor of garlic, soluble in water, alcohol, and oil. This is what is meant by the name arsenic, as commonly used. Purified by sublimation, it is employed in medicine; is tonic and escharotic, and is a most virulent mineral poison. It is used in intermittents, periodical headaches, neuroses, etc. Dose, gr. $\frac{1}{40}$–$\frac{1}{20}$ (0.0016–0.0032). **A. fla′vum,** orpiment. **A. ioda′tum,** iodide of arsenic. **A. ru′brum facti′tium,** realgar.

**Ar′senide.** A combination of arsenic with a basic radical.

**Arseniophthi′sis** (*arsenic* + *phthisis*, wasting). Wasting away after continued use of arsenic; arsenicalism.

**Arse′nious acid.** Arsenous acid.

**Ar′senis.** Arsenite.

**Ar′senite.** Salt formed by a combination of arsenous acid with a salifiable base. **A. of cop′per,** Paris green, French green, emerald green; a pigment formerly used to some extent to give color to confectionary, and now widely employed as a destroyer of the potato-bug and other parasites of plants; accidental poisoning has occasionally resulted from both these uses, and the substance is also a not uncommon agent of suicidal poisoning. It has been employed medicinally in the treatment of intestinal affections in doses of gr. $\frac{1}{200}$–$\frac{1}{100}$ (0.00032–0.00065). **A. of potas′sium,** protoarsenite of potassium; an uncrystallizable, colorless salt, forming the basis of liquor arsenicalis and liquor potassii arsenitis, or Fowler's solution.

**Arsen′ium.** Arsenic.

**Arsen′iuret.** Arsenuret.

**Arseniza′tion.** Medication with arsenic.

**Arsen′oblast** (*arsen*, male, *blastos*, a bud). Male element in generation.

**Ar′senous acid.** $HAsO_2$. A term applied to arsenous oxide. See *Arsenicum album*. **A. bro′mide,** $AsBr_3$, crystalline compound of the two elements named. **A. chlo′ride,** $AsCl_3$, liquid, from combination of the two elements named. **A. hy′dride,** $AsH_3$, arsenureted hydrogen. **A. i′odide,** $AsI_3$, iodide of arsenic. **A. ox′ide,** trioxide of arsenic, see *Arsenicum album*.

**Arsenovi′nic acid.** Acid produced by treating arsenic with alcohol.

**Arsen′uret.** Arsenide.

**Arsen′ureted hy′drogen.** $AsH_3$. A colorless gas of fetid odor; it is exceedingly poisonous when inhaled, causing a rapid destruction of the red blood corpuscles and consequent asphyxia.

**Arse-smart, bi′ting.** Polygonum hydropiper.

**Arsin′.** Arsenureted hydrogen.

**Arsonvaliza′tion.** The employment of very frequently interrupted electrical currents.

**Artan′the adun′ca.** Leaves of Piper aduncum of Southern America; stimulant. **A. elonga′ta,** matico. **A. lancæafo′lia,** matico from New Granada.

**Artarine′.** $C_{20}H_{17}NO_4$. An alkaloid from the root of Xanthoxylum senegalense, or artar root; a cardiac stimulant.

**Ar′tar root.** The rhizome of Xanthoxylum senegalense, possessing cardiac stimulant properties.

**Ar′tefact** or **Ar′tifact** (*ars*, art, *facio*, to make). Artificial structure, not real, but a result of mechanical or chemical disturbance; applied to changes observed in tissues under the microscope.

**Artemis′ia.** A genus of plants, ord. *Compositæ*. **A. abrot′anum,** southernwood, oldman, slovenwood, grows in Europe and the United States, and has stimulant properties. Oil of southernwood, oleum abrotani, possesses the aromatic properties of the plant. **A. absin′thium,** common wormwood, wormit. The flowering tops and leaves are official in the Ph. U. S. under the name *absinthium*. It is a bitter tonic and anthelmintic and cardiac stimulant. Oil of wormwood, *oleum absinthii* (Ph. U. S.), contains the aromatic virtues of the plant. Dose, 1 to 3 drops. A bitter liquor, absinthe, extensively used in France, is made from the leaves infused in brandy or from alcohol mixed with volatile oil of wormwood and other less active ingredients, especially oil of anise. It produces in overdose *absinthism*, consisting of hallucinations, peculiar contractions of the muscles of the lips and face, tremblings in the limbs, numbness, physical prostration, emaciation, giddiness, headache, delirium, dementia, and paralysis, frequently resulting in death. Bitter principle of absinthium, *absinthin*, $C_{16}H_{20}O_4$, is a narcotic poison. **A. a′fra,** S. African species, is tonic, antispasmodic, and anthelmintic; used externally, in strong infusion, as collyrium in weak eyes; the pounded leaves and stalks as discutients in œdema and suggillations. **A. al′ba,** A. santonica. **A. arbores′cens,** Mediterranean plant; tonic, emmenagogue, and stomachic. **A. arbus′cula,** dwarf sagebrush; anthelmintic; remedy for headaches. **A. argonen′sis,** tonic, aperient, anthelmintic plant of Algeria. **A. balsami′ta,** A. pontica. **A. bien′nis,** biennial wormwood; indigenous. **A. bo′trys,** Chenopodium ambrosioides. **A. cærules′cens,** plant with febrifuge properties, growing in S. Europe. **A. campes′tris,** field southernwood; same properties as A. abrotanum. **A. canaden′sis,** Canada wormwood. **A. cauda′ta,** indigenous. **A. chenopo′dium,** Chenopodium botrys. **A. chinen′sis,** from this the Chinese form moxas; the plant is emmenagogue, tonic, and antispasmodic. **A. ci′na,** A. maritima. **A. con′tra,** grows in Persia, Asia Minor, and other parts of the East. **A. dracun′culus,** taragon; flowering tops are antiscorbutic; leaves and oil are used to season food, especially in the form of estragon vinegar. **A. filifo′lia,** southernwood of North America. **A. frig′ida,** Sierra salvia; anthelmintic; also substitute for quinine. **A. glacia′lis,** silky wormwood. **A. in′dica,** A. chinensis, A. santonica. **A. juda′ica,** growing in Palestine, Arabia, China, Cochin China, and Northern Africa. **A. leptophyl′la,** A. pontica. **A. ludovicia′na,** Western mugwort. **A. marit′ima,** sea wormwood, maritime southernwood. The unexpanded flower-heads are official under the name *santonica* (Levant wormseed), which is anthelmintic and stimulant; dose, gr. x–ʒj (0.65–4.0), in powder. Its active principle is santonin, *santoninum* (Ph. U. S.), dose of which is gr. ss–ij (0.032–0.13) for a child six or eight years old. **A. mox′a,** A. chinensis. **A. pauciflo′ra,** A. maritima. **A. pon′tica,** Roman wormwood, lesser wormwood; has like virtues to A. absinthium. **A. roma′na,** A. pontica. **A. ru′bra,** A. santonica. **A. rupes′tris** creeping wormwood; aromatic virtues; used in intermittents and amenorrhœa. **A. santon′ica,** Tartar southernwood; it was formerly supposed that santonica, or Levant wormseed, was obtained from this variety. **A. tenuifo′lia,** A. pontica. **A. tridenta′ta,** sagebrush; infusion is anthelmintic, and used for colds and headaches. **A. trif′ida,** dwarf sagebrush of North America. **A. vulga′ris,** possesses general tonic virtues of the artemisiæ; used also in epilepsy, chorea, and other nervous conditions.

**Artemisin′.** A bitter principle contained in Artemisia absinthium.

**Artereurys'ma.** Aneurysm.

**Arte'ria** (Gr., *arteria*, originally the windpipe and later an artery, the ancients believing that the arteries were air tubes). Artery. For arteries not found in the following list, see below under *Arteriæ*. **A. abdomina'lis,** deep circumflex iliac artery; superficial epigastric a. **A. acetab'uli,** branch of internal circumflex a. to hip-joint. **A. acromia'lis,** acromial a. **A. acro'miothora'cica,** acromiothoracic a. **A. ala'ris,** lateral nasal a. **A. alveola'ris infe'rior,** inferior dental a. **A. alveola'ris supe'rior,** superior dental a.; alveolar branch of internal maxillary a. **A. anastomot'ica,** anastomotic a. of arm and thigh; plantar artery of foot; communicating peroneal artery. **A. angula'ris,** angular artery of nose. **A. anon'yma,** innominate artery. **A. ante'rior commu'nicans,** anterior communicating artery of brain. **A. aor'ta,** aorta. **A. apoplec'tica,** carotid artery. **A. appendica'lis** or **appendicula'ris,** small branch from ileocolic artery to appendix. **A. articula'ris,** name given to a number of articular branches, chiefly to the knee-joint, tibiofibular and radioulnar articulations. **A. as'pera,** trachea. **A. atrabilia'ris,** capsular artery. **A. auditi'va,** auditory artery. **A. auricula'ris,** auricular branches of occipital artery and transverse facial a.; branches of coronary artery to auricle of heart. **A. axilla'ris,** axillary artery. **A. az'ygos,** small artery in middle line of tongue. **A. brachia'lis,** brachial artery. **A. b. profun'da,** superior profunda artery. **A. brachiocephal'ica,** innominate a. **A. bronchia'lis,** bronchial artery. **A. bucca'lis,** branch of inferior dental artery to mouth. **A. buccinato'ria,** buccal a. **A. bulbi'na, bul'bocaverno'sa,** or **bulbo'sa,** artery of bulb of urethra. **A. bul'bo-urethra'lis,** urethral artery. **A. cæca'lis,** branch of ileocolic artery to cæcum. **A. callo'sa,** anterior cerebral artery. **A. capita'lis,** carotid artery. **A. capsula'ris,** branch of a. centralis retinæ to lens. **A. cardi'aca,** coronary artery. **A. carot'ica** or **carot'ida,** carotid a. **A. carot'ica primiti'va,** primitive carotid artery. **A. car'pea dorsa'lis ulna'ris,** anterior carpal artery; posterior branch of ulnar artery to wrist. **A. cauda'lis,** middle sacral artery. **A. caverno'sa,** artery of the corpus cavernosum. **A. centra'lis modi'oli,** branch to modiolus from auditory a. **A. c. ret'inæ,** central artery of the retina. **A. cephal'ica,** carotid artery. **A. cerebel'li infe'rior,** inferior cerebellar artery. **A. cerebra'lis,** internal carotid artery. **A. cer'ebri,** anterior and middle posterior cerebral arteries. **A. cervica'lis,** branch from the occipital artery to the back of the neck; superficial and transverse cervical arteries. **A. cer'vicoscapula'ris,** see *Cervical arteries*. **A. choroid'ea,** branch of superior cerebellar artery. **A. circumflex'a,** circumflex iliac a.; external and internal circumflex arteries of thigh; dorsal branch of scapular a. **A. clitor'idis,** artery of clitoris, similar to a. of penis. **A. coccyge'a,** coccygeal artery. **A. coch'leæ,** cochlear artery. **A. cœli'aca,** cœliac artery. **A. col'ica,** ileocolic a.; right, left, and middle colic arteries; sigmoid a.; superior hemorrhoidal a. **A. collatera'lis,** superior and inferior profunda arteries of arm; branch of former to triceps, to deltoid; anastomotic a. of arm; external superior articular a. of knee. **A. col'li transver'sa,** transverse cervical a. **A. co'mes ner'vi ischiad'ici,** branch of inferior gluteal a. to great sciatic nerve. **A. c. n. media'ni,** median a. **A. c. n. phren'ici,** superior phrenic a. **A. commu'nicans cer'ebri,** communicating a. of brain, anterior and posterior. **A. c. perone'i,** branch of communication between peroneal and posterior tibial arteries. **A. c. Willis'ii,** posterior communicating a. **A. concha'rum,** nasisphenopalatine a. **A. corona'ria,** coronary a. of heart or lip. **A. c. malleola'ris,** a. communicans peronei. **A. c. ventric'uli,** pyloric a., gastric a. **A. cor'poris callo'si,** anterior cerebral a. **A. c. caverno'si clitor'idis,** a. profunda of clitoris. **A. c. caverno'si ure'thræ,** a. of bulb of urethra. **A. costa'lis,** inferior and superior intercostal arteries. **A. cos'tocervica'lis,** costocervical a. **A. costolumba'ris,** a. from aorta, regarded as intercostal a. or lumbar a. by different anatomists. **A. cras'sa,** aorta. **A. cremaster'ica,** external spermatic a. **A. cri'cothyroid'ea,** cricothyroid a. **A. cris'tæ pu'bis,** pubic a. **A. crura'lis,** femoral a. **A. c. ili'aca,** external iliac; deep circumflex iliac a. **A. c. profun'da,** deep femoral a. **A. c. superficia'lis,** superficial femoral a. **A. cubita'lis,** ulnar a. **A. cu'biti exter'na,** radial a. **A. cuta'nea abdom'inis,** superficial epigastric a. **A. ad cu'tem abdom'inis,** branch of crural or femoral supplying skin of abdomen. **A. deferentia'lis,** a. of vas deferens. **A. deltoi'dea,** branch of acromiothoracic a. to deltoid. **A. denta'lis,** dental a. **A. diaphragmat'ica,** phrenic a. **A. digita'lis,** any artery to fingers or toes. **A. dorsa'lis clitor'idis,** dorsal a. of clitoris. **A. d. dig'iti min'imi pro'pria,** dorsal a. of little toe. **A. d. hallu'cis,** first dorsal interosseous a. of foot. **A. d. lin'guæ,** dorsal a. of tongue. **A. d. metacar'pi,** posterior radiocarpal a. **A. d. na'si,** nasal branch of ophthalmic a. **A. d. pe'dis,** dorsal a. of foot. **A. d. pe'nis,** dorsal a. of penis. **A. d. pol'licis,** dorsal a. of thumb. **A. d. scap'ulæ,** dorsal a. of scapula. **A. d. s. infe'rior,** inferior branch of posterior scapular a. **A. dor'sospina'lis,** branch of superior intercostal a. to posterior cervical muscles. **A. duodena'lis infe'rior,** inferior pancreaticoduodenal a. **A. du'ræ ma'tris me'dia max'ima,** middle meningeal a. **A. emul'gens,** renal a. **A. encephal'ica,** internal carotid a. **A. epigas'trica,** epigastric a. **A. e. infe'rior exter'na,** superficial circumflex iliac a. **A. e. i. inter'na,** deep epigastric a. **A. e. supe'rior,** superior epigastric a. **A. epiplo'ica sinis'tra,** branch of left gastroepiploic a. to mesentery. **A. ethmoida'lis,** ethmoidal a., anterior and posterior. **A. facia'lis,** facial a. **A. f. ante'rior,** angular a.; facial a. **A. f. exter'na,** facial a. **A. f. poste'rior,** transverse facial a. **A. f. profun'da,** internal maxillary a. **A. f. transver'sa,** transverse facial a. **A. femora'lis,** femoral a. **A. f. commu'nis,** common femoral a. **A. f.** or **fem'oris profun'da,** deep femoral a. **A. f. superficia'lis,** femoral a. **A. ad fenes'tram ova'lem,** branch of stylomastoid a. to fenestra ovalis. **A. fibula'ris,** peroneal a. **A. f. supe'rior,** superior fibular a. **A. fos'sæ Syl'vii,** middle cerebral a. **A. fronta'lis,** frontal a. **A. f. exter'na,** supraorbital a. **A. f. inter'na,** frontal a.; nasofrontal a. **A. funicula'ris** or **funic'uli spermat'ici,** cremasteric a.; external spermatic a. **A. gas'trica dex'tra infe'rior,** right gastroepiploic a. **A. g. infe'rior,** gastroepiploic a. **A. g. ma'jor** or **supe'rior,** coronary a. of stomach; gastric a. **A. g. sinis'tra infe'rior,** left gastroepiploic a. **A. g. supe'rior dex'tra,** right coronary artery of stomach; pyloric a. **A. g. s. sinis'tra,** coronary a. of stomach. **A. gastrocnem'ica,** branch of sural a. **A. gastroduodena'lis,** gastroduodenal a. **A. gas'troepiplo'ica,** gastroepiploic a., right and left. **A. gas'trohepat'ica sinis'tra,** branch from gastric a. to liver. **A. genita'lis,** internal pudic a. **A. glandulo'sæ axilla'ris,** alar thoracic a. **A. glute'a,** gluteal a. **A. g. infe'rior,** inferior gluteal a.; sciatic a., **A. g. supe'rior,** superior gluteal a. **A. guttura'lis,** thyroid a. **A. hemorrhoida'lis infe'rior** or **exter'na,** inferior hemorrhoidal a. **A. h. inter'na,** superior hemorrhoidal a. **A. hepat'ica,** hepatic a. **A. h. commu'nis,** hepatic a. before its division. **A. h. pro'pria,** branch of hepatic a. supplying the liver. **A. humera'ria** or **humera'lis,** branch of acromiothoracic a.; brachial a. **A. hyaloi'dea,** hyaloid a. **A. hyoi'dea,** hyoid a. **A. hypogas'trica,** internal iliac a. **A. il'eæ,** branch of ileocolic a. **A. il'eocol'ica,** see *Colic arteries*. **A. ili'aca,** common iliac artery. **A. i. ante'rior** or **exter'na,** external iliac a. **A. i. commu'nis,** common iliac a. **A. i. crura'lis,** external iliac a. **A. i. exter'na,** external iliac a. **A. i. inter'na,** internal iliac a. **A. i. par'va,** iliolumbar a. **A. i. poste'rior,** gluteal a. **A. i. primiti'va,** common iliac a. **A. iliolumba'lis** or **iliolumba'ris,** iliolumbar a. **A. incisi'va,** branch from inferior dental to incisor teeth. **A. infe'rior lin'guæ,** ranine a. **A. infraor-**

**bita′lis**, infraorbital a. **A. infrascapula′ris**, infrascapular a.; subscapular a. **A. innomina′ta**, innominate a. **A. intercosta′lis**, intercostal a. **A. intermetatar′sea dorsa′lis pri′ma**, first dorsal interosseous a. **A. interos′sea accesso′ria**, anterior interosseous a. in palm. **A. i. antebrach′ii ante′rior**, anterior interosseous a. **A. i. a. commu′nis**, interosseous a. of forearm. **A. i. a. poste′rior** or **exter′na**, posterior interosseous a. **A. i. ante′rior dorsa′lis**, anterior interosseous a. of forearm. **A. i. a. vola′ris**, branch from anterior interosseous a. of forearm. **A. i. hallu′cis**, first dorsal interosseous a. of foot. **A. i. inter′na** or **palma′ris**, anterior interosseous a. **A. i. per′forans**, posterior interosseous a. of forearm. **A. i. p. infe′rior**, anterior dorsal interosseous a. **A. i. primiti′va**, common interosseous a. of forearm. **A. i. recur′rens**, interosseous recurrent a. **A. i. superficia′lis**, median a. **A. i. vola′ris**, anterior interosseous a. **A. ischiad′ica**, ischiadic or sciatic a. **A. jugula′ris**, carotid a. **A. labia′lis**, labial a. **A. l. ante′rior**, distributed to vulva. **A. l. superficia′lis**, superficial portion of facial a. **A. lacryma′lis**, lacrymal a. **A. larynge′a ascen′dens** or **infe′rior**, cricothyroid a. **A. l. inter′na**, internal laryngeal a. **A. latera′lis na′si**, lateral nasal a. **A. lethar′gica**, carotid a. **A. linea′lis**, splenic a. **A. lingua′lis**, lingual a. **A. l. profun′da**, ranine a. **A. lumba′lis** or **lumba′ris i′ma**, branch from middle sacral a. **A. macula′ris**, branch of a. centralis retinæ. **A. mag′na**, aorta. **A. m. pol′licis**, a. princeps pollicis. **A. malleola′ris**, see *Tibial arteries*. **A. mamma′ria exter′na**, external mammary a.; long thoracic a. **A. m. inter′na**, internal mammary a. **A. m. i. latera′lis**, branch of internal mammary a. **A. mandibula′ris**, inferior dental a.; fetal branch of internal carotid, supplying tissue near stapedius muscle. **A. manu′brii mal′lei**, branch of deep auricular a. to back of handle of malleus. **A. masseter′ica**, masseteric a. **A. mastoi′dea**, mastoid a. **A. maxilla′ris exter′na**, facial a. **A. m. infe′rior**, inferior dental a.; internal maxillary a. **A. m. inter′na**, internal maxillary a. **A. max′ima**, aorta. **A. me′dia**, median a. **A. m. anastomot′ica**, middle colic a. **A. media′na** or **A. m. ret′inæ**, branch of a. centralis retinæ to middle of retina. **A. m. men′ti**, branch from coronary a. in middle line of chin. **A. me′dicerebella′ris**, anterior inferior cerebellar a. **A. medicerebra′lis**, middle cerebral a. **A. medul′læ spina′lis**, spinal a., anterior and posterior. **A. menin′gea accesso′ria**, small meningeal a. **A. m. a. exter′na**, posterior meningeal a. **A. m. mag′na**, middle meningeal a. **A. m. me′dia**, middle meningeal a. **A. m. poste′rior infe′rior**, meningeal a.; posterior internal a. **A. m. p. mastoi′dea**, posterior meningeal a. **A. menta′lis**, mental a. **A. mesera′ica**, mesenteric a., inferior, superior, middle. **A. mesoloba′ris** or **mesolo′bica**, anterior cerebral a. **A. metacar′pea**, metacarpal a. **A. m. dorsa′lis ulna′ris**, posterior ulnocarpal a. **A. m. vola′ris profun′da**, deep ulnar a. **A. m. v. radia′lis profun′da**, part of radial a., forming deep palmar arch. **A. m. v. ulna′ris profun′da**, deep ulnar a. **A. m. v. u. subli′mis**, part of ulnar a., forming superficial palmar arch. **A. metatar′sea**, metatarsal a. **A. m. dorsa′lis fibula′ris**, dorsal a. of little toe. **A. m. pri′ma**, first dorsal interosseous a. **A. min′ima**, arteriole. **A. muscula′ris fem′oris**, **A. m. profun′da**, deep femoral a. **A. m. mag′na superficia′lis** or **tricip′itis**, branch of common femoral to triceps. **A. mus′culoarticula′ris**, branch from anastomotica magna a. to vastus medius. **A. musculophren′ica**, musculophrenic a. **A. my′lohyoi′dea**, mylohyoid a. **A. my′omastoi′dea**, branch from posterior auricular a. to sternomastoid. **A. nasa′lis**, nasal a. **A. n. ante′rior**, anterior nasal a., nasal branch of ophthalmic a. **A. n. exter′na**, lateral nasal a.; posterior lateral nasal a. **A. n. latera′lis**, lateral nasal a. **A. n. l. poste′rior**, posterior lateral nasal a., branch of sphenopalatine a. **A. n. me′dia**, middle nasal a. **A. n. poste′rior**, sphenopalatine a. **A. n. supe′rior**, branch of superior branch of a. centralis retinæ. **A. na′sofronta′lis**, part of ophthalmic a. **A. nasopalati′na**, nasopalatine a. **A. ner′vi acus′tici**, auditory a. **A. obturato′ria**, obturator a. **A. occipita′lis**, occipital a. **A. ophthal′mica**, ophthalmic a. **A. palati′na ascen′dens**, inferior palatine a. **A. p. descen′dens**, superior palatine a. **A. p. ma′jor**, anterior palatine. **A. p. supe′rior**, superior palatine a. **A. palatolabia′lis**, facial a. **A. palma′ris**, palmar a.; anterior interosseous a. **A. palpebra′lis**, palpebral a., external and internal. **A. pancreat′ica mag′na** or **supre′ma**, branch of splenic a., following course of pancreatic duct. **A. pancreat′icoduodena′lis**, pancreaticoduodenal a. **A. parotidæ′a**, branches of external carotid to parotid gland. **A. pediæ′a**, or **ped′ica**, or **pe′dis**, dorsal a. of foot. **A. pel′vica**, internal iliac a. **A. pe′nis**, branch of internal pudic a. **A. per′forans antibrach′ii infe′rior**, inferior perforating interosseous a. **A. p. a. supe′rior**, posterior interosseous a. **A. p. stape′dia**, branch of internal carotid to stapedius in fœtus. **A. p. supe′rior**, posterior interosseous a. **A. pericardi′acophren′ica** or **pericardi′aca ascen′dens**, superior phrenic a. **A. pericephal′ica**, external carotid a. **A. perinæa′lis**, perineal a. **A. perone′a**, peroneal a. **A. p. supe′rior**, superior fibular a. **A. petro′sa**, branch from internal maxillary a. to tensor tympani muscle. **A. pharynge′a ascen′dens** or **infe′rior**, ascending pharyngeal a. **A. p. descen′dens**, pterygopalatine a. **A. p. supre′ma**, superior pharyngeal a.; pterygoid a. **A. pharyn′gobasila′ris** or **p.-menin′gea**, ascending pharyngeal a. **A. pharyn′gopalati′na**, inferior or ascending palatine a. **A. phren′ica**, diaphragmatic a. **A. phren′icocosta′lis**, musculophrenic a. **A. phren′icopericardi′aca**, superior phrenic a. **A. planta′ris**, plantar a. **A. p. exter′na** or **latera′lis**, external plantar a. **A. p. media′lis**, internal plantar a. **A. p. profun′da**, communicating branch of dorsal a. of foot to plantar arch. **A. pol′licis mag′na**, large a. of thumb. **A. poplitæ′a**, popliteal a. **A. postcerebella′ris**, anterior inferior cerebellar a. **A. postcerebra′lis**, posterior cerebral a. **A. postcommu′nicans**, posterior communicating a. **A. præcerebella′ris**, superior cerebellar a. **A. præcerebra′lis**, anterior cerebral a. **A. præcommu′nicans**, anterior communicating a. **A. pri′ma**, inferior profunda a. of arm. **A. prin′ceps cervi′cis**, a. cervicalis princeps. **A. p. pol′licis**, branch of radial from back to front of thumb. **A. profun′da brach′ii**, superior profunda a. of arm. **A. p. b. infe′rior**, inferior profunda a. of arm. **A. p. cer′ebri**, posterior cerebral a. **A. p. clitor′idis**, cavernous a. of clitoris, branch of internal pudic a. in the female. **A. p. fem′oris**, deep femoral a. **A. p. hu′meri**, superior profunda a. of arm. **A. p. lin′guæ**, ranine a. **A. p. pe′nis**, artery of corpus cavernosum. **A. p. vo′læ**, deep ulnar a.; deep palmar arch. **A. profundis′sima il′ii**, branch to hip-joint from deep gluteal a. **A. prostat′ica**, vesicoprostatic a. **A. pterygoi′dea**, superior palatine a. **A. pter′ygomenin′gea**, small meningeal a. **A. pter′ygopalati′na**, superior pharyngeal a. **A. pu′bica**, branch of deep epigastric a. **A. puden′da**, pudic a. **A. p. accesso′ria**, accessory pudic a. **A. p. commu′nis**, internal pudic a. **A. p. exter′na**, external pudic a. **A. p. e. subaponeurot′ica**, external deep pudic a. **A. p. e. subcuta′nea**, external superior pudic a. **A. p. inter′na**, internal pudic a. **A. pu′dica**, internal pudic a. **A. pulmona′lis**, pulmonary artery. **A. pylor′ica**, pyloric a. **A. radia′lis**, radial a. **A. r. in′dicis** branch from radial a. to surface of index finger. **A. r. recur′rens**, radial recurrent a. **A. ra′diopalma′ris**, superficial volar a. **A. ram′ulus duc′tus pterygoi′dei**, pterygoid a. **A. rani′na**, ranine a. **A. recur′rens inter′na**, superior fibular a. **A. r. radia′lis**, radial recurrent a. **A. r. tibia′lis**, tibial recurrent a. **A. r. ulna′ris**, ulnar recurrent a. **A. rena′lis**, renal a. **A. renocapsula′ris**, capsular a. **A. ret′inæ centra′lis**, central retinal a. **A. retrocosta′lis**, internal lateral mammary artery. **A. sacra′lis latera′lis**, lateral sacral a. **A. s. me′dia**, middle sacral a. **A. saphe′na mag′na**, branch of femoral a. to ankle. **A.**

**s. par′va**, branch of popliteal a. to middle of calf of leg. **A. scap′ulæ commu′nis**, subscapular a. **A. s. dorsa′lis**, posterior scapular a. **A. s. exter′na**, acromial a. **A. s. infe′rior**, subscapular a. **A. s. poste′rior**, posterior scapular a. **A. s. pro′pria**, dorsal branch of subscapular a. **A. s. supe′rior**, suprascapular a. **A. s. transver′sa**, suprascapular a. **A. scrotal′is**, scrotal a. **A. sep′ti na′rium**, a. of nasal septum. **A. s. n. poste′rior**, branch from sphenopalatine branch of internal maxillary; nasopalatine a. **A. s. scro′ti**, branch of internal pubic a. to septum of scrotum. **A. sigmoi′dea**, sigmoid a. **A. spermat′ica differentia′lis**, a. of vas deferens. **A. s. exter′na**, cremasteric a. **A. s. inter′na**, internal spermatic a. **A. sphe′nopalati′na**, palatine a. **A. sphe′nospino′sa**, middle meningeal a. **A. spina′lis ante′rior**, anterior spinal artery. **A. spino′sa**, middle meningeal a. **A. spira′lis**, superior profunda a. of arm. **A. splen′ica**, splenic a. **A. stape′dii**, branch from stylomastoid a. to stapedius. **A. sterna′lis**, internal mammary a. **A. sty′lomastoi′dea**, stylomastoid a. **A. subcla′via**, subclavian a. **A. subclavia′na dex′tra**, innominate artery. **A. subcosta′lis**, internal lateral mammary a. **A. subcuta′nea ma′læ**, branch from internal maxillary penetrating malar bone. **A. subscapula′ris**, inferior subscapular a.; subscapular a. **A. superficia′lis abdom′inis**, a. ad cutem abdominis. **A. s. pe′dis media′lis**, branch of internal plantar a. distributed to great toe. **A. supe′rior**, inferior profunda a. of arm. **A. supramaxilla′ris**, alveolar or posterior dental a. **A. suprametatar′sea**, metatarsal a. **A. supraorbita′lis**, frontal a. **A. suprarena′lis**, capsular a.; suprarenal a. **A. suprascapula′ris**, suprascapular a. **A. supraspina′ta**, supraspinous a. **A. supratar′sea**, metatarsal a. **A. s. exter′na**, tarsal a. **A. s. inter′na**, branch from dorsal a. of foot to great toe. **A. supratrochlea′ris**, branch of ophthalmic a. to upper eyelid. **A. sylvia′na**, middle cerebral a. **A. tar′sea exter′na**, external tarsal a. **A. t. e. ante′rior** or **latera′lis**, metatarsal a. **A. t. inter′na**, internal tarsal a. **A. t. latera′lis poste′rior** or **exter′na**, tarsal a. **A. tempora′lis ante′rior** or **fronta′lis**, anterior temporal a. **A. t. exter′na** or **occipita′lis**, posterior temporal a. **A. testicula′ris**, internal spermatic a.; cremasteric a. **A. tes′tis exter′na**, cremasteric a. **A. thorac′ica ala′ris** or **axilla′ris**, alar thoracic a. **A. t. humera′lis**, acromiothoracic a. **A. t. infe′rior**, external mammary a. **A. t. inter′na**, internal mammary a. **A. t. lon′ga** or **ma′jor**, long thoracic a.; internal mammary a. **A. t. mamma′ria**, internal mammary a. **A. t. me′dia**, acromiothoracic a. **A. t. mi′nor**, superior thoracic a. **A. t. poste′rior**, descending branch of subscapular a. **A. t. pri′ma** or **supre′ma**, superior thoracic a. **A. t. secun′da**, acromiothoracic a. **A. t. ter′tia**, long thoracic a. **A. thorac′icodorsa′lis**, descending branch of subscapular a. **A. thy′rocervica′lis**, thyroid axis. **A. thyroi′dea ascen′dens**, inferior thyroid a. **A. t. descen′dens**, superior thyroid a. **A. t. i′ma** or **Neubau′eri**, a. from innominate or right common carotid or aortic arch to thyroid gland. **A. tib′iæ nutrit′ia**, nutrient a. of tibia. **A. tibia′lis anti′ca**, anterior tibial a. **A. t. posti′ca**, posterior tibial a. **A. t. recur′rens**, tibial recurrent a. **A. tonsilla′ris**, tonsillar a. **A. transver′sa car′pi dorsa′lis**, posterior radiocarpal a. **A. t. c. vola′ris**, anterior radiocarpal a. **A. t. col′li**, transverse cervical a. **A. t. facie′i**, transverse facial a. **A. t. scap′ulæ**, suprascapular a. **A. transversa′lis cervi′cis**, transverse cervical a. **A. t. hu′meri**, superior scapular a. **A. trochanter′ica**, branch of internal circumflex a. to vicinity of great trochanter. **A. tuba′ria**, branch from uterine a. to Fallopian tube. **A. ulna′ris**, ulnar a. **A. umbilica′lis**, umbilical a. **A. urethra′lis**, branch of a. of penis to urethra. **A. ure′throbulba′ris**, transverse perineal a. **A. uteri′na hypogas′trica**, uterine a. **A. u′tero-ova′rica**, ovarian a. **A. vagina′lis**, see *Vaginal a.* **A. va′sis deferentia′lis**, a. of vas deferens. **A. vas′ta profun′da**, profunda femoris. **A. veno′sa**, pulmonary vein. **A. ves′icoprostat′ica**, vesical a. **A. vesicovagina′lis**, vaginal a. **A. vestibula′ris**, branch from internal pudic to vestibule. **A. vit′rea**, hyaloid a. **A. vola′ris commu′nicans**, deep ulnar a. **A. v. in′dicis radia′lis**, radialis indicis a. **A. v. ma′nûs ulna′ris**, anterior ulnocarpal a. **A. v. superficia′lis**, superficial volar a. **A. Willis′ii**, posterior communicating a. of brain. **A. zygomat′ico-orbita′lis**, orbital a., external supraorbital a.

**Arte′riæ** (pl. of arteria). Arteries. **A. adipo′sæ**, arteries in the fat about the kidneys; ramifications of capsular, diaphragmatic, renal, and spermatic a's. **A. apoplec′ticæ**, carotids. **A. articula′res ge′nu**, articular a's of knee. **A. atrobilia′riæ**, middle suprarenal a's. **A. auricula′res anterio′res**, anterior articular a's. **A. a. cor′dis**, coronary a's of heart. **A. bronchia′les**, bronchial a's. **A. calca′neæ**, calcaneal a's. **A. capita′les**, carotid a's. **A. capsula′res**, capsular a's. **A. cilia′res**, ciliary a's. **A. c. mus′culi ster′noclei′domastoi′dei**, circumflex a's of sternomastoid. **A. collicula′res**, collicular a's. **A. corona′riæ ventric′uli**, gastroepiploic a's. **A. cor′poris callo′si cer′ebri**, mesolobar a's. **A. costa′les inferio′res**, branches of intercostal a's to ribs. **A. c. posterio′res**, aortic intercostal a's. **A. c. superio′res**, collateral intercostal a's. **A. digita′les commu′nes**, interosseous a's of hand and foot. **A. d. commu′nes vola′res**, palmar interosseous a's. **A. d. dorsa′les commu′nes**, intermetatarsal a's. **A. fronta′les cer′ebri**, frontal a's of brain. **A. gas′tricæ bre′ves**, small branches from splenic a. to stomach. **A. helici′næ**, helicine a's. **A. hepat′icæ me′diæ**, branches of hepatic a. **A. inguina′les**, branches of common femoral a. to groin. **A. i. aor′ticæ**, aortic intercostal a's. **A. intermetacar′peæ dorsa′les** or **interos′seæ metatar′si**, intermetatarsal a's. **A. interos′seæ metacar′pi dorsa′les**, metacarpal a's. **A. i. metatar′si dorsa′les**, intermetatarsal a's. **A. i. volaris**, palmar interosseous a's. **A. jejuna′les**, branches from superior mesenteric to jejunum. **A. labia′les puden′di**, vessels supplying labia from external pudic and superficial perineal. **A. macula′res**, branches of a. centralis retinæ to macula lutea. **A. masseter′icæ posterio′res**, branches from carotid a. to masseter muscle. **A. media′næ bul′bi**, median a's of medulla oblongata. **A. m. oc′uli**, branches from a. centralis retinæ to retina. **A. medul′læ spina′lis**, spinal a's. **A. nasa′les oc′uli**, branches from pupillary a. or from a. centralis retinæ to retina. **A. nucleo′rum**, median a's of medulla oblongata. **A. nutri′tiæ**, medullary a's. **A. n. pel′vis**, branches from renal a. to pelvis of kidney. **A. palati′næ mino′res**, branches from pterygopalatine a. to soft palate. **A. papilla′res**, papillary a's. **A. pinna′les**, branches from lateral nasal a. or superior coronary a. to alæ of nose. **A. pli′cæ cu′biti superficia′les**, muscular branches of radial a. to forearm. **A. præchoroi′deæ**, anteroid choroid a's. **A. præparan′tes**, internal spermatic a's. **A. pro′priæ rena′les** branches of renal a. **A. radicula′res**, arteries accompanying roots of nerve into substance of cord. **A. receptac′uli**, numerous small branches from cavernous portion of internal carotid. **A. rec′tæ**, branches of renal a. supplying medullary pyramids. **A. septa′les** or **sep′ti scroti**, a's to the scrotum. **A. si′nus caverno′si**, small branches from internal carotid to cavernous sinus. **A. somnif′eræ** or **sopora′les** or **sopora′riæ**, carotid a's. **A. subcosta′les**, branches of intercostal a. to under part of ribs. **A. supracosta′les**, collateral intercostal a's. **A. tar′seæ inter′næ**, small branches from dorsal a. of foot. **A. tempora′les cer′ebri**, temporal a's of brain. **A. t. oc′uli**, branches from papillary a. to temporal part of retina. **A. thalam′icæ**, optic a's. **A. thym′icæ**, anterior mediastinal a's. **A. ve′li pala′ti**, small branches from pterygopalatine a. to soft palate. **A. veno′sæ**, pulmonary veins. **A. ventric′uli bre′ves**, small branches from splenic a. to stomach. **A. vola′res car′pi**, carpal branches of the deep palmar arch.

**Arteriag′ra** (*arteria* + *agra*, seizure). Pain in an artery; gouty affection of an artery.

**Arte′rial.** Belonging to an artery. **A. blood,** red blood, so called because contained in arteries; the pulmonary veins also contain red blood, hence they have been called arterial veins. **A. cone,** infundibulum of the heart, see *Conus arteriosus*. **A. constitu′tion,** plethora arteriosa. **A. duct,** portion of the pulmonary artery terminating in the aorta in the fœtus; when obliterated after birth it is called arterial ligament, ligamentum arteriosum. **A. sys′tem** includes all the arteries from the origin of the aorta at the heart to the termination in the capillaries; see *Vascular system*. **A. veins,** the pulmonary veins, because they contain red or arterial blood.

**Arterializa′tion of the blood.** Transformation of venous into arterial blood; hæmatosis.

**Arteriarc′tia.** Arteriostenosis.

**Arteri′asis.** Degeneration of an artery.

**Arteriec′tasis** (*arteria* + *ektasis*, dilatation). Aneurysm.

**Arteriecto′pia** (*arteria* + *ektopos*, out of place). Dislocation or unusual location of an artery.

**Arterieurys′ma** Aneurysm.

**Arterii′tis.** Arteritis.

**Arterin′.** Coloring-matter of arterial blood.

**Arte′riocap′illary.** Relating to an artery or arteries and the capillary vessels, as *arteriocapillary fibrosis*, fibroid degeneration of these vessels, seen sometimes in Bright's disease.

**Arteriochal′asis** (*chalasis*, relaxation). Atonic condition of the arteries.

**Arte′riococcyg′eal gland.** Glomerulus arteriococcygeus; Luschka's gland. See *Coccygeal gland*.

**Arterioconstric′tor.** An instrument used to compress an artery, being a blunt hook to be passed round the vessel and capable of being tightened up by a screw.

**Arteriodial′ysis** (*arteria* + *dialysis*, dissolution). False aneurysm.

**Arteriodias′tasis** (*diastasis*, separation). Retraction of the ends of a divided artery.

**Arteriodiplopies′mus** (*diploos*, double, *piesmos*, pressure). Method of producing coagulation in an artery between two points on which pressure is made.

**Arte′riofibro′sis.** Fibroid degeneration of the arteries, usually associated with that of the capillaries, resulting in a narrowing of their lumen.

**Arte′riogram.** Sphygmographic tracing of an artery.

**Arteriog′raphy** (*arteria* + *graphe*, a description). Description of arteries; study of pulse curves.

**Arte′rioid.** Resembling an artery.

**Arterio′la** (dim. of arteria) or **Arte′riole.** A minute artery; one of the terminal divisions of the arterial system which itself subdivides into capillaries.

**Arterio′læ** (pl. of arteriola). **A. rec′tæ,** minute blood-vessels in the medullary pyramids of the kidney.

**Arte′riolith** (*lithos*, stone). Arterial calculus; concretion in an artery.

**Arteriol′ogy** (*arteria* + *logos*, discourse). Treatise on arteries; description of arteries.

**Arteriomala′cia** or **Arteriomalaco′sis** (*malakia*, softening). Softening of the coats of an artery.

**Arteriom′eter** (*arteria* + *metron*, measure). An instrument recording the varying calibre of an artery during its pulsations. The use of such instrument is called *arteriom′etry*.

**Arteriop′athy** (*pathos*, disease). Disease of an artery.

**Arterioperis′sia** (*perissos*, extraordinary). Excessive development of arteries or of arterial tissue.

**Arteriophlebot′omy** (*arteria* + *phleps*, a vein, *tome*, incision). Bloodletting practised on the skin or mucous membranes by means of leeches, scarifications, or wet cupping.

**Arteriopitu′itous.** Term applied to vessels creeping along pituitous membrane of the nostrils.

**Arteriopla′nia** (*arteria* + *planao*, to wander). Extension or unnatural location of an artery.

**Arteriorrha′gia.** Hemorrhage from a ruptured artery.

**Arteriorrhex′is** (*rhexis*, rupture). Rupture of an artery.

**Arterioscler′sis** (*arteria* + *skleros*, hard). Increase of connective tissue leading to thickening of the walls of an artery; induration, especially of the inner coat.

**Arteriosclerot′ic.** Relating to or affected with arteriosclerosis.

**Arterios′itas** or **Arterios′ity.** Condition of the blood in which it preserves in the veins an arterial character; opposite to venositas. **A. san′guinis,** predominance of arterial blood.

**Arteriosteno′sis** (*stenos*, contracted). Contraction or obliteration of an artery.

**Arteriosteo′sis** or **Arteriostogen′esis** (*arteria* + *osteon*, bone, *genesis*, formation). Early stage of ossification of an artery.

**Arteriostrep′sis** (*arteria* + *strepsis*, twisting). Torsion of artery to obliterate its calibre.

**Arterio′sus.** Arterial.

**Arteriothlim′ma** (*thlipsis*, pressure or friction). Injury to an artery from pressure.

**Arte′riotome** (*arteria* + *tome*, incision). Knife for dissection or operation on arteries.

**Arteriot′omy.** Dissection of an artery; opening an artery to draw blood from it. See *Bloodletting*.

**Arte′riove′nous.** Relating to an artery and vein, as arteriovenous aneurysm or aneurysm of an artery opening into a vein.

**Arteriover′sion** (*arteria* + *verto*, to turn). A method of checking hemorrhage from an artery by everting or turning inside out the divided end of the vessel.

**Arteriover′ter.** An instrument for use in arterioversion.

**Arteriozete′sis** (*arteria* + *zeteo*, to explore). Direct examination of an artery by exposing it to view.

**Arteri′tis** or **Arterii′tis.** Inflammation of an artery. Inflammation of the inner coat of an artery is termed *endoarteritis* or *endarteritis;* of the outer, *exoarteritis* or *exarteritis*. **A. defor′mans,** inflammation of an artery due to atheromatous changes in its walls. **A. hyperplas′tica,** inflammation of an artery with new formation of connective tissue. **A. oblit′erans,** inflammation of an artery leading to obliteration of its calibre by increase of connective tissue.

**Ar′tery** (Gr., *arteria*, of uncertain derivation, possibly from *aer*, air, *tereo*, to preserve, as the ancients believed that arteries contained air. This belief probably arose from the fact that the arteries are commonly found empty after death). Arteries are vessels arising from the two ventricles of the heart and having valves only at their origin. They are cylindrical, firm, and elastic canals, of yellowish-white color, little dilatable, easily lacerable. They have usually been described as formed of three coats: 1. External laminated or areolar membrane, *tunica externa* or *adventitia*, or *cellularis*, *vagina cellularis*, of dense and close character. 2. Middle coat, *tunica media* or *elastica*, composed of fibres of elastic tissue and of smooth muscular fibres, and eminently elastic. 3. Inner or endothelial coat, *tunica intima* or *glabra*, thin, diaphanous, reddish, and polished, composed of pavement epithelium, delicate connective tissue, and elastic fibres, perforated so as to entitle it to the name of fenestrated membrane; these coats are also called *adventitia*, *media*, and *intima*, respectively, without further qualification, the word *tunica* being understood.

Arteries carry blood from the heart to all parts of the system; but they do not all convey arterial blood, for the pulmonary artery conveys venous blood to the lungs, there to be converted into arterial, while the pulmonary veins convey arterial blood back to the heart.

## TABLE OF THE PRINCIPAL ARTERIES OF THE BODY.

All the arteries take their rise from the pulmonary artery, or the aorta, the names generally indicating the parts to which they are distributed.

### I. PULMONARY ARTERY.

The pulmonary artery arises from the right ventricle, and soon divides into right and left branch, one of which is distributed to each lung.

### II. AORTA.

The aorta arises from the left ventricle; it is the common trunk of the arteries of the body, and may be divided into five portions, viz., its origin, arch, thoracic portion, abdominal portion, and bifurcation.

#### (*a*) *Arteries furnished by the Aorta at its Origin.*

1. Cardiac or anterior coronary artery.
2. Cardiac or posterior coronary artery.

#### (*b*) *Arteries furnished by the Aorta at its Arch.*

The arch of the aorta gives off, to the left, two considerable trunks—the primitive carotid artery and the subclavian artery; and, to the right, a single trunk, which is larger—the innominate or brachiocephalic artery, dividing into the primitive carotid and subclavian. The right and left coronary arteries are also given off from the ascending portion.

| | |
|---|---|
| I. PRIMITIVE CAROTID ARTERY. | Divides into external and internal carotid arteries. |
| 1. External carotid artery. | Furnishes: 1. *Superior thyroid artery.*<br>2. *Lingual artery,* giving off the dorsal, lingual, and sublingual arteries.<br>3. *Facial* or *external maxillary artery,* which furnishes the inferior palatine artery, submental artery, and superior and inferior coronary arteries.<br>4. *Occipital artery,* giving off the posterior mastoid artery.<br>5. *Posterior auricular artery,* which gives off the stylomastoid artery.<br>6. *Inferior pharyngeal artery.* |

The external carotid ultimately divides into the temporal artery and internal maxillary.

| | |
|---|---|
| (*a*) *Temporal artery.* | Furnishes *transverse facial, anterior auricular,* and *middle temporal arteries.* |
| (*b*) *Internal maxillary artery.* | Furnishes thirteen branches, viz., *Middle meningeal, inferior dental, deep posterior temporal, masseteric, pterygoid, buccal, deep anterior temporal, alveolar, suborbital, vidian, pterygopalatine* or *superior pharyngeal, superior palatine,* and *sphenopalatine* arteries. |
| 2. Internal carotid artery. | Furnishes: 1. *Ophthalmic,* which gives off lacrymal, central of retina, supraorbital or superciliary, posterior ciliary, long ciliary, superior and inferior muscular, posterior and anterior ethmoidal, superior and inferior palpebral, nasal, and frontal arteries. 2. *Communicating of Willis.* 3. *Choroid.* 4. *Anterior cerebral.* 5. *Middle cerebral.* |
| II. SUBCLAVIAN ARTERY. | Furnishes: 1. *Vertebral,* which gives off anterior and posterior spinal, inferior cerebellar, and forms—by uniting itself with that of the opposite side—the basilar, divided into superior cerebellar and posterior cerebral. 2. *Inferior thyroid,* which gives off *ascending cervical.* 3. *Internal mammary,* which gives off the anterior mediastinal and superior diaphragmatic. 4. *Superior intercostal.* 5. *Transverse cervical.* 6. *Superior scapular.* 7. *Posterior* or *deep cervical.* |

Farther on the subclavian artery continues its progress under the name *axillary artery.*

| | |
|---|---|
| 1. Axillary artery. | Furnishes: 1. *Acromial.* 2. *Superior thoracic.* 3. *Inferior, long,* or *external mammary.* 4. *Inferior* or *common scapular.* 5. *Posterior circumflex.* 6. *Anterior circumflex.* Farther on the axillary artery continues under the name *brachial artery.* |
| 2. Brachial artery. | Furnishes: 1. *Deep humeral* or *external collateral artery.* 2. *Internal collateral artery.* It afterward divides into the *radial* and *cubital* or *ulnar* arteries. |
| (*a*) *Radial artery.* | Gives off *recurrent radial, dorsal carpal, dorsal metacarpal, dorsal of the thumb,* and terminates in forming the *deep palmar arch.* |
| (*b*) *Cubital* or *ulnar artery.* | Gives off *anterior* and *posterior recurrent cubital, anterior* and *posterior interosseous,* which latter furnishes *posterior recurrent radial.* It terminates in forming the *superficial palmar arch,* which gives off *collateral arteries* of the fingers. |

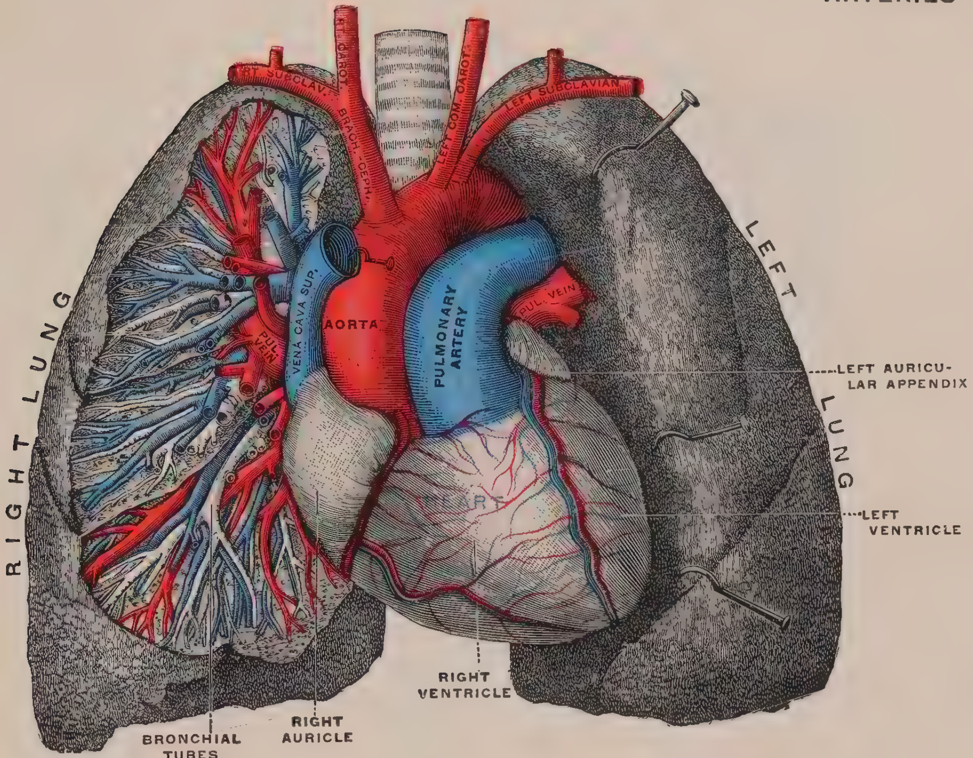
#### (*c*) *Arteries given off by the Aorta in the Thorax.*

1. *Right and left bronchial.*
2. *Œsophageal* (to the number of four, five, or six).
3. *Posterior mediastinal.*
4. *Inferior* or *aortic intercostal* (to the number of eight, nine, or ten).

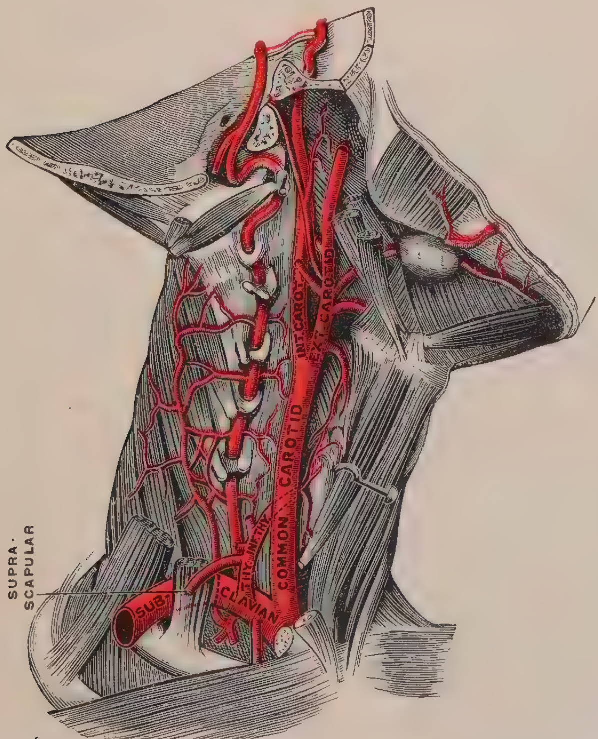
#### (*d*) *Arteries furnished by the Aorta in the Abdomen.*

| | |
|---|---|
| 1. *Diaphragmatic artery.* | *Diaphragmatic* or *phrenic,* right and left. |
| 2. *Cœliac artery.* | Which divides into three branches: 1. *Coronary of the stomach.* 2. *Hepatic,* which gives off pyloric, right gastroepiploic, and cystic; and, 3. *Splenic,* which gives off the left gastroepiploic and vasa brevia. |
| 3. *Superior mesenteric artery.* | Which gives off at its concavity the *right superior, middle,* and *inferior colic,* and at its convex part from fifteen to twenty *intestinal* branches. |
| 4. *Inferior mesenteric artery.* | Which gives off *superior, middle,* and *inferior colic,* and divides into superior hemorrhoidal. |

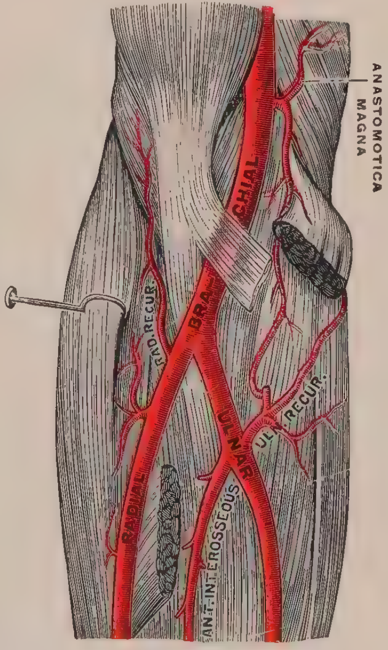
5. *Middle capsular* (to the number of two on each side).
6. *Renal* or *emulgent.*
7. *Spermatic.*
8. *Lumbar* (to the number of four or five on each side).



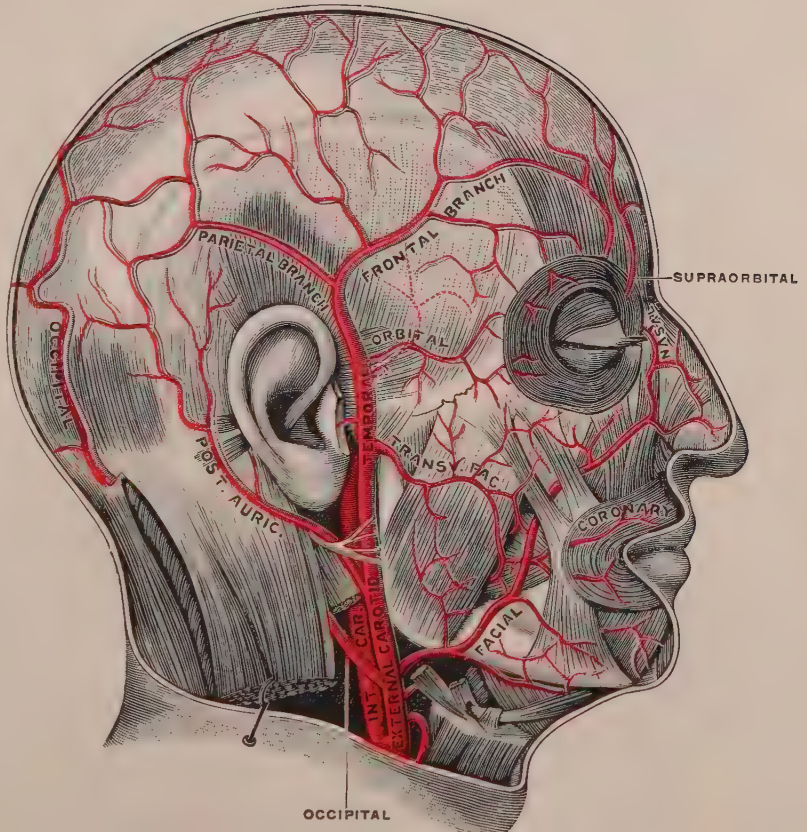
The pulmonary artery and aorta. The front part of the right lung has been removed, and the pulmonary vessels and the bronchial tubes are thus exposed. (Gerrish, after Testut.)



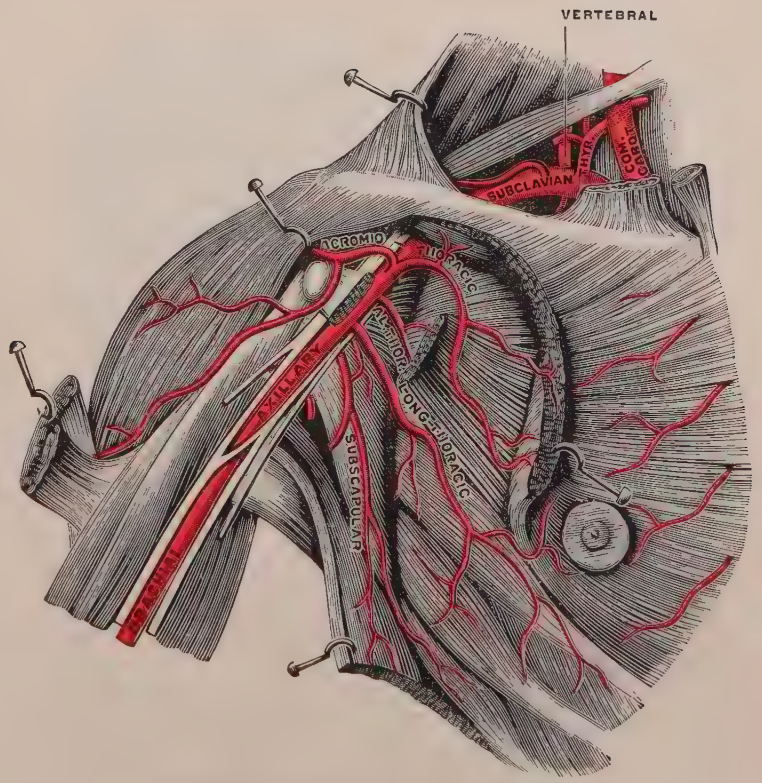
Right subclavian and carotid arteries. The vertebral artery is seen threading the costotransverse processes of the vertebræ. (Gerrish, after Testut.)



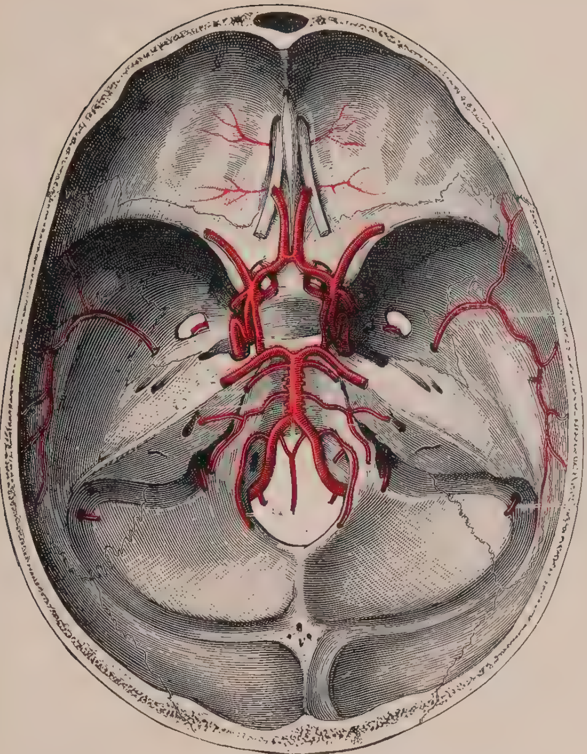
Arteries in the region of the bend of the elbow. (Gerrish, after Testut.)



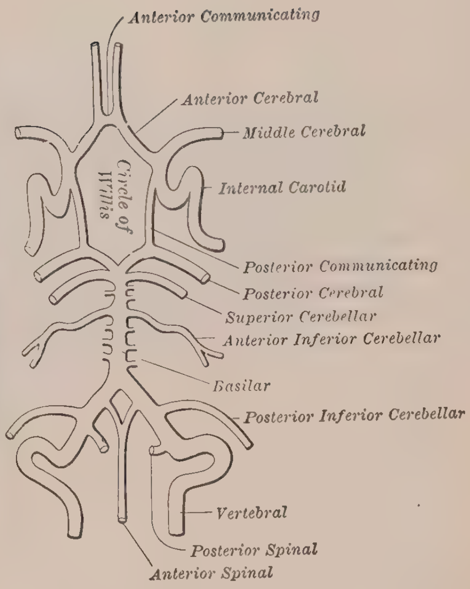
Superficial arteries of the head. (Gerrish, after Testut.)



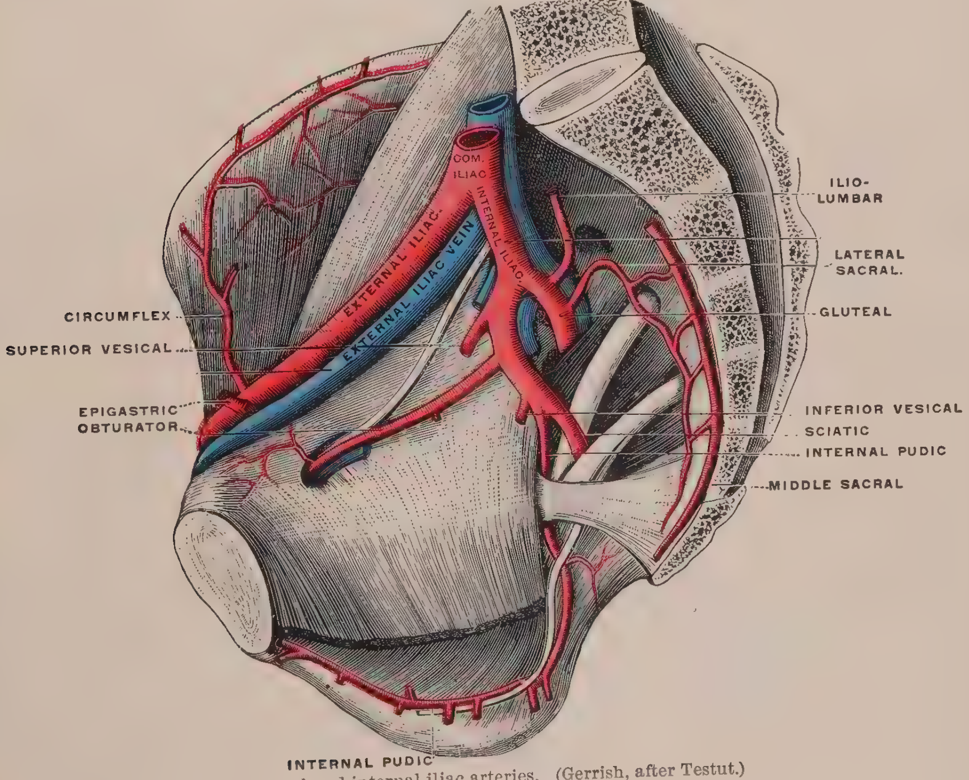
Subclavian and axillary arteries. (Gerrish, after Testut.)



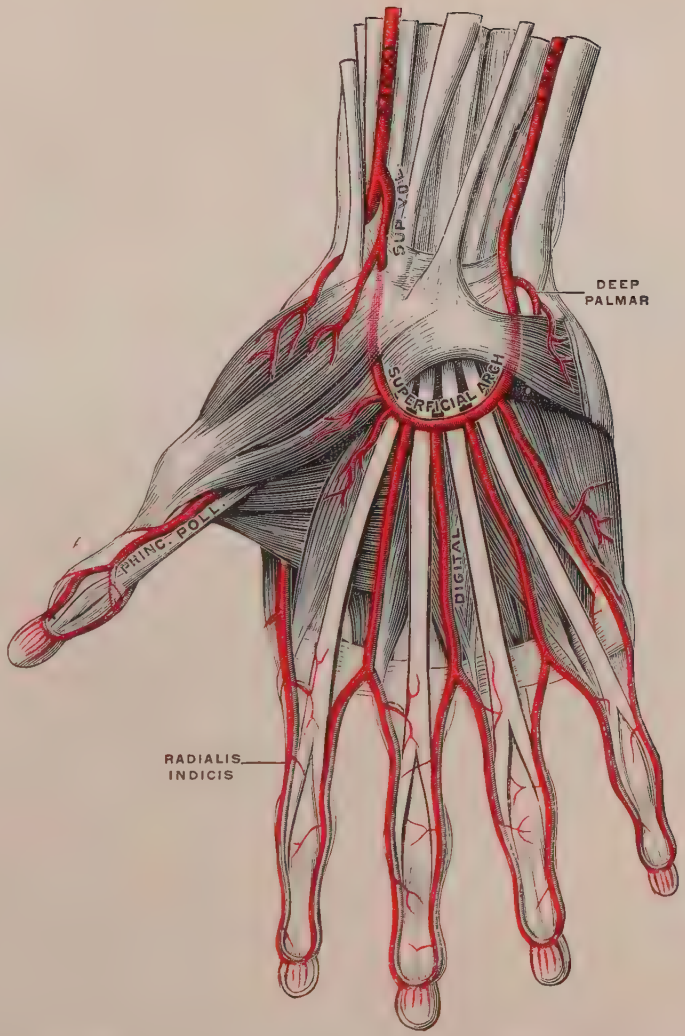
Arteries at the base of the brain, seen in their relations to the skull. See accompanying Key. (Gerrish, after Testut.)



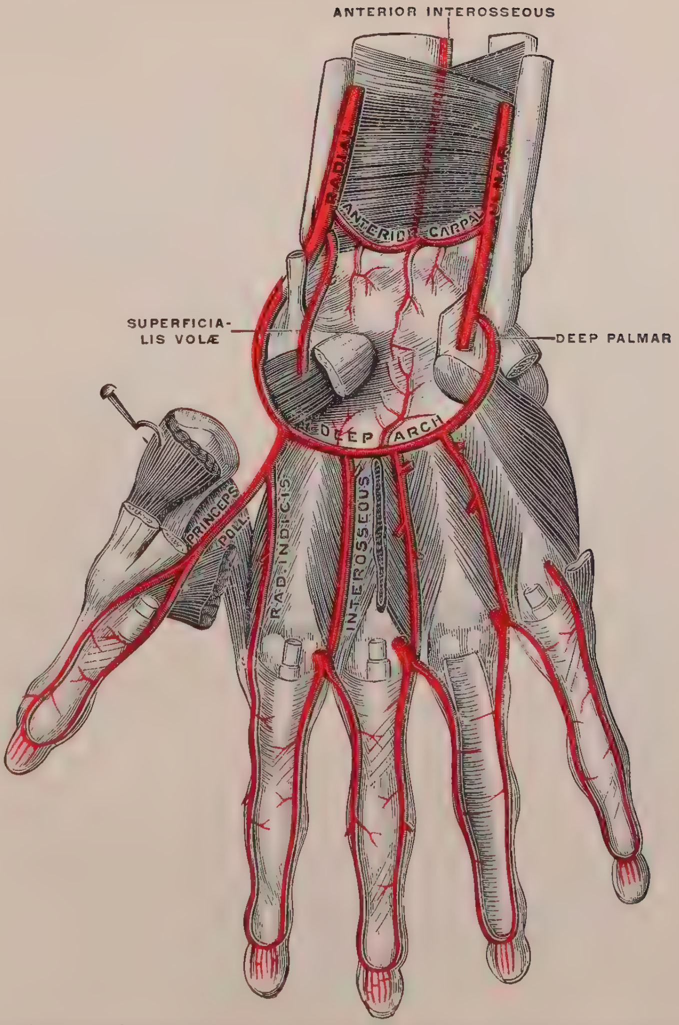
Key to accompanying figure.



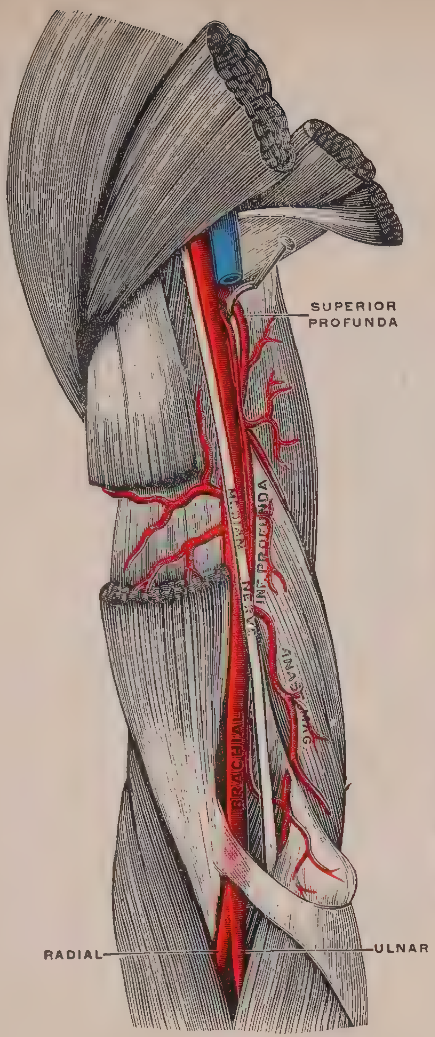
External and internal iliac arteries. (Gerrish, after Testut.)



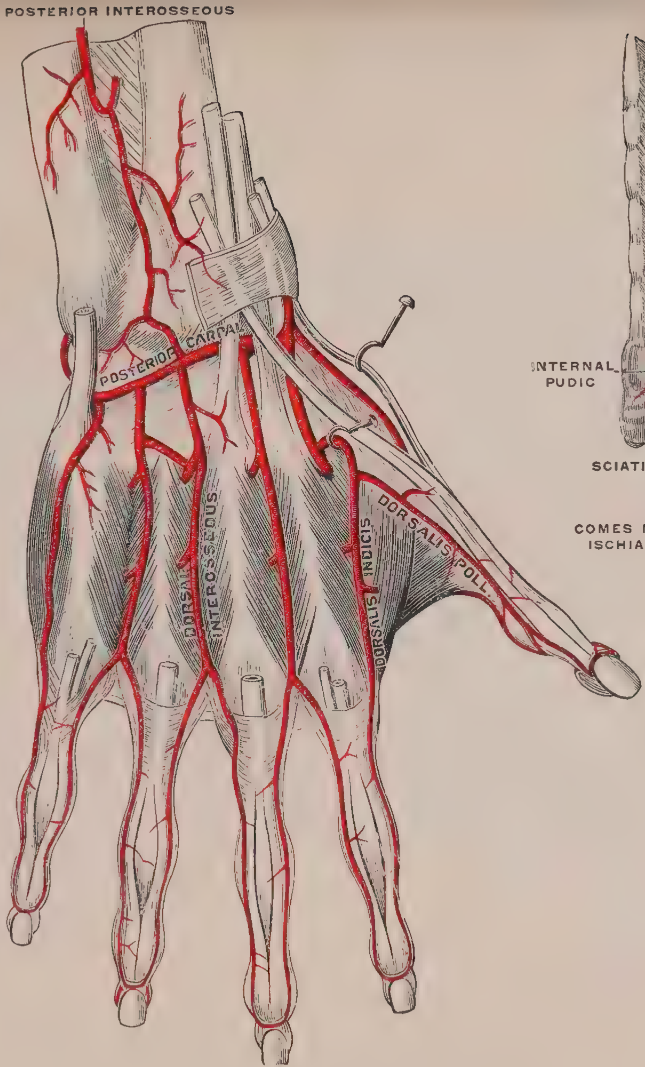
Superficial palmar arch and its branches. Of the digitals, only the third is labelled. (Gerrish, after Testut.)



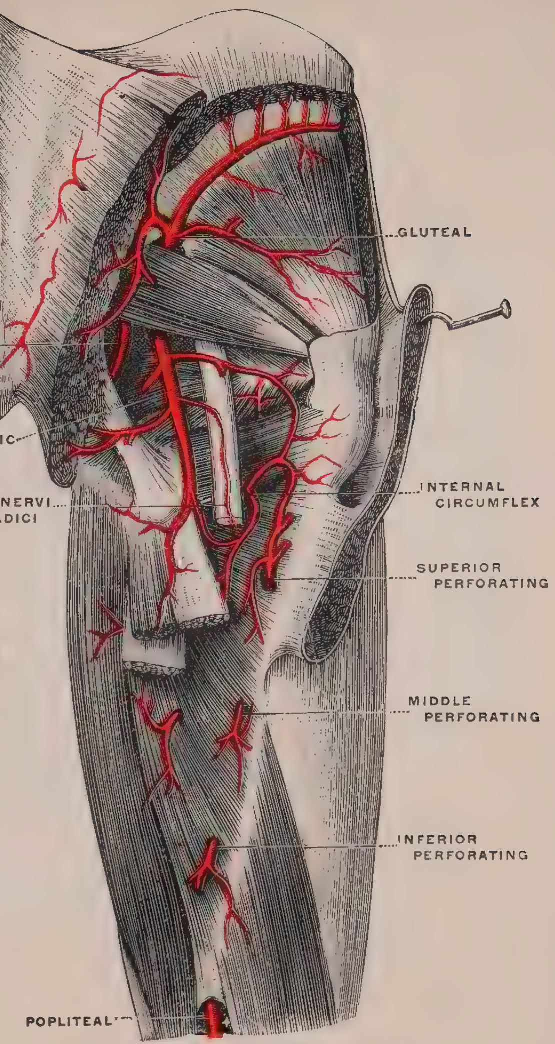
The deep palmar arch and its branches. The first metacarpal bone has been disarticulated to show the course of the radial around the wrist. Of the palmar interosseous, only the first is labelled. (Gerrish, after Testut.)



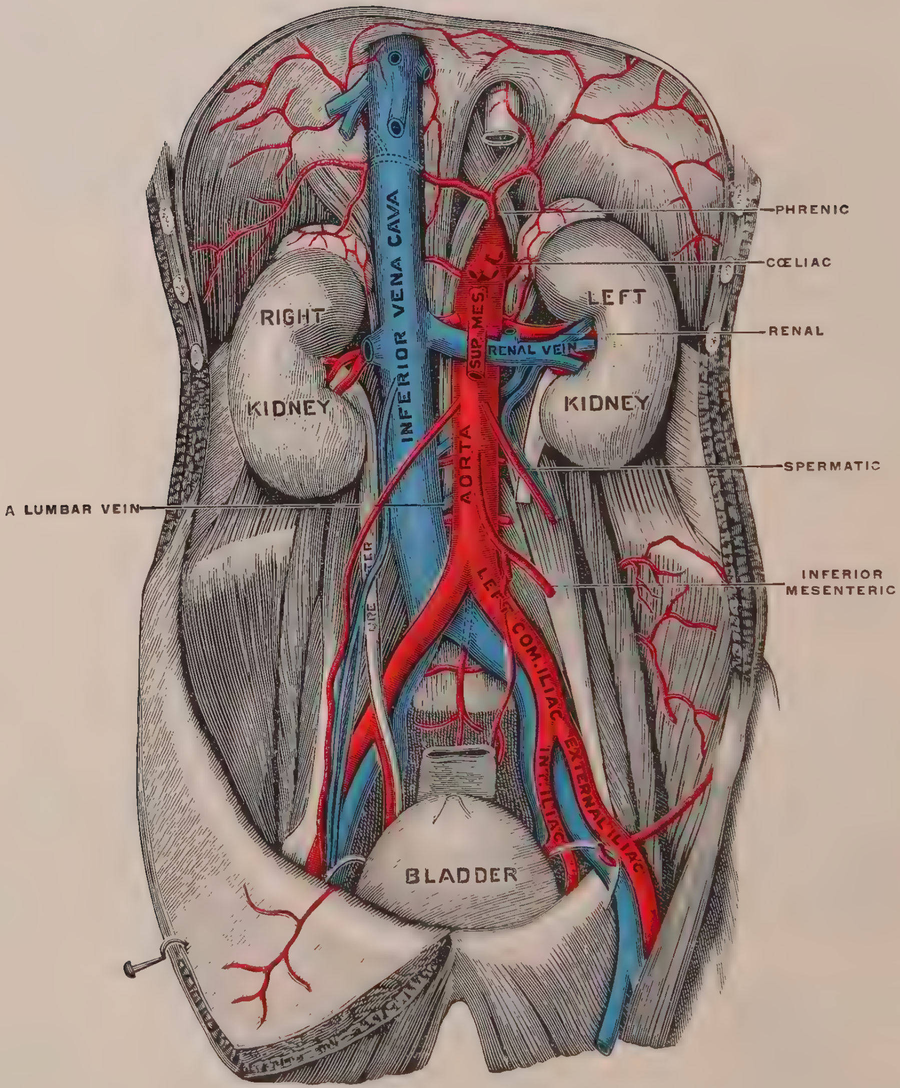
Brachial artery. (Gerrish, after Testut.)



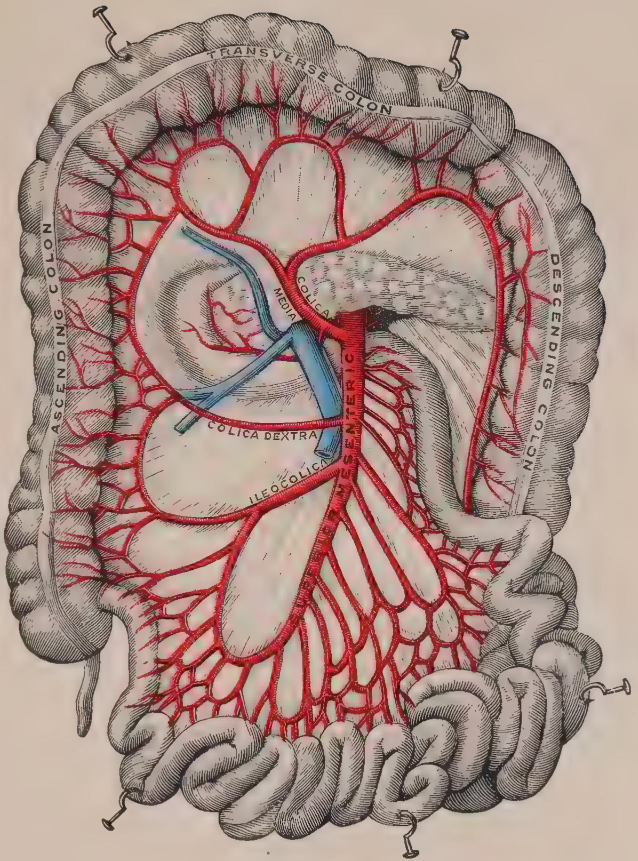
Arteries of the dorsum of the hand. Only the second of the dorsal interosseous is labelled. (Gerrish, after Testut.)



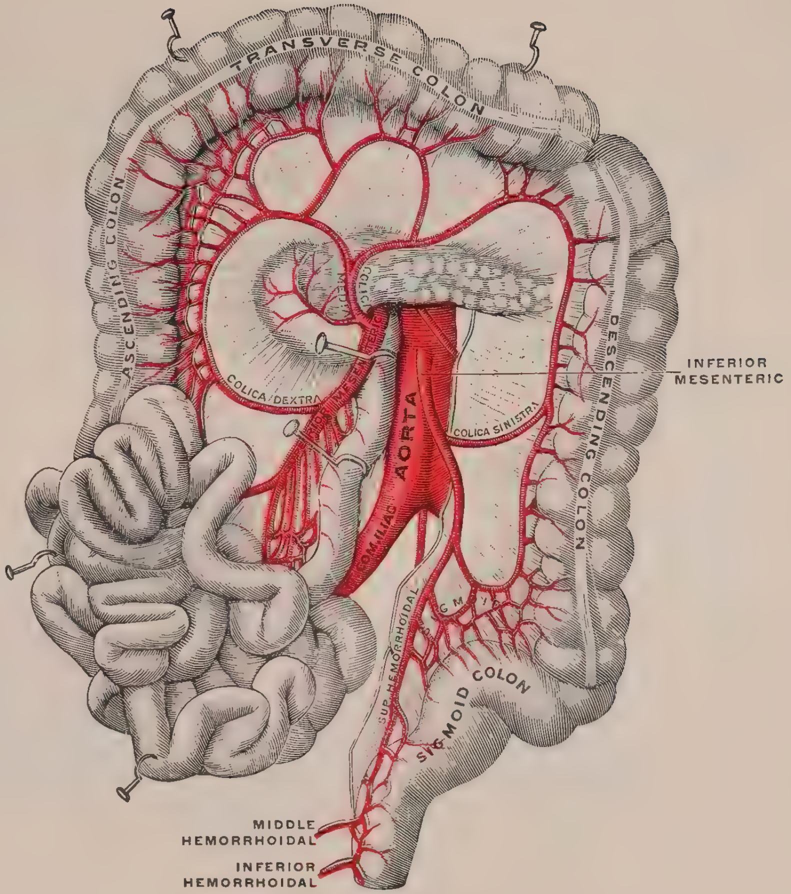
Arteries of the back of the hip and thigh. (Gerrish, after Testut.)



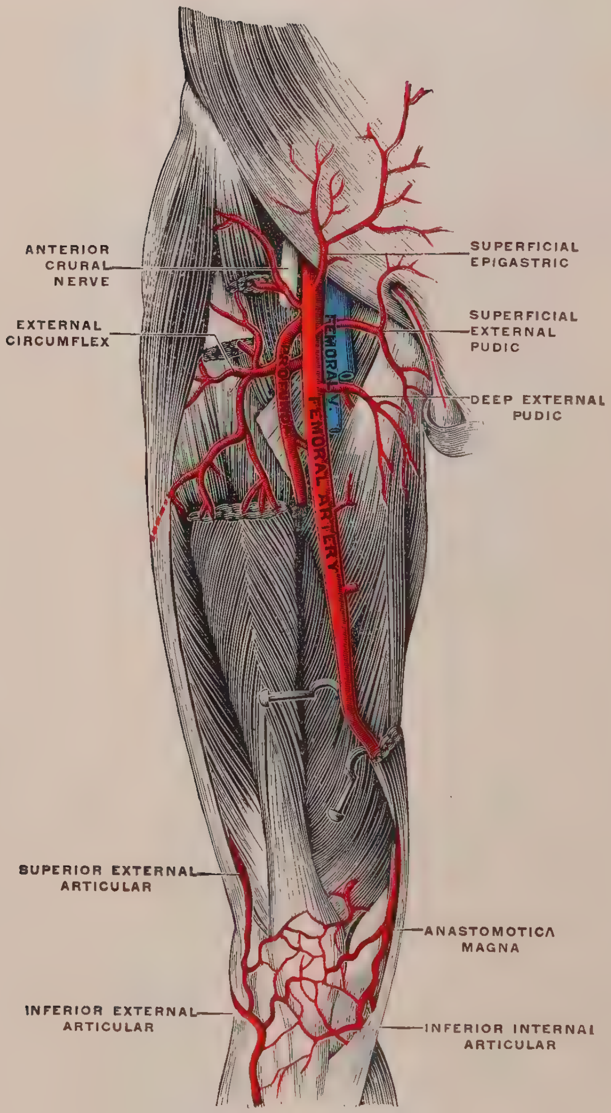
Abdominal aorta. (Gerrish, after Testut.)



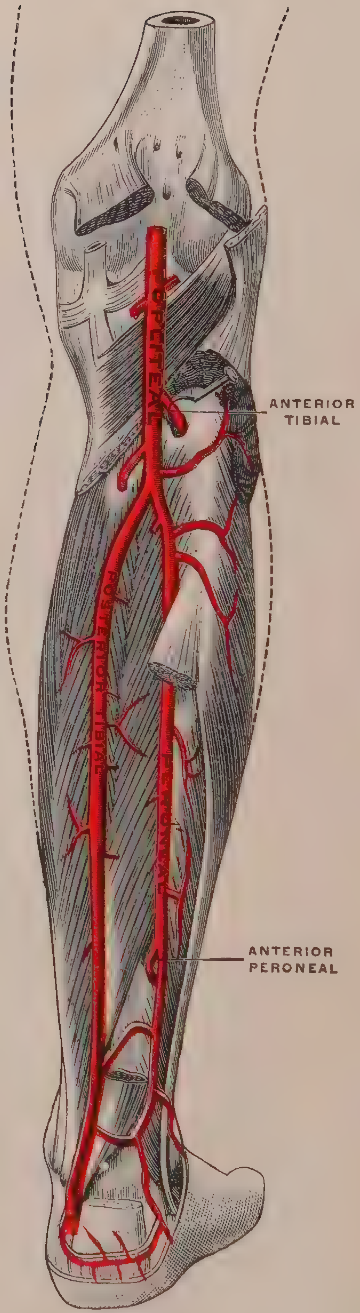
Superior mesenteric artery. (Gerrish, after Testut.)



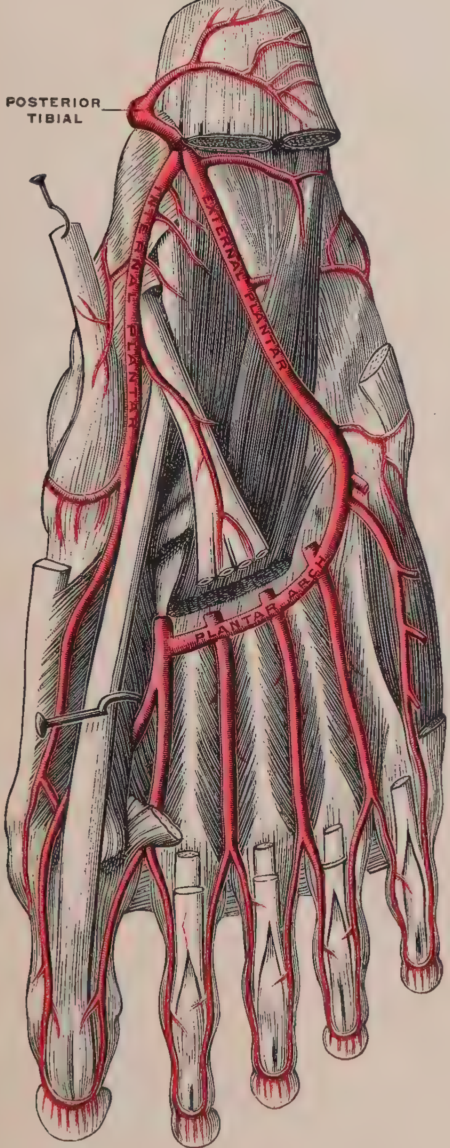
Inferior mesenteric artery. (Gerrish, after Testut.)



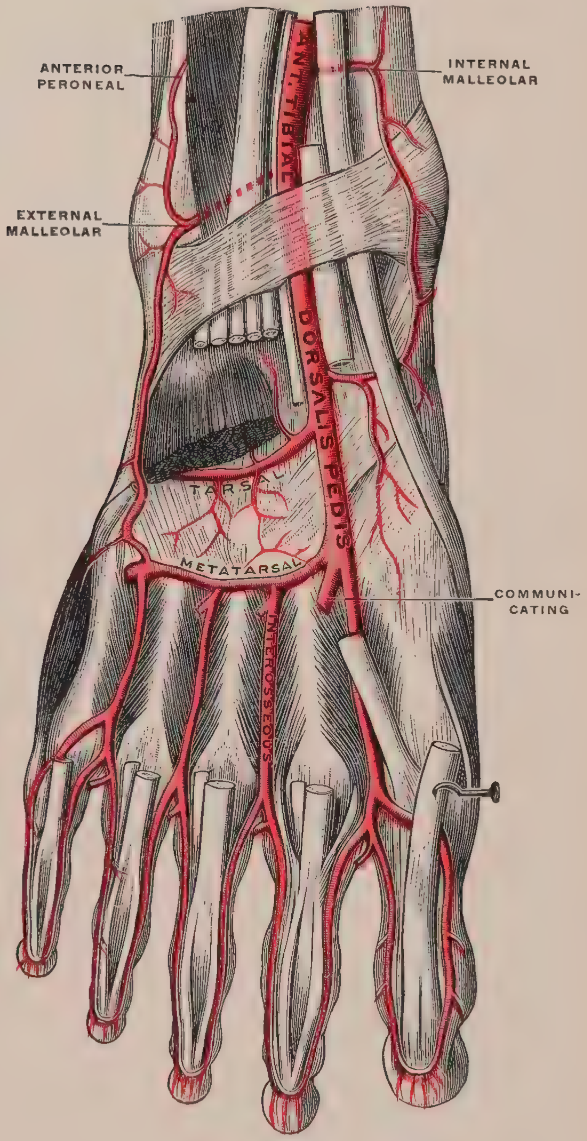
Femoral artery. (Gerrish, after Testut.)



Arteries in the dorsal part of the leg. (Gerrish, after Testut.)



Arteries in the sole of the foot. (Gerrish, after Testut.)



Arteries of the dorsum of the foot. Of the dorsal interosseous, only the second is labelled. (Gerrish, after Testut.)

(*e*) *Arteries resulting from the bifurcation of the Aorta.*

The aorta, a little above its bifurcation, gives off the *middle sacral*, and divides into *primitive iliac arteries.*

The primitive iliac artery divides into *internal* and *external iliac arteries.*

| | |
|---|---|
| 1. Internal iliac artery. | Furnishes: 1. *Iliolumbar.* 2. *Lateral sacral.* 3. *Gluteal or iliac posterior.* 4. *Umbilical.* 5. *Vesical.* 6. *Obturator.* 7. *Middle hemorrhoidal.* 8. *Uterine.* 9. *Vaginal.* 10. *Ischiatic.* 11. *Internal pudendal*, which gives off the *inferior hemorrhoidal, arteries of the septum, transverse perineal, arteries of the corpus cavernosum*, and *dorsal of penis.* |
| 2. External iliac artery. | Furnishes: 1. *Epigastric.* 2. *Anterior iliac* or *circumflex iliac*, and is continued afterward under the name of *crural* or *femoral artery.* |
| 3. Crural or femoral artery. | Furnishes: 1. *Subcutaneous abdominal.* 2. *Superficial and deep pudendal.* 3. *Superficial muscular.* 4. *Deep muscular*, which gives off the *external* and *internal circumflex* and the three *perforating arteries* distinguished into superior, middle, and inferior. Farther on the crural artery continues under the name *popliteal artery.* |
| 4. Popliteal artery. | Furnishes: 1. *Superior, internal, middle*, and *external articular.* 2. *Gemellar.* 3. *Inferior articular* (internal and external). 4. *Anterior tibial*, which, at the foot, takes the name *dorsal of the tarsus*, and gives off the tarsal and metatarsal arteries. In the leg the popliteal artery divides into the peroneal and posterior tibial. |
| 5. Peroneal artery. | Divides into *anterior peroneal* and *posterior peroneal.* |
| 6. Posterior tibial artery. | Divides into *internal* and *external plantar.* The latter by anastomosing with the *dorsal of the tarsus* forms the *plantar arch*, whence arise the *superior* or *posterior perforating branches, inferior posterior* and *anterior branches*, which give off anterior perforating branches. |

**Artery, abdom′inal, aber′rant, acces′sory pu′dic, acro′mial,** etc. See the qualifying word, or the Latin equivalent under *Arteria.*

**Arthani′ta.** Cyclamen; snowbread. Formerly made into ointment and rubbed on the abdomen as purgative.

**Arthanitin′.** Cyclamin; white, poisonous glucoside from Cyclamen europæum.

**Arthræ′mia** (*arthron*, joint, *haima*, blood). Increased flow of blood to a joint.

**Arthrago′sis.** Gouty affection.

**Arthrag′ra** (*arthron*, joint, *agra*, seizure). Gout. **A. anom′ala,** anomalous gout. **A. genui′na, legit′ima, norma′lis,** or **ve′ra,** regular gout.

**Ar′thral** (*arthron*, joint). Relating to a joint.

**Arthral′gia** or **Arthral′gy** (*arthron*, joint, *algos*, pain). Arthrodynia; pain in a joint.

**Arthraposte′ma** (*apostema*, abscess). Suppuration in a joint.

**Arthrecta′sia** or **Arthrec′tasis** (*arthron*, joint, *ektasis*, dilatation). Distention of a joint.

**Arthrec′tomy** (*ektome*, excision). Excision of or cutting away the structures of a joint.

**Arthrem′bolus** (*arthron*, joint, *emballo*, to cast). Ancient instrument for reduction of dislocations.

**Arthrempye′ma** (*arthron*, joint, *empyema*, abscess). Suppuration of a joint.

**Arthrempye′sis** (*arthron*, joint, *empyesis*, suppuration). Arthrempyema.

**Arthren′tasis** (*arthron*, joint, *entasis*, distortion). Distortion of a joint.

**Arthret′ica.** Arthritis or remedies for it; Teucrium chamæpitys.

**Ar′thric.** Appertaining or relating to joints.

**Ar′thrifuge.** Arthritifugum.

**Arthrit′ic.** Gouty; relating to arthritis or inflammation of joints in general, and especially to gout. **A. diath′esis,** arthritism. **A. fe′ver,** acute form of gout. **A. ring,** sclerotic zone.

**Arthritif′ugum** (*arthritis*, *fugo*, to drive away). Remedy to drive away gout.

**Arthri′tis.** Inflammation of a joint, occasionally extending to surrounding muscles. **A. aber′rans,** wandering or metastatic gout. **Acute′ a.,** acute inflammation of a joint. **Rheumat′ic a.,** acute articular rheumatism. **A. asthen′ica,** atonic gout. **Atroph′ic a.,** Charcot's disease. **A. blennorrhag′ica,** gonorrhœal inflammation of a joint. **A. catarrha′lis,** acute inflammation of a joint, supposed to be *ex frigore.* **A. chirag′ra,** gout in the hands. **A. chron′ica,** chronic arthritis, to which other terms have been added, as *deformans*, chronic arthritis with deformity; *neurotica*, associated with disease of the nervous system; *rheumatica*, affecting several joints successively; *senilis*, when attacking old people; *serosa*, when accompanied with serous effusion; *sicca* (dry), when not thus accompanied. **A. defor′mans,** chronic osteoarthritis accompanied by swelling and deformity; rheumatoid arthritis. **A. diaphragmat′ica,** angina pectoris. **Dry a.,** a. sicca. **A. errat′ica,** wandering gout. **A. fungo′sa** or **gelatino′sa,** a. characterized by fungous or gelatinous granulations; white swelling. **A. gonag′ra,** gout in the knees. **A. gonorrho′ica,** rheumatoid disease accompanying gonorrhœa; gonorrhœal rheumatism. **A. granulo′sa, a.** attended with granulations. **A. hiema′lis,** winter gout. **A. hydrar′thros,** a. with serous effusion. **A. inflammato′ria,** regular gout. **A. inter′na.** a. visceralis. **A. juveni′lis,** see *Rheumatism, acute.* **A. larva′ta,** masked gout. **A. maxilla′ris,** gouty or rheumatic affection of the joint of the lower jaw. **A. myelit′ica,** a. deformans. **A. neurot′ica,** a. associated with disease of the nervous system. **A. nodo′sa,** gout with nodosities. **A. pau′perum,** rheumatoid arthritis; chronic rheumatic gout. **A. planet′ica,** wandering gout. **A. podag′ra,** gout in the feet. **A. retrogra′da,** retrograde gout. **A. rheumat′ica,** acute rheumatism. **Rheum′atoid a.,** a. deformans. **A. sic′ca,** dry a.; chronic a. attended with no evident effusion of fluid or plastic material into the cavity of the joint. **A. spu′ria,** undefined pain in any of the joints; swelling of joints, but not rheumatic in origin. **A. syphilit′ica,** articular pains due to syphilis. **A. tuberculo′sa,** tuberculous a. **A. urat′ica,** a. with excess of uric acid, see *Gout.* **Ure′thral** or **urethrit′ic a.,** joint inflammation following urethritis or an operation upon this canal. **A. va′ga,** wandering gout. **A. vene′rea,** a. gonorrhoica or syphilitica. **A. ve′ra,** regular gout. **A. viscera′lis,** gout attacking an internal organ, the stomach, for example.

**Ar′thritism.** Gouty or rheumatic diathesis.

**Arthrit′olith** (*arthron*, joint, *lithos*, stone). Calcareous or other deposit in a joint.

**Arthro-** (*arthron*, a joint). In composition, joint.

**Arthrobacte′rium.** A microorganism, multiplication of which occurs by segmentation. **A. ace′ti, pastoria′num,** etc., see *Bacillus aceti*, etc.

**Arthrocace,** ar-throk′a-se (*arthron*, joint, *kakos*, bad). Disease of joints, especially caries of the articular surfaces; an infectious disease of young domestic animals. **A. coxa′rum,** hip-joint disease.

**Arthrocacol′ogy** (*arthrocace*, joint disease, *logos*, description). The nosology of joint disease.

**Arthrocarcino′ma** (*arthron*, joint, *karkinoma*, cancer). Cancer of a joint.

**Ar'throcele** (*arthron*, joint, *kele*, tumor). Swelling of a joint.

**Arthrochondri'tis** (*arthron*, joint, *chondros*, cartilage). Inflammation of the articular cartilage.

**Arthrocla'sia** or **Arthroc'lasis** (*arthron*, joint, *klao*, to break). Breaking up of adhesions in cases of ankylosis.

**Arthrodac'tylous** (*arthron*, joint, *daktylos*, finger). Having fingers or toes articulated.

**Arthrod'esis** (*arthron*, joint, *desis*, binding). The artificial establishment of ankylosis in a healthy or diseased limb.

**Arthrodex'is** (*arthron*, joint, *dexis*, biting). Operation of scraping a joint to remove granulations, etc.

**Arthro'dia.** Adarticulation; a joint formed by two nearly flat opposing surfaces which glide freely one over the other; a form of diarthrosis; see *Articulation*. **Doub'le a.**, amphidiarthrosis.

**Arthro'dial.** Relating to arthrodia or to the articulation of bones in general. **A. joint,** arthrodia.

**Arthrodyn'ia** (*arthron*, joint, *odyne*, pain). Pain in a joint; chronic rheumatism. **A. podag'rica,** gout.

**Arthrœde'ma** (*arthron* + *œdema*). Hydrarthrus.

**Arthroempye'sis** (*arthron*, joint, *empyesis*, suppuration). Abscess in a joint.

**Arthrog'raphy** (*arthron*, joint, *grapho*, to write). Description of joints.

**Arthrogrypo'sis** (*arthron*, joint, *grypoo*, to incurvate). Persistent or spasmodic incurvation of the joints, especially of the hands and feet.

**Arthrohydrin'** (*arthron*, joint, *hydor*, water). Synovin, or the mucin of synovial fluid.

**Arthroklei'sis** (*arthron*, joint, *kleis*, lock). Ankylosis.

**Arthrolepro'sis.** Leprosy attended with ulceration and separation of fingers or toes.

**Ar'throlith** (*arthron*, joint, *lithos*, stone). Articular calculus; concretion in a joint.

**Arthrolithi'asis.** Gout.

**Arthrol'ogy** (*arthron*, joint, *logos*, description). Description or anatomy of joints; finger spelling of deaf-mutes.

**Arthrom'bole** (*arthron*, joint, *ballo*, to cast). Coaptation, reduction, as of luxated or fractured bone.

**Arthromeningi'tis** (*arthron*, joint, *meninx*, membrane). Synovitis. **A. croupo'sa,** synovitis with exudation. **A. gonorrho'ica,** gonorrhœal rheumatism. **A. prolif'era,** fungous arthritis. **A. sero'sa,** arthromeningitis with effusion of serum. **A. tubercu'losa,** tuberculous synovitis.

**Ar'thron** (joint). Articulation of bones, with motion; opposite of symphysis, or articulation without motion.

**Arthronal'gia** (*arthron*, joint, *algos*, pain). Arthralgia.

**Arthron'cus** (*arthron*, joint, *onkos*, swelling). Tumefaction of a joint.

**Arthronempye'sis** (*arthron*, joint, *en*, in, *pyon*, pus). Suppuration of a joint.

**Arthroneural'gia.** Arthralgia.

**Arthroparal'ysis.** Paralysis of limb.

**Arthropath'ia** (*arthron*, joint, *pathos*, disease). Disease of joints. See *Arthropathy*. **A. progressi'va,** progressive inflammation of the joints of the fingers, with puffiness. **A. tabet'ica** or **tabido'rum,** Charcot's disease, see *Arthropathy*.

**Arthropathol'ogy.** Pathology of joints.

**Arthrop'athy.** Disease of a joint. **Atax'ic a., Charcot's'** or **tabet'ic a.,** a trophic joint affection occurring in spinal-cord diseases, especially syringomyelia and tabes; the disease is characterized by a large, serous effusion into the joint with puffiness of the neighboring soft parts, unaccompanied by pain or fever; at a later stage of the progressive form dislocation occurs through wearing away of the articular surfaces; sometimes, however, recovery takes place before this erosion occurs; the joints most commonly affected are, in the order named, the knee, hip, elbow, wrist, ankle, spine, and fingers. **Hypertroph'ic pul'monary** or **Osteopul'monary a.,** an a. characterized chiefly by enlargement of the articular ends of the bones of the extremities, occurring sometimes in connection with chronic lung diseases.

**Arthroperis'sia** (*arthron*, joint, *perissos*, superfluous). Monstrosity characterized by excess in the number of limbs or joints.

**Arthrophlogo'sis** (*arthron*, joint, *phlogosis*, inflammation). Inflammation of a joint. **A. defor'mans,** arthritis deformans. **A. fibro'sa,** fungous arthritis. **A. synovia'lis,** synovitis. **Tabet'ic a.,** see *Arthropathy*.

**Arthroph'lysis** (*arthron*, joint, *phlysis*, eruption). Cutaneous eruption accompanying gout. **A. cardi'aca,** eczema accompanying gouty or rheumatic heart disease.

**Arthrophy'ma** (*arthron*, joint, *phyma*, growth). Swelling of a joint. **A. adenochon'drium** (*aden*, gland, *chondros*, cartilage). Tumefaction of glands and of cartilages of joints. **A. bursa'le,** enlargement of a bursa.

**Ar'throphyte** (*arthron*, joint, *phyton*, growth). Growth of any kind in a joint; floating cartilage.

**Ar'throplasty** (*arthron*, joint, *plasso*, to form). Operation to form false joint in ankylosis.

**Arthrop'oda** (*arthron*, joint, *pous*, foot). Invertebrate animals with articulated limbs.

**Arthropyo'sis** (*arthron*, joint, *pyon*, pus). Suppuration or abscess of a joint.

**Arthrorrha'gia** (*arthron*, joint, *rhegnymi*, to break forth). Hemorrhage into a joint.

**Arthrorrheumatis'mus.** Acute articular rheumatism.

**Arthro'sia.** Inflammation of a joint, occasionally extending to surrounding muscles. **A. acu'ta,** acute rheumatism. **A. chron'ica,** chronic rheumatism. **A. coxen'dicis,** sciatica. **A. hydrar'thrus,** white swelling; fungous arthritis. **A. lumbo'rum,** lumbago. **A. podag'ra,** gout. **A. p. complica'ta,** retrograde gout. **A. p. larva'ta,** atonic gout. **A. p. regula'ris,** regular gout. **A. thora'cis,** pleurodynia.

**Arthro'sis.** Joint; suture. See *Articulation*.

**Arthrospongo'sis** or **Arthrospon'gus** (*arthron*, joint, *spongos*, sponge). Fungous swelling of a joint.

**Ar'throspore.** Spore resulting from segmentation of parent cell.

**Arthrostei'tis** (*arthron*, joint, *osteon*, bone). Osteoarthritis; inflammation of a joint with involvement of the bones.

**Arthrosteno'sis** (*arthron*, joint, *stenos*, narrow). Contraction in size of a joint.

**Arthrosteophy'ma** (*arthron*, joint, *osteon*, bone, *phyma*, growth). Tumor of the articular extremity of a bone.

**Arthrostere'sis** (*arthron*, joint, *steresis*, deficiency). Deficiency of limbs.

**Arthrosti'tis.** Arthrosteitis.

**Arthrosym'physis** (*arthron*, joint, *symphysis*, growing together). Ankylosis.

**Arthrosyr'inx** (*arthron*, joint, *syrinx*, tube). Fistula communicating with a joint.

**Ar'throtome** (*arthron*, joint, *tome*, cutting). Knife for operating on joints.

**Arthrot'omy.** Operation of opening a joint.

**Arthrot'ophus.** Gouty concretion in a joint.

**Arthrotrau'ma** (*arthron*, joint, *trauma*, wound). Wound of a joint.

**Arthrotro'pia** (*arthron*, joint, *trope*, turning). Sprain of a joint.

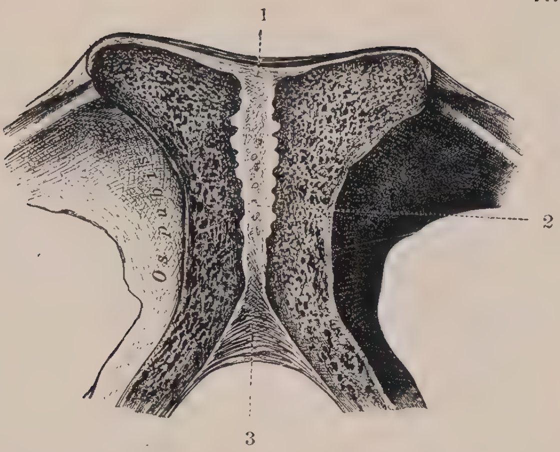
**Ar'throus.** Provided with joints.

**Arthroxero'sis** (*arthron*, joint, *xeros*, dry). Deformative arthritis; chronic osteoarthritis.

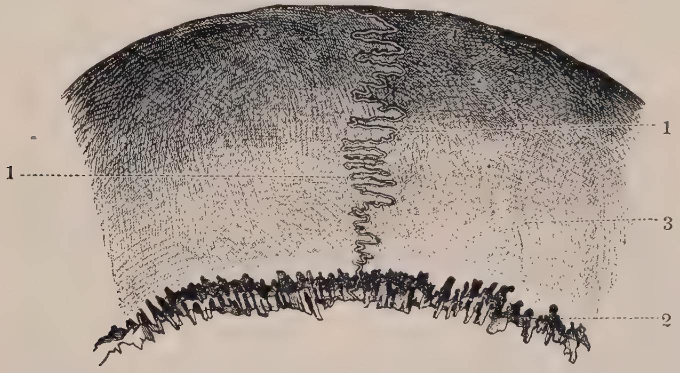
**Arthroxe'sis** (*arthron*, joint, *xeo*, to scrape). Removal of fungosites from joints by scraping.

**Ar'tia** (*aer*, air). Arteria tracheia; trachea.

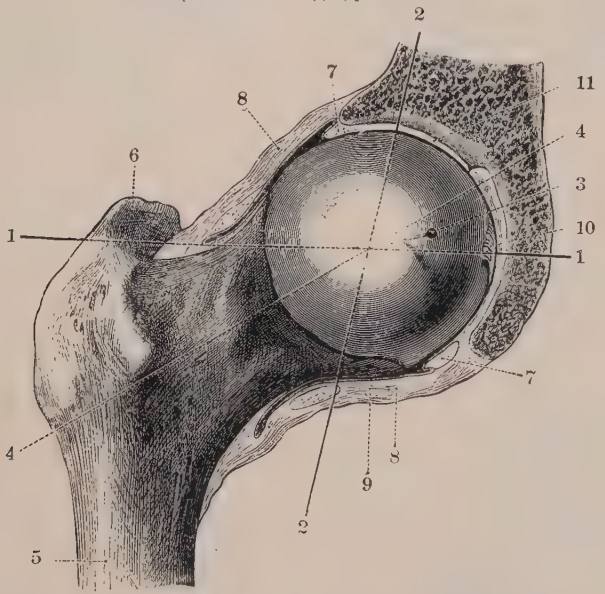
**Ar'tiad** (*artios*, even). Name used in chemistry to denote an element possessing a power of com-



Symphysis; frontal section of the symphysis pubis: 1, superior pubic ligament; 2, interpubic fibrocartilage; 3, ligamentum arcuatum.



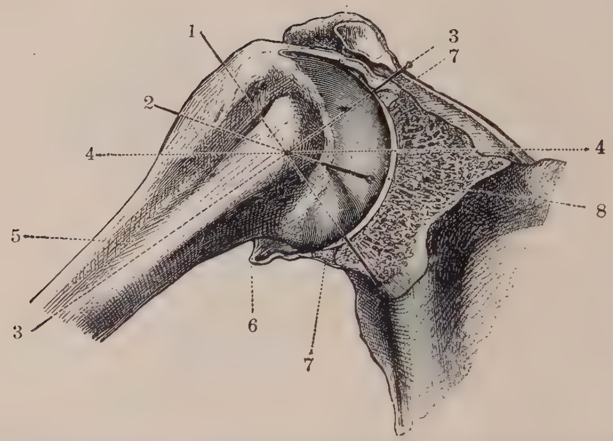
Suture: 1, 1, sagittal or interparietal suture (sutura dentata); 2, parietal edge of the coronal or frontoparietal suture (sutura limbosa); 3, parietal bone.



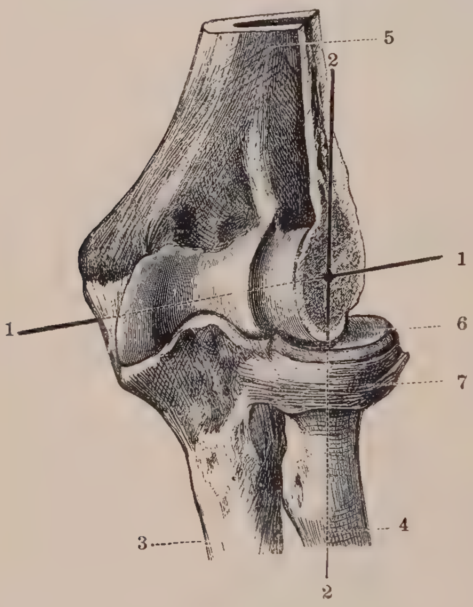
Enarthrosis, ball-and-socket joint; anterior aspect of the hip-joint, the anterior portion of the acetabulum and capsular ligament having been removed: 1, 1, axis of flexion; 2, 2, axis of rotation; 3, axis of abduction and adduction; 4, 4, axis of the neck of the femur; 5, femur; 6, trochanter major; 7, 7, cotyloid ligament; 8, 8, capsular ligament: 9, synovial membrane; 10, ligamentum teres; 11, articular fibrocartilage lining the acetabulum.

Types of Articulation. (Toldt.)

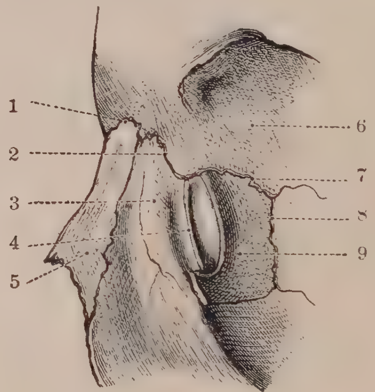
# ARTICULATIONS



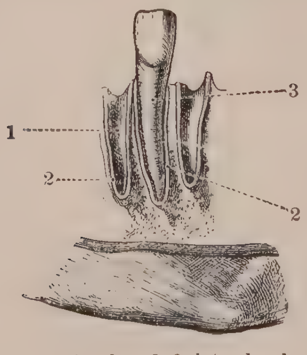
Enarthrosis, ball-and-socket joint; the shoulder-joint seen from in front, the anterior portion of the glenoid cavity and capsular ligament having been removed: 1, axis of flexion; 2, axis of abduction and adduction; 3, 3, axis of rotation; 4, 4, axis of the neck of the humerus; 5, humerus; 6, 6, capsular ligament; 7, 7, glenoid ligament; 8, articular fibrocartilage lining the glenoid cavity.



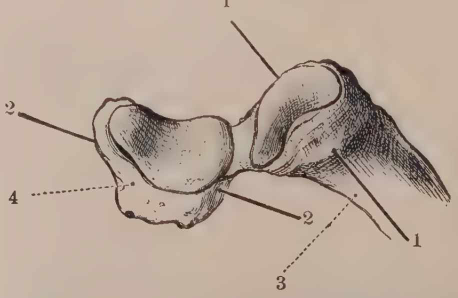
Ginglymus, or hinge-joint, and trochoid, or pivot joint; the elbow-joint: 1, 1, axis of flexion (ginglymus); 2, 2, axis of rotation (trochoid); 3, ulna; 4, radius; 5, humerus; 6, humeroradial articulation; 7, annular ligament of the radius.



Harmonia, simple apposition (seen in 4): 1, nasofrontal suture; 2, frontomaxillary suture; 3, frontal process of the maxilla; 4, lacrymomaxillary suture, furnishing an example of harmonia; 5, nasal bone; 6, orbital surface of the frontal bone; 7, frontolacrymal suture; 8, lacrymo-ethmoidal suture; 9, lacrymal bone.



Gomphosis: 1, alveolus; 2, 2, interalveolar septum; 3, root of an incisor tooth.



Saddle-joint, carpometacarpal articulation of the thumb: 1, axis of abduction and adduction (dorsovolar); 2, axis of flexion (radio-ulnar); 3, first metacarpal bone; 4, trapezium.

Types of Articulations. (Toldt.)

bining, or valency, expressed by an even number. A cloven-footed animal or one possessing an even number of toes.

**Ar′ticle.** Joint; also an interarticular segment or an individual member of an articulated series. **In the a. of death,** at the point of death.

**Artic′ular** (*artus,* joint, *articulus,* small joint). Relating to the articulations, as articular capsules, etc. **A. ar′teries of arm,** circumflex arteries of arm. **A. ar′teries of knee** arise from the popliteal artery and surround the tibiofemoral articulation. They are distinguished into superior and inferior. The *superior articular arteries,* popliteal articular arteries, are commonly three—internal, external, and middle or azygos articular. The first, ramus anastomoticus magnus, anastomoses by one branch with the external circumflex and by another with the external superior articular; the second anastomoses with the external circumflex, superior internal articular, and inferior external articular; the third is distributed within the joint. The *inferior articular arteries* are two—internal and external. The former anastomoses with the internal superior articular and external inferior articular; the latter with the recurrent branch of the anterior tibial and the external superior articular. **A. car′tilages,** see *Cartilages.* **A. em′inence,** prominence of zygomatic process. **A. erup′tive fe′ver,** dengue. **A. facettes′,** contiguous surfaces by which bones are articulated. **A. lamel′la,** tissue to which the articular cartilage is attached. **A. pro′cess,** see *Vertebra.* **A. rheum′atism,** see *Rheumatism.* **A. veins of knee** follow the same course as the arteries.

**Articula′ta.** Arthropoda.

**Artic′ulate.** As a verb, to join together in a series; to speak or pronounce words. As an adjective, articulated; connected. **A. speech,** connection of pronounced words.

**Artic′ulated.** Provided with or united by articulations, as articulated skeleton.

**Articula′tio.** Articulation or joint. **A. artificia′lis,** false joint. **A. Chopart′ii,** line of articulations followed in Chopart's amputation. **A. cox′æ,** hip-joint. **A. cu′biti,** elbow-joint. **A. fem′oris,** knee-joint. **A. ge′nu,** knee-joint. **A. hu′meri,** shoulder-joint. **A. Lisfranc′ii,** tarsometatarsal articulations. **A. mandibula′ris** or **maxil′læ,** temporomaxillary a. **A. mix′ta,** amphiarthrosis. **A. no′tha,** false joint. **A. pe′dis,** ankle-joint. **A. pla′sia,** arthrodia. **A sphæroi′dea,** enarthrosis. **A. ta′li** or **ta′locrura′lis,** ankle-joint.

**Articula′tion.** Joint; union of bones with each other; the joining of the segments of an invertebrate animal; putting the bones of a skeleton together. A sound produced in speech. **A. posi′tion,** the position of the vocal organs at which the sound of a certain consonant is produced.

The following is the classification of articulations usually made (Brockway and O'Malley, after Gray):

CLASSIFICATION OF ARTICULATIONS.

| | | | |
|---|---|---|---|
| Synarthrodial, immovable. | Sutura | vera (true) | dentata—*e. g.,* interparietal. |
| | | | serrata—*e. g.,* interfrontal. |
| | | | limbosa—*e.g.,* frontoparietal. |
| | " | notha (false) | squamosa—*e.g.,* squamoparietal. |
| | | | harmonia—*e. g.,* intermaxillary. |
| | Schindylesis—*e. g.,* rostrum of sphenoid and vomer. | | |
| | Gomphosis—*e. g.,* tooth in alveolus. | | |
| Amphiarthrodial, mixed. | Surfaces connected by fibrocartilage, not separated by synovial membrane—*e. g.,* bodies of vertebræ. | | |
| | Surfaces covered by fibrocartilage and partially lined by synovial membrane—*e. g.,* pubic symphysis. | | |
| Diarthrodial, mixed. | Arthrodia gliding (not referable to any axis)—*e. g.,* some movements in temporomaxillary articulation. | | |
| | Enarthrosis, ball-and-socket—*e. g.,* shoulder and hip. | | |
| | Ginglymus, hinge—*e. g.,* elbow, knee; no lateral motion. | | |
| | Diarthrosis rotatoria, or lateral ginglymus, a pivot within a ring—*e. g.,* atloaxoid. | | |
| | Condyloid, ovoid head in elliptical cavity—*e. g.,* wrist. | | |
| | Reciprocal reception, saddle-shaped—*e. g.,* carpometacarpal joint of thumb. | | |

**Artic′ulator.** One who or that which joins or fits; one who pronounces; a dental appliance for fitting together the artificial teeth in an upper and a lower set.

**Artic′ulatory.** Pertaining to sonant speech.

**Artic′uli** (pl. of articulus). Joints; small members; zones of lenticular nucleus of corpus striatum.

**Artic′ulo mor′tis, in.** At the point of death.

**Artic′ulus.** Joint segment; limb. **A. no′vus** (new joint) **preternatura′lis** or **spu′rius,** pseudarthrosis.

**Ar′tifact.** Artefact.

**Artifi′cial** (*ars,* art, *facio,* to make). Formed by art. **A. a′nus,** see *Anus.* **A. drum,** a thin disk of elastic tissue which is introduced to the bottom of the external auditory meatus in order to supply a deficient membrana tympani. **A. eyes** are usually enamel, glass, or celluloid hemispheres applied beneath the eyelids to replace a lost eye. **A. fecunda′tion** or **impregna′tion,** impregnation with semen injected by artificial means into the vagina or uterus. **A. joint,** false joint, see *Pseudarthrosis.* **A. leech,** see *Leech.* **A. pu′pil,** see *Pupil.* **A. respira′tion,** see *Respiration, artificial,* and *Resuscitation, methods of.* **A. teeth,** these substitutes for natural teeth are made of ivory, tooth of hippopotamus, porcelain, etc.

Artificial drum.

**Ar′tisan's cramp.** A form of professional neurosis; see *Writers' cramp.*

**Artocar′pus heterophyl′la** (*artos,* bread, *karpos,* fruit). Species having astringent root, used in diarrhœa, etc. **A. inci′sa,** breadfruit tree, Polynesian tree, fruit of which is eaten as a vegetable. Ashes of the leaves mixed with cocoanut oil are used externally in leprosy. The root is astringent. **A. integrifo′lia,** root, astringent, is used in dysentery.

**Artopæopso′ra** (*artopoios,* baker, *psora,* itch). Baker's itch, form of eczema.

**Ar′tus.** Articulation; limb.

**Ar′um.** A plant of the order *Araceæ.* **A. america′num be′tæ fo′liis,** Dracontium fœtidum. **A. dracon′tium,** green dragon; indigenous; same properties as A. triphyllum. **A. dracun′culus** resembles A. maculatum in properties. **A. esculen′tum,** used as food by people of Madeira, Polynesia, etc., and laboring population of West Indies. **A. macula′tum,** wake robin, priest's pintle, cuckow pint; fresh root is stimulant and hydragogue cathartic internally; externally, very acrid. From the root a starch is prepared, called Portland Island sago, Portland arrowroot. **Three-leaved a.,** A. triphyllum. **A. triphyl′lum,** three-leaved a., Indian turnip, dragon root, dragon turnip, pepper turnip. This plant grows all over the United States. The fresh root has been employed in asthma, croup and whooping-cough, and phthisis, and boiled in lard is used in tinea capitis. **A. virgin′icum,** Peltandra virginica. **A. vulga′re,** A. maculatum. **Wa′ter a.,** Calla palustris.

**Arun′do.** A genus of grasses. **A. brach′ii ma′jor,** ulna. **A. b. mi′nor,** radius. **A. ma′jor,** tibia. **A. mi′nor,** fibula.

**Ar'va** (pl. of arvum) **mulieb'ria,** female generative organs.

**Ar'vum** (field). Vulva. **A. natu'ræ,** uterus.

**Aryaryt'enoid.** Arytænoidæus.

**Arycornicula'tus obli'quus.** Muscular fasciculi on upper surface of aryepiglotticus muscle. **A. rec'tus,** muscular fibres passing from arytenoid cartilage to cornicula of larynx.

**Aryepiglot'ticus.** Arytenoepiglotticus muscle.

**Arysantorin'ian lig'aments.** Ligaments between arytenoid cartilages and cornicula of larynx.

**Arysantorinia'nus.** Arytenoid muscle.

**Arysyndes'micus.** Collection of muscular fibres, passing from the cricoid cartilage to the arytenoid.

**Arytænoidæ'us** (*arytaina,* ladle, *eidos,* form). A small muscle passing from one arytenoid cartilage to the other; by its contraction it brings them together and diminishes the aperture of the glottis. It has been divided into three portions: *Arytænoidæus transversus* or *aryarytænoidæus* and two *arytænoidæi obliqui.* **A. ma'jor,** a. transversus. **A. mi'nor** or **obli'quus,** oblique portion of arytænoideus. **A. rec'tus,** arycorniculatus rectus. **A. transver'sus,** transverse portion of arytænoideus.

**Arytænopharyngæ'us.** Muscle in some animals extending from the arytenoid cartilage to the lower part of the pharynx.

**Aryte'nial.** Arytenoid.

**Arytenoepiglot'tic** or **arytenoepiglottid'ean.** Belonging to the arytenoid cartilage and epiglottis, as arytenoepiglottic or arytenoepiglottidean fold of the mucous membrane, so situated; arytenoepiglottic muscle, muscular fibres passing from one of the two cartilages to the other.

**Aryt'enoid.** Ladle-shaped. **A car'tilages,** two cartilages of larynx, situated posteriorly above the cricoid, which, by approximation, diminish the aperture of the glottis. Their upper extremities or cornua are now and then found loose as appendices, considered by some as distinct cartilages, *cuneiform* or *tuberculated cartilages, cornicula laryngis.* **A. glands,** small, glandular, whitish bodies situated anterior to the arytenoid cartilages. They pour out mucous fluid to lubricate the larynx. **A. mus'cle,** arytænoidæus.

**Arytenoi'dum capit'ulæ.** Cornicula laryngis. See *Arytenoid cartilages.*

**Aryth'mia, Aryth'mic.** See *Arrhythmia, Arrhythmic.*

**As.** Chemical symbol for arsenic. Abbreviation for astigmatism.

**Asafet'ida** or **Asafœt'ida** (Ph. U. S. and Br.). Devil's dung; food of the gods. Gum-resin, concrete juice of Ferula fœtida, F. narthex, F. scorodosma, Narthex assafœtida, ord. *Umbelliferæ,* occurring in small, whitish, reddish, and violet masses, adhering together, of bitter and subacrid taste and alliaceous smell. It has been used as a condiment. It is antispasmodic, carminative, stimulant, and anthelmintic; dose, gr. iij–x (0.2–0.65). The following preparations are official in the Ph. U. S: *Emulsum asafœtidæ,* a. mixture, milk of a.; dose, ℥ss–j (16.0–32.0); *pilulæ aloes et a.* (gr. iss–0.09 of each constituent), dose 1–3; *pilulæ a.* (each gr. iij–0.2), dose 1–3; *tinctura a.,* dose, ʒss–j (2.0–4.0); official in the Ph. Br. is *spiritus ammoniæ fœtidus,* containing 7.5 per cent. of a.; dose, ʒj (4.0). *Dewees's carminative,* which see, contains a. with opium and magnesia.

**Asagray'a** or **Asagræ'a officina'lis** (after Dr. Asa Gray). Schœnocaulon officinale; source of veratrine.

**Asaph'ia.** Defective articulation, usually from diseased or defective palate.

**As'aprol.** $CaC_{20}H_{14}S_2O_8+3H_2O$. Abrastol; an α-monosulphone derivative of β-naphthol; calcium betanaphtholalphamonosulphonate. A white, soluble powder; antiseptic, anodyne, and antipyretic in doses of gr. v–xv (0.32–1.0); used in acute rheumatism, typhoid fever, etc., and externally also for gargles and for injections into the vagina, rectum, and urethra, in 2 to 5 per cent. solutions.

**Asarabac'ca.** Asarum. **Broad'leaved a.,** Asarum canadense.

**Asar'cia** or **Asark'ia** (*a,* priv., *sarx,* flesh). Want of flesh; emaciation.

**Asarin'.** A camphor-like substance from Asarum europæum and other varieties of asarum. A bitter principle from Asarum canadense.

**As'arol.** Camphoraceous substances from Asarum canadense and other varieties of asarum.

**Asarone'.** Asarin.

**As'arum.** A genus of plants of the order *Aristolochiaceæ.* **A. canaden'se,** Canada snakeroot, wild ginger, cold foot, broadleaf asarabacca, Indian ginger, heart snakeroot. Used as a substitute for ginger; a warm stimulant and diaphoretic. **A. cam'phor,** asarone or asarin. **A. carolinia'num,** A. canadense. **A. europæ'um,** the leaves are emetic, cathartic, and errhine. **A. hypocis'tis,** Cytinus hypocistis. **A. officina'le,** A. canadense.

**Asbes'tos scall** (*asbestos,* unquenchable). Eczema of the hairy scalp.

**Asbol'ic** (*asbole,* soot). Relating or appertaining to soot, as asbolic or chimney-sweepers' cancer.

**Asbolin'.** An oily, bitter principle from soot of pine wood; has been used in tuberculosis.

**Ascamo'nia.** Scammony.

**Ascari'asis.** Ascaridiasis.

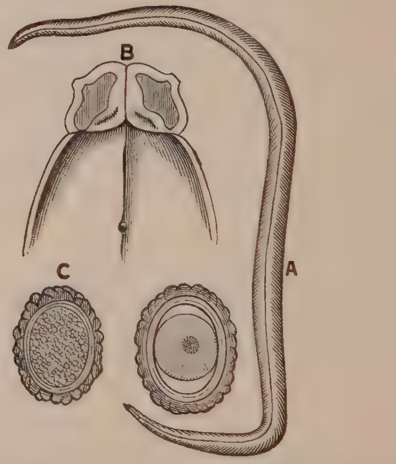
**Ascarici'da anthelmin'tica.** Vernonia anthelmintica.

**Ascar'icide.** Agent destructive of ascarides.

**Ascaridi'asis.** State of having ascarides as an intestinal parasite, or the symptoms resulting therefrom.

**Ascaridocnes'mus** (*ascaris* + *knesma,* itching). Itching of anus or vicinity from ascarides.

**As'caris** (pl. ascarides). Genus of nematoid intestinal worms, characterized by long, cylindrical body, extenuated extremities, and mouth furnished with three tubercles. It is parasitic in the human intestine, causing griping pains and diarrhœa. Formerly there were reckoned two varieties, *A. lumbricoides* or *gigas hominis, Lumbricus, L. teres hominis, Scolex,* or long round worm; and *A. vermicularis,* Ascaris proper, thread worm or maw worm. The former is alone included under the genus, a new genus having been formed of *A. vermicularis,* under name *Oxyuris*; it is *Oxyuris* or *Fusaria vermicularis,* or spring-worm. See *Worms* and *Parasites.* **A. ala'ta,** A. mystax. **A. gi'gas hom'inis,** see *Ascaris.* **A. lumbricoi'des,** see *Ascaris.* **A. margina'ta,** A. mystax. **A. marit'ima,** a parasitic worm found very rarely in the fæces, related to A. mystax. **A. my'stax,** slender worm, like A. lumbricoides, but a smaller parasite. **A. rena'lis,** Strongylus gigas. **A.**



Ascaris lumbricoides. A, worm, half natural size; B, head, magnified; C, eggs. (v. Jaksch.)

**trichu′ria,** trichocephalus. **A. vermicula′ris,** Oxyuris vermicularis. **A. viscera′lis,** Strongylus gigas.

**Ascen′dens.** Proceeding from a region lower than that in which it terminates. *Aorta ascendens* is the first part of the aorta from its origin to the arch; *vena cava ascendens,* large vein carrying blood from inferior parts to the heart.

**Ascend′ing.** Passing from below upward; ascendens. **A. co′lon,** the first portion of the colon from the cæcum to the transverse portion. **A. cur′rent,** current passing between positive pole on the surface of the body and negative pole placed in the central or more external region. **A. degenera′tion,** degeneration in spinal cord gradually extending upward to cerebral region. **A. neuri′tis,** inflammation of nerve travelling centripetally. **A. paral′ysis,** paralysis beginning at the feet and gradually extending upward. **A. pro′cess,** nasal process. **A. ra′mus,** portion of ramus of ischium between the tuberosity and descending ramus of the pubic bone. **A. tracts,** tracts in the spinal cord along which ascending degeneration travels.

**Ascen′sion.** Upward movement; augmented intensity of disease; upward tendency or motion of an organ, as the uterus.

**Ascen′sional an′gle.** Angle which measures the rotation of the eye about its axis.

**Ascen′sus mor′bi.** Increase of disease. **A. u′teri,** elevated position of the uterus in the abdomen.

**Ascherso′nian ves′icles.** When fluid fat and fluid albumin are shaken together the resulting fat globules become surrounded by an albuminous layer; the vesicles thus formed are called after Ascherson, their discoverer.

**Aschistodactylus,** as-kis-to-dak′til-us (*a,* priv., *schistos,* cleft, *daktylos,* finger). Monster whose fingers are not separated from one another. See *Syndactylism.*

**Asch's opera′tion.** Operation of Dr. M. J. Asch for relief of deflected nasal septum by crucial incision, breaking up fragments, reduction of deflection, and retention of fragments by insertion of tube.

**As′cia.** Axe; spiral bandage.

**Ascites,** as-se′tes (*askos,* a bladder). Dropsy of the lower belly, dropsy of the peritoneum, abdominal dropsy; collection of serous fluid in the abdomen. Ascites proper is dropsy of the peritoneum, characterized by increased size of the abdomen, fluctuation, and general signs of dropsy. It is rarely a primary disease, but is usually owing to obstructed circulation in some of the viscera or excessive hyperæmia of the abdominal organs. Treatment is essentially the same as that of other dropsies. Paracentesis, when had recourse to, is usually palliative. Dropsy may be sacculated or in cysts, and occasionally fluid accumulates exterior to the peritoneum, *hydrepigastrium.* When in cysts it is termed *hydrocystis, hydrops abdominis saccatus* or *cysticus,* and *ascites saccatus.* **A. adipo′sus,** so called when dropsical fluid is white and oily; a. chylosus. **A. arthrit′icus,** a. from gout. **A. chylo′sus,** chylous dropsy, in which fluid is milky, probably from some abnormal communication with the lacteal vessels. **A. cruen′tus,** hemorrhage into the peritoneum. **A. hepat′icus,** dropsy from disease of liver. **A. hep′atocyst′icus,** dropsy or turgescence of gall-bladder. **A. inter′cus,** dropsy between skin and peritoneum. **A. intermuscula′ris,** dropsy between the muscles of the abdomen. **A. oleo′sus,** a. adiposus. **A. ova′rii,** dropsy of the ovary. **Pas′sive a.,** dropsy from organic disease of the viscera. **A. purulen′tus,** collection of pus in the peritoneum; pyocœlia. **A. sacca′tus,** encysted peritoneal dropsy; ovarian dropsy. **A. subcuta′neus,** dropsy of the wall of the abdomen. **A. urino′sus,** escape of urine into the cavity of the peritoneum. **A. uteri′nus,** hydrometra.

**Ascit′ic.** Relating to or affected with ascites.

**Asclepiadin′.** Emetic, purgative, expectorant principle from Cynanchum vincetoxicum.

**Ascle′pias.** A genus of plants of the order *Asclepiadaceæ.* **A. al′ba,** A. vincetoxicum. **A. apo′cynum,** A. syriaca. **A. asthmat′ica,** Tylophora asthmatica. **A. cornu′ti,** A. syriaca. **A. cris′pa,** Gomphocarpus crispus. **A. curassav′ica,** bastard ipecacuanha, redhead, bloodweed. Juice is emetocathartic and antiperiodic; leaves are cathartic emetic, and hæmostatic; root is used in asthma. Indigenous in Mexico and S. America. **A. decum′bens,** root is escharotic, cathartic, sudorific, diuretic. **Flesh′-colored a.,** A. incarnata. **A. gigan′tea,** mudar. **A. incarna′ta,** flesh-colored or swamp asclepias or silkweed, swamp milkweed. Root of this plant, growing in all parts of the United States, has same virtues as A. syriaca and A. tuberosa; rhizome is cathartic, emetic, and expectorant. **A. obova′ta,** A. syriaca. **A. proc′era,** beidelossar, beidelsar. Egyptian plant, leaves of which, made into a plaster, are applied to indolent tumors; the milky juice is caustic. **A. pseudosar′sa,** Hemidesmus indicus. **A. pubes′cens,** A. syriaca. **A. pul′chra,** A. incarnata. **A. seto′sa,** Mexican plant; tonic, antiperiodic, and diaphoretic. **A. sullivan′tii,** smooth milkweed, silkweed; indigenous; same virtues as A. tuberosa. **A. syri′aca,** common silkweed, milkweed; cortical part of root is given in asthma and pulmonic affections. **A. tomento′sa,** A. syriaca. **A. tubero′sa,** asclepias (Ph. U. S.), butterflyweed, pleurisy root, flux root, wind root, windweed, white root, orange swallow root, silkweed, Canada root, orange apocynum, tuberous-rooted swallowwort; in Virginia and the Carolinas this root has long been used as a remedy in pulmonary affections. Sudorific and mild purgative; expectorant, diaphoretic, and febrifuge; given to relieve flatulency and indigestion. Dose, gr. xx–ʒj (1.3–4.0); of the fluid extract, ♏xx–ʒj (1.3–4.0). **A. verticilla′ta,** indigenous; anodyne and diaphoretic; decoction used for snake-bites; milky juice is violently purgative. **A. vincetox′icum,** swallowwort, white swallowwort; root of Vincetoxicum officinale and Cynanchum vincetoxicum; stimulant, diuretic, and emmenagogue.

**Asclepias′mus.** Hemorrhoids.

**Asclepidin′.** An aperient derivative of asclepias.

**Asclepin′.** Gummy substance from decomposition of asclepiadin, itself a glucoside from asclepias and cynanchum; diaphoretic, cathartic, and alterative.

**Ascobacil′lus cit′reus.** A microorganism found by Unna and Tommasoli in seborrhœic eczema.

**Ascobacte′rium ulvi′na.** A microorganism observed in putrefying solutions containing leguminous seeds.

**Ascococ′cus** (*askos,* a leather bottle, *kokkos,* kernel). Genus of *Schizomycetes,* consisting of minute circular cells united by glairy intercellular substance. **A. billroth′i,** found in putrefied meat; causes a thick, fermentative condition in saccharated solutions. **A. botryog′enes,** found by Bollinger and Rabe in mycodesmoids of horses. **A. cit′reus,** Ascobacillus citreus. **A. john′ei,** Micrococcus botryogenes. **A. mesenteroi′des,** Leuconostic mesenteroides. **A. vi′brans,** a microorganism isolated from fluids in which beggiatoa are present.

**Ascoïd′ium** (*askos,* pouch, *eidos,* shape). Genus of infusoria found in the excreta and urine in typhoid fever, in drainage water, etc.

**Asco′ma.** Eminence of pubes in women at the period of puberty; mons veneris.

**Ascomyce′tes.** Family of fungi, to which belongs ergot of rye, marked by the presence of hollow cells containing free spores.

**Ascoph′ora muce′do.** Minute fungus, as in mould of bread.

**As′cos** or **As′cus.** Abdomen; cavity or sac. The spore-case of several forms of fungi.

**As′cospore.** Spore from the sac-shaped terminal cell of certain fungi.

**Aselgotrip′sia** (*aselges,* lewd, *tripsis,* rubbing). Depraved sexual relations between two females.

**Asel′li.** Wood-lice or hog-lice, once considered stimulant and diuretic, and useful in jaundice.

**Asellin′.** $C_{25}H_{32}N_4$. Ptomain from cod-liver oil.

**Asel'li's pan'creas.** Collection of lymph bodies at the root of the mesentery.

**Asel'lus** (dim. of *asinus*, an ass). Oniscus.

**Ase'ma cri'sis** (*a*, priv., *sema*, a sign). Unexpected crisis, without ordinary precursory signs.

**Asema'sia** or **Ase'mia.** Inability to give or appreciate any sign of reflective power or to comprehend articulate language. **A. expressi'va,** a. of expression, as aphasia, agraphia, etc. **A. graph'ica,** inability to make or understand written characters. **A. mim'ica,** inability to make or appreciate gestures. **A. percepti'va,** a. of perception, as alexia. **A. verba'lis,** inability to speak or to understand spoken language.

**Asep'sis** (*a*, priv., *sepo*, to corrupt). State of non-putrefaction; exclusion of the causes of septic poisoning, such as pathogenic microorganisms.

**Asep'tic.** Relating to asepsis, not putrefying; non-putrefactive. **A. acid,** solution of boric acid in hydrogen peroxide, to which salicylic acid is sometimes added; used as an antiseptic. **A. opera'tion,** operation in which all the rules of aseptic and antiseptic surgery are observed. **A. sur'gery,** surgical treatment that aims at the exclusion from wounds of all septic material, microorganisms, etc., the operative procedure being germ free.

**Asep'ticism.** The practice of aseptic surgery.

**Asepti'city.** The state of being aseptic.

**Asep'tol.** Sozolic acid, a light yellowish liquid, result of admixture of equivalent quantities of carbolic acid and sulphuric acid; used as antiseptic and disinfectant, like carbolic acid, which it resembles in odor.

**Aseptolin'.** A mixture of phenol and pilocarpine, which has been employed subcutaneously in phthisis.

**Asex'ual.** Devoid of sexual organs or characteristics; term applied to reproduction without sexual intercourse.

**Asexualiza'tion.** Rendering asexual, as operation of castration or spaying.

**Ash.** The residue of a body after it has been burned; a tree of the genus *Fraxinus*. **Amer'ican a.,** Fraxinus americana. **Bit'ter a.,** Bittera febrifuga, quassia. **Blue a.,** Fraxinus quadrangulata. **Moun'tain a.,** Sorbus acuparia and americana. **Prick'ly a.,** Aralia spinosa, Xanthoxylon clava Herculis, X. fraxineum. **Stink'ing a.,** Ptelea trifoliata. **Tree a.,** Fraxinus excelsior. **White a.,** Fraxinus americana.

**Ashan'tee pep'per.** African cubebs, W. African pepper, Guinea or African black pepper; derived from Piper clusii.

**Asiali'a** or **Asialoch'ia.** Deficiency or absence of saliva.

**Asialorrhœ'a** (*a*, priv., *sialon*, saliva, *rheo*, to flow). Diminution in flow of saliva.

**Asiat'ic bal'sam.** Balsamum gileadense. **A. chol'era,** see *Cholera.*

**Asim'ina tril'oba.** See *Carica papaya.*

**Asiminin'.** Principle of Asimina triloba; anæsthetic.

**Asit'ia** (*a*, priv., *sitos*, food). Abstinence from and loathing of food.

**As'keles.** Asceles.

**Aski'tes.** Ascites.

**Asklepi'adæ.** Asclepiadæ.

**Aso'des** or **Asso'des** (*ase*, disgust). Satiety accompanied with anxiety and nausea, as in *febris asodes*, fever so characterized.

**Aso'ma** (*a*, priv., *soma*, body). A monster without or with only a rudimentary body or trunk.

**Aso'matous.** Without body or trunk; applied to a monster so constituted.

**Aspalaso'mus** (*aspalax*, mole, *soma*, body). Monster with imperfect development of the eyes; also one in which the fissure and eventration extend chiefly upon the lower part of the abdomen, the urinary apparatus, genitals, and rectum opening externally by three distinct orifices; celosomus.

**Asparagin'.** See *Asparagus*. **Bil'iary a.,** taurin.

**Asparagin'ic acid.** Asparginic acid.

**Aspar'agus.** A plant of the genus *Asparagus*, ord. *Liliaceæ*. **A. officina'lis,** the fresh roots are diuretic, perhaps owing to a crystallzable principle, *asparagin* ($C_4H_8N_2O_3$), found in it as well as in marshmallow, licorice root, lettuce, and several other plants; they are also sedative. Acted on by acids, *aspartic acid* or amidosuccinic acid results. Extract of the roots is used as a sedative in heart affections.

**Aspar'amide.** Asparagin.

**Aspargin'ic** or **Aspar'tic acid.** $C_4H_7NO_4$. See *Asparagus.*

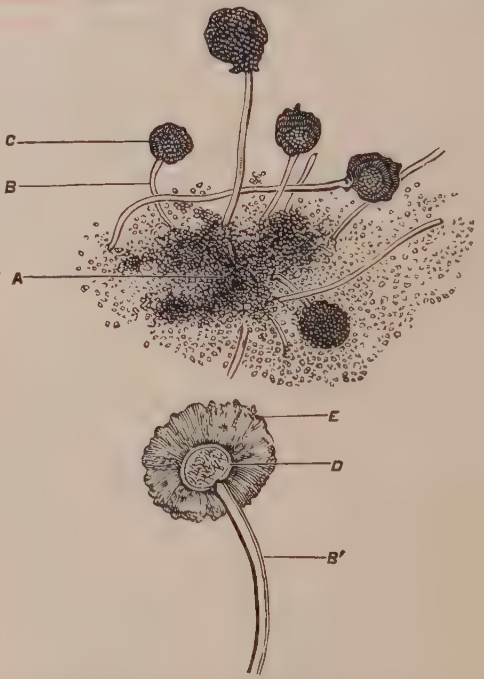
**As'parol.** Fluid extract of Asparagus officinalis.

**Aspa'sia.** Ball of wood soaked in infusion of galls; used for constringing the vagina.

**Aspergillin'.** Vegetable hæmatin; black pigment from the spores of Aspergillus nigrescens and other varieties of A.

**Aspergillo'sis.** Otomycosis.

**Aspergil'lus.** A hyphomycetous fungus, found under different names in different parts of the body. **A. auricula'ris,** in wax of human ear. **A. fla'vus** or **fumiga'tus,** A. nigrescens. **A. glau'cus,** found in the ear and in the lungs of animals, and also as a mould on dried apples and peaches. **A. malig'nus,** causing otomycosis in man and general mycosis on inoculation in other animals, such as rabbits. **A. mucoroi'des,** in gangrenous or tuberculous portions of the lungs; **A. ni'ger** or **nigres'cens,** in the ear and in mycoses of the lungs and in the nose. **A. ory'zæ,** a fungus converting starch and dextrin of rice into sugar, and converted by the yeast fungus into alcohol, forming the sacki wine of Japan.



Aspergillus nigricans. A, mycelium, covered with numerous fallen spores; B, B', hypha; C, sporangium with ripe spores; D, receptaculum; E, sterigmata with spores. (Politzer.)

**Asper'itas** or **Asperitu'do.** Asperity; hoarseness; trachoma. **A. arte'riæ as'peræ,** hoarseness. **A. cu'tis,** roughness of the skin from deficient secretion of sebaceous matter.

**Asper'ity.** Inequality on surface of bone, serving for insertion of fibrous structures.

**Asperm'al.** Aspermous.

**Asperma'sia** or **Asperma'tia.** Aspermatism.

**Aspermat'ic.** Aspermous.

**Asper'matism** (*a*, priv., *sperma*, sperm). Deficiency or absence of or inability to ejaculate the seminal secretion.

**Asperm'atous.** Aspermous.

**Asper'mia.** Aspermatism.

**Asperm'ous.** Deficient in amount of semen; affected with aspermatism.

**Asper'sion** (*aspergo*, to sprinkle). Act of sprinkling or pouring liquid *guttatim* over a wound, ulcer, etc.; cataplasm; fomentation.

**Asper'ula** (dim. of *aspĕr*, rough). Galium aparine. **A. odora'ta,** sweet-scented wood-roof; diuretic, tonic, astringent.

**Asphalge'sia.** Tactile impression of a burn made by contact with metals; generally noticed in hypnotism.

**As'phalt** or **Asphal'tum.** Black resinous material, sometimes found pure in nature. It enters into the composition of certain ointments and plasters.

**Asphalti'tes.** First lumbar vertebra.

**Asphod'elus.** Day lily, daffodil. Bulbs of this Southern European plant (ord. *Liliaceæ*) contain a fecula with which bread has been made, and have been considered diuretic; also used as an application in scabies.

**Asphyc'tic** or **Asphyc'tous.** Relating to asphyxia; pulseless.

**Asphyx'ia** (*a*, priv., *sphyxis*, pulse). Suspension of circulation or syncope; pulselessness; suffocation; suspended animation, produced by non-conversion of venous blood of the lungs into arterial, from interrupted respiration. Owing to the supply of air being cut off, the unchanged venous blood of the pulmonary artery passes into minute radicles of the pulmonary veins; but as the latter require arterial blood to excite them, more or less stagnation takes place in the pulmonary capillaries. Death occurs from this cause and from want of arterial blood, and not owing to venous blood being distributed through the system and poisoning it. Apparent death, death trance, is characterized by suspension or diminution of respiration and circulation to such a degree as to be scarcely or not at all perceptible. Several varieties of asphyxia have been designated: 1. *A. of the newborn*, often dependent upon feeble condition of the infant, or on torpor of the medulla oblongata not permitting respiration to be established. 2. *A. by inhalation of gases*, some of which cause death by producing spasmodic closure of the glottis; others by want of oxygen. 3. *A. from mechanical causes*, as by strangulation, or hanging, or suffocation. *A. by submersion*, a. by drowning, death occurring in this way in consequence of the medium being unfit for respiration. 5. *A. from torpor of medulla oblongata*. 6. *Cutaneous a.*, a condition resulting when an animal is shaved and the body coated over with varnish impenetrable to water and gases, death then occurring from asphyxia. For modes of resuscitation, see *Resuscitation*. **A. al'gida,** a. from exposure to cold. **A. cataph'ora,** a. with brief remissions. **Chol'era a.,** Asiatic cholera. **A. carbon'ica,** a. by inhalation of carbonic oxide and related gases. **Cuta'neous a.,** see *Asphyxia*. **A. flatulen'ta,** apoplexia flatulenta. **Heat a.,** sunstroke. **A. idiopath'ica,** fatal syncope owing to relaxation of the heart. **A. immerso'rum,** a. by submersion. **A. lethar'gica,** torpor with drowsiness. **A. liv'ida,** a. attended with cyanosis, vessels of the skin being swollen with blood. **Lo'cal a.,** see *Raynaud's disease*. **A. neonato'rum** or **neophyto'rum,** or **A. of new-born,** see *Asphyxia*. **A. pal'lida,** a. attended with pallor of the surface of the body. **A. pestilen'ta,** see *Cholera*. **So'lar a.,** sunstroke. **A. spina'lis,** a from extravasation of blood into the spinal canal. **A. suffocatio'nis,** a. from suffocation. **A. traumat'ica,** a. from injury. **A. valsalvia'na,** syncope from heart affection. **A. vig'il,** coma accompanied with delirium, see *Coma vigil*.

**Asphyx'ial** or **Asphyx'ic.** Relating to asphyxia.

**Asphyx'iant.** Producing asphyxia. **Tox'ic a.,** a substance which produces poisonous asphyxial symptoms.

**Asphyx'iated.** In a condition of asphyxia.

**Asphyx'y.** Asphyxia.

**As'pic.** Lavandula spica.

**Aspidin'.** A poisonous principle from male fern; also filicin, an inert anhydride of filicic acid.

**Aspidiopsori'asis** (*aspidion*, small shield). Psoriasis attended with shield-shaped scales.

**Aspidis'cus.** External sphincter ani.

**Aspid'ium** (Ph. U. S.). Filix mas (Ph. Br.), male fern, the rhizome of *Dryopteris* (*Aspidium*) *filix mas* and *D. marginalis;* employed in the treatment of tapeworm in doses of ʒss–j (2.0–4.0). The oleoresin is also official in the Ph. U. S.; it is given in the same doses and for the same purposes. **A. athaman'ticum,** South African fern; anthelmintic; used in powder, infusion, or electuary, especially in the treatment of tapeworm. **A. coria'ceum,** Calagualæ radix. **A. depas'tum,** Dryopteris filix mas. **A. dis'color,** Calagulæ radix. **A. ero'sum,** Dryopteris filix mas. **A. ferrugin'eum,** Calagualæ radix. **A. fi'lix fœm'ina,** Asplenium filix fœmina. **A. fi'lix mas,** Dryopteris filix mas. **A. margina'le,** marginal shield fern; rhizome has properties of A. filix mas. **A. rig'idum,** species growing near Pacific coast of U. S.; used in tapeworm. **A. spinulo'sum** also possesses tæniacide properties.

**As'pidol.** $C_{20}H_{34}O$. Material derived from Aspidium filix mas, having same reactions as cholesterin.

**Aspidosamine'.** $C_{22}H_{28}N_2O_2$. Emetic alkaloid derived from quebracho bark.

**Aspidosper'ma** (Ph. U. S.). Quebracho, the bark of Aspidosperma quebracho blanco, a tree of South America. It is used in diseases accompanied with dyspnœa, as emphysema, pleuritis, phthisis, etc., in doses of half a drachm; also as a tonic and for the relief of headache. The fluid extract (extractum aspidospermatis fluidum) is given in doses of ʒss–j (2.0–4.0).

**Aspidospermatine'.** Alkaloid from quebracho, isomeric with aspidospermine; antipyretic.

**Aspidospermine'.** $C_{22}H_{30}N_2O_2$. Weak alkaloid from quebracho, used in asthma, emphysema, etc., in doses of gr. ss–iij (0.032–0.2). The citrate, hypochlorate, and sulphate are used.

**Aspil'ia latifo'lia.** Hemorrhage plant; grows in Africa; used as astringent in hemorrhage.

**As'pirate.** To inspire; to pronounce the h-sound; to withdraw by suction, as the fluid from a cavity.

**Aspira'tion** (*aspiro*, to breathe). Inspiration; act of attracting or sucking; suction, as in cataract extraction; employment of aspirator; imbibition; pronunciation of a vowel with the h-sound. Pneumat'ic a., see *Aspirator*.

**As'pirator.** Pneumatic aspirator—an instrument consisting of a hollow, air-tight vessel, attached at one side to an air pump, at the other to a tube armed with a hollow needle. The latter is inserted into a cavity containing fluid, as an abscess or the ascitic abdomen, and the content is withdrawn by exhausting the air in the hollow vessel and so sucking up the fluid. **Tra'cheal a.,** a cylinder and piston to be attached to a tracheotomy tube, for use in removing mucus, false membrane, etc.

**Aspirin'.** Acetylsalicylic acid, occurring in the form of white needles, slightly soluble in water; used in rheumatism and other affections as a substitute for sodium salicylate, in doses of gr. v–xxx (0.32 2.0); it is broken up in the intestine and salicylic acid is set free.

**Asple'nium** or **Asple'num.** A genus of ferns. Spleenwort, miltwaste. **A. adian'tum ni'grum,** black maidenhair; rhizome is diuretic. **A. arbo'reum,** species of Jamaica and S. America; anthelmintic and expectorant. **A. au'reum,** A. ceterach. **A. cet'erach,** demulcent, anodyne; used in dropsy, asthma, and calculous affections. **A. esculen'tum,** species growing in India, China, etc.; antiperiodic, expectorant, laxative. **A. falca'tum,** species growing in Australia, India, etc.; rhizome is astringent in dysentery, etc.; herb is laxative. **A. fi'lix fœm'ina,**

female fern, spleenwort; root resembles that of male fern and possesses similar anthelmintic virtues. **A. hir′tum**, species growing in South Sea Islands, Java, Borneo, etc.; vermifuge and expectorant. **A. latifo′lium**, A. ceterach. **A. mura′le**, A. ruta. **A. obtu′sum**, A. ruta muraria. **A. ru′ta mura′ria**, wall-rue, white maidenhair, tentwort; used in same cases as A. filix fœmina. **A. scolopen′drium**, hart's tongue, spleenwort; properties like A. filix fœmina. **A. serra′tum**, of W. Indies and S. America; used in hepatic affections and diarrhœa. **A. trichom′anes** or **trichomanoi′des**, common maidenhair, dwarf spleenwort; properties like those of A. serratum.

**Asporogen′ic** or **Asporogenet′ic** (*a*, priv., *sporos*, spore, *genesis*, formation). Not giving rise to or producing spores; not reproduced by spores.

**Aspor′ous.** Without spores.

**Aspre′do** (*asper*, rough). Trachoma, urticaria. **A. milia′cea**, miliary fever.

**Aspritu′do.** Trachoma.

**As′sa.** Tamarind.

**As′sacou.** Hura brasiliensis.

**Assafe′tida** or **Assafœ′tida.** Asafœtida.

**Assa′la.** Nutmeg.

**Assana′tion.** Sanitary betterment.

**Assay′.** To analyze any substance, particularly to ascertain the proportion of its constituents; also the process of making such an analysis.

**As′serac.** Preparation of opium or other narcotic, used by the Turks.

**Asses′trix.** Midwife.

**As′sidens** (*assideo*, to sit by). Assident symptom.

**As′sident symp′toms.** Accessory or occasional, not pathognomic, signs of disease.

**Assim′ilable** (*ad*, to, *similis*, like, *habilis*, able). Susceptible of assimilation.

**Assim′ilate.** To effect assimilation.

**Assim′ilating** or **Assim′ilatory.** Effecting assimilation.

**Assimila′tion.** Act by which living bodies appropriate and transform into their own substance matters which may be placed in contact with them. The reverse action—separating and eliminating matters already assimilated in the act of nutrition—is termed *destructive assimilation*. **Men′tal a.**, the appropriation and incorporation of ideas and sensory impressions in the mind and the correct reference of them to their origin. **Pri′mary a.**, act by which food, after being converted into chyle, is taken up by the lacteals. **Sec′ondary a.**, change following primary assimilation occurring in the blood-making organs.

**Asso′ciate** or **Asso′ciated.** Connected or joined other than materially. **A. antag′onists**, muscular antagonists, which when acting together move the part in a direction between those effected by the muscles acting separately, as flexion or extension of a segment of a limb resulting from the combined action of the abductors and adductors. **A. move′ments**, movements sometimes seen to occur in a paralyzed part when the corresponding unaffected part is moved; also consensual movements occurring in response to the same stimulus, as flaring of the alæ nasi and expansion of the thorax in forced inspiration. **A. mus′cles**, congenerous muscles; those which concur in the same action. **A. paral′ysis**, paralysis of associated muscles. **A. spasm**, spasm of associated muscles.

**Associa′tion.** The condition of being associated; connection. **A. cen′tre**, the nerve centre assumed to preside over associated movements. **A. fi′bres**, cerebral fibres bringing into association the cortical areas of the same side of the brain.

**Asso′ciative fascic′uli.** Association fibres.

**As′sonance.** A form of alliteration in which words having the same vowel sounds are repeated; sometimes noted as a morbid phenomenon in cerebral disease.

**As′suetude** (*ad*, to, *suesco*, to accustom to anything). Habit; tolerance.

**Assump′tion** (*ad*, to, *sumo*, to take). Prehension; appropriation of oxygen or nutritive material by the blood.

**Assurin′.** Substance in the tissue of the brain, the properties of which are not definitely known.

**As′tacoid** (*astakos*, lobster, *eidos*, resemblance) **rash.** A form of smallpox eruption occurring as a diffused reddish coloration of the whole or the greater part of the body, the patient presenting the hue of a boiled lobster. This form of rash is said to be of evil prognostic import.

**Astac′olith** (*astakos*, lobster, *lithos*, stone). Concretion in the stomach of the crawfish; anciently used for gout, acid conditions, and hemorrhage.

**Asta′sia** (Gr., unsteadiness). Inability to stand, not necessarily due to paralysis or incoordination. **A. aba′sia**, a functional neurosis characterized by inability to stand or walk, the muscular, sensory, and coordinating powers being normal.

**Astat′ic.** Restless; not restrained as to movement; as *astatic magnetic needle*, or *astatic pair*, two magnetic needles in close proximity arranged with poles reversed so that one neutralizes the other, and the needles are free to turn in any direction.

**Asteato′des** (*a*, priv., *stear*, suet). Having the sebaceous secretion of the skin absent or defective.

**Asteato′sis.** Deficiency or absence of fat or sebaceous secretion. *Asteatoses* are diseases characterized by such absence or deficiency.

**As′ter** (*aster*, a star). Dividing nucleus in which fibrils are arranged in open loops and around a common centre, radiated like a star; see *Mitosis*. A name given to plants of several different genera. **A. amel′lus**, grows in Europe and Asia; used in bubo and hernia. **A. at′ticus**, bubonium. **A. cordifo′lius**, heart-leaved aster; A. puniceus, this plant, and other indigenous species, ord. *Compositæ*, possess aromatic properties; antispasmodic, diaphoretic, and nervine. **A. dysenter′icus**, Inula dysenterica. **A. hele′nium**, Inula helenium. **A. inguina′lis**, Eryngium campestre. **A. officina′lis**, Inula helenium. **A. punic′eus**, rough-stemmed a., see *A. cordifolius*. **A. tortifo′lius**, Sericocarpus tortifolius. **A. undula′tus**, Inula dysenterica.

**Asteracan′tha longifo′lia.** Hygraphila spinosa.

**Astereogno′sis** (*a*, priv., *stereos*, solid, *gnosis*, knowledge). Inability to distinguish by the sense of touch the form or character of a body.

**Aste′rias lu′tea.** Gentiana lutea.

**Aste′rion.** Point of junction of lambdoid, parietomastoid, and occipitomastoid sutures in the skull; used in craniometry.

**Aster′nal.** Not connected with the sternum.

**Aster′nia** (*a*, priv., *sternon*, sternum). Monstrosity in which there is absence of the sternum.

**Asteroceph′alus succi′sa.** Scabiosa succisa.

**As′teroid.** Resembling an aster; star-shaped.

**Asthene′ma.** Asthenia.

**Asthe′nia** (*a*, priv., *sthenos*, strength). Want of strength; debility; infirmity. **A. deglutitio′nis**, paralysis of the pharynx. **A. dolorif′ica**, angina pectoris. **A. infan′tum**, marasmus. **Mus′cular a.**, weakness of the muscular movements; paresis. **Ner′vous a.**, neurasthenia. **A. pectora′lis**, angina pectoris.

**Asthen′ic.** Relating to or accompanied by asthenia; weak, feeble, as asthenic diseases.

**Asthenicop′yra** or **Asthenicopyr′etus** (*asthenes*, weak, *pyr*, fever). Adynamic fever.

**Asthenom′eter.** Instrument for measuring the degree of muscular weakness.

**Astheno′pia** (*asthenes*, weak, *ops*, eye). Weakness of sight; weak-sightedness, with fatigue, strain, indistinctness, dread of light, etc. *True* or *accommodative a.* is observed in hypermetropia and astigmatism, and is curable by convex glasses. *Apparent a.* occurs in myopia, and occasionally in hyperæmia of the optic disk and retina. *Binocular* or *muscular a.*, sometimes mistaken for accommodative asthenopia, may arise from weakness or insufficiency of the internal recti muscles or of the ciliary muscles. *Nervous a.* may be produced by some affection of the nervous centres; it may be dependent on an over-sensitive and irritable retina, *retinal a.* *Tarsal a.* is the result of astigmatism produced by pressure of the eyelids on the cornea.

**Asthenop′ic.** Relating to or suffering from asthenopia or weakness of sight.

**Asthenop′yra** or **Asthenopyr′etus** (*asthenes*, weak, *pyr*, fever). Adynamic fever.

**Asth′ma** (Gr., panting). A chronic disease characterized by great difficulty of breathing, recurring at intervals, accompanied with wheezing sounds, a sense of constriction in the chest, and sometimes cough and expectoration. It is frequently hereditary. In some cases respiration is universally puerile during the attack. In the spasmodic form the respiratory murmur is very feeble or absent, and in all forms percussion elicits a clear pulmonary sound. The disease generally consists in a spasmodic constriction of the smaller bronchial ramifications. Treatment is one that relieves spasmodic action—anæsthetics, narcotics, counterirritants, change of air, etc. **A. acu′tum of Mil′lar,** spasm of glottis, laryngismus stridulus. **A. aër′ium,** pneumothorax. **Alve′olar a.,** emphysematous a. **Amyg′daline a.,** reflex a., caused by tonsillar disease or enlargement. **A. arthrit′icum,** angina pectoris. **A. bilio′sum,** a. due to dyspepsia. **Bron′chial a.,** essential a. **Bronchit′ic a.,** catarrhal or humid a. **Car′diac a.,** dyspnœa dependent upon disease of heart. **Catar′rhal a.,** a. with augmented secretion from bronchial tubes; humid a. **Cen′tral a.,** a. from a lesion of the central nervous system. **Convul′sive a.,** dry a.; spasm of glottis, angina pectoris. **A. crys′tals,** Charcot crystals, Leyden crystals; colorless crystalline bodies said to be found in the sputa of asthmatic patients. **A. cultrario′rum,** grinders' a. **Cuta′neous a.,** reflex a. from disease or irritation of the skin. **A. diaphragmat′icum** or **dolorif′icum,** angina pectoris. **Dyspep′tic a.,** a. dependent upon disease of the stomach. **Emphysem′atous a.,** pneumothorax. **Essen′tial a.,** true a., without any apparent organic lesions. **A. fullo′rum,** weavers' a. **Gas′tric a.,** reflex a. from dyspepsia or disease of the stomach. **Grind′ers' a.,** grinders' disease or rot; aggregate of phenomena induced by the inhalation of particles thrown off during the operation of grinding metallic instruments, etc.; the structural changes are enlargement of the bronchial tubes, expansion of pulmonary tissue, and eventually, in some cases, phthisis. **A. gyp′seum,** a. pulverulentum. **Hay a.,** see *Hay fever.* **Heb′erden's a.,** angina pectoris. **A. herpet′icum,** asthma associated with herpes. **Hu′mid** or **hu′moral a.,** spitting asthma, is when the disease is accompanied with expectoration; pulmonary œdema. **A. infan′tum** cynanche trachealis. **A. infan′tum spasmod′icum,** a. thymicum. **Intermit′tent a. of chil′dren,** a. thymicum. **Intrin′sic a.,** a. due to irritation of the lungs. **Kop′pian** or **Kopp's a.,** a. thymicum. **Laryn′geal a.,** laryngismus stridulus. **A. larynge′um infan′tum,** a. thymicum. **Mar′iners' a.,** beriberi. **A. metallario′rum,** miners' asthma. **Mil′lar's a.,** a. acutum. **Mil′lers' a.,** a. pulverulentum. **Mi′ners' a.,** see *Miners' asthma.* **Moist a.,** a. with purulent expectoration. **Na′sal a.,** reflex a. from disease or irritation within the nasal fossæ. **A. nephrit′icum,** a. associated with Bright's disease. **Ner′vous a.,** essential a. **A. noctur′num,** incubus. **Organ′ic a.,** cardiac a. **Pitu′itous a.,** catarrhal or humid a. **Pneumobul′bar a.,** a. from irritation of the pneumogastric nerve. **Pot′ters' a.,** a. pulverulentum pneumonokoniosis. **A. pulverulen′tum,** variety to which millers, bakers, grinders, and others are subject who are constantly exposed to the inhalation of solid particles in the form of dust. The disease is not true asthma, but rather an interstitial inflammation of the lungs due to the irritation of inhaled dust. **Reflex′ a.,** a. caused by irritation or disease in some distant part, as the nose, stomach, tonsils, etc. **Re′nal a.,** uræmic a. **A. seni′le** or **senio′rum,** a. of old persons. **A. sic′cum,** paroxysm is sudden, violent, and of short duration; cough slight and expectoration scanty, with spasmodic constriction. **A. spasmod′icum** or **spas′ticum,** convulsive a. **A. spas′ticoarthrit′icum incon′stans,** angina pectoris. **A. spas′ticum infan′tum,** a. thymicum. **Spit′ting a.,** moist a. **A. syncop′ticum,** angina pectoris. **Thy′mic a.** or **A. thy′micum,** laryngeal a., stridulous or spasmodic laryngitis, suffocative or internal convulsion, intermittent asthma of children, crowing inspiration, vocal asynergy, spasmodic, nervous, or hysterical cough, laryngeal chorea or vertigo, Koppian asthma, laryngismus stridulus, spasm of the larynx or glottis, croup-like inspiration of infants, child-crowing, spasmodic croup, pseudo-croup, spurious or cerebral croup, phrenoglottism, suffocating nervous catarrh. A disease of infants, characterized by suspension of respiration at intervals, great difficulty of breathing, with crowing inspiration, especially on waking, swallowing, or crying, ending often in a fit of suffocation with convulsions. These symptoms are frequently accompanied by rigidity of the fingers and toes, the thumb being drawn forcibly into the palm of the clenched hand, whence the name carpopedal spasm, so called by Kopp. **True a.,** essential a. **A. typ′icum,** a. characterized by periodicity. **Uræ′mic a.,** difficulty of breathing accompanying Bright's disease. **A. u′teri,** hysteria. **A.-weed,** Lobelia inflata.

**Asthmat′ic.** Broken-winded; short of breath; affected with asthma; relating to asthma. **A. drop′sy,** beriberi.

**Asthmogen′ic** (*asthma* + *genesis*, origin). Causing asthma or exciting an asthmatic attack.

**Astigmat′ic** (*a*, priv., *stigma*, point). Affected with or relating to astigmatism. **A. lens** is one used for ascertaining the amount of astigmatism.

**Astig′matism.** State of unequal refraction in the planes of the several ocular meridians, as a result of which the rays are not brought to one focus, but converge at different distances. As a rule, the meridian of greatest curvature in the eye, hence that in which the greatest refraction occurs, is one that is vertical or nearly so. *Astigmatism against the rule,* therefore, is a condition of a. in which the greatest refraction occurs in a horizontal meridian, while in *astigmatism with the rule* the greatest refraction is found, as normally, in a vertical meridian. **Acquired′ a.,** a. due to corneal or lenticular irregularity resulting from disease or injury. **A. against the rule,** see above. **Com′pound a.** is that in which hypermetropia (*compound hypermetropic a.*) or myopia (*compound myopic a.*) also exists in all the ocular meridians. **Congen′ital a.,** a. due to irregularity in the cornea or lens existing at birth, and not resulting from injury or disease. **Cor′neal a.,** that in which the cause resides in the cornea. **Hypermetrop′ic a.,** a. in which hypermetropia coexists; in *simple h. a.* the hypermetropia exists in one meridian; in *compound h. a.* it exists in both. **Irreg′ular a.** is that in which the a. is not equal in all parts of the same meridian, only a part of the cornea being affected. **Lentic′ular a.,** a. due to unequal refraction in the crystalline lens. **Mixed a.,** a. complicated with myopia in one meridian and hypermetropia in the other. **Myop′ic a.,** a. complicated with myopia; in *simple m. a.* the myopia exists in one principal meridian only; in *compound m. a.* it exists in all the meridians. **Reg′ular a.,** a. due to a defect in the entire cornea, and not, as irregular a., to localized inequalities in the refracting power of the cornea. **A. with the rule,** see under the prime.

**Astigmatom′eter** or **Astigmat′oscope.** An instrument for determining the degree of astigmatism.

**Astig′mia** (*a*, priv., *stigme*, point). Astigmatism.

**Astig′mic.** Astigmatic.

**Astig′mism.** Astigmatism.

**Astigmom′eter.** Astigmatometer.

**Astigmom′etry.** The art of measuring the degree of astigmatism.

**Ast′ley Coop′er's her′nia.** Crural hernia with multilobar sac.

**Asto'mia** (*a*, priv., *stoma*, mouth). Absence of mouth.

**As'tomous** or **Asto'matous.** Without mouth or oral orifice.

**Astragalec'tomy** (*astragalus*+*ektome*, excision). Excision of the astragalus.

**Astrag'alocalca'neal.** Relating to astragalus and calcaneum.

**Astrag'aloid** (*astragalus*+*eidos*, form). Resembling the astragalus.

**Astragaloi'des syphilit'ica.** Astragalus exscapus.

**Astrag'aloscaph'oid.** Relating to astragalus and scaphoid.

**Astragalot'omy** (*astragalus*+*tome*, cutting). Excision of the astragalus.

**Astrag'alus.** Short bone situated at the superior and middle part of the tarsus, where it is articulated with the tibia; hucklebone, slingbone, or first bone of the foot. A genus of plants of the order *Leguminosæ*, several of which yield gum tragacanth. **A. adscen'dens**, species growing in Persia, from which tragacanth is obtained. **A. brachyca'lyx,** also source of tragacanth. **A. cre'ticus**, species from Crete and Greece yielding tragacanth. **A. ex'scapus**, stemless milkvetch; diuretic, diaphoretic, antisyphilitic. **A. glycyphyl'lus,** herb of Europe and Asia; leaves are aperient, and have been used in retention of urine, strangury, etc. **A. gum'mifer**, from Persia, is a source of tragacanth. **A. mollis'simus,** loco-weed; plant of the western United States, poisonous to horses and other grazing animals, inducing in them symptoms of insanity; its active principle is narcotic, powerfully sialagogue, mydriatic, and tetanic. **A. pote'rium** grows in Granada; root is tonic and nervine **A. tragacan'thus,** a source of gum tragacanth. **A. ve'rus,** goatshorn, milkvetch, a source of gum tragacanth; see *Tragacantha.* Tragacanth is also credited to other species of astragalus than those above mentioned, such as A. parnassii, etc.

**Astran'tia.** Imperatoria. **A. diapen'sia,** sanicula. **A. ma'jor,** black sanicle, black masterwort of Central Europe; rhizome is purgative.

**Astrapapho'bia** (*astrape*, lightning, *phobos*, fear). Morbid dread of thunder and lightning, a storm often inducing in the sufferer nausea, vomiting, etc.

**Astric'tion** (*astringo*, to constringe). Action of astringents; constriction; constipation.

**Astricto'ria.** Astringents.

**Astrin'gent prin'ciple.** Vegetable principle existing in bark of numerous plants possessing constringing properties. **A. root,** Comptonia asplenifolia.

**Astrin'gents** (*astringo*, to contract). Agents which constringe organic textures, diminish secretion from mucous membranes, check hemorrhage, etc. Astringents act locally on the part to which they are applied, or remotely on internal organs after absorption into the blood. The following is a list of the important astringents: Acids, alcohol, alum, chalk, and lime. Salts of the heavier metals: bismuth salts, cadmium sulphate, copper sulphate, ferric chloride, lead acetate, silver nitrate, and zinc sulphate. Gallic and tannic acids. Vegetable substances containing gallic and tannic acids: catechu, galls, kino, oak bark, uva ursi, and arbutin. Adrenal preparations. Astringents which arrest hemorrhage from surfaces or vessels are called *styptics.* They do this by causing rapid formation of a clot or by contracting the vessels. The chief styptics are: Acids, actual cautery, alum, ferric chloride, gallic and tannic acids, lead acetate. Collodion and matico act mechanically. Cold (ice), digitalis, ergot, cocaine, and adrenal preparations contract the small vessels.

**As'troblast** (*astron*, star, *blastos*, germ). An embryonic cell developing into an astrocyte.

**Astrobole'sia** or **Astrobo'lia.** Apoplexy.

**Astrob'olism.** Apoplexy; sunstroke; gangrene.

**As'trocyte** (*astron*, star, *kytos*, cell). A stellate or star-shaped neuroglia cell, such as Deiter's cell.

**Astrokinet'ic** (*astron*, star, *kinesis*, motion). Relating to the movement of an aster or centrosome.

**Astrol'ogy** (*astron*, star, *logos*, discourse). Art of divining by inspecting the stars; anciently considered a part of medicine.

**Astroman'tia.** Astrology.

**Astropho'bia** (*astron*, star, *phobos*, fear). A morbid fear of going out on a starlit night.

**As'trosphere** (*astron*, star, *sphaira*, a ball). The attraction sphere surrounding the centrosome.

**Astrosta'sis** (*astron*, star, *stasis*, standing). The resting stage of a centrosome.

**Astrostat'ic.** Relating to or in a condition of astrostasis.

**Astu'chium.** Part of the inferior cornu of the lateral ventricle of the brain.

**Astu'rian rose.** Endemic cutaneous affection of Asturia.

**Astyph'ia** or **Asty'sia** (*a*, priv., *styo*, to make erect). Impotence; want of erectile power.

**Asyllab'ia.** Want of power to express words syllabically.

**Asy'lum.** A place of refuge, care, or treatment for those affected with diseases of the organs of sense or of the mind. **A. ear,** morbid condition of external ear sometimes noticed in the insane. See *Hæmatoma auris.*

**Asymbo'lia** (*a*, priv., *symballo*, to connect). Aphasia; ability to express one's self by signs.

**Asymmet'rical** (*a*, priv., *syn*, with, *metron*, measure). Not symmetrical.

**Asym'metry.** Absence of usual similarity in appearance, shape, etc., of surfaces or organs characterizing opposite sides of the body. **Merid'ional a.,** the condition of the cornea underlying regular astigmatism.

**Asyn'chronism** (*a*, priv., *syn*, together, *chronos*, time). Want of synchronism.

**Asyn'clitism** (*a*, priv., *syn*, together, *klitos*, inclined). Want of parallelism of the planes of the fetal head to those of the pelvis.

**Asynech'ia** (*a*, priv., *synecheia*, connection). Absence of continuity.

**Asyn'ergy** (*a*, priv., *syn*, together, *ergon*, work). Want of correlation between organs. **Progres'sive locomo'tor a.,** progressive locomotor ataxia. **Ver'bal a.,** aphasia. **Vo'cal a.,** asthma thymicum; want of coordination of the laryngeal muscles, as in chorea.

**Asyne'sia** (*a*, priv., *syniemi*, to comprehend). Stupidity; dementia.

**Asyno'dia** (*a*, priv., *synodia*, copulation). Impotence; suspension of or lack of sexual intercourse.

**Asyno'via.** Deficiency or lack of synovial fluid.

**Asyn'trophy** (*a*, priv., *syn*, together, *trophe*, nourishment). Absence of symmetrical nourishment or growth.

**Asystemat'ic.** Lacking system; not systematized, as certain nerve cells.

**Asystole** (a-sis'to-ly), **Asysto'lia** or **Asys'tolism.** Incomplete systole or ventricular contraction, so that the ventricles are not completely emptied of blood; met with in degeneration and asthenia of the cardiac muscles.

**Asystol'ic.** Relating to asystolia or incomplete systole.

**Atac'tic** (*a*, priv., *taxis*, order). Erratic; irregular; ataxic. **A. apoph'yses,** term given to minute ramifications of veins.

**Atac'tically apha'sic.** One who can recall the names for things, but who cannot arrange words in proper sequence; one suffering from ataxaphasia.

**Atalan'tia monophyl'la.** Malabar shrub, bark of which is bitter and antispasmodic, and oil is used as an external application in rheumatism and paralysis.

**Atarax'ia** (*ataraxia*, peace of mind). Moral tranquility; absence of emotion.

**At'avism** (*atavus*, ancestor, forefather). The reappearance of a mental or physical family trait or an hereditary disease after its absence in one or more generations; the inheritance of some anomaly or characteristic from a remote ancestor.

**Ataxapha'sia.** An ataxic or disordered condition of aphasia, as shown in inability to speak sentences correctly.

**Atax'ia** (*a*, priv., *taxis*, order). Ataxy; disorder; irregularity, as of pulse; disorder of nervous system, especially that form characterizing nervous fevers and nervous condition; want of coordination of muscular movements. **Abort'ive locomo'tor a.,** a neuralgic affection, severe and long-continued pains being the chief characteristic. **Acute' cen'tral a.,** incoordination dependent upon a myelitis with numerous foci in the cord, pons, and usually the cerebrum, following acute infectious diseases. **Alcohol'ic a.,** form met with in alcohol drinkers, due to neuritis. **Briquet's** (bre-kase') **a.,** hysterical a. with cutaneous anæsthesia. **Bro'ca's a.,** hysterical a. **Bul'bar a.,** locomotor a., from disease or injury of pons Varolii or medulla oblongata. **Cen'tral a.,** a. dependent upon lesion of the coordination centre. **Cerebel'lar a.,** staggering form of a., from lesion of cerebellum. **Cer'ebral a.,** a. due to lesion of the cerebrum. **Chore'ic a.,** want of muscular coordination, seen in chorea. **A. cor'dis,** extremely violent and irregular palpitation of the heart. **Drunk'ard's a.,** alcoholic a. **Famil'ial a., Fam'ily a., Fried'reich's a., Gener'ic a.,** or **Hered'itary a.,** Friedreich's disease; an incurable disease resembling locomotor a., occurring in children, in which there is a. of the limbs and want of control of the muscles regulating speech, ending in paralysis and atrophy; the lesion is a sclerosis of the posterior and lateral columns of the spinal cord. **Hered'itary a.,** familial a. **H. cerebel'lar a.,** a symptom-complex of hereditary nature occurring in early life, with marked cerebellar characteristics. **Hyster'ical a.,** hysteria with ataxic symptoms. **Ley'den's a.,** acute central a. **Locomo'tor a.,** tabes dorsalis; posterior spinal sclerosis; a chronic morbid condition described by Duchenne of Boulogne, prominent symptom of which is loss of power to coordinate voluntary movements, with lightning-like pains in the back, viscera, and lower extremities; the tendon reflexes are lessened or obliterated, and disturbances and irregularities of sensory manifestations occur, together with trophic disturbances in the joints (Charcot's arthropathy). The lesion is a sclerosis of the posterior root-zones of the spinal cord. The affection occurs in middle age or later, and is generally regarded as parasyphilitic in origin. **A. men'suum** or **men'strual a.,** vicarious irregularity of menses. **Mo'tor** or **moto'rial a.,** progressive locomotor a. **Mus'cular a.,** want of coordination of muscles. **Progres'sive locomo'tor a.,** locomotor a. **Sang'er Brown's a.,** hereditary cerebellar a. **Spi'nal a.,** locomotor a. **A. spirit'uum,** nervous diathesis. **Stat'ic a.,** Brach-Romberg symptom—uncertainty or unsteadiness of gait or inability to stand still in the dark or with closed eyes. **Supe'rior a.,** muscular incoordination affecting chiefly the upper extremities. **Ther'mal a.,** irregular and rapid variations of body temperature. **Vasomo'tor a.,** irregular variations in tension of the blood-vessels; alternate flushing and blanching of the skin through variations in the calibre of the cutaneous capillaries.

**Atax'iagram.** Record made by an ataxiagraph.

**Atax'iagraph.** An instrument for recording the intensity of the Brach-Romberg symptom as indicating the degree of ataxia in tabes dorsalis.

**Ataxiamne'sic.** Both ataxic and amnesic.

**Atax'ic.** Having characters of ataxia; affected with ataxia. **A. arthrop'athy,** Charcot's arthropathy. **A. paraple'gia,** combination of paraplegia and ataxia, dependent on disease of the spinal cord.

**Ataxoadynam'ic.** A condition marked by ataxic and adynamic characteristics.

**Ataxophe'mia** (*ataxia* + *phemi*, to speak). Inability to combine words properly in speaking; want of coordination of speech.

**Ataxopho'bia.** Morbid apprehension of becoming ataxic; abnormal orderliness and intolerance of any irregularity in the position of objects or in walking and other repeated movements.

**At'axy.** Ataxia.

**Atec'nia** (*a*, priv., *teknon*, a child). Sterility.

**Atelec'tasis** (*ateles*, imperfect, *ektasis*, dilatation). Imperfect expansion or dilatation, as in a. pulmonum, imperfect expansion of the lungs at birth. A similar condition is observed in lungs which have received air, dependent, in many instances, on catarrhal condition of bronchial tubes, and variously called pulmonary collapse or collapse of the lung, collapsus pulmonis, apneumatosis.

**Atelencephal'ia** (*ateles*, imperfect *enkephalos*, brain). Imperfect development of the cranium or its contents.

**Atelepla'sia** (*ateles*, imperfect, *plasso*, to form). Imperfect development.

**Ate'lia** (*ateleia*, imperfection). Monstrosity in which there is want of some member.

**Atelio'sis.** A condition of dwarfism, or arrested development, occurring without evident cause.

**Atelo-** (*ateles*, imperfect). In composition, defective.

**Atelocar'dia** (*kardia*, heart). Imperfect formation of the heart.

**Atelocephal'ia** (*kephale*, head). Imperfect development of the skull or head.

**Atelochei'lia** (*cheilos*, lip). Imperfect development of the lip.

**Atelochei'ria** (*cheir*, hand). Imperfect development of the hand.

**Ateloencephal'ia.** Atelencephalia.

**Ateloglos'sia** (*glossa*, tongue). Imperfect development of the tongue.

**Atelogna'thia** (*gnathos*, jaw). Imperfect development of the jaw.

**Atelomye'lia** (*myelos*, marrow). Imperfect development of the spinal cord.

**Atelopo'dia** (*pous*, foot). Imperfect development of the foot.

**Ateloproso'pia** (*prosopon*, face). Imperfect development of the face.

**Atelorrhachid'ia** (*rhachis*, spine). Imperfect development of the spinal column.

**Atelosto'mia** (*stoma*, mouth). Imperfect development of the mouth.

**Athaman'ta.** A genus of plants, ord. *Umbelliferæ*. **A. an'nua,** A. cretensis. **A. aureoseli'num,** A. oreoselinum. **A. creten'sis** or **cre'tica,** candy carrot; seeds are acrid and aromatic, carminative, diuretic, and emmenagogue. **A. macedon'ica,** Bubon macedonicum. **A. me'um,** Æthusa meum. **A. oreoseli'num,** black mountain parsley; plant, seed, and roots are aromatic, deobstruent, and lithontriptic. Distilled oil has been used in toothache.

**Athamantin'.** A glucoside from the root and seeds of Athamanta oreoselinum; it has an acrid, bitter taste.

**Athana'sia** (*a*, priv., *thanatos*, death). Tansy; also an old remedy for diseases of the liver, jaundice, gravel, etc., consisting of saffron, cinnamon, lavender, cassia, myrrh, honey, etc.

**Athelas'mus** (*a*, priv., *thele*, breast or nipple). Impracticability of giving suck.

**Athe'les.** Without a breast; weaned; devoid of nipple; one that has not sucked or given suck.

**Athe'lia.** Absence of nipple.

**Athe'lus.** Atheles.

**Athel'xis** (pressing out). Act of giving suck or squeezing out milk.

**Atherin'.** Alcoholic solution of ammonium pyrogallate.

**Ather'mancy.** Condition of being athermanous; opaque in respect to heat rays.

**Ather'manous** (*a*, priv., *therme*, heat). Non-conductive of heat; absorbing heat rays.

**Atherma'sia** or **Athermo'sia** (*a*, priv., *thermasia*, heat). Absence of heat.

**Athermosystal'tic** (*a*, priv., *therme*, heat, *systaltikos*, contractile). Not contracting under influence of heat or cold, as a muscle.

**Athero'ma** (*athere*, pap or pulp). Wen or sebaceous cyst; also disease of the larger arteries of the trunk and limbs and at the base of the brain (arterial atheroma), in which there are yellowish patches covered by normal endothelium, infiltration taking place at first between the laminæ of the innermost coat of the vessel, followed by fibrous deposit, fatty degeneration, and calcification, or perhaps softening; the latter results in atheromatous abscess; or ulceration—atheromatous ulcer—may occur.

**Atheroma′sia.** Atheromatous degeneration.

**Atheromato′sis.** A condition of atheroma.

**Athero′matous.** Of the nature of atheroma. **A. ab′scess,** see *Atheroma.* **A. degenera′tion,** see *Atheroma.* **A. pulp,** bran-like pulp; the appearance presented by the metamorphosis of the products of fatty degeneration enclosed in a cavity whose walls are in a state of inflammatory irritation. **A. ul′cer,** see *Atheroma.*

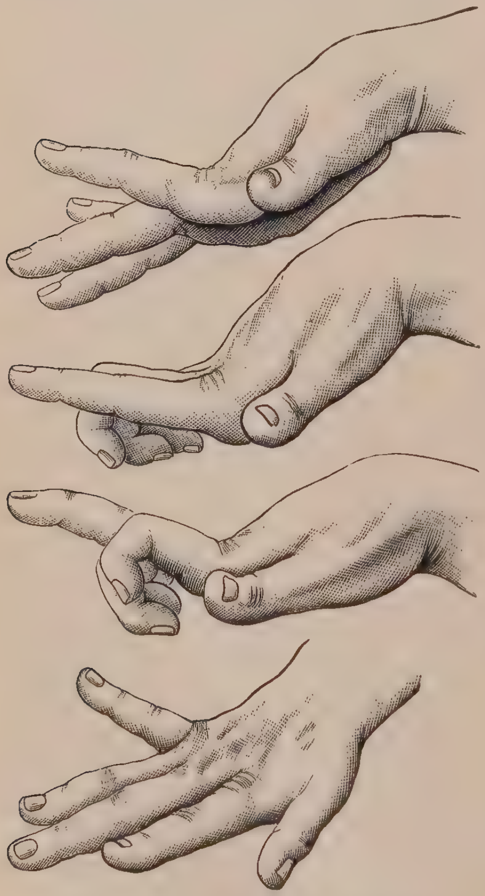
**Athero′sis.** Atheromasia.

**Atherosper′ma moscha′ta.** Australian sassafras; the bark is diaphoretic, diuretic, and sedative to the heart's action.

**Atherospermine′.** $C_{30}H_{40}N_2O_5$. Bitter alkaloid derived from Atherosperma moschata.

**Ath′etoid.** Relating to athetosis. **A. move′ments or spasms,** movements characteristic of athetosis.

**Atheto′sis** (*athetos,* without fixed position). Affection characterized by inability to retain the fingers in any position in which they are placed. The fingers and hands are in a constant state of slow movement, consisting in flexion, extension, adduction, abduction, supination, and pronation, following one after the other in almost rhythmical succession. The toes and feet may be affected in the same way. The condition has been called Hammond's disease, after the neurologist who first described it.



Examples of the positions of the fingers in the movements of athetosis. (Strümpell.)

**Ath′lete's heart.** Aortic incompetence from overexertion.

**Athoracoceph′alus** (*a,* priv., *thorax,* chest, *kephale,* head). Acephalogaster.

**Athrep′sia** (*a,* priv., *threpsis,* nourishment). Parrot's disease. Imperfect nutrition, of infants particularly, from faulty development, emaciation, vomiting, liquid passages, etc.

**A′thrix** (*a,* priv., *thrix,* hair). One who has lost his hair. **A. dep′ilis,** alopecia.

**Athy′mia** (*a,* priv., *thymos,* courage). Despondency; prostration of spirits; melancholy; groundless fear. **A. pleonec′tica,** insanity with desire for money, see *Pleonectica.*

**Athy′rea.** Condition resulting from the absence of the thyroid gland or the suspension of its functions; myxœdema; cretinism.

**Athyr′ium fi′lix fœ′mina.** Asplenium filix fœmina. **A. fi′lix mas,** Polypodium filix mas. **A. mol′le, ova′tum,** or **trif′idum,** Asplenium filix fœmina.

**Athyroida′tion.** Athyrea.

**A′tis.** Root of Aconitum heterophyllum. Tonic, antiperiodic. Alkaloid from it is called *atisine,* $O_{46}H_{74}N_2O_5$.

**Atlan′tad.** Toward the atlantal aspect.

**Atlan′tal.** Relating to the atlas. **A. as′pect,** aspect toward the region of the atlas. **A. extrem′ities,** upper limbs.

**Atlan′ticobasila′ris inter′nus.** Muscle passing between the atlas and basilar process of the os occipitis.

**Atlan′ticomastoide′us.** Muscle from the atlas to the mastoid process of the temporal bone.

**Atlan′tiobli′quus.** Obliquus superior capitis muscle.

**Atlant′ion.** Atlas.

**Atlan′tirec′tus.** Rectus capitis posticus minor muscle.

**Atlantoax′ial** or **Atlantoax′oid.** Relating to the atlas and axis, as atlantoaxial articulation, atlantoaxial ligaments, etc.

**Atlantodid′ymus.** A monster having two heads attached to one neck.

**Atlan′to-occipit′al.** Relating to atlas and occipital bone, as atlanto-occipital articulation.

**Atlan′to-odon′toid.** Relating to the atlas and odontoid process of the axis.

**At′las.** First cervical vertebra, supporting weight of the head, as Atlas is said to have supported the globe on his shoulders; by older anatomists, the last cervical vertebra.

**Atloax′oid.** Atloidoaxoid; relating to both atlas and axis.

**Atlod′ymus** or **Atlodid′ymus** (*atlas* + *didymos,* twin). Atlantodidymus, a monster single below and double above; one having a single body with two distinct heads supported on one neck.

**Atloi′doax′oid.** Relating to the atlas and axis, as **A. articula′tion,** articulation between first two cervical vertebræ. **A. lig′aments,** two in number, passing between those vertebræ.

**Atloidomastoide′us.** Obliquus superior capitis muscle.

**Atloidomuscula′ris.** Superior branch of occipital artery.

**Atloido-occip′ital.** Relating to the atlas and occiput. **A. mus′cle,** rectus capitis posticus minor.

**Atloido-odon′toid.** Relating to the atlas and the odontoid process.

**Atloi′dosuboccipita′lis.** Rectus capitis lateralis.

**Atmiat′ria, Atmidiat′ria** (*atmos,* vapor, *iatreia,* treatment). Treatment by fumigation or inhalation.

**At′mic.** Relating to vapor.

**Atmidalbu′min.** Product of the action of overheated steam on protein.

**Atmidal′bumose.** Albumose produced by the action of overheated steam.

**Atmocau′sis** or **Atmocauteriza′tion** (*atmos*, steam; *kauo*, to burn). Cauterization by steam.

**Atmocau′tery.** Apparatus for effecting cauterization by steam.

**At′mograph** (*atmos*, vapor, *grapho*, to describe). Spirograph; instrument for marking respiratory movement, as the sphygmograph does the movements of the pulse; the process is called *atmog′raphy*.

**Atmol′ysis** (*atmos*, vapor, *lysis*, separation). Analysis of gas, vapor, or atmospheric air.

**Atmom′eter** (*atmos*, vapor, *metron*, measure) or **Atmidom′eter.** Apparatus for determining amount of humidity in the air.

**At′mosphere** (*atmos*, vapor, *sphaira*, sphere). Spherical mass of respirable air surrounding the earth in every part for an indefinite height. It consists of 21 volumes of oxygen, 78 of nitrogen, and 1 of argon, carbonic oxide, and various organic impurities. Also any gaseous envelope or zone surrounding a body. See *Air*. **Elec′trical a.,** the zone surrounding an electrically charged body, within which the electrical influence or force is manifest.

**Atmospher′ic.** Relating to the atmosphere.

**Atmospheriza′tion.** Conversion of venous into arterial blood by introduction of oxygen.

**Ato′cia** (*a*, priv., *tokos*, child). Sterility in woman.

**Ato′cic.** Sterile; childless. A remedy to prevent conception.

**At′ocous.** Sterile; without children.

**At′om.** Smallest division of an element or smallest part capable of entering into chemical combination. **Compo′nent a.,** a. which by uniting with another atom of different character forms a compound atom. **Com′pound a.,** molecule. **Elemen′tary a.,** a. of an elementary body; primary atom.

**Atom′ic.** Relating to an atom, as *atomic weight*, weight of an atom of one substance compared with the weight of an atom of another taken as a standard. Hydrogen is usually accepted as such a standard, its atomic weight being considered as 1. See *Elements*. **A. heat,** specific heat of atoms. **A. the′ory,** theory that the molecules of matter are composed of atoms of definite and invariable number in each molecule.

**Atomic′ity.** Quantivalence.

**Atomiza′tion.** Act of reducing to minute particles, as of liquid into spray; pulverization.

**At′omized.** In the form of spray. See *Pulverization*.

**At′omizer.** Apparatus for producing and throwing a fine spray, for application of medicated liquids to the surface of the throat or other parts, for disinfection, etc. See *Pulverization*.

**At′omy.** Skeleton.

**Ato′nia** (*a*, priv., *tonos*, tone). Atony. **A. nutriti′va,** atrophy. **A. ventric′uli,** debility of the stomach.

**Aton′ic.** Wanting tone.

**At′ony.** Languor; want of tone; weakness of organs, particularly those that are contractile. **Nu′tritive a.,** atrophy.

**Atopomenorrhœ′a** (*atopos*, out of place, *men*, month, *rheo*, to flow). Vicarious menstruation.

**Atox′ic** (*a*, priv., *toxicon*, poison). Not poisonous.

**Atox′yl.** $C_6H_5NHAsO_2$. An arsenical preparation used in the treatment of cutaneous affections.

**At′rabile.** Atrabilis.

**Atrabil′iary** or **Atrabil′ious** (*ater*, black, *bilis*, bile). Melancholic and hypochondriac. **A. ar′teries, cap′sules,** and **veins,** suprarenal arteries, capsules, and veins; formation of black bile having been formerly attributed to them.

**Atrabi′lis** Atrabile; black bile; melancholy; imaginary thick, black, acrid humor, secreted by the pancreas or suprarenal capsules, causing hypochondriasis, melancholy, and mania.

**Atrache′lia** (*a*, priv., *trachelos*, neck). Monstrosity in which the neck is rudimentary or absent.

**Atracheloceph′alus** (*a*, priv., *trachelos*, neck, *kephale*, head). Monster whose neck and head are partially or wholly deficient.

**Atrach′elous.** Devoid of neck; short-necked.

**Atracten′chyma** (*atraktos*, spindle, *chyma*, plastic material). Tissue made up of spindle-shaped cells.

**Atrac′tylis gummif′era.** Gummy-rooted atractylis, pine thistle, ord. *Compositæ*, from the Mediterranean. Root, when bruised, yields a milky, viscid juice, concreting into tenacious masses, which are chewed for the same purposes as mastich. **A. lan′cea,** species from Japan and China; tea from the root is tonic and stomachic. **A. ova′ta,** used in China and Japan as a tonic, stimulant, diuretic, and diaphoretic.

**Atramen′tum** (ink). Mixture of galls and sulphate of iron; astringent, and formerly used as an external application in herpetic affections. **A. suto′rium,** ferri sulphas.

**Atre′mia** (immobility). Continuance in bed without sufficient sickness to warrant it; inability to walk, stand, or sit, yet without loss of voluntary motion.

**Atreselyt′ria** (*atretos*, imperforate, *elytron*, vagina). Atresia of the vagina.

**Atresente′ria** (*atretos*, imperforate, *enteron*, intestine). Atresia of the intestinal canal.

**Atre′sia** (*atretos*, without aperture). Imperforation of natural opening or canal, see *Monster*. **A. a′ni** or **anorec′tal a.,** imperforate anus; aproctia. **A. a′ni adna′ta,** congenital imperforation of anus. **A. au′ris,** adhesion of auricle to side of head, or of the walls of the external auditory meatus to each other. **A. i′ridis** or **A. pupil′læ,** imperforation of the iris, closing the pupil. **A. vagi′næ,** imperforation of the vagina; colpatresia. **A. vul′væ,** imperforation of the vulva.

**Atre′sic.** Relating to or characterized by atresia.

**Atresoblephar′ia** (*atretos*, imperforate, *blepharon*, eyelid). Adherence of the eyelids; symblepharon.

**Atresocys′ia** (*kysos*, anus). Atresia ani.

**Atresome′tria.** Imperforation of the uterus.

**Atre′ta.** Woman with atresia vaginæ.

**Atretelyt′ria.** Atreselytria.

**Atretente′ria.** Atresenteria.

**Atretis′mus.** Atresia.

**Atretoblepha′ria.** Atresoblepharia.

**Atretoceph′alus** (*atretos*, imperforate, *kephale*, head). Monster lacking natural apertures of the head.

**Atretocor′mus** (*atretos*, imperforate, *kormos*, trunk). Monster lacking natural apertures of the trunk.

**Atretocys′tia** or **Atretocys′tis** (*atretos*, imperforate, *kystis*, bladder). Atresia of the bladder.

**Atretogas′tria** (*atretos*, imperforate, *gaster*, stomach). Atresia of either extremity of the stomach.

**Atretolæ′mia** (*laimos*, œsophagus). Atresia of the pharynx or œsophagus.

**Atretome′tria.** Atresometria.

**Atretop′sia** (*ops*, eye). Atresia of pupil.

**Atretorrhin′ia** (*rhis*, nose). Atresia of the nostrils.

**Atretosto′mia** (*atretos*, imperforate, *stoma*, mouth). Imperforation of the mouth.

**Atretureth′ria.** Imperforation of the urethra.

**Atre′tus.** Imperforate; one whose anus or parts of generation are imperforate.

**At′ria** (pl. of *atrium*, hall of a house). Auricles of the heart. **A. mor′tis,** see *Death*.

**At′rial.** Relating to atria or an atrium.

**At′rices.** Condylomata of anus.

**Atrich′ia** or **Atrichi′asis** (*a*, priv., *thrix*, hair). Absence of hair; alopecia.

**Atricho′sis.** Disease attended with loss or deficiency of hair.

**At′richus.** One who has lost his hair.

**At′rici** (*atrium*, an entry). Small sinuses in the vicinity of the anus, not penetrating the rectum.

**A′trioventric′ular.** Auriculoventricular.

**At′riplex fœ′tida.** Chenopodium vulvaria. **A. horten′sis,** ord. *Chenopodiaceæ*. Herb and seed are antiscorbutic. Several other varieties of atriplex have similar properties. **A. littoral′is** possesses toxic properties, giving rise to œdema and nervous symptoms grouped under the term *atrip′licism*. **A. pat′ula,**

spreading orache; indigenous; expressed juice is cathartic; used like gamboge in dropsy and asthma.

**Atrip′licism.** See *Atriplex littoralis.*

**At′rium** (a hall). Ampulla, sinus; specifically, auricle of the heart; the lower part of a cavity of the tympanum; the sinus venosus. **A. bur′sæ omenta′lis,** contracted cavity of the peritoneum in the vicinity of the foramen of Winslow. **A. cor′dis dex′trum,** right auricle of the heart. **A. c. sinis′trum,** left auricle of the heart. **Infec′tion a.,** the point of entrance of the germ of an infectious disease. **A. laryn′gis,** portion of the larynx above the superior cords. **A. poste′rius** or **A. pulmona′le,** left auricle of the heart. **A. tympan′icum,** part of cavity of the tympanum directly opposite the opening of the external meatus. **A. vagi′næ,** vestibulum. **A. vena′rum cava′rum,** right auricle.

**At′ropa** (*Atropos,* immutable; the name of one of the Fates, from its fatal effects). A genus of plants of the order *Solanaceæ.* **A. belladon′na,** belladonna, deadly nightshade, common dwale; perennial plant, indigenous in Europe and Asia; see *Belladonna.* Dose, gr. ss–ij (0.032–0.13); of the root, gr. j–ij (0.065–0.13). **A. mandrag′ora,** mandrake; growing in Europe; narcotic; the leaves are sometimes used as a poultice to indolent swellings.

**Atropamine′.** An alkaloid obtained from some specimens of belladonna; isomeric with belladonnine.

**Atro′phia.** Atrophy; tabes. **A. ablactato′rum,** weaning brash; cholera infantum. **A. an′glica,** a. nervosa. **A. cer′ebri,** atrophy of the brain. **A. cor′dis,** atrophy of the heart. **A. cu′tis,** atrophy of the skin. **A. c. universa′lis,** diffuse idiopathic atrophy of the skin. **A. den′tis,** atrophy of the teeth. **A. glandula′ris,** tabes mesenterica. **A. hep′atis,** atrophy of the liver. **A. infant′um,** marasmus; tabes mesenterica. **A. intestino′rum,** intestinal atrophy. **A. lactan′tium,** atrophy of nursing women. **A. lie′nis,** atrophy of the spleen. **A. maculo′sa et stria′ta,** a form of morphœa occurring in spots and lines. **A. mesenter′ica,** tabes mesenterica. **A. musculo′rum lipomato′sa,** pseudomuscular hypertrophy. **A. nervo′sa,** loss of flesh, appetite, etc., without discoverable organic disease. **A. pigmento′sa,** xeroderma pigmentosum. **A. pilo′rum pro′pria,** atrophy of the hair; it may be symptomatic, as in phthisis, syphilis, etc., or idiopathic. **A. seni′lis,** atrophy due to the katabolic processes of old age. **A. spina′lis,** tabes dorsalis. **A. testic′uli,** atrophy of the testicle. **A. un′guium,** atrophy of the nails.

**Atroph′ic.** Relating to atrophy. **A. na′sal catarrh′,** ozæna. **A. prolifera′tion,** multiplication of the nucleus noticed in atrophy. **A. spi′nal paral′ysis,** inflammation of the gray matter of the anterior part of the spinal cord.

**Atrophoder′ma** or **Atrophoder′mia** (*atrophia + derma,* skin). Atrophy of the skin; atrophia cutis. **A. neurit′icum,** glossy skin, glossy fingers; the fingers are tapering, smooth, hairless, glossy, and pink, ruddy, or blotched, this change being accompanied by intense burning of the parts.

**At′rophy** (*a,* priv., *trophe,* nourishment). Defective nutrition; progressive morbid diminution in bulk of the whole body or part. **Acute yel′low a. of the liv′er,** disease marked by delirium, coma, etc., following jaundice, with general glandular degeneration, and with atrophy and yellow discoloration of the liver, usually fatal. **Ad′ipose a.,** wasting of the fatty tissues of the body. **Amphibles′troid a.,** a. of retina. **Brown a.,** a. of the liver, spleen, or heart of old people, marked by a brownish discoloration of the affected tissues. **Compres′sion a.,** pressure a. **Concen′tric a.,** term applied to the atrophy of an organ containing cavities, as the heart, in which the calibre of such cavities is reduced. **Cor′related a.,** sympathetic a. **Cruveilhier′s′ a.,** progressive muscular a. **Cyanot′ic a.,** a. of the liver from obstructed circulation through it. **Degen′erative a.,** a. with degeneration and absorption of material. **Déjerine′-Sot′ta a.** destruction of nerve structure through hypertrophy of the interstitial fibrous tissue. **A. of disuse′,** a. resulting from immobilization of a part or want of exercise of it for any cause. **Excen′tric a.,** term applied to a. of an organ containing cavities, such as the heart, in which the calibre of such cavities is increased. **Fat′ty a.,** a. with fatty degeneration. **Fat′ty mus′cular a.,** pseudohypertrophic spinal paralysis. **Gran′ular a.,** a. from chronic interstitial inflammation of an organ, with excess of granular matter. **Gray a.,** degeneration of the optic disk, which becomes grayish; resulting from retinitis or organic disease of the central nervous system. **Hemifa′cial a.,** a. of one side of the face. **Hemilin′gual a.,** a. of a lateral half of the tongue. **Hered′itary mus′cular a.,** variety of pseudohypertrophic spinal paralysis. **Idiopath′ic mus′cular a.,** myopathic a. **In′fantile a.,** tabes mesenterica. **Intersti′tial a.**; **Landou′zy-Déjerine′ a.,** a. of the face, side of the neck, and shoulder. **Lin′ear a.,** form of morphœa, occurring in bands or lines, chiefly about the forehead, arms, and legs. **Lipo′matous mus′cular a.,** pseudohypertrophic paralysis. **Mesenter′ic a.,** tabes mesenterica. **Mus′cular a.,** wasting of muscular tissue from any cause. **Myopath′ic a.,** muscular dystrophy; atrophy of the muscles, occurring in early life, and not connected with any lesion of the nervous system. **Necrobiot′ic a.,** numerical a. **Neu′ral a.,** a. of a nerve, from thickening or inflammation. **Neurot′ic a.,** muscular a. from affection of the trophic nerves of a part. **Numer′ical a.,** advanced stage of simple atrophy, some elements actually perishing. **A. of op′tic nerve,** see *Optic nerve.* **Par′rot′s a.,** marasmus neonatorum. **Pas′sive a.,** a. from pressure, lack of nutrition, exhausting visceral diseases, etc. **Physiolog′ical a.,** a. of a part after it has subserved its function, as of the uterus after parturition, or of certain fetal parts after birth. **Pig′mentary a.,** form of a. in which there is a deposit of yellow pigment in the fat cells. **Pres′sure a.,** a. from direct pressure on a part. **Progres′sive fa′cial a.,** partial or unilateral a. of face; a. of one side of face, generally the left, with discoloration, loss or waste of fatty, bony, or cartilaginous parts; perhaps due to lesion of the cervical portion of the sympathetic system. **Progres′sive mus′cular a.,** Cruveilhier's atrophy or paralysis or disease, creeping palsy, peripheral paralysis, wasting palsy, anterior poliomyelitis: a chronic malady, in which the muscles become so greatly atrophied that they cannot perform their functions; there is a granular degeneration of the voluntary muscles, dependent on degeneration of the anterior roots of the spinal nerves and atrophy of the cells of gray matter of the anterior horns of the spinal cord. **Progres′sive ner′vous a.,** a. of the roots of the spinal nerves from compression by fibrous bands. **Qual′itative a.,** degeneration. **Quan′titative a.,** simple a. **Red a.,** cyanotic a.; acute cirrhosis of the liver. **A. of the ret′ina,** see *Optic nerve.* **Rheumat′ic a.,** muscular atrophy consequent on rheumatism. **Rig′id a.,** tonic a. **Se′nile a.,** a. of old persons. **Se′rous a.,** a. in which there is transudation of serum, the fat having disappeared. **Sim′ple a.,** a. not dependent on pathological changes or conditions. **Spi′nal a.,** tabes dorsalis. **Sympathet′ic a.,** wasting of one of paired parts after disease or injury of the other. **Ton′ic a.,** muscular a. with rigidity. **Trophoneurot′ic a.,** a. from defective nervous supply or distribution, as in musuclar atrophy from lesion of a nerve. **Unilat′eral fa′cial a.,** progressive facial a. **Va′ricose a.,** cyanotic a. **White a.,** a. of the nerve tissue, leaving the interstitial connective tissue only. **Yel′low a. of the liver,** acute yellow atrophy.

**Atropi′na** (Ph. U. S. and Br.). Atropine; active principle of Atropa belladonna, $C_{17}H_{23}NO_3$; white, bitter alkaloid, intensely poisonous, soluble in 600 parts of water at 15° C. or 59° F., in 35 parts of boiling water; very soluble in alcohol. It may also be obtained from stramonium. It dilates the pupil, and its therapeutic effects are the same as those of belladonna. Dose, gr. $\frac{1}{20}$ – $\frac{1}{75}$ (0.00032–0.00086).

Hydriodate of atropine, *atropinæ hydriodas*, is employed as a mydriatic in solution. Oleate of atropine, *atropinæ oleas*, is made by dissolving atropine in oleic acid and olive oil; it is sometimes used in suppositories in place of extract of belladonna. The salicylate, *atropinæ salicylas*, has been used in place of the sulphate, having been recommended for hypodermic use, as its solution is said to keep better than that of the other salts. Santonate or santoninate of atropine, *atropinæ santonas* or *santoninas*, is an amorphous, soluble powder, used as a non-irritating mydriatic in 1:2000 solution. Stearate of atropine, *atropinæ stearas*, contains 50 per cent. of atropine; it is used as a substitute for the extract of belladonna in ointments and suppositories. Sulphate of atropine, *atropinæ sulphas*, is official in the Ph. U. S. and Br. It is more soluble than atropine, but the medicinal effects are analogous. Dose, gr. $\frac{1}{150}-\frac{1}{40}$ (0.00043–0.0016). Valerianate of atropine, *atropinæ valerianas*, has also been used.

**Atrop′ic.** Relating to the plant Atropa belladonna or to the alkaloid atropine.

**Atropine′.** See *Atropina.*

**At′ropinism** or **At′ropism.** Constitutional effects of belladonna or atropine.

**Atropiniza′tion.** Process of inducing full effects of atropine.

**Atrosanguin′eous** (*ater*, black, *sanguis*, blood). Color of dark red blood.

**Atroscine′.** An alkaloid, isomeric with hyoscine, obtained from scopolamine; it is said to equal hyoscine in its mydriatic action, but to influence accommodation much more powerfully.

**At′rosine.** Red coloring-matter in Atropa belladonna.

**Attack′.** Access; sudden invasion or onset of disease; seizure.

**At′tar of ro′ses.** See *Rosa centifolia.*

**Atten′uants** (*tenuis*, thin). Medicines which dilute or diminish the action of other remedies.

**Atten′uated.** Weakened or reduced as to toxic action, said of microorganisms or virus.

**Attenua′tion.** Thinness, emaciation; system of diet or medication to reduce corpulency; term used by homœopathic practitioners in the sense of dilution or division of remedies into infinitesimal parts; process of weakening the activity of a microorganism by inoculation, cultivation, etc.

**At′tic.** Pyramidal cavity in the tympanum lying above and opening into the atrium, partially filled by the malleus and incus; called also tautologically the *tympan′ic attic.* **A. disease′**, otitis media.

**At′ticomas′toid.** Relating to the tympanum and the mastoid cells.

**At′titude.** Situation, position of body, posture, often enabling physician to pronounce at once upon the character of the disease, the degree of nervous or cerebral power, etc. In hysteria and hystero-epilepsy the attitudes are peculiar and often characteristic; they are seen in all the stages of the convulsive attack; in the epileptoid stage the most common is the *crucifixion attitude*, in which the arms are extended at right angles to the trunk and lower extremities or rigidly held in the axis of the body; the first part of the stage of clownism is called that of *illogical attitudes*, the positions assumed by the patients being of the most bizarre description, the body usually forming the arc of a circle curved anteroposteriorly or laterally (opisthotonos or pleurosthotonos); the third stage of the attack is called by the French writers the stage of *emotional* or *passional attitudes*, the positions expressing graphically the patient's mental conceptions or hallucinations, such as anger, joy, sadness, fear, surprise, expectation, etc.

**Attol′lens au′rem, au′ris,** or **auric′ulæ** (*ad*, to, *tollo*, to raise). Muscle of the ear, arising thin, broad, and tendinous from the tendon of the occipito-frontalis, and inserted into the upper part of the ear opposite the antihelix; it raises the ear. **A. glan′dulæ thyroi′deæ,** portion of inferior constrictor muscle of the pharynx passing to the thyroid gland. **A. hu′meri** or **hu′merum,** deltoid. **A. lin′guæ,** mylo-glossus. **A. maxil′lam tempora′lis,** temporalis. **A. max′imus,** temporoauricularis externus. **A. oc′uli** or **oc′ulum,** rectus superior oculi. **A. os′sis hyoide′i,** geniohyoideus. **A. scap′ulam,** levator anguli scapulæ. **A. se′dem,** levator ani. **A. superio′rem pal′pebram,** levator palpebræ superioris.

**Atton′itus** (*attono*, to stun). Stupefied; stricken with apoplexy. **A. mor′bus,** apoplexy.

**Attrac′tion.** The force drawing bodies together. **A. bod′y,** a. sphere. **Cap′illary a.,** the force of attraction exerted by the inner walls of a minute tube upon a fluid in which it is immersed, raising the latter above the surrounding level. **Chem′ical a.,** chemical affinity; the attractive force between the atoms of certain substances which compels them to unite and form a new substance. **A. of cohe′sion,** cohesion. **Elec′tive a.,** chemical a. **Elec′trical a.,** a. shown by substances for one another when charged with an opposite variety of electricity. **A. of gravita′tion,** see *Gravity.* **Magnet′ic a.,** the force by which a magnet draws to itself certain bodies, such as those of iron. **A. sphere,** atmosphere; the zone surrounding the centrosome, in which are seen the delicate radiating protoplasmic fibrils attracted by the centrosome.

**At′trahens.** Attrahent. **A. a′læ na′si,** compressor naris muscle. **A. au′rem, auric′ulæ,** or **au′ris,** anterior auris muscle.

**At′trahent** (*ad*, to, *traho*, to draw). Attracting or drawing toward; a remedy attracting fluids to parts to which it is applied; blisters and rubefacients, for example.

**Attri′ta** (*ad*, to, *tero*, to rub) or **Attri′tus.** Chafing.

**Attri′tion.** Friction or bruising; chafing; cardialgia accompanied with panting; violent contusion.

**Atyp′ic** or **Atyp′ical** (*a*, priv., *typos*, type). Not having or being a type; irregular, as atypical or irregular intermittent.

**Au.** The chemical symbol for gold (aurum).

**Auan′sis** (desiccation). Morbid dryness.

**Auan′tic.** Withered; atrophic; desiccated.

**Aubert's** (o-bears′) **phenom′enon.** A deceptive optical phenomenon, sometimes noted; when the head is inclined laterally a vertical line appears deflected obliquely to the opposite side.

**Aucheniat′ria** (*auchen*, neck, *iatreia*, treatment). Treatment of diseases of the throat or neck.

**Auchen′ium.** Part of the neck below the nucha.

**Auchenome′lus** (*auchen*, neck, *melos*, member). Monster having parts abnormally united to the neck.

**Auchenos′chisis** (*auchen*, neck. *schisis*, fissure). Fissure of the neck or of the cervical vertebræ.

**Auctioneer's′ cramp** or **spasm.** A professional spasm, of the same nature as writer's cramp, occuring in auctioneers.

**Au′da brasilien′sis.** Plant of South America, the seeds of which are purgative.

**Audim′eter** or **Audiom′eter** (*audio*, to hear, *metron*, measure). Instrument to test the degree of hearing.

**Audiom′etry.** Measurement of the degree of acuteness of hearing.

**Au′diphone** (*audio*, to hear, *phone*, sound). Fan-shaped instrument for the use of the deaf, by means of which sounds are made to pass to the auditory nerve by bone conduction, the apparatus being in contact with the teeth.

**Audi′tion** (*audio*, to hear). Hearing; act of hearing; sensation arising from the impression made on the auditory nerves by vibrations of air produced by a sonorous body. Audition may be active or passive; hence the difference between listening and simply hearing. **Chromat′ic** or **col′ored a.,** suggestion of a color associated with a sound.

**Au′ditive.** Relating to hearing; auditory; one in whom auditory impressions are recalled by memory or suggestion rather than by actual sounds.

**Au′ditory** Relating to audition or the ear. **A. amne′sia,** word-deafness. **A. a′rea,** centre in the cerebrum in which the sense of hearing is presumed to be located; also auditory field. **A. ar′teries** and **veins**, vessels entering the auditory canals; they are the external auditory artery, given off by the styloid, a branch of the external carotid; internal auditory artery, branch of the basilary artery accompanying the auditory nerve, and distributed to it. The auditory veins empty into the internal and external jugulars. **A. au′ra**, auditory impression preceding an epileptic attack. **A. bulb**, membranous labyrinth of the ear. **A. canal′**, the *external* canal commences at the bottom of the concha, at the foramen auditivum, passes inward, forward, and downward, and terminates at the membrana tympani; it is partly cartilaginous, partly osseous, partly fibrous. The *internal* canal is situated on the posterior surface of the pars petrosa of the temporal bone; from the foramen auditivum internum, where it commences, it passes forward and outward, and terminates by a *cul-de-sac*, perforated by many holes, *maculæ cribrosæ*, one of which is the orifice of the aquæductus Fallopii; the others communicate with the labyrinth. **A. cap′sule**, a cartilaginous capsule of embryonic life, which later develops into the external ear. **A. cells**, cells in the delicate structure of the internal ear, having upon them a hair-like prolongation of epithelial cells, *auditory hairs* or *cirri*. **A. cen′tre**, a. area. **A. cir′ri**, see *A. cells*. **A. duct**, ductus cochlearis. **A. dysæsthe′sia**, excessive pain or discomfort caused by the hearing of certain sounds. **A. field**, area in which a sounding body can be heard. **A. hairs**, see *A. cells*. **A. hyperæsthe′sia**, excessive acuteness of hearing. **A. mea′tus**, see *A. canal*. **A. nerve**, portio mollis of the seventh pair, arises from the corpus restiforme, from the floor of the fourth ventricle, and by means of white striæ from the sides of the calamus scriptorius. As it leaves the encephalon it forms a flattened cord, and proceeds with the facial nerve through the foramen auditivum internum as far as the bottom of the meatus, where it separates from the facial, dividing into two branches, one going to the cochlea, *cochlear nerve*, the other to the vestibule and semicircular canals, *vestibular nerve*. **A. nu′clei**, nuclei of origin of the auditory nerve. **A. os′sicles**, three (in fetal life four) small bones in the middle ear, named, from without inward, malleus, incus (os orbiculare), and stapes; see these words. **A. pit**, a. sac. **A. plate**, roof of external meatus of the ear, extending from beneath the squamous process inward to the tympanum. **A. proc′ess**, rough lip of bone at the entrance of the external meatus, for attachment of the auricle. **A. roots**, roots of auditory nerve. **A. sac**, depression in epiblast on each side of the after-brain in the embryo. **A. teeth**, teeth-like processes on the free border of the labium vestibulare, in the cochlea of the ear. **A. tube**, external auditory meatus or canal. **A. veins**, see *Auditory arteries*. **A. ver′tigo**, Ménière's disease. **A. ves′icles**, minute sacs in the lower animals substituting more complicated apparatus of hearing in the higher animals and man; part of the external germ layer of the fœtus, afterward to be developed into the internal ear.

**Audi′tus.** Hearing.

**Auenbrug′ger's sign.** Prominence of the epigastrium, indicative of great accumulation of serum in the pericardium.

**Au′erbach's gan′glion** or **plex′us.** A collection of sympathetic nervous ganglia between the longitudinal and circular muscular layers of the intestine.

**Auf′recht's sign** or **symp′tom.** A short, weak breathing sound heard above the jugular fossa when the stethoscope is placed over the trachea, indicative of stenosis of this tube.

**Au′ge.** Reservoir into which liquids flow in an interrupted manner, such as the ventricles and auricles of the heart.

**Augmenta′tion** (*augeo*, to increase). Accretion; stage of disease in which symptoms are increasing.

**Augna′thus** (*au*, again, *gnathos*, jaw). Monster with double or supplementary lower jaw.

**Au′la** (Lat., hall). Y-shaped canal between the third and lateral ventricles of the brain.

**Aulat′ela** (*aula* + *tela*, tissue). Membrane covering the aula or anterior portion of the third cerebral ventricle.

**Auliplex′us.** That part of the choroid plexus which lies above the aula.

**Au′lix.** Shallow furrow on the side of the third ventricle of the brain; fissure of Monro.

**Au′lus** (*aulos*, fistula or pipe). Cannula; fistula; foramen; external orifice of the vagina.

**Au′ra.** Vapor or emanation from a body, surrounding it like an atmosphere. Sensation of a light vapor appearing to set out from the trunk or limbs and rise toward the head. It precedes attacks of epilepsy and hysteria—*aura epileptica, aura hysterica.* **Elec′tric a.**, sensation as of a breath of wind in a part subjected to a discharge of static electricity. **Epigas′tric a.**, epileptic aura localized in the epigastrium. **A. epilep′tica**, see *Aura*. **A. hyster′ica**, see *Aura*. **Mo′tor a.**, convulsive phenomena preceding at times an epileptic fit. **A. podag′rica**, sensation experienced preceding an attack of gout. **A. san′guinis**, odor exhaled by blood newly drawn. **A. sem′inis**, volatile principle at one time fancied to exist in sperm and to be the fecundating agent. **Sen′sory a.**, aura associated with sensations of cold or heat, pricking, pain, or numbness, headache, etc. **Vasomo′tor a.**, a. with local pallor, numbness, heat, etc. **A. vertigino′sa**, vertigo preceding an epileptic attack. **A. vita′lis**, vital principle.

**Au′ral** (*auris*, ear). Relating or appertaining to the ear or to an aura. **A. fun′gi**, see *Otomycosis*. **A. med′icine** and **sur′gery**, medical and surgical treatment of diseases of the ear. **A. ver′tigo**, Ménière's disease.

**Auramin′.** See *Pyoktanin*.

**Aurantiamarin′.** Bitter glucoside derived from orange-peel.

**Auran′tii ama′ri cor′tex.** See *Citrus aurantium*. **A. cor′tex**, see *Citrus aurantium*. **A. flo′res**, see *Citrus aurantium*. **A. flo′ris a′qua**, see *Citrus aurantium*. **A. fruc′tus**, bitter orange; ripe fruit of Citrus vulgaris; tonic and stomachic.

**Auran′tium.** Orange. See *Citrus*. **A. ama′rum**, bitter orange. **A. curassaven′tium**, Curacao orange; a stunted variety of an aromatic, bitterish flavor, used in the manufacture of a liqueur. **A. dul′ce**, bitter orange. The following are the official (Ph. U. S.) preparations of orange: **Auran′tii ama′ri cor′tex**, bitter orange-peel, the rind of the fresh fruit of Citrus vulgaris; *extractum a. a. fluidum*, fluid extract of bitter orange; *tinctura a. a.*, tincture of bitter orange. **Auran′tii dul′cis cor′tex**, sweet orange-peel, the rind of the fresh fruit of Citrus aurantium; *oleum a.*, oil of orange peel; *spiritus a.*, spirit of orange; *spiritus aurantii compositus*, compound spirit of orange, used in the manufacture of aromatic elixir; *syrupus a.*, syrup of orange; *tinctura a. dulcis*, tincture of sweet orange. The following are not official: **Auran′tii flo′res**, orange flowers; *Aqua a. florum*, orange-flower water; *a. a. f. fortior*, strong orange-flower water, used for making the preceding; *oleum a. f.*, orange-flower oil, used as a flavoring agent; *syrupus a. f.*, syrup of orange flowers.

**Au′ric.** Aural; relating to or made of gold. **A. acid**, gold trihydroxide; also gold trioxide.

**Au′ricle** (dim. of auris). Pavilion of the ear. One of the receiving cavities of the heart; see *Auricles*.

**Aur′icles of the heart.** Two cavities, one right, the other left, each communicating with the ventricle of its side. They receive the blood from every part of the body. Into the right auricle two venæ cavæ and the coronary vein open; into the left, four pulmonary veins. The right auricle has been called *sinus of the venæ cavæ, sinus dexter cordis;* the left, *sinus of the pulmonary veins, sinus sinister cordis.*

The foliated or dog's-ear portion of each auricle is called *appendix auriculæ*.

**Auric'ula.** Auricle. A genus of plants. **A. cor'dis,** auricle of heart; appendix of the auricle. **A. in'fima,** lobule of ear. **A. ju'dæ,** Peziza auricula. **A. mu'ris,** Hieracium pilosella. **A. mu'ris ma'jor,** Hieracium murorum.

**Auric'ular.** Belonging to or resembling the ear or an auricle of the heart. **A. ang'le,** any angle formed by lines meeting at the auricular point, *i. e.,* the middle of the external auditory meatus. The terms auriculocranial, auriculofacial, auriculofrontal, auriculo-occipital, and auriculoparietal are applied to the auricular angles whose lines pass through the cranium, face, frontal, occipital, and parietal regions, respectively. **A. appen'dage** or **appen'dix,** see *Auricles of the heart.* **A. arcs,** arcs indicating extent of space between the two lines forming the auricular angles. **A. ar'teries** and **veins** are anterior and posterior. The former arise from the temporal artery, and are distributed to the meatus auditorius externus and pavilion of the ear. The posterior auricular artery is given off by the external carotid, from which it separates in the parotid gland. Anterior and posterior auricular veins open into the temporal and external jugular. **A. diam'eter,** inferior parietal diameter of the skull. **A. fin'ger,** little finger, so called because readily introduced into the meatus auditorius. **A. fis'sure,** fissure between the tympanic bone and the mastoid process. **A. fora'men,** external opening of the meatus auditorius externus. **A. glands,** lymphatic glands behind and below the ear. **A. height,** distance from upper edge of outer opening of external auditory meatus to the apex of the cranium. **A. in'dex,** measurement of the auricle of ear, taken from the proportion of its breadth to its length. **A. mus'cles,** muscles attached to the external ear. **A. nerves** are: 1. Auricular branch, zygomaticoauricular, an ascending branch of cervical plexus; ramifies and spreads over the two surfaces of the pavilion. 2. Auricular or superficial temporal, given off from inferior maxillary; ascends between condyle of jaw and meatus auditorius externus; sends numerous filaments to meatus and pavilion, and divides into two twigs accompanying branches of temporal artery and distributed to integuments of head. There is also a posterior auricular furnished by the facial. **A. point,** middle of opening of external meatus; or, in case of measurement of auricular height, middle of upper or lower edge of the meatus. **A. ra'dii,** in craniometry, lines projected from the middle of the external meatus to certain points on the skull. **A. sep'tum,** partition between the two auricles of the heart. **A. si'nus,** cavity in right auricle of heart, between the two venæ cavæ; principal cavity of left auricle. **A. sul'cus,** groove or sulcus in the jugular fossa for auricular nerves from the vagus. **A. sur'face,** ear-shaped surfaces on the sacrum and ilium. **A. veins,** see *Auricular arteries.*

**Auricula'ris.** Auricular. **A. ante'rior,** anterior auris muscle. **A. a. profun'dus,** small muscle from temporal bone to tragus. **A. mag'nus,** auricular nerve. **A. poste'rior,** retrahens aurem muscle. **A. supe'rior,** attollens aurem muscle.

**Auric'ulobregmat'ic.** Relating to the auricular joint and point of junction of the coronal and sagittal sutures, as *auriculobregmatic diameter* or *radii.*

**Auric'ulocra'nial, Auric'ulofa'cial, Auric'ulofron'tal, Auric'ulo-occip'ital,** and **Auric'ulopari'etal angles** are angles, taking the centre of the external meatus as the constant point, measuring respectively the cranium, face, forehead, occiput, and junctions of lambdoid and sagittal sutures and of sagittal and coronal sutures.

**Auric'uloglos'sus.** See *Styloglossus.*

**Auric'uloinfraor'bital plane.** Cranial plane formed by projecting lines from the top of the auricular foramen to the inferior edge of the orbit. Used in craniometry.

**Auric'ulometal'lic.** Term applied to a metallic sound heard on auscultation of the heart.

**Auric'ulona'sal.** Relating to the ears and nose.

**Auric'ulo-occip'ital.** See *Auriculocranial.*

**Auric'ulopari'etal.** See *Auriculocranial.*

**Auric'ulospi'nal plane.** Plane so projected as to pass through two auricular points and spinal or subnasal points.

**Auric'ulotem'poral mus'cle.** Attrahens aurem and attollens aurem muscles viewed as one muscular mass. **A. nerve,** branch of the inferior maxillary to the auricle and temporal bone.

**Auric'uloventric'ular.** Belonging to auricles and ventricles of the heart. The tricuspid and mitral valves are auriculoventricular valves.

**Auric'ulozygomat'ic.** Relating to external ear and zygoma.

**Au'riform.** Ear-shaped.

**Auri'ga.** Lobus Spigelii; bandage for the ribs.

**Aurigenous** (aw-rij'en-us) **disease'.** Jaundice.

**Auri'go.** Icterus. **A. neophyto'rum,** icterus infantum. **A. typho'des,** yellow fever.

**Au'rilave** (*auris,* ear, *lavo,* to wash). Instrument for cleansing the external auditory meatus.

**Auripigmen'tum** (*aurum,* gold, *pigmentum,* paint). Orpiment. **A. ru'brum,** realgar.

**Auripunc'ture.** Puncture of the drum membrane.

**Au'ris.** Ear.

**Auriscal'pium** (*scalpo,* to scrape). Earpick.

**Au'riscope.** Otoscope.

**Au'rist.** Otologist, one who occupies himself with diseases of the ear and their treatment.

**Au'rium fluctua'tio** (gen. pl. of auris). Tinnitus. **A. marmora'ta,** cerumen. **A. sib'ilus,** tinnitus. **A. son'itus,** ringing or buzzing in the ears. **A. sor'des,** cerumen. **A. susur'rus,** ringing or buzzing in the ears. **A. tinni'tus,** bombus; subjective ringing or buzzing sound in the ear. See *Tinnitus aurium.*

**Au'roscope.** Auriscope.

**Au'rous.** Relating to gold; golden.

**Auru'go** (*aurum,* gold). Icterus.

**Au'rum.** Gold, which see. **A. folia'tum,** gold-leaf. **A. lepro'sum,** antimonium. **A. in libel'lis,** gold-leaf. **A. musi'vum,** sulphuret of tin, deutosulphuret or persulphuret of tin; used in some empirical preparations. **A. oxydula'tum muriat'icum,** chloride of gold. **A. sal'itum,** chloride of gold. **A. vegetab'ile,** pipitzahoic acid. The only official (Ph. U. S.) preparation of gold is **Au'ri et so'dii chlor'idum,** chlorides of gold and sodium, an orange-yellow powder composed of equal parts of each chloride salt; dose, gr. $\frac{1}{20}$–$\frac{1}{10}$ (0.0032–0.0065). Other preparations sometimes used in medicine are: **Au'ri brom'idum,** bromide of gold, occurring in orange-red crystals; dose, gr. $\frac{1}{5}$–$\frac{1}{2}$ (0.013–0.032). **A. chlor'idum,** chloride of gold, orange-red crystals; dose, gr. $\frac{1}{100}$ – $\frac{1}{20}$ (0.0006–0.0032). **A. cyan'idum,** cyanide of gold; dose, gr. $\frac{1}{15}$–$\frac{1}{3}$ (0.004–0.02). **A. et potas'sii brom'idum,** bromides of gold and potassium; dose, gr. $\frac{1}{6}$–$\frac{2}{3}$ (0.01–0.04).

**Auscult'** or **Aus'cultate** (*ausculto,* to listen). To practise auscultation.

**Ausculta'tion.** Act of listening, to appreciate different sounds originating in the chest or elsewhere. Used in diagnosis of diseases of the heart, lungs, etc., either by aid of a stethoscope (*mediate auscultation*) or by direct application of the ear to the chest (*immediate auscultation*). **Cepha'lic** or **cer'ebral a.,** a. practised to detect unusual sounds in the circulation through the brain. **Imme'diate a.,** see *Auscultation.* **Me'diate a.,** see *Auscultation.* **Obstet'ric a.,** a. of the pregnant uterus or of the abdomen, to recognize the fetal or other sounds. **A. tube,** stethoscope. **Vo'cal a.,** a. of vocal sounds heard with the ear or stethoscope applied to the chest.

**Aus'cultator.** One who practises auscultation.

**Auscul'tatory.** Relating to auscultation. **A. fric'tion,** if the finger be drawn lightly over the skin, away from the point of application of the stethoscope or phonendoscope, an otherwise inaudible sound of friction will be loudly heard through the stethoscope, but only for a brief distance, beyond which it will cease. **A. percus'sion**, listening, by means of the stethoscope or phonendoscope, to the sounds elicited by percussion in the neighborhood.

**Austra'lian fe'ver tree.** Alstonia constricta. **A. gum**, variety of acacia from Australia. **A. ki'no**, juice from eucalyptus tree of Australia. **A. sas'safras**, Atherosperma moschata.

**Autal'gia** (*autos*, self, *algos*, pain). Localized pain. **A. doloro'sa**, facial neuralgia; pleurodynia. **A. prurigino'sa**, itching. **A. ver'tigo**, vertigo.

**Autech'oscope** (*autos*, self, *echos*, sound, *skopeo*, to examine). Instrument for self-auscultation.

**Aute'cic** or **Aute'cious.** Autœcic; autœcious.

**Auteme'sia** or **Autem'esis** (*autos*, self, *emesis*, vomiting). Vomiting without evident cause.

**Authygian'sis** (*autos*, self, *hygiazo*, to heal). Healing power of nature.

**Auto-** (*autos*, self). As a prefix, self.

**Au'toblast** (*autos*, self, *blastos*, germ). An independent cell, as an amœba or bacterium.

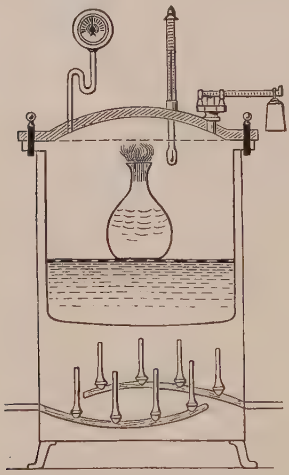
**Autocath'eterism** or **Autocatheteriza'tion.** Passage of a catheter on one's self.

**Au'tocheir** or **Au'tochir** (*autos*, self, *cheir*, hand). A suicide.

**Autoch'thonous** (*autos*, self, *chthon*, land). Indigenous; formed at the point where found, as *autochthonous clot* or thrombus.

**Autocine'sis** or **Autocinet'ic.** Autokinesis; autokinetic.

**Au'toclave** (*autos*, self, *clavis*, key). Self-closing, as erection closing channels of egress of the blood. Now signifying usually an apparatus for sterilization by steam under pressure, in which the proper degree of pressure, and consequently heat, is maintained by an automatic regulator, a modification of Papin's digester.



Autoclave. Sectional view.

**Autoc'rasy** (*autos*, self, *kratos*, strength). Independent force; action of vital principle or of instinctive powers; vis medicatrix naturæ.

**Autocto'nia** (*autos*, self, *ktonos*, murder). Suicide.

**Autocytotoxin'.** A cytotoxin acting upon the cells of the organism in which it is formed.

**Autodiges'tion.** Digestion of the mucous membrane of the stomach by the gastric juice.

**Autœ'cic** (*autos*, self, *oikia*, house). Term applied to parasites whose whole existence is spent in or on the same organism.

**Autœ'cious.** Autœcic. Monœcious or hermaphrodite.

**Autofun'doscope.** Instrument for examination of one's own fundus oculi.

**Autogen'esis** (*autos*, self, *genesis*, generation). Spontaneous generation; self-reparation, as after the division of a nerve.

**Autogenet'ic** or **Autogen'ic.** Relating to autogenesis or spontaneous generation.

**Autogenous**, aw-toj'en-us. Relating to spontaneous generation, or to parts or elements developed from distinct and independent centres. Apophyses that are outgrowths are *exogenous;* apophyses or epiphyses which are formed from independent centres of ossification are *autogenous*. **A. diseas'es**, diseases due to pathological condition of some cell or cells of the body, and not to any cause from without.

**Autog'raphism** (*autos*, self, *grapho*, to write). Dermographism, a condition of the skin resembling urticaria, in which lines or designs traced on the surface remain distinctly visible in elevation for a certain period.

**Autohyp'notism.** Induction of the hypnotic state in one's self.

**Autoimmu'nity.** Immunity, natural or acquired, effected by the unaided powers of the organism, independent of orrhotherapy or other external agencies.

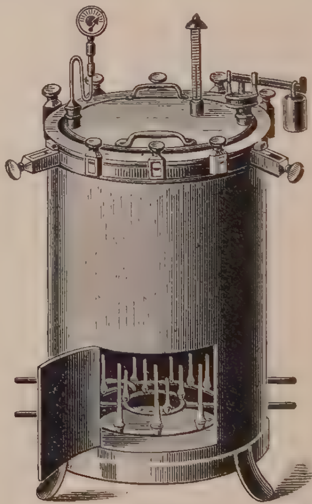
**Autoinfec'tion.** Self-infection from poison generated in one's own body.

**Autoinoc'ulable.** Capable of inoculation again in the same person, as the virus of a syphilitic chancre.

**Autoinocula'tion.** Self-inoculation.

**Autointoxica'tion.** Self-poisoning by toxic matters generated within the intestinal canal or other part of the body; autotoxæmia.

**Autokine'sis** (*autos*, self, *kinesis*, motion). Voluntary motion; motion without muscular or contractile fibres, as of spermatozoa, white corpuscles, etc.



Autoclave, pattern of Wiesnegg. External appearance.

**Autokinet'ic.** Possessing the power of voluntary motion.

**Autolaryngos'copy.** Self-inspection of the larynx by aid of a laryngoscope.

**Autolavage**, aw-to-lav-azh'. Lavage practised on one's self.

**Autol'ogy** (*autos*, self, *logos*, discussion). The science of self-study.

**Autolysin'.** A cytolysin acting upon the cells of the same organism in which it originates.

**Automat'ic** (*automatos*, spontaneous). That which acts of itself. Automatic movements are those executed without volition.

**Autom'atism.** Unconscious or non-voluntary movement.

**Automysopho'bia** (*autos*, self, *mysos*, uncleanness, *phobos*, fear). Morbid dread of personal uncleanliness.

**Auton'omous.** Independent in function; being a law or rule to one's self.

**Auton'omy** (*autos*, self, *nomos*, law). Mechanism of an organized body, or one of its parts, governed by its own laws and independent of any other part.

**Auto-ophthal'moscope** (*autos*, self, *ophthalmos*, eye, *skopeo*, to look at). An instrument by means of which it is possible to examine one's own eye.

**Auto-ophthalmos'copy.** Examination of one's own eye with an auto-ophthalmoscope.

**Autopath'ic.** Relating to disease arising from causes within the body.

**Autopathog'raphy** (*autos*, self, *pathos*, disease, *grapho*, to write). Description of one's own disease written by one's self.

**Autopep'sia** (*autos*, self, *pepto*, to concoct). Autodigestion.

**Autopha'gia, Autoph'agism,** or **Autoph'agy** (*autos*, self, *phago*, to eat). Feeding on one's self; said of the body when deprived of a due amount of food. Eating of one's own flesh, as sometimes attempted by the insane.

**Autopho'bia** (*autos*, self, *phobos*, fear). Morbid fear of being alone.

**Autopho'nia** or **Autoph'ony** (*autos*, self, *phone*, voice). Auscultatory sign, consisting in noting the character of the observer's own voice while speaking with head placed close to the patient's chest. Morbid state of hearing, in which speaker's own voice is over-distinctly heard by him. Suicide (*autos*, self, *phonos*, murder).

**Autophonoma'nia.** Suicidal insanity.

**Autoph'onous.** Relating to autophony.

**Autophthal'moscope.** Auto-ophthalmoscope.

**Au'toplast.** A cell formed in the mass of residual yolk seemingly independently, and not the result of cleavage of pre-existing cells.

**Autoplas'tic** (*autos*, self, *plastikos*, formative). Relating to autoplasty or plastic surgery.

**Au'toplasty.** Reconstruction of lost parts, as by transplantation from another part of the body.

**Autop'sia** or **Au'topsy** (*autos*, self, *opsis*, vision). Self-inspection. Post-mortem examination, necropsy; formerly called *autopsia cadaverica*. **A. wound,** dissection-wound.

**Autorrhinos'copy** (*autos*, self, *rhis*, nose, *skopeo*, to see). Self-examination of the nasal cavities.

**Au'toscope.** Instrument adapted for examination of the condition of one's own organs.

**Autos'copy** (*autos*, self, *skopeo*, to view). Self-inspection; examination of the condition of one's own organs by autechoscopy, autolaryngoscopy, etc.; autopsy.

**Au'tosite** (*autos*, self, *sitos*, food). Monster capable of self-existence. Organism containing a twin parasite.

**Autos'padon** (*autos*, self, *spadon*, eunuch). Self-castrator.

**Autospec'ulum** (*autos*, self, *speculum*). Vaginal speculum which patient may insert herself.

**Autosteth'oscope.** Instrument for self-auscultation.

**Autosty'lic** (*autos*, self, *stylos*, support). Articulated with the skull without the hyoid arch.

**Autosugges'tion.** Psychological suggestion based on reviving previous impressions. Influencing the bodily functions, or exciting or relieving morbid states, by mental processes arising independently of external hypnotic influences; the underlying fact is an extreme psychical impressionability. When this condition follows a severe shock, as in the case of a railway accident, it is sometimes called *traumatic suggestion*, and is at the bottom of various paralyses, dysæsthesiæ, neurasthenic affections (railway spine), etc.

**Autotem'nous** (*autos*, self, *temno*, to cut). Capable of spontaneous section or division.

**Autother'apy** (*autos*, self, *therapeia*, healing). Spontaneous cure; vis medicatrix naturæ.

**Autot'omy** (*autos*, self, *tome*, incision). Self-mutilation.

**Autotoxæ'mia, Autotoxico'sis,** or **Autotox'is** (*autos*, self, *toxicon*, poison, *haima*, blood). Self-poisoning by toxic material formed within one's own body.

**Autotoxin'.** A toxin produced by tissue changes within the system. The poisonous leucomains are autotoxins.

**Autotransfu'sion.** The application of tight bandages to the limbs in order to force the blood to the vital parts.

**Autotyphiza'tion.** Autotoxæmia simulating typhoid fever.

**Autovaccina'tion.** Vaccination with virus formed in the same body; autoinoculation.

**Autoxæ'mia.** Autotoxæmia.

**Autum'nal.** Relating to autumn; name given to certain malarial fevers.

**Auxe'sis** (Gr.). Augmentation; increase.

**Auxil'iary** (*auxilium*, aid). Assisting; adjuvant. **A. lig'aments** and **mus'cles** are those concurring in the same movement. **A. med'icine** assists the principal medicine or basis.

**Auxocar'dia** (*auxe*, increase, *kardia*, heart). Hypertrophy of the heart; enlargement in volume of the heart.

**A'va.** Kava-kava, an intoxicating narcotic drink made from the root of Piper methysticum.

**Av'aism.** Intoxication produced by ava.

**Av'alanche the'ory.** Theory that impression from a nervous centre grows in intensity as it passes along an efferent nerve, causing more energetic muscular contraction.

**Avas'cular.** Non-vascular; containing few or no blood or lymph vessels.

**Avasculariza'tion.** Rendering a part bloodless, usually by the pressure of a bandage.

**Avas'cularize.** To render bloodless.

**Avatar'.** An embodiment of an idea.

**Av'eling's curve.** Curve of the handles of obstetric forceps.

**Ave'na.** Oats. Seeds of *Avena sativa*, ord. *Gramineæ*.

**Avenin'.** Nitrogenous principle like legumin, derived from oats.

**Aven'olith.** Intestinal calculus having a grain of oat as a nucleus.

**Averrho'a bilim'bi.** Blimbing tree; Indian tree, fruit of which is used as a condiment and in syrup as a refrigerant. **A. caram'bola,** carambola or blimbing-bula tree; Indian tree, whose fruit is agreeably acid and used as a refrigerant in bilious fever and dysentery.

**Aver'sion** (*averto*, to turn from). Extreme repugnance, nausea; version, as of the uterus; change in disease by metastasis; counterirritation, revulsion, derivation.

**Aver'tebrate.** Without a vertebral column.

**A'vian** (*aves*, a bird). Belonging or relating to or derived from birds. **A. anat'omy,** dissection of or the science of the structure of birds; ornithotomy. **A. mala'ria,** a condition in birds, analogous to malaria in man, in which certain organisms (*Halteridium danilewski*, *Proteosoma grassi*, etc.) are found in the red blood corpuscles. **A. septicæ'mia,** a disease in birds caused by the presence of *Vibrio metchnikovi*. **A. tuberculo'sis,** a disease of birds analogous to (or a modification of ?) human tuberculosis.

**Avicen'nia officina'lis** or **resinif'era** (after Avicenna). Species of evergreen trees growing in India, Java, China, and Africa, resinous exudate from which is used as food. **A. tomento'sa,** plant which affords Malacca bean or Anacardium orientale, Semecarpus anacardium. Oil from the rind of the fruit is corrosive and vesicatory; resinous gum from the trunk is used as food; the root is aphrodisiac; the seeds are used in poultices.

**Avic'ular.** Avian.

**Avi'la.** Fruit of Feuillea cordifolia of W. Indies; emetic and cathartic; oil has same properties.

**Avir'ulent.** Not virulent.

**Avogad'ro's law.** Under the same physical conditions equal volumes of gaseous substances contain the same number of molecules.

**Avoirdupois'.** See *Weights and Measures.*

**Avornin'.** $C_{16}H_{18}O_8$. Glucoside from the bark of Rhamnus frangula (buckthorn).

**Avor'nus.** Rhamnus frangula.

**Avul'sion** (*a*, priv., *vello*, to pluck). Evulsion; extraction by force or tearing away. **A. of pulp,** removal of dental pulp *en masse.*

**Awa'kener.** See *Baunscheidtism.*

**Axanthrop'sia** (*a*, priv., *xanthos*, yellow, *opsis*, vision). Color-blindness to yellow.

**Ax'ea commissu'ra.** Pivot joint. See *Trochoid.*

**Ax'es.** Intermittent paroxysm. See *Axis.* **[A. of pel'vis,** see *Pelvis.*

**Ax'ial.** Relating to or situated in the axis. **A. cur'rent,** central current of blood in the small vessels in which the red corpuscles flow, the white moving along the walls. **A. fi'bres,** see *Nerve fibres.* **A. plane of the eye,** equatorial plane of the eye. **A. skel'eton,** the skeleton of a quadruped exclusive of the bones of the limbs.

**Ax'ile.** Axial. **A. bod'ies,** see *Corpuscula tactus.*

**Axilem'ma** (*axis*+*lemma*, husk). Sheath of the axis cylinder of a nerve, separating it from the myelin.

**Axil'la.** The armpit, space beneath junction of arm with shoulder; bounded anteriorly by portion of pectoralis major, posteriorly by latissimus dorsi.

**Ax'illary.** Relating to the axilla or armpit. **A. an'eurysm,** aneurysm of the axillary artery. **A. arch,** arch formed by the axillary fascia; also one of several offshoots from the latissimus dorsi muscle; see *Arch, axillary.* **A. ar'tery,** continuation of subclavian, extending from passage of latter between scaleni muscles as far as insertion of pectoralis major, when it takes the name of brachial artery. **A. fas'cia,** fascia of the armpit. **A. glands,** lymphatic glands seated in the armpit, into which lymphatic vessels of the upper extremity open. **A. nerve,** circumflex nerve, articular nerve; arises from the posterior part of the brachial plexus, particularly from the last two cervical pairs and first dorsal, and is chiefly distributed to the posterior margin of the deltoid. **A. plex'us,** brachial plexus. **A. space,** axilla. **A. vein** corresponds with a. artery, anterior to which it is situated; is a continuation of the brachial veins; at its termination it assumes the name of subclavian vein.

**Axin'.** A substance prepared from Coccus axinis, resolvent and vulnerary.

**Axin'ic acid.** An acid derived from Coccus axinis.

**Axiobli'quus.** Obliquus capitis inferior muscle.

**Ax'ion.** Axon; axis cylinder.

**Ax'ioplasm** (*axis*+*plasso*, to form). Neuroplasm.

**Axirec'tus.** Rectus capitis posticus major muscle.

**Ax'is** (axle). A straight line passing through the centre of a body. Second vertebra of neck, so called because it forms a kind of axis on which the head moves. The vertebral column. The central nervous system. The axis cylinder of a nerve fibre. **An'teroposte'rior a. of the eye,** see *Axis of the eye.* **A. of astig'matism** or **Astigmat'ic a.,** in simple astigmatism, the emmetropic meridian; in compound astigmatism, the least myopic or hypermetropic meridian; in mixed astigmatism, one of each of the two axes corresponding to the axes of the two cylinders which correct the astigmatism. **A. band,** a. cylinder. **Basibregmat'ic a.,** a line passing perpendicularly between the basion and the bregma, the length of which corresponds to the extreme height of the skull. **Ba'sicra'nial a.,** line from the centre of the anterior edge of the foramen magnum to the centre of the anterior edge of the cerebral surface of the sphenoid. **Ba'sifa'cial a.,** basicranial a., extended forward to the anterior point of the alveolar edge of the superior maxilla. **Biauric'ular** or **Binauric'ular a.,** imaginary line from one auricular point to the other. **Brain a.,** isthmus of the encephalon. **Cen'tral a.,** a. cylinder. **Cer'ebrospi'nal a.,** central nervous system, brain, and spinal cord. **A. of coch'lea,** modiolus. **Cœ'liac a.,** cœliac artery; sympathetic nerve plexus surrounding the artery. **A. cord,** spot at which commingling of ectoderm and mesoderm occurs. **A. cor'puscle,** corpuscle of touch. **Craniofa'cial a.,** bones constituting the floor of the cavity of the skull in higher animals. **Cra'niospi'nal a.,** cerebrospinal axis. **A. cyl'inder,** central part of nerve fibre, see *Nerve fibre.* **Intermus'cular a. c.,** the axis cylinder of a nerve after passing into the sarcolemma of a muscle. **A. c. pro'cess,** process passing from a nerve cell of the anterior cornu of gray matter in the central nervous system to become the axis cylinder of a nerve fibre. **A. of the eye,** visual axis, optic axis; a line falling perpendicularly on the eye and passing through the centre of the pupil. **Fron'tal a.,** a line passing horizontally through the globe of the eye, on which the upward and downward rotation takes place. **He'mal** or **hæ'mal a.,** aorta. **Horizon'tal a.,** a line projected in a horizontal plane, perpendicular to the anteroposterior and vertical axes of the eyeball. **A. of lens,** see *Lens.* **Neu'ral a.,** cerebrospinal axis. **Notochor'dal a.,** notochord. **Op'tic a.,** a. of the eye. **A. of the pel'vis,** see *Pelvis.* **A. of rota'tion,** that about which any body revolves. **Sagit'tal a. of the eye,** a line passing through the centre of the eyeball anteroposteriorly. **Spi'nal a.,** notochord. **Thora'cic a.,** common trunk of the superior thoracic and acromiothoracic arteries. **Thy'reoid** or **thy'roid a.,** a branch of the subclavian artery, see *Thyroid.* **A. trac'tion,** traction of obstetrical forceps on the child in the direction of the curve of the axis of the pelvis. **A. trac'tor,** obstetrical instrument devised to facilitate axis traction. **A. tube,** a. cylinder. **A. u'teri,** long diameter of the uterus; also a transverse line supposed to pass through the uterus on which it turns in anteversion or retroversion. **Vis'ual a.** or **A. of vis'ion,** a line projected from the point of direct vision on the retina to the fixation point.

**Ax'ite.** Terminal filament, by division, of the axis cylinder.

**Ax'le teeth.** Molar teeth.

**Axoden'drite** (*axis*+*dendron*, a tree). One of the lateral fibrils given off by the axon before its sheath begins. See *Cytodendrite.*

**Axof'ugal** (*axon*+*fugere*, to flee). Efferent; passing from the axon.

**Ax'oid.** Relating to the axis vertebra.

**Axoi'doat'loid** or **Ax'idoatloide'us.** Relating to the axis and atlas; the obliquus capitis inferior muscle.

**Axoi'dobasila'ris.** Muscular fibres from the axis to the basilar process of the occipital bone.

**Axoi'domastoide'us.** Obliquus capitis inferior muscle.

**Axoi'do-occipita'lis.** Rectus capitis posticus major muscle.

**Axolem'ma.** Axilemma.

**Ax'on.** Axis cylinder process of a neuron, neuraxon, axion; an efferent neural cell process; the body or skeletal axis of an animal. **A. hil'lock,** part of the neuron whence arises the axis cylinder.

**Axop'etal** (*axon*+*petere*, to seek). Afferent; passing to the axon.

**Ax'oplasm** (*plasso*, to form). Neuroplasm.

**Ax'unge** or **Axun'gia** (*axis*, axle, *ungo*, to grease). Adeps præparatus; pinguedo. **A. articula'ris,** synovia. **A. balsam'ica,** benzoinated lard. **A. cura'ta,** lard. **A. ga'di,** oleum jecoris aselli. **A. hom'inis,** human fat. **A. de mu'miâ,** marrow. **A. pe'dum tau'ri,** neat's-foot oil. **A. pisci'na mari'na,** cod-liver oil. **A. porci'na,** or **præpara'ta,** or **suil'la,** adeps præparatus.

**Ayapa'na** or **Ayapa'no.** Eupatorium ayapana; Brazilian plant; leaves are tonic.

**Ayden'dron.** Oily seeds of this Brazilian plant (Cujumary beans) are stimulant and stomachic.

**Ay'pnia** (*a*, priv., *hypnos*, sleep). Insomnia.

**Ayp′nos.** Sleepless.

**Azadarine′.** Bitter principle from Azadirachta indica, like quinine in action.

**Azadirach′ta in′dica.** See *Melia azedarach.*

**Aza′lea procum′bens.** Loiseleuria procumbens.

**Azaleïn′.** Fuchsin.

**Azed′arach** or **Azedara′cha amœ′na.** Melia azedarach.

**Azerin′.** A ferment present in various insectivorous plants; it resembles ptyalin.

**Az′ima tetracan′tha.** East Indian shrub, used in chest affections.

**Azoam′yly** (*a*, priv., *zoon*, animal, *amylon*, starch). The anatomical condition of the liver poor in glycogen.

**Azobenzene′, Azoben′zide,** or **Azoben′zol.** $C_{12}H_{10}N_2$. A compound produced by acting on nitrobenzene with sodium amalgam.

**Az′o-com′pound.** A compound resulting from the partial oxidation of an amido-compound, containing a double atom of nitrogen or azote.

**Az′o-dyes.** Coal-tar stains derived from simple azo-compounds.

**Azo′ic** (*a*, priv., *zoe*, life). Devoid of life. The *azoic period* of the geologist is that before living things appeared.

**Azoidynam′ia** (*a*, priv., *zoe*, life, *dynamis*, strength). Privation or diminution of vital powers.

**Azolitmin′.** $C_7H_7NO_4$. A red pigment derived from litmus.

**Azoög′eny** (*a*, priv., *zoe*, life, *genesis*, origin). Generation of defective beings.

**Azoösper′matism, Azoösper′mia,** or **Azoösperm′ism** (*a*, priv., *zoe*, life, *sperma*). Absence or diminished vitality of spermatozoa; sterility in the male.

**Azoösper′matous.** Relating to or affected by azoospermia.

**Azoöspermorrha′gia.** Discharge of unproductive semen.

**Azorel′la gleba′ria.** Species of umbelliferous plants from the Straits of Magellan, furnishing gum resin, *bolax gum*, formerly used in chronic discharges from the urethra.

**Azotæ′mia.** The presence of nitrogenous bodies (especially urea) in the blood.

**Az′otate.** Nitrate.

**Az′ote** (*a*, priv., *zoe*, life). Nitrogen.

**Az′oted** or **Az′otized.** Nitrogenized.

**Azotene′sis.** A morbid condition caused by excess of nitrogenous matter in the system.

**Azo′tic.** Relating to nitrogen. **A. acid,** nitric acid.

**Az′otous acid.** Nitrous acid.

**Azotu′ria** (*azote* + *ouron*, urine). Condition in which there is an increase of urea and urates in the urine; a disease of the horse characterized by hæmoglobinuria and paraplegia.

**Azoxybenzene′.** $C_{12}H_{10}N_2O$. A reduction product of nitrobenzene.

**Azulin′.** A blue anilin pigment.

**Azul′mic acid** or **Azulmin′.** Black substance deposited from solutions of prussic acid.

**Az′yges** (*a*, priv., *zygos*, yoke). Sphenoid bone, because it has no fellow; processus azyges, projecting from under the middle and forepart of that bone.

**Az′ygos** (*a*, priv., *zygos*, yoke). Azyges; not paired. **A. glan′dulæ thyroide′æ,** levator glandulæ thyreoideæ. **A. lin′guæ,** accessory slip of genioglossus muscle. **A. Morgagn′i,** a. uvulæ. **A. pharyn′gis,** middle constrictor muscle of the pharynx; also an occasional muscle from the pharyngeal spine of the occipital bone to the middle rhaphe of the pharynx. **A. pro′cess,** axyges. **A. u′vulæ,** azygous muscle of uvula. **A. vein,** azygous vein.

**Az′ygous.** Unpaired; see *Azyges, Azygos.* **A. ar′tery,** a. articular artery, a branch of the popliteal artery to knee-joint; artery on vaginal wall. **A. artic′ular ar′tery,** superior middle articular artery of the knee, see *Articular arteries of the knee.* **A. gan′glion,** coccygeal ganglion, see *Trisplanchnic nerve.* **A. mus′cle of thy′roid gland,** levator glandulæ thyroideæ. **A. mus′cle of u′vula,** a small muscle occupying the substance of the uvula; the name is inappropriate, as there are two distinct fasciculi alongside each other, forming the palatostaphylini, staphylini, epistaphylini, or staphylini medii muscles; they raise and shorten the uvula. **A. pro′cess of sphe′noid,** see *Azyges.* **A. vein** forms a communication between the vena cava inferior and the vena cava superior, permitting the blood to pass freely between the two. On the left side the *semiazygos*, left bronchial or left superior intercostal vein, has much the same distribution as the vena azygos.

**Azym′ia** (*a*, priv., *zyme*, leaven). Absence of a ferment. **A. humo′rum,** an old term denoting the ancient notion of a crudity of the humors.

**Azym′ic.** Preventing or not derived from fermentation.

**Az′ymous.** Unfermented; azymic.

**Az′zle teeth.** Molar teeth.

# B.

**B.** The chemical symbol for boron.

**Ba.** The chemical symbol for barium.

**Bab′bit met′al.** An alloy of copper and tin with a variable amount of antimony; used in dentistry.

**Babès′-Ernst bod′ies.** Metachromatic granules.

**Babe′sia** (from Babès, a pathologist of Bucharest). A genus of *Protozoa*. **B. bo′vis,** a ciliated protozoon found in the red blood corpuscles of cattle suffering from hæmoglobinuria or Roumanian cattle disease. **B. o′vis,** a protozoon resembling or identical with the preceding, and causing an analogous disease in sheep.

**Babin′ski's phenom′enon** or **re′flex** or **sign.** Extension, instead of flexion, of the toes on tickling of the sole of the foot; believed to point to a lesion of the pyramidal tract; lessening or abolition of the Achilles tendon reflex in true sciatica as distinguished from pain of hysterical origin.

**Babool′** or **Babul′ bark.** Bark of Acacia arabica; tonic and astringent, and externally applied to ulcers. **B. gum,** derived from Acacia arabica; expectorant and a diabetic food.

**Babuzica′rius.** Incubus; nightmare.

**Ba′by.** Infant. **B. farm,** name given in disparagement to an establishment in which infants are received and cared for, for pecuniary consideration, and often allowed to die of neglect.

**Bac′cæ** (pl. of *bacca*, berry) **bermuden′ses.** Sapindus saponaria. **B. cube′bæ,** cubebs. **B. domes′ticæ,** fruit of Rhamnus cathartica. **B. ac′tes,** see *Sambucus ebulus*. **B. ju′jubæ,** jujube. **B. junip′eri,** juniper berries. **B. myrtillo′rum,** see *Vaccinium myrtillus*. **B. norlan′dicæ,** Rubus articus. **B. phytolac′cæ,** pokeberry. **B. pi′peris gla′bri,** see *Piper cubeba*. **B. piscato′riæ,** see *Menispermum cocculus*. **B. ziz′yphi,** see *Jujube*.

**Bac′car.** A root and ointment formerly employed in uterine diseases; probably Asarum europæum.

**Baccel′li's meth′od.** Treatment of tetanus by subcutaneous injection of carbolic acid; treatment of foot-and-mouth disease by intravenous injections of bichloride of mercury. **B.'s sign,** transmission of the whispered voice through a serous pleural effusion, but not through a purulent one; also called aphonic pectoriloquy.

**Baccharine′.** Alkaloid from Baccharis cordifolia.

**Bac′charis alema′ni.** B. glutinosa; diaphoretic. **B. confer′ta,** Mexican shrub; diaphoretic; also used in dysuria. **B. cordifo′lia,** plant of northern part of S. America; diaphoretic. **B. genistelloi′des,** S. American shrub; antiperiodic. **B. glutino′sa** grows in S. America and United States; diaphoretic; used in bronchial and renal catarrhs. **B. halimifo′lia,** groundsel tree; indigenous; demulcent. **B. heterophyl′la,** Mexican shrub; same properties as B. glutinosa. **B. prostra′ta,** shrub of Peru; used in dysuria. **B. trim′era,** Brazilian species; tonic and diaphoretic. **B. vene′ta,** Apoploppus discoideus.

**Bac′chia** (*Bacchus*). Red or pimpled face of a drunkard. See *Gutta rosea*.

**Bac′chica** (sacred to Bacchus). Hedera helix.

**Bacci′na.** Henbane.

**Bace′las** or **Bace′lus** (castrated). One who has been castrated.

**Bach′elor's but′tons.** See *Strychnos nux vomica*.

**Bacilla′ceæ.** Bacilli. See *Bacillus*.

**Bacillæ′mia.** Presence of bacilli in the blood.

**Bacillar** (bas′il-lar) or **Bac′illary.** Like a rod; relating to bacilli. **B. lay′er of ret′ina,** tunica Jacobi.

**Bacil′li** (pl. of bacillus). Rods; rod-shaped microorganisms. See *Bacillus*. **B. acus′tici,** rods of Corti. **B. ret′inæ,** rods of the retina.

**Bacillici′dal.** Destructive to bacilli.

**Bacil′licide** (*bacillus* + *cædo*, to kill). Agent destructive of bacilli.

**Bacillici′dic.** Bacillicidal.

**Bacillicul′ture.** Growing of bacilli artificially outside of the living body.

**Bacil′liform.** Rod-shaped; resembling a bacillus.

**Bacillip′arous** (*bacillus* + *pario*, to beget). Producing bacilli.

**Bacillipho′bia.** Bacillophobia.

**Bacillogenous** (bas-il-oj′e-nous). Of bacillary origin.

**Bacillopho′bia.** A morbid dread of microorganisms as producers of disease.

**Bacillo′sis.** A morbid state caused by generalized bacillary infection.

**Bacil′lum** (stick or staff). Expectorant; troche having shape of a stick; suppository. **B. escharot′icum,** caustic rod or pencil, as of silver nitrate.

**Bacillu′ria.** The presence of bacilli in the urine when voided.

**Bacil′lus** (dim. of *baculus*, a staff). Genus of *Schizomycetes*, family *Bacteriaceæ;* a rod-shaped or elongated cell, usually straight and of a uniform, cylindrical outline, but sometimes very slightly curved or swollen in the centre or at one or both ends. Bacilli occur as single cells or two or more are joined end to end, rarely branching. They multiply by transverse division or by binary division and formation of endogenous spores; many of them are pathogenic, some being associated with specific infectious diseases. A brief mention is alone necessary of those bacilli, pathogenic and non-pathogenic, which have been thus far distinctly recognized. A table which was minute and exact in all the known details of morphology, biological characteristics, pathogenesis, etc., would necessarily be very voluminous and of value to the bacteriologist only; while a table in which a few details only were given would be so incomplete as to be of use neither to the bacteriologist nor to the general reader. It is not claimed that the following list is complete, for the number of species is too large and the confusion in the matter of nomenclature too great to make possible absolute accuracy, and some of the numerous bacilli mentioned will probably hereafter be found to be at least similar if not identical; moreover, new species are being so constantly discovered and described that a list to be complete must be added to almost daily. For information as to the pathogenesis of bacilli, their position in the systems of classification, etc., see *Bacteria*. **Bacil′lus accidenta′lis tet′ani,** small, vibratile rods found in wounds of those having inoculation tetanus; causing fatal septicæmia in rabbits, guinea-pigs, etc., with bloody local œdema, paralysis, and convulsions. **B. ace′ti** (Kütz), acetic or vinegar ferment, see *Bacterium aceti*. **B. ace′ticus** (Flügge), B. aceti. **B. ac′idi butyr′ici,** B. butyricus. **B. ac′idi lac′tici,** bacillus causing lactic acid fermentation (Hueppe); produces lactic acid in milk, precipitates the casein, and carbonic acid is formed; found in sour milk. **B. ac′idi lævolac′tici** (Schardinger), found in well water; produces fermentation. **B. acidifor′mans,** obtained by Sternberg (1888) from a piece of yellow-fever liver and also from two cadavers which were not of men dead of yellow fever; injected into the abdominal cavity of rabbits and guinea-pigs, the bacilli are pathogenic; they are met with in the blood. **B. of ac′ne contagio′sa,** obtained from the pus and scales from pustules of acne contagiosa of the horse. The discoverers (Dieckerhoff and Granitz, 1885) state that a culture of this bacillus brought into thorough contact with the skin of horses, calves, sheep, and dogs gives rise to typical acne pustules. **B. actinobac′ter** (Duclaux), from milk exposed to air. **B. aërog′enes** (Miller), small bacillus found in normal contents of the intestines. **B. a. capsula′tus,** discovered by Welch in the bloodvessels in a case of thoracic aneurysm; injections made with culture of this bacillus into the bloodvessels of rabbits did not produce any visible effect. **B. aërog′enes meningit′idis** (Cantini), found in meningitis; pathogenic and causing fermentation. **B. aëroph′ilus** (Liborius), found as an accidental contamination in bacterial cultivations; non-pathogenic. **B. of Afanas′siev** (1887), found in the sputum and purulent matter from patients affected with whooping-cough; injections of pure cultures into the air passages or parenchyma of the lungs in animals give rise to symptoms similar to those of whooping-cough; at the post-mortem very numerous bacilli are found in the bronchial and nasal mucus. **B. a′gilis cit′reus** (Menge), obtained from an infusion of peas. **B. al′bicans paterifor′mis,** found in the skin in seborrhœa; saprophytic. **B. albu′minis** (Bienstock), detected in feces; disintegrates albumin. **B. of albu′minous decomposi′tion,** see *B. putrificus coli.* **B. al′bus** (Eisenberg), discovered in water; non-pathogenic. **B. a. anaërobies′cens** (Vaughan), found in water; non-pathogenic. **B. a. cadav′eris** (Strassman and Stricker, 1888), found in blood of two cadavers soon after death; a small quantity of a culture of this bacillus in a liquefied state injected subcutaneously caused death in mice in six hours; also fatal to guinea-pigs. **B. a. pu′tidus** (De Bary, Maschek), found in water; when cultivated on gelatin this bacillus emits an offensive odor resembling that of manure; non-pathogenic. **B. of allanti′asis** (Müller), found in poisonous sausage; pathogenic; also causes fermentation. **B. allantoi′des** (L. Klein), found as an accidental contamination in culture of B. megatherium; non-pathogenic. **B. al′lii** (Griffiths), occurs superficially on putrefying onions; the cultures form sulphuretted hydrogen; non-pathogenic. **B. of alope′cia area′ta** (Kasauli and Sabourand), discovered in hair affected in this disease. **B. al′vei,** B. of foul-brood of bees (Cheshire, Watson-Cheyne, 1885); introduction of pure cultures of this bacillus into hives of bees gives rise to foul-brood; bees fed with food containing this bacillus also become infected. **B. amylobac′ter,** see *B. butyricus.* **B. a.** (Grueber), found in flour; causes fermentation. **B. a.** (Van Senus), found in fermenting cellulose; causes fermentation. **B. a.** (Van Tighen), found in soil and manure; causes fermentation. **B. amylov′orus** (Burrill), produces blight and death in pear trees and apple trees; also causes fermentation. **B. amylozy′ma** (Perdrix, 1891), found in hydrant water of Paris. **B. anaëro′bicus liquefa′ciens** (Sternberg), found in cultures from contents of the intestine of yellow fever cadaver; non-pathogenic. **B. anaëro′bius,** B. of milk; there are several kinds, poisonous and non-poisonous. **B. antennifor′mis** (Ravenel), found in soil; saprophytic. **B. an′thracis** (Pollender, 1849; Davaine, 1850), B. of splenic fever; found in blood of animals suffering from charbon and in those who have died from charbon; pathogenic for mice, guinea-pigs, cattle, horses, sheep, and rabbits; see *Anthrax.* **B. a. clavifor′mis** (Chauveau and Phisalix), found in anthrax, in soil, etc.; pathogenic; causes fermentation. **B. a. symptomat′ici,** B. causing symptomatic anthrax; also black-leg and quarter-evil of animals; see *B. carbonis.* **B. aphtho′sus,** found in cultures resembling B. coli; produces lesions resembling those of foot-and-mouth disease, ulcers, hemorrhages, etc. **B. a′pium,** B. of bees; similar to B. anthracis. **B. aquat′icus liquefa′ciens** (Podrovsky), detected in river and hydrant water. **B. aquat′ilis** (Frankland), discovered in water from a well at Kent, England; non-pathogenic. **B. a.** (Lustig), found in water; causes fermentation. **B. a. fluores′cens** (Lustig), found in water; saprophytic. **B. a. grave′olens** (Tataroff), found in water; chromogenic. **B. a. radia′tus** (Zimmermann), found in water; saprophytic. **B. a. sol′idus** (Lustig), found in water; causes fermentation. **B. a. sulca′tus** (Weichselbaum), five varieties of bacilli discovered in drinking water supplied to city of Vienna, Austria. **B. arbores′cens** (Frankland), discovered in the drinking water supplied to the city of London; non-pathogenic. **B. a. non-liquefa′ciens** (Ravenel), found in soil; saprophytic. **B. argent′eophosphores′cens** (Katz), No. 1, found in sea water at New South Wales; cultures on bouillon of this bacillus are phosphorescent; non-pathogenic. No. 2, from phosphorescent fish; non-pathogenic. No. 3, from cuttlefish; non-pathogenic. **B. a. liquefa′ciens** (Katz), found in sea water at New South Wales; non-pathogenic. **B. aromat′icus** (Pammel), found in cabbage leaves; photogenic. **B. arthrit′idis chron′icæ,** found in the articulations in chronic rheumatism; when inoculated in such locations in rabbits, chronic proliferative arthritis results; introduced hypodermically it produces septicæmia. **B. auranti′acus** (Frankland), discovered in well water. **B. aures′cens** (Ravenel), found in soil; saprophytic. **B. au′reus** (Adametz), discovered in water; also in eczema seborrhoicum, superficially on the body. **B. au′reus minutis′simus,** found in atmospheric air; produces in mice septicæmia, in rabbits abscesses. **B. "B"** (Hoffman), pathogenic bacillus detected in diseased larvæ of Liparis monacha. **B. of Babès′ and Opres′cu,** found in hemorrhagic septicæmia, resembling typhus exanthematicus. **B. baccarin′ii** (Macchiati), found in grapevine disease; pathogenic to plants. **B. of Belfan′ti and Pascaro′la** (1888), from suppurating wounds after tetanus; pathogenic for rabbits, guinea-pigs, mice, etc. **B. of beriber′i** (Eykamann) or **B. beriber′icus** (Lacerda), from the blood, spinal cord, etc., of those affected with beri-beri; resembles B. anthracis. **B. berolinen′sis in′dicus,** discovered by Clässen in the water of the river Spree; non-pathogenic. **B. of Bey′erinck,** see *B. radicicola.* **B. of Bien′stock,** found in human fæces; pathogenic; B. putrificus coli. **B. of blue milk,** B. cyanogenus. **B. of blue or green pus,** see *Bacillus pyocyaneus.* **B. boöcop′ricus** (Emmerling), found in the excrement of the cow; causes fermentation. **B. of Book′er,** B. *a* of Booker; pathogenic for mice and guinea-pigs. According to Booker, there are seven varieties of bacteria found in the excrement of children affected with cholera infantum, which he has classified into Bacilli of Booker, *d*, *e*, *f*, *g*, *h*, *k*, and *n*; all these bacilli (*d–n*) bear a strong resemblance to bacterium coli commune. **B. of Borax′y,** see *Bacillus anthracis.* **B. botuli′nus,** found in botulismus; anaërobic; causes mydriasis, urinary and fecal retention in mice, guinea-pigs, etc., and paralysis of respiration and circulation. **B. of Bovet′** (1891), found in the intestine of a patient who had succumbed to an attack of enteritis with symptoms resembling cholera; injections into the peritoneum in guinea-pigs were followed by peritonitis, and proved fatal. **B. bovisep′ticus** (Wildseuche), found in the blood and fluid of œdema in fatal cases of European cattle plague; supposed to be identical with B. suisepticus; causes fatal septicæmia, with hemorrhages, pleuropneumonia, etc., in many animals, large and small. **B. bras′sicæ** (Pommer), from an infusion of cabbage leaves; non-pathogenic. **B. bremen′sis feb′ris gas′tricæ,** a bacillus resembling Gartner's B. enteritidis, found by Kurth in cases of a disease resembling yet distinct from typhoid fever. **B. breslavien′sis,** found in diseased meat; caused serious epidemic enteritis. **B. bre′vis** (Mori), found in sewage; pathogenic. **B. of Brie′ger,** B. cavicida. **B. bronchit′idis pu′tridæ** or **B. of bronchi′tis** (Lumnitzer), obtained from secretions of putrid bronchitis; causes metastatic abscesses in rabbits. **B. of bron′chopneumo′nia in cat′tle,** see *B. of cornstalk disease.* **B. brun′neus** (Adametz), found in water. **B. of bubon′ic plague,** B. pestis bubonicæ; B. of Kitasato; bacterium pestis; discovered simultaneously by Kitasato and Yersin in 1894, during an epidemic of this disease in China, in pus from buboes and lymphatic glands, rarely in internal organs and in the blood; also in feces of men and animals; short, thick rods, with rounded ends, frequently in short chains. **B. bucca′lis,** B. buccalis fortuitus. **B. b. fortu′itus** (Vignal), found in the secretions of healthy salivary glands in man; non-pathogenic. **B. b. max′imus** (Miller), found in mouth and secretions in pharyngomycosis. **B. b. minu′tus** (Vignal), Bacillus *g* of Vignal, found in the secretions of healthy salivary glands in man; non-pathogenic. **B. of buf′falo plague,** supposed to be identical with B. bovisepticus; found in various organs and fluids of the buffalo, causing a fatal form of fever, with exudations and congestions of mucous and serous membranes. **B. bu′tyl** or **B. buty′licus** (Fitz), B. butyricus. **B. of buty′ric acid fermenta′tion,** B. butyricus (Prazmowski). **B. buty′ri fluores′cens** (Lafar), found in butter; causes fermentation. **B. b. visco′sus** (Lafar), detected in butter. **B. butyr′icus** (Prazmowski), causing butyric acid fermentation; found in decomposing vegetable infusions, old cheese, etc.; non-pathogenic. **B. b. of Bot′kin,** found in cultures, from which the air was excluded, from milk, hydrant and well water, earth, and dust; non-pathogenic; resembles butyric acid ferment of Perdrix. **B. b. of Huep′pe,** B. found in imperfectly sterilized milk; non-pathogenic. **B. "C"** (Foutin), found in hailstones; excretes a pigmentary transformation product. **B. cadav′eris,** found by Sternberg (1889) insections of the liver and kidneys from yellow fever cadavers; subcutaneous injections from the liver, in which these bacilli are contained, are followed by marked œdema, and are very pathogenic for guinea-pigs. **B. canal′is capsula′tus** (Mori, 1888), found in sewer water. **B. c. par′vus** (Mori, 1888), found in sewer water. **B. of cana′ry septicæ′mia,** resembles B. choleræ gallinaceæ; causes septicæmia also in mice, and hepatic necrosis in canary birds. **B. of can′cer** (Rappin and Scheurlen and Domingo Freire), B. of Scheurlen. **B. can′dicans** (Frankland), found in the soil; non-pathogenic. **B. of Canestri′ni,** non-pathogenic; found in Italy in larvæ and bees from hives which were infected. It has been demonstrated that pure cultures of this bacillus cause a disease of bees of an infectious character in localities in Italy. **B. of Can′on and Pielic′ke,** found by these two observers in the blood of a number of patients suffering from measles; the bacilli were also present in the nasal and conjunctival secretions of patients with the measles. **B. capsula′tus** (Pfeiffer, 1889), from the blood of a guinea-pig; inoculations prove fatal to white mice and house mice in a few days; bacilli are present in the blood and all the organs. **B. c.** (Mori), found in sewage; pathogenic. **B. c. muco′sus** (Fasching), found in secretions from the nose in influenza. **B. c. pneumon′icus** (Banti), in exudation from the lungs of a person dying of peritonitis. **B. c. sep′ticus,** found in rag-pickers' disease, anthrax, etc.; resembles B. pneumoniæ; causes fatal septicæmia. **B. c. Smith′ii** or **B. cap′sule of Smith** (Theobald Smith), three kinds, similar to bacillus of Friedländer, have been procured from the intestines of swine. **B. cap′sule** (Loeb), detected in keratomalacia of young children. **B. c. of ozæ′na** (Marano), discovered in the secretions of that disease. **B. carabifor′mis** (Kaczynsky), found in the stomach of dogs fed on meat alone for several days; non-pathogenic. **B. of carbohy′drate fermenta′tion,** B. butyricus, B. acidi lactici, B. dysodes. **B. carbo′nis,** found in fluids of the body in animals dying of symptomatic anthrax and in the soil; cultures have the acid smell of rancid butter; inoculation with it causes symptomatic anthrax. **B. of carcino′ma,** B. of cancer. **B. carnic′olor** (Tils), found in water; chromogenic. **B. carota′rum** (A. Koch), found in cooked carrots and sugar-beets; these bacilli cause blood serum to liquefy; non-pathogenic. **B. caten′ula** (Duclaux), detected in cheese. **B. of cat′tle far′cy,** Streptothrix farcinica. **B. of cat′tle plague** (Metchnikoff), B. septicæmiæ hæmorrhagicæ. **B. caucas′icus** (Kern), from the ferment of Kefir. **B. cauliv′orus** (Galloway), found in potatoes; pathogenic to that vegetable. **B. cav′iæ fortu′itus** (Sternberg), found in a guinea-pig which had been inoculated with the liver of a yellow-fever cadaver; non-pathogenic. **B. cavici′dus,** Brieger's bacillus; found in feces and artificial products of decomposition. Subcutaneous injections are very fatal to guinea-pigs (mice and rabbits frequently possess immunity); bacilli are found in the blood; they resemble bacterium coli commune. **B. c. havanien′sis,** found by Sternberg (1889), in the intestinal contents of a yellow-fever cadaver, by inoculation of guinea-pigs. **B. of Ca′za and Baillard′,** found in cheesy nodules situated on the peritoneum and pancreas. **B. ce′reus cit′reus,** found in serous inflammation of the periosteum; produces osteitis, periosteitis, and hyperostosis. **B.of chan′croid** (Ducrey), discovered in pustules from a patient inoculated with chancroid virus. **B. of cheese,** see *Spirillum tyrogenum.* **B. chauvæ′i,** B. of sympathetic anthrax. **B. chlori′nus** (Engelmann), detected in infusions of putrescent vegetable matter. **B. chol′eræ,** spirillum choleræ asiaticæ. **B. c. ana′tum,** B. of duck cholera (Cornil and Toupet, 1888), from blood of ducks in Paris which had died of choleraic disease; resembles B. c. gallinarum, and causes a similar nisease. **B. c. columba′rum,** pathogenic for doves, causing disease like chicken cholera; fatal to rabbits. **B. c. gallina′rum,** B. of fowl cholera (Pasteur, 1881); B. septicæmiæ hæmorrhagicæ; pathogenic microorganism found in chickens and other animals suffering from infectious diseases, in putrefying flesh, etc.; inoculation of fowls produces a stupefied and somnolent condition. At the post-mortem hemorrhagic enteritis of the duodenum is found; bacilli are present in great numbers in the blood and organs. **B. of cholera′ic diarrhœ′a from meat poi′soning** (Klein), discovered in the blood and alvine discharges of those affected by tainted meat. **B. choleroi′des** (Bujwid), found in water; pathogenic. **B. cholog′enus,** resembles B. coli; found in purulent conditions, such as meningitis, abscess of kidney, thrombosis of the portal vein, etc.; pyogenic when injected hypodermically; fatal when injected into the peritoneum. **B. chro′moaromat′icus,** found by Galtier in a pig which had died from an infectious malady in which bronchopneumonia, pleurisy, enteritis, and swollen lymphatics coexisted. **B. of chylu′ria** (Wilson), discovered in coagulated chylous urine. **B. cinc′tus** (Ravenel), found in soil; causes frementation; is also chromogenic. **B. cir′culans** (Jordan), found to be present sometimes in the water from the Merrimac River; these bacilli possess the power of gradually reducing nitrates into nitrites. **B. cit′reus** (Unna and Tommasoli), detected in eczema seborrhoicum; chromogenic (lemon-yellow). **B. c. cadav′eris** (Strassmann), discovered in venous blood in a cadaver after accidental death; non-pathogenic. **B. clava′tus,** B. pseudodiphthericus. **B. clavifor′mis** (Duclaux), detected in decomposing casein. **B. clo′acæ** (Jordan), very frequently found in sewage; reduces nitrates; non-pathogenic. **B. cœru′leus** (Smith), in water of Schuylkill River; non-pathogenic. **B. c.** (Voges), found in water; causes excretion of blue pigment. **B. co′li commu′nis** (Escherich), supposed to be identical with Brieger's bacillus (B. cavicida); Emmerich's bacillus; from the blood and juice of various organs and the alvine discharges of cholera cadavers and cholera patients at Naples; introduced into the animal organism of guinea-pigs, cats, and a man. **B. c. colorab′ilis,** found in cholelithiasis and in the feces and in various organs in yellow fever; pathogenic to mice (causing septicæmia) and to dogs and rabbits. **B. c. concen′tricus** (Fitzpatrick), found in the alimentary canal in yellow fever; pathogenic. **B. c. dysenter′icus,** form of B. coli found in dysentery; acts especially on the large intestines; causes hemorrhagic dysentery. **B. c. icteroi′des** (Fitzpatrick), found in yellow fever. **B. c. immo′ bilis,** found in the feces; causes abscess, peritonitis, or septicæmia. **B. c. sim′ilis** (Sternberg), in human liver; non-pathogenic. **B. of Colomiat′ti,** in xerotic masses in an infant and in some conjunctival affections; non-pathogenic. **B. co′lon,** B. coli communis. **Com′ma, b.,** spirillum choleræ asiaticæ. **B. of conjuncti′val catarrh′** (Koch), B. of conjunctivitis; B. of pink-eye. **B. of conjunctivi′tis** (Weeks), B. conjunctivitidis; very small bacillus, shorter than that of tuberculosis; produces acute conjunctivitis by inoculation. **B. coralli′nus** (Slater), found in dust in the air; excretes red pigment. **B. constric′tus,** found in water; non-pathogenic. **B. coprog′enes fœt′idus** (Schottelius, 1885), found in the intestine of swine suffering from hog cholera. **B. c. par′vus** (Bienstock), in human feces. **B. of corn′-stalk disease′,** found in cattle suffering from bronchopneumonia; supposed to be identical with B. zeæ; fatal to mice, pigeons, rabbits, and guinea-pigs. **B. cortica′lis** (Haenlein), found in pine bark; causes fermentation. **B. cras′sus aromat′icus** (Tataroff), found in water; causes fermentation. **B. c. sputig′enus** (Kreibohm, 1886), in sputum and on the tongue; resembles bacillus pneumoniæ; pathogenic. **B. cunea′tus** (Rivolta), detected in blood and internal organs of animals which have been the victims of sepsis; pathogenic. **B. cunic′uli pneumon′icus,** resembles B. choleræ gallinarum; causes in rabbits and guinea-pigs pneumonia, pleurisy, and septicæmia. **B. c. sep′ticus,** found in diseased rabbits; causes in rabbits œdema, septicæmia, etc. **B. cuniculici′dus** (Koch), see *Bacillus septicæmiæ hæmorrhagicæ.* **B. c. havanien′sis** (Sternberg, 1889), found in the intestinal contents of patients who had died from yellow fever. **B. c. immo′bilis,** resembles B. choleræ gallinarum; causes serous inflammation in rabbits. **B. c. mo′bilis,** found in exudation after peritonitis in rabbits; causes septicæmia in mice and general infection in rabbits. **B. c. thermoph′ilus,** resembles B. choleræ gallinarum; causes septicæmia and serous inflammation in rabbits and guinea-pigs. **B. cuticula′ris** (Fils), found in water; forms in milk a superficial yellow membrane, and an odor of sulphuretted hydrogen is emitted; non-pathogenic. **B. c. al′bus** (Tataroff), found in water; saprophytic. **B. cyan′eofluores′cens** (Zangemeister), found in blue milk; causes excretion of blue pigment. **B. cyan′eofus′cus,** B. cyanofuscus. **B. cyan′eophosphores′cens** (Katz), from sea water, New South Wales; closely allied to bacillus phosphorescens of Fischer. **B. cy′anofus′cus** (Beyerinck), found in glue and size and Edam cheese. **B. cyano′genus** (Eueppe), B. of blue milk, found in milk; non-pathogenic; produces a blue pigment. **B. c.** (Jordan), found in water; causes excretion of blue pigment. **B. cystifor′mis** (Clado), found in the urine in a case of cystitis; non-pathogenic. **B. "D"** (Foutin), found in hailstones; saprophytic; **B. of Dan′tec** (1891), non-pathogenic bacillus found in salted codfish; it gives to codfish a red color. **Dan′ysz rat b.,** see *Danysz.* **B. of Davain's′ septicæ′mia,** B. septicæmiæ hæmorhagicæ. **B. delicat′ulus** (Gerdan), in the water supplied to the city of Lawrence, Massachusetts; reduces nitrates to nitrites; non-pathogenic. **B. of Dem′me** (1888), contained in tumors and pustules and also in the blood of individuals affected with erythema nodosum. **B. dendrit′icus** (Bordoni-Uffreduzzi), found in water in Italy; saprophytic. **Den′ecke's cheese b.,** spirillum tyrogenum. **B. denitrif′icans** (Giltay and Aberson), found in sewage, soil, and air; possesses the power of decomposing nitrates. **B. denta′lis vir′idans,** in carious dentine (Miller). **B. devo′rans** (Zimmermann), found in well water; non-pathogenic. **B. dian′thi** (Arthur and Bolley), bacillus pathogenic to plants; found in carnations that have undergone bacterial deterioration. **B. diatrypet′icus ca′sei** (Baumann), found in cheese; causes fermentation. **B. diffu′sus** (Frankland), in the soil; non-pathogenic. **B. diphthe′riæ** or **diphtherit′icus** (Klebs, 1883; Loeffler, 1884), bacillus found in diphtheritic membranes; brought into contact with the trachea of chickens, pigeons, and rabbits, it produces false membranes; subcutaneous inoculations prove fatal to guinea-pigs and small birds in a few days; hemorrhagic infiltrations of the subcutaneous tissue and pleural cavities are present. **B. d. a′vium,** causes epizoötic condition in birds, including pharyngitis, laryngitis, enteritis, and septicæmia. **B. d. columba′rum** (Loeffler, 1884), in diphtheritic false membranes in pigeons which had succumbed to diphtheria existing in certain localities in Germany among pigeons, and also among chickens. **B. d. cunic′uli,** found in rabbits with diphtheria; causes in them affections of the liver and spleen and mucous enteritis and necrosis of bowel. **B. d. spu′rius,** see *B. pseudodiphthericus.* **B. d. vitulo′rum** (Loeffler, 1884), long bacillus obtained from exudation of false embrane in the oral cavity of calves having infectious diphtheria; pathogenic for mice, but not for rabbits or guinea-pigs. **B. distor′tus** (Duclaux), detected in milk and cheese. **B. of Dö′derlein,** B. vaginalis. **Drum′stick b.,** B. putrificus coli. **B. du′bius,** found in feces in diarrhœa; pathogenic to mice. **B. d. pneumo′niæ,** found in pneumonic sputa; causes in various small animals local œdema and necrosis and hemorrhagic septicæmia. **B. dysenter′iæ** (Shiga), found in the intestine in dysentery; pathogenic for mice, rabbits, and guinea-pigs. **B. d. liquefa′ciens** (Ogata), found in Japanese dysentery; pathogenic to mice and rabbits. **B. dyso′des** (Zopf), in bread, giving it a strong smell. **E′berth's b.,** B. typhi abdominalis. **B. of Egyp′tian catar′rhal conjunctivi′tis,** B. of Kartulis. **B. of Em′merich,** B. coli communis, B. neapolitanus. **B. emphysemato′sus,** found in pneumothorax; produces in guinea-pigs inflammation, but not suppurative unless other bacilli are also present. **B. endocardi′tidis capsula′tus** (Weichselbaum, 1888), from spleen of case of endocarditis. **B. e. gris′eus** (Weichselbaum, 1888), from a case of ulcerative endocarditis; pathogenic for white mice and guinea-pigs. **B. of endocardi′tis,** B. pyogenes fœtidus. **B. enterit′idis** (Gärtner, 1888), from a cow dead from mucous diarrhœa, and from the spleen of a man who died from eating its flesh. **B. enterit′idis sporog′enes,** found in milk and in the passages in diarrhœa; causes diarrhœa. **B. entomotox′icon** (Duggar), found in diseased condition of the *Anasistris* or squash-bug; pathogenic. **B. epiderm′idis,** B. of Scheurlen. **B. e.** (Bizzozero), *Leptothrix epidermidis;* non-pathogenic; found in the epidermis of the interdigital spaces of the foot. **B. ep′silon of Miller,** B. of Finkler-Prior. **B. e′qui intestina′lis,** found in the intestine of the horse; resembles B. coli. **B. ero′dens** (Ravenel), found in soil; saprophytic. **B. erysipel′atos lep′oris** (Koch), in erysipelatous inflammation in the rabbit. **B. erysipel′atos su′is** (Loeffler, Schütz, 1885), B. of hog erysipelas, with which B. of mouse septicæmia (Koch, 1878) is identical; found in the blood and organs of swine, victims to hog erysipelas in Germany; pathogenic for swine, rabbits, pigeons, sparrows, etc. **B. erythem′atis,** found in the skin and blood in erythema nodosum; pathogenic. **B. erythros′porus** (Eidam), non-pathogenic bacillus found in water, in decomposing alkaloids, as putrefying flesh, etc. **B. esthace′ticus** (Frankland), bacillus which produces fermentation in arabinose. **B. esthacetosuccin′icus** (Frankland and New), bacillus which decomposes mannite and dulcite, producing alcohol and succinic and acetic acids. **B. ethace′ticus** (Frankland, Fox, Macgregor), found in the excrement of sheep; causes fermentation. **B. of Euro′pean cat′tle plague,** B. bovisepticus. **B. of E. swine plague,** see *B. suipestifer* and *B. suisepticus.* **B. exanthemat′icus,** found in hemorrhagic infection with morbidly dark skin; pathogenic. **B. ex pneumoenterit′ide su′is** (Klein), B. of hog cholera; pathogenic. **B. "F,"** B. buccalis. **B. faculta′tus** (Sadebeck and E. Fränkel), discovered in uncomplicated mucous pharyngitis.

**B. fæca′lis alcalig′enus,** found in feces; resembles B. typhosus; pathogenic. **B. of false hog chol′era,** B. parvus ovatus. **B. of false tuberculo′sis in rab′bits,** B. of pseudotuberculosis in rabbits. **B. fe′lis sep′ticus,** found in expectoration of the cat; pathogenic. **B. of fer′ret plague,** B. mustelæ septicus. **B. fig′urans** (Vaughan), from water; non-pathogenic; also name of one described by Crookshank, identical with B. mesentericus vulgatus; also by Flügge, in garden earth. **B. filament′ary,** found in the stomach in cancer only. **B. filifor′mis** (Duclaux), discovered in cheese and milk. **B. filifor′mis** (Tils), non-pathogenic; found in water. **B. f. havanien′sis** (Sternberg), non-pathogenic bacillus from yellow-fever liver. **B. of Fink′ler-Pri′or,** detected in those affected with cholera nostras; see *Spirillum Finkler-Prior*. **B. of Fioc′ca,** found in the saliva of cats and dogs. **B. fissura′tus** (Ravenel), found in soil; causes yellow pigment. **B. fitzia′nus** (Zopf), found in hay infusion; probably identical with B. subtilis. **B. flaves′cens** (Pohl, 1892), from swamp water; its importance is not yet determined. **B. flavocoria′ceus** (Eisenberg), small sulphur-yellow bacillus of Adametz and Urichmann, found in water; non-pathogenic. **B. fla′vus** (Macé), discovered in drinking water. **Flesh′-colored b.** (Tils), non-pathogenic, forming flesh-colored pigment. **B. floc′cus** (Warington), from garden soil. **B. fluores′cens** (Becker, Schrötter), from water and pus; forms pigment pyocyamin. **B. fluores′cens al′bus,** found in water; gives yellow color. **B. f. au′reus** (Zimmermann), short, non-pathogenic bacillus found in water. **B. f. liquefa′ciens,** frequently found in water and in putrefying infusions. **B. f. l. minutis′simus** (Unna and Tommasoli), non-pathogenic; found in eczema seborrhoicum. **B. f. lon′gus** (Zimmermann), non-pathogenic bacillus found in water. **B. f. minutis′simus,** found in water and decomposing infusions; causes fermentation and bluish-green color. **B. f. niva′lis** (Schmolck), non-pathogenic bacillus found in water and snow of Norway. **B. f. non-liquefa′ ciens** (Eisenberg and Kreuger), found in water and butter; causes fermentation and green color; not pathogenic. **B. f. ova′lis** (Ravenel), found in soil; saprophytic. **B. f. pu′tidus** (Flügge), non-pathogenic bacillus found in water, in putrefying flesh, etc. **B. f. ten′uis** (Zimmerman), non-pathogenic bacillus found in water. **B. f. undula′tus** (Ravenel), found in soil; saprophytic. **B. fœt′idus,** from exuation of profuse sweating of feet; cultivations have that odor. **B. f.** (Passet), found in soil; saprophytic. **B. f. lac′tis** (Jensen), discovered in milk; causes fermentation. **B. f. ozæ′næ** (Hajek), found in secretions from the nose in ozæna; pathogenic for mice; see *Micrococcus Loewenbergii*. **B. of foot-sweat,** see *B. fœtidus*, *B. saprogenes*, and *Bacterium graveolens*. **B. of foul-brood of bees,** B. alvei. **B. of chol′era,** B. choleræ gallinarum; B. septicæmiæ hæmorrhagicæ. **B. formo′sus** (Ravenel), found in soil; saprophytic. **B of Fraenk′el,** Micrococcus lanceolatus. **B. friedebergen′sis,** found in toxic sausage, liver, and horse-flesh; causes serious gastroenteritis and bacillæmia and occasionally paralysis. **B. of Fried′länder** or **B. pneumo′niæ,** pneumobacillus obtained from the exudation poured into the alveoli of the lungs in croupous pneumonia; it is, however, present in only a small proportion of cases; pathogenic for mice and guinea-pigs. **B. freudenreich′ii,** found in atmospheric air and in abscesses. **B. of Ful′les,** two have been described, both aërobic and non-liquefying; found in the soil. **B. ful′vus** (Zimmermann), non-pathogenic bacillus found in water. **B. fus′cus** (Schrötter), found in putrid infusions of maize; causes fermentation; yellow excretion. **B. f.** (Zimmermann), non-pathogenic bacillus found in water. **B. f. limba′tus** (Scheibenzuber), non-pathogenic bacillus from rotten eggs. **Gaff′ky's b.,** B. typhi abdominalis. **B. gallina′rum** (Klein, 1889), bacillus from disease similar to fowl cholera. **B. ganglifor′mis** (Ravenel), found in soil; causes fermentation. **B. of gan′grene,** B. œdematis maligni; B. saprogenes; B. of senile gangrene. **B. of gan′grenous septicæ′mia,** B. œdematis maligni. **Gas b.,** aërogenes capsulatus. **B. gasofor′mans** (Eisenberg), small bacillus found in water; non-pathogenic. **B. gastromyco′sis o′vis,** found in acute epizoötic disease of sheep with gastrointestinal hemorrhage. **B. gayto′ni** (Cheshire), produces disease of honey bees. **B. gem′inus ma′jor** (Ravenel), found in soil; saprophytic. **B. g. mi′nor** (Ravenel), found in soil; saprophytic. **B. genicula′tus** (De Bary), found in the stomach. **B. of Gess′ner,** found in the normal contents of the human intestine; it is similar to the bacillus lactis aërogenes. **B. gingi′væ** (Miller), found in alveolar abscess and in secretions of a foul mouth. **B. g. pyog′enes** (Miller), found in alveolar abscess and secretions of a foul mouth. **B. gingivit′idis,** found in scurvy; pathogenic to rabbits, guinea-pigs, and dogs. **B. ging′lymus** (Ravenel), found in soil; saprophytic. **B. of Giovanni′ni,** see *B. of purpura hæmorrhagica of Tizzoni*, **Gla′cier b.,** B. fluorescens nivalis. **B. of glan′ders,** bacillus mallei. **B. glau′cus** (Maschek), non-pathogenic bacillus, forming a gray pigment; found in water. **B. gliscrog′enus** (Malerba), see *Bacterium gliscroginum*. **B. glyceri′næ,** B. fitzianus. **B. grac′ilis** (Zimmermann), found in water; non-pathogenic. **B. g. anaërobies′cens** (Vaughan), from water; non-pathogenic. **B. g. cadav′eris** (Sternberg, 1889), from a section of human liver. **B. granulo′sus** (Russell, 1891), from mud in Gulf of Naples. **Grass b.,** resembles B. tuberculosis; found in various grasses, excrement of cow, and in milk and butter; causes pseudotuberculosis in guinea-pigs. **B. grave′olens** (Bordoni-Uffreduzzi), found in the epidermis between human toes; non-pathogenic. **B. of green diarrhœ′a in children** (Lesage), B. of Lesage. **B. of green pus,** B. pyocyaneus. **B. of grouse disease′** (Klein, 1889), from epidemic disease in the grouse. **B. of Guillebeau′,** three forms were obtained by him from the milk of cows suffering from inflamed breast. **B. gummo′sus** (Happ), causes conversion of cane sugar into gum, forming glucose, mannite, and adipous acids. **B. gutta′tus** (Zimmerman), found in water; non-pathogenic. **B. "H"** (Rosenberg), found in water; causes violet color. **B. hæmorrha′gicus,** found in purpura hæmorrhagica; causes intense septicæmia (hemorrhagic) in mice and rabbits. **B. h. nephrit′idis,** found in hemorrhagic nephritis; resembles B. choleræ gallinarum. **B. h. sep′ticus,** found in hemorrhagic septic poisoning; pathogenic. **B. h. veneno′sus,** found in the blood and skin in hemorrhagic infection; pathogenic. **B. haloph′ilus** (Russell, 1891), from water and mud of Gulf of Naples. **B. hanse′nii** (Raspmussen), found in certain dietetic solutions. **B. havanien′sis** ( Sternberg), short, oval bacillus; aërobic and chromogenic. **B. h. liquefa′ciens** (Sternberg), from external surface of patients with yellow fever **B. of Hav′elburg,** found in stomach after yellow fever; causes fermentation. **B. of hay infu′sions,** B. subtilis. **B. hel′volus** (Zimmermann), non-pathogenic bacillus found in water. **B. heminecrobioph′ilus** (Arloing, 1889), bacillus found in caseation of a lymphatic gland in a guinea-pig. **B. hepat′icus fortu′itus** (Sternberg), similar to B. coli communis in shape, etc; non-pathogenic; from the liver of a patient dead from yellow fever. **B. hes′sii** (Guillebeau), from milk of a cow. **B. of hog erysip′elas,** B. erysipelatos suis, see *B. rhusiopathiæ suis*. **B. of hog chol′era** (Klein, 1884; Salmon and Smith, 1885), found in the blood and tissues and in the intestinal contents of hogs affected with cholera; pathogenic for swine, rabbits, mice, guinea-pigs, and pigeons. **B. hom′inis capsula′tus** (Bordoni-Uffreduzzi), B. of rag-pickers' disease; discovered in the bodies of those dead from that disease. **B. of horse-pox** (Dieckorheff and Grawitz), procured from cases of acne contagiosa in horses. **B. of Huep′pe,** B. butyricus. **B. of hydropho′bia,** B. lyssæ. **B. hyacin′thi sep′ticus** (Heinz), non-pathogenic bacillus found in decaying hyacinths. **B. hyali′nus** (Jordan), non-pathogenic. **B. hydoph′ilus fus′cus** (Sanarelli, 1891), from infectious disease of hogs. **B. ianthi′nus**, B. janthinus. **B. of ice-cream poi′soning** (Vaughan and Perkins), found in ice-cream and cheese; pathogenic. **B. icterog′enes**, found in the liver and blood in acute yellow atrophy of the liver, and in the bowels in typhoid fever; resembles B. coli; pathogenic. **B. i. capsula′tus**, B. pneumoniæ, when found sometimes in the spleen in jaundice. **B. icteroi′des**, B. of Sanarelli; found in circulating blood and in the tissues in cases of yellow fever; pathogenic for many animals. **B. of ic′terus** (Karlinsky and Ducamp), discovered in the blood from a case of malignant jaundice. **B. ilidzen′sis capsula′tus** (Karlinsky), found in hot sulphur springs at Ilidze, in Bosnia; thermophilic. **B. implex′us** (Zimmermann), found in water; non-pathogenic. **B. inca′nus** (Pohl), from swamp water; its importance is not yet established. **B. in′dicus** or **ru′ber** (Koch), non-pathogenic bacillus found in intestinal contents of a monkey. **B. indigof′erus** (Claesen), discovered in river water; chromogenic; blue. **B. i.** (Voges), found in water; gives blue color. **B. indigog′enus** (Alvarez, 1887), bacillus from leaves of indigo; pathogenic to guinea-pigs. **B. infla′tus** (A. Koch), non-pathogenic bacillus found as an impurity in the air. **B. of influen′za** (Pfeiffer and Canon, 1892), thought to be the specific cause of influenza; it was discovered in the purulent secretion from the bronchi in epidemic influenza, and in the blood of those attacked with the latter. **B. of intes′tinal diphthe′ria in rab′bits** (Ribbert, 1887), bacillus from diphtheritic inflammation of the intestines; produces in rabbits and guinea-pigs diphtheritic ulceration of the small intestine, the bacillus being found in the blood, liver, and spleen. **B. intesti′ni** (Klein), from the large intestine of a diarrhœic rabbit. **B. intesti′nus mo′tilis** (Sternberg), non-pathogenic; from the intestines of those dead from yellow fever. **B. inunc′tus** (Pohl), from swamp water; its importance is not determined. **B. invisib′ilis** (Vaughan), from water; non-pathogenic. **B. iodococ′cus vagina′tus** (Miller), discovered in foul buccal secretions. **B. irides′cens** (Tataroff), found in water; saprophytic. **B. i′ris** (Frick), small, non-pathogenic bacillus. **B. janthi′nus** (Zopf), violet bacillus; non-pathogenic; found in water and sewage. **B. of Jef′fries**, similar to B. coli communis and B. lactis aërogenes; from fecal discharges of summer diarrhœa. **B. of jequir′ity** (Sattler and De Wecker), from infusion of jequirity and ophthalmia caused by the same; saprophytic. **B. of Karlins′ky**, B. murisepticus pleomorphus. **B. of Kartu′lis** (Koch, 1883, Kartulis), similar to B. murisepticus; from secretions of infectious catarrhal conjunctivitis. **Keph′ir b.** (Sorokin), B. caucasicus. **Kiel b.** (Breunig), found in water; causes blood-red excretion. **B. of Kitasa′to**, see *Bacillus of bubonic plague*. **B. klebs′ii** (Lustgarten), see *B. syphilidis* (Lustgarten). **Koch's b.**, B. tuberculosis; spirillum choleræ asiaticæ. **Koch's com′ma b.**, spirillum choleræ asiaticæ. **Koch-Weeks b.**, B. of conjunctivitis. **B. of Kouba′soff** (1889), procured from affected part in a case of cancer of the stomach. **B. lateric′eus** (Eisenberg), non-pathogenic; found in water. **B. lac′mus** (Schrötter), found in water; causes blue excretion. **B. of lac′tic acid fermenta′tion**, B. acidi lactici. **B. lac′ticus**, B. acidi lactici. **B. lac′tis**, generic name for about a dozen bacilli which make milk bitter after peptonizing and coagulating it. **B. l. ac′idi** (Marpmann), found in milk; causes fermentation. **B. l. aërog′enes** (Escherich), 1886), from intestines and fæces of children and cows fed upon milk. **B. l. al′bus** (Loeffler), found in milk; non-pathogenic. **B. l. cyanog′enes**, see *Bacillus cyanogenes* (Hueppe). **B. l. erythrog′enes** (Hueppe), B. of red milk; non-pathogenic; found in red milk and in the feces. **B. l. pepto′nans** (Sterling), found in pasteurized milk; causes fermentation. **B. l. pituito′si**, non-pathogenic bacillus found in milk. **B. l. sapona′cei** (Weigmann and Zirn), found in soapy milk; causes fermentation. **B. l. visco′sus** (Adametz), discovered in water and stringy milk; causes fermentation. **B. of La′ser** (1892), from epidemic disease of mice; pathogenic for guinea-pigs, rabbits, pigeons, etc. **B. lateric′eus** (Adametz and Wichmann), found in water; causes brick-red excretion. **B. leioder′mos**, B. liodermos. **Lem′on-yel′low b.** (Maschek), found in water; causes lemon-yellow excretion. **B. lep′oris letha′lis** (Gibier, 1888), so named by Sternberg; from fecal matter of yellow fever cases. **B. lep′ræ** (Hansen, 1879), B. of leprosy; it is found in various organs in leprous conditions, especially in the cells; it resembles the bacillus tuberculosis. **B. leptospo′rus** (L. Klein), similar to B. subtilis, found accidentally in the air; non-malignant. **B. of Lesage′** (1887), from discharges of green diarrhœa. **B. letha′lis** (Babès), discovered in the internal organs of a septicæmic patient; pathogenic. **B. of Let′zerich** (1887), from the urine in primary interstitial nephritis. **B. leukæ′miæ ca′nis**, found in leukæmic dogs; pathogenic. **B. le′vans**, found in sour dough; causes fermentation. **B. of Libo′rius**, B. amylobacter; B. butyricus. **B. of li′chen ru′ber** (Laser), discovered in the lymph in that disease. **B. limba′tus ac′idi lac′tici** (Marpmann), non-pathetic bacillus found in fresh milk. **B. limo′sus** (Russell, 1891), found in mud of Gulf of Naples. **B. line′ola**, see *Bacterium lineola*. **B. lioder′mos** (Loeffler), found in milk; similar to B. mesentericus vulgatus; non-pathogenic. **B. liquefa′ciens** (Eisenberg), found in water; non-pathogenic. **B. l. bo′vis** (Arloing), found in the diseased lungs of animals; pathogenic. **B. l. commu′nis** (Sternberg), from feces of yellow fever patients; non-pathogenic. **B. l. lac′tis ama′ri** (Freudenreich), found in bitter cream; causes fermentation. **B. l. mag′nus** (Lüderitz), bacilli in garden soil; non-pathogenic. **B. l. par′vus** (Lüderitz), bacilli in garden soil; non-pathogenic. **B. liq′uidus** (Frankland), non-pathogenic bacillus found in Thames River water; powerful reducing power over aqueous solution of nitrates. **B. litora′lis** (Russell, 1891), found in mud of Gulf of Naples. **B. liv′idus** (Plagge and Proskauer), non-pathogenic; found in water of Berlin. **B. of Loeb**, somewhat similar to B. capsulatus of Pfeiffer, from case of keratomalacia infantum; pathogenic for mice and guinea-pigs. **B. of Loef′fler**, B. mallei; B. diphtheriæ; B. lactis albus. **B. lubin′skii**, found in putrid abscesses; pathogenic. **B. lu′cens** (Van Tieghem), procured from water; saprophytic. **B. of Lucet′** (1891), similar to and perhaps identical with B. gallinarum (Klein); found in the epizoötic dysentery of chickens and turkeys; pathogenic to chickens and turkeys only. **B. of Lum′nitzer** (1888), found in sputa of putrid bronchitis; pathogenic to rabbits. **B. of lungs of cat′tle** (Lustig), obtained from healthy as well as unhealthy lungs. **B. lupuliper′da** (Behrens), found in hops; causes heat and fermentation. **B. of lu′pus**, B. tuberculosis. **B. of Lust′garten**, B. of syphilis. **B. lu′teus** (Dobrzyniecki), found in carious teeth; causes yellow color. **B. l.** (Flügge), obtained from gelatin plate culture; causes yellow color. **B. l. su′is** (Salmon, Smith), from fluids of the pericardial or peritoneal cavities of swine. **B. of lymph in fishes** (Oliver and Richet), discovered in the fluid named in its title. **B. lys′sae** (Pasteur), discovered by him in the salivary excretion of patients and animals affected with hydrophobia. **B. maddox′i**, found in water; effects decomposition of urea. **Magen′ta b.** (Pearmain and Moor), found in water; causes magenta color. **B. ma′idis** (Cuboni), non-pathogenic; found in corn soaked in water and in the feces of pellagric patients, but not proved to be the cause of pellagra. **B. malan′driæ** (Israel), see *B. mallei* (Loeffler). **B. mala′riæ** (Klebs and Tommasi-Crudeli, 1879), microorganism discovered near Rome, Italy, but proven by later investigations not to be an etiological factor in the production of malarial fevers. **B. of malig′nant œde′ma**, B. œdematis maligni. **B. mal′lei** (Loeffler and Schutz, 1882), B. of glanders, found in the discharges and blood of animals so infected; resembles B. tuberculosis in appearance; genuine glanders is produced in animals by the injection of pure cultures of this bacillus. **B. mari′nus** (Russell), spirillum marinum. **B. marsilien′sis** (Rietsch and Jobert), found in swine and ferrets attacked with the plague; pathogenic. **B. marti′nez** (Sternberg), found in the liver of a patient dead from yellow fever. **B. max′imus bucca′lls**, found in the secretions of the mouth in mycotic disease of the pharynx. **B. ma′ydis**, B. maïdis. **B. of meas′les**, see *Bacillus of Canon and Pielicke*. **B. of meco′nium** (Escherich), found in meconium; saprophytic. **B. megathe′rium** (De Bary), non-pathogenic; found on boiled cabbage leaves. **B. m.** (Ravenel), found in soil; causes brown color. **B. melanos′porus** (Eidam), found in air; causes black color. **B. melittoph′thorus** (Cheshire and Cheyne), see *B. alvei*. **B. melochlo′ros** (Winkler and Schrötter), found in in spoiling apples; pathogenic; gives green color; see *B. butyri fluorescens*. **B. membrana′ceus amethysti′nus**, non-pathogenic, forming a violet pigment; found in well water. **B. meningit′idis**, B. m. purulentæ. **B. m. aërog′enes**, found in meningitis; pathogenic. **B. meningit′idis purulen′tæ** (Neumann and Schaffer, 1887), pathogenic; found in a case of purulent meningitis; produced purulent inflammation when injected in guinea-pigs, white mice, rabbits, etc. **B. merismopædioi′des** (Zopf), procured from sewage filth; saprophytic. **B. mesenter′icus fus′cus** (Flügge), non-pathogenic; found in atmospheric air, water, etc. **B. m. ni′ger** (Biel and Lunt), found in potatoes; causes black color. **B. m. ru′ber**, found in water and potatoes; causes fermentation and pinkish or reddish color; not pathogenic. **B. m. vulga′tus** potato bacillus; non-pathogenic; found on potatoes, in milk, in water, and in the alimentary canal **Mil′ler's b.**, B. dentalis viridans. **M.′s b. of the intes′tines**, B. aërogenes; found in healthy intestines; causes fermentation. **M.′s b. ep′silon**, spirillum Finkleri. **B. minia′ceus** (Zimmermann), see *B. ruber*. **B. min′imus** (Klebs), see *B. erysipelatos suis*. **B. mirab′ilis**, Proteus mirabilis. **B. mollus′ci** (Domenico), discovered in molluscum contagiosum. **B. morbif′icans bo′vis**, in puerperal fever of cow; pathogenic; causes bacillæmia. **B. of mouse granulomasepticæ′mia**, identical with B. erysipelatos suis. **B. muco′sus ozæ′næ** (Lowenberg), B. ozænæ; found in the mucous membrane of the nostrils; saprophytic. **B. multifor′mis trichorrhex′idis** (Hodara), found in trichorrhexis nodosa of Turkish women; pathogenic. **B. multipedic′ulus** (Flügge), found in the atmosphere and in water. **B. muripest′ifer**, resembles B. typhi murium; causes epizoötic in mice. **B. murisep′ticus** (Gaffky), found in water; pathogenic. **B. m.** (Koch), in putrefying fluids; produces fatal septicæmia in mice and sparrows. **B. m. pleomor′phus**, see *Proteus of Karlinski*. **B. muscoi′des** (Liborius), non-pathogenic; found in soil, old cheese, and feces of cattle, and sometimes with bacillus œdematis maligni. **B. muste′læ sep′ticus**, found in the blood and organs in ferret plague; pathogenic. **B. mycoi′des** (Flügge), non-pathogenic; found in soil and in water; see *Bacillus figurans*. **B. m. ro′seus** (Scholl), non-pathogenic, forming a red pigment; found in the soil. **B. neapolita′nus**, B. coli communis. **B. necroph′orus** (Loeffler, 1884), found in rabbits inoculated with condyloma; pathogenic for rabbits and white mice. **B. of necro′sis of liv′er** (Eberth), one form discovered in badgers, another in guinea-pigs. **B. of nephri′tis** (Letzerich), B. of Letzerich. **Ni′trifying b.** (Burri-Stutzer), from the soil; oxidizes nitrites to nitrates. **N. b.** (Winogradsky), small bacillus obtained from the soil; its characteristics are not fully determined. **B. nitrobac′ter**, found in soil. **B. nitrosom′onas europæ′us.** **B. n. javanien′sis**, both are found in soil; change ammonia into nitrites. **B. niva′lis** (Schmolck), see *B. fluorescens nivalis*. **B. No.** 41 (Conn), found in butter; causes fermentation. **B. of Nocard′** (1888), aërobic bacillus first discovered in pus of abscesses in cattle with farcinia; when injected into some animals, as the guinea-pig, symptoms occur almost similar to those of miliary tuberculosis. **B. nodo′sus par′vus** (Lustgarten), non-pathogenic; found in the normal urethra. **B. no′mæ**, found in noma, at the junction of live and dead tissue; pathogenic. **B. nu′bilus** (Frankland), non-pathogenic; found in water. **B. ochra′ceus** (Zimmermann), non-pathogenic, producing a yellow pigment; found in water. **B. œdem′atis**, see *B. œdematis maligni* (Pasteur). **B. œ. aëro′bicus** (Klein), B. found in malignant œdema; pathogenic for guinea-pigs, rabbits, and white mice. **B. œ. malig′ni** (Joubert and Chamberlain), found in soil, dust, the intestines, musk, etc.; causes fermentation. **B. œ. m.** (Pasteur, 1877), B. of malignant œdema; found in soil, in foul water, putrefactive matters, etc.; pathogenic for man and other animals, producing progressive emphysematous gangrene. **B. œ. thermoph′ilus**, found in diseased animals; has great resistance to heat; pathogenic. **B. of Oka′da** (1891), found in floor dust; pathogenic to guinea-pigs and rabbits. **B. o′leæ** (Prillieux and Bioletti) or **B. o. tuberculo′sis** (Savartane), B. of the olive; causes tuberculosis of that tree; pathogenic to plant. **B. oög′enes fluores′cens** (Zoerkendoerfer), found in rotten eggs; causes fermentation and a pale green color. **B. o. hydrosulphu′ricus** (Zoerkendoerfer), found in rotten eggs; causes fermentation. **B. of Opres′cu**, see *B. of Babès*. **Or′ange red b.** (Adametz and Wichmann), found in water; causes orange-red color. **B. orchit′icus**, found in secretions of the nose in glanders; causes orchitis, local œdema, etc. **B. orthobutyl′icus** (Grimbert), found in leguminous seeds when in a state of fermentation; causes fermentation. **B. of osteomyeli′tis** (Kraske and Becker), discovered in cases of that disease; pathogenic. **B. ova′tus minutis′simus** (Unna), non-pathogenic; found in cases of eczema seborrhœicum. **B. oxalat′icus** (Zopf), found in air; causes a yellow color. **B. oxyto′cus pernicio′sus** (Wyssokowitsch), from stale milk; pathogenic to rabbits in large doses, producing fatal enteritis. **B. ozæ′næ**, resembles B. pneumoniæ; found in ozæna; pathogenic. **B. panif′icans** (Laurent), discovered in some kinds of bread, but not known to be concerned in the raising process. **B. paraco′lon** (Gwyn), found in blood in infected condition having character of typhoid fever; pathogenic. **B. paratypho′sus** (Archard and Bensaud), form of bacillus met with in a fever resembling typhoid; pathogenic. **B. par′vus ova′tus** (Loeffler), B. of swine plague. **B. of Pascoro′la**, B. of Belfanti. **Pas′set's pu′trefying b**,., B. pyogenes fœtidus. **B. of Pasteur′** (Miquel), also called Urobacillus pasteuri, found in decomposing urine. **B. pastoria′nus** (Van Laer), found in beer wort; causes fermentation. **B. peptofa′ciens** (Bernstein), found in milk; causes fermentation. **B. pertus′sis eppendor′fii**, the supposed pathogenic microbe of whooping-cough. **B. pes′tifer** (Frankland), non-pathogenic; found in the atmosphere. **B. pes′tis** or **B. p. bubon′icæ** (Kitasato and Yersin), see *B. of bubonic plague*. **Pfeif′fer's b.**, B. capsulatus. **B. phase′oli** (E. F. Smith), found as a parasite on leguminous plants; causes fermentation. **B. phasia′ni sep′ticus** resembles B. coli; found in a disease of pheasants. **B. phleg′monis emphysemato′sæ**, B. aërogenes capsulatus. **B. p. e.** (Fraenkel), found in pus in this form of emphysema; pathogenic. **B. phosphores′cens** (Fischer), obtained from sea water. **B. p. gel′idus** (Forster), non-pathogenic; found in phosphorescent fish. **B. p. in′dicus** (Fischer), non-pathogenic; found in sea water in West Indies. **B. p. indig′enus** (Fischer), non-pathogenic; found in sea water. **B. phospho′reus** (Cohn), obtained from marine fishes. **B. phylloxerici′dus** (Dubois), found in soil and manure; pathogenic, being destructive to phylloxera. **B. of Pielic′ke**, see *B. of Canon*. **Pink b. of spread′ing œde′ma** (A. B. Harris), B. œdematis. **B. of pink-eye** (Weeks), B. conjunctivitidis. **B. pinna′tus** (Ravenel), found in soil; causes fermentation. **B. pituito′si** (Loeffler), see *B. lactis pituitosi*. **B. plica′tus** (Zimmermann), non-pathogenic, producing a yellow pigment; found in water. **B. of pneumoenteri'tis su'is**, hog-cholera bacillus. **B. pneumo'niæ**, B. of Friedländer, found in pneumonia, otitis, and meningitis, and in mouth and air passages in health; causes in man pneumonia, particularly of a malignant type, pleurisy, inflammation of the middle ear, ulcers of the cornea, endocarditis, and pericarditis. **B. of pneumo'nia in cat'tle**, see *B. pneumonicus liquefaciens*. **B. of p. in turk'eys**, resembles B. choleræ gallinarum; pathogenic, particularly to turkeys, rabbits, and guinea-pigs. **B. pneumon'icus ag'ilis** (Schon), found in pneumonia of rabbits and in pneumonia and variola in man; pathogenic to a number of the small animals. **B. p. liquefa'ciens**, found in the lungs of cattle with contagious pneumonia. **B. pneumosep'ticus** (Babès, 1889), found in a case of septic pneumonia; pathogenic and fatal to rabbits, guinea-pigs, and mice. **B. polymyx'a** (Prazmowski), obtained from infusion of potatoes, etc.; nearly allied to B. amylobacter; saprophytic. **B. polypifor'mis** (Liborius), non-pathogenic; obtained from soil by inoculation, and from excrement of cattle; often accompanies B. œdematis maligni. **Pota'to b.**, B. mesentericus vulgatus. **B. of pota'to-rot** (Kramer, 1891), from potatoes affected with wet rot. **B. prausnit'zii**, found in water and soil; saprophytic. **Prazmow'ski's b. of buty'ric acid fermenta'tion**, B. butyricus. **B. preus'sii** (Ciesielski), B. alvei. **B. prodigio'sus** (Ehrenberg), found in food materials; causes fermentation and a red color. **B. pro'teus**, found in water, meconium, and with other species of proteus in animal matter, cases of putrid infection, etc.; occurs in filaments, spirilla, etc; causes putrefaction in animal tissue, developing a very toxic ptomain; the bacillus develops after destructive action of other bacilli, continuing and completing their work of infection; causes meat poisoning, cholera infantum, inflammation of the kidney and its pelvis, etc. **B. p. fluores'cens** (Jaeger), found in the organs of fowls affected with disease; pathogenic; causes Weil's disease. **B. p. letha'lis**, found in gangrene of the lungs and septic disease of the spleen; supposed to be identical with B. capsulatus septicus; pathogenic. **B. p. sep'ticus**, found in necrosis of mucous membrane of colon; pathogenic. **B. p. vulga'ris**, formerly called Bacterium termo. **B. pseu'dodiphtherit'icus**, non-pathogenic bacillus resembling B. diphtheriæ; found in non-diphtheritic affections of the throat. **B. pseudoœdem'atis** (Liborius), found in excremental matter of cattle and in mice inoculated with garden soil; pathogenic. **B. pseu'doinfluen'zæ**, found in catarrhal pneumonia, purulent otitis media, etc.; resembles B. influenzæ in form and action. **B.pseu'dopneumon'icus** (Flügge), in abscesses in man; resembles B. of Friedländer. **B. pseu'dosep'ticus** (Macé), B. pseudoœdematis; another similarly named (Bienstock) is found in the fæces of mice and in the fluid of œdema; pathogenic. **B. pseu'dotetan'icus aëro'bius** and **B. p. anaëro'bius**, probably two species of Bacillus tetani, which, through faulty growth, have lost their virulence; non-pathogenic. **B. pseu'dotuberculo'sis**, found in milk, dust of the atmosphere, etc.; resembles B. typhosus; pathogenic for rodents, producing pseudotuberculosis. **B. p.** (Pfeiffer, 1889), from the tissues of a horse with supposed symptoms of glanders. **B. p.** (Rabinowitsch), found in butter; pathogenic. **B. p. mu'rium**, **B. p. o'vis**, resemble B. diphtheriæ; pathogenic; cause pseudotuberculosis in mice and infectious disease in guinea-pigs. **B. p. of rab'bits** (Eberth, Malassez, and Vignal), discovered in the organs of animals with that disease. **B. p. sim'ilis**, resembles B. pseudotuberculosis; pathogenic. **B. pseu'dotypho'sus**, found in the soil, in water, and in some of the tissues and organs; supposed to be identical with B. typhosus. **B. psittaco'sis** (Widal and Sicard), found in man and parrots having psittacosis; pathogenic. **B. puerpera'lis** (Engel and Spillmann), discovered in cases of puerperal toxæmia; pathogenic. **B. of pul'monary gan'grene**, see *B. proteus lethalis*. **B. pul'pæ pyog'enes** (Miller), found in the gangrenous pulp of a tooth; pathogenic. **B. puncta'tus** (Zimmermann), non-pathogenic; found in water. **B. of pur'pura hæmorrhag'ica** (Babès, 1890), found in case of that disease with septicæmia; pathogenic for mice. **B. of p. h.** (Kolb, 1891), found in cases of purpura and fever; pathogenic for rabbits and mice. **B. of p. h.** (Lizzoni and Giovannini, 1889), found in some cases of purpura hæmorrhagica; pathogenic for dogs, rabbits, and guinea-pigs. **B. putrif'icus co'li** (Bienstock), non-pathogenic; found in human feces. **B. of pyæ'mia**, two varieties have been described; one of them (Beltzow) is similar to B. œdematis maligni; pathogenic. **B. pyocinnaba'reus**, found in wounds with red pus; causes red color; toxic. **B. pyocyan'eus** (Gessard), found in green or gray pus, in dust, water, and atmospheric air; gives rise to fermentation and blue coloration; not so pathogenic to man as to animals; in the latter causes abscesses, œdema, hemorrhages, albuminuria, paralysis, etc.; antagonistic to B. anthracis. **B. p. β** (Ernst), non-pathogenic, forming green pigment; found in pus. **B. pyog'enes anaëro'bius**, found in putrefied pus; causes suppuration of an offensive odor. **B. p. bo'vis**, see *B. renalis bovis*. **B. p. cloaci'nus**, found in sewage; like B. suisepticus; causes abscesses, purulent inflammation of various important organs, etc. **B. p. cras'sus**, see *B. pneumoniæ*. **B. p. fœt'idus** (Passet, 1885), derived from fetid anal abscess. **B. p. f. liquefa'ciens**, found in abscess of the ear communicating with the brain; pathogenic to rabbits. **B. p. gingi'væ**, found in alveolar abscess and green crusting of the teeth; pathogenic, causing abscesses and peritonitis in the smaller animals. **B. p. liquefa'ciens**, in pyæmia from inflammation of the ear; pathogenic for mice. **B. p. so'li** (Bolton), found in garden earth and in the excrement of rats inoculated with it; saprophytic. **B. of rab'ies**, B. lyssæ. **B. radia'tus** (Lüderitz), non-pathogenic; obtained from garden soil by inoculation of mice, etc. **B. r. aquat'ilis** (Zimmermann), non-pathogenic; found in water. **B. radicic'ola** (Beyerinck), found in small root nodules of leguminous plants and in soil; has the power of assimilating nitrogen from the atmosphere; causes fermentation. **B. radicifor'mis** (Tataroff), found in water; saprophytic. **B. radico'sus** (Zimmermann), found in water; saprophytic. **B. of rag'-pickers' disease'**, B. hominis capsulatus. **B. ramo'sus** (Frankland), Wurtzel bacillus; non-pathogenic; found in the soil and in water. **B. r. liquefa'ciens** (Flügge), found in the atmosphere. **B. ranici'dus** (Ernst), found in frogs with fatal septicæmia; pathogenic. **B. of Rausch'brand**, B. of sympathetic anthrax. **Red b.**, B. ruber. **B. of red bread**, B. prodigiosus. **B. of red milk**, B. prodigiosus and B. lactis erythrogenes. **B. rena'lis bo'vis**, resembles B. of Friedländer; pathogenic to the ox, causing severe forms of pyelonephritis, and diphtheritic cystitis and ureteritis. **B. reticula'ris** (Jordan), non-pathogenic; found in water. **B. rheumarthrit'idis** (Kussmaul), B. of rheumatism; discovered in arthritic swellings in that disease. **B. of Rhine water** (Burri), found in water of that river; saprophytic. **B. rhinit'idis atroph'icus**, found in the secretions in atrophic rhinitis; saprophytic. **B. rhinosclero'matis** (Cornil and Alvarez) or **B. of rhinosclero'ma** (v. Frisch, 1882), found in the fresh formations of this disease, in the lymphatics and in the tissues affected by it. **B. rhusiopath'iæ su'is**, found in the blood, particularly the white corpuscles, in erysipelas in the hog; resembles B. murisepticus; pathogenic; causing septicæmia in some of the smaller animals, erysipelas in others. **B. rodona'tus** (Ravenel), found in soil; gives rise to brownish or yellowish coloration. **B. rosa'ceum metalloi'des** (Dowdeswell), aërobic bacillus, producing a red pigment. **Ro'senbach's putrefac'tion b.**, B. saprogenes. **B. of Roth** (1890), several bacilli were discovered by him; one, similar to B. coli communis, pathogenic for rabbits and guinea-pigs; another from old rags, pathogenic for the same animals. **B. of rouget′**, B. erysipelatos suis. **B. rubefa′ciens** (Zimmermann), non-pathogenic; producing a light pink pigment. **B. rubel′lus** (Okada, 1892), non-pathogenic; from dust, by inoculation in guinea-pigs. **B. ru′ber** (Frank, Cohn, and Becker), bacillus discovered in water, boiled rice, etc.; produces blood-red pigment. **B. r. in′dicus**, see *Bacillus indicus ruber*. **B. r. kielen′sis** (Breunig), found in water; produces blood-red pigment. **B. r. ova′tus** (Bruyning), found in sorghum; pathogenic to plant. **B. r. sardi′næ**, found in sardines; causes red coloration and abscesses on the hands of those preparing sardines for the market. **B. rubes′cens** (Jordan), non-pathogenic; producing a light pink pigment; found in sewage. **B. ru′bidus** (Eisenberg), non-pathogenic; producing a reddish-brown pigment; found in water. **B. sac′charobuty′ricus** (v. Klecki), found in some forms of cheese; causes fermentation. **B. saliva′rius sep′ticus** (Biondi), Micrococcus pneumoniæ crouposæ. **B. salmonici′dus**, causes epizoötic disease in salmon, with abscesses, hemorrhage, etc. **B. of Sanarel′li**, B. icteroides. **B. san′guinis ty′phi** (Brannan and Cheeseman, 1892), B. found in the blood in typhus fever. **B. sapro′genes** (Rosenbach, 1884), found in the secretion of sweating feet and other foul secretions; pathogenic to rabbits. **B. s. vi′ni** (Kramer), found in urine; causes fermentation; there are several forms of this bacillus. **B. sca′ber** (Duclaux), obtained from cheese. **B. scarlati′næ** (Edington), in blood of scarlatina. **B. of scar′let fe′ver** (Crooke), discovered in buccal and pharyngeal secretions in cases of that disease. **B. Schaf′feri** (Freudenreich), found in cheese and potato in a state of fermentation. **B. of Scheur′len**, non-pathogenic; found in cancer, on healthy skin and mammæ, etc. **B. of Schimmel′busch** (1889), found in the necrosed portion of cancrumoris; caused abscesses when injected into rabbits. **B. of Schon** (1885), found in rabbits in pneumonia occurring after section of vagus nerve, and in normal secretions of the mouth of the same class of animals; pathogenic to rabbits. **B. of Schüt′zenberg**, Urobacillus schutzenbergii. **B. of granted septicæ′mia of mice**, B. murisepticus. **B. scis′sus** (Frankland), obtained from earth; saprophytic. **B. of seborrhœ′a** (Sabouraud), found in the hair and scalp in that disease; produces brick-red pigment. **B. seca′lis** (Burrill), found in bacterial disease of Indian corn; pathogenic to plant. **B. seidenglanzen′der** (Tataroff), found in well water; saprophytic. **B. of se′nile gan′grene** (Tricomi), discovered in the blood and in structures contiguous to the healthy surface, in the skin, and in the discharges in that disease. **B. of septicæ′mia** (Klein), found in the tissues and discharges in that disease. **B. of s. in cana′ry birds**, resembles B. choleræ gallinarum; pathogenic to such birds (causing necrosis of the liver) and to mice (septicæmia). **B. of s. in rab′bits**, see *B. cuniculicidus mobilis* and *B. cuniculi septicus*. **B. septicæ′miæ hæmorrhag′icæ** (Sternberg), found in septicæmic blood; pathogenic; the term includes B. accidentalis tetani, B. choleræ gallinarum, B. choleræ anatum, B. bovi septicus, and others similar in form and causing this disease. **B. sep′ticus** (Koch), B. erysipelatos suis. **B. s.** (Pasteur), B. œdematis maligni. **B. s. acumina′tus** (Babès, 1889), found in an infant a few days old, dead from septicæmia; pathogenic for rabbits and guinea-pigs. **B. s. agrig′enus** (Nicolaier), found in fertilized soil; is similar to B. of fowl cholera and that of rabbit septicæmia; pathogenic to rabbits. **B. s. keratomala′ciæ** (Babès, 1889), found in a case of septicæmia after keratomalacia; pathogenic for rabbits and mice. **B. s. pu′tidus**, found in a patient with cholera; pathogenic; resembles B. proteus in form and action. **B. s. spu′ti** (Kreibohm), found in the secretions of the human mouth; pathogenic. **B. s. sputig′enus** (Flügge), found in the saliva in health and disease (pneumonia); pathogenic. **B. s. s.** (Fränkel), Micrococcus pneumoniæ crouposæ. **B. s. ul′ceris gangræno′si** (Babès, 1889), found in a fatal case of septicæmia; pathogenic for mice and guinea-pigs. **B. s. vesi′cæ** (Clado, 1887), found in the urine in cystitis; pathogenic for mice, rabbits, and guinea-pigs. **B. ses′silis** (L. Klein), non-pathogenic; found in the blood of a cow dead, probably, from anthrax. **B. sim′ilis** (Bienstock), B. subtilis simulans. **B. smaragdi′nophosphores′cens** (Katz), found in phosphorescent fishes; produces light and color (emerald-green). **B. smaragdi′nus fœt′idus** (Reimann, 1887), B. from discharges from the nose in ozæna; pathogenic and fatal to rabbits. **B. of smeg′ma** (Bunge and Trautenroth), discovered in smegma of genital organs of both sexes. **B. of Smith**, see *B. capsule of Smith*. **B. sol′idus** (Lüderitz), non-pathogenic; obtained from garden soil by inoculation. **B. of South′ern cat′tle plague** (F. S. Billings), discovered in the blood, organs, and excrement of cattle so affected, and in the ticks upon such animals; pathogenic. **B. spinif′erus** (Unna), non-pathogenic; producing yellow pigment; found in cases of eczema seborrhœicum. **B. spino′sus** (Lüderitz), non-pathogenic; from garden soil by inoculation of mice, etc. **B. of sponta′neous rab′bit septicæ′mia** (Eberth), form of B. proven to be identical with B. of swine plague of Marseilles. **B. sputig′enus cras′sus**, B. crassus sputigenus. **B. s. ten′uis**, found in sputa of tuberculosis of the lungs and pneumonia; pathogenic to rabbits and rats. **B. of Stern′berg**, see *Micrococcus lanceolatus*. **B. stolona′tus** (Adametz), non-pathogenic; found in water. **B. stolonif′erus** (Pohl, 1892), from water of swamps. **B. stria′tus al′bus** (von Besser), non-pathogenic; found in normal mucus from the nose. **B. s. fla′vus** (von Besser), non-pathogenic; producing a yellow pigment; found in mucus of the nose. **B. s. vir′idis** (Ravenel), found in soil; saprophytic. **B. stuet′zeri** (Lehmann and Neumann), found in soil; causes fermentation. **B suave′olens**, found in water; causes fermentation. **B. subfla′vus** (Zimmermann), non-pathogenic; producing a yellow pigment; found in water. **B. subtilifor′mis** (Bienstock), B. subtilis simulans. **B. sub′tilis** (Ehrenberg), hay bacillus, in infusions of dried grasses; non-pathogenic; found in water, the soil, hay, etc. **B. s. sim′ilis** (Sternberg), non-pathogenic; found in cultures from the liver of a yellow fever patient. **B. s. sim′ulans** (Bienstock), two bacilli are described under this name, both found in human feces and non-pathogenic. **B. of sug′ar-beet disease′** (Arthur and Golden), found in sugar-beets. **B. suici′dus**, see *B. suisepticus*. **B. suipes′tifer**, found in blood and organs in fatal cases of hog cholera and swine plague; pathogenic; causing inflammation of viscera, bacillæmia, enteritis; in hogs, hog cholera, and swine plague, colitis, etc. **B. su′is** (Detmers), B. tardigradus. **B. suisep′ticus**, found in German swine plague; resembles B. choleræ gallinarum; pathogenic to various animals, causing septicæmia, necroses, hemorrhagic œdema, etc. **B. sulph-hydrog′enus** (Miquel), detected in water; causes fermentation. **B. sulphu′reum, I.** (Holschewnikoff), found in urine; saprophytic. **B. s. II.** (Holschewnikoff), found in mud; produces reddish-brown pigment. **B. sulphu′reus** (Lindenborn), non-pathogenic; found in water. **B. superficia′lis** (Jordan), non-pathogenic; found in sewage. **B. of swine erysip′elas**, see *B. rhusiopathiæ suis*. **B. of swine fe′ver**, B. suipestifer. **B. of swine pest** (Selander), B. ex pneumoenteritide suis. **B. of swine plague** (Klein, 1884), B. of hog cholera. **B. of s. p. of Marseilles** (Rietsch and Jobert), B. of ferret disease, B. of spontaneous rabbit septicæmia; these have been proven to be identical. **B. sycosif′erus fœt′idus** (Tommasoli), obtained from the hair in a case of sycosis; B. Tommasoli; pathogenic. **B. s. f.** (Jordan), found in sewage; saprophytic. **B. of symptomat′ic an′thrax** (Bollinger and Feser, 1878), found in the tissues of cattle suffering from this disease; pathogenic to cattle and guinea-pigs; resembles B. œdematis maligni. **B. syncy′anus** (Ehrenberg), found in water; produces blue pigment; B.

cyanogenus. **B. synxan'thus** (Schrötter), found in yellow milk; produces citron-yellow pigment. **B. of syph'ilis** (Eve and Lingard), detected in syphilis before mercurialization. **B. of s.** (Lustgarten, 1884), found in various lesions of syphilis and discharges from syphilitic ulcers, but not yet established definitely as pathogenic of that disease. **B. tachyc'tonus**, found in feces in cholera morbus; pathogenic to mice and guinea-pigs, causing fatal septicæmia. **B. tardecres'cens** (Warington), from a solution of nitrified ammonium carbonate. **B. tardigrad'us** (Detmers), detected in water, atmospheric vapor, and in animals suffering from swine plague. **B. tar'tricus** (Grimbert and Ficquet), found in fermenting solution of tartrate of calcium; causes fermentation. **B. ten'uis** (Duclaux), obtained in decomposition of cheese, albuminous food, etc. **B. t. sputig'enus** (Pansini, 1890), derived from sputa; pathogenic for rabbits and white rats. **B. ter'mo** (Macé), found in water; saprophytic. **B. t.** (Vignal) non-pathogenic; found in normal saliva; Bacterium termo. **B. terrig'enus** (Frank), found in soil; causes fermentation. **B. tet'ani** (Nicolaier), anaërobic bacillus, found in soil, excrement of horse, and in the organs in fatal cases of tetanus; pathogenic, causing tetanus; causes also fermentation; **B. t. of inocula'tion**, see *B. accidentalis tetani*. **B. t. traumat'ici** (Rosenbach), B. tetani. **B. of Tex'as cat'tle fe'ver** (F. S. Billings), B. of Southern cattle plague. **B. thalassoph'ilus** (Russell, 1891), found in deep mud of Gulf of Naples. **B. thermoph'ilus** (Miguel), non-pathogenic; found in sausage, the soil, and in the alimentary canal. **B. tholoi'deum** (Gessner), found in water, sewage, and intestinal secretions; pathogenic. **B. of tim'othy**, grass bacillus. **B. of Tizzo'ni**, see *B. of purpura hæmorrhagica*. **B. of Tommaso'li** (1889), found in the hair in a case of sycosis. **B. torulifor'mis** (Warington), from garden soil. **B. tremelloi'des** (Schottelius), non-pathogenic, producing a yellow pigment; found in water. **B. trem'uius** (Koch), found on the surface of vegetable infusions in a state of decomposition; saprophytic. **B. of Trico'mi** (1886), found in a case of senile gangrene; pathogenic to rabbits and guinea-pigs. **B. of trichorrhex'is nodo'sa** (Markusfeld), found in hair affected by that disease; pathogenic; causes fermentation. **B. trommelschla'gel** (Ravenel), found in soil; saprophytic. **B. tuberculo'sis**, tubercle bacillus; discovered by Koch, in 1882, in sputa of patients with pulmonary or laryngeal tuberculosis, in tuberculous cavities, joints, and bones, and glands in lupus; it is in the form of a rod with rounded extremities. It grows at a temperature of about 98° F. Koch found in cultures of this bacillus a toxin to which the name *tuberculin* was given, which is soluble in water and glycerin, and which, injected into tuberculous animals, has been supposed to give a possible immunity against tuberculosis; its importance, when used in cases of tuberculous disease in man, except as a means of diagnosis, has not yet been determined. **B. t. a'vium**, bacillus causing miliary tuberculosis in various birds; resembles B. tuberculosis. **B. t. gallina'rum** (Maffucci, 1889), B. of tuberculosis in chickens, very similar to that of tuberculosis in man, but entirely distinct. **B. t. of vines** (Corvo), productive of a morbid condition in vines generally considered due to phylloxera; phytopathogenic. **B. tuberig'enus**, found in root nodules of plants. **B. tumes'cens** (Zopf), non-pathogenic; found on beets. **B. tur'gidus** (Duclaux), detected in cheese. **B. tus'sis convulsi'va** (Afanasieff), in sputa in whooping-cough. **B. ty'phi abdomina'lis**, B. of typhoid fever, discovered by Eberth in 1880; it produces death when injected into the rabbit and the mouse but not the characteristic symptoms of typhoid fever. It also has been found in alvine dejecta and in the spleen, liver, mesenteric and other intestinal glands, and kidneys in fatal cases, but only in rare cases in the blood of typhoid fever patients. It is the only microorganism found in the internal organ in such cases; it is not putrefactive. **B. t. mu'rium** (Loeffler, 1889), found in mice which had died from epidemic disease. **B. typho'sus**, B. typhi abdominalis. **B. ubiq'uitus** (Jordan), found in sewage. **B. of ul'cerative stomati'tis of cat'tle** (Lingard and Batt), obtained from the skin and mucous membranes and pulmonary organs. **B. ul'ceris cancro'si**, found in organs and secretions in chancroid; cause of soft chancre. **B. of ul'cus mol'le** (Kröfting), B. of chancroid. **B. ul'na** (Cohn), non-pathogenic; found in solution of egg-albumin. **B. u. of Vignal'**, non-pathogenic; found in normal saliva. **B. ure'æ** (Leube), in stale urine. **B. u.** (Miquel), found in atmospheric air. **B. uroceph'alus** (Duclaux), found in decomposing animal matter. **B of Utpadel'** (1887), found in the contents of the small intestine, and in the filling of hospital quilts; produces inflammation and œdema and death in mice, cats, and guinea-pigs. **B. vacuola'tus** (Ravenel), found in soil; produces yellow ferment. **B. vacuolo'sis** (Sternberg, 1888), noticed in cultures from the digestive canal of yellow fever patients. **B. vagi'næ** or **B. vagina'lis** (Döderlein), found in the healthy secretions of the vagina; saprophytic. **B. of va'gus pneumo'nia**, B. pneumonicus agilis. **B. varico'sus conjuncti'væ** (Gombert, 1889), found in normal conjunctival sac. **B. vascula'ris** (Sternberg), found in organs in fatal cases of yellow fever. **B. vasculo'rum** (Cobb), found in gummy exudation of sugar-cane. **B. veneno'sus** (Vaughan), from water. **B. v. bre'vis** (Vaughan), from water. **B. v. invisib'ilis** (Vaughan), from water. **B. v. liquefa'ciens** (Vaughan), from water. **B. ventric'uli** (Raczynsky), non-pathogenic; found in the stomach of a dog fed on meat. **B. vermicula'ris** (Frankland), non-pathogenic; found in river water. **B. vermiculo'sus** (Zimmermann), non-pathogenic; found in water. **B. of verru'ga peruan'a** (Izquierdo), obtained from the parts in immediate vicinity of Peruvian warts. **B. verticilla'tus** (Ravenel), found in soil; causes fermentation. **B. vib'rio** (Müller and Ehrenberg), B. ulna. **B. of Vignal'**, B, non-pathogenic; found in normal secretions of the mouth. **B. of V. "F,"** non-pathogenic; found in normal saliva. **B. of Villard'**, see *Bacillus of Cazal*. **B. viola'ceus** (Becker), found in water; produces a deep violet pigment. **B. v.** (Frankland), non-pathogenic; forming a violet pigment; found in river water; powerful reducer of nitrates to nitrites. **B. v. lauren'tius** (Jordan), non-pathogenic; forming a violet pigment. **Vi'olet b.**, B. janthinus. **B. vi'rens** (Van Tieghem), obtained from stagnant pools; produces green pigment. **B. vires'cens** (Frick), non-pathogenic; found in sputum; forms a green pigment. **B. v. palles'cens**, see *B. fluorescens non-liquefaciens*. **B. vir'gula** (Duclaux), detected in albuminous liquids; spirillum choleræ asiaticæ. **B. vir'idans**, chromogenic microorganism, discovered in vesicles of herpes labialis; found also in water, producing a green pigment. **B. virides'cens liquefa'ciens** (Ravenel), found in soil; saprophytic. **B. v. non-liquefa'ciens** (Ravenel), found in soil; causes fermentation. **B. vir'idis** (Van Tieghem), obtained from water in which a fungus had been growing; produces green pigment. **B. v. flav'us** (Frick), similar to B. viridans; found in water; produces yellowish-green pigment. **B. v. palles'cens** (Frick), non-pathogenic; produces a light blue pigment. **B. visco'sus** (Frankland), non-pathogenic; forms a green pigment; found in river water. **B visco'sus** (Van Laer), obtained from stringy milk, viscid yeast and bread; causes fermentation. **B. v. cerevis'iæ** (Van Laer), obtained from viscid beer; causes fermenation. **B. v. lac'tis**, found in chalk; thickens milk. **B. v. sac'chari** (Kramer), obtained from thick fluids containing sugar; causes fermentation. **B. v. vi'ni** (Kramer), found in ropy wine; causes fermentation and mucilaginous change in white wine. **B. vulga'ris** (Hauser), found in putrefying matter; pathogenic; see *Proteus vulgaris*. **B. vulga'tus**, see *B. mesentericus vulgatus*. **B. of Weeks**, see *B. of conjunctivitis*.

**B. of Weig′mann,** found in bitter milk; causes fermentation. **B. weis′sen** (Eisenberg), found in water; saprophytic. **B. weis′ser** (Tataroff), found in well water; saprophytic. **White b.** (Maschek), found in water; saprophytic. **W. b. of wa′ter,** B. albus. **B. of whoop′ing-cough,** B. tussis convulsivæ. **B. of wild′seuche** (Loeffler), game bacillus; probably identical with B. cuniculicidus. **B. of Winograd′sky,** nitrifying bacillus. **B. Wurt′zel,** B. ramosus. **B. "X"** (Sternberg), obtained from the bodies of those dead of yellow fever. **B. xanthog′enus** (Fuchs and Ehrenberg), B. synxanthus. **B. xero′sis** (Fränkel), see *B. of xerosis epithelialis conjunctivæ* and *B. pseudodiphthericus.* **B. of xero′sis epithelia′lis conjuncti′væ** (Leber, Kuschbert, Fränkel, and Neisser), obtained from conjunctival scales in xerophthalmia. **Yel′low b.** (Lustig), found in water; saprophytic. **B. of yel′low fe′ver,** found in the organs in yellow fever, but none pathogenic of that disease; the chief forms are *B. cadaveris, B. icteroides, B. neapolitanus,* and *B. x.* **B. of yel′low milk** B. synxanthus. **B. of Yer′sin,** B. pestis bubonicæ. **B. ze′æ** (Burrill), found in bacterial contamination of Indian corn or maize. **B. zenk′eri,** Proteus zenkeri. **B. zop′fii,** from the intestines of chickens, etc. **B. zurnia′nus** (List), from water and air; causes fermentation.

**Back.** Dorsum; posterior portion of an organ, bone, etc. **B. draught,** whoop of whooping-cough. **B. friend,** hangnail. **B. sprent,** vertebral column. **B. stroke of the heart,** diastolic impulse.

**Back′ache.** Continuous dull pain in the back; dorsodynia; rachialgia. **B. root,** liatris.

**Backbone′.** Vertebral column.

**Back′set.** Relapse.

**Ba′cony degenera′tion** or **disease′.** See *Lardaceous.*

**Baco′pa.** Species of scrophulariaceous plants of Brazil, used in external application to burns.

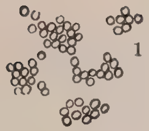
**Bacte′ria** (pl. of bacterium, *bakterion,* small stick). Schizomycetes, or fission-fungi, microscopic organisms formerly classed among the infusoria, but now regarded as belonging to the vegetable kingdom. They are unicellular vegetable organisms, reproducing by division or spore formation, containing no chlorophyle. Some are motile, others not; when motility is present it is usually effected by flagella, sometimes by an undulating membrane. They are variously designated as *aërobic* and *anaërobic,* according as they live and grow with or without oxygen; *saprophytic* and *parasitic,* according as they do or do not live and grow outside of a living organism; only a few are *obligatory parasites,* unable to live outside of a living organism, most of the parasites being *facultative* or capable of existence either within or without a living host. By far the greater number of known bacteria are saprophytic; these are not only harmless to animal life, but are most beneficial, being instrumental in the resolving of dead organic matter into its original elements and also in the initiation and conduct of many economic processes; the parasitic bacteria, on the other hand, are in many if not most cases *pathogenic,* that is, causing disease in the organism within which they multiply. *Acid-fast, acid-proof,* or *acid-resisting bacteria* are those which, when once stained, are not readily deprived of their color by acid decolorizing solutions. Bacteria are also distinguished according to the changes produced in the media in which they grow. We may thus have pigment-forming or chromogenic, fermentative, putrefactive, and pathogenic bacteria. *Chromogenic bacteria* form, while growing, definite color stuffs. *Fermentative* or *zymogenic bacteria* produce their changes in non-nitrogenized media. *Putrefactive bacteria* produce changes allied to fermentation in complex organic substances. *Pathogenic bacteria* are those associated with infectious diseases in man and the lower animals. To establish the pathogenic character of bacteria, according to Koch, it is necessary that (1) the microorganism must be found in the blood, lymph, or diseased tissue of man or animal suffering from or dead of the disease; (2) the microrganisms must be isolated from the blood, lymph, or tissues, and cultivated in suitable media, *i. e.,* outside the animal body; these pure cultivations must be carried on through successive generations of the organism; (3) a pure cultivation, thus obtained, must, when introduced into the body of a healthy animal, produce the disease in question; (4) in the inoculated animal the same microorganism must again be found.

In spite of many attempts, no entirely satisfactory classification of bacteria has yet been made. The simplest is that based upon morphology, the general groups being *Sphærobacteria* or *Cocci, Bacilli,* and *Spirobacteria* or *Vibriones.* The sphærobacteria are spherical or spheroid cells which may exist singly (*monococci*), in pairs (*diplococci*), in fours (*tetracocci*), in larger packets (*sarcinæ*), in chains (*streptococci*), or in clusters like grapes (*staphylococci*). The bacilli are the elongated rod-shaped microorganisms; they may be single or arranged end to end in pairs (*diplobacilli*), in greater number (*streptobacilli*), or as long threads without any visible nodes. The spirobacteria are the curved or spiral bacteria, vibriones, spirochætæ, spirilla, etc. (See Plate.) Cohn separates the bacilli into two classes: *Microbacteria,* small, rod-like cells, and *Dermobacteria* or *Filobacteria,* larger rod-like cells or straight threads.

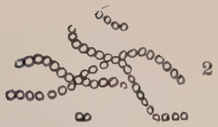
Zopf's classification of the *Schizomycetes* or bacteria is the following:

| Families. | Genera. |
|---|---|
| I. Coccaceæ. Up to the present time only known in the form of cocci. | 1. Streptococcus (chain cocci),<br>2. Merismopedia (plate cocci),<br>3. Sarcina (packet cocci),<br>4. Micrococcus (mass cocci),<br>5. Ascococcus (pellicle cocci). |
| II. Bacteriaceæ. Have for the most part spherical, rod-like, and filamentous forms; the first (cocci) may be wanting; the last are not different at the two extremities; filaments straight or spiral. | 1. Bacterium,<br>2. Spirillum,<br>3. Vibrio,<br>4. Leuconostoc,<br>5. Bacillus,<br>6. Clostridium. |
| III. Leptotricheæ Spherical, rod-shaped, and filamentous forms; the last show a difference between the two extremities; filaments straight or spiral; spore formation not known. | 1. Crenothrix. Threads articulated; cells sulphurless; habitat water.<br>2. Beggiatoa. Threads inarticulated; cells with sulphur granules; habitat water.<br>3. Phragmidiothrix. Threads jointless; successive subdvision of cells is continuous; cells sulphurless; habitat water.<br>4. Leptothrix. Threads articulated or unarticulated; successive subdivisions of cells not continuous; cells sulphurless. |
| IV. Cladotricheæ. Spherical, rod-shaped, filamentous, and spiral forms; the filamentous form presents pseudo-branches; spore formation not known. | 1. Cladothrix. |

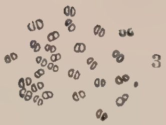
The classification usually followed is that of Migula; it is based upon the double characteristics



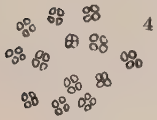
Staphylococci.



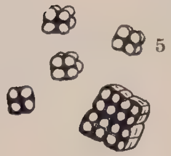
Streptococci.



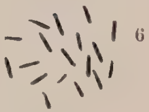
Diplococci.



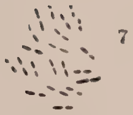
Tetrads.



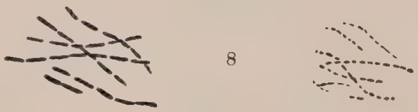
Sarcinæ.



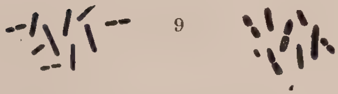
Single bacilli.



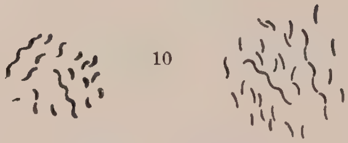
Bacilli in pairs.



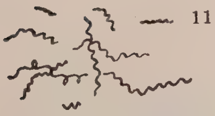
Bacilli in threads.



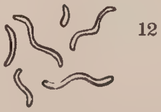
Bacilli of variable morphology.



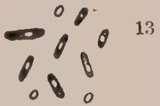
Spirilla in short segments and longer threads—the so-called comma forms and spirals.



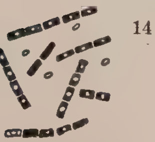
The forms known as spirochæta.



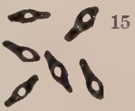
The thick spirals sometimes known as vibrios.



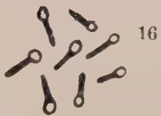
Bacillus subtilis with spores.



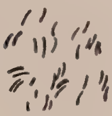
Bacillus anthracis with spores.



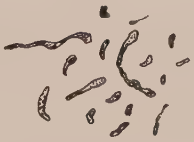
Clostridium form with spores.



Bacillus of tetanus with end-spores.



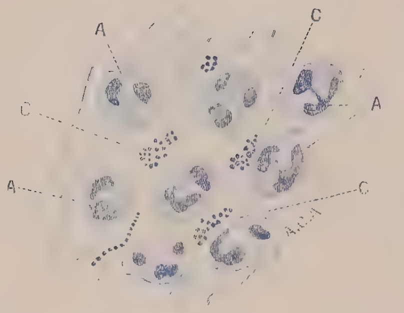
Spirillum of Asiatic cholera (comma bacillus); normal appearance in fresh cultures.



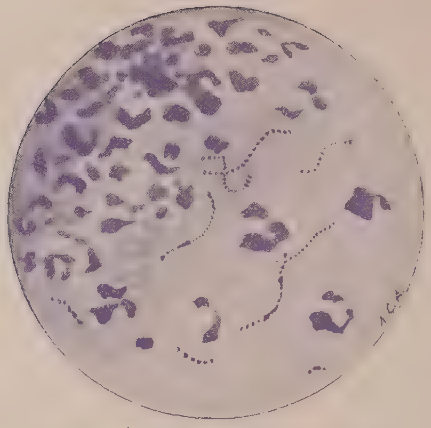
Involution-forms of the comma bacillus as seen in old cultures.

Morphological Characters of Bacteria (Schematic): 1–5, Micrococci; 6–9, Bacilli; 10–12, Spirilla; 13–16, Variations in Spore-formation. (Abbott.)

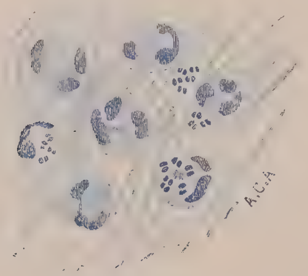
# BACTERIA



Preparation from pus, showing pus-cells, *A*, and staphylococci, *C*. (Abbott.)

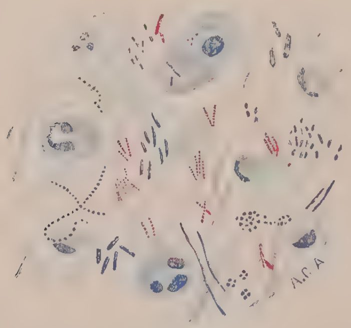


Streptococcus pyogenes in pus. (Abbott.)

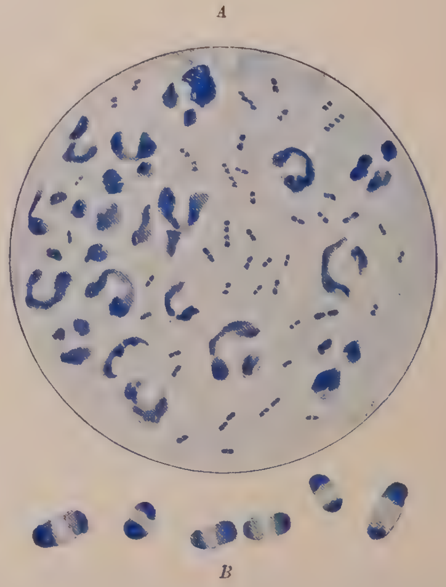


Pus of gonorrhœa, showing diplococci in the bodies of the pus-cells. (Abbott.)

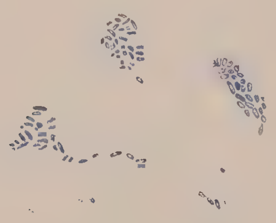
Micrococcus lanceolatus in blood of rabbit. Stained by method of Gram. Decolorization not complete. (Abbott.)



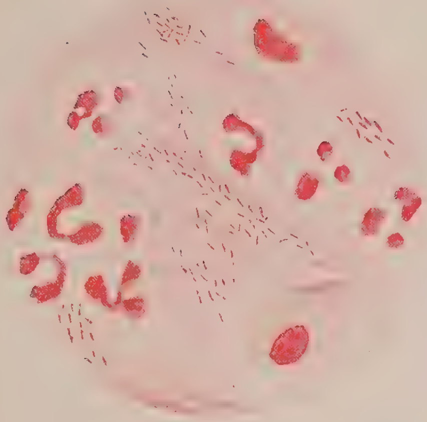
Tuberculous sputum stained by Gabbett's method. Tubercle bacilli seen as red rods; all else is stained blue. (Abbott.)



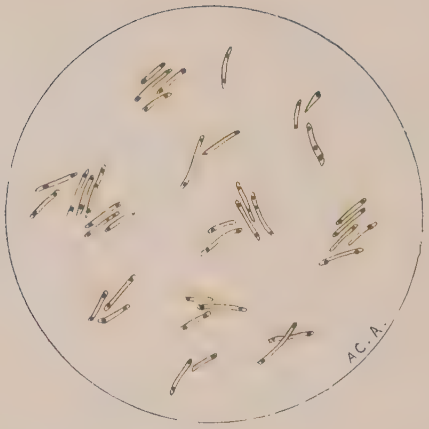
Bacillus of bubonic plague: *A*, in pus from suppurating bubo; *B*, the bacillus very much enlarged to show peculiar polar staining. (Abbott.)



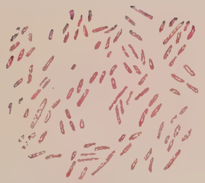
Bacillus dysenteriæ. (Shiza.)



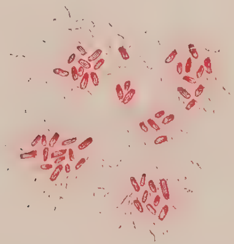
Bacillus of influenza in sputum. (Abbott.)



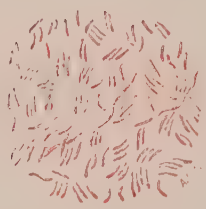
Bacillus of diphtheria, stained by Neisser's method. (Abbott.)



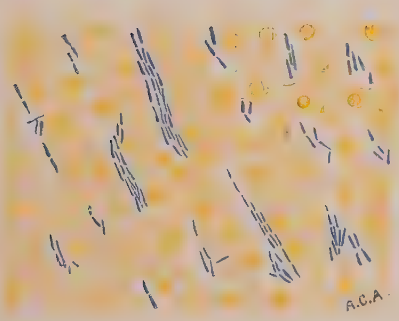
Bacillus typhosus, from culture twenty-fours old, on agar-agar. (Abbott.)



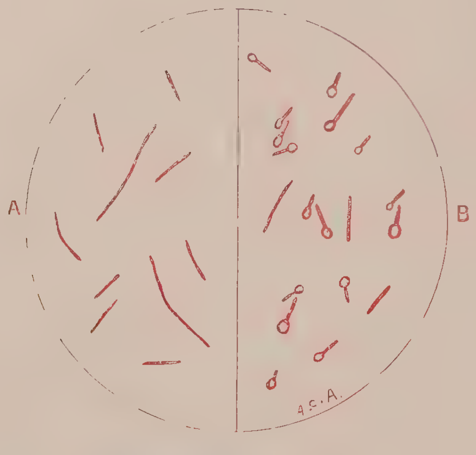
Bacillus typhosus, showing flagella stained by Loffler's method. (Abbott.)



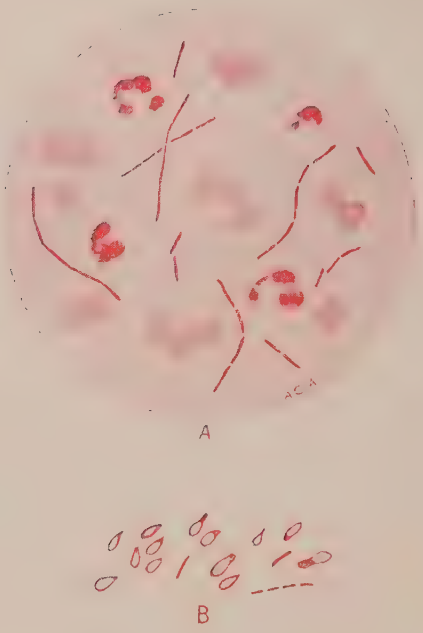
Cholera spirillum. Impression cover-slip four hours old. (Abbott.)



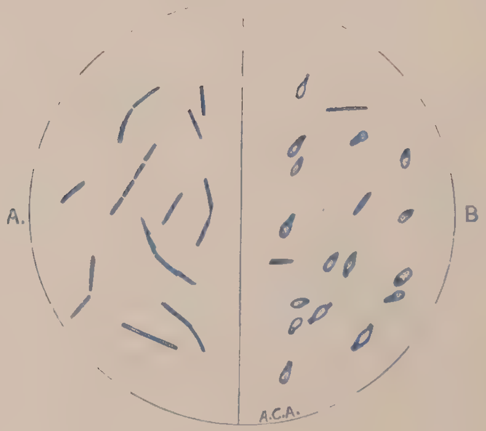
Anthrax bacilli in liver of mouse. × about 450 diameters. Bacilli stained by Gram's method; tissue stained with Bismarck-brown. (Abbott.)



Tetanus bacilli: A, vegetative stage; B, spore stage, showing pin-shapes. (Abbott.)



Bacillus œdematis maligni: A, œdema-fluid, from site of inoculation of guinea-pig, showing long and short threads; B, spore-formation, from culture. (Abbott.)



Bacillus of symptomatic anthrax: A, vegetative stage—gelatin culture; B, spore-forms—agar-agar culture. (Abbott.)

of the mode of reproduction and the means of locomotion. It is not fixed, however, and the author of it is constantly modifying and extending it. The following is that proposed by Migula in 1896. A new classification, made in 1900, is longer and more complicated.

| FAMILIES. | GENERA. |
|---|---|
| I. Coccaceæ. Cells which are globular in the free state, but slightly elongated before division. Division in one, two, or three dimensions. | 1. Streptococcus. Cells dividing in one dimension of space, and remaining attached they form beaded chains. No locomotion.<br>2. Micrococcus. Division in two dimensions; when the cells remain attached they form plate-like clusters—merismopedia. No locomotion.<br>3. Sarcina. Division in three dimensions; and the cells remaining attached, packet-like eight-celled cubes are formed. No lomocotion.<br>4. Planococcus. Division in two dimensions. Differ from micrococcus in possessing locomotion by means of flagella.<br>5. Planosarcina. Division in three dimensions, but differ from sarcina in seldom forming packets and in the fact of locomotion by means of flagella. |
| II. Bacteriaceæ. Short or long straight cylindrical cells; no sheath surrounds the chains resulting from division in one dimension of space. | 1. Bacterium. Cells of varying length without flagella; no locomotion; endospores supposed to be present, but not always discoverable.<br>2. Bacillus. Cells of varying length; motile by means of flagella, single or multiple, and attached to any part of the organism; endospores usually present, though not always discoverable.<br>3. Pseudomonas. Cells possess terminal flagella varying in number up to ten, and are actively motile; endospores are seldom present. |
| III. Spirillaceæ. Spiral cells, sometimes forming only one segment of a spiral; division in one dimension. | 1. Spirosoma. Rigid spiral or comma-shaped cells; non-motile; no endospores; often united in zoöglœa masses.<br>2. Microspira. Rigid spirals, formed of a number of comma cells united end to end; no endospores; one single wavy flagellum at one pole, sometimes one at each.<br>3. Spirillum. Corkscrew forms, actively motile, with bundles of flagella at one or both poles; endospores in a few of the species.<br>4. Spirochæte or spirochæta. Cells in the form of long coiled filaments, with slow, undulatory movement; no flagella and no endospores. |
| IV. Mycobacteriaceæ. Cells of varying length, filamentous, cylindrical, or clavate; no endospores, but segmentation results in conidia-like bodies; no flagella; dichotomous branching; no sheath. | 1. Mycobacterium. Rods of varying shape, bent, swollen, cuneate, or Y-shaped. No endospores; no flagella.<br>2. Streptothrix. Thread-like cells; no endospores; multiplication taking place by conidia. |
| V. Chlamydobacteriaceæ. Cells of varying shape, surrounded by a sheath; reproduction by conidia. | 1. Leptothrix. Non-branching filaments enclosed in a sheath; reproduction by non-motile conidia.<br>2. Phragmidiothrix. Cells first are filaments, then divide in three dimensions to form sarcina-like packets, and finally free cells; delicate sheath.<br>3. Crenothrix. Threads dividing first in one dimension, then in three; conidia, both large and small.<br>4. Cladothrix. Pseudo-branching filaments; reproduction by separation of branches and by motile conidia with flagella.<br>5. Thiothrix. Non-motile, unbranched threads; reproduction by conidia; contain sulphur granules. |
| VI. Beggiatoaceæ. Long threads without sheaths, but with undulating membrane giving motility. Contain sulphur granules. | 1. Beggiatoa. The only genus of this family. |

**Bacteria'ceæ.** Schizomycetes, microorganisms including micrococci, bacilli, and straight or spiral thread-like forms. In Zopf's classification this is the name of a family which includes the genera *Bacterium, Spirillum, Vibrio, Leuconostoc, Bacillus, Clostridium;* in Migula's classification it includes the genera *Bacterium, Bacillus,* and *Pseudomonas.*

**Bacteriæ'mia.** Presence of bacteria in the blood.

**Bacte'rial** or **Bacte'rian.** Relating to bacteria. **B. al'kaloid,** ptomain. **B. proteins',** poisonous proteids produced by bacteria; they differ from the toxalbumins in not being destroyed by the temperature of boiling water; they cause fever and inflammatory reaction.

**Bacterici'dal.** Destructive to bacteria; germicidal.

**Bacte'ricide** (*bacterium + cædo,* to kill). An agent which is destructive to bacteria; a germicide.

**Bacterid'ium.** Formerly considered a genus of *Vibriones.* **B. auranti'acum,** Micrococcus aurantiacus. **B. cyan'eum** (Schrötter), Micrococcus cyaneus (Cohn). **B. lu'teum** (Schrötter), Micrococcus luteus (Cohn). **B. prodigio'sum,** Bacillus prodigiosus.

**Bacte'riform** or **Bacte'rioid.** Resembling bacteria; rod-shaped.

**Bacterinu'ria** or **Bacteriu'ria** (*bacteria + ouron,* urine). The presence of bacteria in the urine when voided.

**Bacteriofluorescin'.** Blue, fluorescent coloring-matter produced by the so-called fluorescent bacteria.

**Bacterioidom'onas** (*bacteria + eidos,* form, and *monas,* unit). Genus of microorganisms intermediate between *Schizomycetes* and *Protozoa.*

**Bacteriol'ogist.** One skilled in bacteriology.

**Bacteriol'ogy** (*bacterium + logos,* description). That department of scientific investigation which has to do with bacteria.

**Bacteriolysin′** (*bacterium* + *lysis*, solution). A defensive substance formed in the body during the course of an infectious disease which has the property of destroying the specific bacterium of that disease.

**Bacteriol′ysis.** The destruction of bacteria. **Specif′ic b.,** if cholera bacilli are placed in the peritoneal cavity of an animal which has been immunized against cholera, the bacteria are dissolved by the peritoneal fluid; the same phenomenon occurs, *mutatis mutandis,* in the case of other pathogenic microorganisms and other fluids of the body; this is called specific bacteriolysis.

**Bacteriolyt′ic.** Causing the destruction of bacteria.

**Bacteriopathol′ogy.** The science of the relation of bacteria to disease and of the lesions caused by them.

**Bacteriophyto′ma** (*bacterium* + *phyton,* growth). Tumor composed of bacterial cells.

**Bacterioprotein′** or **Bacteriprotein′.** Bacterial protein.

**Bacte′riopurpurin′.** Purplish coloring-matter in protoplasm of some of the chromogenic bacteria.

**Bacterioscop′ic.** Relating to bacterioscopy.

**Bacterios′copy.** Microscopic examination of bacteria.

**Bacteriotherapeu′tic.** Relating to bacteriotherapy.

**Bacteriother′apy.** Treatment of disease by bacteria, as of phthisis by inhaling cultures of Bacterium termo.

**Bacteriotoxin′.** A substance exerting a poisonous action on bacteria.

**Bacte′rium.** There is some confusion in the employment of this word, as it has several general and specific meanings. It is used (in the plural) to denote microbes or microorganisms in general, or, in a more restricted sense, the vegetable microorganisms; or again, and properly, the fission fungi, or schizomycetes, as distinguished from the budding fungi, or saccharomycetes. In a still more limited application, the word is employed to mark one genus of the family *Bacteriaceœ.* See *Bacteria.* In writing the names of the different species the abbreviation *Bact.* is used in order to prevent confusion with Bacillus, written *B.* **Bact. accidenta′le tet′ani** (Belfanti and Pescorolo), found in an abscess in tetanus; pathogenic. **Bact. ace′ti** (Hansen), found in wine and beer; causes fermentation. **Bact. ace′ti** (Lanzi), Bacillus aceti. **Bact. ace′ti** (Peters), found in sour dough; causes fermentation. **Bact. ace′ticum** (Baginsky), found in beerwort; causes fermentation; Bacillus aceti; Bacillus aërogenes. **Bact. ace′ticum** (Zoidler), found in beerwort; causes fermentation. **Bact. ac′idi lac′tici,** name given to Bacillus aërogenes and another bacillus occurring in sour milk. **Bact. ac′idi lac′tici** (Grotenfeld), found in fæces, water, and milk; causes fermentation. **Bact. ac′ne contagio′sæ** (Dieckerhoff and Grawitz), found in that disease in the horse; pathogenic. **Bact. acti′noclad′othrix** (Afanassieff), actinomyces. **Bact. a′ëris minutis′simum** (Bey), found in atmospheric air; produces canary-yellow pigment. **Bact. aërog′enes** (Miller), from the normal alimentary canal; nonpathogenic; Bacillus aërogenes. **Bact. aërugino′sum,** Bacillus pyocyaneus. **Bact. al′lii,** Bacillus allii. **Bact. amab′ile** (Dyar), found in air; produces a yellow pigment. **Bact. ambig′uum** (Wright), found in water; saprophytic. **Bact. amethysti′num** (Eisenberg), found in water; produces dark blue pigment. **Bact. a. mo′bile** (Germano), produces blue-violet pigment. **Bact. anaëro′bicum** (Flügge), found in milk; causes fermentation. **Bact. annula′tum** (Wright), found in water; produces yellow pigment. **Bact. a′pii** (Brizi), found in bacterial degeneration of celery plants; pathogenic to plant. **Bact. an′thracis** (Zopf), Bacillus anthracis. **Bact. aphtho′sum** (Siegel), found in diseased liver and kidneys; pathogenic. **Bact. aquat′ile commu′ne** (Zimmermann), found in water; saprophytic. **Bact. a. sulca′tum quar′tum** (Weichselbaum), found in soil; saprophytic. **Bact. articula′tum** (Ehrenberg), Bact. lineola. **Bact. auranti′acum** (Trelease), found in water; produces orange pigment. **Bact. aureofla′vum** (Adametz), found in water; produces chrome-yellow pigment. **Bact. bacil′lus** (Pasteur), Bact. termo. **Bact. be′tæ** (Arthur and Golden), found in bacterial degeneration of sugar-beets; pathogenic to the plant. **Bact. bovisep′ticum** (Kitt), found in disease of buffaloes; pathogenic. **Bact. bras′sicæ** (Lehr and Conrad), found in sour-crout; causes fermentation. **Bact. breslavien′se** (Van Ermenghen), found in poisonous beef, etc.; pathogenic; also causes fermentation. **Bact. brun′neofla′vum** (Dyar), found in atmospheric air; produces brown or orange pigment. **Bact. brun′neum** (Schrötter), found in septic infusion of maize or Indian corn; produces brown pigment. **Bact. bucca′le fortu′itum** (Vignal), found in normal saliva; saprophytic. **Bact. bucca′le minu′tum** (Vignal), found in normal saliva; produces golden-yellow pigment. **Bact. of buff′alo plague** (Ratz), found in infectious disease of that animal; pathogenic; Bacillus of buffalo plague. **Bact. buty′ri colloi′deum** (Lafar), noticed in butter; saprophytic. **Bact. of butyr′ic acid fermenta′tion,** Bacillus butyricus. **Bact. campes′tre** (Pammel), found in spoiled turnips; causes fermentation, also a yellow pigment. **Bact. of cana′ry-bird septicæ′mia** (Rieck), pathogenic. **Bact. can′didum** (Trelease), chromogenic. **Bact. capita′tum** (Davaine), detected in albuminous solutions; saprophytic. **Bact. cap′sule,** form of bacterium in which the cell-membrane or its outer layers are thickened, so that the bacterium seems to be surrounded by a gelatinous envelope. **Bact. carbuncula′re** (Pollender, Brauell, Delafond, and Davaine), Bacillus anthracis. **Bact. carlsvergen′se** (Hansen), detected in the atmosphere; saprophytic. **Bact. car′neum** (Tils), found in water; produces flesh-colored pigment. **Bact. caten′ula** (Dujardin), detected in albuminous solutions, in blood in process of putrefaction, and in putrid urine; causes fermentation. **Bact. caucas′icum,** Bacillus caucasicus. **Bact. cauda′tum** (Wright), found in water; produces yellow pigment. **Bact. centrif′ugans** (Wright), found in water; causes fermentation; also greenish pigment. **Bact. chainette′,** Bacterium catenula. **Bact. chlori′num** (Engelmann), detected in water; produces green pigment. **Bact. chol′eræ columba′rum** (Leclancher), found in disease of wild pigeons; pathogenic. **Bact. chol′eræ gallina′rum** (Perroncito), found in chicken cholera; pathogenic. **Bact. cholog′enes** (Stern), found in angiocholitis; pathogenic. **Bact. chrysogloi′a** (Lafar), found in air and water; produces yellow pigment. **Bact. cit′reum** (Unna and Tomasoli), found in the skin in eczema; produces citron-yellow pigment. **Bact. cit′reum cadav′eris** (Strassmann and Strecker), found in the human body after death; produces citron-yellow pigment. **Bact. coadnu′tum** (Wright), found in water; saprophytic. **Bact. cohe′rens** (Wright), found in water; saprophytic. **Bact. co′li aërog′enes** (Lembke), found in excrement of dog; pathogenic. **Bact. c. anindol′icum,** found in excrement of dog; pathogenic; also causes fermentation. **Bact. c. commu′ne** (Escherich), found in the feces of man and domestic animals; pathogenic; Bacillus coli communis; B. neapolitanus. **Bact. c. immo′bile** (Germano and Maurea), found in feces; pathogenic; also causes fermentation. **Bact. c. mo′bile** (Messea), found in intestinal discharges of typhoid fever. **Bact. colorab′ile** (Naunyn), found in a fatal case of yellow fever; causes fermentation. **Bact. commu′ne** (Pasteur), Bact. termo. **Bact. conjunctivit′idis** (Morax), found in catarrh of conjunctiva and chronic conjunctivitis; pathogenic. **Bact. convolu′tum** (Wright), found in water; saprophytic. **Bact. of corn′stalk disease′** (Billings), found in that disease and in bronchopneumonia of cattle; pathogenic. **Bact. cunea′tum** (Rivolta), Bacillus cuneatus. **Bact. cunic′uli pneumon′icum** (Beck), found in infectious lung disease of rabbits; pathogenic. **Bact. cuniculici′dum**

**immo'bile** (Smith), found in infectious disease of rabbits; pathogenic. **Bact. c. sep'ticum** (Lucet), found in epizoötic disease of rabbits; pathogenic. **Bact. c. thermoph'ilum** (Lucet), in infectious disease of rabbits and guinea-pigs; pathogenic. **Bact. cyanog'enum,** Bacillus cyanogenus. **Bact. of Da'nish swine plague,** Bacillus suipestifer. **Bact. decal'vans** (Thin), Micrococcus areæ Celsi. **Bact. decidio'sum** (Wright), found in water; produces yellow pigment. **Bact. decol'orans ma'jor** (Dyar), found in atmospheric air; saprophytic. **Bact. decol'orans mi'nor** (Dyar), found in atmospheric air; saprophytic. **Bact. dela'bens** (Wright), found in water; saprophytic. **Bact. del'ta** (Dyar), found in water; produces a red pigment. **Bact. dendrit'icum** (Lustig), found in water; saprophytic. **Bact. denitrif'icans** (Gayon and Dupetit), found in atmospheric air, earth, excrement of horse, etc.; Bacillus denitrificans. **Bact. d.** (Stuetzer and Burri), found in manure; causes fermentation. **Bact. d. ag'ile** (Ampola and Garino), found in manure; causes fermentation. **Bact. diphthe'riæ,** Bacillus of diphtheria; B. of Friedländer. **Bact. d. a'vium** (Loir and Duclaux), epizoötic disease of birds and chickens; pathogenic. **Bact. d. cunic'uli** (Ribbert), found in diphtheritic disease of the intestines of rabbits; pathogenic. **Bact. discis'sum** (Dinwiddie), found in milk; causes fermentation. **Bact. domes'ticum** (Dyar), found in the air; produces yellow ferment. **Bact. dormita'tor** (Wright), found in water; produces bright yellow pigment. **Bact. du'bium** (Bleisch), found in feces; pathogenic. **Bact. du'bium pneumo'niæ** (Bunzi and Federn), found in rusty expectoration of pneumonia; pathogenic. **Bact. duplica'tum** (Wright), found in water; saprophytic. **Bact. dysente'riæ liquefa'ciens** (Ogata), found in dysentery; pathogenic. **Bact. dysente'riæ vitulo'rum** (Jensen), found in dysentery in calves; pathogenic. **Bact. dyso'des** (Zopf), Bacillus dysodes. **Bact. egre'gium,** found in the dust of the air; produces a yellow pigment. **Bact. ellenbachen'se** (Stuetzer and Hartleb), found in the earth and roots of graniferous plants; causes fermentation. **Bact. emphysemato'sum** (Fränkel), found in emphysematous suppurative inflammation of areolar tissue; pathogenic; also causes fermentation. **Bact. en'chelys** (Ehrenberg), found in water; saprophytic. **Bact. endometrit'idis** (Kaufmann), found in hepatic abscess complicating endometritis. **Bact. ep'silon** (Dyar), found in atmospheric air; produces pink pigment. **Bact. e'qui-intestina'lis** (Dyar and Keith), found in manure; saprophytic. **Bact. erysipel'atos su'um,** Bacillus rhusiopathiæ suis. **Bact. e'ta** (Dyar), found in atmospheric air; causes fermentation and produces a yellow pigment. **Bact. of Europe'an cat'tle plague,** Bacillus bovisepticus. **Bact. exanthemat'icum** (Babès and Oprescu), found in infectious and hemorrhagic disease; pathogenic. **Bact. exig'uum** (Wright), found in water; produces a salmon-pink pigment. **Bact. feca'le alcalig'enes** (Petruschky), found in feces; pathogenic; also causes fermentation. **Bact. fairmonten'se** (Wright), found in water; saprophytic. **Bact. farina'ceum** (Wigand), found in fermented sponge or dough; causes fermentation. **Bact. fe'lis sep'ticum** (Fiocca), found in septicæmia of cats; pathogenic. **Bact. ferrugin'eum** (Dyar), found in atmospheric air; produces brick-red pigment. **Bact. fimbria'tum** (Wright), found in water; causes fermentation. **Bact. finit'imum ru'brum** (Dyar), found in atmospheric air; produces pink-red pigment. **Bact. of fire blight,** Bacillus butyricus. **Bact. fisch'eri** (Beyernick), found in atmospheric air; produces yellowish pigment. **Bact. fitzia'num** (Zopf), Bacillus subtilis. **Bact. flexuo'sum** (Wright), found in water; saprophytic. **Bact. fluores'cens** (Lepierre), found in water; produces a yellow-green pigment. **Bact. f. convex'um** (Wright), found in water; saprophytic. **Bact. f. cras'sum** (Frick), found in air and water; pathogenic. **Bact. f. folia'ceum** (Wright), found in water; saprophytic. **Bact. f. immo'bile,** found in air and water; saprophytic. **Bact. f. incog'nitum** (Wright), found in water; saprophytic. **Bact. f. mutab'ile** (Wright), found in water; produces yellow-green pigment. **Bact. f. schuylkillien'se** (Wright), found in water; saprophytic. **Bact. fœt'idum** (Thin), Bacillus fœtidus. **Bact. friedbergen'se** (Ebert and Mandry), found in toxic sausages; pathogenic. **Bact. of French swine plague,** Bacillus suipestifer. **Frog-spawn bact. of su'gar fac'tories,** Leuconostoc mesenteroides. **Bact. fur'furis** (Wood and Wilcox), found in tanners' vat; causes fermentation. **Bact. fus'cum liquefa'ciens** (Dyar), found in atmospheric air; produces orange pigment. **Bact. fus'cum pal'lidum** (Dyar), found in atmospheric air; produces pink-orange pigment. **Bact. fusifor'me** (Warming), detected in ocean water; saprophytic. **Bact. gallina'rum** (Klein), found in intestinal inflammation of fowls; pathogenic. **Bact. gam'ma** (Dyar), found in atmospheric air; produces yellowish pigment. **Bact. gelatino'sum be'tæ** (Glazer), found in juice of beets; causes fermentation; pathogenic to the plant. **Bact. genicula'tum** (Wright), found in water; saprophytic. **Bact. gingi'væ pyog'enes** (Miller), found in inflamed and suppurating gums; pathogenic; produces yellowish pigment; Bacillus gingivæ pyogenes. **Bact. gliscrog'enum** (Malerba), found in viscid, acid urine; non-pathogenic. **Bact. gris'eum** (Warming), Micrococcus griseus. **Bact. gum'me** (Commes), productive of morbid gummy changes in vines, fig trees, orange trees, etc. **Bact. gummo'sum** (Ritsert), causes thick, cloudy appearance in infusion of digitalis. **Bact. hæmatoi'des** (Wright), found in water; produces a blood-red pigment. **Bact. hæmorrha'gicum** (Kolb), found in fatal septicæmia; pathogenic. **Bact. h. nephrit'idis** (Vassale), found in hemorrhagic nephritis; pathogenic. **Bact. h. sep'ticum** (Babès), found in septicæmia; pathogenic. **Bact. h. veneno'sum** (Tizzoni and Giovannini), found in purpura hæmorrhagica; pathogenic. **Bact. of hemorrha'gic septicæ'mia of swans,** pathogenic; **Bact. hes'sii** (Guillebeau), found in ropy milk. causes fermentation; Bacillus Hessii. **Bact. of hog chol'era,** Bacillus suipestifer. **Bact. hudso'nii** (Dyar), found in atmospheric air; produces yellow pigment. **Bact. hyacin'thi** (Walker), detected in the hyacinth. **Bact. hydrosulphu'reum pon'ticum** (Zelinsky), found in sea water; causes fermentation; also produces brown pigment. **Bact. ianthi'num,** Bacillus ianthinus. **Bact. icterog'enes** (Guarnieri), found in acute yellow atrophy of the liver and in the intestinal discharges of typhoid fever. **Bact. indigona'ceum** (Schneider), found in water; produces indigo-blue pigment. **Bact. of infec'tious pneumo'nia in the horse,** Streptococcus coryzæ contagiosæ equorum. **Bact. inu'tile** (Dyar), found in atmospheric air; pathogenic. **Bact. javanien'se** (Eijikmann), found in atmospheric air; causes fermentation. **Bact. of kef'ir,** Bacillus caucasicus. **Bact. koch'ii** (Hansen), found in atmospheric air; saprophytic. **Bact. kral'lii** (Dyar), found in atmospheric air; saprophytic. **Bact. kutzingia'num** (Hansen), found in stale beer; causes fermentation. **Bact. lac'ticum** (Gunther and Thierfelder), found in milk; causes fermentation. **Bact. lac'tis** (Lister), found in milk; causes fermentation; Bacillus lacticus. **Bact. l. aërog'enes** (Escherich), found in the milk and intestines of animals that live on milk as food; causes fermentation; Bacillus lactis aërogenes. **Bact. l. innoc'uum** (Wilde), found in milk; saprophytic. **Bact. lacuna'tum** (Wright), found in water; produces a yellowish pigment. **Bact. larvici'dum** (Dyar), found in morbidly affected larvæ of silkworm; pathogenic. **Bact. leukæ'miæ ca'nis** (Lucet), found in a leukæmic dog; pathogenic. **Bact. le'vans** (Lehmann and Wolffin), found in fermented sponge or dough; causes fermentation. **Bact. lindo'lum** (Fodor), found in soil; causes fermentation. **Bact. line'ola** (Müller and Cohn), found in water, vegetable infusions, and in the soil; saprophytic. **Bact. lito'reum** (Warming), detected in water of the ocean; saprophytic. **Bact. of liv'er ab'scess** (Korn), produces a yellow ferment.

**Bact. lu′cens** (Nuesch), found in phosphorescent beef, etc. **Bact. lu′cens** (Van Tieghem), Bacillus lucens. **Bact. ludwig′ii** (Karlinsky), found in hot sulphur springs in Bosnia; requires elevated temperature for its development. **Bact. lumino′sum** (Giard), found in the abdomen of a crustaceous animal, causing luminous effect; pathogenic. **Bact. lumino′sum** (Beyernick), found in ocean water, giving it a luminous appearance. **Bact. lu′teum** (List), found in water; non-pathogenic. **Bact. maddox′ii** (Miquel), found in fermenting urine. **Bact. ma′idis** (Cuvoni), Bacillus maidis. **Bact. martine′zii** (Sternberg and Dyar), found in a fatal case of yellow fever; also in atmospheric air; pathogenic. **Bact. merismopædioi′des** (Zopf), Bacillus merismopædioides. **Bact. mon′achæ** (Tubeuf), found in morbidly affected larvæ of the nun-moth; pathogenic. **Bact. monadifor′me** (Messea), found in intestinal discharges of typhoid fever; pathogenic. **Bact. morbif′icans bo′vis** (Basenau), found in puerperal fever of the cow. **Bact. morbil′li** (Lanzi), found in the urinary excretion in morbilli or measles. **Bact. mo′ri** (Boyer and Lambert), found in morbidly affected mulberry trees. **Bact. multistria′tum** (Wright), found in water; saprophytic. **Bact. muripes′tifer** (Laser), found in mice plague; pathogenic. **Bact. murisep′ticum** (Flügge), found in septic conditions of mice. **Bact. navic′ula** (Reinke and Berthold), found in potato-rot; Bacillus butyricus. **Bact. neapolita′num,** Bacillus neapolitanus. **Bact. nebulo′sum** (Wright), found in water; saprophytic. **Bact. nexib′ile** (Wright), found in water; saprophytic. **Bact. nitrif′icans** or **ni′trifying bact.** (Burri and Stuetzer), found in soil; causes fermentation; Bacillus nitrificans. **Bact. nitro′sofor′mæ no′væ,** found in soil; causes fermentation. **Bact. oblon′gum** (Boutroux), causes fermentation in beer. **Bact. œdem′atis thermoph′ilum** (Novy), found in decomposing solution of nuclein; pathogenic; causes fermentation. **Bact. o′leæ** (Archangeli), found in olives undergoing tuberculous decomposition. **Bact. orchit′icum** (Kuetscher), found in glanders in the horse. **Bact. ova′le** (Wright), found in water; produces yellow pigment. **Bact. ova′tum** (Lebert), the cause of an epidemic disease in silkworms called *pébrine*. **Bact. oxylac′ticum** (Dyar), found in atmospheric air; produces light yellow pigment. **Bact. palles′cens** (Henrici), found in cheese; saprophytic. **Bact. paradox′um** (Kruse and Pasquale), found in dysentery; pathogenic. **Bact. pasteuria′num** (Hansen) or **pastoria′num,** Bacillus pasteurianus. **Peach-colored, bact.** (Lankester), Beggiatoa persicina. **Bact. periplan′etæ** (Tichomiroff), detected in the cockroach; pathogenic. **Bact. pes′tis,** bacillus of bubonic plague. **Bact. pflü′geri** (Lüdwig), Photobacterium pflügeri. **Bact. phasia′ni sep′ticum,** found in diseased pheasants. **Bact. phosphores′cens** (Cohn), Photobacterium phosphorescens, Bacillus phosphorescens. **Bact. p.** (Hermes), Bacillus phosphoreus. **Bact. p. pflü′geri** (Foerster), found in luminous fish; Photobacterium pflügeri, Bacillus phosphorescens. **Bact. photomet′ricum** (Engelmann), found in water; produces a green pigment,. **Bact. pi′ni** (Vuillemin), found in galls; saprophytic. **Bact. of pneumo′nia,** Bacillus friedländeri; Micrococcus lanceolatus. **Bact. of pneumo′nia in turk′eys** (MacFadyean), pathogenic for that disease. **Bact. pneumo′niæ croupo′sæ** (Friedländer), Bacillus friedländeri. **Bact. pneumon′icum,** B. pneumoniæ, B. of Friedländer. **Bact. pneumon′icum liquefa′ciens** (Arloing), found in cattle lung plague. **Bact. pneumosep′ticum** (Klein), found in the characteristic sputa of pneumonia. **Bact. por′ri** (Tommasi-Crudeli), detected in warts. **Bact. of pota′to scab** (Bolley), pathogenic for potatoes. **Bact. pri′mum fulle′sii** (Dyar), found in water; causes fermentation. **Bact. prodigio′sum,** Bacillus prodigiosus. **Bact. pseu′doconjunctivit′idis** (Kartulis), found in the conjunctiva; produces a yellow pigment. **Bact. pseu′doinfluen′zæ** (Pfeiffer), found in bronchopneumonia and inflammation of the middle ear. **Bact. pseu′dopneumon′icum,** Bacillus pseudopneumonicus. **Bact. pseudotypho′sum** (Loesener), found in hepatic abscess; also in water; pathogenic. **Bact. pul′lulans,** found in water produces a yellow pigment. **Bact. punc′tum** (Rivolta), B. lineola. **Bact. pu′tidum** (Frick and Dyar), found in water and air; causes fermentation; produces a yellow pigment. **Bact. putred′inis** (Davaine), found in decaying vegetable matter. **Bact. pyocinnabar′eum** (Ferchmin), found in abscesses; produces reddish-yellow pigment. **Bact. pyog′enes anaërob′icum** (Fuchs), found in fetid pus of rabbits. **Bact. pyog′enes fœt′idum liquefa′ciens** (Lanz), found in cerebral abscess following inflammation of middle ear; pathogenic; produces also a citron-yellow pigment. **Bact. pyog′enes minutis′simum,** found in pus. **Bact. pyrifor′me** (Hansen), found in the atmosphere; saprophytic. **Bact. radicic′ola** (Prazmowski), detected in the soil. **Bact. recupera′tum** (Wright), found in water; saprophytic. **Bact. refrac′tans** (Wright), found in water; saprophytic. **Bact. rhodo′crous** (Dyar), found in atmospheric air; produces rose-colored pigment. **Bact. rhusiopath′iæ su′is** (Kitt), found in erysipelas in the hog; Bacillus rhusiopathiæ suis. **Bact. rosa′ceum metalloi′des** (Dowdeswell), Bacillus ruber. **Bact. ru′ber sardi′næ** (DuBois Saint Sévrin), found in oil of sardines; produces red pigment; causes fermentation. **Bact. rubes′cens** (Lankester), Beggiatoa roseopersicina. **Bact. rugo′sum** (Wright), found in water. **Bact. sali′væ minutis′simum** (Wilde), found in the salivary secretions in the mouth; pathogenic. **Bact. salmo′neum** (Dyar), found in atmospheric air; porduces salmon-pink pigment. **Bact. salmon′icum** (Emmerich and Weibel), found in diseased trout; pathogenic. **Bact. sanguina′rium** (Smith and Moore), found in virulent leukæmia of chickens, etc.; pathogenic. **Bact. sarcoph′ilum** (Dubois), found in luminous or phosphorescent meat. **Bact. sarrace′ni co′la** (Dyar), found in pitcher plant; causes fermentation. **Bact. secun′dum fulle′sii** (Dyar), found in air. **Bact. septicæ′miæ** (Koch), Bacillus septicæmiæ hæmorrhagicæ. **Bact. sep′ticum pu′tidum** (Roger), found in a fatal case of cholera; pathogenic. **Bact. sep′ticum sputig′enum,** Bacillus septicus sputigenus. **Bact. of sheep′pox,** detected in that disease; pathogenic. **Bact. sinuo′sum** (Wright), found in water. **Bact. of sporad′ic pneumo′nia in cat′tle,** pathogenic. **Bact. sputig′enes cras′sum** (Kreibohm) found in sputa; pathogenic. **Bact. s. ten′ue** (Pansini), found in the sputa in pulmonary tuberculosis and pneumonia; pathogenic. **Bact. subochra′ceum** (Dyar), found in atmospheric air; produces orange pigment. **Bact. sub′tile** (Buchner), Bacillus subtilis. **Bact. suipes′tifer** (Salmon and Smith), found in cholera in hogs; pathogenic. **Bact. suisep′ticum** (Schutz), found in swine plague; pathogenic. **Bact. sulca′tum liquefa′ciens** (Kruse), found in water; produces a yellow-brown pigment. **Bact. sulfura′tum** or **sulphura′tum** (Warming). Beggiatoa roseopersicina. **Bact. sulphu′reum** (Rosenheim), discovered in wine; causes fermentation. **Bact. syncyan′eum** (Ehrenberg and Schrötter), or **syncy′anum,** Bacillus cyanogenes, B. lactis cyanogenes. **Bact. synxan′thum** (Schrötter), Bacillus synxanthus. **Bact. tachyc′tonum** (Fischer), found in alvine evacuations in cholera nostras; pathogenic. **Bact. termo,** former name of Bacillus proteus vulgaris. **Bact. termo** (Dallinger and Drysdale), found in putrefying and decaying matter; causes fermentation. **Bact. ter′mo** (Vignal), found in the normal secretions of the mouth; produces a yellow-gray pigment; non-pathogenic. **Bact. the′ta** (Dyar), found in atmospheric air. **Bact. tholoid′eum,** Bacillus of Gessner. **Bact. tiogen′se** (Wright), found in water; saprophytic. **Bact. tracheiph′ilum** (Smith), found in spoiled or diseased melons. **Bact. trambus′tii** (Trambusti and Galcotti), found in water. **Bact. trem′ulans** (Trevisan), B. lineola. **Bact. trilocula′re** (Ehrenberg), B. lineola. **Bact. tuberculo′sis** (Zopf) or **Bact. tuberculo′sum** (Koch), Bacillus tuberculosis. **Bact. tumes′cens** (Zopf), Bacillus tumescens. **Bact. typho′sum,**

Bacillus typhi abdominalis. **Bact. ul′na,** Bacillus ulna. **Bact. ul′na** (Cohn), Micrococcus ureæ. **Bact ure′æ** (Jaksch), found in stale urine having an ammoniacal odor; causes fermentation. **Bact. u′væ** (Cugini and Macchiati), found in spoiled grapes; produces a yellow pigment. **Bact. vacuola′tum** (Dyar), found in the bladder of *Utricularia;* causes fermentation. **Bact. vagi′næ** (Doederlein), found in the secretions of the vagina. **Bact. of vario′la** (Cose and Feltz), found in vesicles in smallpox; pathogenic(?). **Bact. vermifor′me** (Ward), found in ginger beer after fermentation; causes fermentation. **Bact. vernico′sum** (Zopf), found in water; causes fermentation. **Bact. viola′ceum** (Bergonzini), found in solutions of egg-albumin while undergoing putrefaction; produces violet pigment. **Bact. viola′ceum sac′chari** (Agar and Dyar), found in atmospheric air; produces a violet pigment. **Bact. vir′ide** (Lesage), Bacillus viridis; found in green diarrhœa of young persons; produces a green pigment. **Wa′ter bact.,** commonly present in water; grows best at about 20° C. **Bact. xanthi′num,** Bacillus synxanthus. **Bact. xyli′num** (A. J. Brown), found in acetifying solutions of carbohydrates; causes fermentation. **Bact. ze′ta** (Dyar), found in atmospheric air; produces orange-red pigment. **Bact. zop′fii** (Kurth), found in the intestines of chickens; non-pathogenic. **Bact. zürnian′um** (List), found in water; non-pathogenic.

**Bacteriu′ria.** The presence of microorganisms in the urine when voided.

**Bac′teroid.** Resembling a rod, or a bacterium. (pl.) Zoöglœa-like microorganisms possessing the property of assimilating and combining nitrogen.

**Bac′tris min′ima** or **mi′nor.** A plant of tropical America, the pulp of which is used in bronchitis.

**Bactyrilo′bium.** Cassia fistula.

**Bac′uliform.** Rod-shaped.

**Bad.** Evil; sick. **B. disease′,** syphilis. **B. sick′ness** (of Ceylon), beriberi.

**Badal′s′ opera′tion.** Stretching or rupture of the infratrochlear branch of the nasal nerve in the treatment of glaucoma.

**Badia′ga.** Russian sponge, powder of which takes away livid marks from blows and bruises.

**Badier′a diversifo′lia.** Bastard lignum vitæ of W. Indies; properties similar to guaiacum.

**Bad′isis** or **Badis′mus.** Walking.

**Baduk′ka.** Capparis badukka.

**Bad′ula mecran′tha.** Plant of Mauritius; diuretic.

**Bad′ulam.** Ardisia humilis of Ceylon, whose fruit, made into syrup, is used as a cooling drink.

**Bæck′ea chinen′sis** or **frutes′cens.** Species of Asiatic myrtaceous plants; diuretic and abortifacient.

**Ba′el.** Covolam.

**Baelz's disease′.** Destructive ulceration of the mucous glands of the lips.

**Bæob′otrys pic′ta.** Saoria.

**Bæom′yces coccif′erus.** Species of European lichens used in intermittent fevers.

**Baer's plane,** a craniometrical plane touching the upper border of the zygomatic arches. **B.'s ves′icle,** the ovule, the ovum in the Graafian follicle.

**Bag.** A pouch or small sac; the scrotum; the mamma of cattle. **Barnes's b.,** see *Barnes'.* **Hon′eycomb b.,** the reticulum of ruminant animals. **Ice b.,** a bag, usually of rubber, to hold ice for application to the spine or other part. **Pol′itzer's b.,** see *Politzer's.* **B. of wa′ters,** see *Liquor amnii.*

**Ba′hel.** Plant of Malabar, whose bruised leaves are applied as cataplasms. **B. schul′li,** Genista spinosa indica.

**Bahi′a arachnoid′ea.** Butterfly plant of California; tonic and stomachic, especially in convalescence. **B. pow′der,** Goa powder.

**Baibu′la.** Plantago major.

**Baillarger's** (bi-yar-zhaze′) **lay′er.** Layer of nervous fibres in the cortex of the brain; near the calcarine fissure it is called Vicq d'Azyr's band. **B.'s sign,** difference in size of pupils in dementia paralytica.

**Ba′ker's cysts.** Projections of synovial membrane of an articulation through the fibrous capsule. **B.'s itch,** psoriasis; lichen; eczema; noticed on the hands of bakers. **B.'s leg,** genu valgum. **B.'s salt,** ammonium carbonate. **B.'s stig′mata,** hard, callous appearance on the fingers from kneading.

**Balæ′na mystice′tus.** Greenland whale, from which whale oil and whalebone are derived.

**Balan′ic.** Relating to the glans of either the penis or the clitoris.

**Bal′anism.** Application of a suppository or pessary.

**Balani′tis** (*balanos,* glans). Inflammation of the glans penis or clitoridis. **B. blennorrho′ica,** b. of gonorrhœal origin. **B. diabet′ica,** b. caused by contact with saccharine urine. **Gonorrhœ′al b.,** gonorrhœa involving the glans penis.

**Balanoblennorrhœ′a.** Gonorrhœal balanitis.

**Bal′anoplasty.** Plastic operation on the glans penis.

**Balanoposthi′tis** (*balanos,* glans, *posthe,* prepuce). Inflammation of the glans penis and prepuce.

**Bal′anoprepu′tial.** Relating to glans penis and prepuce.

**Balanorrha′gia** (*balanos,* glans, *rhegnymi,* to burst forth). Gonorrhœal balanitis.

**Balanorrhi′num.** Secretion occurring in balanitis.

**Balanorrhœ′a** (*balanos,* glans, *rheo,* to flow). Purulent balanitis.

**Bal′anos.** Suppository; glans penis. **B. phœ′nicos,** date.

**Balantid′ium.** A genus of Protozoa, ord. *Heterotricha.* **B. co′li** (Malusten), Paramecium coli, a ciliated organism, found in the feces of the pig and sometimes in diarrhœal discharges in man. **B. minu′tum** (Jakoby and Schaudinn), a form found in diarrhœal discharges; it is much smaller than B. coli and differs from it somewhat in morphology.

**Balan′tion.** Scrotum.

**Balantiophthal′mus** (*balantion,* bag, *ophthalmos,* eye). Bag-like appearance of the eyelids.

**Balbia′ni's nu′cleus.** Nucleus of yolk of ovum.

**Bal′bis.** Oblong cavity; olecranon cavity of humerus.

**Bal′bus.** Stammering or lisping; stammerer.

**Balbu′ties.** Stuttering, stammering; traulismus.

**Bald.** Without hair on the head.

**Bald′money.** Æthusa meum.

**Bald′ness.** Alopecia; calvities. **Lim′ited** or **par′tial b.,** porrigo decalvans.

**Bale′nas** (*balæna,* whale). Leviathan penis.

**Bal′four's disease′.** Chlorosarcoma. **B.'s treat′ment,** potassium iodide for internal aneurysms.

**Ball.** A bolus, used in veterinary medicine; the round part of the great toe or thumb. **B. of the eye,** globe of the eye. **B.-and-sock′et joint,** see *Enarthrosis.* **B. so′da,** British barilla, consisting of sodium carbonate and calcium oxysulphide. **B. throm′bus,** clot in the heart formed before death and having a spherical shape.

**Bal′last fe′ver.** Ship fever, yellow fever, or any tropical fever contracted on shipboard, contagion of which was formerly believed to come from the ballast.

**Ballet's′ sign.** External ophthalmoplegia, met with in hysteria and exophthalmic goitre.

**Ballis′mus.** Chorea; disordered muscular movement.

**Ballis′tic galvanom′eter.** Instrument for estimating the force of brief galvanic currents.

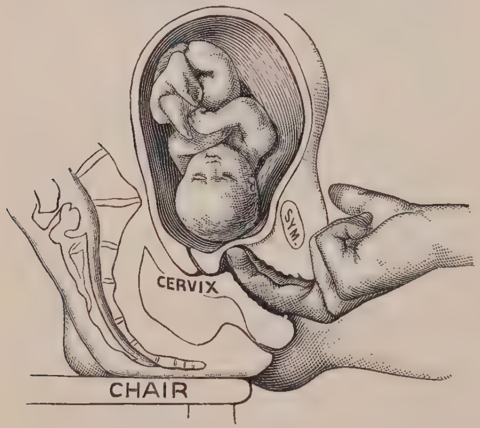
**Balloon′.** Receiver used in chemistry. **B. vine,** Cardiospermum heliocacabum.

**Balloon′ing.** Tympanitic distention of the abdomen; distending a cavity or canal, as the vagina or rectum, with air or water in air bags or water bags.

**Ballo′ta fœt′ida.** Black horehound, stinking h.; ord. *Labiatæ.* Antispasmodic, resolvent, and detersive. **B. lana′ta,** a plant growing in Siberia. Decoction of entire plant, except root, recommended in dropsy, rheumatism, and gout as diuretic. **B. ni′gra** grows in Europe; antispasmodic. **B. suave′-**

**olens**, plant of Antilles and India; nervine, sedative, diuretic, and laxative.

**Ballottement′** (Fr.). Agitation, succussion, repercussion. Motion impressed on the fœtus in utero by tapping the lower segment of the uterus with the index finger of one hand introduced into the vagina, the fœtus rising on the impact and then falling down against the finger. **Abdom′inal b.**, b. practised with the finger on the abdominal wall. **Oc′ular b.**, deposit of opaque matter in the vitreous humor after the fluids have been shaken by moving the eyeball. **Re′nal b.**, palpation so practised over the abdomen and lumbar region as to cause a movable kidney to strike the anterior wall of the abdomen. **Vag′inal b.**, ordinary b., practised with the finger in the vagina.



Ballottement. (Jewett.)

**Balm** (contracted from balsam). Melissa; healing ointment; anodyne medicine. See *Balsam*. **B. ap′ple**, Momordica balsamina. **Bas′tard b.**, Melitis melissophyllum. **B. of Gil′ead**, Amyris opobalsamum. **B. of Gil′ead pop′lar**, Populus candicans. **B. of Gil′ead, Sol′omon's**, see *Tinctura cardamomi*. **B. of Gil′ead tree**, Dracocephalum canariense. **In′dian b.**, Trillium latifolium. **Mount′ain b.**, Monarda coccinea. **Pop′lar b.**, Populus balsamifera. **Red b.**, monarda coccinea. **Scar′let rose b.**, monarda coccinea. **Stink′ing b.**, hedeoma. **B. tea**, infusion of melissa.

**Bal′mony.** Chelone glabra.

**Balnea′tion.** Bathing; balneotherapy.

**Bal′neatory.** Relating to bathing.

**Balneog′raphy** (*balneum*, bath, *graphe*, description). Description of baths and of bathing establishments at spas.

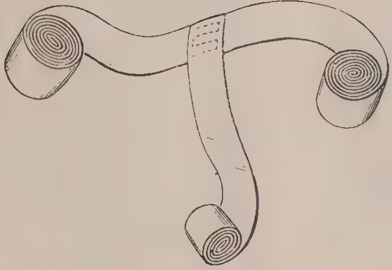
**Balneol′ogy** (*balneum*, bath, *logos*, description). Science of bathing, especially of the therapeutic use, both external and internal, of natural mineral waters.

**Balneophysiol′ogy.** Physiology of bathing and the use of water in general.

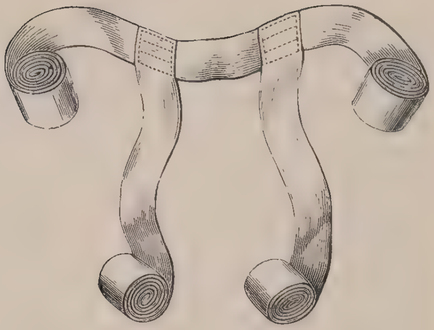
**Balneotherapeu′tics** or **Balneother′apy** (*balneum*, bath, *therapeia*, treatment). Treatment of disease by baths, especially the employment of natural mineral waters for this purpose.

**Bal′neum.** Bath. **B. ac′idum**, acid bath. **B. aë′reum** air bath. **B. aëroph′orum**, effervescing bath. **B. alkali′num**, alkaline bath. **B. am′yli**, starch bath. **B. anima′le**, animal bath. **B. aq′uæ**, water bath. **B. are′næ**, sand bath. **B calid′ulum**, warm bath. **B. cal′idum**, hot bath. **B. cœno′sum**, mud bath. **B. frig′idum**, cold bath. **B. fur′furis**, bran bath. **B. mari′æ**, water bath. **B. mari′num**, sea bath. **B. ma′ris**, water bath. **B. medica′tum**, medicated bath. **B. nu′triens** or **nutri′tium**, nutritive bath. **B. pen′sile**, shower bath. **B. rus′sicum**, Russian bath. **B. sic′cum**, dry bath. **B. sola′re**, sun bath. **B. sudato′rium**, sweat bath. **B. sulphurat′um** or **sulphu′reum** or **sul′phuris**, sulphur bath. **B. tep′idum**, tepid bath. **B. terres′tre**, earth bath. **B. therma′le**, warm bath. **B. tur′cicum**, Turkish bath. **B. va′poris**, vapor bath.

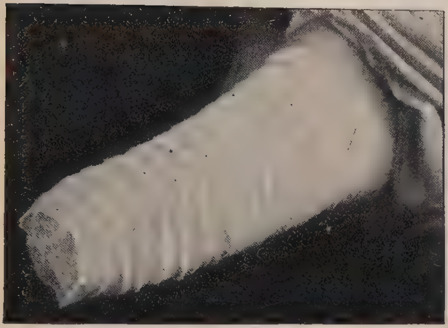
**Bal′sam.** Natural vegetable substance, concrete or liquid; very odorous, bitter, and piquant; composed of resin, benzoic or cinnamic acid, and sometimes essential oil, benzoic acid being disengaged by the action of heat; it is readily dissolved in volatile oils, alcohol, and ether; when treated with alkalies, affords soluble benzoate and throws down resin. Many pharmaceutical preparations and resinous substances possessed of balsamic smell are called balsams. **Acous′tic b.**, mixture of oils, sulphur, and tinctures of fetid gums; so named from the fact that it was dropped into the ear in atonic deafness. **Amer′ican b.**, see *Myroxylon peruiferum*. **Apoplec′tic b.**, an old remedy composed of several balsams, properly so called, resins, and volatile oils; it was worn about the person and smelled at in headaches, etc. **B. ap′ple**, Momordica balsami. **B. of Arcæ′us**, unguentum elemi compositum. **Can′ada b.**, see *Pinus balsamea*. **Capar′rapi** or **Caper′rapi b.**, derived from Laurus giganteus; used in chronic catarrh. **B. capi′vi** copaiba. **Carpa′thia b.**, Hungarian turpentine; resin of Pinus cembra, growing in Switzerland and Hungary. **Chalyb′eate b.**, mixture of nitrate of iron, alcohol, and oil, formerly applied with friction in pains of joints. **Comman′der's b.**, tinctura benzoini composita. **B. of copai′va**, copaiba. **B. for cuts**, tinctura benzoini composita. **B. of Fioravan′ti** or **of Fioraven′ti**, product of the distillation of resinous and balsamic articles and aromatic substances previously macerated in alcohol; used with friction in chronic rheumatism. The *spirituous balsam* was the first product of distillation from a sand bath; entirely alcoholic. The *oily balsam of Fioraventi* was obtained by removing the residue and distilling in an iron vessel at white heat. The *black balsam of Fioraventi* was a black oil obtained at a temperature sufficient to carbonize the substances in a cucurbit. **B. of fir**, see *Pinus balsamea*. **Fri′ard's b.**, said to be the correct name of **Fri′ar's b.**, tinctura benzoini composita. **B. of Gil′ead**, Amyrus opobalsamum. **Gurgi′na** or **Gur′jun b.**, see *Dipterocarpus*. **B. herb**, Justicia comata, Dianthera repens. **Hoff′man's b.**, b. of life of Hoffman. **B. of hon′ey**, cough mixture of benzoin, balsam of Tolu, honey, and alcohol. **B. of hore′hound**, tincture of horehound, licorice root, camphor, opium, benzoin, dried squills, oil of aniseed, and honey. **Hunga′rian b.**, resina strobilina from Pinus mughos **Hypnot′ic b.**, preparation containing opium, hyoscyamus, camphor, and othersedative substances; used externally in friction to produce sleep. **Hyster′ic b.**, preparation of opium, aloes, asafœtida, castor, distilled oils of rue, amber, etc., held to the nose, applied to the navel, or rubbed on the hypogastrium in hysterical cases. **In′dian b.**, see *Myroxylon peruiferum*. **Iod′ureted b.**, used by friction, in goitre, in Switzerland; composed of animal soap, iodide of potassium, alcohol, essence of lemon. **B. of life**, decoctum aloes compositum. **B. of life of Hoff′man**, tincture composed of essential oils and ambergris, employed internally and externally as a stimulant. **B. of life of Tur′lington**, see *Tinctura benzoini composita*. **B. of liquidam′bar**, solid balsam obtained from Liquidambar styraciflua. **B. of Mec′ca**, see *Amyris opobalsamum*. **Mex′ican b.**, see *Myroxylon peruiferum*. **Nat′ural b.**, see *Myroxylon peruiferum*. **Nephrit′ic b.**, a remedy composed of oils, resins and balsams, which are in an incipient state of carbonization from the action of concentrated sulphuric acid; formerly given in affections of the kidneys. **Ner′vous b.**, ointment of fatty bodies, volatile oils, balsam of Peru, camphor, etc.; employed with friction in sprains and rheumatic pains. **Nut′meg b.**, oil of mace, see *Myristica*. **B. pare′ira bra′va**, soft mixture of balsam, resin, muriate of ammonia, and powder of root of Pareira brava, given internally to excite urinary secretion. **B. of Peru′, red**, see *Toluifera balsamum*. **B. of Peru′, white**, see



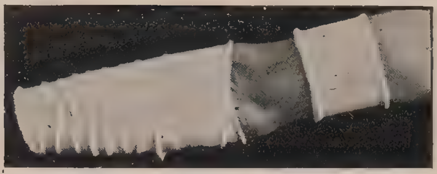
Single T-bandage.



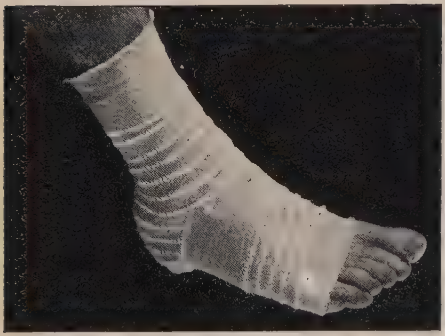
Double T-bandage.



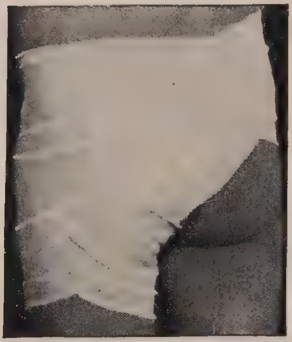
Recurrent bandage of a stump.



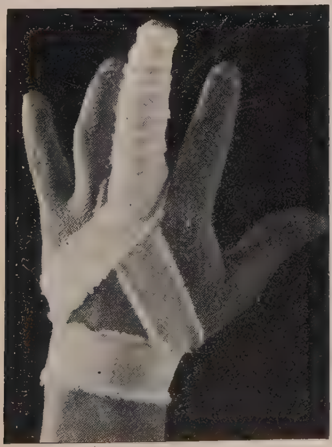
*a* Spica bandage.     *b* Circular bandage.



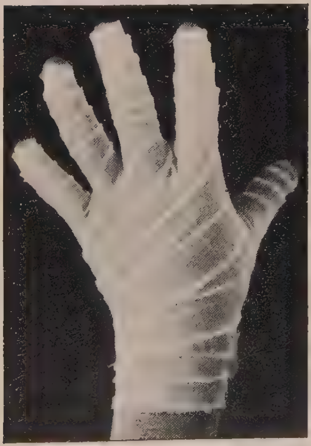
Spica-bandage of the foot.



Spica-bandage of buttock.



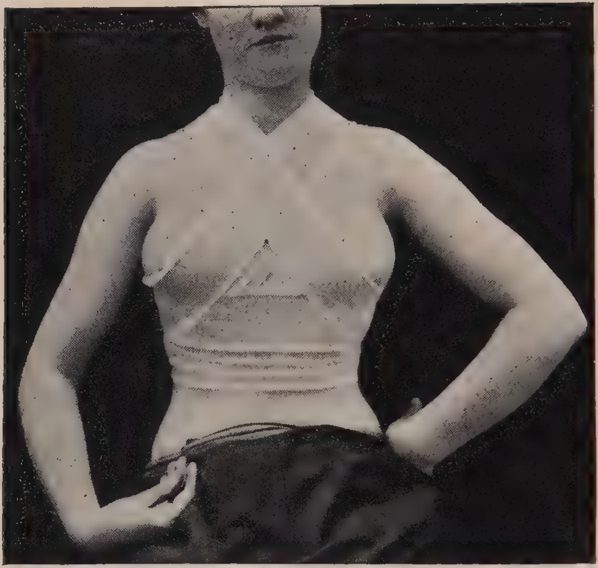
Spiral bandage of the finger.



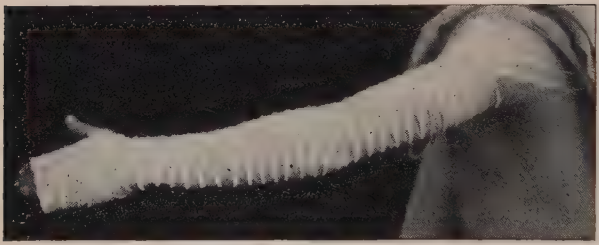
Gauntlet bandage.

BANDAGES. (WHARTON.)

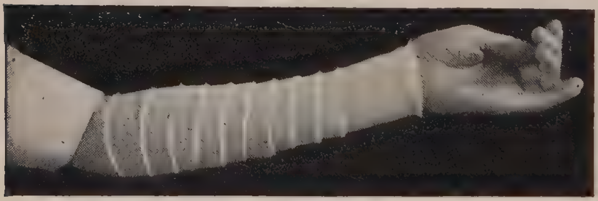
# BANDAGES



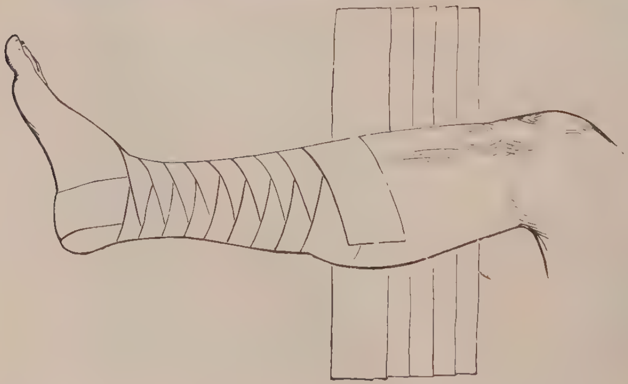
Suspensory and compressor bandage of both breasts.



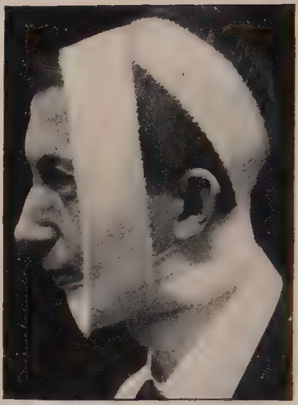
Spiral reversed bandage of the upper extremity.



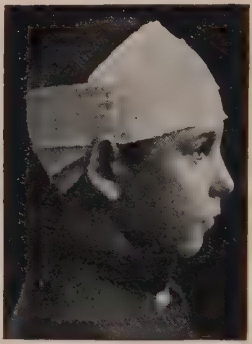
Descending spiral bandage.



Bandage of Scultetus.



Barton's bandage.



Occipito-frontal bandage.

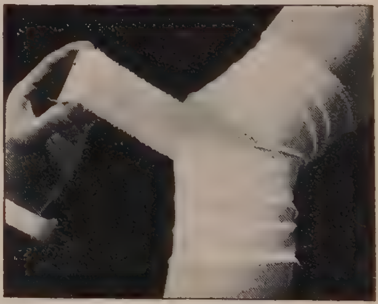


Figure-of-eight bandage of the knee.

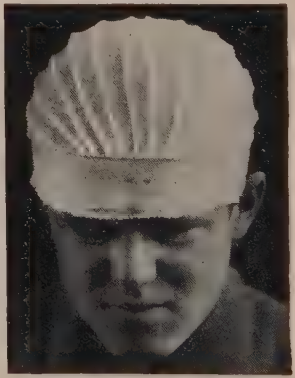


Recurrent bandage of the head.

BANDAGES. (WHARTON.)

*Myroxylon peruiferum.* Pine b., Abies menziesii. **Pop'lar b.,** Populus balsamifera. **B. of the Samar'itan,** liniment prepared by boiling together, at gentle heat, equal parts of wine and oil. **Sax'on b.,** balsam of life of Hoffman. **Spruce b.,** Abies balsamea. **B. of sto'rax,** derived from Liquidambar orientale. **B. of sul'phur,** Balsamum sulphuris, solution of sulphur in oil. **B. of sul'phur, an'isated,** solution of sulphur in essential oil of aniseed; carminative. **B. of sul'phur, suc'cinated,** solution of sulphur in oil of amber; **B. of sul'phur, terebin'thinated,** Dutch drops; solution of sulphur in essential oil of turpentine; diuretic. **B. of sym'pathy,** balsam used in days when sympathetic influence was believed in, composed of raspings of the human skull, blood, and human fat, and applied to the instrument which had inflicted the wound. **Tamaco'ari b.,** derived from Moquilea utilis or Para pottery tree. **B. of Tolu',** see *Toluifera balsamum.* **Tran'quil b.,** liquid medicine employed externally by friction; prepared by macerating and boiling in olive oil narcotic and poisonous plants, belladonna, mandragora, hyoscyamus, etc., and afterward infusing aromatic plants; anodyne. **Tur'key b.,** Dracocephalum canariense. **Tur'lington's b.,** see *Tinctura benzoini composita.* **B. of tur'pentine,** Dutch drops; obtained by distilling oil of turpentine in a glass retort until a red balsam is left. **Umi'ri b.,** a fragrant b. derived from Humiria floribunda of Brazil. **Vul'nerary b. of Mindere'rus,** liniment of turpentine, resin elemi, oil of St. John's wort, and wax; employed in friction and as a dressing to wounds. **Wade's b.,** tinctura benzoini composita. **B. weed,** Impatiens fulva. **Wound b.,** tinctura benzoini composita.

**Balsama'ceæ** or **Balsami'fluæ.** Natural order of plants, including one genus, *Liquidambar.*

**Balsamaden'dron.** A genus of balsam-yielding plants; see *Balsamodendron.*

**Balsama'tion.** Embalming.

**Balsamelæ'on.** Myroxylon peruiferum, Amyris opobalsamum.

**Balsam'ic.** Possessing qualities of balsams, as balsamic odor.

**Balsami'ta fœm'ina.** Achillea ageratum. **B. ma'jor,** Tanacetum balsamita. **B. ma'ris,** B. odorata. **B. mas,** Tanacetum balsamita. **B. mi'nor,** Achillea ageratum. **B. odora'ta** or **suave'olens,** plant common in south of France, used for the same purposes as tansy, as a stimulant, vermifuge, etc. See *Tanacetum balsamita.*

**Balsami'to.** Alcoholic extract of fruit of Myroxylon pereiræ. Stimulant; diuretic; anthelmintic.

**Balsamoden'dron.** A genus of balsam-yielding plants. **B. africa'num,** shrub of W. Africa, source of gum resin called African bdellium. **B. ehrenbergia'num,** B. opobalsamum. **B. gileaden'se,** Amyris gileadensis. **B. mu'kul,** plant of India, from which East Indian bdellium is derived. **B. myr'rha,** tree of E. Africa and Arabia, a source of myrrh; see *Myrrha.* **B. opobal'samum,** African tree, from which balm of Gilead is procured. **B. roxburg'hii,** indigenous in India; a source of E. Indian bdellium.

**Balsamosac'charum.** Sugar rubbed up with balsam; elæosaccharum.

**Bal'samum.** See *Balsam.* The official (Ph. U. S. and Br.) balsams are: **B. peruvia'num,** balsam of Peru, obtained from Toluifera pereiræ; dose, gr. x–xxx (0.65–2.0); before the days of antiseptic surgery it was very extensively employed as a dressing for wounds. **B. toluta'num,** balsam of Tolu, obtained from Toluifera balsamum; dose, gr. x–xxx (0.65–2.0). The following preparations are also official: *Syrupus tolutanus;* dose, ʒss–ij (2.0–8.0); *tinctura tolutana;* dose, ʒss–ij (2.0–8.0).

**Bal'ser's fat necro'sis.** Disease of the pancreas, with fat necrosis in various organs and tissues.

**Bamba'lia.** Balbuties.

**Bamba'lio.** One who stammers, lisps, or speaks indistinctly, as if the mouth were paralyzed.

**Bam'berger's bul'bar pulse.** Beating of the jugular vein synchronously with the systole of the heart, in insufficiency of the tricuspid valve. **B.'s disease',** saltatory spasm. **B.'s flu'id,** combination of albumin and mercury employed in syphilis. **B.'s hæmatogen'ic albuminu'ria,** albuminuria associated with well-marked anæmia. **B.'s sign,** perverted sensibility as to the location of tactile or painful impressions; it is a sign of tabes dorsalis. **B.'s type,** a form of hypertrophic pulmonary osteopathy attended especially with painful enlargement of the long bones.

**Bamboo'.** Young shoots of Bambos or Bambusa arundinacea and B. verticillata, plants of India containing saccharine pith, sometimes made into pickle; juice of the green leaves is emmenagogue and parturifacient; some of the species also possess astringent, antispasmodic, and anthelmintic properties. **B. bri'er,** Smilax sarsaparilla.

**Ba'mia moscha'ta.** Hibiscus abelmoschus.

**Bam'ma.** Liquid in which bodies are plunged to moisten or soften them.

**Bana'na.** Musa sapientum; the root is alterative.

**Banck'sia abyssin'ica.** Hagenia abyssinica.

**Bancoul' oil.** Oil obtained from Alemites triloba.

**Band.** Ligament; strip, cord, or anything that binds or constricts. **Amniot'ic b.,** b. of false membrane on the inner part of the amnion, sometimes constricting the fœtus. **Anogen'ital b.,** rudiments of the perineum in the embryo. **Ax'is b.,** primitive streak; axis cylinder. **Bel'ly b.,** belly bandage. **Den'tal b.,** epithelial b. **Den'tate b.,** fascia dentata. **Epithe'lial b.,** cells in the embryo from which teeth are formed. **Fetoamniot'ic b.,** amniotic b. **Flat'tened b.,** axis cylinder, see *Nerve fibre.* **Front'al b.,** circular head bandage. **Fur'rowed b.,** b. of gray matter between the uvulæ of the cerebellum and the amygdalæ. **Head b.,** frontal b.; strap that retains the mirror of the laryngoscope, etc., on the forehead. **Hippocam'pal b.,** tænia hippocampi. **Horn'y b.,** the anterior portion of the tænia semicircularis. **Iliotib'ial b.,** sheath of the tensor fasciæ muscle formed from the fascia lata. **Mesoblas'tic b.,** mesoblastic cells running full length of embryo. **Mod'erator b.,** columnæ carneæ of the ventricles of the heart. **Perine'al b.,** bandage passing over perineum in fractures. **Prim'itive b.,** axis cylinder. **B. of Reil,** triangular space on each side of crus cerebri; also moderator b. **B. of Remak',** axis cylinder, see *Nerve fibre.* **B. of Simonart',** an adhesion between amnion and fœtus which gradually becomes elongated into a band as the amniotic fluid increases in amount. **B. of Tari'nus,** horny b. **Vo'cal b.,** one of the vocal cords.

**Ban'dage.** A binder; a slip or square of cloth applied to a limb or other part for the purpose of compression, keeping severed parts in apposition, or retaining dressings or apparatus in place. A long strip of cloth, rolled up in the form of a cylinder to facilitate its application, is called a *roller bandage;* if rolled from both ends, the two cylinders meeting at the middle of the bandage, it is called a *double-headed roller.* A bandage or roller may be made of cotton, linen, flannel, cheese-cloth or other stuff capable of offering a certain amount of resistance. **A'pron b.,** folded cloth applied to the chest by strips. **Bar'ton's b.,** b. for fracture of head and jaw, forming three circles. **Bayn'ton's b.,** a b. of adhesive strips for treatment of ulcers of the leg. **Bel'ly b.,** body b. for compression of abdomen, especially for dropsy. **Bod'y b.,** band used for fixing dressings, etc., to the trunk; is formed of towel, napkin, or large compress folded three or four times, the ends being fastened by pins. This is again fixed by a scapulary b., which is an ordinary b. stitched to anterior and middle part of napkin, passing over the clavicles and behind the head, to be attached to back part of napkin. **Breast b.,** b. for support of one or both breasts. **Cap'eline b.,** bonnet of Hippocrates, for compressing head or retaining dressings. **Capis'trum b.,** b. for lower jaw, somewhat like Barton's b. **Chalk b.,** form of immovable b., composed of chalk and gum arabic.

**Chirothe′ca b.**, complete spiral reverse b. of hand and fingers. **Cir′cular b.**, b. with one or two simple turns around a part. **Com′pound b.**, see *Bandage*. **Compress′ing** or **compress′ive b.**, roller b. neatly and firmly applied in cases of ulcers, varices, etc., of limbs, or wherever compresion may be required. **Contain′ing b.**, retention b. **Contin′uous b.**, spiral b. **Cru′cial b.**, T-bandage. **Desault's′ b.**, b. employed in fractured clavicle, comprising a roll or cylinder for the axilla, two single-headed rollers, and some compresses. **Dextrin′ b.**, immovable b., made of dextrin, alcohol, and water. **Divi′ding b.**, a b. intended to keep the parts separated. **Double-head′ed b.**, see *Bandage*. **Eighteen′-tailed b.**, made of longitudinal portion of common roller, with sufficient number of transverse pieces or tails to cover as much of the part as is requisite; can be undone without disturbing the part. **Elas′tic** or **Es′march's b.**, a rubber b. tightly applied to limb before amputation, to remove blood from it and to act as a tourniquet. **Expel′ling b.**, compression b. to produce expulsion of pus, etc. **Fig′ure-of-8 b.**, a b. with turns crossing and recrossing in such a way as to resemble this figure. **Ga′len's b.**, b. of the poor; kind of cucullus or hood, divided into three parts on each side, to retain applications to the head; see *Cancer Galeni*. **Gar′retson's b.**, a b. for the lower jaw, retained by passing over the anterior and posterior portions of the skull, forming a V with the chin at the apex. **B. of Gen′ga**, b. of Theden. **Gib′son's b.**, a b. for fracture of the lower jaw. **Glass b.**, silicate b. **Glue b.**, immovable b., made of ordinary roller, cotton batting, glue, and alcohol. **Gum b.**, immovable b., gum arabic being the material employed. **Gyp′sum b.**, plaster-of-Paris b. **Hal′ter b.**, capistrum b. **Ham′ilton's b.**, compound b. for the lower jaw, consisting of leather strap and webbing. **Hand′kerchief b.**, loose b. made of handkerchiefs; various bandages may be so made. **Hard′ening b.**, immovable b. **B. of Heliodo′rus**, T-b. **Her′nial b.** see *Truss*. **Immov′able b.**, an apparatus for preventing motion in a part, made of a b. stiffened with starch, plaster-of-Paris, or the like. **In′guinal b.**, b. for keeping dressings applied to the groin; cincture, to which is attached triangular compress adapted for covering the groin; to its lower extremity one or two bandages are attached, passing under the thigh and fixed to the posterior part of the cincture. **Invag′inated b.**, one in which some of the tails pass through slits made in others. **Jaw b.**, see *Barton's b.*, *Garretson's b.*, *Gibson's b.*, etc. **Lar′rey's b.**, b. with several tails made adhesive, so as to unite when applied. **Lieb′rich's b.**, form of eye b. made of tapes. **Maisonneuve's′ b.**, several folds of cloth impregnated with gypsum, moulded to the part when moist, and retained by a roller b. until it is hard. **Many-tailed b.**, b. of separate strips. **Mar′tin's b.**, a b. for varicose veins made of elastic material. **Nap′kin b.**, handkerchief b. **Oblique′ b.**, spiral b. **Par′affin b.**, immovable b., in which paraffin is the stiffening agent. **Perine′al b.**, b. for support of perineum or merely traversing that space. **Per′manent b.**, immovable b. **Plas′ter-of-Par′is b.**, immovable b. in which gypsum is the stiffening material used. **B. of the poor**, see *Galen's b.* and *Cancer Galeni*. **Recur′rent b.**, roller b. applied in radiating turns over a round surface, such as the end of a stump, backward and forward. **Retain′ing b.**, b. applied to keep dressing, etc., in situ. **Reversed′ b.**, b. in which spiral turns are folded obliquely on themselves. **Rib′bail's b.**, spica b. for foot. **Richet's′ b.**, a b. of plaster of Paris and gelatin, said to be more elastic than one of gypsum alone. **Roll′er b.**, see *Bandage*. **Ro′tatory b.**, Winslow's b. **Sagit′tal b.**, T-bandage for the head, having turns around the head and over the forehead, with a median turn from front to back of the head. **Sayre's b.**, a b. made of adhesive strips for fracture of the clavicle. **Scap′ulary b.**, b. for application to shoulder. **Scarf b.**, handkerchief b. **B. of Sculte′tus** or **B. of sep′arate strips**, formed of linen strips, each capable of surrounding once and a half the part to which they have to be applied, and placed upon each other so as to cover successively one-third of their width; used chiefly for fractures requiring frequent dressing. **Seu′tin's b.**, starch b. **Sil′icate b.**, immovable b.; roller b. coated with a solution of silicate of potassium and sodium and whiting. **Sim′ple b.**, see *Bandage*. **Six-tailed b.**, Galen's b. **Spi′ca b.**, see *Spica*. **Spi′ral b.**, roller b. applied in spiral turns, see *Spiral*. **Starch b.**, a b. of loose-meshed cloth impregnated with starch and applied when moist, so as to make an immovable b. when dry. **Star′tin's b.**, see *Splint*. **Ste′arin b.**, immovable b., having stearin as the stiffening agent. **Suspen′sory b.**, b. applied for suspension of a part or organ, as the scrotum, breast, etc. **T.-b.**, a b. of two strips attached to each other in shape of a letter T, usually applied to keep dressings in place. **Tailed b.**, b. partly divided into two or more strips. **The′den's b.**, roller b. sometimes applied in brachial aneurysm or hemorrhage, commencing at fingers and ending at axilla. **Thillaye's′ b.**, b. with pads and tapes, used for bringing together lips of wound in harelip operations. **Uni′ting b.**, b. and strips used to bring together edges of wounds, fractured bones, etc. **Velpeau's′ b.**, b. for fracture of clavicle, with pad in each axilla (see cut under *Velpeau*). **Wins′low's b.** a roller b. rotated around foot, as in talipes; b. suggested by Winslow for wryneck, having circular turns of roller b. around the head and passed down over the shoulder on the opposite side, where it is secured. (Other bandages may be found described under their various names.)

**Bandl, ring of.** Constricting ring above the internal os uteri.

**Ban′dolin.** Mucilage of quince seed (Cydonium) with cologne water; used externally to keep the hair in place.

**Bands of Goll.** Columns of Goll.

**Ban′duc seeds.** See *Cæsalpina*.

**Bandu′ra.** Nepentha destillatoria.

**Ban′dylegged.** Bowlegged, or knock-kneed.

**Bane.** Rot, a disease in sheep.

**Bane′berry.** Root of Actæa spicata; purgative.

**Bane′wort.** Atropa belladonna, Ranunculus flammula.

**Bangue, Bhang, Bang, Bangi,** or **Beng.** Indian hemp. See *Cannabis*.

**Baniste′ria angulo′sa** (after Rev. John Banister, botanist). Grows in Brazil and Antilles; powerful sudorific and reputed to be an antidote to the poison of serpents. **B. prag′ua,** species from Brazil, root of which is laxative and emetic.

**Banks′ia abyssin′ica** (after Sir Joseph Banks, F.R.S.). Hagenia abyssinica. **B. marces′cens,** Australian shrub; root is emetic. **B. specio′sa,** costus.

**Bankul′ oil.** Fixed oil from kernel of seeds of Aleurites triloba; cathartic.

**Ban′ti's disease′.** Anæmia with enlargement of the spleen followed by cirrhosis of the liver and ascites, first described by Banti, of Florence, in 1894.

**Ban′tingism** or **Ban′ting cure.** Mode of treating corpulence dietetically, described and practised by a non-professional man named Banting, according to rules laid down for him by a medical practitioner of London; it consists mainly in regulating the quantity of fluids and diminishing the amount of amylaceous and saccharine articles of diet.

**Ba′obab.** Adansonia digitata of Africa, ord. *Bombacæ*. Its fruit is called monkey bread; refreshing drink is made from the pulp, which is used in fevers; the bark has been given as a substitute for cinchona.

**Baptin′.** Glucoside from Baptisia tinctoria; weak cathartic.

**Baptis′ia leucan′tha** or **tincto′ria.** Sophora tinctoria.

**Baptisin′.** Resinous extractive matter from Baptisia tinctoria; laxative. Alkaloid is called *baptisine*. Another alkaloid, very poisonous, from the same plant, is called *baptitoxine*; tonic in small dose.

**Baptitoxine′.** See *Baptisin.*

**Baptorrhœ′a** (*bapto,* to dye, *rheo,* to flow). Gonorrhœa.

**Baptothecorrhœ′a** (*bapto,* to dye, *theke,* vagina, *rheo,* to flow). Gonorrhœa in women.

**Bar.** Arch; projection inward of the symphysis pubis. **Hy′oid b.,** one of a pair of cartilages entering into the formation of the second visceral arch in the embryo. **Mercier's′ b.,** the posterior boundary of the trigone of the bladder, marked usually by a ridge.

**Baræsthesiom′eter** (*barys,* heavy, *aisthesis,* sensation, *metron,* measure). Instrument for estimating the sense of pressure; that is, to ascertain the least difference which can be felt at a given spot.

**Barb.** Fold on sides of the frænum linguæ in the horse.

**Bar′ba.** Beard. **B. Aaro′nis,** Arum maculatum. **B. cap′ræ,** Spiræa ulmaria. **B. hir′ci,** tragopogon. **B. Jo′vis,** Sempervivum tectorum.

**Barba′does al′oes.** See *Aloes.* **B. leg,** elephantiasis Arabum. **B. nut,** Jatropha curcas. **B. tar,** petroleum.

**Barbaloïn′.** Neutral crystallizable principle from Barbadoes aloes.

**Bar′bary gum.** Variety of gum acacia. **B. worm′-seed,** variety of artemisia.

**Barbas′co.** Plant of Mexico and Venezuela; stalk is medicinal; used in ophthalmic diseases.

**Bar′ben chol′era.** Choleraic affection from eating barbel or barbed sturgeon occasionally noted in Russia and other parts of Europe.

**Bar′ber-chirur′geons.** Corporation of London, instituted by King Edward IV. Barbers were separated from surgeons by 18 Geo. II., c. 15; latter were erected into Royal College of Surgeons at the beginning of the nineteenth century. Barber's pole of present day is a relic of the old staff that was grasped, and the colored strip passing spirally around it of fillet or tape employed in the operation of bleeding.

**Bar′berry.** Oxyacantha galeni. **Amer′ican b.,** see *Oxyacantha galeni.* **B. bark,** bark of root of Berberis vulgaris. **B. juice,** juice of fruit of Berberis vulgaris.

**Bar′bers′ itch.** Tinea barbæ or Tinea trichophytina.

**Bar′biers.** Variety of paralysis chiefly prevalent in India.

**Barbit′ium,** (*barba,* beard). Beard.

**Bar-bone.** Pubic bone.

**Barbotin′.** Santonica; tansy.

**Bar′bula capri′na.** Spiræa ulmaria. **B. hir′ci** or **tra′gi,** see *Tragus.*

**Barcelo′na fe′ver.** Yellow fever.

**Bar′clay's an′gle.** Angle between the facial line and a plane drawn through the line indicating the masticating surface of the teeth of the upper jaw. **B. plane′s,** plane at a tangent to the masticating surfaces of the teeth of the upper jaw.

**Bardan′a.** Arctium lappa; burdock. **Ma′jor b.,** lappa major. **Mi′nor b.,** xanthium.

**Bar′dane oil.** An oil derived from the seeds of Arctium lappa, or burdock.

**Bardinet's** (bar-din-aze′) **lig′ament.** Posterior portion of internal lateral ligament of elbow-joint.

**Bard's sign.** Increase or disappearance of nystagmic oscillations when the person examined looks at the motions of the physician's hand passed in front of the eye. The increase is thought to show organic trouble, the disappearance congenital trouble.

**Bareg′gi's reac′tion.** The retraction of the clot and the small amount of serum when blood is allowed to stand in a tube or small vessel indicates the existence of typhoid fever; a contrary condition indicates tuberculosis.

**Baregin′.** A glairy matter produced by Beggiatoa alba on the surface of sulphur spring water.

**Bar′ic.** Relating to barium.

**Ba′rium** (*barys,* heavy). Symbol, Ba. Metallic base of baryta, so called from the great density of its compounds. **B. bro′mide,** colorless, crystalline, soluble salt; poisonous; not used medicinally. **B. car′bonate** is used only to obtain the chloride. **B. chlo′ride** is made by the action of muriatic acid on carbonate of barium; occurs in the form of a crystalline powder or of clear, colorless crystals; dose, gr. $\frac{1}{10}$–j (0.0065–0.065); also given in the form of liquor barii chloridi in scrofula, worms, and cutaneous diseases; dose, gtt. v (0.32), two or three times a day; used externally in fungous ulcers and specks on the cornea. **B. diox′idum** (Ph. U. S.) barium dioxide or peroxide, a yellowish-white powder; used in the manufacture of hydrogen dioxide. **B. hy′drate,** caustic baryta, used as a test for sulphates. **B. i′odide** has been given in scrofulous and similar morbid conditions, and recently in aneurysm as a substitute for iodide of potassium; internally in dose of gr. $\frac{1}{6}$ (0.01) three or four times a day, and applied externally to scrofulous swellings, in the form of ointment (gr. iv–ℨj of lard). **B. loret′inate,** orange-colored needles. **B. ni′trate,** used as a test. **B. ox′ide** or **protox′ide,** baryta. **B. sul′phate** is used in pharmacy, like the carbonate, to obtain chloride of barium.

**Bark.** The integument covering the root, trunk or stem, and branches of a plant, see *Cortex.* Specfically, Peruvian bark or cinchona. **Ar′ica b.,** see *Cinchonæ cordifoliæ cortex.* **Ash b.,** see *Cinchona.* **Angostu′ra b.,** Galipea cusparia. **Babul′ b.,** bark of several acacias. **Bebee′ru b.,** see *Nectandra.* **Bit′ter b.,** Pinckneya pubens. **Bogota′ b.,** see *Cinchona.* **Boliv′ian b.,** variety of Cinchona calisaya. **Calisa′ya b.,** Cinchonæ cordifoliæ cortex. **Calisa′ya b., spurious,** see *Cinchonæ cordifoliæ cortex.* **Canel′la b.,** see *Canella.* **Carabay′a b.,** see *Cinchonæ cordifoliæ cortex.* **Caribbæ′an b.,** Cinchonæ caribbææ cortex. **Carthage′na b.,** see *Cinchona.* **Cascaril′la b.,** b. of Croton cascarilla and C. pseudochina. **Cas′sia b.** of Cinnamomum cassia. **Cher′ry b. wild,** Prunus virginiana. **Chit′tem b.,** b. of Rhamnus purshiana. **Cincho′na b.,** see *Cinchona.* **Cin′namon b.,** see *Cinnamon.* **Colom′bian b.,** of Cinchona lancifolia and C. cordifolia. **Conduran′go b.,** see *Condurango.* **Cones′si b.,** b. of Wrightia antidysenterica. **Copal′chi b.,** aromatic bitter tonic bark from Mexico. **Coquet′ta b.,** see *Cinchona.* **Co′to b.,** bark of an East Indian tree, used in diarrhœa and hyperidrosis; see *Coto.* **Cot′ton-root b.,** see *Gossypium.* **Crown b.,** Cinchona officinalis, best qualities of bark. **Cu′prea b.,** hard. **Cus′co b.,** see *Cinchonæ cordifoliæ cortex.* **Di′ta b.,** aletonia bark. **Dog′wood b.,** see *Cornus florida.* **Doom b.,** sassy bark. **Eleuthe′ra b.,** eleutheric or cascarilla bark. **Elk b.,** Magnolia glauca. **Elm b.,** see *Ulmus.* **Essen′tial salt of b.,** see *Cinchona.* **Euon′ymus b.,** see *Euonymus.* **False Angostu′ra b.,** of Strychnos nux vomica. **Fi′brous Carthage′na b.,** b. of Cinchona lancifolia. **Flor′ida** or **Geor′gia b.,** Pinckneya pubens. **Fran′gula b.,** see *Frangula.* **Fugagas′uga b.,** see *Cinchona.* **Gerem′ma b.,** astringent Brazilian bark from Acacia jurema. **Gray b.,** Cinchona pallida, see *Cinchona.* **Hard b.,** cinchona bark from species of remijia. **Huamil′ies b.,** b. of Cinchona purpurea, see *Cinchona.* **Huanu′co b.,** see *Cinchona.* **In′dian b.,** Magnolia glauca. **I′ron b.,** b. of Eucalyptus resinifera, see *Kino.* **Jack′et b.,** see *Cinchona.* **Jaen b.,** b. of Cinchona humboldtiana, see *Cinchona.* **Jamai′ca b.,** b. of Exostema caribbæum. **Jes′uit's b.,** cinchona. **Jure′ma b.,** geremma b. **Juriba′li b.,** astringent bark of Demarara; laxative, diaphoretic, antipyretic. **Lace b.,** Lagetta lintearia. **Li′ma b.,** Huanuco bark; bark of Cinchona micrantha, see *Cinchona.* **Lox′a b.,** Cinchonæ lancifoliæ cortex. **False l. b.,** Cinchona humboldtiana. **Malam′bo b.,** b. like that of Angustura, from Drimys granatensis, Croton malambo, etc., given in rheumatism, tetanus, diseases of stomach and bowels, etc. **Maracai′bo b.,** b. of Cinchona tucujensis, see *Cinchona.* **Massoy′** or **Missoy′ b.,** E. Indian bark, a variety of cinnamon.

**Neem b.**, Melia azedarach. **Negril′la b.**, b. of Cinchona heterophylla. **Oak b., white**, Quercus alba. **Or′ange b.**, b. of Cinchona lancifolia. **Orde′al b.**, sassy bark. **Pale b.**, Cinchona pallida, see *Cinchona;* Cinchona lancifoliæ cortex. **Peru′vian b.**, cinchona. **Philadel′phia b.**, Quercus tinctoria. **Pita′ya** or **Pita′yo b.**, b. of Cinchona pitayensis; Cinchonæ caribbææ cortex; see *Cinchona.* **Quercit′ron b.**, b. of Quercus tinctoria. **Red b.**, Cinchonæ oblongifoliæ cortex, see *Cinchona.* **Roy′al b.**, Cinchonæ cordifoliæ cortex. **Sa′cred b.**, b. of Rhamnus purshiana. **Saint Ann's b.**, see *Cinchonæ cordifoliæ cortex;* b. of Cinchona scrobiculata. **Saint Lu′cia's b.**, Cinchonæ caribbææ cortex; b. of Exostema floribundum. **San′ta Mar′ta's b.**, see *Cinchona.* **Sas′sy b.**, sassy bark. **Sev′en b.s.** Hydrangea arborescens. **Sil′ver b.**, gray or pale cinchona bark, see *Cinchona.* **Soap b.**, Quillajo bark. **String′y b.**, Eucalyptus b. **Sweetwood b.**, cascarilla b. **W. In′dies b.**, b. of Exostema caribbæum. **White b.**, b. of Cascarilla macrocarpa and several cinchonas. **White-wood b.**, Canella alba. **Wild cher′ry b.**, Prunus virginiana. **Win′ter's b.**, b. of Drimys winteri and other undetermined sources, reasonably cinnamon. **Worm b.**, b. of Andira inermis; anthelmintic. **Yel′low b.**, Cinchona flava; Cinchonæ cordifoliæ cortex.

**Bar′ker's point.** Place on the skull for trephining in abscess of the temporosphenoidal lobe of the cerebrum. It is situated an inch and a quarter above and behind the centre of the external auditory meatus.

**Bark′ing disease′.** Epidemic hysterical affection in Germany in the fifteenth century.

**Bar′kow's lig′aments.** Anterior and posterior ligaments of the elbow.

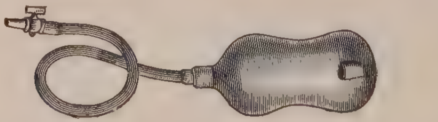
**Barle′ria buxifo′lia.** Dicranacanthus buxifolia; root is aperient. **B. mysosen′sis** of Ceylon has same properties. **B. prioni′tis** or **pubiflo′ra,** juice of this E. Indian plant is used in aphthæ and fevers.

**Bar′ley.** Hordeum. **B. bree**, cerevisia. **Caus′tic b.**, seeds of Veratrum sabadilla. **B. corn**, cerevisia. **B. flour** or **meal,** see *Hordeum.* **B. malt**, see *Hordeum.* **B. mole**, Acarus hordei. **Pearl b.**, see *Hordeum.* **Scotch b.**, hordeum. **B. wa′ter**, decoctum hordei.

**Bar′low's disease′.** Infantile scurvy or scorbutus, disease of infants, marked by pain in the extremities, a leaden hue of the face, œdema, purpuric spots, spongy gums, etc.

**Barm.** Yeast.

**Barnes's bag.** A rubber bag used for dilating the cervix uteri; it is inserted collapsed and then distended with air or fluid. **B.'s cer′vical zone**, lowest fourth part of inner cervical portion of surface of the uterus. **B.'s curve**, section of circle of pelvis, the centre of which is the promontory of the sacrum. **B.'s dila′tor**, Barnes's bag.



Barnes's bag.

**Baroelec′troæsthesiom′eter.** An instrument for determining by means of electricity the acuity of pressure sense.

**Bar′ograph.** A self-registering barometer.

**Baromacrom′eter** (*baros*, weight, *makros*, long, *metron*, measure). Instrument to indicate length and weight of the newborn.

**Barom′eter** or **Ba′roscope** (*baros*, weight, *metron*, measure). Instrument to measure weight or pressure of the atmosphere. **An′eroid b.**, barometer with thin metallic box, previously exhausted of air, and furnished with an index to denote the changes of atmospheric pressure.

**Baromet′rograph** (*baros*, weight, *metron*, measure, *grapho*, to write) or **Bar′ograph.** Instrument which records the different barometric changes on paper.

**Bar′oscope.** Barometer. Ureameter.

**Baros′ma betuli′na, B. crena′ta** or **crenula′ta,** and **B. serratifo′lia** furnish the long buchu leaves. See *Diosma crenata.*

**Barosmin′.** A preparation of buchu; buchu resin; diuretic.

**Barred pel′vis.** Projection or prolongation of symphysis pubis inward, rendering delivery difficult. **B. teeth,** molar teeth when the roots are spread or tortuous, so that they cannot be extracted without being broken or without a portion of the alveolar arch being removed.

**Bar′rel chest.** Condition of the chest after chronic hypertrophic pulmonary emphysema, in which lateral motion is impeded. **B. of ear,** tympanum.

**Bar′ren.** Sterile.

**Bar′renness.** Sterility.

**Barringto′nia acutan′gula.** Bengalese plant; root is laxative and tonic; seeds are carminative. **B. racemo′sa,** tree of E. Indies; fruit is errhine, and applied externally in throat affections.

**Bar′rows' grease.** Adeps præparatus.

**Bars of the hoof.** Reflection of the wall of the hoof at the heels of the horse.

**Barsa′ti.** Atrophic carcinoma, a disease of horses, especially of India.

**Bartholini′tis.** Inflammation of Bartholin's or the vulvovaginal glands.

**Bar′tholin's duct.** A tube formed by the union of two of the excretory ducts of the sublingual gland and opening into the duct of Wharton. **B.'s foram′en,** the obturator foramen. **B.'s gland,** vulvovaginal gland; Cowper's gland in the female.

**Bar′ton's ban′dage.** See *Bandage.* **B.'s frac′ture,** lower extremity of the facture of the radius, involving the articular surface. **B.'s opera′tion for ankylo′sis,** cutting out V-shaped portion of bone, first devised and executed by Dr. John Rhea Barton, of Philadelphia, in 1826.

**Bart′sia odonti′tes.** Plant of Asia and Europe; used in menorrhagia and odontalgia.

**Bar′uch's sign.** Impossibility of reducing rapidly the rectal temperature by a gradually cooled bath; pointing to typhoid fever.

**Baru′ria** (*barys*, heavy, *ouron*, urine). Urine having high specific gravity.

**Bar′wood.** Pterocarpus angolensis.

**Barycoc′calon.** Datura stramonium; D. metel.

**Barycoi′a** or **Baryëcoi′a** (*barys*, heavy, *akoe*, hearing). Hardness of hearing.

**Baryencepha′lia** (*barys*, heavy, *enkephalos*, brain). Dulness of comprehension or of intellect.

**Baryglos′sia** or **Baryglot′tia** (*barys*, heavy, *glossa*, tongue). Balbuties; thickness of speech; baryphonia.

**Baryglot′tic.** Having thickness of speech.

**Baryla′lia** (*barys*, heavy, *lalia*, speech). Baryglossia.

**Barymas′tus** (*barys*, heavy, *mastos*, breast). Having large breasts.

**Baryma′zia** or **Baryma′sia** (*barys*, heavy, *mazos*, breast). Condition of one who has heavy or large breasts.

**Baryod′mia** (*barys*, heavy, *odme*, odor). Strong, oppressive odor; subjective sense of offensive smell.

**Baryod′yne** (*barys*, heavy, *odyne*, pain). Dull, heavy pain.

**Barypho′nia** (*barys*, heavy, *phone*, voice). Difficulty or thickness of voice or speech; hoarseness.

**Barypic′ron.** Artemisia abrotanum.

**Barysoma′tia** or **Baryso′mia** (*barys*, heavy, *soma*, body). Obesity.

**Bary′ta** (*barys*, heavy). Protoxide of barium; heavy earth; ponderous earth. This earth and its soluble salts are corrosive poisons; externally applied, baryta is caustic, like potassa and soda. **B. wa′ter,** solution of barium hydrate in water; used as a reagent.

**Barythy′mia** (*barys*, heavy, *thymos*, mind). Melancholy.

**Ba′sad.** Toward the basal aspect.

**Ba′sal.** Relating to the base, as of the brain; basisphenoid; designating the part of a tooth crown next to the roots. **B. gan′glia,** optic thalami and corpora striata. **B. mem′brane,** basement membrane.

**Basa′lia.** Metacarpal bones.

**Basanastrag′ala** (*basanos,* torture, *astragalus*). Pain in the ankle-joint; gout in the foot.

**Bascula′tion.** Treatment of uterine retroversion by drawing the cervix downward and thrusting the fundus upward; the swinging movement of the fœtus in utero.

**Bas′cule move′ment.** Peculiar recoil of the heart which occurs during systole.

**Base.** Foundation or support; principal matter in mixture or combination. In anatomy, in former sense, as base of cranium, base of brain, base line (line connecting rotary centres of the eyes, etc.). In dentistry, a plate used as support for artificial teeth. In prescribing, the base is the chief substance entering into a compound formula. In chemistry, a body capable of combining with an acid. **An′imal b.,** a ptomain or leucomain. **B. line,** see *Base.* **Alloxu′ric b.,** purin b. **Nuclein′ic b.,** purin b. **Organ′ic b.,** an alkaloid. **Purin′ b.,** see *Purin.* **Xanthin′ b.,** purin b.

**Baseborn′.** Illegitimate.

**Bas′edow's disease** (after von Basedow, who described it). Exophthalmic goitre.

**Basel′la al′ba.** Plant of E. Indies; leaves are emollient and used as cataplasms. **B. ru′bra,** Malabar nightshade; Indian plant, the juice of which is used in infantile catarrh.

**Base′ment mem′brane.** See *Membrane.*

**Baseohy′oepiglot′ticus.** Occasional muscle from the hyoid bone to the base of the epiglottis.

**Bas-fond,** bah-fon′ (F.). Base of bladder.

**Ba′sham's mix′ture.** Mixture of tincture of chloride of iron, diluted acetic acid, solution of acetate of ammonium, elixir of orange syrup, and water; formerly official in Ph. U. S. under name *Mistura ferri et ammonii acetatis*; dose, f℥ss–j (16.0–32.0).

**Ba′sial.** Basal; body of vertebra.

**Basialve′olar.** Relating to the basion and alveolus. **B. length,** distance between the basion (point of anterior surface of occipital foramen lying in median line) and alveolar point (centre of anterior edge of upper alveolar arch).

**Basiarachni′tis.** Inflammation of the arachnoid at the base of the skull.

**Basia′tor.** Orbicularis oris.

**Ba′sic.** Relating to a base.

**Basic′ity.** Term signifying the number of atoms of replacable hydrogen in an acid.

**Basicra′nial.** Relating to the base of cranium. **B. ax′is,** line drawn within the cavity of the skull, from the central point between the condyles of the occipital bone to a point of union of the ethmoid and the anterior part of the body of the sphenoid.

**Basifa′cial.** Relating to the face and the base of the skull. **B. an′gle,** angle made by intersection of basifacial and basicranial axes. **B. ax′is,** line from the centre of the superior part of the sphenoid bone to that of the alveolar process of the upper maxillary bone.

**Ba′sifier.** In chemistry a substance which converts a body into a base.

**Basigen′ic** (*basis,* base, *gennao,* to produce). In chemistry, term applied to bodies which do not neutralize metals, but form with them electronegative compounds.

**Basihy′al** or **Basihy′oid.** Base of hyoid bone; a separate bone in some animals.

**Bas′il bush.** Ocymum caryophyllatum. **B. cit′ron,** Ocymum basilicum. **Com′mon b.,** Ocymum basilicum. **Small b.,** Ocymum caryophyllatum. **Wild b.,** Chenopodium vulgare, Cunila mariana, and Pycnanthemum incanum.

**Bas′ilad.** Toward the basilar aspect.

**Bas′ilar** or **Bas′ilary.** Basal; belonging to the base, especially base of the skull; a name given to several parts seeming to serve as basis to others, as the sacrum and sphenoid. See *Basiooccipital.* **B. an′gle,** angle included between radii from anterior edge of foramen magnum to prominent parts of cranium. **B. an′gle of jaw,** angle formed by lines from outer side of angle of each lower jaw to symphysis. **B. apoph′ysis,** b. process. **B. ar′tery,** union of two vertebral arteries; ascends along middle groove on inferior surface of tuber, terminates in posterior cerebral arteries. **B. as′pect,** aspect toward base of the head. **B. bone,** see *Basilar* and *Basiooccipital.* **B. cell,** nucleated matter at base of Corti's rod in internal ear. **B. diam′eters,** diameters of basilar region of cranium. **B. fi′bres,** fibres of basilar membrane of cochlea. **B. fos′sa,** upper surface of basilar process; groove for basilar artery on pons Varolii. **B. groove,** b. fossa. **B. mem′brane,** see *Corti* and *Membrana basilaris.* **B. meningi′tis,** inflammation of meninges at base of brain. **B. pit,** a depression in the crown of an incisor tooth, above its neck. **B. plex′us,** transverse sinus. **B. pro′cess,** cuneiform process, bony projection formed by inferior angle of os occipitis, which is articulated with sphenoid; lower extremity of outer hair cells of organ of Corti. **B. ra′dii,** lines projected from median point of anterior border of occipital foramen to selected points on skull. **B. si′nus,** sinus transversus. **B. sur′face,** inferior surface of b. process, covered by mucous membrane of pharynx. **B. su′ture,** suture between basilar process of occipital bone and sphenoid. **B. vein,** vein from base of brain emptying into vein of Galen. **B. ver′tebra,** fifth lumbar vertebra.

**Basilat′eral.** Pertaining to the base and one or both sides.

**Basilem′ma.** Basement membrane.

**Basil′ic** (*basilikos,* royal). Name given by the ancients to parts which they conceived to be important in the animal economy. **B. vein,** one on which bloodletting is performed, situated at the internal side of the fold of the elbow, and formed by interior and posterior cubital veins and median basilic; terminates in axillary vein. It was formerly thought that the basilic vein of the right arm had some connection with the liver, hence it was called hepatic; vein of the left arm, for similar reason, was called splenic. **Me′dian b. v.** is a branch of preceding, joins median cephalic by transverse branch, and receives branches of deep radial and cubital veins and subcutaneous vein—common median.

**Basil′icon** (*basilikos,* royal). Ointment of yellow wax, black pitch, resin, and olive oil; hence called *unguentum tetrapharmacum* (four drugs). In most pharmacopœias it is represented by *unguentum* or *ceratum resinæ*; used as a stimulating ointment.

**Basil′icum.** Basilicon; Ocymum basilicum. **B. citra′tum** or **B. ma′jus,** Ocymum basilicum.

**Basilis′cus.** Syphilis; corrosive sublimate.

**Basilobregmat′ic.** Belonging to basilar process and bregma, as basilobregmatic diameter.

**Basilomen′tal.** Relating to basilar process and chin, as basilomental radius, line from basion to anterior point of chin.

**Basil′ysis** (*basis,* base, *lysis,* dissolution). Destruction of fœtal skull by force, as in cranioclasty, or by perforation, the instrument being called *basilyst.*

**Bas′ilyst.** Instrument with which basilysis is performed.

**Ba′sin.** A shallow receptacle for fluids; the pelvis; the third cerebral ventricle. **Pus b.,** a receptacle for catching the pus flowing from an abscess and the water used in flushing a purulent surface or cavity, variously shaped so as to fit the part to which it is to be applied.

**Basina′sal length.** Distance between basion and middle point of nasofrontal suture.

**Basioalve′olar.** Relating to basion and centre of upper edge of alveolar arch.

**Basioccip′ital** (*basis,* base, *occipitalis,* occipital bone). Basilar process of occipital bone; relating to base of brain and occipital region. See *Basiooccipital.*

**Basiodeltoide′us.** Part of deltoid inserted on spinal part of scapula.

**Basioglos′sus** (*basis*, base, *glossa*, tongue). Portion of hyoglossus muscle inserted into the base of the os hyoides. See *Lingual muscles.*

**Basiohumeral′is.** Levator claviculæ muscle.

**Basioker′atochondroglos′sus** (*basis*, base, *keras*, cornu, *chondros*, cartilage, *glossa*, tongue). Hyoglossus muscle.

**Basiokeratoglos′sus.** Part of the hyoglossus muscle inserted into the cornu of the os hyoides and base of the tongue.

**Basiokes′trum** (*basis*, base, *kestra*, a dart). Instrument for opening the head of the fœtus in utero.

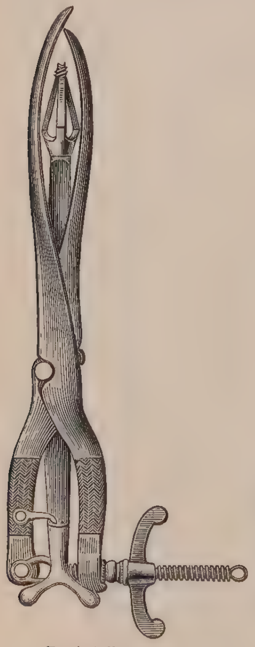
**Bas′ion.** Middle point of the anterior margin of the occipital foramen.

**Basio-occip′ital.** Relating to base of brain and occipital region; basilar process. The latter is called basilar bone when separate, as in some fishes.

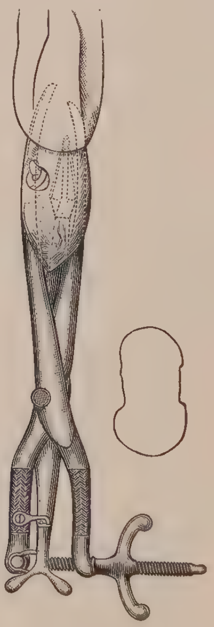
**Basiopharynge′us.** Fibres of constrictor pharyngis medius muscle.

**Basiot′icum.** Small fetal bone between basi-occipital and basisphenoid bones.

**Bas′iotribe** (*basis*, base, *tribo*, to destroy). Instrument for crushing the base of the fetal skull.



Basiotribe.



Basiotripsy.

**Basiotrip′sy.** Crushing the base of the fetal skull.

**Basipter′ygoid.** Relating to the base of the sphenoid or pterygoid bone.

**Basirrhi′nal.** Relating to the base of the brain and the nose. **B. fis′sure,** cerebral fissure at the base of the olfactory lobe.

**Ba′sis.** Base. See *Prescription.* **B. cer′ebri,** base of the brain. **B. cor′dis,** base of the heart. **B. cor′poris,** sole. **B. cra′nii,** base of skull. **B. infundib′uli,** tuber cinereum. **B. mandib′ulæ** or **maxil′læ inferio′ris,** horizontal ramus of lower jaw. **B. na′si,** base of outer part of nose. **B. occip′itis,** basilar process. **B. of pe′duncle,** see *Peduncles of the brain.* **B. pleu′ræ,** part of sac of pleura below the lung. **B. scap′ulæ,** spinal edge of scapula. **B. ver′tebræ,** body of vertebra. **B. vesi′cæ,** base of bladder.

**Basisphe′noid.** Back part of body of sphenoid bone; separate bone in the fœtus and in some animals.

**Basisyl′vian.** Relating to the basilar part of the fissure of Sylvius.

**Basitem′poral.** Small tongue-like process on the upper surface of the sphenoid bone.

**Basiver′tebral.** Relating to the body of a vertebra.

**Ba′sophile** (*basis* + *phileo*, to love). That which takes readily basic stains, such as fuchsin, methyl, and phenyl derivatives of rosanilin, etc.; applied to leucocytes possessing this property.

**Basophil′ic** or **Basoph′ilous.** Taking basic stains readily.

**Basopho′bia** (*basis*, step, *phobos*, fear). Fear to take a step, as in walking.

**Bass** or **Bast.** Linden tree; also its inner bark.

**Bass-deaf′ness.** Inability to distinguish low notes.

**Bas′sia** (after F. Bassi, an Italian physician of the eighteenth century). A genus of trees, indigenous in the tropics, ord. *Sapotaceæ.* **B. butyra′cea,** Indian butter tree; the expressed oil of which (a solid at ordinary temperatures), known as fulwa butter, is used in rheumatism. **B. latifo′lia,** mahwa tree, and **B. longifo′lia,** illupi or mee tree, yield an expressed oil, doli oil, similar to fulwa butter; the flowers are used for food and from them an ardent spirit is distilled.

**Bassi′ni′s opera′tion** (after Bassini, an Italian surgeon). Operation for effecting a radical cure of inguinal hernia by twisting and ligation of the sac, and suturing of the internal oblique, transversalis, and external oblique to Poupart's ligament, the cord resting just beneath the external oblique muscle.

**Basso′ra gum.** Gum originally brought from the neighborhood of Bassora. Insoluble portion is a peculiar principle, *bassorin*, $C_6H_{10}O_5$. The gum is not used in medicine, but to adulterate tragacanth.

**Bassorin′.** See *Bassora gum.*

**Bass′wood.** Tilia americana.

**Bast** (AS, bæst). The fibrous inner bark of certain trees. **B. tree,** the linden, Tilia americana or europæa.

**Bas′tard** (Celt., *bas* or *boas*, fornication, *tardd*, source). Illegitimate, hybrid, spurious. **B. car′damom,** seed of Amomum xanthoides. **B. dit′tany,** Dictamnus albus. **B. ipecacuan′ha,** root of Asclepias currasavica of West Indies. **B. mea′sles,** rubella. **B. pel′litory,** Achillea ptarmica. **B. saf′fron,** florets of Carthamus tinctorius.

**Bas′tardy.** Illegitimacy.

**Bas′tian's law** or **Bas′tian-Bruns's law.** Entire absence of tendon reflexes in the lower parts of the body, when there is a complete transverse injury of the spinal cord above the lumbar enlargement.

**Ba′syl.** Electropositive or metallic ingredient of a salt.

**Ba′sylous.** Referring to a basyl.

**Bata′ta jalap′a.** Mexican root; drastic. **B. de pur′ga,** purgative, feculent, gum-resinous roots of two plants of Convolvulaceæ of Brazil, one called Jeticucu, Mechoacan, Convolvulus mechoacaña, Piptostegia pisonis; the other, Convolvulus operculatus, Ipomæa, or Piptostegia operculata.

**Bata′tas.** Several tuberous roots of Peru, especially Convulvulus batatas or sweet potato. See *Solanum tuberosum.* **B. edu′lis,** Convolvulus batatas.

**Bate′man's disease′.** Molluscum contagiosum. **B.'s drops,** pectoral drops.

**Bates's cam′phorated lo′tion** or **wa′ter.** A red wash of copper sulphate, camphor, and other ingredients; diluted it forms Bates's collyrium.

**Bath.** Immersion or stay, for a longer or shorter duration, of the whole or a part of the body in some medium, as water; the vessel in which water is put for bathing; public or private establishment for bathing; in pharmacy, vessel placed over the fire and filled with any substance, into which another vessel is placed containing matters for digestion, evaporation, or distillation. Baths may be local or general, that is, applied to a part or to the whole of the body; they may be classified as follows:

- I. Water bath.
  - A. Simple,
    - Cold,
      - Ordinary full bath.
      - Affusions.
      - Spray.
      - Sitz bath.
      - Foot bath.
      - Cold pack.
      - Compresses.
      - Douches.
    - Hot,
      - Tepid bath.
      - Warm bath.
      - Hot bath
      - Hot foot bath.
      - Hot sitz bath.
  - B. Medicated,
    - Sea bathing.
    - Common saline bath. Artificial sea water.
    - Carbonic acid.
    - Acid bath.
    - Alkaline bath.
    - Sulphurated bath.
    - Mustard bath.
    - Pine bath.
- II. Vapor bath.
  - A. Aqueous,
    - Simple
      - Russian.
      - Simple vapor.
    - Medicated, Vinegar.
  - B. Volatilized drugs—*e. g.*, calomel.
- III. Air bath. Turkish bath.
- IV. Solid bath. Sand bath, mud bath, etc.

**Acid b.**, a bath containing hydrochloric acid in the strength of one-half to two pints in sixty gallons of water; or a pint of aqua regia (nitromuriatic acid) is mixed with an equal quantity of water, and three ounces of this dilute acid are added to every gallon of water. **Air b.**, a b. in which the body is exposed to air, usually hot air. **Al′kaline b.** made of half a pound or a pound of pearl ash or carbonate of sodium to sixty-six gallons of water. **An′imal b.**, consists in wrapping an animal, recently killed, or its skin, around the body or some part of it. **Antipso′ric b.**, recommended in cases of itch and other cutaneous diseases, containing four ounces of potassium sulphide in sixty gallons of water. **Antisyphilit′ic b.**, mercurial bath; made by dissolving from two drachms to an ounce of corrosive chloride of mercury in sixty gallons of water. **Artific′ial sea-wa′ter b.**, 1 part common salt to 30 parts of water. **Astrin′gent b.**, b. containing tannic acid, oak bark, etc.; used for ulcerations and cutaneous diseases. **Balsam′ic b.**, b. made of balsamic materials or turpentines, used in diseases of the head. **Blood b.**, b. in freshly drawn blood. **Bran b.**, b. containing bran; used in eczema and burns. **Brand b.**, a cool b. used in the treatment of typhoid fever. **Brine b.**, b. of salt water; used in scrofula, rheumatism, and to act on kidneys. **Cam′phor b.**, camphor on a hot plate, the vapor surrounding one and being inhaled. **Chalyb′eate b.**, b. containing a soluble preparation of iron; presumably tonic. **Chem′ical b.**, an apparatus containing sand, water, etc., surrounding the substance to be heated, so that the latter is shielded from the direct action of the flame. **Chlor′inated b.**, chlorine vapor bath, made with chlorine or chlorinated lime or soda. **Cold** or **cool b.**, employed as a tonic and stimulant and to reduce bodily temperature in fevers, etc.; the temperature of a cold bath is from 30° to 60° F.; of a cool bath from 60° to 75° F. **Douche b**,, see *Douche*. **Dry b.**, immersion in ashes salt, sand, etc., usually heated. **Earth b.**, a dry b. in which earth is used as the medium. **East′ern b.**, Turkish bath; Egyptian bath. **Egyp′tian b.**, form of Turkish bath in which the temperature is raised to the highest point and gradually lowered to the starting-point again. **Elec′tric b.** consists in placing person upon insulated stool communicating, by metallic wire, with the principal conductor of an electrical machine in action, or in such position as to include him in the galvanic circuit; bath in which a current of electricity is produced by decomposition of the components of the bath; it produces general excitement of all the functions, especially of circulation and secretion. **Emol′lient b.**, starch, oil, bran, malt, or other bath used in burns and some skin diseases as emollient to inflamed surfaces. **Ferru′ginous b.**, chalybeate b. **B. fe′ver**, a condition of malaise caused by excessive bathing or drinking of the waters at mineral spas. **Fin′nish b.**, Russian b. carried to a more elevated temperature. **Fir′-needle b.**, b. in an infusion of some preparation of needles of fir; stimulant and slightly irritating to the surface. **Foot b.**, b. for the feet, of hot water, mustard water, etc. **Galvan′ic b.**, electric b. **Gas b.**, air bath, hot air bath, vapor bath; the Turkish bath is included under this head, as well as baths of hydrogen sulphide gas, etc. **Gelat′inous b.**, made by dissolving gelatin or glue in a gallon of water; used to reduce irritability of the skin. **Gelat′inosul′phurous b.** may be made by adding gelatin or glue, previously dissolved in water, to sulphur bath. **Gen′eral b.**, one in which the whole body is plunged, except the head; in contradistinction to a partial bath. **Gly′cerin b.**, vapor bath containing glycerin. **Grape-lees b.**, a b. of fermenting grape-lees; tonic, and used in rheumatism. **Half b.**, one adapted for half the body, as the hips or extremities. **Head b.**, b. for the head; douche or shower bath. **Hip b.**, one in which lower part of trunk and upper part of thighs are immersed. **Hot b.**, one the temperature of which is 98° and upward; *warm bath*, from 92° to 98°; *tepid bath*, from 85° to 92°; *temperate bath*, from 75° to 85°; *cool bath*, from 60° to 75°; *cold bath*, from 30° to 60°; and *vapor bath*, from 100° to 130° and upward. *Warm-air bath* or *hot-air bath* is one in which the naked body is surrounded by air the temperature of which is raised. **Ind′ian b.**, Turkish bath combined with massage. **I′odine b.**, one containing iodine with iodide of potassium dissolved in water in a wooden bath tub; usually produces only slight rubefacient effect, though it sometimes causes the epidermis to peel off. **I′ron b.**, chalybeate b. **Malt b.**, emollient b. **Med′icated** or **medic′inal b.**, b. in decoctions or infusions of vegetable substances, or with any ingredient introduced into the water for therapeutic purposes; medicated *air* or medicated *vapor baths* are baths of air or vapor charged with medicated matters. **Mercu′rial b.**, antisyphilitic b. **Mud b.**, immersion in mud impregnated with the salts of some mineral spring; used in rheumatism, gout, paralysis, etc. **Must b.**, b. in grape-lees. **Mus′tard b.**, foot bath to which mustard is added to produce rubefaction or stimulation. **Narcot′ic b.**, water bath containing narcotic ingredients. **Oil b.**, emollient bath of oil. **Orien′tal b.**, Turkish b., Egyptian b., etc. **Ox′ygen b.**, gaseous bath of oxygen for inhalation in asphyxia and conditions attended with defective aëration of blood; locally to ulcers. **Pack b.**, bath in which the body is enveloped in cloths. **Par′tial b.**, b. for use to part of body only, such as a hand bath, sitz bath, douche, etc. **Peat b.**, containing peat, acting similarly to a mud bath. **Pine** or **pine′-needle b.**, similar to fir-needle b. **Plunge b.**, one in which the bather is suddenly completely immersed. **Ro′man b.**, form of hot-air bath followed by inunction. **Rus′sian b.**, a vapor b., a powerful sudorific agent, inapplicable in many cases of disturbed conditions of heart and lungs, fevers, etc. **Sa′line b.**, common salt is added to water. **Sand b.**, arenation; b. of sand heated to from 120° to 130° F., or of sandy mineral springs; diaphoretic effect. **Sea b.**, sea-water bath, having stimulant action of cold salt bath. **Sheet b.**, b. in which the body is enveloped in cloths. **Show′er b.**, one in which water is made to fall like a shower on the body; tonic, and by its shock revulsive. **Sitz b.**, one in which the bather sits in a tub of water, cold or hot, according to the indications, for a variable period. **Sol′id b.**, this form of bath includes mud b., sand b., earth b., and similar baths into which solids enter as important ingredients. **Sponge b.**, thorough application of water to the surface with a sponge. **Starch b.**, emollient b. **Steam b.**, chemical b. made by introducing steam into a properly closed vessel in place of water. **Succes'sion b.**, transition bath, or one in which there is rapid succession or transition from cold to warm or hot bath, or conversely. **Sul'phur b.**, sulphuretted bath; one much used in scabies and other chronic cutaneous affections; composed of diluted sulphuric acid, and sulphuret of potassium or of sodium, added to each bath, or simply of sulphuret of potassium. **Sul'phur va'por b.**, vapor bath of gaseous sulphurous acid. **Sun b.**, form of air bath in which the naked body is exposed to bright sunshine. **Sweat'ing b.**, b. employed for sudorific effect, as Turkish or Russian bath. **Tan b.**, astringent bath, prepared by boiling ground oak bark—as used by tanners—in water and then adding decoction to water of bath. **Tem'perate b.**, one in which the water has a temperature of from 75° to 85° F. **Tep'id b.**, one in which the water has a temperature of from 85° to 92° F. **Transi'tion b.**, succession b. **Turk'ish b.**, hot-air bath followed by rubbing, cold douche, and plunge. **Va'por b.**, one in which the body is exposed to hot or medicated vapor. **Warm b.**, one in which the temperature of the water is from 92° to 98° F. **Wa'ter b.**, in chemistry a vessel filled with water raised to the desired temperature, in which is placed another vessel containing the substance to be evaporated; in a water bath the temperature of the material in the inner vessel can never be raised above that of boiling water (212° F., 100° C.).

**Bath'ing.** See *Bath.*

**Bath'mis** (Gr., a step). Cavity of bone receiving eminence of another; especially two fossettes at the inferior extremity of the humerus, into which processes of the ulna are received during flexion and extension of the forearm. Also force as basis of growth

**Bath'mism.** The force in the body controlling nutrition, growth, and development.

**Bathyæsthe'sia** (*bathys*, deep, *aisthesis*, sensation). Deep-seated sensation in bone or muscle; more specifically the latter.

**Bathycente'sis** (*bathys*, deep, *kentesis*, piercing). Puncturing deeply; acupuncturation.

**Bathylimnet'ic** (*bathys*, deep, *limne*, marsh). Belonging to or living in deep watery places.

**Bathymet'rical.** Relating to bathymetry.

**Bathym'etry** (*bathys*, deep, *metron*, measure). Measurement of any cavity of the body.

**Bathymor'phia** (*bathys*, deep, *morphe*, shape). Myopia.

**Bat'ia.** A retort.

**Batopho'bia** (*batos*, passable, *phobos*, fear). Morbid dread of passing between two high walls or through the streets of a city.

**Batrach'oplasty.** See *Batrachus.*

**Bat'rachus** (frog). Ranula; plastic operation for its relief is called *batrachoplasty.*

**Batracin'.** Active principle from the skin of a batrachian, used as an arrow-poison.

**Bat'talism, Battalis'mus, Bat'tarism,** or **Battaris'mus** (*battarizo*, to stammer). Balbuties; stammering with incapacity to pronounce *r;* stuttering.

**Bat'talus** or **Bat'tarus** (stammerer). Stutterer.

**Bat'tery.** Apparatus for generating electricity by means of Leyden jars or voltaic cells. In optics, a series of prisms or lenses. **Con'stant b., galvan'ic b.**, etc., see the qualifying word.

**Bat'tey's opera'tion.** Normal ovariotomy; removal of one or both ovaries to produce the menopause, for relief of otherwise incurable disease.

**Battisego'la.** Centaurea cyanus, or blue-bottle; Euphrasia officinalis, or eyebright.

**Bat'tledore placen'ta.** Placenta with the cord attached near the rim.

**Bat'weed.** Lappa major.

**Bauchee'.** Seeds of Psoralia corylifolia, of E. Indies; used for leprosy.

**Baudelocque's' diam'eter.** External conjugate diameter of female pelvis, extending from just above the spinous process of the first sacral vertebra to the median line of the upper part of the symphysis pubis.

**Bau'den's amputa'tion.** A method of knee-joint disarticulation; see *Amputation.*

**Bauhin', valve of.** Valve of Tulpius, of Fallopius, or of Varolius; iliocæcal or ileocolic valve; valve situated transversely where the ileum opens into the cæcum, which Bauhin is said to have discovered in 1759. It had, however, been previously described.

**Bauhin'ia acumina'ta.** Leguminous plant of E. and W. Indies and China, used as laxative, anthelmintic, and carminative. **B. angui'na**, plant of E. Indies, etc., root of which is antipyretic. **B. articula'ta**, tree of tropical Africa; bark is astringent. **B. tomento'sa**, St. Thomas's tree, of Africa and Asia; leaves are used in dysentery; root-bark is anthelmintic and used in affections of the liver. **B. variega'ta**, bark of this E. Indian and Chinese plant is tonic, alterative and astringent.

**Bauhm's gland.** A mucous gland near the middle of the tip of the tongue

**Baun'scheidtism.** Kind of acupuncture proposed by a man nammed Baunscheidt, consisting in impelling on the skin, by means of a spring, a brush of wires, but not so as to draw blood, and then rubbing into the part a stimulating fluid having for its base mustard and black pepper or some irritant oil. The instrument has been called the awakener, on account of its energetic revellent action.

**Bava'rian splint.** An immovable dressing of plaster of Paris.

**Bay.** The laurel-tree. In anatomy a receding part. **B. cas'tor**, Magnolia glauca. **Lac'rymal, b.** see *Lacrymal.* **B. rose**, Rhododendron chrysanthemum. **Amer'ican b. r.**, Rhododendron maximum. **B. rum**, spiritus myrciæ. **B. salt**, chloride of sodium. **B. sore**, disease endemic in Honduras. **Sweet b.**, laurus. **B. tree**, Laurus nobilis, Magnolia glauca. **White b.**, Magnolia glauca and M. macrophylla.

**Bay'ard's ecchymo'ses.** Minute ecchymotic spots noticed in pleura and pericardium of newborn infants who have made respiratory efforts while still within the uterus.

**Bay'berry bark.** Bark of Myrica cerifera, wax plant, candleberry myrtle; tonic, stimulant, and astringent; used in dysentery. **B. tal'low**, wax obtained from fruit of Myrica cerifera. **B. tree**, Myrcia acris, see *Spiritus myrciæ.*

**Baycurine'.** Alkaloid from Baycuru.

**Baycuru'.** Plant growing on shores of Rio Grande and in South America, Statica braziliensis, root of which is a powerful astringent.

**Bayle's disease'.** Progressive general paralysis of the insane. **B.'s granula'tions**, tubercles of miliary consumption.

**Bayonet' joint.** A socket joint in which the male segment is fastened by a turn, as a bayonet is attached to the barrel of a musket; used in certain surgical instruments. **B. leg**, a deformity resulting from an inveterate backward dislocation of the leg bones on the thigh, resembling in contour a bayonet joint.

**Bazin's' disease'.** Psoriasis of the mouth; strumous ulcer of the leg; molluscum contagiosum. **B.'s erythe'ma**, erythema induratum scrofulosorum.

**Bdal'sis.** Sucking.

**Bdel'la.** Leech; varicose vein.

**Bdellat'omy.** Bdellotomy.

**Bdellepithe'cium** (*bdella*, leech, *epi*, upon, *theca*, a shield). Tube for protection and keeping of leeches during their application to the surface.

**Bdellepith'esis** (*bdella*, leech, *epithesis*, application). Application of leeches.

**Bdel'lium.** Gum resin from Levant and India, from several species of balsamodendron.

**Bdellom'eter** (*bdella*, leech, *metron*, measure). Instrument proposed as a substitute for the leech, consisting of cupping-glass to which a scarificator and exhausting syringe are attached.

**Bdellot'omy** (*bdella*, leech, *tome*, incision). Cutting a leech so that the blood will flow from it as rapidly as it sucks the same from the patient.

**Bdel'us, Bdelyg'mia**, or **Bdelyg'mus** (*bdelysso*, to cause disgust). Passage of wind from the rectum; morbid loathing of food.

**Bdes'ma.** Flatulence.

**Bdo'lus** (*bdeo*, to break wind). Bdelus.

**Bead'ed ribs.** Nodules at junction of the ribs with the cartilages, present in rickets.

**Beads, jum'ble** or **prayer.** See *Abrus precatorius* and *Jequirity*.

**Bead tree.** Melia azedarach.

**Beak of enceph'alon.** Extension forward of frontal lobe of cerebrum in lower animals. **B. of cal'amus scripto'rius** is its lower extremity. **B. of cor'pus callo'sum** is its posterior extremity, also B. of encephalon. **B. of sphe'noid bone,** rostrum.

**Bea'ker.** Small glass vessel used in chemical investigations. **B. cells,** goblet cells. **Taste b.,** see *Taste buds*.

**Beal.** Phlegmon. Suppuration.

**Beale's fi'bre.** Delicate spiral nerve fibre around the process of a ganglion cell in the frog.

**Beal'ing.** Pregnant; suppurating.

**Bean.** Seed of one of the *Leguminosæ*, particularly the Faba vulgaris. **Bush b.,** phaseolus. **Cal'abar b.,** ordeal nut. **Carthage'na b.,** habilla de Carthagena. **Cas'tor b.,** see *Ricinus communis*. **Egyp'tian b.,** Nymphæa nelumbo. **French b.,** Phaseolus vulgaris. **Gar'den b.,** Vicia faba. **In'dian b.,** catalpa. **Kid'ney b.,** Phaseolus vulgaris. **Malac'ca b.,** Avicennia tomentosa. **Orde'al b.,** see *Ordeal*. **Pichu'rim b.,** nectandra. **Pon'tic b.,** Nymphæa nelumbo. **Red b.,** Abrus precatorius. **Sa'cred b.,** Nelumbium luteum. **St. Igna'tius's b.,** Ignatia amara. **Snap b.,** phaseolus. **String b.,** phaseolus. **Ton'ka b.,** Dipterix odorata. **B. tree,** Catalpa bignonioides, Cratægus aria. **B. tre'foil,** Cytisus laburnum. **Vanil'la b.,** see *Vanilla*. **Wild b.,** Apios tuberosa.

**Bear'berry.** Arbutus uva ursi.

**Beard.** Hair covering part of the cheek, lips, and chin of the human male at puberty.

**Beard's disease.** Neurasthenia.

**Beard-Valleix's' points.** Painfully sensitive spots, felt in neuralgia, where the nerves enter or pass from fascial openings or emerge from bony canals

**Bear'ing down.** Contraction of the abdominal muscles with fixation of the diaphragm, making compression of the abdomen, as in defecation and parturition. **B.-d. pains,** pains caused by parturient efforts of the uterus.

**Bear's bed.** Polytrichum juniperinum. **B.'s breech,** Acanthus mollis. **B.'s foot,** Helleborus fœtidus, Polymnia uvedalia. **B.'s fright,** Heptallon graveolens. **B.'s grapes,** fruit of Arbutus uva ursi. **B.'s grass,** Yucca filamentosa. **B.'s weed,** Eriodictyon californicum, Veratrum viride. **B.'s whort'leberry,** Arbutus uva ursi.

**Beast'ings.** Colostrum.

**Beat.** Pulsation, as of the heart or an artery. **A'pex b.,** impulse caused by the beating of the heart against the chest wall felt in the fifth intercostal space on the left side. **Pulse b.,** see *Pulse*.

**Beat'son's meth'od.** Treatment of mammary cancer by ovariotomy.

**Beatty-Bright's fric'tion-sound.** Friction sound of pleuritis.

**Beaumès'-Col'les's law.** See *Colles's law*.

**Beaumès's sign.** Pain back of the breast-bone in angina pectoris.

**Beau'mont root.** Gillenia trifoliata.

**Beau's disease.** Imperfect systole of the heart; insufficiency or want of normal action of the heart.

**Beauvois's' disease'.** Chronic articular rheumatism.

**Bea'ver.** Castor fiber. **B. poi'son,** Cicuta maculata. **B. tree,** Magnolia glauca. M. macrophylla. **B. wood,** Celtis occidentalis, Magnolia glauca.

**Bebeeri'na,** or **Bebeerine'.** See *Bebeeru*.

**Bebee'ru.** Tree of British Guiana, bark of which yields two alkalies, *bebeerine*, $C_{19}H_{21}NO_3$ (*bebeerina*, *nectandria*, or *biberine*), and *sipeerine*; in its properties it resembles cinchona. It is properly Nectandra rodiei or rodiæi, bark of which is nectandra or greenheart bark, ord. *Lauraceæ*. Sulphate of bebeerine, *beberinæ sulphas*, is employed in same cases as sulphate of quinine, but is not so reliable. Hydrochlorate of bebeerine has also been employed.

**Becabun'ga** or **Beccabun'ga.** Veronica beccabunga.

**Becca'ria's sign** or **test.** Painful spots of a pulsatile character experienced during pregnancy in the back part of the head.

**Bechæsthe'sis** (*bex*, cough, *aisthesis*, sensation). Desire to cough.

**Be'chia** or **Be'chias.** Cough; hoarseness.

**Bech'ic** (*bex*, cough). Medicine to allay cough; relating to or caused by cough.

**Bechorthopnœ'a** (*bex*, cough, *orthos*, upright, *pneo*, to breathe.) Whooping-cough; orthopnœa.

**Be'chous.** Bechic.

**Bechterew's** (bekh-ter'effs) **disease.** Ankylosis of the spinal column, with muscular atrophy. **B.'s lay'er,** layer of nerve fibres in cortex of cerebrum. **B.'s nu'cleus,** lateral nucleus of the anterior root of the auditory nerve. **B.'s reac'tion,** diminution of force of electric current applied to muscles to check tetanic contraction, which might otherwise occur. **B.'s sign,** loss of sensibility in the popliteal space in tabes dorsalis. **B.'s tract,** middle portion of tegmentum or covering of the crus cerebri between the central part of the superior olivary body and the fillet.

**Beck'er's sign.** Pulsation of arteries of the retina in exophthalmic goitre.

**Béclard's** (ba-clarz') **amputa'tion.** A method of hip-joint disarticulation; see *Amputation*. **B.'s her'nia,** hernia occurring opposite the saphenous orifice. **B.'s nu'cleus,** lens-shaped bony nucleus in the lower cartilaginous portion of the femur, appearing about the end of the ninth month of intrauterine life. **B.'s su'ture,** form of suture used in wounds of intestines, by white and colored thread.

**Becquerel' rays.** See *Ray*.

**Bed.** That on which one habitually sleeps. **Air b.,** mattress of rubber or leather that can be filled with air. **B.-bug,** Cimex lectularius. **B.-case,** form of hysteria in which the patient lives in bed, under the impression that he or she is suffering from serious symptoms. **B.-fast,** bed-ridden. **Frac'ture b.,** bed arranged for proper rest and treatment of a fractured part. **Hydrostat'ic b.,** water-bed. **B.-pan,** pan for use of a patient in bed for purposes of urination or defecation. **B.-rest,** an appliance for supporting patients in bed in a semi recumbent position. **B.-rid'den,** confined to bed by a chronic ailment. **B.-sore,** decubitus, an excoriation or ulcer resulting from prolonged pressure on one spot, as in fevers, chronic disease, etc. **Wa'ter-b.,** a mattress of rubber that can be filled with water, affording a yielding surface upon which to lie.

**Bed'egar** or **Bed'eguar.** Excrescence on different species of wild roses, produced by puncture of a small insect, cynips rosæ; formerly employed as a lithontriptic, as a remedy for dysuria, and as a vermifuge.

**Bed'lam** (from Bethlehem lunatic hospital in London). Hospital for the insane.

**Bed'lamite.** An insane person.

**Bed'nar's aph'thæ** or **B.'s plaques.** An affection of early infancy, consisting of yellow, sharply defined spots of thinning of the epithelium localized on the mucous membrane over the posterior alveolar border of the hard palate, and sometimes in the median line of the palate; in addition to the thinning of the epithelium, there is a deposit of "epithelial pearls." The lesions cause no discomfort, and heal spontaneously in a few days.

**Bed'ouin itch.** Form of lichen tropicus.

**Bed'straw.** Galium verum, G. mollugo, G. asprellum.

**Bee.** Formerly used, dried and powdered, as diuretic. **Hon'ey b.**, apis mellifica.

**Bee'bread.** See *Propolis.*

**Beech.** Fagus sylvatica. **Al'bany b.**, Pterospora andromedea. **B. drop**, Orobanche virginiana, Epiphegus virginiana. **B. drops, false**, Hypopitys lanuginosa. **B. mast**, see *Fagus sylvatica.* **B. nut**, see *Fagus sylvatica.* **B. oil**, oil expressed from Fagus sylvatica. **B. tar**, procured by destructive distillation from Fagus sylvatica; creosote is obtained from it.

**Beef.** Flesh of ox or cow. **B. es'sence, B. ex'tract, B. juice**, see *Beef tea.* **B. meal**, beef dried and powdered for use as an article of diet by the sick. **B. tea**, infusion of beef; used in debilitating maladies and in convalescence.

**Beer.** Cerevisia, malt liquor in general; specifically an alcoholic liquor made of malt, hops, and water; lager beer, containing about 2 per cent. of alcohol.

**Beer's knife.** Triangular-shaped knife used in operations for cataract for section of the cornea. **B.'s opera'tion for cat'aract**, operation in which the cataract is extracted by a corneal flap without excision of the iris.

**Beest** or **Beest'ings.** Colostrum.

**Bees'wax.** See *Cera.*

**Bee'tleweed.** Galax aphylla.

**Beg'bie's disease'.** Exophthalmic goitre; rhythmic chorea, the spasms recurring at regular intervals.

**Beg'gar's bas'ket.** Pulmonaria officinalis. **B.'s blank'et**, Verbascum thapsus. **B.'s but'tons**, flowerheads of Arctium lappa. **B.'s lice**, Cynoglossum morisoni. **B.'s ticks**, Bidens connata, B. frondosa, Cynoglossum morisoni. **B.'s weed**, Polygonum aviculare.

**Beggiato'a.** Genus of *Schizomycetes* of the family *Beggiatoaceæ.* See *Bacteria.* **B. al'ba** (Vaucher), sewage fungus, common in stagnant and sulphurous water; forms baregin on the surface of the water. **B. arachnoid'ea** (Agardh), found in marshy places and in sea water in shallow places. **B. leptomitiform'is**, found in sulphur waters. **B. mari'na** (Cohn), found in stagnant sea water, as in aquaria. **B. min'ima** (Warning), found in sea water. **B. mirab'ilis**, found in sea water. **B. multisep'ta**, Phragmidiothrix multisepta. **B. ni'vea**, found in sulphurous waters. **B. nodo'sa** (Van Tieghem), a form having nodes upon it. **B. oersted'tii** (Rabenhorst), B. alba. **B. pellu'cida** (Cohn), found in sea water aquaria. **B. puncta'ta** (Trevisan), B. alba. **B. roseopersici'na** (Cohn), found in water of rivers and of the ocean; bacteriopurpurin is obtained from it. **B. tigri'na** (Rabenhorst), found in marshy regions.

**Beggiatoa'ceæ.** Family of *Bacteria*, see *Bacteria.*

**Beg'ma** (*bex*, cough). Coughing; sputum or expectorated matter.

**Bego'nia** (after M. Begon, French botanist in San Domingo). Begonia grandiflora and B. tomentosa have astringent roots; used in Peru in hemorrhage, scurvy, low fevers, etc. **B. ac'ida** is from Brazil; **B. acutifo'lia** from Jamaica; **B. grac'ilis** from Mexico; emetic and cathartic.

**Be'hen.** Bladder campion. **B. a'biad**, Centaurea behen. **B. al'bum**, Centaurea behen. **B. officina'rum**, Cucubalus behen. **B. oil**, ben oil. **B. ru'brum**, Statice limonium. **B. vulga'ris**, Cucubalus behen.

**Béhier'-Har'dy's symp'tom.** Aphonia preceding gangrene of the lungs.

**Beh'ring's law.** Transference of immunity against infectious disease is effected by the injection of the blood or serum of an immune person into the body of a non-immune.

**Bei'gel's disease'.** Fragility of the hair of the head, with bulbous tumefaction of the hair shafts.

**Beist'ings.** Colostrum.

**Bejui'o.** Carthagena bean; used as an antidote to serpent venom.

**Be'la** or **Be'læ fruc'tus.** Bael fruit; covolam.

**Belch'ing.** Eructation.

**Bel'enoid, Bel'onoid, Bel'emnoid**, or **Bel'oid** (*belos*, arrow, *eidos*, shape). Arrow-shaped; name given to styloid processes in general.

**Bel'gram oil.** Candelwort oil.

**Bell, Can'terbury.** Campanula trachelium. **B. pep'per**, capsicum annuum. **B. sound**, a clear sound, like that of a bell, heard in pneumothorax. **B. tym'pany**, b. sound.

**Bell's an'eurysm.** Aneurysmal varix. **B.'s an'gles**, angles formed by the meeting of the vertical line of Bell with Cowper's profile line, and with line projected from middle point of anterior border of occipital foramen to point of crossing of supraorbital and median lines. **B.'s disease'**, acute delirium, followed by exhaustion and death. **B.'s law**, rule that the anterior roots of nerves are motor; the posterior roots, sensory. **B.'s line**, a vertical line drawn through the centre of the foramen magnum. **B.'s ma'nia**, B.'s disease. **B.'s mus'cle**, muscular fibres on the inner surface of the bladder, running from the orifices of the ureters to the uvula vesicæ. **B.'s paral'ysis** or **pal'sy**, paralysis of the facial nerve. **B.'s phenom'enon**, oscillation of the eyeball when an effort is made to close the eye on the side affected with facial paralysis. **B.'s respi'ratory nerve**, the long thoracic nerve. **B.'s spasm**, convulsive tic douloureux. **B.'s ver'tical line**, B.'s line.

**Belladon'na** (beautiful lady). Deadly nightshade, Atropa belladonna, ord. *Solanaceæ;* indigenous in Asia and Europe. Its leaves, *belladonnæ folia*, and root, *belladonnæ radix*, are official in the Ph. U. S. and Br. The drug is anodyne, narcotic, antispasmodic, and mydriatic, and suppresses the various secretions. See *Atropine.* The following are the official (Ph. U. S. and Br.) preparations of belladonna: *Emplastrum belladonnæ* (from the leaves), used externally; *extractum belledonnæ alcoholicum* (Br.), prepared by concentration from the liquid extract; dose, gr. ss-j (0.032–0.065); *extractum belladonnæ foliorum alcoholicum*, (U.S.) dose, gr. $\frac{1}{6}$–$\frac{1}{4}$ (0.01–0.016); *extractum belladonnæ liquidum* (Br.); dose, ♏ ss (0.032); *extractum belladonnæ viride* (Br.), made from the expressed juice of the fresh plant; dose, gr. $\frac{1}{4}$–$\frac{3}{4}$ (0.016–0.048); *extractum belladonnæ radicis fluidum*, dose, ♏i–ij (0.06–0.13); *linimentum belladonnæ* (from the root), used externally; *tinctura belladonnæ foliorum*, dose, ♏v–xv (0.3–1.0); *unguentum belladonnæ* (from the leaves), used externally.

**Belladonnine'.** Resinous alkaloid from Atropa belladonna root; not important medicinally; atropine is sometimes so called.

**Bell-Bern'hardt phenom'enon.** Bell's phenomenon.

**Bell'flower.** Narcissus pseudonarcissus.

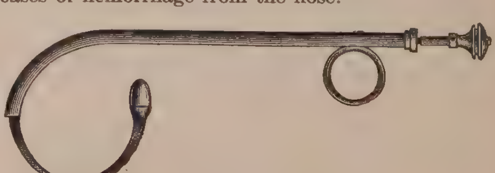
**Bellidoid'es.** Chrysanthemum leucanthemum.

**Belli'ni's ducts** or **tubes.** Tubes converging from the cortex of the kidney to the apices of the papillæ. **B.'s lig'ament**, a band passing from the capsule of the hip-joint to the trochanter major.

**Bel'lis** or **Bel'lus.** Bruisewort, common daisy, day's eye; ord. *Compositæ.* Leaves and flowers are acrid, and were at one time used as a vulnerary; the root has been used in scurvy and in pulmonary diseases. **B. horten'sis**, bellis. **B. ma'jor**, Chrysanthemum leucanthemum. **B. mi'nor**, bellis. **B. peren'nis**, bellis. **B. praten'sis**, Chrysanthemum leucanthemum.

**Bell-Magendie' law.** Bell's law.

**Bellocq's' can'nula** or **sound.** Instrument used in the operation of plugging the posterior nares in cases of hemorrhage from the nose.



Bellocq's cannula.

**Bel′lows mur′mur** or **sound.** Blowing sound like that of bellows heard occasionally by ear applied to chest during contraction of ventricles, auricles, or large arteries; it coexists with affections of the heart, but is heard also without disease of that organ, as when an artery is compressed. **B. sound, encephal′ic,** this is heard on applying ear to occiput or top of head, and is considered to indicate turgescence of vessels or inflammation, compression from turgescence giving rise to the sound in question. **B. s., fu′nic,** single murmur of bellows kind, synchronous with the first sound of the heart, due to diminished calibre of umbilical arteries, either by pressure or stretching of funis, or both. **B. s., placent′al,** uteroplacental murmur, uterine murmur or rush; sound heard on auscultating over site of placenta in pregnant woman.

**Bell′wort, small′er.** Uvularia perfoliata.

**Bel′ly.** Abdomen; formerly all splanchnic cavities were called bellies, the lower belly or venter infimus being the abdomen; middle belly, venter medius, thorax; upper belly, venter supremus, head; also the womb. Fleshy part of a muscle. **B.-band,** Russian belt. **B.-bound,** constipated. **B.-but′ton,** the navel. **B.-pot,** physconia. **B.-stalk,** a short stalk or stem connecting the embryo with the blastodermic vesicle.

**Bel′lyache.** Colic. **Dry b.,** lead colic, colica metallica. **B. root,** Angelica lucida.

**Bel′nileg.** Myrobalanus.

**Be′loid** (*belos*, arrow, *eidos*, shape). Belenoid. **B. proc′ess,** styloid process.

**Belonepho′bia** (*belone*, needle, *phobos*, fear). Morbid dread of pins and needles.

**Bel′onoid.** Belenoid.

**Belt.** Girdle or band around the waist. **Abdom′inal b.,** Russian b. **Mercu′rial b.,** cingulum mercuriale. **Rus′sian b.,** bellyband; abdominal supporter; broad bandage applied to the abdomen to support and make methodical pressure.

**Belul′cum** (*belos*, dart, *helko*, to draw out). Instrument for extracting darts or arrows.

**Ben.** Guilandina moringa, Moringa pterygosperma. **B. of Judæ′a,** benjamin. **B. nut,** seed of Guilandina moringa, or of Moringa pterygosperma. **B. oil,** the expressed oil of the seed of Moringa pterygosperma or M. aptera.

**Bence-Jones's bod′ies.** Albumosic substances in urine in diseases of the bone-marrow. **B.-J.'s cyl′inders,** substances having this shape noticed in the urine, which have passed into it from the seminiferous tubules.

**Bend.** A flexure or curve. **Head b., Neck b.,** two curves in the outline of the embryo, the former about the level of the midbrain, the latter of the hindbrain.

**Bends** (pl.). Caisson disease.

**Benedic′ta sylves′tris.** Geum rivale.

**Benedic′tum laxati′vum** (blessed laxative). Confectio sennæ.

**Ben′edikt's, symp′tom-com′plex** or **syn′drome.** Palsy of muscles to which the oculomotor nerves of one side are distributed, with tremor and paralysis of the upper extremity on the opposite side.

**Benefic′ium al′vi.** Alvi profluvium; spontaneous diarrhœa, acting favorably in prevention or cure of disease. **B. natu′ræ** (benefit of nature), vis medicatrix naturæ.

**Bengal′ car′damom.** Seed of Amomum sublatum. **B. el′emi,** resin from Canarium commune. **B. ipecacuan′ha,** root of Tylophora asthmatica. **B. ki′no,** juice of Butea frondosa. **B. quince,** see *Covolam*. **B. root,** cassumuniar.

**Benign′, Benig′nant.** Mild, non-malignant; term applied to a tumor or disease of mild character, or to a medicine whose action is not violent.

**Beninca′sa cerif′era.** E. Indian plant, used for fevers, chest affections, dysuria, etc.

**Ben′jamin.** Benzoin. **B. bush,** Laurus benzoin. **Flow′ers of b.,** benzoic acid.

**Benjoi′num** or **Ben′jui.** Benzoin.

**Ben′ne.** Sesamum orientale. **B. oil,** Sesame oil.

**Ben′net herb.** Geum urbanum, G. virginianum.

**Ben′nett's cor′puscles.** Epithelial cells or corpuscles sometimes seen in ovarian cysts. See *Drysdale's corpuscles*. **B.'s frac′ture,** longitudinal fracture of the first metacarpal bone, involving the joint and associated with dislocation.

**Benzacetin′.** Acetamidomethylsalicylate; employed as a remedy for neuralgia in doses of 5 to 15 grains (0.32–1.0).

**Benzaconine′.** Picroaconitine; with acetic acid it forms aconitine.

**Ben′zal.** Benzylidene. **B. green,** malachite green.

**Benzal′cohol.** Benzyl alcohol.

**Benzal′dehyde.** Benzoic aldehyde; identical with oil of bitter almonds; may be prepared from toluol.

**Benzaldoxine′.** $C_7H_9NO$. Oleaginous material produced by the action of hydroxylamine on benzaldehyde.

**Benzam′ide.** $C_7H_7NO$. Benzoylamide; a crystallized substance produced by acting on alcoholic ammonia with benzoyl chloride, or by heating together ammonium thiocyanate and benzoic acid.

**Benzanal′gen.** $C_{18}H_{16}N_2O_2$. A derivative of chinolin. Ortho–oxyethal–anamo–benzoyl–amido–chinoline. Antiseptic and solvent of uric acid, antithermic, antineuralgic, antiarthritic. Dose, 10 to 30 grains (0.65–2.0) daily.

**Benzan′ilid.** White powder, like acetanilid, having the same relation to benzoic acid that acetanilid has to acetic acid; natipyretic; dose, gr. iij–x (0.19–0.65).

**Ben′zene.** Benzol. **B. ring,** benzol ring. **B.-sulphon′ic acid** ($C_6H_5SO_3H$), produced by boiling together equal parts of $H_2SO_4$ and benzene.

**Ben′zidam.** Anilin.

**Benzidine′.** $C_{12}H_{12}N_2$. Diamidodiphenyl; made by the action of tin and HCl on a solution of azobenzine in alcohol.

**Ben′zil.** $C_{14}H_{10}O_2$. A product of the oxidation of benzoin with chlorine.

**Ben′zimide.** $C_{23}H_{18}N_2O_2$. A product of the action of hydrocyanic acid on benzoyl hydride; derived also from oil of bitter almonds.

**Benzin′, Benzi′num** (Ph. U. S.). Petroleum ether, a mixture of various hydrocarbons obtained in distillation of coal gas, tar, and petroleum; used as a solvent of fats, caoutchouc, and resins.

**Ben′zoas.** Benzoate; salt of benzoic acid.

**Ben′zoate.** Compound of benzoic acid and a base. **B. of beta-naph′thol,** benzonaphthol. **B. of guai′acol,** benzosol. **B. of men′thol,** used in the local treatment of toothache, neuralgia, and migraine. **B. of mer′cury,** soluble crystalline substance, employed in the treatment of syphilis.

**Ben′zoated.** Benzoinated.

**Ben′zoe.** Benzoin.

**Benzoene′.** Toluene.

**Benzo′enil.** Vanilla.

**Benzo′ic acid.** Flowers of benjamin. This acid, $C_7H_6O_2$, exists in all balsams, but chiefly in benzoin, from which it is obtained by sublimation. It is in vanilla, canella, urine of infants and of herbivorous animals; its odor is aromatic and fragrant; taste hot, slightly acidulous, and agreeable; it is soluble in 200 parts of cold water and 24 of hot water; it is expectorant and diuretic. See *Benzoin*. **B. al′dehyde,** benzaldehyde. **B. sul′phinide,** saccharin.

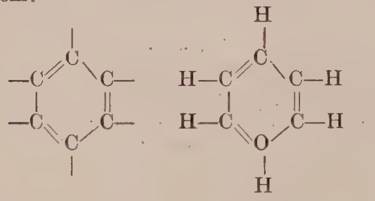
**Ben′zoin, Benzoi′num** (Ph. U. S.). Benjamin; resinous, dry, brittle substance, concrete juice of Styrax benzoin, Arbor benivi, Laurus benzoin, of Sumatra; odor is extremely fragrant, taste slightly aromatic; principle used for preparation of benzoic acid, employed in some vulnerary tinctures, and as an expectorant; also given in inhalation. Benzoic acid is obtained from it by sublimation; dose, gr. x–xxx (0.65–2.0); it is an ingredient in tinctura opii camphorata or paregoric. Purest benjamin is in amygdaloid masses. The following preparations of benzoin are official in the Ph. U. S.: *Adeps benzoinatus*, benzoinated lard, used as an ointment base; *tinctura benzoini*, dose ♏x–xxx (0.65–2.0); *tinctura benzoini composita*, dose, ʒss–j (2.0–4.0). **B. bush**, Laurus benzoin. **Flow′ers of b.**, benzoic acid. **B. odorif′erum**, Laurus benzoin.

**Ben′zoinated** or **Ben′zoated.** Term applied to ointments of various ingredients incorporated with benzoic acid in order to impart a pleasant odor.

**Benzo′inol.** Oily material like liquid vaselin; used as an application to the nasal and nasopharyngeal passages.

**Ben′zo-i′odohydrin′.** Mixture of benzoyl iodide and epichlorhydrin; used as a substitute for potassium iodide, in same doses.

**Ben′zol** or **Ben′zene.** Hydruret or hydride of phenyl, hydrophenyl, $C_6H_6$. Constituent of coal-gas tar, obtained by distilling coal naphtha. Colorless, oleaginous liquid of agreeable odor; sp. gr. 0.85. Vapor, when inhaled, acts as an anæsthetic, and may be diffused through the room in whooping-cough. It has also been given internally for destruction of trichinæ, and mixed with lard externally in itch and parasitic skin diseases, and in rheumatic and neuralgic cases. Not to be confounded with benzin, which is a mixture of several hydrocarbons. **B. ring**, the assumed arrangement of the carbon atoms in the benzol radical, the six C-atoms being joined by alternately single and double union, forming a closed chain and leaving to each atom one unsaturated affinity; in benzol each of these is united to one hydrogen atom:



The H-atoms may one or all be substituted (theoretically, at least) by any univalent atom or radical, those unions constituting the side chains.

**Ben′zonaph′thalin.** Mixture of benzoic acid and naphthalin.

**Benzonaph′thol, β-naph′thol ben′zoate.** White, tasteless, odorless substance, analgous to β-naphthol salicylate or betol; diuretic; depresses the temperature and the action of the heart and lungs.

**Benzoni′tril.** $C_7H_5N$. Cyanbenzene; an oily substance produced by distilling benzene-sulphonic acid with potassium cyanide.

**Benzoparacre′sol.** Benzoylparacresol.

**Benzophe′non.** Diphenylketone; a crystallized substance produced by the distillation of calcium benzoate.

**Benzophe′noneid** or **Benzophe′noid.** Compound obtained by decomposition of an anilin dye; germicide and antiseptic; used in ulcers and inflammation of the cornea and purulent keratitis.

**Benzopurpurin.′** A scarlet pigment formed by acting on orthotoluidin with naphthionic acid.

**Benzoqui′none.** Quinone, derived from the benzene series.

**Benzosalicin′.** A benzoyl derivative of salicin; from poplar, hence called *populin*.

**Ben′zosol.** Substitution compound of guaiacol; colorless, odorless, tasteless powder; used in tuberculosis instead of guaiacol, as being more agreeable to the stomach.

**Ben′zoyl.** $C_7H_5O$. Radical of benzoic acid. **B.-acet′yl perox′ide**, acetozone. **B. aconine′**, japaconitine. **B.-amide**, benzamide. **B.-am′idophen′ylace′tic acid**, a combination of benzoyl chloride and amidophenylacetic acid in a solution of sodium hydrate; intestinal disinfectant. **B. an′ilid**, benzanilid. **B.-ecgonine′**, a product of the decomposition of cocaine; action like caffeine, not paralysant. **B.-eu′genol**, derivative of eugenol; colorless, odorless crystals, supposed to be useful in tuberculosis. **B.-glycocin′**, hippuric acid. **B.-guai′acol**, benzosol. **B.-methylecgonine′**, B. ecgonine. **B.-paracre′sol**, formed by the action of benzoyl chloride on sodium paracresol; intestinal antiseptic; dose, gr. iv (0.26); see *Cresol*. **B.-phenylhydrazin′** ($C_{13}H_{12}N_2O$), antiseptic. **B.-pseudotropine′**, see *Tropococaine*. **B.-quinine′**, a local anæsthetic. **B.-salicin′**, populin. **B.-sulphon′ic i′mide**, saccharin. **B.-tropine′**, substance formed by the union of the tropine molecule from atropine with benzoic acid; anæsthetic and mydriatic.

**Ben′zozone.** An antiseptic, now called *Acetozone*, which see.

**Ben′zyl.** When the oily matter in balsam of Peru undergoes fractional distillation in an atmosphere of carbonic-acid gas, and under diminished pressure, it furnishes *benzyl-hydrate* or *benzylic alcohol*, *benzoate of benzyl*, and *cinnamate of benzyl*. **B. al′cohol**, phenylmethyl alcohol; found naturally in storax and balsams of Peru and tolu; produced by hydration of benzoic aldehyde. **B.-ben′zoate**, found naturally in balsams of Peru and tolu, as is also **B.-cin′namate**. **B.-e′ther of morphine′**, peronin.

**Bérard's′ an′eurysm.** A form of varicose aneurysm.

**Béraud's** (ba-roze′) **lig′ament**, suspensory ligament of pericardium. **B.'s valve**, fold of mucous membrane at the bottom of the lacrymal sac.

**Berberin′.** See *Oxyacantha galeni*, *Cœlocline polycarpa*, and *Calumba*. **B. hydrochlo′rate**, see *Oxyacantha galeni*. **B. phos′phate**, employed in malaria and in vomiting of pregnancy.

**Ber′beris.** Oxyacantha galeni. **B. aquifo′lium**, mountain grape, Oregon grape; grows in Western N. America; tonic and alterative. **B. arista′ta**, **B. asiat′ica**, from E. Indies; tonic and antiperiodic. **B. canaden′sis**, see *Oxyacantha galeni*. **B. chinen′sis**, Chinese species, used for headache, weak eyes, etc. **B. frutico′sa**, Jamaica shrub; antisyphilitic. **B. ly′cium**, similar source and properties to B. canadensis; used as a local application in diseases of the eyes. **B. vulga′ris**, common barberry of Europe and U. States; root, leaves, and fruit are all used medicinally; tonic, astrigent, and antiscorbutic.

**Berg′amot.** Small orange of very agreeable taste and peculiar odor; from its rind an oil, *oleum bergamottæ* (Ph. U. S.), oil of bergamot, is obtained, much employed as a perfume and sometimes in medicine. **B. cam′phor**, solid, greasy compound derived from bergamot oil.

**Bergap′tene.** A derivative of oil of bergamot; bergamot camphor.

**Bergenin′.** A nerve tonic, derived from saxifrage.

**Ber′ger's paræsthe′sia.** Paræsthesia of one or both extremities in young persons with debility. **B.'s sign**, inequality of pupil noticed in some nervous affections.

**Bergeron's′ chore′a** or **disease′.** Localized rhythmic chorea. **B.'s meth′od**, rectal injection of sulphuretted hydrogen and carbonic oxide in the treatment of pulmonary tuberculosis.

**Bergeron′-Hen′och's disease′.** Localized rhythmic chorea.

**Berg′mann's** or **Berg′mann-Dei′ter's fi′bres.** Radiating fibres or processes of superficial cerebellar neuroglia cells.

**Beriber′i** (*beri*, Singhalese for weakness, *beriberi*, great weakness). Disease of E. Indies, China, and Japan; kakke; bad sickness of Ceylon; acute anæmic dropsy, marked by debility and tremors of limbs or whole body, painful numbness of affected parts, anæmia, etc.; form of cachexia in which there is great muscular debility and feebleness of reparatory powers. It is a form of neuritis, almost always incurable, frequently fatal; treated by exercise, stimulant friction, sudorifics, etc. Sometimes called *barbiers*, although many consider this a different disease.

**Berlin′ blue.** See *Blue*.

**Berlin's′ disease′.** Œdema of the retina due to traumatism.

**Bernard's' cen'tre.** Centre for diabetes in floor of fourth ventricle of the brain. **B.'s duct,** accessory duct of pancreas. **B.'s gran'ular lay'er,** layer of cells in interior of acini of pancreas.

**Bernardin'.** Glycogen; named from Bernard, the French biologist.

**Ber'nay's sponge.** Prepared cotton fibre subjected to great pressure and then cut into various shapes.

**Bern'hardt's paræsthe'sia.** Paræsthesia or abnormal sensibility, with pain, due to irritation along the course of the external cutaneous nerve of the thigh.

**Bern'hardt-Roth's symp'tom-com'plex.** Bernhardt's paræsthesia.

**Bern'heimer's fi'bres.** Nervous fibres connected with the tractus opticus.

**Berthollet's** (behr-to-laze') **law.** If two salts soluble in a given medium can, when brought together in that medium, by mutual decomposition produce a salt less soluble than either, that salt will under such conditions be produced; or, if two salts by mutual decomposition can produce a salt more volatile than either of them, they will always form this salt when they are mixed together and dry heat is applied.

**Bertillon's' sys'tem** or **Bertillonage'.** The systematic recording of measurements and special characteristics of individuals for use in future identification; used in the case of recruits, criminals, and other aggregations of men; devised by Bertillon, a French criminologist.

**Bertin's** (behr-tans') **bones** or **spon'gy bod'ies** (after Bertin, French anatomist). Sphenoidal cornua. **B.'s col'umns,** processes of the cortical substance of the kidney, extending between the pyramids of Malpighi as far as the hilus. **B.'s lig'ament,** iliofemoral ligament.

**Ber'trand's su'ture.** Continued suture, resorted to in wounds of the intestines.

**Beryl'lium.** Glucinum.

**Besen'na.** Bark of Albizzia anthelmintica.

**Besnier's' rheu'matism.** Simple chronic articular rheumatism.

**Bestial'ity.** Sexual intercourse with one of the lower animals.

**Bes'tucheff's mix'ture** or **tinc'ture.** Ethereal tincture of iron chloride.

**Be'ta.** The beet; a genus of plants of the order *Chenopodiaceæ.* The second letter (β) of the Greek alphabet, prefixed as a classifier in chemistry to denote the second of a series, the first being marked by alpha (*a*).

**Be'ta-eucaine'.** See *Eucaine.*

**Be'ta-gran'ules.** Fine granules present in the protoplasm of the leucocytes in certain pathological conditions; they are amphophilic, *i. e.*, reacting to both acid and basic dyes.

**Betaïne'.** $C_5H_{13}NO_3$. An alkaloid from Beta vulgaris, the common beet, and other plants: it is also produced by the oxidation of the ptomaïn, *cholin.*

**Be'ta-naph'thol.** Hydronaphthol; form of naphthol isomeric with *a*-naphthol ($C_{20}H_8O_2$), obtained from naphthalin; in white flakes, odorless, slightly soluble in water, more soluble in alcohol and ether. It is an intestinal antiseptic and a bactericide; used in typhoid fever and chronic diarrhœa; externally, in ointment, in prurigo, strength of 5 per cent. with lard or lanolin; internally, dose, gr. iij–viij (0.2–0.5). Has been used in chronic disease of the middle ear. **B.-n. antipyrin',** a compound of the two substances, formed by trituration. **B.-n. ben'zoate,** antiseptic and diuretic; used in phthisis; benzonaphthol: an intestinal antiseptic, used in dysentery, typhoid fever, etc., in doses of gr. v–xv (0.32–1.0). **B.-n. bis'muth,** bismuth naphtholate, orphol; a brown, insoluble powder containing 80 per cent. of bismuth and 20 per cent. of betanaphthol, which is decomposed in the stomach into its two constituents; an intestinal antiseptic, employed in gastroenteric catarrh, diarrhœa, dysentery, typhoid fever, cholera, etc., in doses of gr. v–x (0.32–0.65). **B.-n. car'bonate,** the dinapthyl ester of carbonic acid, made by the action of phosgene on betanaphthol sodium; an intestinal antiseptic. **B.-n. sal'icylate,** betol, naphthalol, naphtosalol, salinaphthol, salicylate of naphthol ether, salicylate of betanaphthol; white, odorless, tasteless powder. soluble in oil and alcohol; obtained by reaction between betanaphthol and salicylic acid in presence of a dehydrating agent, such as oxychloride of phosphorus; it is antiseptic, antipyretic; used in cystitis and articular rheumatism, and externally in bougies in gonorrhœa; dose, gr. iv–viij (0.25–0.5).

**Beta-nitrophen'ylpiperazin'.** A derivative of piperazin; its therapeutic value is undetermined.

**Beta-phenet'idyl-croton'ic-eth'yl es'ter.** See *Phenetidyl.*

**Beta-phenylacryl'ic acid.** Cinnamic acid.

**Beta-phe'nylpropion'ic acid.** See *Phenylpropionic acid.*

**Beta-quinine'.** Quinidine.

**Beta-resalgin'.** Resalgin.

**Be'tel.** Species of pepper cultivated in India; leaves are chewed with lime and areca; tonic and astringent.

**Beth'root.** Trillium latifolium.

**Betin'.** A substance derived from the beet; action like that of ergot.

**Be'tol.** Betanaphthol salicylate.

**Beton'ica al'ba.** B. officinalis. **B. aquat'ica,** Scrophularia aquatica. **B. monta'na,** Arnica montana. **B. officina'lis,** betony, wood betony; ord. *Labiatæ;* formerly employed in decoction of the flowers and leaves, in gout, sciatica, cephalalgia, etc.; the leaves are aperient, the root, emetic. **B. paul'i** veronica. **B. vulga'ris,** B. officinalis.

**Bet'ony.** Betonica officinalis.

**Bet'telheim's gran'ules.** Blood dust.

**Bett'endorff's test.** Bettmann's test.

**Bett'mann's test.** For arsenic. To a mixture of hydrochloric acid and the suspected liquid a solution of tin chloride in hydrochloric acid is added; then upon the dropping of a bit of tin-foil in the mixture a brown precipitate is thrown down if arsenic is present.

**Bet'ula al'ba.** Birch; ord. *Betulaceæ.* The young leaves are astringent and bitter, antiscorbutic, diaphoretic, and anthelmintic. The young leaves are also applied to wounds and ulcers. The saccharine juice or sap is antiscorbutic and diuretic; bark is aromatic and astringent; oil or pitch from it is used, like other forms of pitch, in cutaneous affections, also in gonorrhœa. **B. al'nus,** Alnus glutinosa. **B. emargina'ta,** Alnus glutinosa. **B. glutino'sa,** Alnus glutinosa. **B. len'ta,** sweet birch, black birch, cherry birch, mountain mahogany; American species, bark and leaves of which have smell and taste of Gaultheria procumbens. Infusion is used as an excitant and diaphoretic; bark and leaves are stimulant and diaphoretic; volatile oil is nearly identical with that of gaultheria; gaultheria is obtained from the leaves and bark. **B. na'na,** dwarf birch; mountainous shrub of Switzerland; the sap is used in gout, and applied externally in skin diseases.

**Betulin'.** Crystalline resinous substance ($C_{36}H_{60}O_3$) from inner bark of Betula alba.

**Betz's gi'ant cells.** Large nerve cells or ganglia in the deeper portion of the cortex of the brain. Several of these in a group form what is called *Betz's nest.*

**Bev'elling.** In dentistry, the flaring outward of the edge of a tooth cavity.

**Bex** (cough). Cough; tussis. **B. convulsi'va,** pertussis. **B. hu'mida,** cough with expectoration. **B. sic'ca,** dry cough. **B. therio'des,** pertussis.

**Bez'oar.** Calculous concretion, found in stomach, intestines, and bladder of herbivorous animals, and esteemed alexipharmic. It was believed that no poison and no eruptive or pestilential disease could resist its influence.

**Bezoar'dic.** Medicines supposed to possess same properties as bezoar. **B. acid,** acid found occasionally in bezoardic concretions of animals.

**Bezoar'dica rad'ix.** Dorstenia contrayerva.

**Bezoar'dicum.** Bezoar. **B. huma'num,** urinary calculus, formerly supposed to be alexipharmic.

**Bez'old's gan'glion.** Ganglion found in septum between the auricles in the heart of the frog. **B.'s mastoidi'tis,** destructive suppurative inflammation of the mastoid process. **B.'s symp'tom,** sign of B.'s mastoiditis, being a swollen, inflamed spot near the seat of the inflamed mastoid process.

**Bhang.** Hashish, cannabis indica.

**Biartic'ulate** (*bis*, twice, *articulus*, joint). Having two joints.

**Biaster'ic diam'eter.** Occipital diameter.

**Biauric'ular diam'eter.** Distance between auricles on the skull.

**Biauric'ulate.** Having two auricles, as of the heart, or two ears.

**Biba'sic** (*bis*, twice, *basis*, base). Possessing two bases, or being able to unite with two equivalents of a base. **B. salts,** see *Salt.*

**Bibito'rius** (*bibo*, to drink). Rectus internus oculi, so called from habit of drinker looking into the glass.

**Bibo'rate.** Compound having one part of base to two of boric acid.

**Bibro'mide.** Compound having one part of an element to two of bromic acid.

**Bi'bron's an'tidote.** A remedy formerly in use for snake-bites, consisting of corrosive sublimate, potassium iodide, and bromine.

**Bib'ulous.** Drinking up or absorbing. **B. pa'per,** absorbent paper used in dentistry.

**Bicam'eral** (*bis*, twice, *camera*, room). Having two chambers or compartments, as *bicameral abscess.*

**Bicap'itate** (*bis*, twice, *caput*, head). Having two heads.

**Bicap'sular.** Having two capsules.

**Bicarbo'nas** or **Bicar'bonate.** Compound having one part of base to two of acid

**Bicau'dal** or **Bicau'date.** Having two tails. **B. mus'cle,** the retrahens auris muscle.

**Bicel'lular.** Having two cells.

**Bicephal'ic** or **Biceph'alous.** Having two heads.

**Bicephal'ium** (*bis*, twice, *kephale*, head). Large sarcoma on the head, like a double head.

**Biceph'alus.** Two-headed monster.

**Bi'ceps** (*bis*, twice, *caput*, head). That which has two heads; name given to two muscles—one in the arm, the other in the thigh. **B. ancone'us,** anconeus. **B. brach'ii** or **brachia'lis,** b. flexor cubiti. **B. cru'ris,** b. flexor cruris. **B. cu' biti,** b. flexor cubiti. **B. exten'sor,** triceps extensor. **B. exter'nus mus'culus,** long portion of triceps brachialis. **B. fem'oris,** b. flexor cruris. **B. flex'or cru'ris,** muscle on posterior part of thigh; one head arising from tuberosity of ischium, the other from great part of linea aspera; inserted into top of fibula; serves to bend leg on thigh. **B. flex'or cu'biti** or **f. ra'dii** or **f. hu'meri,** muscle situated at anterior and internal part of arm; extending from edge of glenoid cavity and from top of coracoid process to tuberosity of radius; it bends the forearm upon the arm. **B. hu'meri** or **inter'nus hu' meri,** b. flexor cubiti. **B. ma'nus** or **ra'dii,** b. flexor cubiti. **B. su'ræ,** gastrocnemius.

**Bichat's** (be-shaz') **canal'.** Arachnoid canal. **B.'s fat-ball,** collection of fat between buccinator and masseter muscles, especially in very young children. **B.'s fis'sure,** fissure below the posterior part of corpus callosum, through which the pia mater passes. **B.'s mem'brane,** tunica intima or inner coat of an artery.

**Bichlo'ral antipyrin'.** See *Dichloral.*

**Bichlo'ride.** Compound of one part of an element to two of chlorine.

**Bi'cho.** Portuguese name for a worm that penetrates the toes, pulex penetrans. Gangrene of the rectum.

**Bichro'mate.** A salt having one part of base to two of chromic acid.

**Bicip'ital** (*biceps*, two-headed). Two-headed; relating to biceps. **B. em'inence,** b. tubercle. **B. fas'cia,** aponeurosis of biceps muscle. **B. groove,** longitudinal groove between tuberosities of os humeri, lodging long head of biceps. **B. tu'bercle** or **tuberos'ity,** prominence near the upper extremity of the radius, to which the tendon of the biceps is attached.

**Bicolorin'.** Æsculin.

**Biconcave'** (*bis*, twice, *concavus*, concave). Doubly concave, both sides being concave; term applied to lenses, etc.

**Bicon'dylar diam'eter.** Diameter of jaw measured between given points on the condyles.

**Biconvex'** (*bis*, twice, *convexus*, convex). Doubly convex, both sides being convex.

**Bicor'nate** (*bis*, twice, *cornu*, horn). Having two horns, as *bicornate uterus*, in which cornua are divergent.

**Bicor'nis** (*bis*, twice, *cornu*, horn). Possessing or ending in two horns or processes, as the hyoid bone.

**Bicus'pid** (*bis*, twice, *cuspis*, spear). That which has two cusps or points, as *bicuspid teeth*, small molars; see *Molar.* **B. valve,** mitral valve.

**Bicus'pus.** Bicuspid tooth.

**Bicy'anide.** Compound in which there are two parts of the cyanide to one of the combining element.

**Bid'der's gan'glion.** Ganglion in the groove between the auricle and ventricle of the heart.

**Bi'dens acmel'la.** Spilanthus acmella. **B. bipinna'ta,** Spanish needle; indigenous plant whose seed and roots are emmenagogue and expectorant. **B. conna'ta;** swamp beggars' ticks, similar properties. **B. croca'ta,** Mexican plant; applied externally to syphilitic ulcers. **B. fer'vida,** Spilanthus oleracea. **B. frondo'sa,** beggars' ticks; indigenous; used in croup. **B. tetrago'na,** Mexican plant; leaves used for tea. **B. triparti'ta** grows in Europe; sialagogue.

**Bidet'.** Chamber bathing apparatus to be bestridden in case of hemorrhoids, prolapsus ani, affections of the sexual organs, etc.

**Bidig'ital.** Having two fingers.

**Bid'uoter'tian fe'ver.** A tertian fever with paroxysms lasting two days, the interval therefore being of very short duration; subcontinuous fever.

**Bid'uous.** Lasting two days. **B. fe'ver,** a term suggested for estivo-autumnal fever, because of the long duration of the paroxysm.

**Bieg's ento'tic test.** Test of power of conduction or non-conduction of sound through the small bones of the ear when an ear-trumpet is applied to the end of a catheter in the Eustachian tube

**Bielectrol'ysis.** Decomposition by electricity at both the positive and negative poles.

**Bien'stock's bacil'lus** or **putrefac'tive bacil'lus.** Bacillus putrificus coli.

**Bier'mer's anæ'mia.** Pernicious anæmia. **B.'s pitch,** lowering of pitch of the tympanitic sound in hydropneumothorax when the patient is seated.

**Biernac'ki's symp'tom.** Insensibility to pain in the ulnar nerve near the elbow-joint, occurring in locomotor ataxia and dementia paralytica.

**Bier'-right, trial by.** See *Trial by bier-right.*

**Biesiadec'ki's fos'sa.** Fossa iliacosubfascialis.

**Biest'ings** or **biest-milk.** Colostrum.

**Biett's** (be-ets') **col'lar.** Syphilitic zone of eruption on the neck.

**Bifem'orocalcane'us.** Gastrocnemius.

**Bi'fid.** Divided into two parts, see *Bifurcated.* **B. spine,** spina bifida. **B. tongue,** tongue with longitudinal cleft.

**Bifis'tular** (*bis*, twice, *fistula*, pipe). Possessing two tubes.

**Bi'flex canal'.** A reflection of the skin, making a sac between the claws of sheep.

**Bifo'cal.** Having a double focus, as a lens so ground that the refracting power in one half differs from that in the other.

**Bifor'ate** (*bis*, twice, *foris*, opening). Provided with two perforations or pores.

**Bifur'cate** or **Bi'furcated** (*bis*, twice, *furca* fork). Divided into two, as the roots of the lower molar or upper first bicuspid teeth. *Bifurcated* suggests normal, *bifid* abnormal, division.

**Bifurca'tion.** Division of a trunk into two branches, as bifurcation of the trachea, aorta, etc.

**Bigas'ter.** Digastric muscle.

**Big'bloom.** Magnolia macrophylla.

**Bigelo'via vene'ta.** A plant of the order *Compositæ,* in the S. W. United States and N. Mexico; a source of damiana.

**Big'elow's lig'ament.** Y-shaped ligament of Bigelow; iliofemoral ligament. **B.'s opera'tion,** litholapaxy. **B.'s sep'tum,** layer of compact osseous tissue in the neck of the thigh-bone.

**Bigem'inæ eminen'tiæ** (*bis,* twice, *gemini,* twins). Quadrigemina tubercula.

**Bigem'inal bod'ies.** Quadrigemina tubercula.

**Bigem'inous.** Term applied to a variety of pulse which intermits after every second beat.

**Bigem'inum.** One of the corpora quadrigemina in the fœtus.

**Big'gar.** Disease of Bengal with dangerous cerebral symptoms.

**Big jaw.** Actinomycosis of cattle.

**Big'leaf.** Magnolia macrophylla.

**Bigle'noid diam'eter.** Diameter taken from one glenoid fossa to the other on the skull.

**Bigno'nia antisyphilit'ica.** Cybistax antisyphilitica. **B. aquifocia'lis,** W. Indian and S. American plant, bark of which is astringent. **B. capreola'ta,** root and plant are employed in syphilis, chronic rheumatism, and cachexiæ in general. **B. caro'ba,** Jacaranda procera. **B. catal'pa,** catalpa. **B. copa'ia,** caroba. **B. cruci'gera,** B. capreolata. **B. in'dica,** leaves are employed in India as emollients to ulcers. **B. leucox'ylon,** trumpet tree; American tree, sap of which is antidote against manchineel. **B. ophthal'mica,** eye root, eye vine; indigenous in Guiana; pulp or juice of root dropped into the eye has been used in ophthalmia. **B. pur'gans,** leaves are antisyphilitic; bark of root is purgative. **B. radi'cans,** Tecoma radicans. **B. sempervi'rens,** Gelsemium nitidum.

**Bigo'nial.** Between or relating to the two gonions.

**Big'paunched.** Having a large belly; abdominous.

**Biju'gal diam'eter.** Diameter between points of junction of posterior vertical edge of malar bone and extended upper edge of zygoma.

**Biju'gular diam'eter.** Diameter between points of junction of mastooccipital suture with posterior border of jugular process.

**Bikh.** Aconitum ferox.

**Bi'labe** (*bis,* twice, *labium,* lip). Instrument with two blades for removing foreign bodies from the bladder through the urethra.

**Bi'late of so'dium.** Picromel. See *Glycocholate.*

**Bilat'eral.** Having relation to both sides of the body or to each of two paired organs, as *bilateral paralysis* or *bilateral squint.* **B. opera'tion,** see *Lithotomy.* **B. sym'metry,** see *Symmetry.*

**Bilat'eralism** or **Bilat'eralness.** The condition of being equal on the two sides; bilateral symmetry.

**Bil'berry.** Vaccinium myrtillus. **Bear's b.,** Arctostaphylus uva ursi. **Red b.,** Vaccinium vitis idæa.

**Bile.** Yellow, greenish, viscid, bitter, nauseous fluid secreted by the liver. It is called *hepatic* or *cystic* according as it flows into the duodenum from the liver or from the gall bladder. It consists of water holding salts in solution, with coloring-matters, fat, and mucus, the salts being especially those of sodium and potassium in combination with glycocholic and taurocholic acids. Its sp. gr. is 1.020 to 1.026. It contains no enzyme. Several pigments have been described in the bile, but bilirubin and biliverdin are the only ones found in normal bile. The fatty matter of bile chiefly consists of cholesterin combined with fatty acids and various products of disintegration of tissue, as xanthin, leucin, tyrosin, and hypoxanthin.

The use of bile is to emulsify and saponify fats, to dissolve fatty acids and the soaps of the alkaline earths, to promote peristalsis and absorption, and to retard putrefaction in the intestinal canal. The quantity of bile in twenty-four hours is estimated at 532.8 c. c. (v. Wittich), 453 to 566 c. c. (Westphalen); in round figures 500 c. c., with specific gravity of 1.0104 and 2.253 per cent. of solid residue. The proportion of solid matter to liquid in the bile is about 14 to 86. Frerichs and Gorup-Besanez made the following analysis of bile from the gall-bladder:

COMPOSITION OF THE BILE.

| In 100 parts. | Frerichs. | | | Gorup-Besanez. | | |
|---|---|---|---|---|---|---|
| | Man æt.18 | Man æt.22 | Man æt.49 | Man æt.68 | Woman æt.28 | Boy æt.12 |
| Water . . . . . . | 86.00 | 85.92 | 82.27 | 90.87 | 89 81 | 82.81 |
| Solids . . . . . . | 14.00 | 14.08 | 17.73 | 9.13 | 10.19 | 17.19 |
| Salts of biliary acids | 7.22 | 9.14 | 10.79 | 7.37 | ..... . | 14.80 |
| Fat . . . . . . . | 0.32 | 0.92 | 4.73 | ...... | 3.09 | |
| Cholesterin . . . . | 0.16 | 0.26 | | | | |
| Mucus and pigment | 2.66 | 2.98 | 2.21 | 1.76 | 1.45 | 2.39 |
| Inorganic salts . . | 0 65 | 0.77 | 1.08 | ...... | 0.63 | |

**B. acids,** see *Bile.* **Black b.,** atrabilis. **B. canalic'uli** or **cap'illaries,** minute canals, commencement of biliary ducts. **Cys'tic b.,** see *Bile.* **B. ducts,** see *Choledoch duct.* **B. fat,** cholesterin. **B. fis'tula,** opening made artificially between the gall-bladder and the bowels. **Green b.,** form of bile met with in herbivorous animals; bile exposed to action of gastric juice, as in biliary vomit. **Hepat'ic b.,** see *Bile.* **B. of ox,** ox-gall; fresh gall of bos taurus (*fel bovis,* Ph. U. S.). Bitter stomachic and anthelmintic; tonic and laxative in cases of deficiency of biliary secretion. Inspissated ox-gall is an extract made by heating and evaporating ox-gall. **B. pig'ment,** coloring-matter of bile, see *Bile.* **B. salts,** sodium glycocholate and taurocholate. **B. of swine,** pig's bile, inspissated, has been used for the same purposes as ox-gall. **Test for b.,** see *Pettenkofer's test.*

**Bilhar'zia hæmato'bia** or **mag'na** (after Dr. Bilharz, of Cairo). Distoma hæmatobium.

**Bilharzio'sis.** The aggregate of symptoms caused by the presence of *Distoma hæmatobium,* which see.

**Bil'iary.** That which relates to bile. **B. ab'scess,** suppuration in the gall-bladder or bile-ducts. **B. acids,** bile acids, see *Bile.* **B. appara'tus,** collection of parts concurring in the secretion, storage, and excretion of bile, viz., liver-cells, ducts, and gall-bladder. **B. ar'tery,** cystic artery. **B. cal'culus,** see *Calculi.* **B. cirrho'sis,** Hanot's disease, a form of hypertrophic cirrhosis of the liver, with jaundice, supposed by Charcot to be caused by an irritation coming from the contents of the bile ducts. **B. col'ic,** attack of violent pain from passage of a gallstone. **B. concre'tions,** concretions formed in the biliary apparatus. **B. ducts,** ducts which receive the bile from the penicilli of the liver and convey it to the hepatic duct. **B. fis'tula,** see *Fistula.* **B. or'gans,** see *Biliary apparatus.* **B. pas'sages,** see *Biliary apparatus.*

**Bilia'tion.** Excretion of bile.

**Bi'lic acid.** Combination of various acids of bile.

**Bilichol'ic acid.** Name given by Berzelius to a supposed biliary acid.

**Bilicholin'ic acid.** Choleic acid.

**Bilicyanin'** (*kyanos,* blue). Blue coloring-matter produced by oxidation of pigment of bile, by adding strong nitric acid to an ammoniacal solution of bilirubin.

**Bilifica'tion.** Formation of bile.

**Biliflavin'** (*flavus,* yellow). Yellow substance resulting from the action of silver oxide on biliverdin.

**Bilifulvin'** (*fulvus,* reddish yellow). Yellow coloring-matter from bile of the ox; bilirubin. See *Cholochrome.*

**Bilifuscin'** (*fuscus,* brown). $C_{16}H_{20}N_2O_4$. Dark brown substance similar in appearance to biliprasin.

**Bilihumin'.** Insoluble blackish-brown extractive matter of gallstones remaining after treating them with ether, water, acids, etc., and acting on the residue with ammonia-water.

**Bilim'bi** or **Bilim'bing te'res.** Averrhoa bilimbi.

**Bilin′.** Picromel; resinous matter resulting from the evaporation of bile from which mucus has been removed; mixture of glycocholate and taurocholate of sodium.

**Bilineurin′.** Neurin of bile; choline.

**Bil′ious.** Relating to bile, containing bile, or produced by bile, as b. temperament, b. symptoms, b. fever. Often used without any definite idea as regards bile being attached to it. *Biliousness* is a term to denote symptoms of disturbance of digestive functions, constipation, malaise, furred tongue, vomiting of bile, etc. **B. fe′ver,** term indefinitely applied to some forms of malarial or typhoid fever. **B. remit′tent fe′ver,** form of remittent fever in which vomiting of bilious matter, jaundice, and tenderness over the hepatic region are the chief symptoms. **B. tem′perament,** constitution possessed by those of sallow or dusky complexion, who suffer especially from slow digestion, torpid liver, and constipation; their mental processes are apt to be rather sluggish, and they naturally look on the dark side of life; when this latter tendency is specially marked the temperament is called the melancholic. **B. ty′phoid,** a grave form of relapsing fever complicated by jaundice.

**Biliphæin′** (*phaios,* dusky). Cholepyrrhin, cholophæin. See *Cholochrome.*

**Biliprasin′** (*prasinos,* dark green). $C_{16}H_{22}N_2O_6$. Greenish-black coloring-matter from gallstones.

**Bilipurpin′** or **Bilipurpurin′.** Purple material produced by action of oxide of silver on biliverdin.

**Bilipyrrhin′** (*pyrros,* reddish). See *Cholochrome.*

**Bilirubin′** (*bilis,* bile, *ruber,* red). $C_{16}H_{18}N_2O_3$. Orange-red coloring-matter in minute granules, resulting from the decomposition of hæmatin; it is the only pigmentary ingredient in fresh hepatic bile in man; it is found in the urine in jaundice, and in gallstones; it exists usually as a neutral bilirubinate of sodium.

**Bilirubin′ic acid.** Bilirubin in its aspect as the acid element in sodium bilirubinate.

**Bi′lis.** Bile. **B. bovi′na** or **bu′bula,** ox-gall. **B. cys′tica** or **fel′lea,** cystic bile. **B. hepat′ica,** hepatic bile.

**Biliverdin′** (*bilis,* bile, *viridis,* green). $C_{32}H_{36}N_4O_8$. On adding acid to a solution of bilirubin, a precipitate of green flocculi takes place, possessing properties of chlorophyll or green coloring-matter of leaves; the same is found in the bile of the herbivora. It exists for the most part as a biliverdinate of sodium.

**Biliverdin′ic acid.** An acid obtained from biliverdin on oxidation with sodium chromate. The term has also been applied to the free pigment uncombined with sodium.

**Bill′roth's disease.** Malignant lymphoma, resembling Hodgkin's disease; pseudomeningocele.

**Bi′lobed** or **Bilob′ular.** Having two lobes.

**Biloc′ular** (*bis,* twice, *loculus,* small place). Having two cells or cavities.

**Bil′va.** Covolam.

**Bima′lar diam′eters.** Diameters between malar regions of face.

**Bima′na** (having two hands). Order of division of *Mammalia,* man being alone included. See *Bimanus.*

**Bi′manous** (*bis,* twice, *manus,* hand). Having two hands; man is the only animal possessing two perfect hands.

**Biman′ual.** By means of both hands. **B. palpa′tion,** examination of pelvis and contents by hands applied, the one within and the other without. **B. ver′sion,** see *Turning.*

**Bimas′toid.** Relating to mastoid process of both sides, as bimastoid diameter.

**Bimax′illary.** Relating to the jaw-bones of both sides, as bimaxillary diameter.

**Bi′nary.** Consisting of two parts; in chemistry, containing two elements; in anatomy, branching into pairs. **B. combina′tion,** in chemistry, combination of two elementary bodies. **B. com′pound,** in chemistry, compound of two elements, or of an element and a compound acting as an element.

**Binau′ral** or **Binauric′ular.** Relating to both ears, or (the second term) to both auricles, as binaural stethoscope (see *Stethoscope*). **Binauric′ular arc,** line drawn over the vertex between the two ears.

**Bind′er.** Bandage. **Obstet′ric b.,** bandage applied around the abdomen after delivery.

**Bind′ing.** Constipating.

**Bind′web.** Neuroglia.

**Bind′weed.** Polygonum aviculare. **Blue b.,** Solanum dulcamara. **False b.,** Ipomœa. **Fid′dle-leaved b**, Convolvulus panduratus. **Great b.,** Convolvulus sepium. **Hedge b.,** Convolvulus sepium. **Lav′ender-leaved b.,** Convolvulus cantamica. **Sea b.,** Convolvulus soldanella. **Virgin′ia b.,** Convolvulus panduratus.

**Bind′wood.** Hedera helix.

**Bini′odide.** Iodide containing two equivalents of iodine to one of the combining element.

**Binoc′ular** (*oculus,* eye). Relating to or affecting both eyes, as *binocular vision,* vision with both eyes; the images made upon the two retinæ amalgamated into one. **B. band′age,** figure-of-8 bandage covering both eyes.

**Bino′tic** (*ous,* ear). Binaural.

**Binov′ular.** Relating to two ova.

**Binox′alate.** A salt in which the proportion of oxalic acid is double that in a simple oxalate.

**Binox′ide.** Oxide containing twice as much oxygen as the first oxide of the same element.

**Binu′clear** or **Binu′cleate.** Having two nuclei.

**Bi′oblast** (*bios,* life, *blastos,* sprout). A mass of protoplasm in process of conversion into a cell; any young cell, an osteoblast, for example.

**Biochem′ia, Biochem′istry,** or **Biochym′ia** (*bios,* life, *chemia*). Vital chemistry; chemistry of living organisms as distinguished from that of the dead.

**Biochem′ical.** Relating to the chemistry of living organisms.

**Bi′od** (*bios,* life). Vital force.

**Biodynam′ics** (*bios,* life, *dynamis,* power). Doctrine of vital activity or force.

**Biogam′ia** (*gamos,* marriage). Animal magnetism.

**Bi′ogen.** The assumed ethereal substance of a spirit body. Magnesium dioxide; employed in anæmic conditions in doses of gr. v–xv (0.32–1.0).

**Biogen′esis** (*bios,* life, *genesis,* origin). Formation or development of organisms from those already existing. See *Archebiosis.*

**Biogenet′ic** or **Biogen′ic.** Relating to the formation or development of life.

**Biogno′sis** (*bios,* life, *gnosis,* knowledge). Knowledge or study of phenomena of life.

**Biokinet′ics** (*bios,* life, *kinesis,* motion). The science of the developmental changes of living beings.

**Biolog′ical** (*bios,* life, *logos,* description). Relating to laws or phenomena of life or of living bodies.

**Biol′ogist.** One who studies or is versed in biology.

**Biol′ogy.** Science of life or of living bodies; physiology.

**Biolych′nion** or **Biolych′nium** (*bios,* life, *lychnion,* lamp). Innate heat, vital heat, animal heat.

**Biol′ysis** (*bios,* life, *lysis,* solution). Destruction of life; cessation of life.

**Biolyt′ic.** Tending to destruction of life; an intensely depressing agent.

**Biomag′netism.** Animal magnetism.

**Biom′etry** (*bios,* life, *metron,* measure). Estimation of duration of life.

**Bi′on.** A living thing.

**Bion′ergy.** Vital force.

**Bion′omy** (*bios,* life, *nomos,* law). Physiology.

**Biophænomenolo′gia** (*bios,* life, *phainomenon,* appearance, *logos,* discourse). Physiology.

**Bioph′agism** or **Bioph′agy.** The act of feeding on or absorbing living matter.

**Bioph′agous** (*bios,* life, *phago,* to eat). Subsisting on living organisms, said of insectivorous plants.

**Biophil'ia** (*bios*, life, *phileo*, to love). Instinct of self-preservation.

**Biophysiog'raphy.** The description of living beings.

**Biophysiol'ogy.** The science of the origin, development, and functions of living organs and tissues.

**Bi'oplasm** (*bios*, life, *plasma*, formation). Bioplasmic or germinal matter; living or germinal self-propagating matter of living beings.

**Bioplas'mic.** Relating to bioplasm.

**Bioplas'son.** Protoplasm; bioplasm.

**Bi'oplast** (*bios*, life, *plasso*, to form). Distinct mass of bioplasm; minute living particle.

**Bioplas'tic.** Relating to bioplasm.

**Bi'opsy.** The excision of a lesion or a piece of morbid tissue for purposes of histological diagnosis.

**Bior'bital.** Pertaining to both orbits. **B. an'gle,** angle of divergence of axes of vision of both eyes. **B. diam'eters,** diameters of upper part of face. **B. plane,** plane of axes of the two orbits.

**Bi'oscope** (*bios*, life, *skopeo*, to see). Instrument used in *bioscopy* or examination of a dead infant to determine whether it was born alive.

**Bio'sis.** Vitality; life.

**Biosoph'ia** (*sophia*, wisdom). Biodynamics.

**Bi'ospheres.** Minute protoplasmic particles in a state of Brunonian oscillation.

**Biostat'ics.** The science of the physical properties, weight, etc., of living beings.

**Biostatis'tics** (*bios*, life, *statistics*). Vital statistics.

**Biotax'is** or **Bi'otaxy** (*taxis*, order). Taxonomy; arrangement or coordination of living organisms according to external characters; static biology.

**Biot'ic.** Vital.

**Biot'ics.** Physiology.

**Biot'omy** (*bios*, life, *tome*, incision). Vivisection.

**Biot's** (be-oze') **respira'tion.** Short and occasionally interrupted breathing, when occurring in meningitis regarded as of unfavorable prognostic import.

**Biparasit'ic.** Relating to two parasites, one living on the other.

**Bipari'etal.** Relating to both parietal bones. **B. diam'eter,** measurement from one parietal fossa to the other. **B. su'ture,** sagittal suture.

**Bip'arous** (*pario*, to bring forth). Giving birth to two offspring at a time.

**Bipar'tite.** Divided into two parts.

**Biparti'tion.** Division or partition into two parts, as cells.

**Bi'ped** (*bis*, twice, *pes*, foot). An animal walking on two feet only.

**Bip'edal.** Having or relating to two feet.

**Bipen'niform.** Double feather-shaped. See *Penniform.*

**Biper'forate.** Having two perforations.

**Biphos'phate.** Compound in which there is one part of the base to two parts of phosphoric acid.

**Bip'licate** (*bis*, twice, *plico*, to fold together). Possessing two folds.

**Bipo'lar** (*bis*, twice, *polus*, pole). Having two poles or processes, said of nerve cells found in the ganglia of the gray matter of the brain. **B. ver'sion,** see *Version.*

**Bipo'rous** (*bis*, twice, *porus*, pore). Possessing two pores.

**Bipubiot'omy** (*pubes*, *tome*, incision). Operation of sawing through the front of the pelvis, a substitute for the Cæsarean operation.

**Birch.** Betula alba. **Black b.,** Betula lenta. **B. cam'phor,** $C_{36}H_{60}O_3$, betulin. **Cher'ry b.,** Betula lenta. **B. oil,** see *Betula alba.* **Sweet b.,** Betula lenta.

**Bird cher'ry.** Prunus padus. **B. pep'per,** Capsicum baccatum. **B. pox,** epithelioma contagiosum. **B. weed,** Polygonum aviculare.

**Birds' bread.** Sedum acre. **B. nest,** Hypopitys lanuginosa. **B.-nest bod'ies** or **cells,** masses of epithelial cells in cancer, having such appearance. **B.-nest, ed'ible,** see *Hirundo esculenta.*

**Bird's for'mula.** The two final figures of the specific gravity of a specimen of urine express approximately the number of grains of solid matter in an ounce of the same urine. **B.'s sign,** absence of respiratory sounds, with dulness, in pulmonary hydatids.

**Birefrac'tive** or **Birefrin'gent.** Doubly refractive.

**Birhin'ia** (*bis*, twice, *rhis*, nose). A monstrosity marked by a double nose.

**Birk'ett's her'nia.** Protrusion of the synovial membrane through a rent in the capsular ligament of a joint.

**Birth.** Parturition. **Cross b.,** preternatural. **Live b.,** see *Born.* **B. mark,** nævus. **B. pal'sy,** spastic diplegia; spastic paralysis of all the extremities at birth or soon afterward, due usually to hemorrhage into the cerebral meninges. **Plu'ral b.,** the birth of more than one child at a time. **Post'humous b.,** birth of a child after the death of its father. **Prem'ature b.,** extrusion of the fœtus before the end of the ninth month of intra-uterine life; more definitely, during the seventh or eighth month. **B. root,** Trillium erectum. Aristolochia. **Still-b.,** birth of a dead, but fully developed, child; also the child so born. **Vir'gin b.,** parthenogenesis.

**Birth'root** or **Birth'wort.** Aristolochia. **B. snake'root,** Aristolochia serpentaria.

**Bisacro'mial.** Relating to both acromion processes.

**Bis'cara but'ton.** Aleppo button.

**Bische.** Malignant dysentery or gangrene of the lower bowel, which prevails in Brazil and on the coast of Africa.

**Bis'cuiting.** Primary drying and fixing of porcelain moulded into definite form for dentists' use.

**Bisec'tion.** Division into two parts.

**Biser'mas.** Salvia sclarea.

**Bisex'ual.** Having genital characteristics of both sexes; hermaphrodite.

**Bisfer'iens** or **Bisfer'ious** (*bis*, twice, *ferio*, to strike). Dicrotic; having double beat, as pulse.

**Bish** or **Bisk.** Aconitum ferox.

**Bish'op's weed.** Ammi.

**Bisil'iac.** Relating to both ilia, as *bisiliac diameter*, that between cristæ ilii, transverse diameter of pelvic inlet.

**Bisischiad'ic** or **Bisischiat'ic.** Relating to both ischia, as *bisischiadic diameter*, line between the two tuberosities of the ischia.

**Bisk'ra boil** or **but'ton.** See *Aleppo button.*

**Bislin'gua.** Ruscus hypoglossum.

**Bis'mal.** Bismuth methylenedigallate; employed as an astringent in diarrhœa, in doses of gr. ij–v (0.12–0.32).

**Bismal'va.** Althæa.

**Bis'marck brown.** Phenylene brown, triamidoazobenzene hydrochloride, a stain employed in microscopy.

**Bismutal'.** An antiseptic mixture of bismuth, sodium phosphate, and sodium salicylate.

**Bis'mutan.** Santan.

**Bis'muth** (symbol, Bi). Regulus of bismuth, tin glass; a metal of crystalline structure and of a grayish-white or pinkish color, sp. gr. 9.822; fusible at 507° F., volatilizable at a white heat. Its salts are used in gastroenteric disorders, as they are believed to check intestinal fermentation without interfering with the normal digestive processes. See also *Bismuthum.* **B. albu'minate,** grayish-white powder; used in spasmodic affections of the stomach and bowels. **B. and ammo'nium cit'rate** (Ph. U. S.), in small scales, formed by dissolving citrate of bismuth in water of ammonia. **B. ben'zoate,** white powder made by the action of a watery solution of sodium benzoate and any acid solution of bismuth nitrate; employed for dusting ulcers, soft chancres, etc. **B. betanaph'thol,** b. naphtholate, orphol, a brown, insoluble powder containing 80 per cent. of bismuth and 20 per cent. of betanaphthol, decomposed in the stomach into its two constituents; an intestinal antiseptic, employed in gastrointestinal catarrh, diarrhœa, dysentery, typhoid fever, cholera, etc.;

dose, gr. xv–xxx (1.0–2.0). **B. bo′rate,** from fusion of bismuth trinitrate and boric acid, employed like subnitrate and as a substitute for iodoform. **B. borophe′nate,** markasol. **B. but′ter,** chloride of bismuth. **B. car′bolate,** b. phenol. **B. car′bonate** (Ph. Br.), b. subcarbonate. **B. and ce′rium sal′icylate,** reddish-white insoluble powder; useful in diseases of the gastrointestinal mucous membrane, especially diarrhœa and dysentery caused by ulceration. **B. chinolin′ rho′donate,** reddish-yellow powder; used as a local application to ulcers. **B. chrysophan′ate,** dermol, a yellow, insoluble powder, a mixture of chrysarobin and bismuth hydroxide; an astringent application in some forms of cutaneous disease. **B. cit′rate** (Ph. U. S.), white, insoluble powder; used for preparing citrate of bismuth and ammonium. **B. cres′ylate,** betacresol, a substitute for iodoform; also an intestinal antiseptic; dose, gr. xv–xlv (1.0–3.0) in a day. **B. dithiosal′icylate,** thioform. **B. gal′late,** b. subgallate. **B. loret′inate,** a combination of bismuth and loretin; astringent and antiseptic; used externally as a dusting-powder and ointment in wounds and skin diseases. **B. metacre′sol,** employed as an intestinal antiseptic. **B. meth′ylenedigal′late,** bismal. **B. naph′tholate,** b. betanaphthol. **B. ni′trate,** ternitrate of bismuth; crystalline salt from direct solution of bismuth in nitric acid. **B. no′sophen,** eudoxin. **B. o′leate,** used externally in skin diseases. **B. ox′ide** (Ph. Br.), a dull, lemon-yellow powder prepared by boiling b. subnitrate in a soda solution. **B. oxyben′zoate,** b. benzoate. **B. oxybro′mide,** yellow powder; used in nervous dyspepsia. **B. oxychlo′ride,** white, insoluble powder; used as a cosmetic. **B. oxyi′odide,** red, insoluble powder, result of action of potassium iodide on bismuth subnitrate; used externally as an antiseptic; resembling iodoform in action. **B. oxyiodogal′late,** airol, the oxyiodide of bismuth subgallate; used as a dusting-powder in wounds, ulcers, burns, chancres, etc. **B. oxyi′odometh′ylgal′lol,** iodogallicin. **B. oxyi′odopyrogal′lol,** yellow-red powder; surgical antiseptic. **B. oxysal′icylate** (Ph. Br.), b. salicylate. **B. pentox′ide,** $Bi_2O_5$; found in bismuthic acid. **B. phe′nate** or **phe′nolate,** b. phenol, a white, non-toxic powder, containing 80 per cent. of bismuth oxide and 18–19 per cent. of phenol; its doses and actions are similar to those of betanaphthol bismuth. **B. phos′phate,** obtained from fusion of bismuth oxide, caustic soda, and phosphoric acid; a gastrointestinal disinfectant; dose, gr. iij–x (0.2–0.65). **Pu′rified b.,** by heating bismuth with potassium nitrate contaminating metals are oxidized and separated. **B. pyrogal′late** or **pyrogal′lol,** a dark green powder, non-toxic, containing 50 per cent. of bismuth oxide and 50 per cent. of pyrogallol. Employed as a disinfectant in contagious intestinal diseases and as an antiseptic in the treatment of wounds, ulcers, psoriasis, etc. **Reg′ulus of b.,** bismuth. **B. resor′cinate,** a yellowish powder, result of action of resorcin on solution of bismuth trinitrate, used in catarrh of the stomach. **B. sal′icylate,** (Ph. Br.) pink powder precipitated when sodium salicylate is added to bismuth nitrate in solution in glycerin; used in catarrh of the intestines and stomach, diarrhœa, etc., as an intestinal antiseptic; externally as a substitute for iodoform in wounds, ulcers, etc. **B. and so′dium i′odide,** $Bi_34NaI$, an alterative associated with the therapeutic action of bismuth. **B. subben′zoate,** b. benzoate. **B. subcar′bonate** (Ph. U. S.), similar in properties to subnitrate and used as a substitute for it; white, insoluble powder. **B. subchlo′ride,** b. oxychloride. **B. subgal′late,** dermatol, odorless, insoluble yellow powder; employed externally as a substitute for iodoform in wounds, burns, ulcers, certain diseases of the eye and ear, eczema, caries of the teeth, etc.; internally, in gastrointestinal diseases in place of bismuth subnitrate; in powder, gauze, glycerin, etc. **B. subi′odide,** b. oxyiodide. **B. subni′trate** (Ph. U. S. and Br.), white bismuth, trisnitrate of bismuth, white oxide of bismuth, magistery of bismuth, pearl white, Spanish white; white, insoluble powder, prepared by the addition of purified bismuth to nitric acid and precipitation by water; it is tonic, astringent, anodyne, antispasmodic, local sedative, and antiseptic; used in gastrodynia, dyspepsia, diarrhœa, and dysentery, and externally as a drying application to ulcerated surfaces in leucorrhœa, coryza, etc., and for soothing effect to burns, ulcers, and excoriated surfaces, ozæna, etc. **B. subsal′icylate,** b. salicylate. **B. subtan′nate,** similar in action to b. subgallate. **B. sul′phite,** antiseptic; used in gastrointestinal fermentative affections; obtained by mutual action of sodium and bismuth nitrite solutions. **B. sulphocar′bolate** or **sulphophe′nate,** employed as a digestive and antiseptic astringent in doses of gr. ij–v (0.13–0.32). **B. tan′nate,** yellow, insoluble powder. **B. tribromcar′bolate** or **tribromphe′nate** or **tribromphe′nol,** xeroform, a yellowish-green, insoluble, non-toxic powder containing 49.5 per cent. of bismuth oxide and 50 per cent. of tribromphenol; intestinal antiseptic in diarrhœa, dysentery, typhoid fever, cholera, etc.; dose, gr. xv–xx (1.0–1.3). **B. triox′ide,** yellow, insoluble oxide. **B. trisni′trate,** b. subnitrate. **B. vale′rianate,** white, insoluble powder, with odor of valerianic acid; made by mixing a neutral solution of oxide of bismuth in nitric acid with sodium valerianate, washing and drying the precipitate; used in gastrodynia, chronic gastralgia, and neuralgia, and chronic palpitation as a nervine; dose, gr. ss–ij (0.032-0.13) three or four times a day, in pill. **White b.,** b. subnitrate.

**Bismu′thate.** Salt of bismuthic acid.

**Bismu′thic.** Belonging to or containing bismuth, as *bismuthic acid* or *bismuthic oxide*.

**Bismu′thol.** Bismutal.

**Bismutho′sis.** The constitutional toxic effects of bismuth when taken in excess.

**Bismu′thum.** Bismuth. **B. al′bum** or **B. oxydula′tum al′bum,** bismuth subnitrate. **B. purifica′tum,** purified bismuth. The official preparations are: (Ph. U. S.) *Bismuthi citras,* dose, gr. ij–v (0.13–0.32); *B. et ammonii citras,* dose, gr. ij–v (0.13–0.32); *B. subcarbonas,* dose, gr. x–xxx (0.65–2.0); *B. subnitras,* dose, gr. x–xxx (0.65–2.0). (Ph. Br.) *Bismuthi carbonas,* same as the subcarbonate; *B. oxidum* dose, gr. v–xx (0.32–1.3); *B. oxysalicylas* or *salicylas,* dose, gr. v–xx (0.32–1.3); *B. subnitras,* dose, gr. x–xxx (0.65–2.0). For further description of these and other salts, see under *Bismuth.*

**Bi′sol.** Soluble bismuth phosphate; employed in gastralgia, enteralgia, etc.

**Bispi′rus** (*bis,* twice, *spiro,* to breathe). Dipnous.

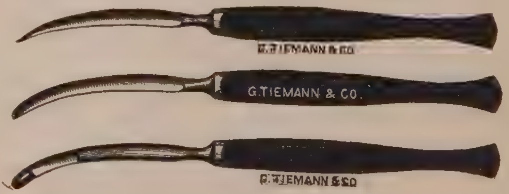
**Bis′sa.** Dropsy, in Egypt, of man and the lower animals.

**Bissul′cate** (*bis,* twice, *sulcus,* furrow). Possessing two grooves.

**Bistephan′ic.** Relating to the two stephanions or points of meeting of the temporal ridge and coronal suture.

**Bis′tort.** Polygonum bistorta. **Virgin′ian b.,** Polygonum virginianum.

**Bis′toury.** Small cutting-knife, used in surgery, composed of blade and handle, the former movable or fixed in the latter. The chief bistouries are:



Curved bistouries; the upper is sharp-pointed, the middle blunt-pointed, and the lower Sir Astley Cooper's.

*straight b.,* in which blade and cutting edge are straight, point being fine, round, or square; *convex b.,* blade being convex at cutting edge, concave at back; *concave b.,* blade being concave at edge and convex at back; *blunt-pointed b.*, blade having button at its extremity; *blunt* or *probe-pointed bistoury of Pott*, concave at cutting edge and its point blunt, so as to be carried on the palmar surface of the index finger, to divide stricture in strangulated hernia. *Sir Astley Cooper's bistoury* has an edge of not more than eight lines in length, situated about five lines from the point. *Bistouri caché* is a curved bistoury, the blade of which is placed in a cannula, whence it issues on pressing a spring.

**Bisul'phate.** Salt of sulphuric acid containing twice as much acid as a normal sulphate.

**Bisul'phide.** Compound of two atoms of sulphur with one of another element.

**Bisul'phite.** Acid sulphite; two equivalents of sulphurous acid are united with one of a base.

**Bisvigume'.** A new food introduced into the French army; the name is contracted from the French words *biscuit* (biscuit), *viande* (meat), and *legume* (vegetable). This food is compounded of ship-bread, meat, and vegetables, and is similar to the German pea-sausage (*Erbswurst*).

**Bitart'rate.** Compound in which there is one part of base to two parts of tartaric acid.

**Bitem'poral.** Relating to both temporal bones, as *bitemporal diameter* in the fœtus, a line drawn from one zygomatic process to the other.

**Bitot's** (be-toze') **spots.** Small areas of xerosis or abnormal dryness of the conjunctiva.

**Bit'ter.** Amarus. **B. al'mond,** Amygdalus amarus. **B. ap'ple,** colocynth. **B. ash,** quassia. **B. bark,** Pinckneya pubens, Alstonia constricta. **B. bloom,** Chironia angularis. **B. bu'gleweed,** Lycopus europæus; tonic and alterative. **B. can'dytuft,** Iberis amara. **B. cane,** Cana agria. **B. cassa'va,** Manihot utilissima. **B. cress,** cardamine. **B. cu'cumber,** Citrullus colocynthis. **B. cup,** cup made of quassia wood; it is filled with water, which is allowed to stand in it over night and is then taken in the morning as a tonic. **B. dock.** Rumex obtusifolia. **B. grass,** Aletris farinosa. **Ho'ly b.,** tiera picra. **B. kino'va,** kinovic acid. **B. or'ange,** Citrus vulgaris. **B. polyg'ala,** Polygala rubella. **B. prin'ciple,** principle contained in some vegetables, from which they derive their bitter character. **B. red'berry,** Cornus florida. **B. root,** Apocynum androsæmifolium, Gentiana catesbæi, Menyanthes verna. **B. salt,** magnesium sulphate. **B. tinc'ture,** compound tincture of gentian. **B. weed,** Ambrosia trifida. **Wel'ter's b.,** carbazotic acid. **B. wood,** quassia.

**Bit'tera febrif'uga.** Quassia.

**Bitterin'.** See *Quassia*.

**Bit'ters.** A class of drugs of vegetable origin, containing a bitter principle, employed chiefly to increase the appetite and improve digestion, and thus secondarily as tonics; also a class of semi-medicinal proprietary cordials and alcoholic preparations. The medicinally prescribed bitters are divided into several groups, as follows: *Aromatic bitters,* containing both bitter principles and aromatic oils, but no tannin; *astringent* or *styptic bitters,* containing bitter principles and tannin, but little if any aromatic oil; *simple bitters,* containing bitter principles only, with very little or no tannin or aromatic oil; *compound bitters* are mixtures of two or more bitters in definite proportions and flavored.

**Bit'tersweet.** Solanum dulcamara, Celastrus scandens.

**Bitu'men.** Mineral pitch or tar; one of the family of mineral resins or hydrocarbons.

**Bitu'minate of iod'oform.** Mixture of tar, 100 parts, and iodoform, 10 or 20 parts; used as an ointment to soft chancres.

**Bitu'minous.** Relating to or containing bitumen.

**Bi'uret.** $C_2O_2N_3H_5+H_2O$. A substance derived from urea by driving off ammonia by heat. **B. reac'tion,** reaction of a purple color resulting from adding Fehling's solution to a solution of peptone.

**Bivalent** biv'a-lent or bi'va-lent (*bis,* twice, *valeo,* to be able). Possessing the capability of displacing two atoms of hydrogen or combining with the same number.

**Bi'valve** (*bis,* twice, *valva,* a door). Having two folds or blades. **B. spec'ulum,** a speculum for the rectum or vagina, composed of two semicylindrical halves which can be separated after the instrument is in place.

**Biven'ter** (*bis,* twice, *venter,* belly). Double-bellied, digastric. **B. cervi'cis,** inner part of complexus muscles. **B. mandib'ulæ** or **maxil'læ,** digastric muscle.

**Biven'tral.** Having two stomachs or bellies. **B. lobe of cerebel'lum,** wedge-shaped lobe of cerebellum behind the amygdala.

**Bix'a america'na, orella'na,** or **orlea'na.** See *Terra orleana.*

**Bixin'.** An orange-red stain derived from bixa seeds or annotto.

**Bizygomat'ic.** Relating to zygoma of both sides, as *bizygomatic diameter,* distance between arches formed on each side by union of zygoma with temporal process of malar bone.

**Bizzozero's** (bit-tsots'er-oze) **blood plaques** or **plates** or **plate'lets.** Colorless round or oval disks of variable size occurring in the blood; their function is undetermined, but it is believed they are a source of the fibrin ferment, and thus an agent in coagulation. **B.'s cor'puscles,** nucleated red blood corpuscles. **B.'s crys'tals,** crystals of spermic phosphate found in the sputa of asthma, in feces, seminal fluid, and elsewhere.

**Blac'ciæ.** Rubeola.

**Black.** Destitute of color, owing to absorption of all the light rays; the antithesis of white. **B. al'der,** Prinos verticillatus; Rhamnus frangula. **B. ant'imony,** antimony sulphide. **B. ash,** Fraxinus sambucifolius. **B.-berry,** see *Rubus fruticosus.* **B. birch,** Betula lenta. **B. blood,** see *Blood.* **Bone b.,** animal charcoal. **B. bot'tle,** see *Infusum sennæ.* **B. can'cer,** melanosis. **B. cher'ry,** Prunus serotina. **B. co'hosh,** cimicifuga. **B. damp,** methane, fire-damp. **B. death,** see *Death.* **B. dog,** hypochondriasis. **B. dose,** see *Infusum sennæ.* **B. draught,** see *Infusum sennæ.* **B. drop,** acetum opii. **B. elm,** Ulmus effusa. **B. eye,** see *Ecchymosis.* **B. fe'ver,** malignant purpuric fever. **B. galls,** galls that have been collected before the egg has been hatched or the fly has escaped; see *Galls.* **B. gin'ger,** Amomum zingiber. **B. haw,** Viburnum prunifolium. **B. head,** comedo. **B. hel'lebore,** Helleborus niger. **B. indura'tion of the lungs,** anthracosis. **B. jaun'dice,** jaundice with dark discoloration. **B. lead,** plumbago. **B. leg,** sympathetic anthrax. **B. lep'rosy,** lepra nigricans. **B. li'on,** sloughing syphilitic ulcer, from which British soldiers suffered in Portugal. **B. mea'sles,** rubeola nigra. **B. mus'tard,** Sinapis nigra. **B. night'shade,** Solanum nigrum. **B. oak,** Quercus tinctoria. **B. pep'per,** Piper nigrum. **B. phthis'is,** miners' asthma. **B pitch,** pix nigra. **B. pock,** see *Variola.* **B. quar'ter** symptomatic anthrax. **B. rasp'berry,** Rubus occidentalis. **B. root,** Aletris farinosa, Pterocaulon pycnostachyum, Coryza pycnostachia, Leptandria purpurea. **B. Sam'son,** Rudbeckia purpurea. **B. snake'root,** cimicifuga. **B. spit,** sputum of anthracosis of miners. **B. spruce,** Abies nigra. **B. tang,** Fucus vesiculosus. **B. su'gar,** extractum glycyrrhizæ. **B. tongue,** dark appearance of that organ from accumulated impurities, spores, disintegrated epithelium, etc. **B. tur'peth,** turpethum nigrum. **B. vom'it,** yellow fever; also characteristic matter vomited in that disease. **B. wal'nut** Juglans nigra. **B. wash,** made by the addition of calomel to lime-water, used as an application to syphilitic sores. **B. wa'ter,** pyrosis. **B.-wa'ter fe'ver,** a malignant malarial affection of tropical and sub-tropical regions, characterized by hæmoglobinuria, bilious vomiting, and jaundice; supposed by some to be a manifestation of quinine poisoning. **B. wil'low,** Salix nigra.

**Blad'der.** A word originally signifying the urinary bladder, and subsequently extended to denote any similar membranous bag containing fluid; when employed without qualifying word it usually retains its original meaning. See under *Urinary*. Also used as a synonym of blister or vesicle. **Air-b., Swim-b.,** see *Air*. **Biloc′ular b.,** saculated bladder divided into two parts. **Brain-b.,** cerebral vesicle. **Colum′nar b.,** fasciculated b. **Daugh′ter-b.,** secondary hydatid. **Eye-b.,** optic vesicle. **Fascic′ulated b.,** condition of bladder in which interior of organ is marked by strong reticulated ridges or columns. **B. fe′ver,** pemphigus; cystitis; urethral fever. **Gall-b.,** see *Gall-bladder*. **Gas′trula b.,** perigastrula. **Germ-b.,** blastula. **Moth′er-b.,** hydatid cyst from which secondary cysts arise. **Sac′culated b.,** condition of bladder in which the mucous coat protrudes through the muscular, so as to produce hernia, which may form vesical sacculus or appendix vesicæ. **B. sen′na,** Colutea arborescens; purgative. **Stam′mering b.,** spasmodic micturition, with imperfect emptying of the bladder, from want of coordination of muscles employed in the act. **Swim-b.,** air-bladder. **U′rinary b.,** see *Urinary bladder*. **B.-worm,** cysticercus. **B.-wrack,** Fucus vesiculosus.

**Blade′bone.** Scapula.

**Blæ′sitas** (*blaisos*, halting). Stammering; balbuties; defect in pronunciation, substituting soft consonants for hard, as *z* for *s*, *d* for *t*; lisping.

**Blæso′sis.** Crookedness of limb.

**Blæ′sus.** One who is bowlegged; a stammerer; a general paralytic.

**Blain.** Pustule; blotch; blister; mark left by wound; discoloration after sore; swelling of glottis in horses.

**Blain′ville's ears.** Congenital lack of symmetry in the two ears.

**Blan′card's pills.** Pills of iodide of iron, imitated in *pilulæ ferri iodidi* (Ph. U. S.).

**Blanch′ing.** Making white; becoming white.

**Bland.** Soothing; demulcent.

**Blan′din-Nuhn's gland.** Blandin's gland.

**Blan′din's gan′glion** or **gland.** Mucous gland near the tip of the tongue, having its outlet on the inferior surface of the tongue.

**Blanks.** Epileptic vertigo.

**Blas alterati′vum.** Plastic force.

**Bla′sius's duct.** Duct of the parotid gland, better known as *Steno's* or *Stenson's duct*.

**Blast.** Infection of anything pestilential, destructive epidemic. A blighted bud or embryo. Flatulent affection of sheep. To wither, to blight or ruin.

**Blastelas′ma** (*blastos*, germ, *elasma*, plate). One of the secondary layers of the fecundated ovum derived from ectoderm and endoderm.

**Blaste′ma** (Gr., a sprout). Germinal or embryonic protoplasm. **B. den′tis,** pulp of a tooth. **Ossif′ic** or **os′sifying b.,** osteogenetic layer of the periosteum. **B. pi′li,** hair papilla.

**Blaste′mal** or **Blastemat′ic.** Relating to blastema.

**Blas′tide.** Space in segment of ovum preceding appearance of nucleus.

**Blastocar′dia** (*blastos*, germ, *kardia*, heart) or **Blas′tocele** (*blastos*, germ, *kelis*, spot). Germinal spot.

**Blas′tochyle** (*blastos*, germ, *chylos*, juice). Clear liquid contents of germinal vesicle or blastocele.

**Blas′tocœle, Blastocœlo′ma,** or **Blastocœ′lome** (*blastos*, germ, *koilos*, hollow). Cavity in ovum after division; central part or cavity of blastula.

**Blas′tocyst** (*blastos*, germ, *kystis*, bladder). Germinal vesicle.

**Blas′toderm** (*blastos*, germ, *derma*, skin). Germinal membrane or vesicle; membranous sac in fecundated ovum, consisting of nucleated cells or blastomeres formed by segmentation, original structure from which embryo is developed. At the outset it is a simple layer, afterward composed of two layers, endoderm or hypoblast and ectoderm or epiblast, between which, at a later stage of development, a third layer forms, called the mesoderm or mesoblast.

**Blastoder′mal** or **Blastoder′mic.** Relating to the blastoderm.

**Blas′todisc** or **Blas′todisk.** Germinal disk of the ovum of birds; archiblast.

**Blastogen′esis** or **Blastog′eny** (*blastos*, germ, *genesis*, production). Reproduction by budding; evolution of the body from the primitive substance.

**Blasto′ma.** Granuloma; a true tumor; a tumor composed of the products of aberrant growth of cells and tissues of the individual in whom it is developed. (Adami.)

**Blas′tomeres** (*blastos*, germ, *meros*, part). Nucleated cells formed in the first stages of development of the ovum, constituting the blastoderm. From these early cells all the fœtal tissues are afterward developed. See *Morula*.

**Blastomyce′tes** (*blastos*, germ, *mykes*, mushroom). Saccharomycetes or budding fungi; order of fungi multiplying by germination and sporification, including yeast fungi, torulaceæ, etc.

**Blastomyce′tic** or **Blastomycot′ic.** Relating to such fungi as yeast fungi, torulaceæ, etc. **B. dermati′tis,** disorder of the skin induced by the presence in it of a vegetable parasite of the yeast-plant family; it progresses slowly from one point of integument to another, with vegetations and wart-like elevations of surface, which may ulcerate and produce grave destruction of tissue; it resembles lupus vulgaris in the ulcerative stage.

**Blas′tophore** (*blastos*, germ, *phero*, to carry). Part of spermatospore which is not developed into spermatozoids.

**Blastophyl′la** (*blastos*, germ, *phyllon*, leaf). Ectoderm and endoderm.

**Blas′topore** (*blastos*, germ, *poros*, passage). Passage into cavity of innermost germ layer through the primitive streak.

**Blas′tosphere** (*blastos*, germ, *sphaira*, sphere). Single row of cells in the embryo arranged like a closed sphere; segmentation sphere of embryo, result of combination of the male and female elements. See *Blastula* and *Cytula*.

**Blastostom′ion** (*blastos*, germ, *stoma*, mouth). Blastopore.

**Blastostro′ma** (*blastos*, germ, *stroma*, bed). Portion of ovum giving origin to the blastoderm; embryonic area.

**Blas′tula.** Fecundated ovum, when in condition of hollow, spherical space filled with liquid or semiliquid material, the walls of the sphere being made up of a single cell layer; blastosphere.

**Blas′tulapore.** Passage into the interior of the blastula.

**Blastula′tion.** Development of the blastula or blastosphere.

**Blas′tule.** Blastula.

**Blat′ta.** Clot. A genus of insects; roach. **B. byzan′tia,** marine production from Conchylia, prescribed in epilepsy, hysteria, and hepatic obstructions. **B. lappo′nica,** Russian cockroach. **B. orienta′lis,** cockroach; active principle, called *antihydropin*, is diuretic and used in albuminuria, diminishing the amount of albumin and casts in the urine and dispelling accompanying œdema.

**Blaud's pills.** Pills of carbonate of iron, imitated in *pilulæ ferri carbonatis* (Ph. U. S.).

**Bla′wort.** Centaurea cyanus, Campanula rotundifolia.

**Bla′zing star.** Chamælirium luteum, Liatris, Aletris farinosa.

**Blea′berry.** Vaccinium myrtillus.

**Bleach′ing.** Dealbation, or subjecting to a process of whitening; losing color. Process of chemically removing discoloration of dental tissues by means of oxidizing or reducing agents. **B. pow′der,** chlorinated lime.

**Blear′edness.** Lippitudo; sore eyes from inflammation of the edges of the eyelids.

**Blear-eye** or **Blear′-eyedness.** Lippitudo.

**Blear-eyed.** Lippus, one affected with blear-eye.

**Bleb.** Bulla.

**Blech'non** or **Blech'num.** Polypodium filix mas. **B. lignifo'lium,** Asplenium scolopendrium. **B. squamo'sum,** Asplenium ceterach.

**Bleed'er.** Phlebotomist. Person suffering from hæmophilia.

**Bleed'ers' disease'.** Hæmophilia.

**Bleed'ing.** Hemorrhage; bloodletting. **B. boist,** cupping-glass. **B. heart,** Cypripedium luteum.

**Blem'matrope** (*blemma,* eye, *trepo,* to turn). Ophthalmotrope.

**Blen'na.** Mucus. Many compounds of this word (blenn-) were formerly in use, but most of them are now obsolescent or actually obsolete. Such words were: *Blennemesis* or *blennoëmesis,* vomiting of mucus; *blennenteria* or *blennenteritis,* mucous diarrhœa; *blennocystitis,* vesical catarrh, etc. **B. na'rium,** nasal mucus.

**Blennadeni'tis** (*blenna,* mucus, *aden,* gland). Inflammation of mucous follicles.

**Blennocys'tis,** pl. blennocyst'ides (*blenna,* mucus, *kystis,* cyst or bladder). Bursa mucosa.

**Blenno'des.** Blennoid; myxoid; mucous.

**Blennogen'ic** or **Blennog'enous** (*blenna,* mucus, *gennao,* to form). Mucific; forming or generating mucus.

**Blen'noid** (*blenna,* mucus, *eidos,* resemblance). Like mucus; myxoid; muciform.

**Blenno'ma.** Polypus.

**Blennomenorrhœ'a** (*blenna,* mucus, *men,* month, *rheo,* to flow). White menses; menstrual flow characterized by impoverished appearance of the blood in tuberculous and other debilitated subjects.

**Blennophthal'mia.** Ophthalmia, usually purulent.

**Blennorrha'gia** (*blenna,* mucus, *rhegnymi,* to break forth). Gonorrhœa; excessive mucous discharge.

**Blennorrha'gic.** Relating to blenorrhagia or gonorrhœa. **B. epididymi'tis,** hernia humoralis.

**Blennorrhin'ia** (*blenna,* mucus, *rhis,* nose). Coryza.

**Blennorrhœ'a** (*blenna,* mucus, *rheo,* to flow). Inordinate secretion and discharge of mucus; gonorrhœa. **B. benig'na,** leucorrhœa. **B. chron'ica,** gleet. **B. cilia'ris,** ophthalmia tarsi. **B. conjuncti'væ,** purulent conjunctivitis. **B. genital'ium,** leucorrhœa. **B. of lac'rymal sac,** see *Mucocele.* **B. luo'des,** gonorrhœa. **B. nasa'lis,** coryza. **B. neonato'rum,** ophthalmia neonatorum. **B. oc'uli,** purulent ophthalmia. **B. Stoerk'ii,** chronic catarrh of the upper air passages, with narrowness of the larynx, described by Stoerk as occurring in some parts of Europe. **B. tor'pida,** gleet. **B. urethra'lis,** gonorrhœa. **B. urina'lis,** cystitis with profuse mucous discharge. **B. vene'rea,** gleet. **B. ventric'uli,** gastrorrhœa. **B. vesi'cæ,** b. urinalis.

**Blennorrhœ'al.** Accompanied with profuse secretion and discharge of mucus; usually synonymous with gonorrhœal.

**Blenno'sis.** An affection of mucous membranes.

**Blennostasin'.** Cinchonidine hydrobromide; has the property of checking mucous secretion, hence employed in the treatment of coryza, bronchitis, etc. Dose, gr. v (0.32).

**Blennos'tasis** (*blenna,* mucus, *stasis,* rest). Suppression or suspension of mucous discharge.

**Blennostat'ic.** Remedy for suppression of mucous discharge.

**Blennotho'rax** (*blenna,* mucus, *thorax,* chest). Pulmonary catarrh, with excessive mucous secretion and abundant râles. **B. chron'icus,** asthma humidum.

**Blennotorrhœ'a** (*blenna,* mucus, *ous,* ear, *rheo,* to flow). Discharge of mucus from the ear; otorrhœa.

**Blennu'ria.** Presence of mucus in the urine.

**Blepharadeni'tis** (*blepharon,* eyelid, *aden,* gland). Ophthalmia tarsi; inflammation of the eyelids or of the Meibomian glands.

**Bleph'aral.** Relating to the eyelid; palpebral.

**Blepharanthraco'sis.** Gangrenous or carbuncular inflammation of the eyelids.

**Blepharelo'sis** (*blepharon,* eyelid, *eileo,* to roll). Entropion; ectropion.

**Blepharemphyse'ma.** Emphysema of the eyelid.

**Bleph'aric.** Relating to the eyelid; palpebral.

**Bleph'arism** or **Blepharis'mus.** Nictation; involuntary winking.

**Blephari'tis.** Ophthalmia tarsi; inflammation of the eyelids. **B. angula'ris,** b. intermarginalis. **B. cilia'ris,** b. marginalis. **B. gangræno'sa,** blepharanthracosis. **B. glandula'ris** or **glandulo'sa,** inflammation of Meibomian glands; chalazion. **B. intermargina'lis,** inflammation of lids and parts between, from altered secretion and lacrymation. **B. inter'na,** inflammation of conjunctival portion of the eyelids. **B. margina'lis,** inflammation of edges of the eyelids. **B. phlegmono'sa,** intense inflammation of the cellular tissue of the eyelids. **B. sim'plex,** simple inflammation of the edges of the eyelids, with redness, crusting, and gluing together of the lids. **B. squamo'sa,** b. marginalis, with the formation of scales. **B. ulcero'sa,** form of blepharitis with pustules at opening of hair glands, followed by ulceration. **B. variolo'sa,** inflammation of the lids in smallpox.

**Blepharoadeni'tis.** Blepharadenitis.

**Blepharoadeno'ma.** Glandular tumor of the eyelid.

**Blepharoathero'ma.** Tumor of lid, semifluid and gelatinous, with distinct cell wall; sebaceous cyst of the eyelid.

**Blepharoblennorrhœ'a.** Purulent ophthalmia. **B. neonato'rum,** see *Ophthalmia purulenta infantum.*

**Blepharocarcino'ma.** Cancer of the eyelid.

**Blepharochal'asis** (*blepharon,* eyelid, *chalasis,* relaxation). Relaxation of the skin of the upper lid, causing drooping.

**Blepharochromidro'sis** (*blepharon,* eyelid, *chroma,* color, *hidros,* sweat). Colored sweat, usually bluish, of the eyelids.

**Blepharoclei'sis** (*blepharon,* eyelid, *kleisis,* closure). Occlusion or adhesion of the eyelids.

**Blepharoclo'nus** Clonic spasm of the eyelids.

**Blepharocolobo'ma** (*coloboma,* cleft or shortening). Fissure of the eyelids; deficiency of the eyelid.

**Blepharoconjunctivi'tis.** Inflammation of the palpebral conjunctiva.

**Blepharodyschrœ'a** (*blepharon,* eyelid, *dys,* with difficulty, *chroa,* color). Discoloration of the eyelid; nævus of the eyelid.

**Blepharœde'ma.** Œdema of the eyelids. **B. agno'sum,** hydroblepharon.

**Blepharoemphyse'ma.** Emphysema of the eyelids.

**Blepharohæmatidro'sis** (*blepharon,* eyelid, *haima,* blood, *hidros,* sweat). Sweating of blood from the eyelids, probably local hemorrhage.

**Blepharohyperidro'sis.** Excessive sweating of the eyelids.

**Blepharolithi'asis** (*blepharon,* eyelid, *lithos,* stone). Formation of concretions in the eyelid.

**Blepharomelæ'na** (*blepharon,* eyelid, *melas,* black). Condition of the eyelids in which there is a deposit of black pigment; blepharochromidrosis.

**Blepharonco'sis** or **Blepharon'cus** (*blepharon,* eyelid, *onkos,* tumor). Tumor of the eyelid.

**Blepharopachyn'sis** (*blepharon,* eyelid, *pachynsis,* thickening). Abnormal thickness of the eyelid.

**Blepharoöphthal'mia.** Blepharophthalmia.

**Blepharophimo'sis** (*blepharon,* eyelid, *phimoo,* to constrict). Congenital diminution of space between the eyelids; blepharostenosis.

**Blepharoph'ryplasty** (*blepharon,* eyelid, *ophrya,* eyebrow, *plasso,* to form). Plastic operation on the eyelid and eyebrow.

**Blepharophlegma'sia.** Blepharitis.

**Blepharophthal'mia.** Ophthalmia tarsi. **B. glandulo'sa,** purulent ophthalmia of infants. **B. neonato'rum,** ophthalmia neonatorum. **B. purulen'ta,** blepharopyorrhœa. **B. ulcero'sa,** see *Ophthalmia tarsi.*

**Blepharophthal'mostat** (*blepharon,* eyelid, *ophthalmos,* eye, *statikos,* at standstill) Instrument to keep the eyeballs and eyelids immovable.

**Blepharophtheiri′asis.** Presence of lice or of their nits in the eyelashes.

**Blepharophy′ma** (*phyma*, swelling). Blepharoncosis.

**Bleph′aroplasty** (*plastikos*, forming). Formation of new eyelid; plastic surgery of the eyelid.

**Blepharople′gia.** Paralysis of the eyelid.

**Blepharopto′sis** (*blepharon*, eyelid, *ptosis*, fall). Falling down of the upper lid over the eye, caused by paralysis of the levator palpebræ superioris muscle. **B. ectro′pium**, ectropion. **B. entro′pium**, entropion. **B. lagophthal′mus**, lagophthalmus.

**Blepharopyorrhœ′a** (*blepharon*, eyelid, *pyon*, pus, *rheo*, to flow). Secretion of pus from the eyelids; purulent ophthalmia. **B. neonato′rum**, purulent ophthalmia of infants.

**Blepharor′rhaphy** (*blepharon*, eyelid, *rhaphe*, suture). Operation for bringing together the edges of the lids by stitches, as after removal of the eyeball or operation for ectropion.

**Blepharorrhœ′a.** Discharge of mucus or purulent matter from the eyelids.

**Bleph′arospasm.** Spasmodic action or tic of the orbicularis palpebrarum muscle, generally occurring in scrofulous keratitis or conjunctivitis.

**Bleph′arospath** (*spathe*, spatula). Forceps applied to the eyelid to check hemorrhage during an operation.

**Bleph′arostat.** Elevator for the eyelids, enabling the surgeon to expose the parts thoroughly for examination or operation; eye speculum.

**Blepharosteno′sis.** Accidental or congenital diminution of space between the eyelids; blepharophimosis.

**Blepharosym′physis** (*symphysis*, growing together) Adhesion between the eyelids.

**Blepharosynech′ia** (*synecheia*, connection). Adhesion of eyelids; blepharosymphysis.

**Blepharot′omy** (*blepharon*, eyelid, *tome*, incision). Incision of the eyelid for the relief of spasm, for example.

**Blepharoto′sis.** Ectropion.

**Blepharoxys′tum** (*xuo* to scrape). Instrument for removing callosities from the eyelids, as in trachoma.

**Blephil′ia hirsu′ta.** Ohio horsemint, hairy horsemint; indigenous plant having the aromatic properties of the mint family.

**Bles′sed herb.** Geum urbanum. **B. this′tle,** Carduus benedictus.

**Ble′ta al′ba.** White or milky urine.

**Ble′tia campanula′ta.** Mexican plant used in dysentery.

**Blight.** Mildew; partial paralysis of the nerves of the face, from cold. **B. in the eye,** catarrhal ophthalmia; palsy of orbicularis palpebrarum and muscles of the eyebrow; extravasation of blood within the conjunctiva. **Sand′y b.** conjunctivitis with photophobia and sensation of grittiness.

**Blights.** See *Lichen urticatus.*

**Blind.** Without sight; without outlet, as blind canals. **B. boil,** see *Furunculus.* **B. gut,** the cæcum. **B. piles,** those without any discharge externally. **B. spot,** point of entrance of the optic nerve on the retina.

**Blind′ness.** Loss of sight. See *Cœcitas.* **Blue-b.** incapacity to distinguish blue color. **Col′or-b.,** the want of capacity to distinguish or appreciate colors; achromatopsia. **Cor′tical b.,** loss of sight from lesion of cortical centre for vision. **Day-b.,** hemeralopia **Light′ning b.,** see *Lighting.* **Men′tal** or **Mind-b.,** b. due to central lesion in which the brain is unable to recognize and interpret what the normal eye sees. **Moon-b.,** nyctalopia. **Ner′vous b.,** amaurosis. **Night** or **noctur′nal b.,** nyctalopia. **Ob′ject-b.,** mental b. with reference especially to objects. **Psych′ical b.,** form of blindness in which sight exists, but without power of recognition, the same as mental b. **Red-b.,** inability to distinguish red color. **Snow-b.,** see *Snow.* **Soul-b.,** mental b. **Word-b.,** aphasia.

**Blink′ing.** Winking.

**Blis′ter.** A circumscribed collection of serous fluid beneath the raised epidermis; also vesicant, vesicatory, blister plaster; a substance which, when applied to the skin, irritates it and occasions serous secretion, raising the epidermis and inducing vesicles, as cantharides, mustard, ammonia, etc. Blisters are used as counterirritants. A blister applied only long enough to produce this effect is termed a flying blister. A perpetual blister is one kept open by an issue or irritant dressings. **B. bee′tle,** cantharis. **Fe′ver b.,** herpetic eruption on the lip, see *Fever blister.* **Fly b.,** cantharis. **Fly′ing b.,** transient application of blister to produce rubefaction, see *Blister.* **Per′manent b.,** blister so treated as to prevent its healing. **B. plant,** Ranunculus acris. **B. plas′ter,** blister. **B. weed,** Ranunculus acris. **White b.,** Rupia escharotica.

**Bli′tum america′num.** Phytolacca decandra.

**Block teeth.** See *Teeth, block.*

**Blocq's disease′.** Astasia-abasia.

**Blood.** Animal fluid circulating in the arteries and veins, entering every organ and nearly every tissue, bringing new material for nutrition and removing the waste products of metabolism. Blood is white in molluscous and inferior animals, which are hence called white-blooded to distinguish them from the red-blooded, including the mammalia, birds, reptiles, and fishes. Arterial or red blood is florid, with a strong smell; sp. gr. 1.049. Venous or black blood is brownish-red; sp. gr. 1.051. The former, distributed from the heart, is nearly the same through its whole extent; venous blood is the arterial blood after different elements have been taken from it in nutrition, with addition of waste products resulting from the vital changes in the body. Blood taken from a vessel and left to itself becomes solid, separating into two distinct parts: *serum,* or watery, supernatant fluid, and *clot, coagulum,* or *crassamentum,* formerly called variously *cruor, hepar,* or *placenta sanguinis* or *cruoris, insula,* and *thrombus.* Serum is chiefly water holding in solution proteids and salts; clot contains fibrin, corpuscular elements, coloring-matter, hæmatin, a little serum, and a small quantity of salts. The blood is composed of the fluid part—liquor sanguinis, or plasma, and the solid elements—red and white corpuscles, or erythrocytes and leucocytes, platelets, and hæmoconia, or blood dust. The salts of the blood are chiefly sodium chloride and also potassium chloride, sodium phosphate, calcium phosphate, magnesium phosphate, sodium carbonate, and various sulphates. The proteids are fibrinogen, serum globulin, and serum albumin; in the serum after separation of the clot the fibrinogen is replaced by the fibrin ferment. The blood contains also, in varying quantities, urea and uric acid, creatin, creatinin, xanthin, hypoxanthin, fat, soap, cholesterin, and sugar. Its gases are carbon dioxide, oxygen, and nitrogen; the proportions of the first two differ in arterial and venous blood, the volume of oxygen being 20 in the former and 10 in the latter, while that of carbon dioxide is 40 in the former and 50 in the latter.

Blood taken from an artery coagulates in three to fifteen minutes. The coagulation of the blood is hastened by moderate warmth, 100° to 120° F.; by contact with foreign matters; by access of air; by rest, and by the addition of moderate amounts of water. It is retarded or prevented by greater heat or extreme cold; by contact with living tissues, especially the blood-vessels; by absence of air (after death by asphyxia the blood remains fluid, also when air is withheld from drawn blood, as by a film of oil); by agitation of the vessel; by more than twice the bulk of water; by addition of viscid substances, as glycerin or syrup; by addition of neutral salts, about 2 per cent. solution; by digestive ferments, and by strong acids or alkalies. (Manning.)

The *erythrocytes,* red globules, or corpuscles, or cells, or disks, are small bodies, circular in the mammalia, excepting the camel and the llama, and ellip-

tical in birds and cold-blooded animals; flattened biconcave, with a smooth surface; of yellow color when viewed by transmitted light; formerly thought to be composed of a central nucleus surrounded by a fluid enclosed in a membranous sac, now usually regarded as a homogeneous mass of hæmoglobin enclosed in a fine network. The corpuscles vary in size in different animals. In man they average 7.5 microns in diameter by 1.8 microns in thickness, or, approximately, $\frac{1}{3333}$ by $\frac{1}{13888}$ inch. The following table (from that of Gulliver and the observations of Chapman) exhibits a comparative view of the

AVERAGE DIAMETERS OF THE BLOOD CORPUSCLES IN DIFFERENT ANIMALS.

| *Mammals.* | | *Birds.* | |
|---|---|---|---|
| Animal. | Diameter. inch. | Animal. | Diameter. inch. |
| Manatee | $\frac{1}{2700}$ | Ostrich | $\frac{1}{1649}$ |
| Elephant | $\frac{1}{2745}$ | Owl | $\frac{1}{1763}$ |
| Ant-eater | $\frac{1}{2769}$ | Swan | $\frac{1}{1806}$ |
| Sloth | $\frac{1}{2865}$ | Pigeon | $\frac{1}{1973}$ |
| Whale | $\frac{1}{3099}$ | | |
| Camel | $\frac{1}{3123}$ | *Reptiles.* | |
| Man | $\frac{1}{3200}$ | Turtle | $\frac{1}{1231}$ |
| Orang | $\frac{1}{3383}$ | Viper | $\frac{1}{1274}$ |
| Chimpanzee | $\frac{1}{3412}$ | Lizard | $\frac{1}{1555}$ |
| Dog | $\frac{1}{3542}$ | | |
| Opossum | $\frac{1}{3557}$ | *Amphibia.* | |
| Rabbit | $\frac{1}{3607}$ | Amphiuma | $\frac{1}{363}$ |
| Black rat | $\frac{1}{3754}$ | Proteus | $\frac{1}{400}$ |
| Mouse | $\frac{1}{3814}$ | Siren | $\frac{1}{420}$ |
| Brown rat | $\frac{1}{3911}$ | Menopoma | $\frac{1}{563}$ |
| Gray squirrel | $\frac{1}{4000}$ | | |
| Ox | $\frac{1}{4267}$ | *Fishes.* | |
| Cat | $\frac{1}{4404}$ | | |
| Sheep | $\frac{1}{5300}$ | Pike | $\frac{1}{2000}$ |
| Goat | $\frac{1}{6366}$ | Perch | $\frac{1}{2461}$ |
| Pigmy musk deer | $\frac{1}{12325}$ | Lamprey | $\frac{1}{2134}$ |

There are also seen sometimes in the blood decolorized erythrocytes, called phantom cells, achromacytes, or shadow corpuscles. These are not a different form of corpuscle, but simply degenerated red cells. The *blood plaques* or *platelets* are pale yellowish or colorless corpuscles, from one-quarter to one-half the diameter of the red corpuscle, without nucleus. They are generally regarded not as cells or true blood corpuscles, but rather as pieces broken off from the red or white cells. The *blood dust* or *hæmoconia*, consists of minute specks, about one-eighth the diameter of a red corpuscle, highly refractive, swimming free in the plasma but without amœboid movements. Some regard them as the débris of broken-down blood cells; others suggest that they may carry the protective bodies upon which immunity depends; their function is, however, not yet determined.

Hayem differentiates three varieties of red corpuscles: large, with a diameter of 8.5μ; medium-sized, with a diameter of 7.5μ; small, with a diameter of 6.5μ (μ stands for micron or micromillimetre, or the $\frac{1}{1000}$ of a millimetre, equal to about $\frac{1}{25000}$ of an inch). Among 100 blood corpuscles 75 are of medium size. The following facts from Vierordt are of interest in regard to the corpuscles of the blood:

Size: greatest diameter, 7.4μ (minimum 4.5μ, maximum 9.7μ); greatest thickness, 1.9μ.

| | |
|---|---|
| Weight of a single red blood corpuscle | 0.00008 mg. |
| Specific weight | 1.105 (Welcker); 1.088–1.089 (C. Schmidt). |

Number of red corpuscles per mm.: 5,174,000 (Vierordt), 5,000,000 (Hayem), 5–6,000,000 (Patrigeon).

Ratio between white and red corpuscles:

| Observers. | | |
|---|---|---|
| Gowers | 1:330 | 1:340 (on an average). |
| Welcker | 1:335 | |
| Moleschott | 1:357 (=2.8:1000) | |
| Bouchut and Dubrisay | for 20–30 years | 1:700 |
| | for 30–58 years | 1:616 |

Frey states that in his own case, while fasting, the ratio was 1:357. Two hours after dinner Frey obtained for himself 1:303; in a boy 4 years old, 1:345.

| | |
|---|---|
| Moleschott, 4 hours after breakfast | 1:466 |
| " 2 " " a meal containing little albumin | 1:356 |
| " 2 " " a meal containing much albumin | 1:282 |

The *leucocytes*, or white corpuscles, are colorless, nucleated cells, for the most part larger (7–12μ in diameter), but less numerous than the red corpuscles, the proportion between the two being approximately as 1:500. Several varieties of white cells have been described, the distinguishing characteristics being in structure, size, staining properties, etc. According to the first there are three varieties: 1. Small cells with large nucleus and scanty protoplasm, possessing little or no power of amœboid movement; they are usually called lymphocytes, as they are believed to be derived from the lymph. 2. Larger cells with more protoplasm and a single nucleus, possessing some power of amœboid movement; they are called uninucleated or mononucleated leucocytes. 3. Still larger cells, irregular in form, with a granular protoplasm and several nuclei, possessing active amœboid movements; they are called multinucleated or polynucleated leucocytes. The classification based upon the reaction to stains includes eosinophile (acidophile, oxyphile) cells, in which staining is effected only with acid dyes; basophiles, which are stained only with basic dyes; neutrophiles, staining only with neutral dyes; and amphophiles, which can be stained by both acid and basic dyes. These differences in staining properties depend upon the presence of various granules in the protoplasm, named from the Greek alphabet, α-, β-, γ-, δ-, and ε- granules. The functions of the leucocytes are various and not yet fully understood.

The numbers of the red and white cells, both relative and absolute, vary greatly in various diseases and at different times in the normal state, and the cells themselves also vary in size, structure, and appearance. These variations offer useful data for the determination of many points in the way of diagnosis and prognosis.

The following table exhibits the computations of different physiologists regarding the amount of the circulating blood, arterial and venous:

| | Lbs. |
|---|---|
| Harvey,<br>Lister,<br>Moulins,<br>Abildguard, | 8 |
| Blumenbach,<br>Lobb,<br>Lower and Lewes, | 10 |
| Sprengel, | 10 to 15 |
| Günther and Bock | 5 to 20 |
| Blake | 16½ to 18¾ |
| Weber and Lehmann | 17½ to 19 |
| Müller, Burdach, and P. Bérard | 20 |
| Wagner | 20 to 25 |
| Guesnai | 27 |
| F. Hoffmann | 28 |
| Haller | 28 to 30 |
| Young | 40 |
| Hamberger | 80 |
| Keill | 100 |

The estimate of Blake is probably approximately correct. It is generally believed that the amount of blood is about one-thirteenth of the body weight. The proportion of arterial blood to venous is about 4 to 9.

**Blood, arte′rial,** see *Blood.* **Black b.,** see *Blood.* **B. boil,** hæmatoma. **B. cal′culi,** see *Pseudocalculi.* **B. casein′,** globulin. **B. casts,** casts of renal tubes formed by extravasated and coagulated blood, seen in examining urine microscopically. **B. cells,** blood globules. **B. chan′nels,** canaliculi, devoid of walls, for the passage of blood in granulation tissue. **Char′coal b.,** see *Charcoal.* **B. circula′tion,** see *Circulation.* **B. clot,** coagulum, see *Blood.* **B. col′oring-mat′ter,** see *Blood.* **B. cor′puscles,** see *Blood.* **B. crys′tals,** hæmatoidin. **B. cyst,** sanguineous cyst, see *Hæmatoma* and *Hæmatocele.* **B. disease′,** any morbid condition, the materies morbi of which is presumed to exist in the blood. **B. disk** or **disk′let,** blood globule, b. plaque or plate. **B. dust,** hæmoconia, see *Blood.* **B. glands,** see *Ganglion.* **B. glob′ules,** see *Blood.* **B heat,** 98.6° F. (37° C.) on the thermometric scale. **B. isl′ands,** collections of small red spots in the vascular area in early embryonic life, afterward developing into blood-vessels. **B. leech,** the medicinal leech or any of the Hirudinea which sucks blood. **B. liq′uor,** liquor sanguinis. **B. mur′murs,** see *Murmurs.* **B. par′ticles,** blood corpuscles. **B. pict′ures,** picture or small pattern network speedily formed by human blood under the microscope, said to be distinguishable from that formed by other animals, which takes place more slowly with a larger pattern. **B. pig′ments,** see *Pigments.* **B. plaques,** see *Blood.* **B. plas′ma,** see *Blood.* **B. plates** or **plate′lets,** see *Blood* and *Hæmatoblasts.* **B. pois′oning,** presumed condition of the blood, in which its constitution is modified by reception into it of substances that render it noxious or unfit for healthy nutrition, as in pyæmia, septicæmia, etc. **B. pres′sure,** force exercised by the blood against the walls of the blood-vessels. This is modified by the condition of the heart, the elasticity of the vessels, etc. The causes of alteration in the blood pressure may be tabulated as follows (Brunton):

| *May be raised—* | *May be lowered—* |
|---|---|
| 1. By the heart beating more quickly. | 1. By the heart beating more slowly. |
| 2. By the heart beating more vigorously and more completely, and sending more blood into the aorta at each beat. | 2. By the heart beating less vigorously and completely, and sending less blood into the aorta at each beat. |
| 3. By contraction of the arterioles, retaining the blood in the arterial system. | 3. By dilatation of the arterioles, allowing the blood to flow more quickly into the veins. |
| | 4. By deficient supply of blood to the left ventricle, as from contraction of the pulmonary vessels or obstruction to the passage of blood through them, or from stagnation of blood in the large veins—*e. g.,* in shock. |

The following estimates have been made from direct experiments as to the nature of the blood pressure:

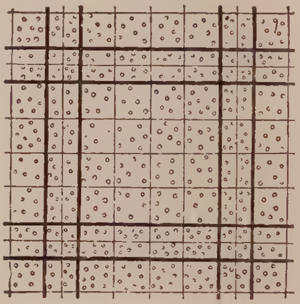
(*a*) *In the arteries* (Vierordt).

| | *Mercury.* | *Column of blood.* |
|---|---|---|
| In the newborn | = 111 mm. | = 1443 mm. |
| In 3-year-old | = 138 " | = 1794 " |
| In 14-year-old | = 171 " | = 2223 " |
| In adult | = 200 " | = 2600 " |

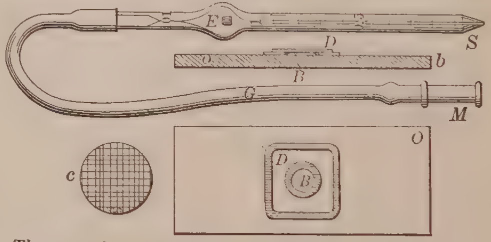
(*b*) *In the capillaries* (Kries): The blood pressure in the capillaries is about equal to one-half to one-fifth of the arterial pressure.

(*c*) *In the veins*: About $\frac{1}{20}$ of the pressure in the corresponding artery. In the large veins near the heart the pressure in general is negative during inspiration, positive during expiration. **B. quo′tient,** result obtained by dividing amount of hæmoglobin in the blood by the number of red corpuscles, in each case expressed as a percentage of the natural amount. **Red b.,** see *Blood.* **B. se′rum,** see *Blood.* **B. sounds,** see *Murmur, arterial.* **B. stone,** hæmatite. **B. stroke,** loss of sensation and motion resulting from cerebral hemorrhage or congestion of the vessels of the brain; hemorrhage in the areolar tissue of the face, lungs, skin, etc. **B. tab′lets,** b. plates. **B. tubes,** see *Arteries* and *Veins.* **B. tu′mor,** swelling, with effusion of blood; hæmatoma. **Ve′nous b.,** see *Blood.* **B. ves′icle,** blood globule. **B. ves′sel,** vessel destined to contain and convey blood. **B. weed,** Asclepias curassavica. **White b.,** lymph. **B. wort,** Hieracium venosum, Sanguinaria canadensis.

**Blood′-counting appara′tus.** Device by which the number of corpuscles, either white or red, in a cubic millimetre of blood can be determined.



Blood-counter; appearance of blood in the Thoma-Zeiss cell.



Thoma-Zeiss blood-counting apparatus; *O*, object-glass with a cell (*B*) $^1/_{10}$ mm. in depth; *D*, cover-glass; *S*, Potain mixer consisting of a graduated capillary tube, the upper end of which is blown into a chamber (*E*) holding 100 c. mm.; *G*, rubber tube; *M*, mouth-piece; *b*, object-glass in cross section; the bottom of the cell is ruled off into squares as shown (enlarged) at *c*.

**Blood′ing.** Bloodletting; flooding.

**Blood′less meth′od** or **opera′tion.** Operation, as amputation, in which Esmarch's elastic bandage and tourniquet are employed and bleeding is prevented.

**Blood′lessness.** Anæmia.

**Blood′letter.** Bleeder.

**Blood′letting.** Blooding, bleeding, letting blood; abstraction of blood from an artery (arteriotomy), a vein (phlebotomy, venesection), or the capillaries (arteriophlebotomy) for therapeutic purposes. Drawing blood from the capillaries is called local bloodletting in contradistinction to bleeding from an artery or vein, called general bloodletting. Bleeding is used during the existence of disease, as in inflammation, and in the way of prophylaxis: 1. To diminish the actual mass of blood, and in such case fluids ought not to be allowed too freely afterward. 2. To diminish turgescence in any organ; *revulsive bloodletting* or bleeding, venæsectio revulsoria, when performed far from the part affected, and *derivative bloodletting* when near. 3. To diminish the number of blood corpuscles *spoliative phlebotomy*. The immediate effects of bloodletting are diminution of the mass of blood and of fever, retardation of pulse, sometimes syncope.

Bloodletting from a vein, *phlebotomy*, is practised on the subcutaneous veins of the neck, face, forearm, and leg, sometimes of the hand or foot; the necessary apparatus consists of bandage or ribbon, compress, and lancet or fleam. The veins selected for operation are: 1. In the fold of the arm, cephalic, basilic, two median, and anterior cubital. 2. In the hand, cephalic and salvatella. 3. In the foot, great and little saphena. 4. In the neck, external jugular. 5. In the forehead, frontal. 6. In the mouth, ranine. Phlebotomy in the limb is performed by tying a circular bandage round it, to render the subcutaneous veins turgid by blood being obstructed, the bandage not being so tight, however, as to compress the arteries. Puncture is made into the vein and the desired quantity allowed to flow; the ligature is then removed and a compress and retaining bandage are applied.

Capillary local, or topical bloodletting, *arteriophlebotomy*, is practised on the skin or mucous membranes by means of leeches, the lancet, or cupping.

**Blood′like.** Sanguine.

**Blood′root.** Sanguinaria canadensis.

**Blood′shot.** Hyperæmic, as of the eye.

**Blood′y.** Sanguineous. Having the character of blood; relating to blood. **B. flux**, dysentery. **B. sweat**, hæmatidrosis; ephidrosis cruenta.

**Blotch.** Pustule; discolored eruption. **Milk b.**, crusta lactea.

**Blow′ball.** Leontodon taraxacum.

**Blow′ing sound.** Bellows sound.

**Blown.** Out of breath; stained with ova, as of fly.

**Blow′pipe.** Straight or bent tube through which a current of air is directed against a flame, in order to increase the heat of the same.

**Blue.** The color of the sky; livid; cyanotic. **B. bells**, Gentiana catesbæi. **Berlin′ b.**, material used for injecting the vascular system in pathological investigations, of which potassium ferrocyanide, sodium sulphate, and iron chloride are the main components. **B. berry**, Caulophyllum thalictroides, Lantana. **B. blind′ness**, see *Blindness*. **B. bon′nets**, Centaurea cyanus. **B. bot′tle**, Centaurea cyanus, Cyanus segetum. **B. disease′**, cyanosis. **B. flag**, Iris versicolor. **B. gen′tian**, Gentiana catesbæi. **B. gums**, blue line along the gums, indicating lead poisoning. **B. gum tree**, Eucalyptus globulus. **B. line**, b. gums. **Low b.**, Vaccinium pennsylvanicum. **B. mass**, mercurial pill, see *Massa hydrargyri*. **Meth′ylene b.**, see *Methylene*. **B. oint′ment**, mercurial ointment. **B. pill**, mercurial pill, see *Massa hydrargyri*. **B. pyoktanin′**, see *Pyoktanin*. **B. stone**, copper sulphate. **B. ver′vain**, Verbena hastata. **B. vi′olet**, Viola pedata. **B. vis′ion**, cyanopia. **B. vit′riol**, copper sulphate.

**Blues.** A depressed mental condition.

**Blume′a balsamif′era.** Plant of Asia, source of Ngai camphor, by distillation. **B. lac′era**, species from E. Indies, having the odor of turpentine; used in dyspepsia.

**Blu′menbach's cli′vus.** Portion of sphenoid bone back of posterior clinoid processes. **B.'s plane**, the plane of the base of the skull without the inferior maxilla. **B.'s proc′ess**, uncinate process of ethmoid.

**Blumeneau's′ nu′cleus.** Lateral nucleus of nucleus cuneatus.

**Blunt hook.** See *Hook*.

**Blush.** See *Flush*. **Inflam′matory b.**, erythema.

**Blush′wort.** Erythræa.

**Bo′a.** Eruption of red, ichorous pimples. See *Hidroa* and *Sudamina*. **B. u′pas**, upas. **B. vis′ta fe′ver**, yellow fever.

**Bo′as's rea′gent.** Reagent for determining presence of hydrochloric acid in the stomach or elsewhere; it consists of 5 parts of resorcin, 3 of sugar, and 100 of alcohol. **B.'s sign**, lactic acid in the stomach in cases of cancer of that organ. **B.'s test**, test for lactic acid, the latter being decomposed by sulphuric acid and dioxide of manganese into aldehyde and formic acid; the aldehyde becomes iodoform when conveyed into an alkaline solution of iodine. Also sound of gurgling of water in the intestines, produced by external pressure after a small quantity of water has been thrown up into the rectum; the quantity of water necessary to produce this sound is a measure of the degree of intestinal atony.

**Boat-belly.** Condition in which marked retraction of the abdomen is present.

**Boat′man's ring′worm.** A form of trichophyton which occurs in luxuriant vegetation upon smooth portions of the body in tropical countries.

**Boat-shaped abdo′men.** Boat-belly.

**Bo′ba.** Frambœsia.

**Boch′dalek's canal′.** Small canal taking an oblique direction through the membrana tympani. **B.'s gap**, space in the diaphragm between its attachments to the ribs and to the loins. **B.'s gan′glion**, small thickening formed by branch of anterior dental nerve uniting with branch of posterior nasal nerve from Meckel's ganglion. **B.'s mus′cle**, see *Triticeoglossus muscle*. **B.'s tubes**, cavities communicating, especially in fœtal life, with the back part of the thyroglossal duct (a canal between the thyroid gland and the tongue). **B.'s valve**, minute duplication of a portion of the investing membrane of the lacrymal duct.

**Bock's pharyn′geal nerve.** Pterygopalatine branch of the sphenopalatine ganglion.

**Bock′hart's impeti′go.** Suppurative epidermic inflammation of pyogenic microbic origin.

**Bo′do sal′tans.** Variety of flagellata sometimes met with on unhealthy ulcers. **B. urina′rius**, species found in albuminous urine of those suffering from cholera.

**Bod′y.** Human body as a collection of organs; the trunk; body of a bone, as of the femur, sphenoid, etc., to designate shaft or middle portion of those bones; body of the uterus, main part of that organ; corpse; distinct portion of matter perceived by the senses; the rectum, as in "coming down of the body," or proctocele; in artificial teeth, the basis of porcelain which gives form and on which the enamels are fused. **Ad′enoid b.**, **Allox′ur b.**, **Amyla′ceous b.**, etc., see the qualifying word. **B. of Aran′tius**, see *Corpora Arantii*. **B. of High′more**, corpus highmorianum. **Hy′aloid b.**, corpus vitreum. **B. of Lan′gerhans**, one of the rounded vascular aggregations of small cells between the lobules of the liver; probably imperfectly developed lobules. **B. louse**, Pediculus vestimenti. **Meiss′ner's b.**, tactile corpuscle. **Mu′riform b.**, mass of vitelline globes from segmentation of vitellus. **O′ken's b.**, mesonephros. **Pacchio′nian b.**, one of the numerous granular bodies on the surface of the dura mater in the course of the longitudinal sinus. **Perine′al b.**, see *Perineum*. **Postpyram′idal b.**, posterior pyramid. **Prepyram′idal b.**, anterior pyramid. **Pyram′idal b.**, corpus pyramidale. **Rhom′boid b.**, fourth ventricle. **Ro′senmüller's b.**, parovarium; epo-öphoron. **Touch b.**, tactile corpuscle. **Trap′ezoid b.**, trapezium-shaped portion of pons Varolii. **Wink′ler's b.**, one of certain pathological formations seen in syphilis. **Wolff′ian b.**, corpus wolffianum; mesonephros. **Yel′low b.**, corpus luteum.

**Bod′y-read′ing.** See *Muscle reading*.

**Bod′y-sear′cher.** A name formerly given to one who examined bodies to report as to the cause of death.

**Bod′y-snatch′er.** Resurrectionist.

**Boeck's scab′ies.** Norway itch or scabies crustosa. See *Radzyge*.

**Bœhme′ria cauda′ta.** Brazilian plant; sudorific; used also for hemorrhoids.

**Boer′haave's glands.** Sweat glands.

**Boerhaa′via dian′dra.** Plant of South America; root is emetocathartic. **B. diffu′sa** grows in W. Indies; root is purgative. **B. hirsu′ta,** same habitat; leaves are employed in diseases of the liver. **B. procum′bens,** plant of India; antipyretic, cathartic, anthelmintic. **B. scan′dens,** root of this shrub of W. Indies is used in gonorrhœa. **B. tubero′sa** grows in Peru; antisyphilitic.

**Boett′cher's cells.** Cells arranged in single layer on membrana basilaris of cochlea. **B.'s crys′tals,** crystals found in semen, supposed to be the same as Charcot's crystals. **B.'s test,** test for sugar; consists of mixing equal parts of the suspected urine and of liquor potassæ, then adding a small quantity of subnitrate of bismuth and boiling for some time; if sugar is present the bismuth becomes black or gray.

**Boett′ger's test.** Boettcher's test.

**Bog′bean.** Menyanthes trifoliata.

**Bogota′ bark.** Carthagena cinchona bark.

**Bog′ros's space.** Space between the peritoneum and the transversalis fascia through which the external iliac artery may be tied without injuring the peritoneum.

**Bogrow's** (bog′roffs) **fi′bres.** Nerve fibres going from the optic tract to the optic thalamus.

**Bog′rush.** Eleocharis palustris.

**Bog-spav′in.** Dilatation of the capsular ligament of the tibiotarsal joint in the horse.

**Bo′hon u′pas.** Antiaris upas.

**Boil.** Furunculus. **Alep′po b.,** see *Aleppo*. **Blind b.,** see *Furunculus*. **Bulam′a b.,** see *Bulama*. **Del′hi b.,** see *Delhi*. **Gum-b.,** alveolar abscess; parulis. **Malig′nant b.,** see *Furunculus*. **Trop′ical b.,** Aleppo b. **Wasp's-nest b.,** see *Furunculus*.

**Boi′na.** Cow-pox.

**Bo′la.** Myrrh.

**Bolbomelano′ma** or **Bolbomelano′sis** (*bolbos*, bulb). Melanosis of the eyeball; the second word also denotes the formation of such melanotic tumor.

**Boldine′.** Alkaloid from boldo; used in diseases of the bladder and liver and in gallstones.

**Bol′do.** Leaves of Boldoa fragrans or Peumus boldus; stimulant and antiseptic.

**Boldo′a aromat′ica.** Tree of Chili; leaves and bark in baths are given in rheumatic arthritis. **B. chilen′sis,** possesses properties similar to those of B. aromatica; yields boldine. **B. fra′grans,** B. aromatica.

**Boldoglucin′.** Glucoside derived from Boldoa fragrans; possesses hypnotic properties.

**Bole** (*bolos*, clod of earth). Argillaceous earth; used as an absorbent and alexipharmic; various boles were stamped or sealed, hence called *terræ sigillatæ* or sealed earths. **Arme′nian b.,** red, clayey earth from Armenia and other countries of Europe, once esteemed tonic and astringent; it consists of argil mixed with lime and iron. **White b.** is native aluminum, silicate, or argil, with a trace of iron; it has similar properties to those of Armenian b.

**Bolet′ic acid.** Acid existing in Boletus agaricus.

**Bole′tus.** A genus of mushrooms. **B. agar′icus,** B. laricis. **B. al′bus,** B. laricis. **B. cervi′nus,** Elaphomyces granulatus. **B. chirurgo′rum,** B. igniarius. **B. discoi′deus,** Dædalea suaveolens. **B. edu′lis,** edible species, of agreeable taste and smell. **B. esculen′tus,** edible mushroom; found in woods in Europe; much admired by gastronomes; formerly esteemed aphrodisiac. **B. fomenta′rius,** Polyporus fomentarius. **B. ful′vus,** B. igniarius. **B. hippoc′repis,** B. igniarius. **B. ignia′rius,** agaric, spunk, amadou, punk, agaric of the oak, touchwood, touchwood boletus, female agaric, tinder; formerly much used by surgeons as a styptic. **B. lar′icis,** white agaric; cathartic and emetic and used also in the sweats of phthisis. *Agaricin*, the active principle. is given for this purpose in doses of gr. $\frac{1}{20}-\frac{1}{10}$ (0.003–0.006); externally, B. laricis is styptic. **B. obtu′sus,** B. igniarius. **B. officina′lis,** B. laricis. **B. pur′gans,** B. laricis. **B. sal′icis,** Dædalea suaveolens. **B. suave′olens,** Dædalea suaveolens. **Touch′wood b.,** Boletus igniarius.

**Boli′tes.** Mushroom; perhaps Agaricus aurantiacus.

**Bollin′gera e′qui** (Saccardo). Micrococcus botryogenes.

**Bologni′ni's sign** or **symp′tom.** An early symptom of measles, being an impression as of friction imparted to the hand of the examining physician when he presses upon each side of the abdomen while the patient is supine in bed with his abdominal muscles relaxed.

**Bo′los.** Eruption of teeth.

**Bolt.** To swallow without chewing, as to "*bolt* one's food."

**Bo′lus** (*bolos*, lump or mass). Bole. Pharmaceutical preparation having pilular shape, but larger, although capable of being swallowed as a pill. **B. al′ba,** argil; formerly made into small cakes or flat masses, and stamped or sealed with certain impressions and called *terræ sigillatæ*; used like Armenian b. and brought from Etruria; see *Bole*. **Aliment′ary b.,** mass formed by the food after mastication and insalivation in the mouth and collected upon the tongue prior to deglutition. **B. arme′na,** Armenian bole. **Hyster′ical b.,** see *Hysteria*. **B. orienta′lis,** bolar earth from Constantinople; also Armenian bole. **B. ru′bra,** Armenian bole.

**Bomar′ea salsil′la** (after naturalist Valmont de Bomare). Used as a sudorific in Chili, and in infusion in cutaneous diseases.

**Bombardier′ bee′tle.** See *Brachinus crepitans*.

**Bom′bax.** A genus of silk-cotton trees. **B. malabar′icum,** tree of East Indies, various portions of which are emetic, astringent, laxative, diuretic, and antiphlogistic; see *Mocharas*. **B. septena′tum,** tree of West Indies and South America; seeds are demulcent, leaves are an article of diet, and root bark is emetic.

**Bom′bus** (humming of bees). Ringing or buzzing in the ears; borborygmus, or flatulent rumbling in the bowels.

**Bom′byx.** Vermiform process. **B. mo′ri,** see *Sericum*.

**Bo′na.** Phaseolus vulgaris. **B. fe′ver,** a malignant malarial fever prevailing among the troops of the garrison at Bona, Algeria, from 1832 to 1835.

**Bonan′nia officinal′is.** Sinapis alba.

**Bond′ea.** Erythrophlœum.

**Bon′duc.** Cæsalpina bonducella. Bonduc or bonducella seeds are tonic and antiperiodic, and in large doses emetic.

**Bonducin′.** Bitter, resinous principle from oily fruit of Guilandina bonducella; used in intermittent fever.

**Bon′due.** Gymnocladus canadensis.

**Bone.** Bones are solid and hard parts, forming the basis of the bodies of animals of the superior classes, union of which constitutes the skeleton. The human body has, at adult age, 240 bones, including 32 teeth and ossa wormiana, and excluding sesamoid bones. Anatomists divide them, from their shape, into: 1. *Long bones*, forming part of the limbs and representing columns for supporting the weight of the body, or levers of different kinds for the muscles to act upon. 2. *Flat bones*, forming parietes of the splanchnic cavities. 3. *Short bones*, in parts of the body where solidity and some mobility are necessary. Bones are formed of two different textures, spongy—substantia spongiosa—and compact—substantia compacta. They afford, on analysis, much phosphate and carbonate of lime, little phosphate of magnesium, phosphate of ammonium, oxide of iron and manganese, some traces of alumina and silica, gelatin, fat, and water. Lehman's analysis of bone is as follows:

| | | |
|---|---|---|
| Gelatin and bloodvessels | 33 | per cent. |
| Phosphate of calcium | 57 | " |
| Carbonate of calcium | 8 | " |
| Fluoride of calcium | 1 | " |
| Phosphate of magnesium | 1 | " |

The uses of the bones are usually mentioned under each bone. They give shape to the body, contain and defend the viscera, and act as levers to muscles. See cuts under *Cancelli* and *Haversian*, showing the structure of bone.

TABLE OF THE BONES.

| | | | | |
|---|---|---|---|---|
| BONES OF THE HEAD. | *Bones of the cranium or skull.* | | Frontal | 1 |
| | | | Parietal | 2 |
| | | | Occipital | 1 |
| | | | Temporal | 2 |
| | | | Ethmoid | 1 |
| | | | Sphenoid | 1 |
| | *Bones of the face.* | | Superior maxillary | 2 |
| | | | Malar or cheek | 2 |
| | | | Nasal | 2 |
| | | | Lacrymal | 2 |
| | | | Palatine | 2 |
| | | | Inferior spongy | 2 |
| | | | Vomer | 1 |
| | | | Inferior maxillary | 1 |
| | *The teeth.* | | Incisors | 8 |
| | | | Cuspidate | 4 |
| | | | Molars | 20 |
| | *Bone of the tongue.* | | Hyoid | 1 |
| | *Bones of the ear.* | | Malleus | 2 |
| | | | Incus | 2 |
| | | | Orbicular | 2 |
| | | | Stapes | 2 |
| BONES OF THE TRUNK. | *Vertebræ.* | | Cervical | 7 |
| | | | Dorsal | 12 |
| | | | Lumbar | 5 |
| | *Sacrum* | | | 1 |
| | *Os Coccygis* | | | 1 |
| | *Thorax.* | | Sternum | 2 |
| | | | Ribs | 1 |
| BONES OF THE UPPER EXTREMITY. | *Pelvis* | | Innominate | 2 |
| | *Shoulder.* | | Clavicle | 2 |
| | | | Scapula | 2 |
| | *Arm* | | Humerus | 2 |
| | *Forearm.* | | Ulna | 2 |

| | | *Phalanges* | | 28 |
| | | | Totals | 240 |

**Acetab′ular b.**, small bone in acetabulum of some of the vertebrata. **Adna′sal b.**, premaxillary bone of some animals. **Ador′bital b.**, lacrymal b.; malar b. of some animals. **Alisphe′noid b.**, bony cartilage in some animals corresponding to greater wing of sphenoid in man; bone forming front of auditory capsule. **An′gular b.**, bone aiding to form part of inferior maxillary bone. **An′kle b.**, astragalus. **Apohy′al b.**, bone in lower animals corresponding with lesser cornu of hyoid bone in man; epihyal bone. **Artic′ular b.**, delicate lamella of articular end of bone, beneath articular cartilage; one of the bones of the lower jaw or mandible in some animals. **Back b.**, vertebral column. **Bar b.**, pubic bone. **Basibranch′ial b.**, basihyal bone of fishes; row of minute bones from which four branchial arches proceed. **Basidig′ital b.**, metatarsal and metacarpal bones are so called. **Basihy′al b.**, bone in other animals corresponding to the body of the human hyoid bone; basibranchial b. **Bas′ilar b.**, sphenoid and occipital bones considered as a single bone; basioccipital bone, last lumbar vertebra, and sacrum have all received this name; basisphenoid bone of birds. **Basioccip′ital b.**, basilar part of occipital bone in fœtal life. **Basisphe′noid b.**, part of sphenoid bone from which back part of body of that bone and sella turcica are developed; in lower animals, bone between basioccipital and presphenoid bones. **Ber′tin's b.**, one of the sphenoidal cornua. **Blade b.**, scapula. **Boat-like b.**, scaphoid. **Breast b.**, sternum. **Calf b.**, fibula. **Can′non b.**, middle metatarsal bone of some animals. **Car′pal b.**, carpus. **Cav′alry b.**, drill b. **Cheek b.**, malar bone. **Col′lar b.**, clavicle. **Cor′acoid b.**, bone representing in some animals the coracoid process in man. **Coro′nal b.**, frontal bone. **Cot′yloid b.**, acetabular bone. **Cox′al b.**, coccyx; ilium. **Crib′riform b.**, ethmoid bone. **Crup′per b.**, coccyx. **Drill b.**, see *Drill.* **Epihy′al b.**, see *Epihyal.* **Epio′tic b.**, cartilage in lower animals corresponding to inferior portion of mastoid process in man. **Ex′ercise b.**, drill b. **Exoccip′ital b.**, lateral occipital bone of some animals, but in man part of occipital bone of fœtus, constituting lateral part of foramen magnum and condyle. **Face b.**, malar bone. **Fore′head b.**, frontal bone. **Frontona′sal b.**, nasal bone. **Haunch b.**, ilium; innominate bone. **Heart b.**, see *Heart bone.* **Heel b.** calcaneum. **Hip b.**, innominate bone. **Hook b.**, unciform bone. **Huck′le b.**, coccyx; astragalus. **Hyp′siloid b.**, see *Hyoid.* **B. of in′cus**, interparietal bone. **Intermax′illary b.**, bone in fœtus behind the anterior portion of the superior maxillary bone, afterward united to it; in lower animals it corresponds to the incisive portion of the upper jaw. **Interpari′etal b.**, see *Interparietal.* **Ju′gular b.**, malar bone; lacrymal bone. **Knuc′kle b.**, coccyx. **Lac′rymal b.**, see *Lacrymal.* **Lentic′ular b.**, orbicular bone. **Lig′ament b.**, sesamoid bone. **Lin′gual b.**. hyoid bone. **Lu′nar b.**, semilunar bone. **Mandib′ular b.**, inferior maxillary bone. **Mid′jaw b.**, intermaxillary bone. **Navic′ular b.**, see *Navicular* and *Scaphoid.* **Odon′toid b.**, odontoid process of axis vertebra when a separate bone. **Olfac′tory b.**, ethmoid bone. **Orbic′ular b.** orbicular process of incus. **Orbitosphe′noid b.**, lesser wing of sphenoid bone in lower animals. **Perone′al b.**, fibula. **Plough′share b.**, vomer. **Proö′tic b.**, bone in lower animals corresponding to parts of petrous and mastoid portions and of the labyrinth in man. **Ri′der's b.**, cavalry bone. **Rump-coc′cyx b.**, sacrum. **Seat b.**, ischium. **Ses′amoid b.**, see *Sesamoid.* **Share b.**, ilium; pubic bone. **Shin b.**, tibia. **Sling b.**, astragalus. **Splint′er b.**, fibula. **Spoke b.**, radius. **Spon′gy b.**, turbinated bone. **Stir′rup b.**, stapes. **Tail b.**, coccyx. **Thigh b.**, femur. **Tongue b.**, hyoid bone. **Trique′tra b.**, Wormian b. **Tympan′ic b.**, bony ring nearly encircling membrana tympani. **Ver′tex b.**, parietal bone. **Worm′ian b.**, see *Wormian.* **Wrist b.**, metacarpal bone. **Yoke** or **zygomat′ic b.**, malar bone.

**Bone ache** or **a′gue.** See *Osteocopus.* **B.-ash**, products of bones, usually of ox and sheep, burnt white, chiefly calcium phosphate, and a little carbonate; used in pharmacy. **B.-bind′er**, see *Osteocolla.* **B.-black**, animal charcoal. **B. canals′**, nutritive canals in the diploë. **B. car′tilage**, see *Cartilage of ossification.* **B. cell**, osteoblast; cell in the lacuna of bone. **B. conduc′tion**, conduction of sound through the bones of the face and head, distinguishing middle-ear deafness from labyrinthine deafness, in which bone conduction is lost. **B. cor′puscle**, **B. discs**, bone plates. **B.-doc′tor**, bone-setter. **B. earth**, b. ash. **B. fe′ver**, dengue, **B. nip′pers**, instrument for cutting off splinters. etc., of bone. **B. oil**, a tarry, ill-smelling, liquid obtained from the distillation of bone. **B. phos′phate,** $Ca_3(Po_4)_2$, tricalcium phosphate, found in bone. **B. plates,** perforated plates of ox bone used in the operation of intestinal anastomosis. **B.-set′ter,** one who pays special attention to treatment of fractures; generally applied to irregular or uneducated practitioners supposed to have special aptness in this direction, **B. spav′in,** bony growth in hock of horse. **B.-spir′it,** an ammoniacal liquid obtained in the process of making bone charcoal.

**Bone′let.** A small bone.

**Bone′set.** Eupatorium perfoliatum. **Rough b.,** Eupatorium teucrifolium. **Up′land b.,** Eupatorium sessilifolium.

**Bone′shave.** Femoropopliteal neuralgia.

**Bonfil's′ disease′.** Hodgkin's disease.

**Bonifa′cia.** Ruscus hypoglossum.

**Bonna′ya brachia′ta.** Plant of E. Indies, used in chronic cutaneous affections. **B. grandiflo′ra** has similar properties, and is also used in diseases of the liver. **B. integrifo′lia,** of E. Indies, used in gonorrhœa, epilepsy, and diseases of the eyes.

**Bon′net.** Reticulum. **B. pep′per,** Capsicum tetragonum.

**Bonnet's** (bon-aze′) **cap′sule.** Tenon's capsule.

**Bonnier's** (bon-ne-aze′) **rings.** Arrangement of ferrules and cork ring employed in operation of intestinal anastomosis.

**Bonplan′dia angustu′ra** (after the French naturalist Bonpland). Cusparia febrifuga. **B. trifolia′ta,** Cusparia febrifuga.

**Bon′tia daphnoi′des** (after Jacob Bontius, Dutch physician). Grows in W. Indies; flowers and berries in decoction are emollient; berries are also tæniacide. **B. ger′minans,** Avicennia tomentosa

**Bon′us ge′nius.** Peucedanum. **B. Henri′cus,** Chenopodium.

**Bo′ny.** Osseous.

**Boo′cho** or **Boo′ko.** Diosma crenata.

**Boo′hoo fe′ver** or **sick′ness.** A form of influenza (?) marked by great depression of spirits and gastroenteric disorder, prevalent in Samoa and the Hawaiian Islands.

**Book-worm.** The larva of the drug-store beetle, Sitodrepa panicea.

**Boo′mah nuts.** Fruit of Pycnocoma macrophylla.

**Bo′on u′pas.** Upas.

**Boo′na.** Phaseolus vulgaris.

**Boöph′ilus bo′vis.** Texas cattle tick; carrier of the germ of Texas fever.

**Boot, Junod's.** See *Junod.*

**Boot′ia vulga′ris.** Saponaria.

**Boracic acid** (bor-as′ik as′id). Boric acid.

**Bo′rage.** Borago officinalis.

**Bora′go officina′lis.** Borage, burrage; leaves and flowers are emollient, aperient, diuretic, and demulcent.

**Bo′ral.** Aluminum borotartrate; an astringent and disinfectant, prepared by the mutual action of watery solutions of borax and aluminum sulphate.

**Bo′rate.** Salt of boric acid.

**Bo′rated.** Containing borax or boric acid.

**Bo′rathron.** Juniperus sabina.

**Bo′rax** (Ph. Br). Sodii boras (Ph. U. S.), borate, biborate, or subprotoborate of sodium; inodorous salt, occurring as a white powder or transparent, colorless prismatic crystals, of a cool, somewhat alkaline taste; soluble in twelve parts of water. Borax is used as a lotion in aphthæ and other oral affections and in affections of the mucous membranes. Dose, gr. v–xv (0.32–1.0). **B. hon′ey,** mel boracis.

**Borbo′nia ruscifo′lia** (after Gaston de Bourbon, son of Henry IV. of France). S. African shrub, used in asthma and hydrothorax, and in decoction as a diuretic.

**Bor′borus** Fecal matter.

**Borboryg′mus.** Noise made by flatus in the intestines.

**Bor′derland cases.** Cases of mental disorder or eccentricity approaching the grade of positive insanity, but not definitely regarded as insane.

**Bordier-** (bor-de-a′) **Fränk′el's sign** or **symp′tom.** See *Bell's phenomenon.*

**Bore′tree.** Sambucus.

**Bo′ric** or **Borac′ic acid.** $H_3BO_3$. Acidum boricum (Ph. U. S. and Br.). White, crystalline soluble substance, made by the action of chlorohydric acid on sodium borate; antiseptic; used externally in diseases of the skin and in collyria, gargles, etc.

**Boricin′.** A mixture of borax and boric acid in water, from which a crystalline substance in formed, which is antiseptic and used in surgery as a substitute for boric acid.

**Bo′ride.** A compound of boron and a metallic base.

**Bo′rism.** A term used to denote the toxic effects of borax, as nausea and vomiting, eczema, dryness of the skin and mucous membranes from loss of fat, alopecia, constitutional skin rashes, emaciation, local swellings, albuminuria, heart failure.

**Bo′rium.** Boron.

**Borkhause′nia ca′va** (after Borkhausen, German botanist). Fumaria bulbosa.

**Born.** Brought forth from the womb. It has been decided by English judges that to "be born alive" means that acts of life must have been manifested after the whole body has been extruded, and that respiration in transitu is not evidence that a child was born alive; hence respiration may be a sign of life, but not of live birth.

**Bor′neëne.** Borneo camphor oil.

**Bor′neo cam′phor.** $C_{10}H_{18}O$. A solid substance obtained from Dryobalanops aromatica. **B.-c. oil,** $C_{10}H_{16}$, obtained from Dryobalanops aromatica; it consists of a liquid hydrocarbon containing borneol in solution.

**Bor′neol.** Artificial Borneo camphor.

**Borocit′rate.** Combination of both boric and citric acid with a base.

**Boroformalin′.** White substance from a solution of aluminum hydrate in formic and boric acids; antiseptic and antibromic.

**Borofor′mol.** Boroformalin.

**Borofuchsin′.** Stain for Bacillus tuberculosis, being a solution in alcohol of fuchsin and boric acid, equal parts.

**Boroglyc′eride.** Combination of glycerin with boric acid, having antiseptic properties; employed especially in affections of the eye; borate of glyceryl.

**Boroglycerin′.** Boroglyceride.

**Boroglyc′erol.** Glyceritum boroglycerini.

**Bo′rol.** Sodium or potassium borosulphate, antiseptic, externally and internally, in diphtheria, erysipelas, gonorrhœa, burns, wounds, etc.

**Borolyp′tol.** Antiseptic combination of formaldehyde, myrrh, eucalyptus, etc.

**Bo′ron** (symbol, B). An element obtained by treating potassium with boracic acid; dark, olive-colored powder, devoid of taste and smell; heated in air or in oxygen, it is converted into boric acid.

**Borophe′nol.** A combination of borax and carbolic acid; disinfectant.

**Borophenyl′ic acid.** White, soluble powder; antiseptic and preservative.

**Borosal′icyl.** Made by triturating sodium salicylate and boric acid; antiseptic.

**Borosal′icylate of glycerin′.** Obtained by heating and dissolving boric and salicylic acids in the presence of glycerin; antiseptic and microbicidal.

**Borosalicyl′ic acid.** Result of the addition of a solution of boric acid to an alcoholic solution of salicylic acid; white powder; antiseptic. *Borosalicylate of sodium* is the chief salt of this acid.

**Borosal′yl.** See *Borosalicyl.*

**Borotar′trate.** Compound of a base with boric and tartaric acids conjointly, as *potassium borotartrate.*

**Borotar′trol.** Combination of boric acid and sodium tartrate; antiseptic.

**Borra′go.** Borago officinalis.

**Bor′ras.** Black vomit.

**Borsier′i's line.** Line made by the finger-nail on the skin early in a case of scarlatina; white at first and afterward resuming its red color.

**Bo'rum.** Boron.

**Borve'ria emet'ica.** Brazilian plant; root emetic.

**Bosom** (booz'um). Breast; mamma.

**Boss.** Prominence, as of bone.

**Bos'selated.** Having bosses or prominences.

**Bos'tock's catarrh'.** Hay fever.

**Bos'ton i'ris.** Iris virginica.

**Boswel'lia** (after Dr. John Boswell, of Edinburgh) **carte'rii,** African tree, source of olibanum. **B. floribun'da,** see *Juniperus lycia.* **B. frerea'na,** African tree, yielding elemi. **B. papyrif'era,** see *Juniperus lycia.* **B. serra'ta,** see *Juniperus lycia.* **B. thurif'era,** see *Juniperus lycia.*

**Bot** (*botus,* intestinal worm). Larva of fly of genus *Œstrus,* carried into the stomach and hatched there. **B. fly,** Gasterophilus equi and other species of fly, parasitic in the stomach of the horse, under the skin of ruminants, and in the nostrils of sheep, and sometimes of man.

**Botal's' canal'** or **duct.** Ductus arteriosus. **B.'s fora'men,** foramen of Galen, an opening in the fetal heart between the two auricles, through which blood passes from one to the other; named after Leonard Botallus, Botal, or Botalli, who wrote in 1562; it was spoken of, however, by Vesalius, and even by Galen. **B.'s lig'ament,** vestige of ductus arteriosus.

**Botan'.** Pæonia moutan.

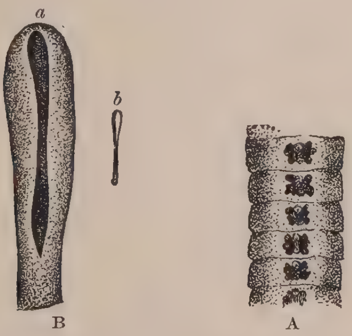
**Botan'ical doc'tor.** Herb doctor.

**Bot'any.** The science which treats of the nature, growth, uses, and classification of plants. **Med'ical b.,** science of the properties, characters, etc., of the plants used in medicine.

**Bot'any Bay gum.** Xanthorrhœa resin. **B. B. ki'no,** Australian kino.

**Botch.** Swelling of the skin; phlegmon.

**Bothrioceph'alus** (*bothrion,* small pit, *kephale,* head). A genus of cestoid worms. **B. la'tus,** the broad tapeworm, common in Switzerland, Russia, and some parts of France. It inhabits the intestines of man, and is sometimes of enormous length. Other varieties inhabit the intestines, as *B. cephalus corda'tus,* only about a foot long; *B. crista'tus* and *B. liguloi'des,* ribbon-like worm; *B. trop'icus,* variety found in those resident in Guinea.



Bothriocephalus latus. A, proglottides; B, head—*a*, from the side, enlarged; *b*, from the flat, natural size.

**Both'rion** or **Both'rium.** Alveolus or small fossa; small, deep ulcer on the cornea.

**Both'rus.** Fovea; pit; depression.

**Bo'tou.** Pareira brava.

**Bo-tree.** Ficus religiosa.

**Botrioceph'alus.** Bothriocephalus.

**Bot'rophis serpenta'ria.** Actæa racemosa.

**Botryococ'cus.** Botryomyces.

**Bot'ryoid** (*botrys,* bunch of grapes). Like a bunch of grapes, as syphilitic gummata of the liver.

**Botryomy'ces** (*botrys,* bunch of grapes, *mykes,* fungus). Micrococcus of horses, *Micrococcus botryogenus,* giving rise to small multiple fibromatous tumors in the lungs, subcutaneous tissue, and within the muscular structures. The condition is called *botryomyco'sis.*

**Botryophy'ma** (*botrys,* bunch of grapes, *phyma,* growth). Vascular fungous growth on the skin.

**Botryop'sis platyphyl'la.** Chondodendron tomentosum.

**Botryos'teophyte** (*botrys,* cluster of grapes, *osteon,* bone, *phyton,* growth). Bony growth—osteophyte—having the appearance of a bunch of grapes.

**Botryotherapeu'tics** or **Botryother'apy.** The grape cure.

**Bot'rys.** Chenopodium botrys. See *Vitis vinifera.* **B. ambrosioi'des,** Chenopodium ambrosioides. **B. america'na,** Chenopodium ambrosioides. **B. anthelmin'tica,** Chenopodium anthelminticum. **B. mexica'na,** Chenopodium ambrosioides.

**Botry'tis bassia'na.** Parasitic fungous formation, causing silkworm disease or muscardine. **B. tenel'la,** parasitic fungous growth producing disease in the larvæ of May-beetles. **B. ton'surans,** Trichophyton tonsurans.

**Bots.** Disease of cattle, horses, and sheep, attended with colic, spasms, etc., caused by the presence of parasitic larvæ. See *Bot.*

**Böttcher.** See *Boettcher.*

**Botti'ni's opera'tion.** Treatment for hypertrophy of the prostate gland by establishing a channel or opening through it by means of the galvanocautery.

**Bot'tle nose.** Gutta rosea.

**Bot'tom.** Buttock; nates.

**Bot'try-tree.** Sambucus.

**Bot'uliform** (*botulus,* sausage). Having the form of a sausage.

**Botulin'.** A poisonous ptomain found in spoiled sausage and various canned meats, the cause of botulism.

**Botulin'ic acid.** Acid detected in sausage poisoning.

**Bot'ulism** or **Botulis'mus.** Sausage or meat poisoning; allantiasis; form of ptomain poisoning caused by introduction into the system of the products of decomposition of sausages and various canned meats. The symptoms are those of marked disturbance of the central nervous system, with dryness of the mucous membranes, ptosis, contracted pupils, and depression of the mental faculties.

**Boucen'na.** Albizzia anthelmintica.

**Bouchard's** (boo-sharz') **coeffi'cient.** Proportion of urea in the urine to total amount of solid matter. **B.'s disease',** dilatation of the stomach caused by muscular atony of that organ. **B.'s nodos'ities,** knotty or hardened finger-joints, associated by Bouchard with gastric dilatation.

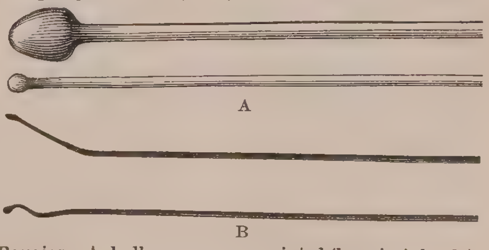
**Bouchut's** (boo-shueze') **tubes.** Tubes devised by Bouchut, a French physician, for use in intubation of the larynx. The procedure was bitterly opposed at the time and was abandoned, but was later independently introduced by O'Dwyer, of New York. See *Intubation of the larynx.*

**Boucne'mia** or **Bucne'mia.** Elephantiasis Arabum.

**Bou'da.** Disease of dissolute Abyssinian women, characterized by severe cataleptic paroxysms.

**Boudin's' law.** That malarial poison and tuberculosis are antagonistic.

**Bougie,** boo-zhe' (F., candle). Flexible cylinder, variable in size, to be introduced into the urethra, œsophagus, rectum, etc., to dilate these canals when



Bougies. A, bulbous or acorn-pointed (bougie à boule); B, filiform.

contracted. Bougies are composed of solid and insoluble substances, as plaster, wax, steel, German silver, elastic gum, gutta-percha, catgut, etc. They act, of course, only mechanically. Soluble bougies have been employed in gonorrhœa, gleet, etc. **Armed b.**, b. having some caustic attached to its extremity; caustic or corrosive bougie. **B. à boule** (F.), bougie with a bulbous tip, employed to ascertain if a stricture exists in the urethra. **Bul'bous b.**, bougie à boule. **Caus'tic b.**, armed b. **Fil'iform b.**, delicate, almost thread-like bougie. **Med'icated b.** has an addition of some escharotic or other substance to destroy the obstacle, as the caustic bougie, which has a small portion of lunar or other caustic inserted in its extremity. **U'terine b.**, uterine sound.

**Bouillaud's** (bwe-yoze') **disease.** Endocarditis, exhaustively described by Bouillaud, of Paris. **B.'s metal'lic tink'ling**, a faint sound like the clinking of coin, sometimes heard near the apex in cases of cardiac hypertrophy.

**Bouillon**, boo-yon' (F., *bouillir*, to boil). Broth, liquid food, made by boiling the flesh of animals in water. It is slightly nourishing owing to the gelatin, and stimulating because of the extractives it contains. It is used as a medium in the culture of bacteria.

**Boule'sis** (*boulomai*, to will). Will; voluntas.

**Boulim'ia** or **Bulim'ia** (*bous*, ox, *limos*, hunger). Almost insatiable hunger; canine appetite, sometimes seen in hysteria and pregnancy.

**Boul'ton's solu'tion.** A mixture of carbolic acid, iodine, and glycerin.

**Boun'cing bet.** Saponaria.

**Boun'dou.** Ordeal poison; akasga.

**Bou'nodont** (*bounos*, a mound, *odous*, a tooth). A molar tooth.

**Bouphthal'mos.** Buphthalmia.

**Bouquet** (boo-ka'). Flavor of old wine. **B. fe'ver**, dengue.

**Bourane'.** Arrow poison from Erythrophlœum guineense.

**Bourdin's' paste.** A mixture of nitric acid with flowers of sulphur; used as an escharotic.

**Bourdonnement'** (F.). Buzzing sound; murmur caused by fibrillar muscular contraction, heard on auscultation of any region.

**Bour'tree.** Sambucus nigra.

**Bousse'na.** Musenna.

**Bouton'** (F.). Bud; button; used vaguely for papule, vesicle, and pustule; see *Button*. **B. d'Amboine'**, framboesia. **B. terminal'**, enlargement of free extremities of sensory nerves.

**Boutonnière**, boo-ton-yair' (F., buttonhole). Long incision made into the urethra to extract a calculus from the canal when too large to be discharged by the natural passage; also a small incision in the peritoneum or above the pubis, to penetrate the bladder in retention of urine.

**Bouvar'dia angustifo'lia.** Used in Mexico in rabies. **B. hirtel'la**, **B. jacqui'ni**, and **B. triphyl'la** are credited with similar properties.

**Bouveret's** (boo-ver-aze') **disease'.** Paroxysmal tachycardia.

**Bovil'læ.** Rubeola.

**Bovi'na fa'mes** (*bovinus*, pertaining to oxen, *fames*, hunger). Boulimia.

**Bo'vine heart.** Hypertrophied heart. **B. lymph**, b. virus. **B. vi'rus**, vaccine matter from a cow or calf.

**Bovis'ta.** Lycoperdon.

**Bow.** Bending, as of the legs outward, *bowleg*. **La'bial b.**, a mechanical appliance used in tooth regulating, applied to the outside of the dental arches. **Lin'gual b.**, the same as labial b., but applied to the inside of the dental arches.

**Bowdich'ia** or **Bowditch'ia.** South American plant, the source of Alcornoque bark; the latter is astringent and emetic.

**Bow'ditch Isl'and ring'worm.** Tinea imbricata.

**Bow'el.** Intestine. **B. complaint'**, looseness of the bowels, especially in young children in the warm season. **Low'er b.**, rectum.

**Bow'knee** or **Bow'leg.** Genu varum.

**Bow'man's cap'sule.** See *Kidney*. **B.'s disks**, see *Sarcous elements*. **B.'s glands**, long follicles, either flask-shaped or with projections and twistings of their blind extremities, more clearly seen on the periosteum of the nasal septum of lower animals. **B.'s mem'brane**, layer of connective tissue below the corneal portion of the conjunctiva. **B.'s mus'cle**, ciliary muscle. **B.'s opera'tion**, operation for thick opacity after cataract, in which two shouldered or stop needles are introduced at opposite sides of the cornea, one fixing the membrane, the other effecting laceration. **B.'s probe**, probe for examination and dilatation of minute canals and the nasal duct. **B.'s root**, Euphorbia corollata, Gillenia trifoliata, Leptandria purpurea. **B.'s sar'cous el'ements**, muscle cases, elements entering into the formation of striated muscular fibres.

**Bow'man-Mül'ler's cap'sule.** Bowman's capsule.

**Box.** An evergreen shrub. **Moun'tain b.**, Arbutus uva ursi. **B. tree**, Buxus sempervirens; Cornus florida. **B. wood**, Cornus florida.

**Box'berry.** Gaultheria.

**Boy'er's bur'sa** or **cyst.** Bursa between hyoid bone and thyrohyoid membrane; called also subhyoid cyst.

**Boyle's fu'ming liq'uor.** Ammonium sulphide in solution. **B.'s law**, with a constant temperature the volume of a gas varies in inverse ratio to the pressure upon it.

**Boze'man's su'ture.** Suture used in operation for vesicovaginal fistula; a metal or button shield is used, oval and perforated, for passage of silver wires.

**Bozzi's** (bot'tsis) **fora'men.** Macula lutea of the retina.

**Bozzoli's** (bot'tso-lis) **sign** or **symp'tom.** Pulsation of arteries of the nose noticed in aneurysm of the thoracic aorta.

**Brab'ylon.** Prunum damascenum.

**Bra'chia** (pl. of brachium). Arms or processes. **B. cerebel'li**, see *Peduncles of cerebellum*. **B. copulati'va**, see *Peduncles of cerebellum*. **B. of op'tic lobes**, see *Brachium anterius* and *Brachium posterius*. **B. pon'tis**, see *Peduncles of cerebellum*.

**Bra'chial** (*brachium*, arm). Belonging to the arm. **B. aponeuro'sis**, aponeurosis formed particularly by expansions of tendons of latissimus dorsi, pectoralis major, and deltoid muscles, completely enveloping the muscles of the arm. **B. arch**, arch of brachial fascia at posterior border of axilla. **B. ar'tery**, humeral artery, extends from axilla to bend of elbow, where it divides into cubital or ulnar and radial arteries; it passes along the internal edge of the biceps, behind the median nerve, and between accompanying veins. **B. fas'cia**, fascia of the arm. **B. glands**, lymphatic glands in vicinity of elbow-joint. **B. lig'ament**, ligament from greater tuberosity of humerus to point of insertion of coracobrachialis muscle. **B. mus'cle, ante'rior**, situated at anterior and inferior part of arm, and below the elbow-joint; arises, fleshy, from middle of the os humeri, and is inserted into coronoid process of the ulna; it bends the forearm. **B. plex'us**, nervous plexus, formed by interlacing of anterior branches of last four cervical pairs and first dorsal; deeply seated in the hollow of the axilla, extending as far as the inferior and lateral part of the neck; it gives off thoracic, suprascapular and infrascapular, brachial (six in number), axillary, cutaneous, musculocutaneous, radial, cubital, and median nerves. **B. veins**, two in number, accompany the artery, frequently anastomosing with each other, and terminating in the axillary veins.

**Brachia'le** (bracelet). Carpus.

**Brachial'gia** (*brachion*, arm, *algos*, pain). Pain in the arm; neuralgia of the arm.

**Brachia'lis.** Brachial. **B. accesso'rius**, accessory muscle to b. anticus. **B. anti'cus**, brachial muscle. **B. exter'nus**, see *Triceps extensor cubiti*. **B. inter'nus**, brachial muscle. **B. posti'cus**, triceps brachii.

**Brachilu'vium.** Arm bath.

**Brachinin′.** Extract of Brachinus crepitans, the bombardier beetle; used in rheumatism.

**Brachi′nus crep′itans.** The bombardier beetle, fam. *Carabidæ;* it secretes when irritated an acrid fluid which has been used in the treatment of rheumatism.

**Brachio-.** In composition, brachium or arm.

**Brach′ioabdomina′lis.** Occasional separate muscle, usually part of pectoralis major.

**Brach′iocapsula′ris.** Rare muscle, passing from shaft of humerus to capsular ligament of shoulder.

**Brachiocephal′ic.** Relating to the arm and head. **B. ar′tery,** innominate artery. **B. veins,** innominate veins.

**Brachiocru′ral.** Relating to the arm and thigh conjointly.

**Brachiocu′bital.** Belonging to arm and forearm, as *brachiocubital ligament,* internal lateral ligament of elbow-joint, because attached to os brachii or humerus and to cubitus or ulna.

**Brachiocyllo′sis** or **Brachiokyllo′sis** (*brachion,* arm, *kyllosis,* act of making crooked). Curvature of the arm inward, sometimes causing paralysis.

**Brachiofa′cial.** Relating to the arm and face conjointly, as *brachiofacial paralysis.*

**Brach′iofascia′lis.** Slip from brachialis anticus muscle inserted into fascia of biceps.

**Brachiom′eter.** Instrument for measuring dimensions of the arm.

**Brachion′cus** (*brachion,* arm, *onkos,* swelling). Tumor or swelling of the arm.

**Brach′iora′dial.** Belonging to the humerus and radius; name applied to the external lateral ligament of the elbow-joint, because attached to the brachium or humerus and radius. The *brachioradial fascicle* is a small slip from the brachialis anticus muscle inserted on the radius.

**Brach′ioradia′lis mus′cle.** Supinator radii longus; also third head of the biceps muscle of the arm.

**Brach′iorrheu′ma** (*brachion,* arm, *rheuma,* defluxion, rheumatism). Rheumatism of the arm.

**Brachiostropho′sis** (*brachion,* arm, *strepho,* to twist). Injury of the arm by twisting.

**Brachiot′omy** (*brachion,* arm, *tome,* incision). Amputation of the arm; dissection of the arm.

**Brach′iplex.** The brachial plexus.

**Brachistoceph′alus** (*brachistos,* very short, *kephale,* head). Brachycephalus, especially one with a cephalic index of 86 degrees or over.

**Bra′chium** or **Bra′chion.** The arm or upper extremity from shoulder to wrist, especially the upper arm or part between shoulder and elbow; any process, especially in cerebral nomenclature. **B. ante′rius,** rounded process passing from anterior pair of corpora quadrigemina (*nates*) obliquely outward into the thalamus opticus. **B. cerebel′li,** restiform body; peduncle of the cerebellum. **B. cer′ebri,** b. anterius, b. posterius. **B. copulati′vum,** superior peduncle of cerebellum. **B. for′nicis,** pillar of fornix. **B. mo′vens quar′tus,** latissimus dorsi muscle. **B. of op′tic lobes,** b. anterius, b. posterius. **B. pon′tis,** middle peduncle of cerebellum. **B. poste′rius,** rounded process passing from posterior pair of corpora quadrigemina (*testes*) obliquely outward into the optic thalamus.

**Brach-Rom′berg symp′tom.** See *Romberg.*

**Brachu′na.** Nymphomania; satyriasis.

**Brachy-** (*brachys,* short). In composition, short.

**Brachyau′chen** (*brachys,* short, *auchen,* neck). Short neck, or one so constituted.

**Brachycar′dia.** Bradycardia.

**Brachycephal′ic** or **Brachyceph′alous.** Having a short head.

**Brachyceph′alus** (*brachys,* short, *kephale,* head). One with a short head; one of a race of people whose cerebral lopes do not completely cover the cerebellum; having *brachycephalic skull,* breadth being out of proper proportion to length. The condition is called *brachycepha′lia* or *brachyceph′alism.*

**Brachychei′lia** (*brachys,* short, *cheilos,* lip). Unusual shortness of the lip or lips.

**Brachychron′ic** (*brachys,* short, *chronos,* time). Continuing but a short time; acute.

**Brachydac′tylous** (*brachys,* short, *daktylos,* finger). Having short fingers or toes. The condition is *brachydactyl′ia* or *brachydac′tylism.*

**Brachyfa′cial.** Having a short face.

**Brachyglos′sia** (*glossa,* tongue). Shortness of tongue.

**Brachygnath′us** (*gnathos,* under jaw). One with abnormally short lower jaw. The condition is called *brachygnath′ia* or *brachyg′nathism.*

**Brachymetro′pia** (*brachys,* short, *metron,* measure, *ops,* eye). Myopia.

**Brachyno′sis** or **Brachyn′sis** (*brachyno,* to shorten). Unusual shortness; abbreviation.

**Brachyo′tous** (*ous,* ear). Having short ears.

**Brachypneu′ma** or **Brachypnœ′a** (*brachys,* short, *pneuma,* breath). Shortness of breath; dyspnœa.

**Brachyp′odous** (*brachys,* short, *pous,* foot). Having unusually short foot or feet.

**Brachyrrhyn′chus** (*rhynchos,* snout). Shortness of nose. Such an animal is said to be *brachyr′rhinous.*

**Brachysmus** (brak-iz′mus). Abbreviation; shortening.

**Brachys′tomus** (*brachys,* short, *stoma,* mouth). An animal having a short mouth.

**Bra′cing.** Corroborant; tonic.

**Brack′en.** Ptaris aquilina. **Rock b.,** Polypodium, P. incanum. **B. root,** Polypodium vulgare.

**Bradæsthe′sia** or **Bradyæsthe′sia** (*bradys,* tardy, *aisthesis,* sensation). Impaired sensation.

**Brady-** (*bradys,* tardy). In composition, difficult; tardy.

**Bradyar′thria** (*bradys,* tardy, *arthron,* articulation). Slowness of speech; bradylalia.

**Bradybolis′mus** (*bradys,* tardy, *ballo,* to throw). Bradyspermatism.

**Bradycar′dia** (*bradys,* slow, *kardia,* heart). Slow action of the heart.

**Bradycau′ma** or **Bradycau′sis** (*bradys,* slow, *kauo,* to burn). Slow combustion.

**Bradycaute′rium.** Slow, caustic action, as that of a moxa.

**Bradycine′sia** or **Bradycine′sis.** Bradykinesia.

**Brad′ycrote** (*bradys,* slow, *kroteo,* to strike). Agent that diminishes the number of pulsations of the heart, as veratrum viride.

**Bradycrot′ic.** Having slow pulse.

**Bradydias′tole** or **Bradydiasto′lia.** Prolonged diastole; a condition of the heart characterized by the prolongation or retardation of diastole; observed in aortic insufficiency, stenosis of mitral valve, etc.; usually associated with lesions of the cardiac muscle; a premonitory sign of dilatation.

**Bradyecoi′a.** Deafness.

**Bradyesthe′sia.** Bradæsthesia.

**Bradyfi′brin.** See *Corium phlogisticum.*

**Bradyglos′sia** (*bradys,* slow, *glossa,* tongue). Slowness of speech.

**Bradykine′sia** or **Bradykine′sis.** Slowness of movement.

**Bradylal′ia** (*bradys,* slow, *lalia,* speech). Slowness of speech.

**Bradylo′gia** (*bradys,* slow, *logos,* discourse). Difficulty or slowness of speech; bradylalia.

**Bradymase′sis** (*masesis,* mastication). Difficult or slow mastication.

**Bradyno′sus** (*nosos,* disease). Chronic disease.

**Bradypep′sia** (*bradys,* slow, *pepto,* to digest). Slow digestion; dyspepsia.

**Bradypha′sia** (*phasis,* speaking). Bradylogia.

**Bradyphra′sia** (*phrasis,* speech). Labored speech.

**Bradypnœ′a** (*bradys,* slow, *pneo,* to breathe). Slow or difficult breathing.

**Bradysper′matism.** Slow emission of sperm.

**Bradysu′ria** or **Bradyu′ria** (*bradys,* slow, *ouron,* urine). Slow evacuation of urine; dysuria.

**Bradyto′cia** (*tokos,* birth). Slow and difficult parturition.

**Braid′ism.** Animal magnetism; hypnotism.

**Brain.** Cerebrum; encephalon. **Abdom′inal b.,** solar plexus. **Af′ter b.,** metencephalon. **B. fag,** cerebral asthenia. **B. fe′ver,** meningitis. **Fore b.,** prosencephalon. **Great b.,** cerebrum. **Hind b.,** epencephalon. **Lit′tle b.,** cerebellum. **Mid b.,** mesencephalon. **B. mur′mur,** systolic murmur heard in rickets in ausculation over the anterior fontanelle or in the temporal region. **B. pan,** cranium. **Rail′way b.,** neurosis peculiar to railroad employés, consisting of disturbance of sensations and perceptions, insomnia, anæsthesia, paresis, etc. **B. sand,** acervulus cerebri; gritty matter in the pineal gland. **B. stem,** cerebellum and transverse fibres of pons Varolii. **B. tire,** cerebral asthenia.

**Brake.** Fern. **Com′mon b.,** Pteris aquilina. **Dock b.,** Polypodium incanum, Polypodium vulgare. **B. root,** Polypodium vulgare.

**Bram′ble.** The blackberry and other plants of the genus *Rubus*.

**Bran.** Furfur; external layer of wheat, separated from flour by bolting. **B. disease′,** a disease in the horse, probably osteitis deformans, supposed to be due to the substitution of bran for oats in the animal's dietary.

**Bran′ca german′ica.** Heracleum spondylium. **B. leo′nis,** Alchemilla vulgaris. **B. lupi′na,** Leonurus cardiaca. **B. ur′si** or **ursi′na,** Acanthus mollis. **B. ve′ra,** Acanthus mollis.

**Branch.** Division of an artery or nerve; used synonymously with ramus. Often it signifies the main division, while ramus denotes a smaller branch, and ramusculus a minute branch.

**Bran′chi.** Swelling of tonsils or parotid, or of thyroid gland.

**Bran′chia** or **Bran′chiæ.** Gills or respiratory organs of fishes, consisting of mucous membrane to which blood is liberally supplied.

**Bran′chial.** Relating to branchia. **B. arch′es,** visceral arches; tissue separating contiguous branchial clefts. **B. clefts** or **fis′sures,** clefts from pharynx to outside found in early embryonic life in vertebrates, and persistent in amphibians. **B. cyst,** remnant of branchial arches. **B. fis′tula,** fistula between pharynx or larynx and exterior of neck.

**Branchiog′enous.** Developing branchia or gills; or developed from or in a branchial cleft, as *branchiogenous cyst*.

**Branchiom′erism.** Division of the entoderm into a longitudinal series of homogeneous parts.

**Branchiosto′ma** (*branchia*+*stoma*, mouth). Opening of branchiæ or gills.

**Bran′chus.** Catarrhal affection of mucous membrane of fauces, trachea, etc.; hoarseness.

**Bran′ci.** Cynanche tonsillaris.

**Bran′cia.** Vitrum.

**Brand's meth′od.** Antipyretic treatment, as of typhoid fever, etc., by means of the cold water bath.

**Brandt's meth′od.** Massage of the Fallopian tubes in order to express from them pus or other retained fluids.

**Bran′dy.** Spiritus vini gallici (Ph. U. S. and Br.), spirit of French wine; first liquid product obtained by distilling wine; sp. gr. 0.925–0.941; composed of water, alcohol, and aromatic oily matter, which gives it its flavor. It ought to contain from 46–55 per cent. of alcohol by volume. Brandy is a powerful and diffusible stimulant. **B. bot′tles,** Nymphæa lutea. **B. face** or **nose,** acne rosacea.

**Brankursine′.** Acanthus mollis.

**Bran′ny tet′ter.** Pityriasis.

**Bras′dor's opera′tion.** Operation proposed by Brasdor, consisting in the application of a ligature on the distal side of an aneurysmal tumor.

**Brase′nia** or **B. hydropel′tis.** Frog-leaf, little water lily, water jelly, water shield, or water target, deer food; indigenous plant, ord. *Ranunculaceæ*, of southern United States, covering surface of ponds, marshes, etc.; fresh leaves, mucilaginous; have been used in pulmonary complaints, dysentery, etc., like cetraria. **B. pelta′ta,** B. hydropeltis.

**Brash.** Transient attack of sickness; disordered digestion; rash or eruption. **Wa′ter b.,** pyrosis. **Wean′ing b.,** severe form of diarrhœa supervening at times on weaning.

**Bras′ium.** Malt.

**Bras′mos.** Fermentation.

**Brass′-founders' a′gue** or **B.-workers' disease′.** Chronic zinc poisoning following the inhalation of the fumes of deflagrating zinc in brass foundries.

**Bras′sica.** Cabbage, ord. *Cruciferæ*. Vegetable more digestible when raw; when in a solid, globular mass, like a head, it is b. capitata. **B. al′ba,** Sinapis alba. **B. campes′tris,** wild navet; cultivated turnip. **B. cani′na,** Mercurialis perennis. **B. capita′ta,** head cabbage. **B. cu′mana,** brassica. **B. eru′ca,** garden rocket, Roman rocket, shinlock; considered by the Romans aphrodisiac. **B. flor′ida,** cauliflower, more tender and digestible variety; Broccoli, Brassica sabellica, B. italica belongs to this variety. **B. his′pida,** Beruca. **B. ital′ica,** B. florida. **B. jun′cea,** Indian mustard. **B. mari′na,** Convolvulus soldanella. **B. na′pus,** rape; seed yields, on expression, oil which at times forms part of liniments. **B. ni′gra,** Sinapis nigra. **B. oblon′ga,** B. rapa. **B. olera′cea,** brassica. **B. pompeia′na,** B. florida. **B. ra′pa,** turnip. **B. sabel′lica,** B. florida. **B. sati′va,** brassica. **B. sinapis′trum,** charlock; resembles black mustard.

**Bra′thu.** Juniperus sabina.

**Braun's canal′.** Neurenteric canal in the fœtus. **B.'s cords,** cellular cords in the embryonic kidney.

**Braune's canal′.** Canal or open space made during labor by the vagina and cavity of the uterus together for the passage of the fœtus.

**Bravais′-Jack′son ep′ilepsy.** Jacksonian epilepsy.

**Braw′lins.** Arbutus uva ursi, Vaccinium vitis idæa.

**Brawn.** Muscle.

**Braw′ny indura′tion.** Hardening of muscular and other tissues.

**Brax′ton-Hicks's sign.** Intermittent contractions of the uterus at about the fourth month of pregnancy.

**Brax′y.** Fatal disease of sheep, especially anthrax or carbuncular fever.

**Braye′ra** (after Brayer, German physician). The former official (Ph. U. S.) name of Kousso, Hagedenia abyssinica, now *Cusso*, which see.

**Brayerin′.** Resinous principle from brayera; kosin.

**Brazil′nut.** Nut of Bertholettia excelsa.

**Brazil-wood.** Cæsalpina echinata.

**Bread.** See *Triticum*. **B. crumb,** mica panis. **Glu′ten b.,** bread made of wheat dough deprived of most of its starch by washing; bread made of gluten only cannot be eaten, being too hard and tough; hence one-fifth of the normal quantity of starch is allowed to remain. **B. fruit.** Atocarpus. **In′dian b.,** Lycoperdon tuber. **Mon′key b.,** Adansonia digitata. **B. paste,** medium for culture of bacteria, a paste of stale, coarse bread. **B. root,** Camassia esculenta, Psoralea esculenta. **St. John's b.,** Ceratonia siliqua.

**Bread′berry.** Pap.

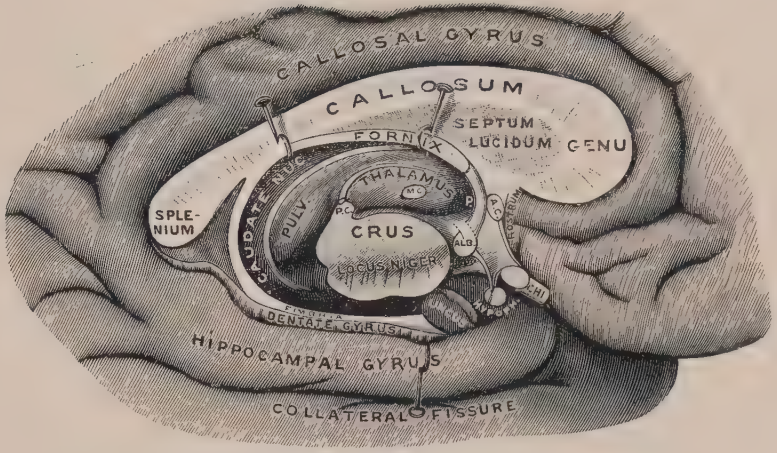
**Break′bone fe′ver.** Dengue.

**Break′er.** Arrangement for interrupting an electric current or circuit.

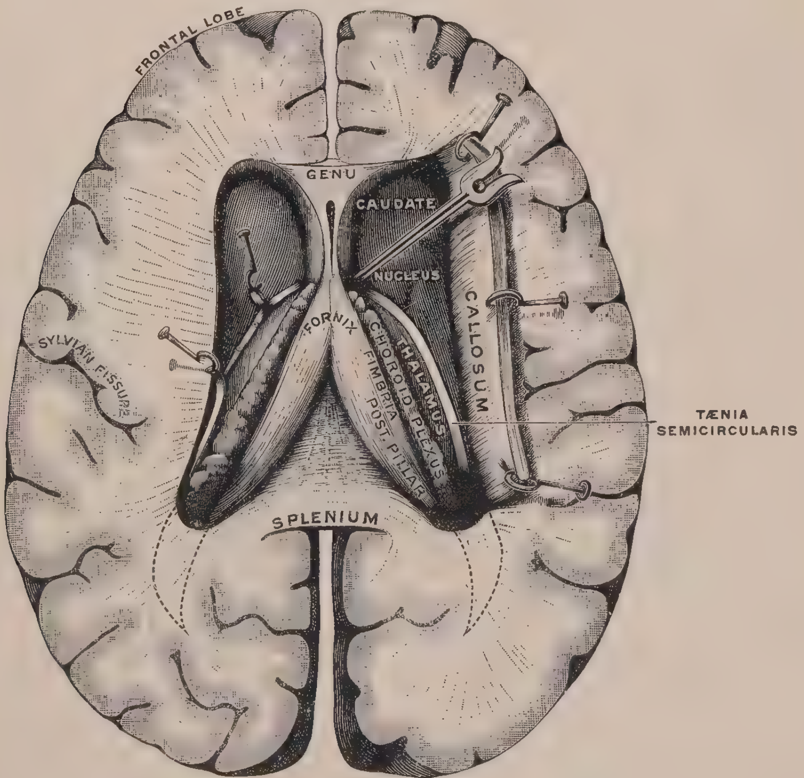
**Breast.** Thorax; mamma. **Bro′ken** or **gath′ered b.,** mammary abcess. **B. bone,** sternum. **Chick′en b.,** a narrowed and elongated thorax with projection forward of the sternum. **B. glass,** milk glass, glass applied to the nipple to receive milk when secreted copiously by the mamma. **Hyster′ical b.,** tender and swollen condition of mammary gland in hysterical girls. **Ir′ritable b.,** neuralgia of the breast; induration and tenderness of mammary gland. **B. pang** or **suf′focative b.,** angina pectoris. **Pig′eon b.,** chicken b. **B. pump,** antlia lactea. **B. weed,** Saururus cernuus.

**Breast′ings.** Colostrum.

**Breath.** Air expelled from the chest at each expiration. See *Respiration*. Offensive breath is

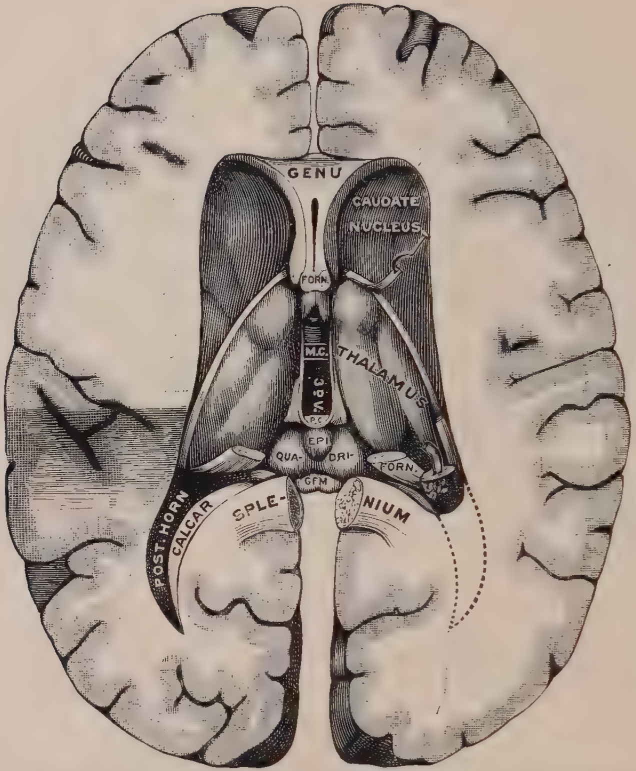


Parts of mesial and tentorial surfaces of left hemisphere, showing callosum in sagittal section with many of its relations: A. C., anterior commissure; ALB., corpus albicans; CHI., chiasma; HYPOPH., hypophysis; M. C., middle commissure; P., porta; P. C., posterior commissure; PULV., pulvinar. (Gerrish, after Testut.)

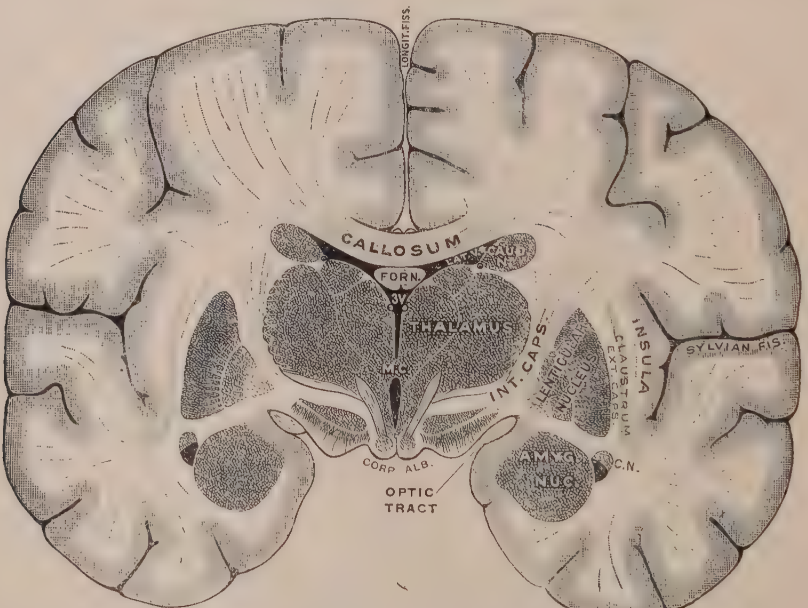


Floor of the lateral ventricles. On the left side the vein of the corpus striatum is lifted up. The director is in the right porta. Dotted outlines indicate the position of the posterior cornua. (Gerrish, after Testut.)

THE BRAIN.



Lateral and third ventricles from above. The fornix and velum interpositum have been removed. EPI., epiphysis; FORN., remains of fornix; 3D V., third ventricle; M. C., middle commissure; P. C., posterior commissure. (Gerrish, after Testut.)



Coronal section of the hemispheres through the middle commissure: AMYG. NUC., amygdaloid nucleus: C. N., caudate nucleus in the roof of the middle horn of the right lateral ventricle; CORP. ALB., corpora albicantia; EXT. CAPS., external capsule; FORN., fornix; INT. CAPS., internal capsule; M. C., middle commissure; LAT. V., body of lateral ventricle; 3D V., third ventricle. (Gerrish, after Testut.)

THE BRAIN.

usually dependent upon carious teeth or faulty state of the secretions of the air passages or disordered stomach. **B. pulse,** audible pulsation given to the breath as it issues from the mouth, by each beat of the heart; occasionally heard when there are dry, tuberculous cavities in the lung, with dense walls not separated from the heart by permeable lung tissue. **B. sounds,** respiratory sounds.

**Breath′ing.** Respiration. **Abdom′inal b., cog-wheel b., Cheyne-Stokes b.,** etc., see the qualifying word, also *Respiration.* **B. air,** air of respiration. **B. capac′ity,** amount of air that can be expelled from the lungs at forcible inspiration. **Mouth b.,** habitual breathing through the mouth instead of through the nose; In children it frequently depends upon the presence of adenoid growths in the pharynx. **B. a vein,** bloodletting.

**Brech′ma** or **Brech′mus.** Bregma.

**Brecht′s car′tilages.** Rudimentary cartilages which afterward become the episternal bone in some animals.

**Breech.** Nates. **B. presenta′tion,** appearance of the breech of child as the presenting part in parturition.

**Breed.** Race.

**Breed′ing.** Generation; pregnant. **Cross b.,** act of raising or breeding from different stocks or families. **In-and-in b.,** act of raising or breeding from the same stock or family.

**Breeze, elec′tric** or **stat′ic.** See *Aura.*

**Bregenin′.** Crystalline substance in brain tissue.

**Breg′ma** (*brecho,* to moisten). Anterior fontanelle, or top of head, because believed to be humid in infants, and to correspond to the most humid part of the brain; point of union of sagittal and coronal sutures; anterior fontanelle.

**Bregmat′ic.** Relating to bregma or anterior fontanelle. **B. bones,** parietal bones. **B. fontanelle′,** anterior fontanelle.

**Breg′matoante′rior presenta′tion.** Position of the fœtus in childbirth, descending head first, with the anterior fontanelle toward the obturator foramen of the mother. When it is toward the acetabulum of the mother it is called *bregmatocotyloid presentation;* when toward the sacroiliac articulation of the mother, *bregmatoposterior presentation.*

**Breg′matocot′yloid.** See *Bregmatoanterior.*

**Bregmatodym′ia.** See *Cephalodymia.*

**Breg′matolamb′doid arc.** Arc measured on the skull from the bregma to the point of junction of the sagittal and lambdoid sutures.

**Breg′matoposte′rior.** See *Bregmatoanterior.*

**Breis′ky′s disease′.** Kraurosis vulvæ, in which dryness of the mucous membrane is especially marked.

**Breph′ic** (*brephos,* infant). Relating to an infant or young child.

**Brepho-.** In composition, infant, as *brephopolysarcia,* obesity of infants; *brephohydrocephalus* or *brephydrocephalus,* hydrocephalus in infants, etc.

**Breschet′s** (bres-shaze′) **bone canals′** (after French anatomist). See *Diploic.* **B.′s helicotre′ma,** opening between the two scalæ of the cochlea. **B.′s si′nus,** sphenoparietal sinus. **B.′s veins,** see *Diploic.*

**Bres′lau test.** Test to discover if the infant had breathed before death: the floating of the stomach and bowels in water, when first taken from the body, was believed to show that the child had been born alive.

**Bretonneau′s′ diphthe′ria.** Pharyngeal diphtheria.

**Brevexten′sor.** Extensor brevis muscle. **B. digito′rum,** extensor brevis digitorum.

**Brev′ia va′sa** (short vessels). Branches of splenic arteries and veins distributed to the great cul-de-sac of the stomach.

**Brev′iceps** (*brevis,* short, *caput,* head). Having a short head, as a muscle.

**Brevicol′lis** (*brevis,* short, *collum,* neck). Having a short neck.

**Breviduc′tor.** Abductor brevis muscle.

**Breviflex′or.** Flexor brevis muscle; short flexor, as of the fingers, thumb, little finger, great toe. **B. hallu′cis,** flexor brevis pollicis pedis. **B. min′imi,** flexor brevis minimi digiti. **B. pol′licis,** flexor brevis pollicis.

**Brev′is cu′biti.** Anconeus. **B. ra′dii,** supinator brevis.

**Brevis′simus oc′uli.** Obliquus inferior oculi.

**Brevisupina′tor.** Supinator radii brevis muscle.

**Brezilin′.** Coloring-matter contained in Brazil wood; brazilin.

**Brick′dust depos′it.** A reddish urinary sediment composed of urates.

**Brick′layers′ itch.** Eczema impetiginoides.

**Brick′makers′ anæ′mia.** Disease in brickmakers due to the presence of ankylostoma duodenale.

**Bride′lia spino′sa.** Indian plant, the bark of which is astringent and anthelmintic.

**Bridge.** A protoplasmic bridle uniting two cells. **B. abut′ments,** in dentistry, abutment crowns; crowns anchored to the abutments; the portion of bridge lying between is called its body, each tooth of which is called a dummy. **Ju′gal b.,** zygomatic arch. **B. of nose,** arch formed by the junction of two nasal bones at the middle and upper part of the face. **B. work,** dental prosthetic devices supported entirely by anchorage to natural teeth as abutments.

**Bri′dle.** A device used in the regulation of the teeth, which has metal extensions protruding beyond the corners of the lips. A band or membranous fold extending from one part to another, sometimes in such a way as to produce a stricture. **B. stric′ture,** narrow band formed across a canal or outlet, as *bridle stricture of the urethra.*

**Brie′ger′s bacil′lus.** Bacillus cavicidus.

**Bri′er, bamboo′.** Smilax sarsaparilla. **Wild b.,** Rosa canina.

**Bright′ic.** Relating to Bright′s disease.

**Bright′ism.** Constitutional state associated with chronic Bright′s disease.

**Bright′s blind′ness.** Albuminuric retinitis, occurring in chronic nephritis. **B.′s disease of the kid′ney,** name applied to several forms of disease of the kidney in which there is albumin in the urine. **B.′s fric′tion sound,** the friction sound of pleuritis. **B.′s granula′tions,** granulations of chronic catarrhal nephritis or large white kidney.

**Brim of pel′vis.** Line of boundary of the superior strait of the pelvis.

**Brim′stone.** Sulphur. **Flow′ers of b.,** sublimated sulphur.

**Brine.** Solution of common salt, there being more than 3 per cent. of the salt. **B. bath,** tonic and stimulant bath of brine or sea water, artificially prepared.

**Brin′ton root.** Leptandria purpurea.

**Brin′ton′s disease.** Inflammation of the filamentous network of areolar tissue ensheathing the vessels of the stomach, with hyperplasia of connective tissue; plastic linitis.

**Brinvil′liers.** Spigelia anthelmintica.

**Briquet′s** (bre-caze′) **atax′ia or at′axy.** Hysterical loss of sensibility in a limb.

**Brisement forcé** (F., breeze-mon(g)′ for-say′). Forcible breaking up of parts, such as adhesions, which prevent free motion of an ankylosed limb or part.

**Brissaud-Marie′s** (bris-so′-mar-eze′) **syn′drome.** Hysterical hemispasm of the tongue and lips.

**Bris′tle bacil′lus.** Specific bacillus of tetanus existing in earth and garden mould. **B. cells,** ciliated cells at the end of the auditory nerve.

**Brit′ish gum.** Dextrin starch changed to a gummy condition by the action of dilute acids, diastase, or heat. **B. oil,** oil of petre, a variety of petroleum; also a mixture of camphor, rectified spirits of wine, sweet oil, and oil of hartshorn, boiled together.

**Brit′tle gum.** Product of Acacia albida of Senegambia.

**Brizo′ceras.** Ergot.

**Broach.** An instrument like a reamer for enlarging cavities in teeth.

**Broad.** A body is so termed whose transverse extent is considerable compared with its length. **B. bones**, plate-like bones which usually aid in forming the parietes of splanchnic cavities; such are the frontal, parietal, occipital, and iliac bones. **B. lig′aments**, suspensory ligament of liver; ligaments of the uterus; see *Uterus*. **B. mus′cles**, these generally form wholly or in part the parietes of cavities, especially those of the chest and abdomen.

**Broad′bent's sign.** A sign or symptom of adhesion of the pericardium, the interspaces between the ribs being retracted posteriorly during systole.

**Broad′nail.** Onychogryphosis.

**Bro′ca's an′gle.** A term applied to several angles of the skull in craniometry. **B.'s apha′sia**, cortical motor aphasia. **B.'s a′rea**, central portion of the anterior olfactory lobe. **B.'s cen′tre**, posterior portion of the left third frontal convolution; the centre for speech. **B.'s convolu′tion**, the third or inferior left frontal convolution of the brain in which the speech centre is located. **B.'s fis′sure**, the fissure surrounding the third left frontal convolution. **B.'s olfac′tory a′rea**, seat of origin of olfactory tract. **B.'s point**, centre of the orifice of the external auditory meatus. **B.'s pouch**, elastic pouch or sac in each labium majus, containing fat and connective tissue. **B.'s square**, a square applied to the head to indicate the location of the central fissure. **B.'s vis′ual plane**, plane of axes of orbits.

**Bro′chus.** One who has a very prominent upper lip or whose teeth project in front of the mouth.

**Bro′die's ab′scess.** Chronic abscess of bone, particularly of the head of the tibia. **B.'s disease′**, doughy condition of the knee-joint, obscuring points of bone. **B.'s joint**, pain in a joint, hysterical in origin. **B.'s pain**, pain when the skin is pinched in the vicinity of a neuralgic joint.

**Broes′ike's fos′sa.** Fossa in the peritoneal cavity located in the mesojejunum.

**Bro′kaw ring.** Catgut and rubber ring employed in intestinal anastomosis.

**Broke′leak.** Rumex hydrolapathum.

**Bro′ken breast.** Mammary abscess. **B. cir′cuit**, see *Circuit*. **B. do′ses**, see *Doses*. **B. wind′ed**, asthmatic.

**Bro′mal.** $C_2HBr_3O$. Oily liquid, chemical properties those of chloral; made by adding bromine to ether or absolute alcohol. **B. hy′drate**, $C_2H_3Br_3O_2$. Chemically analogous to chloral hydrate; white, crystalline, soluble substance, with odor like that of chloral, and pungent taste. Physiological effects resemble those of chloral hydrate, but bromal is more irritating, producing vomiting, diarrhœa, etc. Dose, gr. j–v (0.06–0.3). Externally it causes erythema and deep-seated infiltration of areolar tissue.

**Bromalbu′min.** Bromoalbumin.

**Bromalin′.** $(CH_2)_6N_4C_2H_5Br$. Bromethylformin; employed as a sedative in epilepsy; dose, 30 to 60 grains (2.0–4.0). **B. brometh′ylformin′**, hexamethylene-tetra minebromethylate, $C_6Br_4O_2$; a yellow compound produced by heating carbolic acid with bromine and iodine; it acts like potassium bromide, without its after-effects; its dose is larger; used in epilepsy and as a nervine and sedative. **B. hydrobro′mate**, bromamide.

**Bromaloïn′.** $C_{16}H_{15}Br_3O_7$. Preparation of aloin obtained by the action of bromine.

**Bro′mamide.** A member of the anilide group, largely consisting of bromine; antineuralgic and antipyretic.

**Bromammo′nium.** Ammonium bromide.

**Bromam′yl.** See *Amyl bromide*.

**Bro′mate.** A salt of bromic acid.

**Bro′mated.** Having bromine as a constituent, as **B. cam′phor**, see *Camphor*.

**Bromatoëc′crisis** (*broma*, food, *ekkrisis*, excretion). Lientery; discharge of unassimilated food.

**Bromatog′raphy** or **Bromog′raphy** (*broma*, food, *graphe*, description). Description of aliments; bromatology.

**Bromatol′ogy** (*broma*, food, *logos*, discourse). Sitiology; treatise on or description of foods; dietetics.

**Bromatotox′icon.** The active agent in food-poisoning.

**Bromatotoxin′.** A poisonous base of bacterial origin in decomposing food.

**Bromatotox′ism** or **Bromatox′ism** (*broma*, food, *toxikon*, poison). Food poisoning.

**Bromcam′phor.** Camphora monobromata.

**Brome′grass.** Bromus ciliatus.

**Brome′lia** (after Bromel, botanist of Sweden). A genus of tropical plants with rigid, spiny leaves. **B. anan′as**, the pineapple. **B. pin′guin**, pinguin, broad-leaved wild ananas, etc.; West India plant affording pinguin fruit, which is refrigerant; the berries are used for scurvy and for worms.

**Bromelin′.** A proteolytic ferment from the pineapple; used as a digestant.

**Brometh′yl.** Ethyl bromide.

**Brometh′ylene.** Ethylene bromide.

**Brometh′ylformin′.** Bromalin.

**Bromhidrosis′.** Bromidrosis.

**Bromhy′drate.** Hydrobromate.

**Bromhy′dric.** Hydrobromic.

**Bro′mic.** Containing bromine.

**Bro′mica.** A class of pharmaceutical substances, consisting of bromine and its compounds.

**Bro′mide.** A compound formed of bromine and another element. Many of the bromides have a therapeutic value in epilepsy and other diseases in which the indication is to allay nervous irritation.

**Bromidrosipho′bia** (*bromos*, fetor, *hidros*, sweat, *phobos*, fear). A morbid dread of or illusion as to unpleasant odors from the surface of the body.

**Bromidro′sis** (*bromos*, stench, *hidros*, sweat). Fetid sweat; at times general, *bromidrosis universalis*; at others partial, *bromidrosis localis*.

**Bro′mine** (symbol, Br). Bromum (Ph. U. S.); a non-metallic, volatile liquid element, of a reddish-brown color and highly offensive and suffocating odor, whence its name (*bromos*, stench); met with chiefly in sea water and in many animal and vegetable bodies living therein; also in many mineral waters. In chemical relations it may be placed between chlorine and iodine. With oxygen it forms bromic acid; with hydrogen, hydrobromic acid. It is used externally, either pure or dissolved in water, as an antiseptic and caustic. **B. chlo′ride** has been prescribed internally, as well as externally, in cancer and malignant tumors; chiefly in a caustic paste, either alone or with other chlorides, as of zinc, antimony, and gold.

**Bro′minism** or **Bro′mism.** General cachectic condition induced by bromine or the bromides, attended with drowsiness, general weakness, headache, cold extremities, foul breath, and eruptions on the skin.

**Bromipin′.** A non-official nerve sedative; an oily liquid, yellowish in color, obtained by the action of bromine on sesame oil; dose, ʒss–j (2.0–4.0).

**Bro′mized.** Affected with symptoms of full or excessive doses of bromides.

**Bromoalbu′min.** A substance formed by the action of bromine on peptone, albumose, etc.; used in epilepsy.

**Bro′moform.** $CHBr_3$. Liquid substance produced by distilling a mixture of calcium bromide and alcohol; analogue of chloroform. As an anæsthetic it is similar to chloroform in its odor, taste, and effects; also hypnotic. Used in whooping-cough, and externally analgesic and antiseptic in ozæna, ulcers of the larynx, etc. In large doses it is narcotic. Dose, ♏ i-v (0.065-0.32). The symptoms induced by it in long-continued or toxic doses are grouped under the name *bromoformism*.

**Bromogal′lic acid.** See *Gallobromol*.

**Bromogal′lol.** See *Gallobromol*.

**Bromohæmatin′.** Hydrobromide of hæmatin.

**Bromohæ′mol.** Hæmol containing a small percentage of bromine; dose, gr. xv–xxx (1.0–2.0); alterative and sedative.

**Bromohyperidro′sis** (*bromos*, stench, *hyper*, excess, *hidrosis*, perspiration). Condition in which there is an increase in amount and offensive odor of sweat.

**Bro′mo-i′odism.** General cachectic condition or poisoning induced by large doses of bromine and iodine or their compounds.

**Bro′mol.** Tribromophenol, a white, crystallized substance of a sweetish, astringent taste, derived from precipitating a weak solution of phenol with bromine-water; antiseptic in solution, powder, or ointment. Internally it has been used in cholera infantum, typhoid fever, diphtheria, pertussis, etc., in doses of gr. $\frac{1}{10}$–$\frac{1}{5}$ (0.006–0.012).

**Bromoma′nia.** Mania from the abuse of bromine or bromides.

**Bromomenorrhœ′a** (*bromos*, fetid, *menes*, menses, *rheo*, to flow). Excessive and fetid discharge of menstrual blood.

**Bromophe′nol.** Orthobromophenol, a liquid with carbolic odor, resulting from the action of bromine on carbolic acid; a weak ointment is employed in erysipelas.

**Bromopyrin′.** $C_{11}H_{11}BrN_2O$. White, crystalline substance; antipyretic and antiseptic.

**Bromosin′.** Bromoalbumin.

**Bro′mous.** Fetid.

**Brompheʹnol.** See *Bromol*.

**Bromphenylacetan′ilide.** See *Antisepsin*.

**Bro′mum.** Bromine.

**Bro′murated** or **Bro′mureted.** Containing bromine or bromide.

**Bro′muret** or **Bromure′tum.** Bromide.

**Bro′mus.** Brome grass, a genus of grasses containing many species. **B. cathar′ticus,** species growing in Peru and Chili; rhizome is cathartic. **B. cilia′tus,** indigenous; emetic, anthelmintic, cathartic, diuretic. **B. gla′ber,** Triticum repens. **B. mol′lis,** soft brome grass; the seeds cause giddiness in man and are fatal to poultry. **B. temulen′tus,** Lolium temulentum.

**Bronchadenes,** bronk-ad′en-ees (*bronchia*+*aden*, gland). Bronchial glands.

**Bronchadeni′tis.** Inflammation of the bronchial glands.

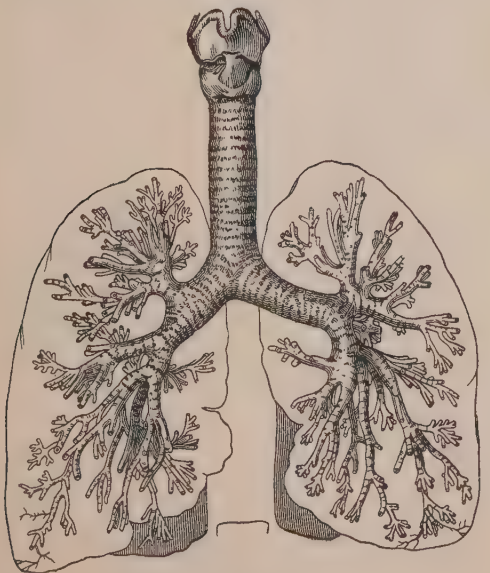
**Broncharc′tia** (*arcto*, to contract). Bronchiostenosis.

**Bronchecta′sia** or **Bronchec′tasis** (*ektasis*, dilatation). Dilatation of bronchia. See *Bronchiectasia*.

**Bronchelcho′sis** (*helkosis*, ulceration). Ulceration of bronchi.

**Bronchemphrax′is** (*emphraxis*, obstruction). Obstruction of bronchi.

**Bron′chi** (pl. of bronchus) and **Bron′chia** (pl. of bronchion). Two tubes, with their ramifications, arising from bifurcation of the trachea, carrying air into the lungs. The *bronchi* are the larger, the *bronchia* the smaller divisions of the bronchial tree, while the *bronchioles* are the minute terminal twigs ending in the pulmonary air cells. For measurements of bronchia, see *Trachea*. The Latins used the term *bronchus* for the whole trachea; its ramifications, *bronchia*. Term also applied to spongy bodies of the ethmoid bone.



Trachea and bronchial tubes.

**Bronchiadenoscir′rhus.** Scirrhus of the bronchial glands.

**Bron′chial.** Relating to the bronchia. **B. ar′teries,** generally two in number, one going to each lung, arising from the thoracic aorta and accompanying the bronchia in all their ramifications. **B. asth′ma,** asthma with bronchial symptoms. **B. breath′ing,** see *Murmur*. **B. cells,** pulmonary vesicles. **B. cough,** generally accompanies bronchial respiration, and indicates obstruction to entrance of air into air cells. **B. cri′ses,** see *Crises*. **B. glands,** glands of Vesalius; numerous glands of ovoid shape, of a reddish hue in infant, and subsequently brown and black, seated along the course of the bronchia. They may be presumed to be diseased when, in addition to existence of tumors in the neck, percussion gives a dull sound under the upper central part of the sternum, while there is no appreciable lesion of the lungs. **B. mus′cles,** unstriped muscles of the bronchial tubes. **B. nerves,** nerves furnished from the pneumogastric. **B. phthi′sis,** see *Phthisis, bronchial*. **B. plex′us,** pulmonary plexus. **B. respira′tion,** see *Murmur, respiratory*. **B. sep′tum,** spur or ridge projecting upward within the trachea at point of bifurcation. **B. sound,** sound of the air passing in and out the bronchia in respiration. **B. tubes,** see *Bronchi*. **B. veins** arise from last divisions of arteries of same name and pass on the right side into the vena azygos; on the left, into the superior intercostal vein. **B. voice,** bronchophony. **B. whis′per,** whispering bronchophony.

**Bronchiarc′tia.** Bronchiostenosis.

**Bron′chic.** Bronchial. **B. cel′lules,** pulmonary vesicles.

**Bronchiecta′sia** or **Bronchiec′tasis,** *ektasis*, dilatation). Dilatation of bronchial tubes; the most common situations for dilated bronchia are the scapular, mammary, and lateral regions.

**Bronchio-** or **Broncho-** (*bronchos*, throat, windpipe). In composition, bronchia or bronchus.

**Bronchiocatar′rhus.** Bronchial catarrh.

**Bron′chiole** (dim. of bronchium or bronchus). Minute terminal bronchial tube. See *Bronchi*.

**Bronchioli′tis.** Inflammation of the bronchioles; capillary bronchitis. **B. exudati′va,** inflammation of the bronchioles, accompanied with tough fibrinous or adhesive sputa.

**Bronchiopneumo′nia.** Bronchopneumonia.

**Bronchiorrhœ′a.** Bronchorrhœa.

**Bronchiorrhon′chus** (*rhonchos*, snoring sound). Bronchial râle.

**Bron′chiospasm.** Spasmodic contraction of the bronchial tubes.

**Bronchiosteno′sis** (*stenosis*, contraction). Contraction or narrowness of the bronchi.

**Bronchis′mus.** Spasmodic contraction of the bronchia.

**Bronchit′ic.** Relating to bronchitis.

**Bronchi′tis.** Inflammation of the lining membrane of the bronchial tubes, accompanied by cough, mucous expectoration, dyspnœa, and more or less uneasiness in breathing. Acute form is accompanied with all the signs of inflammation, and requires active treatment; the chronic form, winter cough, chronic catarrh, may be confounded with phthisis, from which it is distinguished mainly by the absence of hectic fever and of physical signs characteristic of the latter, as well as by the nature of the expectoration, which is generally mucous, at times mucopurulent, and contains no tubercle bacilli. When expectoration is little or none, bronchitis is said to be dry—dry catarrh; when fetid, the disease is fetid bronchitis. Plastic bronchitis is characterized by the formation of solid or tubular concretions of exudaton matter within the bronchial tubes. When bronchitis affects the smaller tubes it is termed capillary bronchitis or bronchiolitis, and is often fatal to children; vesicular bronchitis is sometimes called vesicular pneumonia of children. **Asthen'ic b.**, capillary bronchitis. **Cap'illary b.**, bronchiolitis. **Carbona'ceous b.**, see *Miners' asthma.* **Catar'rhal b.**, bronchitis with mucopurulent discharge. **Chron'ic b.**, see *Bronchitis.* **Convul'sive b.**, pertussis. **Croup'ous b.**, plastic b., b. in which fibrinous casts of the bronchial tubes are formed and coughed up. **Dry b.**, b. with little if any mucous discharge or secretion. **Epidem'ic b.**, influenza. **Exu'dative b.**, plastic b. **Fet'id b.**, see *Bronchitis.* **Fi'brinous b.**, croupous b. **Mechan'ical b.**, inflammation of lining membrane of air tubes, induced by inhalation of irritating particles. **Mem'branous b.**, plastic b. **Phthin'oid b.**, b. accompanying pulmonary tuberculosis, attended by purulent expectoration. **Plas'tic b.**, inflammation of the bronchial tubes in which a fibrinous exudate forms and is coughed up in the shape of a cast of one or more of the smaller tubes, sometimes resembling a collection of branching twigs. **Pol'ypoid b.**, plastic b. **Pot'ters' b.**, potters' consumption. **Pseudomem'branous b.**, fibrinous b. **Pu'trid b.**, fetid b., see *Bronchitis.* **Suf'focative b.**, capillary b. **Sum'mer b.**, hay fever. **Vesic'ular b.**, bronchopneumonia.

**Bron'chium.** See *Bronchi.*

**Bron'chius.** Sternothyroideus muscle.

**Bronchlemmi'tis** (*lemma*, sheath). Cynanche trachealis; croupous bronchitis.

**Bronchoalveoli'tis.** Catarrhal pneumonia.

**Bron'choblennorrhœ'a.** Purulent form of bronchitis.

**Bronchocace**, brong-kok'a-se (*kakos*, faulty). Bronchial disease, especially chronic bronchitis. **B. infan'tilis**, capillary bronchitis.

**Bronchocatar'rhus.** Bronchial catarrh.

**Bronchocav'ernous respira'tion.** Sound heard in tuberculosis of the lungs when a cavity is included in consolidated structure.

**Bron'chocele** (*kele*, tumor). Goitre; popularly, Derbyshire neck, or swelled neck; an enlargement of the thyroid gland common among those living in valleys among lofty mountains in every part of the world. Iodine will sometimes occasion its absorption when the case has not been of such duration that the thyroid gland is in a cartilaginous condition. Several varieties of bronchocele have been described—follicular, fibrous, amyloid, vascular, etc. Cysts in the thyroid gland are globular, tense, fluctuating tumors containing glairy fluid of the gland, or serous or sanguineous fluid, or old, grumous blood, constituting *cystic bronchocele.* See *Goitre.*

**Bronchocephali'tis.** Whooping-cough.

**Bronchoconstric'tion.** Bronchostenosis; narrowing of the bronchial tubes.

**Bronchohæmorrha'gia.** Hemorrhage from the bronchial tubes.

**Broncholemmi'tis.** Cynanche trachealis; croupous bronchitis.

**Bron'cholite** or **Bron'cholith** (*lithos*, stone). Concretion in a bronchial tube or gland.

**Broncholithi'asis.** The formation or presence of concretions in the bronchial tubes or trachea.

**Bronchomyco'sis** (*mykes*, fungus). Presence or development of microorganisms—mould fungi—in the bronchial tubes.

**Bron'cho-œsophage'us.** Unstriped muscular fibres passing from bronchus to œsophagus.

**Bronchoparal'ysis.** Asthma.

**Bronchop'athy** (*pathos*, disease). Disease of the bronchial tubes.

**Bronchoph'ony** (*phone*, voice). A resonant, tubular voice sound, such as is heard on auscultating the trachea while the subject counts aloud; heard over the lungs it indicates consolidation. **Pectoril'oquous b.**, combined b. and pectoriloquy. **Whis'pering b.**, a whispering sound of tubular, blowing character, heard under the same conditions as bronchophony, the subject counting in a whisper instead of aloud.

**Bronchophthi'sis.** Tuberculosis of the lungs accompanied with ulceration of the bronchial tubes.

**Bronchoplas'tic** (*plasso*, to form). Epithet given to operation for closing fistulæ in the trachea. The operation is called *bron'choplasty.*

**Bronchople'gia.** Bronchoparalysis.

**Bronchopleu'risy.** Bronchitis complicated with pleurisy.

**Bronchopleuropneumo'nia.** Bronchitis, pleurisy, and pneumonia associated in the same individual.

**Bronchopneumo'nia** or **Bronchopneumoni'tis.** Catarrhal pneumonia; lobular pneumonia; inflammation of the bronchia and lungs. **B. caseo'sa**, bronchopneumonia, with cheesy exudation. **B. indura'ti'va**, the same disease, with thickening or deposit in the connective tissue. **B. syphilit'ica**, syphilitic inflammation of the lungs and bronchia. **B. tubercu'lo'sa**, tuberculous inflammation of the lungs and bronchia.

**Bronchopul'monary.** Relating to the bronchial tubes and lungs.

**Bronchorrhæ'mia.** Bronchorrhagia.

**Bronchorrha'gia** (*rhegnymi*, to break forth). Hemorrhage from or into the bronchial tubes.

**Bronchorrhœ'a** (*rheo*, to flow). Increased secretion of mucus from the air passages, accompanied or not by inflammation; gleet, as it were, of the bronchial mucous membrane. **B. acu'ta**, chronic bronchitis. **Fet'id b.**, see *Breath.* **B. sero'sa**, b. attended with serous discharge; pituitous catarrh.

**Bronchorrhon'cus.** Bronchial râle.

**Bronchosta'sia** or **Bronchos'tasis** (*stasis*, stagnation). Bronchitis.

**Bronchosten'ia** or **Bronchosteno'sis** (*stenos*, narrow). Contraction or narrowness of the bronchial tubes.

**Bron'chotome** (*tome*, incision). An instrument for use in tracheotomy; also a knife for opening the bronchial tubes in post-mortem examination.

**Bronchot'omy.** Operation of opening the trachea (*tracheotomy*), larynx (*laryngotomy*), or both (*tracheolaryngotomy*) to extract foreign bodies or permit the passage of air to the lungs.

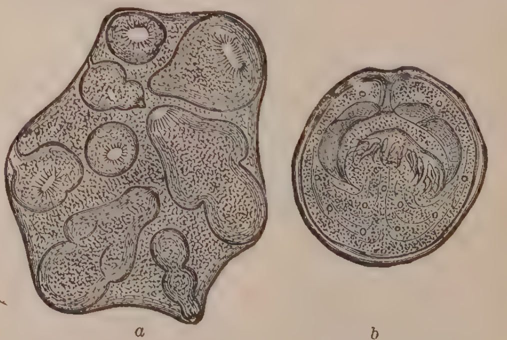
**Bronchotra'cheal.** Relating to the trachea and bronchi.

**Bronchovesic'ular respira'tion.** See *Respiration.*

**Bron'chus** (*bronchos*, windpipe). See *Bronchi.* **Heart b.**, an accessory bronchus passing from the right bronchus, mesially and dorsally, to the lower lobe of the right lung.

**Bronzed diabe'tes.** Diabetes accompanied with pigmentation of various secretory organs and with sclerosis of the liver and pancreas. **B. skin** or **B. s. disease'**, Addison's disease.

**Brood cap'sules** or **cells.** Cells having other cells contained within them; mother cysts enclosing daughter cysts.



Brood capsule of echinococcus. *a*, with tapeworm heads; *b*, scolex retracted. (Heller.)

**Brook'lime.** Veronica beccabunga.

**Broom.** Sophora tinctoria; Spartium scoparium. **But′cher's b.**, ruscus. **B. clo′ver**, Sophora tinctoria. **B. corn**, Sorghum vulgare. **In′digo b.**, Sophora tinctoria. **B. pine**, Pinus australis. **B. rape of Virgin′ia**, Orobanche virginiana. **Span′ish b.**, Spartium junceum. **Yel′low b.**, Sophora tinctoria.

**Bro′simum alicas′trum.** Breadnut tree from Jamaica. **B. galactoden′dron**, cow tree; indigenous in South America.

**Brossard's′ type.** Femorotibial type of progressive muscular atrophy, with clawfoot.

**Broth.** Weak decoction of meat, to which condiments may be added.

**Brousni′ka.** Vaccinium vitis idæa; the berries are used in Russia as a diuretic.

**Broussa′ist.** Believer in physiological and pathological opinions of Broussais. The system was called *Broussaism*, or the *physiological doctrine*, in which the excitability of the gastrointestinal mucous membrane was given much prominence.

**Broussone′tia tincto′ria.** Species of moraceous trees of West Indies and South America, the fruit of which is used in bronchitis.

**Brow.** Ridge over the orbit; front; acetabulum. **B. ache** or **pang**, facial or supraorbital neuralgia, hemicrania; when of malarial origin it is called *brow ague*. **B. presenta′tion**, position of the fœtus during birth, in which the brow presents. **B. shin′gles**, see *Herpes*.

**Brown.** A dusky color of a yellowish-reddish tinge. **B. at′rophy**, atrophy with morbid brown discoloration, as in *brown atrophy of the heart*. **Bis′marck b.**, an anilin dye used as a stain in histological work. **B. indura′tion**, induration or cirrhosis with morbid brown discoloration, as *brown induration of the lungs*. **B. mix′ture**, mistura glycyrrhizæ composita.

**Brown′ea coccin′ea.** A tree of Venezuela, decoction of the leaves of which is used in hemorrhoids.

**Brown′ian, Browno′nian,** or **Bruno′nian.** Relating to the system or opinions of Dr. John Brown, who attributed all morbid conditions to disordered excitability. **B. mo′tion** or **move′ments**, rapid oscillation observed in minute particles suspended in a fluid or semifluid medium.

**Brown′ism,** or **Bru′noism,** or **Bruno′nianism.** The doctrines of Dr. John Brown. See *Brownian*.

**Brown′ist, Browno′nian,** or **Bruno′nian.** Follower of the system of Brown. See *Brownian*.

**Brown's phenom′enon.** Brownian motion or movement. **B.'s sign**, Crichton Brown's sign; tremor of the lips and eyes in dementia paralytica.

**Brown-Séquard's′ disease′** or **paral′ysis** or **syn′drome.** Hemiparaplegia, with hemianæsthesia of the opposite side. **B.-S.'s elix′ir**, a preparation made from testicular juice, presumed to have the power of restoring the enfeebled vital forces.

**Bru′cea antidysenter′ica** or **ferrugin′ea** (after Bruce, Abyssinian traveller). Systematic name of a plant whence was obtained false angustura or false cusparia bark.

**Bruch's ag′gregate glands or fol′licles.** Trachoma glands of Henle; lymph follicles in the conjunctiva, similar in morphology to the glands of Peyer. **B.'s lay′er** or **mem′brane**, innermost layer of choroid coat of the eye.

**Brucine′.** $C_{23}H_{26}N_2O_4$. Organic, salifiable alkaloid in false angustura (Brucea antidysenterica), and obtained from strychnos; pearly white; crystallizes in oblique prisms with parallelogrammatic base; very bitter, slightly acrid, and styptic; somewhat soluble in water, but more so in alcohol. Brucine is a less active poison than strychnine, and may be used as a substitute for it and for extract of nux vomica. Dose, gr. ss (0.03). It is also a local anæsthetic.

**Bruck's disease′** or **syn′drome.** A combination of fractures, osseous deformities, multiple deformities, and atrophy of muscular structures.

**Brück′e's lines.** Bands seen in striped muscular tissue. **B.'s mus′cle**, Bowman's muscle, the ciliary muscle; muscular tissue of the mucous membrane of the intestines. **B.'s tu′nica ner′vea**, layers of the retina, rods and cones excepted.

**Bruf′falo.** Follicular lumps or tumors of the hard palate seen in newborn children in Egypt.

**Brug′giser's her′nia.** Inguinal hernia in which the protruded parts have come down in front of the peritoneum.

**Bruise.** Contusion.

**Bruise′root.** Stylophorum diphyllum.

**Bruise′wort.** Bellis saponaria.

**Bruit** (brue-ee′). A French word meaning noise; sound heard on percussion or auscultation. Some of the chief *bruits* are the following, which, although French in nomenclature, have been accepted in lieu of any English equivalents: **B. d'airan′** (sound of brass), a metallic sound heard over a cavity either on auscultation or percussion. **Aneurys′mal b.**, a thrill heard upon listening over an aneurysmal tumor. **B. de clapotement′**, splashing sound heard over an organ or cavity containing gas or liquid. **B. de claquement′** (clacking sound), produced by striking of valves together, as the auriculoventricular valves during the contraction of the ventricles. **B. du cœur**, sound of beating of the heart. **B. du cœur fœtal′** (sound of the fœtal heart), pulsations of the fœtal heart heard in auscultation in the latter half of uterogestation. **B. de craquement′** (sound of crackling) or **B. de cuir neuf** (sound of new leather), sound produced by friction of the pericardium when dried and roughened by inflammation. **B. de diab′le** (sound of the *diable* or humming-top), venous hum; high degree of bruit de soufflet, heard on auscultating the arteries or veins—probably the latter—of the neck in chlorosis; denoting an impoverished state of the blood. **B. de drapeau′**, sound as of a flag moving with the breeze, caused by the upward and downward movement of neoplasms in the larynx and trachea during the act of respiration. **B. de frottement′** (sound of friction), sound produced by rubbing of the lung against the parietes of the chest during inspiration and expiration; distinctly heard in pleuritis when the pleura has become roughened. *Friction sounds, rubbing sounds, to-and-fro sounds* are also heard in pericarditis and peritonitis; may be produced in the situation of any of the organs contained in the abdominal cavity, or of morbid growth developed there, independent of acute inflammation. **B. de frou-frou**, a sound like the rustling of silk. **B. de galop′**, galloping sound in the narrowness of the mitral valve. **B. de lime**, file or saw sound in heart disease. **B. métallique′**, metallic sound. **B. de mouche** (fly sound), sound analogous to *bruit de diable*, a buzzing heard on auscultating the neck in chlorotic cases. **B. de moulin′** (water-wheel sound), friction sound heard in some cardiac affections, mixed with gurgling and splashing. **B. musculaire′** (muscular sound), sound accompanying first sound of the heart; called also *bruit rotatoire*, being thought to resemble the rumbling of distant wheels. **B. placentaire′** (placental sound), a bellows or blowing heard on auscultation over the placenta in pregnancy. **B. de pot fêlé**, cracked-pot sound; sound heard on percussion when a cavern in the lungs is filled with air and has a narrow outlet. **B. de rappel′**, a cardiac sound heard on auscultation, suggesting a drum beat. **B. respiratoire′**, respiratory murmur. **B. rotatoire′**, see *Bruit musculaire*. **B. de scie**, sawing sound. **B. de sifflement′**, hissing cardiac sound. **B. skodique′**, sound with a high pitch heard in the stage of lobar congestion in pneumonia and above the seat of pleuritic effusion; Skoda's sign. **B. de souffle**, bruit de soufflet; b. de diable. **B. de souffle placentaire′** or **utérin′**, bruit placentaire. **B. de soufflet′** (bellows sound, blowing sound), sound like that of bellows, heard occasionally by the ear applied to the chest during contraction of the ventricles, auricles, or large arteries; it coexists with affections of the heart, but is heard also without disease of that organ—whenever, indeed, an artery is compressed. *Encephalic bellows sound* is heard on applying the ear to the occiput or to the top of the head, and indicates turgescence of the vessels or inflammation. When such turgescence exists the vessels are compressed, and compression gives rise to the sound in question; see *Bellows sound*. **B. de taffetas′**, respiratory sound like that caused by the tearing of a piece of taffeta, indicating hepatization of the lung, limited to the surface in pneumonia. **B. tympanique′** (tympanic sound), clear sound afforded by percussing the stomach and intestines when containing air. **B. utérin′**, b. placentaire. **B. vésiculaire′**, respiratory murmur.

**Brunel′la vulga′ris.** Self-heal, heal-all; indigenous bitter tonic.

**Brunfel′sia** (after O. Brunfels, botanist of Metz), **uniflo′ra.** Scrophulariaceous plant of Brazil; emetocathartic and emmenagogue.

**Brun′ner's glands.** Solitary glands or follicles; second pancreas; compound muciparous follicles, seated between the mucous and muscular coats of the stomach, along the two curvatures of that organ, and in the duodenum; their discovery is generally attributed to Brunner, although he restricted the term solitary glands to glands of the duodenum.

**Brunn's cell-nests** or **epithe′lial nests.** Nests or collections of tesselated epithelial cells found in the normal ureters.

**Bruno′nian.** Brownian.

**Bruno′nianism.** Brownism.

**Brush.** A bunch of flexible material (hair, wire, broom, etc.) attached at one end to a handle of some sort. **Elec′tric b.**, metallic electrode for localized electrization, as in neuralgia. **End b.**, an occasional form of termination of a nerve-cell process in a tuft. **Hai′dinger's brushes**, colored, brush-like figures seen in polarizing sections of certain minerals; also seen sometimes with the naked eye in looking at a bright cloud in the sky. **Stom′ach b.**, brush to be passed down the œsophagus into the stomach as a stimulant and to remove mucus.

**Brush burn.** Contused wound produced by violent friction.

**Bru′ta.** Juniperus sabina.

**Bruxanel′li.** Malabar tree, bark and leaves of which are astringent, diuretic, and anthelmintic.

**Bry′ant's ampul′la.** Distention of an artery above a ligature. **B.'s il′iofem′oral tri′angle**, Bryant's rectangle. **B.'s line**, a vertical line constituting one of the sides of the iliofemoral triangle. **B.'s rec′tangle**, a right angle made by a perpendicular line from the anterior superior spinous process of the ilium to the plane of the bed when the patient is supine in bed, and a line from the trochanter major perpendicular to the one just mentioned; in fracture the amount of displacement of the trochanter major is indicated by the difference in length of the latter line on the two sides.

**Bryce's test.** Test for successful vaccination; a second vaccination is made some days after the first, and if the first is successful the two lesions will reach maturity at about the same time.

**Bryg′ma** or **Bryg′mus.** Grinding of teeth; a common symptom, in children, of gastric or other derangement.

**Bryoidin′.** Bitter substance from elemi.

**Bry′one.** Bryonia alba.

**Bryo′nia.** (Ph. U. S.). Root of Bryonia alba and B. dioica; ord. *Cucurbitaceæ*. It is large and succulent, and has an acrid, bitter taste; drastic cathartic, and also employed in whooping-cough; externally applied, in cataplasm, in gout. The tincture is official; dose, ♏x–ʒj (0.65–4.0). Its active bitter principle, a glucoside, is called *bryonin*; it has been employed as an active hydragogue cathartic in dropsy. *Bryonidine* is an alkaloid derived from bryonia. **B. africa′na**, African bryony; South African plant, in the form of a decoction acting as an emetic, cathartic, and diuretic; used in cutaneous diseases, dropsy, and syphilis. **B. al′ba**, bryony; white bryony. **B. america′na** grows in West Indies; its properties are the same as B. alba. **B. dioi′ca**, red bryony; emetocathartic; locally, vesicant; used internally in dropsy and whooping-cough. **B. epigæ′a**, species growing in India; used as anthelmintic, and in dysentery and syphilis. **B. maderaspata′na**, diaphoretic and diuretic; used in cholera, gonorrhœa, calculous affections, etc. **B. mechoacan′na ni′gricans**, Convolvulus jalapa. **B. ni′gra**, Tamus communis. **B. peruvia′na**, Convolvulus angulatus. **B. rostra′ta**, root of this plant, growing in Java, is expectorant and refrigerant. **B. variega′ta**, Mexican; root is drastic and cathartic.

**Bryonidine′.** Amorphous, bitter alkaloid from Bryonia alba; powerful irritant to the gastrointestinal mucous membrane.

**Bryonin′.** $C_{48}H_{80}O_{19}$. Very bitter glucoside from Bryonia alba and B. dioica; styptic and vesicant. Internally it is used in pleurisy, pleuropneumonia, and acute rheumatism.

**Bry′ony.** Bryonia.

**Bryophyl′lum calyci′num.** Shrub of South Africa, Europe, and America, the leaves of which are sedative and refrigerant.

**Bryoplas′tic** (*bryon*, moss, *plasso*, to form). Forming growths like excrescences from the action of parasites, microorganisms, accretion, or other cause.

**Bryoretin′.** $C_{21}H_{35}O_7$. Derivative of bryonin.

**Bry′son's sign.** Lessened expansibility of the chest during the inspiratory period, seen sometimes in nervous prostration and exophthalmic goitre.

**Bu′ba.** Frambœsia.

**Bub′ble.** A spherical film of fluid enclosing gas. **Amphor′ic b.**, a sound resembling the gurgle of a liquid poured from a nearly full bottle, heard sometimes on ausculation of the chest in cases of hydropneumothorax. **B. fe′ver**, pemphigus.

**Bu′bo.** Formerly the groin or an inguinal gland; swelling or inflammation of one or more lymphatic glands in the groin or, sometimes, axilla. The term is now applied to three forms of inguinal tumor: 1. Simple or sympathetic bubo, independent of any virus in the economy. 2. Venereal bubo, occasioned by absorption of the virus of gonorrhœa, chancre, or chancroid. 3. Pestilential or malignant bubo, occurring in plague. **Chancroid′al b.**, venereal, usually virulent, b. **Creep′ing b.**, serpiginous bubo which has ulcerated and spread in serpiginous form to adjoining parts. **Gonorrhœ′al b.**, see *Bubo*. **Idiopath′ic b.**, primary bubo, not due to any apparent specific cause. **In′dolent b.**, chronic, painless, hard induration of one or more inguinal glands accompanying indurated chancre; multiple indolent bubo is a similar induration of the first row of inguinal glands only. **In′durated b.**, b. occurring with syphilitic chancre. **Malig′nant b.**, pestilential b. **Parot′id b.**, mumps. **Pestilen′tial b.**, bubo occurring as a symptom of the plague. **Pri′mary or prim′itive b.**, enlargement and suppuration of one or more inguinal glands, not preceded by any form of venereal disease nor associated with the plague. **Scrof′ulous b.**, indolent adenitis in the groin, of scrofulous origin. **Specif′ic b.**, syphilitic bubo. **Stru′mous b.**, scrofulous b. **Sup′purating b.**, b. in which the adenitis has gone on to suppuration. **Sympathet′ic b.**, swelling of gland, as in the groin, from irritation or injury. **Syphilit′ic b.**, b. following an indurated chancre. **Vene′real b.**, b. occurring with venereal disease, especially gonorrhœa or soft chancre. **Vir′ulent b.**, a very severe form of venereal bubo following chancroid.

**Bubon′.** The groin; bubo. **B. d'emblée′**, primary bubo.

**Bu′bon′ gal′banum.** Long-leaved or lovage-leaved galbanum, ord. *Umbelliferæ*; South African plant, wild celery; diuretic; decoction of leaves is given in dropsy and gravel. Galbanum is the gum resinous juice; the odor is fetid, taste bitter and acrid; it forms an emulsion when triturated with water; antispasmodic and expectorant; externally applied as cataplasm. **B. gummif′erum**, ammoniac gum. **B. macedon′icum**, Macedonian parsley; properties are similar to those of common parsley, but weaker.

**Bubo′na.** Nipple.

**Bubonadeni′tis.** Inflammation of the inguinal glands.

**Bubonal′gia** (*algos*, pain). Pain in the groin.

**Bubon′ic.** Belonging to or characterized by the presence of buboes or inflamed lymphatic glands (especially in the groin). **B. plague,** an infectious epidemic fever, having buboes as a prominent symptom.

**Bubo′nium.** Golden starwort; the plant, Aster atticus, formerly used in diseases of the groin.

**Bubon′ocele** (*kele*, tumor). Inguinal hernia, rupture in the groin; incomplete hernia limited to the groin. When it has descended to the scrotum it is called *oscheocele, scrotal hernia.* The rupture passes through the abdominal ring, and, because of the greater size of the opening in the male, is more frequent in that sex.

**Bubonon′cus** (*onkos*, swelling). Bubo.

**Bubonop′anus.** Bubo.

**Bubonorrhex′is** (*rhexis*, rupture). Bubonocele accompanied with division of the peritoneum; or, in other words, devoid of sac.

**Bubon′ulus** or **Bubun′culus** (dim. of bubo). Painful swelling of the lymphatics of the penis, an occasional accompaniment of gonorrhœa.

**Bubophthal′mia.** Buphthalmia.

**Buc′ca.** Cheek and hollow of cheek; vulva.

**Buc′cal.** Relating to the mouth or cheek. **B. ar′tery,** arises from internal maxillary or some of its branches, as deep anterior temporal or alveolar; it is distributed to buccinator muscle and buccal membrane. **B. cav′ity,** the cavity of the mouth or oral cavity. **B. glands,** mucous follicles in the buccal membrane; those near the molar teeth are called *molar glands,* and secrete a viscid humor, mixing with saliva and lubricating the mouth. **B. mem′brane,** mucous membrane lining the interior of the mouth. **B. nerve,** buccinator nerve, is given off by inferior maxillary, and sends branches to the cheek, especially the buccinator muscle. **B. sur′face of a tooth,** the surface lying next to the cheek, see *Surfaces of the teeth.* **B. vein** follows the course of the artery.

**Buc′cea.** An old name for nasal polypus, so called because it was believed to proceed from the mouth.

**Buccella′tio** or **Buccella′tion.** Mode of arresting hemorrhage by applying a pledget of lint to the bleeding vessel.

**Bucci′na** (Lat., trumpet). Turbinated bone.

**Buccinatola′bial.** Combination of orbicularis oris and buccinator muscles.

**Buccina′tor** (*buccino*, to sound a trumpet). Muscle situated in the substance of the cheeks, extending between the posterior portions of the alveolar arches of the jaws and the commissure of the lips, which it draws backward. It assists in mastication by keeping the food between the teeth; if the cheeks are distended by air its contraction forces the air out, hence its name.

**Buccocer′vical.** Pertaining to the neck of a tooth and its buccal surface.

**Buccola′bial.** Pertaining to both cheek and lip. **B. mus′cle,** anterior portion of buccinator. **B. nerve,** buccal nerve.

**Buccopharyn′geal.** Belonging to mouth and pharynx. The buccopharyngeal *aponeurosis* or *intermaxillary ligament* extends from the internal ala of the pterygoid process to the posterior part of the lower alveolar arch, affording attachment to the buccinator and constrictor pharyngis superior muscles. **B. fas′cia,** fascia covering the buccinator muscle. **B. mus′cle,** portion of the superior constrictor pharyngis muscle from the pterygomaxillary ligament.

**Buc′copharynge′us.** Buccopharyngeal muscle.

**Buc′cula** (dim. of bucca). Small mouth; fleshy part beneath the chin; "double-chin."

**Bu′ceras.** Trigonella fœnum.

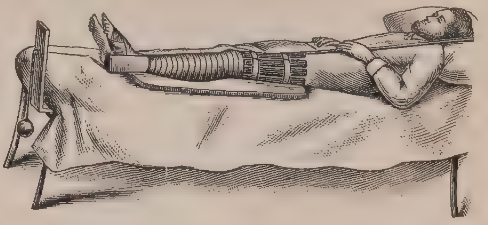
**Buchan′an's opera′tion.** See *Lithotomy.*

**Buchin′ha.** Fruit of Luffa purgans; drastic.

**Buch′ner's albu′minoid bod′ies.** Defensive proteids.

**Bu′chu.** (Ph. U. S.) The leaves of Barosma betulina and B. crenulata; diuretic; dose, ʒss–j (2.0–4.0) in infusion. The fluid extract is also official; dose, ʒss–j (2.0–4.0). **B. res′in,** barosmin.

**Buck's exten′sion.** Apparatus for extension to be used in fractures of the thigh, weights being fixed to the legs, and counterextension being effected by the weight of the body, the lower part of the bedstead being elevated. **B.'s fas′cia,** superficial perineal fascia continued upon the penis.



Buck's extension.

**Buck′bean.** Menyanthes trifoliata. **Amer′ican, b.,** Menyanthes verna.

**Buck′berry.** Vaccinium stamineum.

**Buck′brake.** Osmunda regalis.

**Buck′et fe′ver.** Dengue.

**Buck′eye.** Æsculus hippocastanum.

**Buck′horn.** Osmunda regalis.

**Buck′thorn.** Rhamnus catharticus; Rhamnus frangula. **Califor′nia b.,** Rhamnus purshiana.

**Buck′wheat.** Polygonum fagopyrum. **B. plant, east′ern,** Polygonum divaricatum.

**Bucne′mia** or **Boucne′mia** (*bous*, ox, *kneme*, leg), elephantiasis. **B. in′dica,** elephantiasis. **B. spargan-ot′ica,** phlegmasia dolens. **B. trop′ica,** elephantiasis.

**Buc′ton.** Hymen.

**Bud.** Gemmule.

**Bud′ding** or **B. germina′tion.** Growth by buds on cells; gemmation.

**Budd's cirrho′sis.** Cirrhosis of liver, caused by the autotoxic effect of materials within the gastrointestinal canal. **B.'s jaun′dice,** acute yellow atrophy of the liver.

**Budge's cen′tre.** Ciliospinal centre; also the genitospinal centre.

**Buec′phlysis** (*bous*, ox, *ekphlyo*, to boil up). Cowpox.

**Buehl′mann's fi′bre.** Line noticed on carious teeth.

**Bue′na magnifo′lia.** Tree of S. America, ord. *Rubiaceæ*; form of cinchona.

**Buetsch′li's nu′clear spin′dle.** Spindle form seen during karyokinesis.

**Buff, inflam′matory.** Corium phlogisticum.

**Buf′fer ac′cidents.** Contusion and severe internal injury of the abdomen and its viscera by tight jamming between the buffers of railway cars.

**Buf′fing.** Operation of smoothing and polishing a rough surface, as in dentistry.

**Buff′y coat.** Corium phlogisticum.

**Bugan′tia.** Chilblain.

**Bug′bane.** Cimicifuga.

**Bug′gery.** Sodomy; bestiality; carnal copulation against nature.

**Bugina′rium.** Medicated bougie.

**Bu′gle.** Prunella. **Com′mon b.,** Ajuga reptans. **Wa′ter b.,** Lycopus virginicus. **B. weed,** lycopus.

**Bu′gloss.** Anchusa officinalis. **Dy′ers' b.,** Anchusa tinctoria. **Gar′den b.,** Anchusa officinalis. **Up′right b.,** ajuga.

**Bu′gula.** Ajuga. **B. chamæ′pitys,** Teucrium chamæpitys. **B. pyramida′lis,** ajuga. **B. rep′tans,** Ajuga reptans.

**Buhl's desquam′ative pneumo′nia.** Caseous pneumonia. **B.'s disease′,** dangerous acute affection of newborn children, including various morbid conditions, such as fatty degeneration, purpura, jaundice, œdema, etc.

**Buhl-Ditt'rich's law.** Problematical, or rather unfounded, idea that in acute diffused miliary tuberculosis a chronic centre of caseation exists in some portion of the body.

**Bulam'a boil.** Boil observed in island of Bulama, west coast of Africa, produced by the larva or grub of an insect. **B. fe'ver,** yellow fever.

**Bulat'a.** Substance analogous to gutta-percha, from Sapota mülleri, or bullet tree, in Dutch Guiana.

**Bulb.** Name given to different parts resembling in shape bulbous roots. The bulb of the aorta is the great sinus of the aorta; bulb or root of the hair is the part whence hair originates; bulb of the urethra is the dilated portion formed by the commencement of the corpus spongiosum; the bulb of the corpus cavernosum is the enlarged portion at the root: the globe of the eye is also called the bulb. **Arte'rial b.,** anterior part of embryonic heart. **Aud'itory b.,** cochlea and membranous labyrinth together. **Brach'ial b.,** enlargement of spinal cord in the neck at origin of brachial plexus. **B. of cor'pus caverno'sum** and **c. spongio'sum,** see *Bulb.* **Den'tal b.,** pulp of tooth. **B. of eye,** eyeball. **B. of fe'male,** bulbus vestibuli. **B. of for'nix,** see *Mammillary eminences.* **Four bulbs,** corpora quadrigemina. **Gus'tatory b.,** see *Taste.* **B. of hair,** see *Hair.* **B. of ju'gular vein,** expansion existing near point of origin of external jugular vein. **Krause's b.,** see *Krause.* **Olfac'tory b.,** see *Olfactory nerves.* **B. of o'vary,** bulb-shaped mass of veins at the hilus. **B. paral'ysis,** paralysis from lesion of the medulla oblongata. **Rachid'ian b.,** medulla oblongata. **B. of spi'nal mar'row,** medulla oblongata. **B. of the throat,** tonsil. **B. of the ure'thra,** see *Urethra.* **B. of the vagi'na** or **of the vest'ibule,** or **vestib'ulovag'inal** or **vul'vovag'inal b.,** see *Bulbus vestibuli.*

**Bul'bar.** Relating to the eyeball, or to the rachidian bulb or medulla oblongata. **B. ar'teries,** branches of the anterior spinal artery to the medulla oblongata. **B. disease'** or **paral'ysis,** paralysis from causes seated in the medulla oblongata; term applied to *labioglosso-laryngeal paralysis,* a form of progressive paralysis of the facial muscles and of the tongue, lips, and larynx of both sides. **B. myeli'tis,** see *Myelitis.*

**Bul'bi** (pl. of bulbus) **B. for'nicis** or **B. prio'rum cru'rum for'nicis,** mammillary tubercles.

**Bulbip'arous.** Gemmiparous. See *Generation.*

**Bulbocast'anum.** Bunium bulbocastanum.

**Bulbocaverno'sus.** Accelerator urinæ; constrictor cunni.

**Bulbocav'ernous glands.** Cowper's glands.

**Bulboco'dium.** Narcissus pseudonarcissus.

**Bul'bonach.** Lunaria rediviva.

**Bulbonu'clear.** Relating to the medulla oblongata and the nerve nuclei pertaining to it.

**Bulborrhex'is** (*bulbus,* eyeball, *rhexis,* rupture). Rupture of the eyeball.

**Bul'boure'thral.** Relating to the bulb of the urethra. **B. glands,** Cowper's glands. **B. mus'cle,** bulbourethralis; the accelerator urinæ muscle.

**Bul'bous.** Bulbar. **B. nerves,** painful enlargement of the nerves at the extremity of the stump after amputation.

**Bul'bus.** Bulb; eyeball. **B. agres'tis,** Colchicum autumnale. **B. arterio'sus,** anterior of three compartments in a rudimentary heart, dividing afterward into the aorta and pulmonary artery; see *Bulb.* **B. cine'reus,** olfactory bulb. **B. cor'nu poste'rius,** bulbous prominence on the posterior horn of the lateral ventricle of the brain. **B. cor'poris caverno'si,** bulb of the corpus cavernosum. **B. cri'nis,** hair bulb. **B. for'nicis,** corpus albicans; see *Mammillary eminences.* **B. glandulo'sus,** proventriculus. **B. medul'læ spina'lis,** medulla oblongata. **B. oc'uli,** eyeball. **B. olfacto'rius,** see *Olfactory nerves.* **B. pi'li,** see *Hair.* **B. rachid'icus,** see *Medulla oblongata.* **B. scil'læ,** bulb of squills. **B. ure'thræ,** bulb of the urethra. **B. vagi'næ,** bulbus vestibuli. **B. ve'næ jugula'ris,** bulb of the jugular vein. **B. vestib'uli,** vulvovaginal gland, Bartholini's gland: a close-packed plexus of intricately anastomosing veins, enclosed in a fibrous investment, occupying the space between the vestibule of the vagina and the rami of the pubic arch on each side; analogue of the male bulb or Cowper's gland. **B. vomito'rius,** musk-grape flower, Hyacinthus muscari; emetic and diuretic.

**Bule'sis.** Will or power of will.

**Bulim'ia.** Boulimia; insatiable hunger.

**Bulim'ic.** Relating to boulimia.

**Bu'lithos** (*bous,* ox, *lithos,* stone). Bezoar found in the kidneys, gall bladder, or urinary bladder of the ox or cow.

**Bul'la.** Bleb; portion of the cuticle detached from the skin by interposition of serous or seropurulent fluid; pemphigus; hydatid. **Com'pound b.,** bulla with two or more chambers, from coalescence of adjacent vesicles. **B. ethmoida'lis,** elevation of ethmoid cells in the middle meatus of the nose. **B. hæmorrhag'ica,** blood blister; purpura. **B. os'sea,** the expanded portion of the osseous meatus externus of the ear. **Spi'nal b.,** a bleb resembling a burn, of trophic origin, occurring in certain diseases of the spinal cord. **B. syphilit'ica,** bullar syphilitic skin disease.

**Bul'læ** (pl. of bulla). A class of skin diseases having bullæ. **B. rotun'dæ cervi'cis u'teri,** Nabothi glandulæ.

**Bul'late.** Pertaining to bullæ; inflated; blistered.

**Bulla'tion.** Inflation; division into small spaces.

**Bull'dog.** See *Tabanus.* **B. for'ceps,** spring forceps for arresting hemorrhage.

**Bul'let for'ceps.** Forceps for the extraction of a bullet from a wound. **B. probe,** probe for the detection of location of a bullet; Nélaton's probe.

**Bull'fists.** Lycoperdon.

**Bull'ock's blood.** Given in anæmia, phthisis pulmonalis, and other diseases of debility **B.'s eye,** Sempervivum tectorum.

**Bul'lous.** Relating to bulla or bleb.

**Bul'lula** (dim. of bulla). Small vesicle or bleb.

**Bul'piss** (*bulny,* in the language of the Mosquito Indians, spotted, *piss,* gray). A cutaneous affection apparently peculiar to Nicaragua, and especially the Mosquito Indians; two forms are met with, the black and the white; the affection is papular and pruritic, and seems to be parasitic and contagious.

**Bumam'ma** (*bu,* intensive, *mamma,* breast). Excessively large mammary gland.

**Bumel'ia.** Fraxinus excelsior.

**Bump.** A swelling or protuberance; used in the plural (originally in derision) to designate the external inequalities on the skull which phrenologists associate with the "organs" or qualities of the mind, such as combativeness, amativeness, etc.

**Bu'na.** Coffee plant; Coffea arabica.

**Bu'nach.** Persian powder, made from Pyrethrum flowers, grown in California.

**Bunch.** Hunch.

**Bunch'backed.** See *Hunch.*

**Buncho'sia lanceola'ta.** A plant of Mexico; bark of root is astringent.

**Bun'dle.** An aggregation of fibres; fasciculus. **Aber'rant b.,** nerve fibres in the isthmus of the gyrus. **Ante'rior ground b.,** a part of the lateral tract of the spinal cord between the anterior roots and Türck's column. **Ante'rior mar'ginal b.,** the portion of the descending cerebellar tract in the spinal cord occupying the position indicated. **Lat'eral ground b.,** a part of the lateral tract of the spinal cord. **B. of Lenhos'sek,** the ascending root of the pneumogastric and glossopharyngeal nerves. **Mey'nert's b.,** Meynert's fasciculus. **Prim'itive b.,** muscular fibre. **Respi'ratory b.,** b. of Lenhossek; respiratory or solitary fasciculus. **B. of Vicq d'Azyr',** fibres of white nervous matter in the thalamus opticus.

**Bun'du** or **Bun'dou.** Ordeal poison of the Gaboon; a substance analogous to strychnine, from apocynaceous plant of Western Africa, by some considered identical with akasja.

**Bung′e's law.** That inorganic materials are obtained from the mineral salts of the blood, through the action of the mammary epithelial cells, in quantity just sufficient for the development and growth of the offspring.

**Bu′nias.** Brassica napus.

**Bu′nioid.** Napiform; like a turnip, as scirrhus.

**Bun′ion** (*bounos*, eminence). Enlargement and inflammation of the bursa mucosa at the inside of the ball of the great toe.

**Bu′nium bulbocast′anum.** Ord. *Umbelliferæ;* the systematic name of a plant whose tuberous root, agriocastanum, pignut, earthnut, hawknut, kippernut, is eaten raw or roasted. **B. car′vi,** carum.

**Bun′sen burn′er.** A gas-burner in which air mingles with the gas, insuring more perfect combustion and therefore greater heat. **B. double′-cell bat′tery,** constant battery, in which carbon, amalgamated zinc, diluted sulphuric acid, and nitric acid are the component parts.

**Bun′weed.** Senecio jacobæa.

**Buophthal′mia.** Buphthalmia.

**Buph′agous** (*bous*, ox, *phago*, to eat). Beef eating; having an excessive appetite.

**Bu′phlysis.** Buecphlysis.

**Buphthal′mi her′ba.** Anthemis tinctoria.

**Buphthal′mia** or **Buophthal′mia** (*bous*, ox, *ophthalmos*, eye, ox-eye). The first stage of hydrophthalmia; turgescence of the vitreous humor, which, pushing the iris forward, forms a sort of border around the crystalline.

**Buphthal′mum cret′icum.** Anthemis pyrethrum. **B. ma′jus,** Chrysanthemum leucanthemum.

**Buphthal′mus.** Buphthalmia, hydrophthalmia; Sempervivum tectorum.

**Bupleu′rum rotundifo′lium.** Round-leaved hare's ear, ord. *Umbelliferæ.* Herb and seeds are aromatic.

**Bur or Burr.** Burdock; lobe of the ear; also the external auditory meatus; pancreas of the calf; a fluted, spherical tool used by dentists for drilling and polishing teeth; rhotacism.

**Burck′hardt's cor′puscles.** Yellow bodies, usually roundish, observed in the secretion of trachoma.

**Bur′dach's col′umn.** See *Column of Goll.* **B.'s fis′sure,** fissure between operculum and island of Reil. **B.'s nu′cleus,** nucleus cuneatus. **B.'s oper′culum,** operculum of the island of Reil.

**Bur′dock.** Arctium lappa; the root is official in the Ph. U. S. under the name *lappa,* which see. **Les′ser b.,** xanthium. **B. oil,** lappa oil, used externally to promote the growth of hair. **Prai′rie b.,** Silphium terebinthaceum.

**Burdwan′ fe′ver.** Malarial fever in Bengal.

**Buret′** or **Burette′.** A glass tube for measuring liquids.

**Bur′gundy pitch.** Pix burgundica.

**Bu′ris.** Hernia with scirrhus; scirrhus only.

**Burke.** To take away life by suffocation, as by closing the nose and mouth, preventing costal and abdominal breathing; called from a wretch who, in 1829, in Edinburgh, procured subjects for dissection in that way, for which offence he was executed.

**Burk′ing.** See *Burke.*

**Bur′mah boil.** Furunculus endemic in Burmah.

**Burmese′ ring′worm.** Tinea imbricata.

**Burn.** Injury produced by the action of too great heat. Burns have been divided into simple burns, or those of first degree, *dermatitis ambustionis erythematosa,* chiefly producing rubefaction; those of second degree, or accompanied with vesication, *dermatitis ambustionis bullosa;* and those of third degree, with destruction of the parts affected, from involvement of the papillary layer only to total destruction of tissues and charring of bone, *dermatitis ambustionis escharotica.*

**Bur′net, Can′ada** or **great.** Sanguisorba canadensis.

**Burnett's′ disinfect′ing liq′uid** or **fluid.** Solution of zinc chloride, first used by Sir William Burnett for preserving timber, canvas, etc., from dry rot, mildew, etc,. and afterward as a disinfectant and antiputrefactive, especially in case of dead bodies. The Ph. U. S. and Br. contain *liquor zinci chloridi,* made in the former by the action of nitromuriatic acid on zinc (in the latter an aqueous solution of chloride of zinc), distilled water and precipitated carbonate of zinc being added after evaporation.

**Burn′ing.** A disease mentioned by old historians, probably gonorrhœa and syphilis. **B. bush,** Euonymus purpureus.

**Burns's amauro′sis.** Blindness due to sexual excess. **B. lig′ament,** falciform process of the fascia lata. **B. space,** the space between the layers of the deep fascia of the neck.

**Burnt al′um.** Dried alum. **B. holes,** variety of rupia among children of the poor in Ireland; noma; pemphigus gangrænosus; see *Rupia escharotica.* **B. sponge,** Spongia usta. **B. su′gar,** caramel.

**Bu′row's opera′tion.** Plastic flap operation on the lip. **B. solu′tion,** a mixture of acetate of lead and alum dissolved in water. **B. veins,** portal veins occupying the place of the urachus.

**Burq′uism.** Metallotherapeutics.

**Burr.** See *Bur.*

**Bur′rage.** Borago officinalis.

**Bur′reed, great.** Sparganium ramosum.

**Bur′row.** The track of a subcutaneous parasite, as the itch mite; a sinus or fistula.

**Bur′sa.** Pouch or sac, especially synovial sac, *bursa mucosa,* which see, situated between the bones and their coverings of muscles, tendons, or skin; scrotum. **B. acromia′lis,** b. beneath deltoid muscle; also occasional b. over acromion **Adventi′tious b.,** artificial b. **B. ancone′i,** between olecranon and tendon of triceps extensor cubiti **B. an′guli mandib′uli,** rare subcutaneous b. over angle of jaw. **B. a. ster′ni,** subcutaneous b. over angle between first and second pieces of sternum. **B. a. superio′ris scap′ulæ,** b. at upper angle of scapula, in serratus magnus or between it and insertion of levator anguli scapulæ. **B. anseri′na,** b. between expansion of semitendinosus, gracilis, and sartorius muscles and long internal lateral ligament. **Artifi′cial b.,** a b. formed under the stimulus of pressure or friction in a part where only a rudiment existed before. **B. bicip′itis,** surrounding tendon of long head of biceps in bicipital groove. **B. b. cru′ris** or **bicip′itofibula′ris,** between external lateral ligament of knee and tendon of biceps **B. b. gastrocnemia′lis,** rare b. between sesamoid bone in external head of gastrocnemius muscle and tendon of biceps femoris or skin. **Boy′er's b.,** b. subhyoidea **B. brachia′lis infraspina′ti,** between infraspinatus tendon and capsule of the shoulder-joint. **B. calca′nea,** between tendo Achillis and back of calcaneum. **Capit′ulora′dial b.,** between head of radius and common tendon of extensors. **B. cap′sulæ oc′uli,** between capsule of Tenon and globe of the eye. **B. carpi′na vola′ris,** between tendon of carpi ulnaris and pisiform bone. **B. circumflex′i pala′ti,** at the point at which tendon of tensor palati turns around the hamular process. **B. clavic′ula,** between the clavicle and coracoid process of scapula. **B. coccyge′a,** between tip of coccyx and sphincter ani. **B. con′dyli exter′ni** and **B. c. inter′ni,** subcutaneous bursas over condyles of femur. **B. cor′acobrachia′lis,** between subscapularis and upper extremities of muscles arising from coracoid process. **B. c.-brachia′lis mi′nor,** under rare muscle of that name. **B. c.-clavicula′ris latera′lis,** between coracoid process and trapezoid ligament. **B. c.-c.-me′dia,** between conoid and trapezoid ligaments. **B. coracoide′a,** near base of coracoid process. **B. cor′dis,** pericardium. **B. cos′tæ pri′mæ,** between muscles of the back and tuberosity of the first rib. **B. cos′toclavicula′ris,** within fibres of rhomboid ligament. **B. cri′cothy′rothyroide′a,** between lateral lobes of thyroid body and cricothyroid. **B. cubita′lis extenso′ris car′pi radia′lis bre′vis,** occasional b. over head of radius, beneath origin of extensor carpi radialis brevior and extensor communis digitorum. **B. c.**

**interos′sea** or **cu′bitoradia′lis**, b. ulnoradialis. **B. cuculla′ris**, b. trapezii. **B. deltoide′a**, b. acromialis. **B. digas′trici ante′rior**, at point at which tendon of digastric muscle passes through fascia binding it to hyoid bone, or through stylohyoid muscle. **B. d. poste′rior**, between posterior belly of digastric and sternocleidomastoid. **B. epicon′dyli**, rare b. between skin and external condyle of humerus. **B. epiplo′ica**, lesser peritoneal sac. **B. epitroch′leæ**, between skin and inner condyle of humerus. **B. extenso′ris car′pi radia′lis brevio′ris**, b. cubitalis extensoris. **B. e. c. ulna′ris**, beneath origin of extensor carpi ulnaris. **B. e. digito′rum pe′dis bre′vis**, under extensor brevis digitorum of foot. **B. e. hallu′cis bre′vis**, between tendon and head of first metacarpal bone. **B. fibula′ris**, b. bicipitis cruris. **Fleisch′mann's b.**, b. sublingualis. **B. flexo′ris car′pi ulna′ris**, b. carpina volaris. **B. f. digito′rum subli′mis**, rare b. in tendon of origin of flexor digitorum sublimis, or between it and pronator radii teres. **B. fos′sæ infraclavicula′ris**, between two layers of coracoclavicular fascia in front of coracoid process. **B. fronta′lis**, over frontal eminences. **B. ga′leæ cap′itis**, between aponeurosis of occipitofrontalis and pericranium, over occipital protuberance. **B. gastrocnemia′lis exter′na** or **latera′lis**, occasional b. between outer head of gastrocnemius muscle and capsule. **B. g. inter′na** or **media′lis**, or **gastrocne′mii inter′ni**, between inner head of gastrocnemius and semimembranosus, behind inner condyle. **B. gemel′li superio′ris**, b. pyriformis. **B. gemello′rum**, rare b. between gemelli muscles and capsule of hip-joint. **B. genua′lis ante′rior**, b. anserina. **B. g. latera′lis exter′na** or **latera′lis exter′na ante′rior**, b. subtendinea tensoris fasciæ latæ. **B. g. l. e. infe′rior**, b. bicipitis cruris. **B. g. l. e. supe′rior**, b. tendinis poplitei. **B. g. l. inter′na infe′rior**, b. anserina. **B. g. l. i. me′dia**, b. sub ligamento interno. **B. g. l. i. supe′rior**, b. subtendinea sartorii. **B. g. poste′rior**, b. gastrocnemialis interna. **B. glute′i me′dii** or **me′dii ante′rior**, between anterior part of tendon of gluteus medius and trochanter major. **B. g. m. poste′rior**, between tendons of gluteus medius and pyriformis muscles. **B. g. min′imi**, between tendons of gluteus minimus and great trochanter. **B. gluteofascia′lis, gluteofemora′lis**, or **gluteotrochanter′ica**, between tendon of gluteus maximus and trochanter major. **B. Gru′beri**, b. sinus tarsi. **B. humera′lis flexo′ris digito′rum subli′mis**, b. flexoris digitorum sublimis. **B. hu′merotricipita′lis**, between anterior surface of triceps extensor cubiti and fat at lower extremity of humerus. **B. hyoide′a**, b. subhyoidea. **B. ili′aca**, between iliopsoas muscle and brim of pelvis. **B. i. ante′rior**, subcutaneous b. over anterior superior spine of ilium. **B. i. poste′rior**, subcutaneous b. over posterior superior spine of ilium. **B. il′iocos′tocervica′lis**, between iliocostal muscle and transverse process of seventh cervical vertebra. **B. il′iopectine′a** or **il′iopso′as**, b. subiliaca. **B. infragenua′lis** or **infrapatella′ris**, or **infrapatella′ris profun′da**, b. subpatellaris. **B. i. superficia′lis infe′rior**, b. præspinosa. **B. i. s. supe′rior**, b. præligamentosa. **B. infraspina′ta**, b. brachialis infraspinata. **B. infraspina′ti**, between superior margin of infraspinatus muscle and spine of scapula. **B. intermuscula′ris extenso′ris cru′ris**, occasional b. between tendons of rectus femoris and cruræus. **B. intertubercula′ris**, b. bicipitis. **B. intramuscula′ris pectora′lis majo′ris**, between clavicular and thoracic portions of pectoralis major. **B. intraserra′ta**, b. anguli superioris scapulæ. **B. intratendin′ea olec′rani**, within tendon of triceps extensor cubiti. **B. ischiad′ica**, between obturator internus and lesser sciatic notch. **B. i. glute′i max′imi**, between inferior margin of gluteus maximus and tuberosity of ischium. **B. latis′simi dor′si**, between tendon of latissimus dorsi and inferior angle of scapula. **Lusch′ka's b.**, b. pharyngea. **B. malle′oli exter′ni**, subcutaneous b. over external malleolus. **B. m. inter′ni**, subcutaneous b. over internal malleolus. **B. metacar′pea ulna′ris**, subcutaneous b. over head of fifth metacarpal bone. **B. muco′sa**, see *Bursæ mucosæ*. **B. mus′culi glute′i in tu′bere is′chii**, b. ischiadici glutei maximi. **B. obturato′ris exter′ni**, between obturator externus and capsule of hip-joint. **B. o. inter′ni**, b. obturatoris interni ovalis. **B. o. inter′ni circumflex′a**, b. ischiadica. **B. o. i. ova′lis**, between tendon of obturator and gemelli. **B. olec′rani**, subcutaneous b. over olecranon. **B. omenta′lis**, cavity formed by peritoneum in great omentum. **B. omen′ti majo′ris**, cavity of great omentum. **B. o. mino′ris**, cavity of lesser omentum. **B. omohyoide′i**, between sternomastoid and middle tendon of omohyoid. **B. ova′rica**, shallow depression in broad ligament of uterus, near ovary. **B. palma′ris lon′gi**, occasional b. between origin of palmaris longus muscle and capsule of hip-joint. **B. patel′læ** or **patella′ris**, subcutaneous b. over patella. **B. patel′læ amplifica′ta**, housemaid's knee. **B. patella′ris latera′lis** or **B. p. l. exter′na**, occasional b. between lateral expansions of tendons of quadriceps cruris and patella. **B. p. l. inter′na**, between inner lateral expansion of tendon of quadriceps and patella. **B. p. præligamento′sa**, between fascia and ligament of patella. **B. p. profun′da**, b. præpatellaris subaponeurotica. **B. p. subcuta′nea**, b. præpatellaris subcutanea. **B. pectine′a**, between insertion of pectineus and femur. **B. pectora′lis mino′ris**, beneath tendon of pectoralis minor muscle. **B. peroneo′rum commu′nis**, between peronei tendons and inferior part of fibula. **B. perone′i lon′gi**, sac over tendon of peroneus longus at calcaneum. **B. pharynge′a**, pouch in mucous membrane of back part of pharynx in middle line. **B. phren′icohepat′ica ante′rior**, between left lateral ligament of liver and under surface of diaphragm in front. **B. p. poste′rior**, occasional b. between left lateral ligament of liver and under surface of diaphragm behind. **B. planta′ris in capit′ulo os′sis metatar′si pri′mi** and **quin′ti**, subcutaneous bursa on sole beneath heads of first and fifth metatarsal bones. **B. poplite′a**, beneath popliteus muscle and on capsule of knee-joint and external tuberosity of tibia. **B. postcalca′nea profun′da**, b. calcanea. **B. p. superficia′lis** or **subcuta′nea**, between tendo Achillis and deep fascia. **B. postgenua′lis exter′na**, b. gastrocnemialis externa. **B. præligamento′sa**, b. over ligamentum patellæ. **B. præmenta′lis**, subcutaneous b. at inferior margin of symphysis of chin. **B. præpatella′ris latera′lis inter′na subligamento′sa**, between internal lateral ligament of knee-joint and capsules of joint. **B. p. me′dia**, between fascia over patella and quadriceps aponeurosis. **B. p. media′lis profun′da**, b. subligamento interna. **B. p. m. superficia′lis**, b. patellaris lateralis interna. **B. p. pri′ma**, subcutaneous b. in front of patella. **B. p. profun′da**, b. præpatellaris subaponeurotica. **B. p. secun′da**, b. præpatellaris subfascialis. **B. p. subaponeurot′ica** or **subtendino′sa**, between aponeurosis of extensors and front of patella. **B. p. subcuta′nea**, subcutaneous b. beneath aponeurosis over patella. **B. p. subfascia′lis**, between fascia of patella and aponeurosis of extensors of leg. **B. p. superficia′lis**, b. præpatellaris subcutanea. **B. p. ter′tia**, b. præpatellaris subaponeurotica. **B. præspino′sa**, over tuberosity of tibia. **B. præthyroide′a**, occasional b. between skin and superior portion of thyroid cartilage. **B. prætibia′lis, B. prætubero′sa**, b. præspinosa. **B. pyrifor′mis**, beneath tendon of insertion of pyriformis muscle. **B. quadra′ti fem′oris**, between quadratus femoris and trochanter minor. **B. radia′lis** or **ra′diobicipita′lis**, between tendon of biceps and tuberosity of radius. **B. r. subcuta′nea**, over styloid process of radius. **B. retrocondyloide′a exter′na me′dia**, b. bicipitogastrocnemialis. **B. r. e. profun′da** or **B. r. e. pro′pria**, b. gastrocnemialis externa. **B. r. e. subcuta′nea** or **superficia′lis**, subcutaneous b. over sesamoid bone in tendon of external head of gastrocnemius muscle. **B. r. inter′na**, b. gastrocnemialis interna. **B. re′troepitrochlea′ris**, occasional b. between triceps extensor muscle and ulnar nerve behind, and internal condyle of humerus and capsule of elbow-joint in front. **Ri′ders′ b.**, see *Riders*. **B. sac′culi lacryma′lis**, between lacrymal sac and internal palpebral ligament. **B. sacra′lis**, over spinous process of fourth or fifth sacral vertebra, or over articulation of sacrum and coccyx. **B. sarto′rii pro′pria**, between tendon of sartorius and femur. **B. semimembrano′sa**, between lateral part of semimembranosus tendon and inner condyle of tibia; also b. gastrocnemialis interna. **B. semimembrano′so-gastrocnemia′lis**, inferior part of b. gastrocnemialis interna. **B. semitendino′sa-bicipita′lis in tu′bere is′chii**, between conjoined tendon of semitendinosus and biceps and tuberosity of ischium. **B. sero′sa**, communicating with cavity of joint. **B. si′nus tar′si**, occasionally found between fascia over extensor longus digitorum and head of astragalus. **B. spi′næ scap′ulæ**, over spine of scapula, caused by carrying heavy weights. **B. s. sphenoide′æ**, between spine of sphenoid bone and capsule of temporomaxillary joint. **B. ster′nohyoide′i**, between insertion of sternohyoid muscle and hyoid bone. **B. sty′lohyoide′i**, under insertion of stylohyoid muscle. **B. subachille′a**, b. calcanea. **S. subacromia′lis**, upper part of b. deltoidea on muscles of shoulder-joint. **B. subcalca′nea**, between inferior surface of calcaneum and plantar fascia. **B. subcla′via**, b. costoclavicularis. **B. subcoracoide′a**, occasional b. between subscapularis muscle and subscapularis bursa; also b. coracobrachialis and b. scapularis. **B. subcrura′lis**, between quadriceps extensor and inferior portion of front surface of femur above patella. **B. subcuta′nea calca′nei**, b. subcalcanea. **B. s. capit′uli ul′næ**, over styloid process of ulna. **B. s. con′dyli radia′lis hu′meri** or **condyloide′a hu′meri exter′na**, b. epicondyli. **B. s. con′dyli ulna′ris hu′meri** or **condyloide′a hu′meri inter′na**, b. epitrochlei. **B. s. ge′nu**, b. præligamentosa. **B. s. latis′simi dor′si**, between skin and lumbar aponeurosis. **B. s. malle′oli exter′na** or **latera′lis**, subcutaneous b. over external malleolus. **B. s. m. inter′na** or **media′lis**, subcutaneous b. over internal malleolus. **B. s. olec′rani**, b. olecrani. **B. s. tu′beris is′chii**, subcutaneous b. over tuberosity of ischium. **B. subdeltoide′a** b. acromialis. **B. subfascia′lis**, between superficial insertion of quadriceps and inferior part of fascia lata. **B. subgemella′ris**, b. pyriformis. **B. subhyoide′a**, between hyoid bone and conjoined insertion of sternohyoid, omohyoid, and stylohyoid muscles, and thyrohyoid membrane. **B. subili′aca**, under tendon of iliopsoas muscle covering iliopectineal tubercle, anterior surface of tubes, and capsule of hip-joint. **B. subligamen′to-inter′na**, between internal lateral ligament of knee-joint and capsule of joint. **B. subligamento′sa**, b. subpatellaris. **B. sublingua′lis**, between tongue and mucous membrane. **B. submamma′ria**, between mammary gland and pectoralis major. **B. subpatella′ris**, between tendon of quadriceps extensor and front of tibia. **B. subscapula′ris**, between subscapularis muscle and coracoid process and neck of scapula. **B. subtendin′ea brachia′lis anti′ci**, between tendon of insertion of brachialis anticus and coronoid process. **B. s. extenso′ris car′pi radia′lis brevio′ris**, under tendon at its insertion into third metacarpal bone. **B. s. e. c. r. longio′ris**, under tendon at its insertion into second metacarpal bone. **B. s. e. lon′gi hallu′cis**, b. extensoris hallucis brevis. **B. s. flexo′ris car′pi ulna′ris**, b. carpina volaris. **B. s. ili′aci**, occasional b. between tendon of insertion of iliopsoas muscle and femur. **B. s. infraspina′ti**, b. brachialis infraspinata. **B. s. olec′rani**, above olecranon, in front or at side of triceps extensor tendon. **B. s. pectora′lis majo′ris**, between tendon of pectoralis major and b. bicipitis and tendon of latissimus dorsi. **B. s. p. mino′ris**, occasional b. beneath insertion of pectoralis minor. **B. s. perone′i ter′tii**, beneath tendon of that muscle at its insertion upon head of fifth metacarpal bone. **B. s. sarto′rii**, between tendon of sartorius and femur. **B. s. subscapula′ris**, occasional b. between tendon of subscapularis and capsule of shoulder-joint. **B. s. tenso′ris fas′ciæ lat′æ**, between iliotibial band and capsule of knee-joint. **B. s. tere′tis mino′ris**, beneath tendon of teres minor. **B. s. tibia′lis anti′ci**, beneath tendon of that muscle at insertion. **B. s. tricip′itis bra′chii**, b. subtendinea olecrani. **B. supra-acetabula′ris**, between head of rectus femoris and upper border of acetabulum. **B. supra-acromia′lis**, occasional b. over acromion process. **B. supra-ancone′a intratendino′sa**, b. intratendinea olecrani. **B. supracondyloid′ea inter′na** or **media′lis**, between inner tendon of gastrocnemius muscle and femur. **B. supragenua′lis**, b. subcruralis. **B. suprahyoide′a**, b. between superior surface of hyoid bone and geniohyoglossi muscles. **B. suprapatella′ris**, b. subcruralis; b. intermuscularis extensoris cruris; also b. occasionally found in shoemakers above the knee. **B. suprapu′bica**, beneath rectus abdominis at its attachment to pubes. **B. supraxiphoide′a**, subcutaneous b. over ensiform cartilage. **B. syno′viæ** or **syno′vial b.**, see *Bursa* and *Bursæ mucosæ*. **B. tar′sica subcuta′nea**, subcutaneous b. on dorsal surface of foot. **B. ten′dinis bicip′itis cru′ris**, b. bicipitis cruris. **B. t. poplite′i**, between external lateral ligament of knee-joint and tendon of popliteus. **B. tendino′sa radia′lis**, sheath surrounding tendon of long flexor of thumb. **B. t. ulna′ris**, sheath surrounding tendons of deep and superficial flexors of fingers in wrist and palm. **B. tenso′ris fas′ciæ la′tæ**, b. subtendinea tensoris fasciæ latæ. **B. t. ligamen′ti annula′ris ra′dii ante′rior**, b. palmaris longi. **B. t. ve′li palati′ni**, b. circumflexi palati. **B. tere′tis majo′ris**, between tendon of insertion of teres major and lesser tuberosity of humerus. **B. tes′tium**, scrotum. **B. thy′rohyoide′a**, b. subhyoidea. **B. thyroide′a latera′lis**, between inferior constrictor muscle and greater cornu of thyroid cartilage. **B. thy′rotrachea′lis**, between isthmus of thyroid gland and trachea. **B. tibia′lis anti′ci**, beneath tendon of tibialis anticus at its insertion. **B. t. inter′na**, b. anserina. **B. t. subcuta′nea**, subcutaneous b. over upper end of tibia. **B. trape′zii**, between aponeurosis of trapezius and base of spine of scapula. **B. trochanter′ica glute′i** or **B. t. g. max′imi**, b. trochanterica profunda. **B. t. g. me′dii ante′rior**, b. glutei medii anterior. **B. t. g. m. poste′rior**, b. glutei medii posterior. **B. t. g. min′imi**, b. glutei minimi. **B. t. profun′da**, between tendon of gluteus maximus and posterior and external portions of great trochanter. **B. t. superficia′lis**, b. subcutanea trochanteris majoris. **B. trochlea′ris oc′uli**, in pulley of superior oblique muscle of eye. **B. tubero′so-ischiad′ica**, b. ischiadica. **B. ulna′ris inter′na**, between pisiform bone and tendon of flexor carpi ulnaris. **B. ulna′ris subcuta′nea**, b. subcutanea capituli ulnæ. **B. ulnoradia′lis**, between tendon of biceps flexor cubiti and radial tuberosity externally, and ulna and contiguous muscle internally. **B. vagina′lis**, synovial sheath. **B. v. abducto′ris lon′gi** and **extenso′ris bre′vis pol′licis** surround tendons of these muscles. **B. v. ante′rior extenso′ris lon′gi hallu′cis**, anterior sheath of that muscle over first metatarsophalangeal joint. **B. v. extenso′ris car′pi ulna′ris**, sheath of that muscle. **B. v. e. lon′gi digito′rum pe′dis**, sheath for tendons of that muscle. **B. v. e. l. hallu′cis**, sheath for that muscle. **B. v. e. l. pol′licis**, separate sheath for that extensor muscle. **B. v. e. min′imi dig′iti**, small sheath for tendon of that muscle. **B. v. extenso′rum car′pi radialo′rum**, common sheath of such extensor muscles. **B. v. e. commu′nis et in′dicis**, synovial covering of tendons of common extensor and extensor of forefinger. **B. v. flexo′ris car′pi radia′lis**, on tendon of that muscle. **B. v. f. lon′gi digito′rum**, synovial sheath for tendon of that muscle. **B. v. f. l. hallu′cis**, sheath surrounding tendon of that muscle behind internal malleolus. **B. v. pectora′lis mino′ris**, around tendon of pectoralis minor. **B. v. perone′i**, sheath of peroneal tendons behind external malleolus. **B. v. p. lon′gi**, sheath of tendon of that muscle in groove of cuboid. **B. v. tibia′lis anti′ci**, sheath around tendon of that muscle. **B. v. t.**

**posti′ci,** sheath surrounding tendon of that muscle. **B. ver′tebræ prominen′tis,** between skin and spinous process of seventh cervical vertebra. **B. vesicula′ris glute′i me′dii,** b. glutei medii anterior. **B. viri′lis,** scrotum.

**Bur′sæ** (pl. of bursa). **B. abducto′ris min′imi dig′iti pe′dis,** b. between that muscle and sesamoid bone of peroneus longus; also b. between that muscle and tuberosity of fifth metatarsal bone. **B. aor′ticotrachea′les,** between aorta and trachea. **B. dorsa′les profun′dæ** or **subtendin′eæ,** between tendons of extensor muscles and capsules of metacarpophalangeal or metatarsophalangeal joints. **B. d. subcuta′neæ** or **superficia′les,** beneath skin of dorsum of foot and hand. **B. glute′i max′imi** or **glute′ofemora′les,** between tendons of gluteus maximus and femur. **B. intermetacar′pophalan′geæ,** between the heads of the second, third, fourth, and fifth metacarpal bones. **B. intermetatar′sophalan′geæ,** between metatarsophalangeal joints. **B. interos′seæ,** between tendons of interossei muscles and metacarpophalangeal joint; between interossei muscles and metatarsophalangeal joint. **B. lumbrica′lium pe′dis,** between lumbricales muscles of foot. **B. masseter′icæ,** between masseter and structures beneath. **B. mucilagino′sæ,** b. mucosæ. **B. muco′sæ,** synovial crypts or follicles; small, membranous sacs situated about joints, particularly large ones of the upper and lower extremities, and, for the most part, lying under tendons; they are naturally filled with an oily kind of fluid, to lubricate the surfaces over which the tendons play. The bursæ are generally either roundish or oval, and arranged under two classes, *spherical* and *vaginal*. **B. phalan′geæ dorsa′les,** subcutaneous b. on dorsal surface of phalangeal joints. **B. semimembrano′sæ in tu′bere isch′ii,** between tendon of semimembranosus and quadratus femoris muscles. **B. subcuta′neæ dorsa′les artic′uli metacar′pophalan′gei,** between skin and extensor tendons over metacarpophalangeal articulations. **B. s. vola′res artic′uli metacar′pophalan′gei,** between skin and fat and the flexor tendon with its sheath. **B. s. v. phalan′gis pri′mæ,** between skin and tissue beneath, and the flexor tendon in front of the first phalanx. **B. subtendin′eæ dorsa′les artic′uli metacar′pophalan′gei,** between extensor tendons on dorsum of hand and metacarpophalangeal joints.

**Bur′sal.** Relating to bursæ or the scrotum.

**Bursal′is.** Bursal; obturator internus muscle.

**Bursal′ogy.** Treatise on or description of bursæ.

**Bur′sera acumina′ta** or **gummif′era** (after Burser, Neapolitan botanist). Jamaica bark tree, resinous exudation from which has been used like balsams and turpentines in general.

**Bur′sic** or **Bursin′ic acid.** Bursin.

**Bursin′.** Yellow substance derived from Capsella bursa pastoris; astringent, styptic, and used subcutaneously as a substitute for ergot.

**Bursi′tis.** Inflammation of a bursa. See *Synovitis.*

**Bur′sula** (dim. of bursa). Scrotum.

**Bur′ton's line.** Blue marginal line on the gums in lead poisoning.

**Bur′wart.** Ranunculus acris.

**Bur′weed.** Xanthium.

**Bush, Jew.** Pedilanthus tithymaloides.

**Busk's diam′eter.** Diameter between the ear and bregma. **B.'s horizon′tal plane,** plane through the middle point of the upper edge of the external meatus, vertical to the plane passing through such points and the bregma.

**Butalamine′.** Derivative from the spleen or pancreas of an ox.

**Bu′tane.** $C_4H_{10}$. An anæsthetic derivative of petroleum.

**Butch′er's broom.** Ruscus aculeatus.

**Bu′tea frondo′sa** (after John, earl of Bute). Tree common in Bengal and India, ord. *Leguminosæ,* from which butea or Bengal gum or kino flows; vermifuge and cathartic; the leaves are astringent, tonic; the flowers are astringent and diuretic. **B. gum,** from B. frondosa. **B. ki′no,** b. gum. **B. parviflo′ra,** Indian shrub; gum is used in colic and hysteria.

**But′ter.** Unctuous substance or concrete oil obtained from cream forming on the surface of milk furnished by females of mammalia, especially by the cow and goat; employed as a substitute for oils in the treatment of rickets, etc. vegetable substances resembling butter obtained from milk also receive this name. Essential fatty matter in it is *butyrin* or *butyrate of glycerin;* see *Butyric acid.* **B. of an′timony,** antimonium muriatum. **B. bacil′lus,** B. butyricus. **B. of caca′o,** oil of cacao; oil of theobroma; concrete oil, of sweet and agreeable taste, obtained from the kernels of the fruit of Theobroma cacao or chocolate-nut; being firm, but fusible at body temperature, it is adapted to serve as a constituent of suppositories. **B. of co′coa,** fatty, concrete substance separating from the milk of the cocoanut. **B. and eggs,** Narcissus pseudonarcissus. **B. ko′kum,** see *Garcinia purpurea.* **B. of nut′megs,** see *Myristica.* **B. teeth,** incisive teeth. **B. of tin,** stannic chloride. **B. tree,** Bassia butyracea, B. latifolia, and B. parkii. **B. weed,** Erigeron canadense. **B. wort,** Pinguicola vulgaris. **B. of zinc,** zinc chloride.

**But′tercup.** Ranunculus acris and R. bulbosus.

**But′terfly.** A pledget of cotton, tied in the centre by a string but with loose ends; used in vaginal tamponnade. **B. lu′pus,** lupus erythematosus of the nose. **B. patch,** b. lupus. **B. weed,** Asclepias tuberosa.

**But′termilk.** An acidulous liquid separated from cream by churning; it contains casein and a little butter.

**But′ternut.** Juglans cinerea.

**But′tock.** Nates. **B. hump,** steatopyga.

**But′ton.** Bud; protuberance resembling a button. **Bis′kra, b.,** aleppo boil, a cutaneous affection in the Levant, characterized by tubercles on the face or limbs, which soften and become covered with a scar. Ulcerations formed are long in healing, and generally leave a scar. It is usually left to itself, but is said to be benefited by crucial incisions into the tubercle prior to the period of softening. The disease appears to be anthracoid in its character. **B. bush,** Cephalanthus occidentalis. **B. cau′tery,** see *Cautery.* **B. of hair,** see *Hair.* **Mur′phy's b.,** metallic device for connecting the ends of a divided intestine in the operation of anastomosis; see cut under *Murphy.* **B. of Na′ples,** bubo. **B. scur′vy,** epidemic cachectic affection in Ireland; indolent, button-like growths of the corpus papillare of the skin; allied to frambœsia. **B. snake′root,** Liatris spicata; Eryngium aquaticum. **B. su′ture,** see *Suture, twisted.*

**But′tonhole.** A slit in a tissue or a contraction of an orifice, giving the appearance of a buttonhole. **B. frac′ture,** see *Fracture.* **Mi′tral b.,** stenosis of the mitral orifice of the heart at an advanced stage. **B. opera′tion,** see *Boutonnière.*

**But′tonwood shrub.** Cephalanthus occidentalis.

**Bu′tua.** Pareira brava.

**Bu′tyl.** $C_4H_9$. A hypothetical hydrocarbon. **B. al′cohol,** $C_4H_9OH$; a liquid of which there are several forms. **B. bacil′lus,** Bacillus butyricus. **B. chlo′ral hy′drate,** $C_4H_5Cl_3O,H_2O$, croton-chloral hydrate, from the action of chlorine on aldehyde; chloral butylicum; analgesic and hypnotic; employed in neuralgia and insomnia. **B. chlo′ride,** a colorless fluid; anæsthetic; effects similar to amyl chloride. **B. hy′dride,** substance derived from rectified American petroleum; gaseous, condensable into liquid; inhaled, it produces sleep and unconsciousness, resembling nitrous oxide in action; if long continued, asphyxia results from the exclusion of air. **B. hyp′nal,** colorless, soluble crystals, a combination of antipyrin and butyl chloral, having the therapeutic action of its constituents. **B. mus′tard oil** (b. isothiocyanate or isosulphocyanate), $C_4H_9CNS$, liquid found in oil of scurvy grass or cochlearia.

**Butylamin′.** $C_4H_{11}N$. Ptomain found in cod-liver oil; a colorless, alkaline liquid. It stimulates action of the skin and kidneys, and in large doses it is narcotic and produces vomiting.

**Bu'tylene.** A hydrocarbon gas.

**Buty'phus** (*bous*, ox). Cattle plague.

**Butyra'ceous** (*butyron*, butter). Resembling butter.

**Bu'tyrate of glycerin'.** See *Butter*.

**Butyr'ic.** Derived from or relating to butter. **B. acid,** $C_4H_8O_2$, liquid, fatty acid in perspiration; muscle-juice, and associated with glycerin in butter; the odor of the latter, when rancid, is due to the presence of free acid. **B. e'ther,** ethyl butyrate. **B. fermenta'tion,** fermentation attended with the formation of butyric acid.

**Butyrin'.** A triglyceride, the characteristic constituent of butter. See *Butter*.

**Bu'tyroid tu'mor.** Form of milk tumor of the breast, the contents of which resemble butter.

**Butyrom'eter.** Device for determining the amount of fatty matter or butter in milk.

**Bu'tyrone.** $C_7H_{14}O$. Dipropylketone; obtained from the distillation of calcium butyrate.

**Bu'tyrous.** Containing, relating to, or resembling butter.

**Buxine'.** Alkaloid found in the leaves and bark of Buxus sempervirens; identical with bebeerine; antiperiodic and antipyretic in doses of gr. xv–xxx (1.0–2.0).

**Bux'us sempervi'rens.** Box tree, indigenous in Europe; the root, bark, and leaves are used for worms, dyspepsia, etc., and are also diaphoretic and antisyphilitic.

**Byrsodep'sicum princip'ium.** Tannin.

**Byrson'ima chrysophyl'la.** Tree of Cayenne; bark is astringent, tonic, and antipyretic. **B. cumingia'na,** Panama tree; the bark is used in skin diseases. **B. spica'ta,** a tree of West Indies and South America; the bark and fruit are astringent.

**Byssino'sis** (*byssos*, cotton). Pulmonary disease from inhalation of fine particles of cotton, affecting cotton-spinners.

**Byssocau'sis** (*byssos*, cotton, *kausis*, burning). The use of cotton moxa.

**Byssophthi'sis.** See *Byssinosis* and *Pneumonoconiosis*.

**Bys'sus.** Cotton; charpie; lint.

**Byth'ium.** An alleged chemical element said to enter into the composition of sulphur.

**Byth'us** (*bythos*, depth). Fundus of the stomach.

**Byttneria'ceæ.** Natural order of plants, including Theobroma cacao.

# C.

**C.** Chemical symbol of carbon; also used as an abbreviation for contact, closure, cathode, contraction, clonus, centimetre, cubic, color-sense, gallon (congius), centigrade, and cylindrical lens.

**Ca'a.** Ilex paraguayensis, maté; generic name, in Brazil, for an herb. **C.-ap'ia** is emetic and antidiarrhœic. **C.-atay'a,** plant of Brazil having cathartic properties.

**Caape'ba.** Pareira brava, Pothomorpha peltata and P. umbellata.

**Caapon'ga.** Crithmum maritimum.

**Caaro'ba.** Brazilian tree; its leaves, in decoction, promote perspiration. See *Caroba* and *Ceratonia.*

**Caballa'tion** or **Cabal'lion.** Cynoglossum.

**Cab'alline al'oes** (*caballus,* horse). Impure aloes; used by veterinary surgeons.

**Cabalon'ga.** Seeds of Strychnos ignatii.

**Cab'bage.** Brassica. **C. bark** or **Bas'tard c.,** bark of Andira inermis. **Cow c.,** Nymphæa odorata. **I'rish c.,** Dracontium fœtidum. **C. rose,** Rosa centifolia. **Skunk c.,** Dracontium fœtidum or Symplocarpus fœtidus; used sometimes as an antispasmodic in doses of ʒss–j (2.0–4.0) of the fluid extract. **Swamp c.,** skunk c. **C. tree,** Geoffræa inermis. **Wa'ter c.,** Nymphæa odorata.

**Cab'inet.** Chamber; museum. **Pneumat'ic c.,** an air-tight chamber having in it apparatus for compressing or rarefying the contained air; used in the treatment of affections of the chest.

**Cacæ'mia** (*kakos,* bad, *haima,* blood). Faulty or morbid condition of the blood.

**Cacaërom'eter** (*kakos,* bad, *aer,* air, *metron,* measure). Instrument for measuring the quantity of deleterious matter in depraved air.

**Cac'agogue** (*kakke,* excrement, *ago,* to expel). Cathartic; an ointment of alum and honey, formerly of reputation as a remedy for constipation when applied to the anus.

**Cacaine'.** Theobromine.

**Caca'lia.** A genus of plants, ord. *Compositæ.* **C. alpi'na,** used in bronchitis and bronchorrhœa. **C. antiuphor'bium,** a plant which tempers the caustic properties of euphorbium. **C. hasta'ta,** Siberian plant; purgative. **C. klein'ii,** Indian plant; alterative.

**Cacan'thrax.** Malignant anthrax. See *Anthrax.*

**Caca'o.** Cocoa or chocolate-nut; fruit of Theobroma cacao; see *Chocolate.* **C. but'ter,** oil of theobroma.

**Cacaostearin'.** Oil of theobroma.

**Cacaphrodi'te** (*kakos,* evil, *Aphrodite,* Venus). Syphilis.

**Cacaph'thæ.** Malignant form of aphthæ.

**Caca'tion** (*kakke,* excrement). Defecation.

**Cac'atory.** Having alvine discharges, as *cacatory fever,* fever accompanied with copious alvine evacuations.

**Cac'cagogue.** Cacagogue.

**Cacente'ria** (*kakos,* evil, *enteron,* intestine). Intestinal disorder.

**Cacha'na.** Root of balsamic Mexican plant.

**Cachec'tes.** A cachectic individual.

**Cachectic,** kak-ek'tic (*kakos,* bad, *hexis,* habit). One attacked with cachexia; relating to cachexia; remedy for cachectic condition. **C. diseas'es,** constitutional diseases—tuberculosis, for example.

**Cachelco'ma** or **Cachelco'sis** (*kakos,* bad, *helkos,* ulcer). Malignant ulcer.

**Cachet** (F.), kash-ay'. Wafer enclosing medicinal articles.

**Cachex'ia** or **Cachexy,** kak-eks'e (*kakos,* bad, *hexis,* habit). A state of malnutrition usually dependent upon some chronic constitutional affection, such as cancerous, tuberculous, or venereal disease. **C. africa'na,** earth eating, see *Chthonophagia.* **C. america'na,** ankylostomiasis. **Alcohol'ic c.,** constitutional effects of excessive use of alcoholic drinks. **C. aphtho'sa,** psilosis. **C. aquo'sa,** anæmia with dropsy, seen in the lower animals. **Arsen'ical c.** chronic poisoning from arsenic. **C. calculo'sa,** lithiasis. **Can'cerous** or **carcino'matous c.,** see *Cancer.* **Car'diac c.,** chlorotic condition observed in some forms of chronic heart disease. **Drunk'ard's c.,** alcoholic c. **C. dysthet'ica,** dyscrasia. **C. exophthal'mica,** exophthalmic goitre. **C. icter'ica,** jaundice; icterus. **Jail c.,** disturbed organic functions and malnutrition induced by confinement in prison. **Lead c.,** constitutional effects of chronic lead poisoning; saturnism. **C. londinen'sis,** impaired health or nutrition said to occur in inhabitants of London; seen also in those of other crowded cities. **C. lymphat'ica,** Hodgkin's disease. **Mala'rial** or **marsh c.,** state of cachexia observed in malarious districts; constitutional sequences of malarial fever. **Mercu'rial c.,** constitutional effect of chronic mercurial poisoning, as anæmia, arthritic pain, emaciation, etc. **Mi'ners' c.,** ankylostomiasis. **Ne'gro c.,** African c. **Os'teal c.,** cachectic condition of children in which the long bones become painful and swollen. **Pachyder'mic c.,** myxœdema. **Palu'dal c.,** or **C. palus'tris,** malarial c. **Perios'teal c.,** osteal c. **C. rena'lis,** kidney, Bright's disease of. **C. saturni'na,** lead colic; saturnism. **C. scorbu'tica,** see *Purpura.* **C. scrophulo'sa,** see *Scrofula.* **C. sple'nica** or **splenet'ica,** splenic leucocythæmia, a cachexia often accompanying diseases, especially enlargement, of the spleen; *splenalgia bengalensis* in India; leukæmia; pseudoleucocythæmia. **C. strumipri'va,** myxœdema or condition allied to it. **Stru'mous c.,** scrofula. **C. syphilit'ica,** anæmic condition due to syphilitic poison. **C. thyreopri'va,** c. strumipriva. **Thy'roid c.,** exophthalmic goitre. **Tuber'culous c.,** depressed constitutional state accompanying tuberculous disease. **U'rinary c.,** constitutional effects of chronic, especially suppurative, disease of the urinary tract. **C. u'teri** or **uteri'na,** fluor albus. **C. vene'rea,** syphilis. **Ve'nous c.** venosity. **Verm'inous c.,** constitutional effect of worms in the intestine, as anæmia, etc. **C. vir'ginum,** chlorosis.

**Cachinna'tion** (*cachinno,* to laugh aloud). Immoderate laughter, as in hysterical and maniacal affections.

**Cachou'.** Troche to perfume the breath.

**Cacoæsthe'sia.** Morbid subjective sensation, paræsthesia.

**Cacocho'lia** (*kakos,* bad, *chole,* bile). Depraved condition of bile.

**Cacochrœ'a** (*kakos,* evil, *chroia,* color). Change in the color of the skin from disease.

**Cacochy'lia** (*kakos,* evil, *chylos,* chyle). Deprave chylification; hence *cacochy'lous,* indigestible.

**Cacochy'mia** (*kakos,* evil, *chymos,* juice). Disordered chymification; dyspepsia.

**Cacochy'mic.** Dyspeptic.

**Cacocol'pia** (*kakos,* evil, *kolpos,* vagina). Gangrene of the vagina or vulva.

**Cacocynan'che.** Malignant angina.

**Cacodæ'mon.** Nightmare.

**Cacodæmonoma'nia.** Demonomania.

**Cacodon'tia** (*kakos,* bad, *odous,* tooth). Bad condition of the teeth.

**Cacodon'tic.** Having bad teeth.

**Caco'dorous.** Foul smelling.

**Cac'odyl** (*kakos,* bad, *ozo,* to smell, *hyle,* matter). $As(CH_3)_2$. A compound radical, dimethyl arsenide; a very offensive, volatile, inflammable liquid, giving off poisonous vapors; alkarsin; Cadet's fuming liquid; it unites with oxygen to form cacodylic acid.

**Cac'odylate.** A salt of cacodylic acid. **Fer'ric c.,** a yellowish-white powder; used in anæmia in doses of gr. ss–v (0.032–0.32). **Guai'acol c.,** a whitish, granular salt; used in tuberculosis in doses of gr. ss–ij (0.032–0.13). **So'dium c.,** a deliquescent salt; employed in the treatment of tuberculosis, anæmia, cancer, diabetes mellitus, and malaria in doses of gr. ss–j (0.032–0.065).

**Cacodyli'acol.** Guaiacol cacodylate.

**Cacodyl'ic.** Relating to cacodyl. **C. acid,** $AsO(CH_3)_2OH$; dimethyl arsenic acid, a crystalline, odorless oxidation-product of cacodyl; dose, gr. j–iij (0.065–0.2). Its sodium salt is used in the treatment of tuberculosis.

**Cacoe'thes** (*kakos*, bad, *ethos*, disposition, habit). Bad habit, disposition, or character.

**Cacoeth'ic.** Of bad character; malignant.

**Cacogalac'tia** or **Cacogal'ia** (*kakos*, bad, *gala*, milk). Bad condition of milk.

**Cacogas'tric.** Dyspeptic; having a disordered stomach.

**Cacogen'esis** (*kakos*, bad, *genesis*, generation). Morbid or monstrous formation; malformation.

**Cacoglos'sia** (*kakos*, bad, *glossa*, tongue). Glossitis; cancer of the tongue.

**Cacome'tra** (*kakos*, bad, *metra*, uterus). Suppurative or gangrenous metritis.

**Cacomor'phia** or **Cacomorpho'sis** (*kakos*, bad, *morphe*, shape). Malformation; development of diseased tissue.

**Caconych'ia** (*kakos*, bad, *onyx*, nail). Morbid condition of nail.

**Cacoparonych'ia.** See *Paronychia*.

**Cacopath'ia** or **Cacop'athy** (*kakos*, bad, *pathos*, affection). Distressed state of mind; malignant disease.

**Cacopho'nia** or **Cacoph'ony** (*kakos*, bad, *phone*, voice). Dissonant condition of the voice.

**Cacophthal'mia** (*kakos*, bad, *ophthalmos*, eye). Malignant disease of the eye.

**Cacopla'sia** (*kakos*, bad, *plasso*, to form). Formation of morbid tissues. See *Cacoplastic*.

**Cacoplas'tic.** Susceptible of only a low degree of organization, as indurations resulting from low or chronic inflammation, fibrocartilage, cirrhosis, etc.; opposite of euplastic.

**Cacopra'gia** or **Cacoprax'is** (*kakos*, bad, *prasso*, to perform). Depraved condition of organic functions.

**Cacor'rhachis** or **Cacorrhachi'tis** (*kakos*, bad, *rhachis*, spine). Deformity or disease of the spine.

**Cacorrhyth'mic** (*kakos*, bad, *rhythmos*, rhythm). Irregular as to rhythm.

**Caco'sis.** Bad condition of the body; diseased condition in general.

**Cacosit'ia** (*kakos*, bad, *sition*, aliment). Disgust or aversion for food.

**Cacos'mia** (*kakos*, bad, *osme*, smell). Offensive odor.

**Cacosom'nia** (*kakos*, bad, *somnos*, sleep). Sleeplessness; restless sleep.

**Cacosper'mia** (*kakos*, bad, *sperma*, sperm). Abnormal condition of sperm.

**Cacosphyg'mia** or **Cacosphyx'ia** (*kakos*, bad, *sphygmos* or *sphyxis*, pulse). Bad state of the pulse.

**Cacosplanch'nia** (*kakos*, bad, *splanchnon*, viscus). Indigestion; emaciation dependent upon imperfect digestion.

**Cacosto'mia** (*kakos*, bad, *stoma*, mouth). Disordered state or gangrene of the mouth.

**Cacothana'sia** (*kakos*, bad, *thanatos*, death). Unnatural, painful, or distressing death.

**Cacotheline'.** $C_{42}H_{22}NO_{20}$. Alkaloid resulting from the action of nitric acid on brucine.

**Cacoth'esis** (*kakos*, bad, *thesis*, position). Faulty position or attitude.

**Cacothy'mia** (*kakos*, bad, *thymos*, mind, disposition). Depraved state of mind; mental depression.

**Cacotrib'ulus.** Centaurea calcitrapa.

**Cacotrich'ia** (*kakos*, bad, *thrix*, hair). Disease of the hair.

**Cacotro'phia** or **Cacot'rophy** (*kakos*, bad, *trophe*, nutrition). Disordered or defective nutrition. **C. folliculo'rum,** a form of keratosis pilaris widely distributed over the body and involving the deeper portion of the follicles. **C. pilo'rum,** keratosis pilaris; lichen pilaris.

**Cacou'cia coccin'ea.** Perennial shrub of South America; emetocathartic.

**Cac'ozyme** (*kakos*, bad, *zyme*, ferment). Disease-producing ferment.

**Cactine'.** The active principle of Cactus or Cereus grandiflorus.

**Cac'tus.** A plant of the order *Cactaceæ*, one of the Indian fig family. **C. grandiflo'rus,** night-blooming cereus; tincture is empoyed as a cardiac tonic in functional palpitation of the heart; it owes its action probably to direct stimulation of the intracardiac ganglia; dose, ♏ij–viij (0.13–0.5); the fluid extract is employed in doses of ♏ij–iv (0.13–0.26). **C. opun'tia,** Indian fig; grows in S. America, Spain, Italy, etc.; fruit is sweetish and colors urine red when eaten; leaves are refrigerant.

**Cacu'men.** The superior part of the vermis in the brain.

**Ca'cur.** Fruit of Cucumis myriocarpus.

**Cada'ba.** Genus of family *Capparidaceæ* of India and Arabia; young shoots of C. farinosa are used as an antidote against venomous bites; also cathartic and antiseptic. **C. in'dica** is anthelmintic, cathartic, emmenagogue.

**Cada'ver.** A dead body.

**Cadav'eric.** Cadaverous. **C. al'kaloids,** ptomains. **C. face,** facies hippocratica, see *Face*. **C. hyperæ'mia,** gravitation of the fluid blood to the dependent parts of the dead body. **C. posi'tion,** see *Gerhardt-Simon's law*. **C. rigid'ity,** rigidity occurring after death. **C. soft'ening of stom'ach,** condition sometimes seen after death in which the stomach is softened from the post-mortem action of the gastric juice.

**Cadaverin'.** $C_5H_{14}N_2$. Isomeric with saprin and neuridin and animal coniine; a ptomain in putrefying animal tissues in which Vibrio proteus (the Finkler-Prior bacillus) is present, as the heart, liver, or lungs, and in putrid eggs [and albumin of the blood; a heavy, syrupy liquid of offensive odor. It has power to excite suppuration and necrosis.

**Cadaveriza'tion.** Condition which, in paleness, coldness, and loss of vital manifestations, gives the appearance of a dead body, as in the collapse of cholera.

**Cadav'erous** or **Cadav'eric.** Belonging to a dead body; resembling a dead body.

**Cade.** Juniperus oxycedrus. **Oil of c.,** oleum cadinum (Ph. U. S. and Br.), oleum Juniperi empyreumaticum; a tarry oil obtained by the dry distillation of the wood of Juniperus oxycedrus; used externally in the treatment of skin diseases.

**Cadet's' fu'ming liq'uid.** Cacodyl; alkarsin.

**Ca'dia arab'ica** or **purpu'rea.** Egyptian leguminous plant; used in colic.

**Cadi'va insa'nia** (*cadivus*, falling). Epilepsy.

**Cad'mia.** Calamina; tutia. **C. metal'lica** or **nati'va,** arsenic.

**Cad'mium** (symbol, Cd). A metal resembling tin in general appearance, obtained in the smelting of zinc ores. **C. i'odide,** a white, soluble salt, is said to possess all the advantages of preparations of iodine; in ointment is used in scrofulous and other tumefactions. **C. ni'trate,** a poisonous salt, inducing vomiting and purging in dose of gr. ⅛ (0.008). **C. sal'icylate,** a white, soluble salt derived from the action of salicylic acid on cadmium carbonate or hydrate; antiseptic, and employed especially in purulent ophthalmia. **C. sul'phate,** a crystalline, soluble salt; used in affections of the eye, as a substitute for zinc sulphate, in solutions of gr. ss–j to ℥j; has also been recommended as an astringent injection in urethritis.

**Cadu′ca.** Decidua. **C. pas′sio,** epilepsy.

**Cadu′city** (*cado*, to fall). Old age; portion of human life preceding decrepitude.

**Cadu′cous.** Deciduous; tending to decay.

**Cadur′cus.** Vulva.

**Cæ′cal.** Blind; closed at one extremity; belonging to the cæcum; the cæcal arteries and veins are branches of arteriæ and venæ colicæ dextræ inferiores, distributed to the cæcum; cæcal or blind extremity of a duct is its closed termination. **C. appen′dix,** appendix vermiformis. **C. foram′ina,** foramina situated at fore and back parts of tuber annulare of the brain and at the extremities of the depression made by the vertebral artery; see also *Foramen cæcum.* **C. fos′sa,** depression made by the folds of the peritoneum going to the cæcum.

**Cæcec′tomy** (*cæcum* + *ektome*, excision). Excision of a portion of the cæcum.

**Cæ′citas** or **Cæcitu′do** (*cæcus*, blind). Cecity; blindness. **C. crepuscula′ris,** nyctalopia. **C. diur′na,** hemeralopia. **C. mi′nor,** amaurosis. **C. noctur′na,** nyctalopia. **C. verba′lis,** word-blindness, or inability to understand written or printed words; see *Aphasia.*

**Cæci′tis.** Inflammation of the cæcum; typhlitis; typhloenteritis.

**Cæcitu′do.** Cæcitas.

**Cæcos′tomy** (*cæcum* + *stoma*, mouth). Making of an artificial anus at the cæcum.

**Cæ′cum** (*cæcus*, blind). Blind gut, so called from being open at one end only; portion of intestinal canal seated between termination of ileum and commencement of colon, filling almost wholly the right iliac fossa, where the peritoneum retains it immovably; its length is about three or four fingers' breadth; the ileocæcal valve or valve of Bauhin prevents reflux from it into the ileum; the appendix vermiformis cæci is attached to it. **C. vestib′uli,** the inferior blind extremity of the scala media in the ear.

**Cæ′la.** Malabar plant employed in pustular affections and in gonorrhœa.

**Cærulo′sis neonato′rum.** Cyanosis of newborn.

**Cæsalpi′na** (after Andreas Cæsalpinus). Sappan or sampfen wood; Siamese tree, wood of which is used in decoction in contusions. **C. axilla′ris,** plant of Malabar, seeds of which are emetic and antiperiodic; Brazil wood, Pernambuco wood, used as astringent; is wood of Cæsalpina echinata. Another variety is brasiletto, from Cæsalpina brasiliensis and C. crista, growing in the West Indies; Nicaragua or peach wood, analogous to this, is derived from a species of Cæsalpina; the kernel of Cæsalpina bonducella, seed of which is called in India *kutkuleja* and *kutoo kurunja, banduc seeds, nickernuts,* is febrifuge tonic, antiperiodic, and anthelmintic; used, powdered and mixed with castor oil, in hydrocele. **C. coria′ria,** grows in Southern America; fruit is astringent and antiperiodic; used externally for piles and prolapse of rectum. **C. cris′ta,** shrub of Jamaica, bark of which is epispastic and stimulant to ulcers. **C. morin′ga,** root is diuretic. **C. pulcher′rima,** small tree of E. and W. Indies and S. America; flowers are used in cutaneous affections, malarial fevers, and diseases of the lungs; seeds and leaves are cathartic, diuretic, and abortifacient. **C. sap′pan,** seeds are emmenagogue; see *Cæsalpina.*

**Cæsa′rean** or **Cæsa′rian opera′tion** or **sec′tion** (*cædo*, to cut). Operation through parietes of abdomen and uterus to extract fœtus; Julius Cæsar is said to have been so extracted; it is also called hysterotomy, hysterotocotomy, gastrometrotomy, gastrohysterotomy. When the incision is made into the uterus through the vagina it constitutes vaginal Cæsarean section, gastroelytrotomy, gastrelytrotomy, gastrocolpotomy, laparocolpotomy, laparoelytrotomy. Cæsarean section may be required when the mother dies before delivery, when there is an invincible obstacle to delivery from faulty conformation of pelvis, or when the child has passed into the abdominal cavity in consequence of rupture of the uterus. See *Cœliotomy, Laparotomy, Porro's operation, Sänger's operation,* etc.

**Cæs′ium** (symbol, Cs). A rare metal, never isolated in uncombined form, found in certain natural mineral water. **C. bitart′rate,** recommended in palpitation, in doses of gr. ij–v (0.13–0.32). **C. bro′mide,** used with apparently good results in epilepsy and palpitation, in doses of gr. ij–v (0.13–0.32). **C. car′bonate,** a white, granular salt recommended in nervous affections. **C. chlo′ride** is used for the relief of tumultuous heart action. **C. hydrox′ide,** used in the treatment of epilepsy and as a nervine tonic. **C. sul′phate,** used in the treatment of epilepsy.

**Cæsu′ra** (*cædo*, to cut). Cut; incision.

**Caffearine′.** $C_{14}H_{16}N_2O_4$. An alkaloid derived from coffee.

**Caffe′ic acid.** $C_9H_8O_4$. Crystallizable acid derived from coffee, in which, combined with glucose, it forms caffeotannic acid.

**Caffeidin′.** Base derived from caffeine.

**Caffei′na.** (Ph. U. S. and Br.). See *Caffeine.*

**Caffeine,** kaf-fe-een′. White alkaloid, $C_8H_{10}N_4O_2,H_2O$, in coffee, tea, guarana, etc.; odorless, long, white crystals; it retards metabolism, produces contraction of bloodvessels, etc.; used in migraine and as a heart tonic, and is also antispasmodic, diuretic, and stimulant to the digestive organs; dose, gr. ss–ij (0.032–0.13). The official salt of caffeine is **C. cit′rate,** caffeina citrata (Ph. U. S.), citrated caffeine, caffeinæ citras (Ph. Br.), a loose combination of caffeine and citric acid; dose, gr. j–v (0.65–0.32). **Efferves′cent c. c.,** caffeina citrata effervescens, is a coarse, white, granular powder, effervescing when put in water; dose, ʒj–iv (4.0–16.0). Other salts of caffeine have been used for their actual or presumed therapeutic action, as follows: **C. and ammo′nium bro′mide,** a white, soluble powder; hypnotic and antiepileptic; dose, gr. xv–xxx (1.0–2.0). **C. bitar′trate,** employed in palpitation of the heart, of nervous origin, in doses of gr. iij–v (0.2–0.32). **C. borocit′rate,** a salt of caffeine recommended for hypodermic use, being soluble and non-irritant; it is antiseptic, having boric acid in its composition. **C. car′bolate,** c. phenate. **C. chlo′ral,** a soluble combination of caffeine and chloral; sedative and anodyne in doses of gr. iij–v (0.2–0.32). **C. cinnam′ylate,** a salt of caffeine recommended for hypodermic use, being soluble and non-irritant. **C. hydrobro′mate** or **hydrobro′mide,** in soluble crystals; used as a diuretic in cardiac dropsies, given hypodermically. **C. i′odol,** a molecular combination of caffeine and iodol; surgically antiseptic like iodol. **C. ni′trate,** a yellow, crystallized substance, having properties of caffeine preparations. **C. phe′nate,** used hypodermically where the virtues of caffeine and carbolic acid are indicated. **C. phthal′ate,** a salt of caffeine used hypodermically; soluble and non-irritant. **C. rubid′ium and ammo′nium bro′mide,** a white soluble powder; hypnotic and antiepileptic; dose, gr. xv–xxx (1.0–2.0). **C. so′dium,** the salts of this series employed hypodermically are the benzoate, cinnamate, salicylate, and sulphonate. **C. trii′odide,** diiodocaffeinehydriodide, result of the action of a solution of hydriodic acid on a feeble solution of caffeine. **C. vale′rianate,** a mixture of valerianic acid and caffeine occurring in powder or irregular crystals having the odor of valerian; used in whooping-cough and hysterical vomiting in doses of gr. ss–iij (0.032–0.2).

**Caf′feinism** or **Caf′feism.** Chronic coffee poisoning; the chief symptoms are palpitation of the heart, insomnia, indigestion, mental depression, and tremor.

**Caf′feol** or **Caf′feone.** $C_8H_{10}O_2$. An oil of powerful aroma, the aromatic principle of coffee.

**Caf′feotan′nic acid.** Glucoside, $C_{10}H_4O_7$, in coffee; composed of glucose and caffeic acid. See *Caffeic acid.*

**Cagot** (ca-go′) **ear.** Deficiency of the lower lobe of the ear; said to be a peculiarity of the Cagots, an outcast race in the Pyrenees.

**Cahin'ca root.** Cainca or cainana root; bark of roots of Chiococca anguifuga, C. densifolia, or C. racemosa; ord. *Rubiaceæ*; a bitter tonic and diuretic. See *Cahincin.*

**Cahin'cic acid.** Cahincin.

**Cahincin'** or **Caincin'.** $C_{40}H_{64}O_{18}$. Bitter, white, crystallized glucoside in root and root-bark of Cainca or Chiococca racemosa; cahincic or caincic acid.

**Cai'eput oil.** Cajeput oil.

**Cain'cic acid** or **Caincin'.** Cahincin.

**Cais'son disease'.** Symptoms caused by working in compressed air, as in that of the caisson or diving-bell in tunnelling or bridge building, comprising intense neuralgic pains in the limbs and stomach, headache, vertigo, nausea and vomiting, paralysis, and coma.

**Cajal's** (cah-hahls') **cells.** Fusiform nervous cells in proximity to the cortex cerebri, from which branched processes are given off.

**Caj'eput oil.** Volatile oil of leaves of Melaleuca cajuputi, ord. *Myrtaceæ*, a native of Moluccas; has a strong, fragrant smell, like camphor; taste is pungent and aromatic; is stimulant and useful where essential oils in general are indicated; antispasmodic, stimulant, and anodyne in colic, neuralgia, toothache, earache, skin diseases, vomiting, etc. It is called oil of Witneben, from the person who first distilled it.

**Caj'eputene.** $C_{10}H_{16}$. A liquid hydrocarbon from *oil of cajeput.*

**Caj'eputol.** Oily liquid constituting larger part of oil of cajeput and of some other oils.

**Caj'uput.** Cajeput.

**Cake, a'gue.** Enlarged spleen in malarial cachexia. **Embryon'ic c.,** fœtal placenta. **Mater'nal c.,** uterine placenta. **Vas'cular c.,** placenta.

**Cal'abar bean.** Ordeal nut; physostigma.

**Calabarine'.** Alkaloid from physostigma, having action similar to strychnine.

**Cal'abash tree.** Crescentia cujete.

**Calabazil'la.** Cucurbita perennis, a California squash, the bruised and macerated root of which is used as an application in hemorrhoids.

**Cala'dium esculen'tum.** Arum esculentum. **C. segui'num,** plant of India, South America, and the West Indies; the juice is given in gout and rheumatism and as an anaphrodisiac; the tincture is used in pruritus vulvæ.

**Calaf'.** Egyptian willow, distilled water of flowers of which—macahalef—is said to be anaphrodisiac, antiseptic, and cordial.

**Calage'** (F.). Wedging; method of preventing or relieving seasickness by pressure of a pillow against the stomach, the patient being recumbent.

**Calage'ri** or **Calagi'rah.** Vernonia anthelmintica.

**Calagua'la root.** Root of Polypodium calaguala or adiantiforme or coriaceum or amnifolium or argenteum or politum; diuretic, and used in dropsy, pleurisy, contusions, abscesses, etc.

**Calamandri'na.** Teucrium chamædrys.

**Calam'ba, Calam'bac, Calam'bar, Calam'be,** or **Calam'bouk.** Aloes wood.

**Calame'don** (*kalamos,* reed). Oblique fracture of bone, fractured portions having the shape of the nib of a pen; longitudinal fracture; comminuted fracture.

**Calami'na** or **Calamine'** (*calamus,* reed, from its reed-like appearance). Native, impure carbonate of zinc; chiefly used for pharmaceutical purposes in the form of *calamina præparata,* prepared calamine, calamine reduced to impalpable powder by roasting and levigation; it is sprinkled or dusted on excoriated parts, or to prevent excoriation, etc; also alkaloid from Acorus calamus.

**Cal'amint.** Calamintha.

**Calamin'tha** (*kalos,* beautiful, *mentha,* mint). Melissa calamintha. **C. a'cinos,** basil thyme; stimulant, diaphoretic. **C. an'glica,** Melissa nepeta. **C. aquat'ica,** Mentha aquatica. **C. clinopo'dium,** wild basil; aromatic tonic. **C. erec'ta virginia'na,** Cunila mariana. **C. grandiflo'ra** of Southern Europe; carminative. **C. hedera'cea,** Glechoma hederacea. **C. humil'ior,** Glechoma hederacea. **C. mag'no flo're,** Melissa grandiflora. **C. monta'na,** Melissa grandiflora. **C. nep'eta,** Melissa nepeta. **C. officina'lis,** Melissa officinalis. **C. parviflo'ra,** Melissa nepeta. **C. pule'gii odo're,** Melissa nepeta. **C. trichot'oma,** Melissa nepeta.

**Cal'amus.** (Ph. U. S.) Sweet flag; the rhizome of Acorus calamus; carminative and tonic; dose, gr. v–xxx (0.32–2.0). The fluid extract, *extractum calami fluidum,* is official; dose, ♏v–xxx (0.32–2.0). A *tincture* is also prescribed in doses of ʒj (4.0). **C. alexandri'nus,** stalk of plant of India and Egypt; antihysteric and emmenagogue. **C. aromat'icus,** Acorus calamus. **C. aromat'icus asiat'icus,** C. alexandrinus. **C. aromat'icus ve'rus,** C. alexandrinus. **C. asiat'icus,** C. alexandrinus. **C. dra'co,** C. rotang. **C. in'dicus,** see *Saccharum.* **C. odora'tus,** Acorus calamus; Juncus odoratus. **C. ro'tang,** systematic name of a plant whence dragon's blood is procured; red, resinous juice, obtained in India from wounding bark of Calamus rotang; used as an astringent in hemorrhages, etc. **C. scripto'rius** (writing pen), a small, angular cavity at the superior extremity of the medulla in the fourth ventricle of the brain, supposed to resemble a pen. **C. vulga'ris,** Acorus calamus.

**Calan'the veratrifo'lia.** Species of orchid of Moluccas, used locally in œdema and internally in chronic diarrhœa.

**Calat'ropus gigante'a.** Tree of India, possessing the property of exciting powerful uterine contractions.

**Cala'ya.** Extract of the fruit of Anneslea febrifuga; antiperiodic in dose of gr. xxx (2.0).

**Calca'neal** (*calx,* heel). Relating to the calcaneum, as *calcaneal arteries,* branches from posterior tibial to the heel.

**Calca'nean.** Calcaneal.

**Calca'neoastrag'alar** or **Calca'neoastrag'aloid.** Relating to calcaneum and astragalus.

**Calca'neoca'vus.** Clubfoot, combining calcaneus and cavus or talipes arcuatus.

**Calca'neocu'boid.** Relating to calcaneum and cuboid.

**Calca'neofib'ular.** Relating to calcaneum and fibula. **C. lig'ament,** the middle part of the external lateral ligament of the ankle.

**Calca'neonavic'ular.** Relating to calcaneum and scaphoid bone.

**Calca'neoplant'ar.** Relating to the os calcis or heel, and the sole of the foot.

**Calca'neoscaph'oid.** Calcaneonavicular.

**Calca'neota'lar.** Calcaneoastragaloid.

**Calca'neotib'ial.** Relating to the os calcis and tibia.

**Calca'neoval'goca'vus.** Clubfoot, combining calcaneus, valgus, and cavus.

**Calca'neum** (*calx,* heel). The largest tarsal bone, forming the heel, situated at the posterior and inferior part of the foot; the posterior surface, the heel, gives attachment to the tendo Achillis.

**Calca'neus** (*pes,* foot, understood). Variety of clubfoot, in which the dorsum of the foot is drawn upward by contraction in the direction of the shin, the heel alone touching the ground.

**Cal'car** (a spur). Ergot. **C. a'vis,** hippocampus minor. **C. eques'trum,** Delphinium consolida or larkspur. **C. femora'le,** vertical plate of compact tissue just in front of the small trochanter. **C. pe'dis,** calcaneum.

**Calca'reous** (*calx,* lime). Containing lime or chalk, as calcareous concretions, degeneration, metastasis, etc. See *Calcification.*

**Calca'ria.** Lime. **C. carbon'ica,** see *Creta.* **C. caus'tica,** lime. **C. chino'vica,** calcium kinovate. **C. chlora'ta, C. chlo'rica, C. chlorin'ica,** calcium chloride. **C. hy'drica,** slaked lime. **C. muriat'ica,** calcium chloride. **C. oxymuriat'ica,** chlorinated lime. **C. phosphor'ica,** calcium phosphate. **C. pu'ra,** calx. **C. pu'ra liq'uida,** liquor calcis. **C. sacchara'ta,**

saccharate of lime; antidote to carbolic or oxalic acid. **C. sulfura′ta,** calcium sulphide. **C. us′ta,** lime.

**Cal′carine.** Spur-shaped. **C. fis′sure** or **sul′cus,** groove on the occipital lobe corresponding with the hippocampus minor of the lateral ventricle.

**Calcatrep′pola.** Centaurea calcitrapa.

**Calce′na, Calce′non, Calceno′nia, Calcino′nia.** Concretions of lime tartrate in the body.

**Calceola′ria** (*calceolus*, small slipper). Slipperwort. **C. corymbo′sa,** species of slipperwort; diuretic. **C. pinna′ta,** used in Peru as emetic and laxative. **C. puncta′ta,** South American shrub, the stem and leaves of which are cathartic and antisyphilitic. **C. res′eda,** species in Peru; antipyretic and antiseptic. **C. trif′ida** is a febrifuge and antiseptic.

**Calce′tus.** Abounding in tartrate of lime or abnormal calcareous matter.

**Cal′ceum equi′num.** Tussilago.

**Cal′cia.** Calcaneum.

**Cal′cic.** Relating to calcium or lime.

**Calcico′sis.** Chronic pneumonia occurring in stone-cutters, set up by the irritation of the inhaled dust; stone-cutters' phthisis.

**Calcif′erous canals′** (*calx*, lime, *fero*, to carry). Microscopic canaliculi in cartilages of bones, full of calcareous salts.

**Calcif′ic.** Converting or being converted into chalk-like matter.

**Calcifica′tion** (*calx*, lime, *facere*, to make). Conversion into chalky or osseous matter by the deposition of calcareous substance or lime salts in the tissues; calcareous degeneration, as in the larger arteries, in breaking-down inflammatory products, in new growths, as chondroma, etc. See *Cretefaction*. **An′nular c.** takes place occasionally in the middle coat of vessels of medium size, causing sometimes total occlusion in them.

**Calcif′raga** (*calx*, limestone, *frango*, to break, from supposed power of dissolving stone in the bladder). Scolopendrium asplenium.

**Cal′cify.** To impregnate with a lime salt.

**Calcig′erous** (*calx*, lime, *gero*, to bear). Lime-bearing. **C. cells,** cells in which a deposit of lime salts normally occurs, as osteoblasts and odontoblasts.

**Calcig′radus** (*calx*, heel, *gradus*, step). One who walks on his heels.

**Calcina′tion** (*calx*, lime). Submission to strong heat of a mineral substance, so as to deprive it of water or any other volatilizable substance entering into its composition.

**Cal′cine.** To subject to calcination.

**Calcino′nia.** Calcena.

**Calcit′rapa.** Centaurea calcitrapa; Delphinium consolida. **C. hippophæs′tum,** Centaurea calcitrapa. **C. stella′ta,** Centaurea calcitrapa.

**Cal′cium** (symbol, Ca). A metallic element of light yellow color, the base of lime. **C. ac′etate,** soluble, crystalline salt; diuretic and resolvent; also employed in scrofula. **C. ar′abate,** a source of gum Arabic. **C. ar′senate,** compound of calcium and arsenic acid; three are known. **C. ar′senite,** compound of calcium and arsenious acid. **C. ben′zoate,** white, crystalline salt, from boiling benzoic acid in milk of lime; antilithic. **C. be′tanaph′tholmonosul′phonate,** asaprol. **C. bisul′phite,** antizymotic; disinfectant. **C. bo′rate,** powder formed by the addition of borax to a solution of calcium chloride. **C. boroglyc′eride,** obtained by heating together glycerin and calcium borate; antiseptic. **C. broma′tum,** calcium bromide. **C. bro′mide,** calcii bromidum (Ph. U. S.); a deliquescent, white, granular salt, in taste resembling bromide of potassium, though more pungent; hypnotic and sedative in irritable conditions of the nervous system attended with exhaustion; dose, gr. v–xxx (0.32–2.0). **C. car′bolate,** used in diarrhœa. **C. car′bonate,** chalk, calcii carbonas præcipitatus (Ph. U. S. and Br.); a very fine, tasteless, white powder; used as a tooth-powder and as a dusting-powder, and internally as an antacid in diarrhœa and gastric acidity; dose, gr. x–xl (0.65–2.6). **C. chlo′ride,** calcii chloridum (Ph. U. S. and Br.), chloride of lime; occurs in translucent, deliquescent masses; a powerful disinfectant and bleaching agent; used as an application to foul ulcers, and occasionally employed internally in doses of gr. ij–xv (0.13–1.0) in the treatment of scrofulous glands. **C. cit′rate,** compound of calcium and citric acid; formerly used as a diuretic and in nephritis and calculus. **C. cres′ylate,** from the action of calcium hydrate on cresol; disinfectant like carbolic acid. **C. e′osolate,** a gritty powder of grayish color and acrid taste, derivative of creosote; antiseptic, employed in tuberculosis; dose, gr. ij–xv (0.13–1.0). **C. flu′oride,** $CaF_2$, crystalline substance present in bones, in enamel of teeth, mineral water, sea water, etc. **C. glycerobo′rate,** mixture by fusion of equal parts of c. borate and glycerin. **C. glycerophos′phate,** $CaC_3H_7PO_6$, a white, soluble powder; nerve tonic in neurasthenia, phosphaturia, etc.; dose, gr. ij v (0.13–0.32). **C. hip′purate,** compound of calcium and hippuric acid, by the action of the latter on lime-water; used in affections of the urinary organs, of the liver, ascites, and cutaneous diseases consequent on diseases of the liver. **C. hy′drate,** slaked lime. **C. hydrosul′phide,** $Ca(SH)_2$; gray substance, used as a powerful depilatory. **C. hydrox′ide,** c. hydrate. **C. hypochlo′rite** or **hypochloro′sum,** chlorinated lime. **C. hypophos′phite,** calcii hypophosphis (Ph. U. S. and Br.), calcium hypophosphite or hypophosphite of lime; occurs as a white powder or in translucent, colorless scales, having a nauseous, bitter taste; it is obtained by the union of phosphorus with milk of lime and long boiling (during which phosphuretted hydrogen gas is given off), purifying, and evaporating; the other hypophosphites are usually prepared from this by double decomposition; used in tuberculosis and other wasting diseases; dose, gr. x–xxx (0.65–2.0) in syrup. **C. hyposul′phite,** antizymotic. **C. i′odide,** prepared by the action of iodide of iron on milk of lime; given in doses of gr. j–iii (0.065–0.2) in phthisis, scrofula, erysipelas; also antiseptic. **C. iodobro′mide,** compound of calcium, iodine, and bromine; used in exophthalmic goitre **C. kino′vate,** combination of calcium and kinovic acid; used in diarrhœa and dysentery. **C. lac′tate,** used to obtain lactic acid and other lactates. **C. lactophos′phate,** lactophosphate of lime, freshly precipitated calcium phosphate dissolved in free lactic acid; it is official (Ph. U. S. and Br.) in the form of syrup, syrupus calcii lactophosphatis, containing two grains of the salt in each teaspoonful; employed to meet the same indications as the phosphate in doses of ʒj–iv (4.0–16.0). **C. loret′inate,** there are two of these compounds, both antiseptic. **C. mu′riate,** c. chloride. **C. naph′tholsul′phonate,** asaprol. **C. ni′trate,** $Ca(NO_3)_2$, white, hygroscopic substance, noticed in places in which animals freely urinate. **C. orthophos′phate,** c. phosphate. **C. ox′alate,** in eight-sided crystals, deposited in urine; see *Calculi, urinary*, and *Oxaluria*. **C. ox′ide,** lime; see *Calx*. **C. oxyda′tum,** quicklime. **C. o. hydra′tum,** slaked lime. **C. perman′ganate,** soluble, powerfully antiseptic and bactericide, in gynecological and dental practice especially; a stronger preparation than potassium permanganate; dose, in diarrhœa of children, gr. i–ij (0.065–0.13). **C. phos′phate,** calcii phosphas (Ph. Br.), c. p. præcipitatus (Ph. U. S.), a very fine white powder; given in scrofula, rachitis, osteomalacia, etc., in doses of gr. x–xxx (0.65–2.0). **C. phosphoglyc′erinate,** the combining acid is made by heating together anhydrous glycerin and commercial phosphoric acid; used as a substitute for calcium phosphate. **C. protox′ide,** calx. **C. sacch′arate,** sucrate; three compounds of calcium and saccharic acid are known. **C. sal′icylate,** white, odorless, tasteless powder; employed with bismuth salicylate in diarrhœa of children and inflammation of the stomach and bowels; dose, gr. viij–xx (0.5–1.3).

**C. san′tonate**, a white, soluble powder; anthelmintic; dose, gr. ss–jss (0.032–0.096). **C. su′crate**, compound of calcium and saccharose; formed when lime is dissolved in cane sugar. **C. sul′phate**, calcii sulphas exsiccatus (Ph. U. S.), dried gypsum; plaster-of-Paris; employed in the making of immovable dressings, plaster jackets and splints, etc. **C. sul′phide**, calcium sulphuret, hydrosulphate of lime; used in solution as a bath in itch and other cutaneous affections, and as a depilatory. Vleminckx's solution, used in itch and other cutaneous affections, is a solution of calcium sulphuret. **C. sul′phite**, see *Sulphurous acid*. **C. sulphocar′bolate**, or **C. sulphophe′nate**, obtained by the action of sulphophenic acid on calcium carbonate; a white, crystalline soluble powder; antiseptic, disinfectant, and astringent used in diarrhœa of children, rickets, etc., indoses of gr. iij–xv (0.2–1.0). **C. sul′phuret**, c. sulphide. **C. thioantimo′niate**, $Ca_3(SbS_4)_2$, made by calcining together oyster shells or chalk, sulphur, and antimony trisulphide; employed in gout, scrofula, rheumatism, etc. **C. thiosul′phate**, c. hyposulphite.

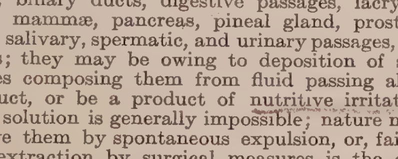
**Calcoglobulin′.** Union of salts of calcium with proteid in commencing change to bone.

**Cal′coid.** Neoplasm of a tooth pulp.

**Calcosubphalange′us min′imi dig′iti.** Abductor minimi digiti pedis muscle. **C. pol′licis**, abductor pollicis pedis muscle.

**Cal′cotar.** Ferri sulphas.

**Cal′culi** (pl. of calculus; dim. of *calx*, stone). Concretions in any part of the animal body, most frequently in organs acting as reservoirs and in excretory canals. They are met with in the tonsils, joints, biliary ducts, digestive passages, lacrymal ducts, mammæ, pancreas, pineal gland, prostate, lungs, salivary, spermatic, and urinary passages, and uterus; they may be owing to deposition of substances composing them from fluid passing along the duct, or be a product of nutritive irritation. Their solution is generally impossible; nature must remove them by spontaneous expulsion, or, failing this, extraction by surgical measures is the only practicable way of getting rid of them. **Al′ternating c.**, see *Table of urinary calculi*. **Al′vine c.**, calculi of the stomach and intestines; calculi of the stomach are rare, and are almost always carried thither by the antiperistaltic action of intestines; symptoms are those of chronic gastritis. Intestinal concretions are not uncommon in animals (see *Bezoard*), but are rare in man: they are fetid and formed, ordinarily, between valvulæ of the small intestines or in loops of large or old herniæ, and are generally evacuated *per anum*. **Arthrit′ic** or **artic′ular c.**, chalk stones, gout-stones, nodes; concretions forming in the ligaments, and within the capsules of joints, in persons affected with gout; composed of uric acid, soda, and some animal matter; rarely, urate of lime and chloride of sodium; see also *Concretions, articular*. **Au′ral c.**, ceruminous concretions in external auditory canal. **Bezoar′dic c.**, bezoar. **Bil′iary c.**, biliary concretions, gallstones, some being nothing more than secretion of bile thickened; the greater part are composed of cholesterin, with some coloring-matter of bile; biliary calculi are most frequently found in the gall bladder, *cystic calculi;* at other times in the substance of the liver, in branches of the ductus hepaticus, *hepatic calculi;* or in the ductus communis choledochus, *hepatocystic calculi;* antiphlogistics when there is inflammatory action, and anæsthetics and strong doses of opium to allay pain and spasm, with warm baths, are the chief remedies; olive oil has been used internally as a presumed solvent. **Blood c.**, fibrinous concretions in which are traces of blood, see *Pseudocalculi*. **Bone-earth c.**, see *Table of urinary calculi*. **Breast c.**, calculi of mammæ. **Bron′chial c.**, calculous concretions in bronchial tube. **Car′diac c.**, calcareous, fibrinous clots in the heart. **Chalk′y c.**, concretions of carbonate and phosphate of calcium, etc., found in various organs and regions of the body. **Com′pound c.**, see *Table of urinary calculi*. **Cor′al c.**, form of calculus occurring in the kidney, forming casts of the renal pelvis. **Cuta′neous c.**, hard, cutaneous concretions, generally sebaceous matter, sometimes chalky; milium. **Cys′tic c.**, see *Biliary* and *Table of urinary calculi*. **Cystin′** or **cys′tic-ox′ide c.**, yellow, greasy, friable, urinary calculi, made up chiefly of cystin. **Den′tal c.**, salivary c., **C. of ears**, concretions in the meatus auditorius externus; merely indurated cerumen, a frequent cause of deafness. **Encys′ted c.**, vesical calculi in pouch or sac in wall of the bladder. **Fi′brinous c.**, form of urinary calculi containing coagulated albumin, see *Blood calculi*. **Fu′sible c.**, see *Urinary*. **Gas′tric c.**, c. of stomach. **Hæ′mic c.**, blood c. **Hemp′seed c.**, calcium oxalate calculi in kidney. **Hepat′ic c.**, see *Biliary*. **Hep′atocyst′ic c.**, see *Biliary*. **Incar′cerated c.**, c., encysted. **In′digo c.**, c. of ureter, containing indigo-blue. **Lac′rymal c.**, concretions in lacrymal passages, where they may occasion abscess and fistulæ. **Lac′teal c.**, calculi of mammæ. **Lith′ic c.**, uric acid calculi, see *Urinary*. **Mam′mary c.**, lacteal calculi; concretions of yellowish-white color in the excretory ducts of the mammary gland. **Mul′berry c.**, calcium oxalate calculi, see *Urinary*. **Na′sal c.**, concretions in nasal passages; rhinoliths; see *Dacryolite*. **Nephrit′ic c.**, c. of kidney, see *Urinary*. **Organ′ic c.**, c. made up of organic materials, as blood, epithelium, etc. **Ox′alate of lime c.**, mulberry calculi, hempseed calculi; see *Table of urinary calculi;* these are usually rough, and occur in children, oxalate of lime being the chief ingredient. **Pancreat′ic c.**, c. of the pancreatic duct, usually chalky. **Parot′id c.**, c. of that gland or duct. **Phosphat′ic c.**, c. variously formed of ammonio-magnesium phosphate, calcium phosphate, and ammonio-magnesian and calcium phosphate. **Pin′eal c.** sabulous concretions in the pineal gland, composed of phosphate of lime; see *Acervulus*. **Prepu′tial c.**, spherical or ovoidal concretions, usually composed of uric acid; formed from urine, when prepuce is long and narrow, between prepuce and glans penis. **Prostat′ic c.**, symptoms are those common to tumefaction of prostate, sometimes those of calculi in the bladder. **Pul′monary c.**, lungstones, lung calculi; concretions in the lung or bronchial tubes met with in dead body, without seeming to have produced unpleasant symptoms during life; or they may have been accompanied with symptoms of phthisis (lithophthisis, phthisis calculosa); they are usually formed mainly of carbonate of lime and animal matter. **Re′nal c.**, calculi formed in any part of the kidney, see *Urinary*. **Sal′ivary c.**, concretions, usually of phosphate and carbonate of lime and animal matter, developed in the substance of the salivary glands or their excretory ducts; they may be extracted by incision in interior of the mouth. Calculus developed in sublingual ducts has been called sublingual calculus and ranula lapidea. **Scro′tal c.**, c. of integument of scrotum; c. of bladder or prostate found in scrotum. **Sem′inal c.**, spermatic c. **Se′rumal c.**, deposit of calcium salts upon the roots of the teeth, derived from serous exudations. **Spermat′ic c.**, concretions found in vesiculæ seminales after death, not detected during life. **Stercora′ceous c.**, fecal concretions. **Sublin′gual c.**, salivary concretions of sublingual gland; ranula. **Ton′sillar c.** calculous concretions occasionally formed in the tonsils; sometimes discharged by spitting, either alone or with pus of abscess occasioned by them. **Trip′le** or **trip′le-phos′phate c.**, see *Urinary*. **Ureter′ic c.**, c. in ureter, see *Urinary*.



Biliary calculi. *a*, cholesterin; *b*, pigmented stones.

**Ure′thral c.**, c in urethra, but usually formed in the bladder or kidney; see *Urinary*. **U′ric c.**, see *Table of urinary calculi*. **U′rinary c.**, concretions formed from crystallizable substances in urine, met with in any part of the urinary passages and in fistulous openings wherever urine stagnates naturally or accidentally; more common at the two extremities of life and in some countries and districts; at times a clot of blood, portion of mucus, etc., form a nucleus; symptoms and treatment vary according to the seat of the calculus; there is no such thing probably as a medical solvent.

The most important varieties of urinary calculi produced by combination or intermixture of different ingredients may be thus tabulated:

TABLE OF URINARY CALCULI.

| SPECIES OF CALCULI. | EXTERNAL CHARACTERS. | CHEMICAL COMPOSITION. | REMARKS. |
|---|---|---|---|
| 1. Lithic or Uric. | *Form*, a flattened oval. Sp. gr. generally exceeds 1.500. *Color*, brownish or fawn-like. *Surface*, smooth. *Texture*, laminated. | It consists principally of *uric acid*. When treated with nitric acid a beautiful pink substance results. This calculus is slightly soluble in water, abundantly so in the pure alkalies. | It is the prevailing species, but the surface sometimes occurs finely tuberculated. It frequently constitutes the *nuclei* of the other species. |
| 2. Mulberry. | *Color*, dark brown. *Texture*, harder than that of the other species; sp. gr. from 1.428 to 1.976. *Surface*, studded with tubercles. | It is *oxalate of calcium*, and is decomposed in the flame of a spirit-lamp, swelling out into a white efflorescence, which is *quicklime*. | This species includes some varieties which are remarkably smooth and pale colored, resembling *hemp-seed*. |
| 3. Bone-earth. | *Color*, pale brown or gray. *Surface*, smooth and polished. *Structure*, regularly laminated; the laminæ easily separating into concrete crusts. | Principally *phosphate of calcium*. It is soluble in muriatic acid. | |
| 4. Triple. | *Color*, generally brilliant white. *Surface*, uneven, studded with shining crystals, less compact than the preceding species. Between its laminæ small cells occur, filled with sparkling particles. | It is an *ammonio-magnesium phosphate*, generally mixed with phosphate of calcium. Pure alkalies decompose it, extracting its ammonia. | This species attains a larger size than any of the others. |
| 5. Fusible. | *Color*, grayish-white. | A compound of the two foregoing species. | It is very fusible, melting into a vitreous globule. |
| 6. Cystic. | Very like the triple calculus, but it is unstratified and more compact and homogeneous. | It consists of *cystic oxide*. Under the blowpipe it yields a peculiarly fetid odor. It is soluble in acids and in alkalies, even if they are fully saturated with carbonic acid. | It is a rare species. |
| 7. Alternating. | Its section exhibits different concentric laminæ. | Compounded of several species, alternating with each other. | |
| 8. Compound. | No characteristic form. | The ingredients are separable only by chemical analysis. | |

Chemists have demonstrated the existence of several components of urinary calculi, viz., uric acid, urates of ammonium, sodium, potassium, and magnesium, xanthic oxide, cystin, calcium oxalate, calcium and magnesium carbonates, ammonio-magnesium phosphate, phosphates of calcium, magnesium, and iron; mucus, nitrogenized matters, modified blood; coloring-matters; silica, mica, oxide of iron, and different foreign bodies; urea, benzoate of ammonium, oxalate of ammonium, ammonium chloride, and other immediate principles of the urine.

1. *Renal calculi.* Have very irregular shape; at times no indication of their presence; at others occasion attacks of pain in the kidneys, sometimes accompanied by bloody or turbid urine. Often they cause inflammation. Generally formed of uric acid or oxalate of lime, or phosphates with animal matter. Treatment varies with presumed constituents and absence or presence of inflammatory signs—relieving the irritation by opiates. Surgical operation is rarely applicable.

2. *Calculi of the ureters.* These come from the kidneys, and produce unpleasant effects when so large as to obstruct the course of the urine and occasion distention of the ureters, or when the rough surface irritates the mucous membrane and occasions pain, hemorrhage, abscesses, etc. Pain during the passage is very violent, extending at times to the testicle of the same side, and occasioning numbness of the thigh. Treatment consists in general or local blood-letting, warm bath, and opiates.

3. *Vesical calculi* (*stone in the bladder*) are the most common form, sometimes proceeding from the kid-

neys, most commonly formed in the bladder itself. Sense of weight in perineum, and sometimes of body rolling when the patient changes position; pain or itching at extremity of glans in men; frequent desire to pass urine; sudden stoppage to its flow and bloody urine are the chief phenomena producing suspicion of their existence. We cannot be certain without sounding the patient. Sometimes, when of small size, they are expelled; most commonly they remain in the bladder, disorganization of which they occasion unless removed by surgical operation.

4. *Urethral calculi* almost always proceed from the bladder. The obstruction they cause to the passage of urine, hard tumor, and noise occasioned when struck by the sound indicate their presence. They are removed by incision. They form at times, in the prostate gland, *prostatolithi*. Prostatic calculus may project into the urethra, and thus assist to form *prostatovesical calculus*.

5. *Calculi of fistulous passages* arise when there is a fistulous opening into the urethra. They may generally be extracted with facility.

**Cal′culi of the u′terus** are very rare; the signs indicating them during life are those of chronic engorgement. Their existence is not usually suspected. **Ve′nous c.**, vein stones; phleboliths. **Ves′ical c.**, see *Urinary*. **Ves′icoprostat′ic c.**, see *Urinary*. **Xanth′ic, xanthin′**, or **xanth′ic-ox′ide c.**, occasional form of greasy calculus, composed of xanthin and hypoxanthin.

**Calculif′ragous** (*calculus* + *frango*, to break). Lithontriptic.

**Cal′culoid.** Resembling calculus.

**Cal′culous.** Relating to or affected with calculus.

**Cal′culus.** See *Calculi*.

**Calda′ni′s lig′ament.** Fibrous ligament passing from the internal edge of the coracoid process to the inferior edge of the clavicle and superior edge of the first rib.

**Ca′lea zacatechi′chi.** Mexican plant, given in infusion as a tonic and antiperiodic.

**Calefa′cients** (*calidus*, warm, *facio*, to make). Substances exciting warmth in the part to which they are applied, as mustard, pepper, etc. They belong to the class of stimulants.

**Calefac′tio.** Augmentation of heat in the animal economy, evinced by sensation of heat, disposition to perspiration, great thirst, general indisposition, flushed countenance, etc; treated by antiphlogistics and abstinence. **C. vir′gæ**, chancre.

**Calei′dophone** (*kalos*, beautiful, *eidos*, form, *phone*, sound). Instrument for making visible the vibrations essential to the production of sound.

**Calen′dula alpi′na.** Arnica montana. **C. arven′sis**, wild marigold; the juice has been given in jaundice and cachexia. **C. officina′lis**, single or garden marigold; the flowers (*calendula*, Ph. U. S.) and leaves are aperient, diaphoretic, and have been used in cancer; employed chiefly as a vulnerary; the tincture, tinctura calendulæ, is official in the Ph. U. S. **C. palus′tris**, Caltha palustris.

**Calendulin′.** Amorphous principle from Calendula officinalis.

**Calentu′ra.** A general term for fever in Spanish America, usually applied to the milder forms of thermic fever.

**Calentu′ras.** Cinchona tree of the Philippine Islands; bitter and febrifuge. **C. pa′lo**, fever wood; cinchona and trees with similar properties.

**Calf.** Round, posterior portion of the leg, formed by the soleus and gastrocnemius muscles; sura.

**Calf′s foot.** Arum maculatum.

**Cal′ibrate.** To fix or note the degree marks on a thermometer.

**Cal′ibrator.** An instrument for measuring the internal dimensions of any passage, especially of the urethra.

**Cal′ibre.** Internal diameter; lumen.

**Califor′nia lau′rel.** Umbellaria californica, of the Western United States; the leaves are used in nervous headaches, neuralgia, etc.

**Californin′.** The bitter principle from Quina californica.

**Caliga′tion** (*caligo*, mist). Dazzling; cloudiness of the front part of the crystalline lens.

**Cali′go** (mist). Obscurity of vision; opaque cornea. **C. cor′neæ**, obscurity of vision due to a speck on the cornea; the speck itself. **C. humo′rum**, obscurity from opacity of humors. **C. len′tis**, cataract. **C. palpebra′rum**, opacity in the region of the eyelids. **C. pupil′læ**, closure of the pupil; synezisis. **C. synezi′sis**, synezisis. **C. tenebra′rum**, night-blindness; nyctalopia.

**Cal′ipers.** An instrument, shaped like a pair of compasses with curved legs, used for measuring the diameter of any cylindrical or spherical part of the body, such as the chest. **Beaudelocque′s′ c.**, see *Pelvimetry*.

**Calisa′ya bark.** Yellow cinchona bark, the bark of Cinchona calisaya, one of the sources of quinine.

**Calisthen′ics** (*kalos*, beautiful, *sthenos*, strength). Art of promoting, by appropriate exercises, the strength of the body and grace of movements.

**Cal′ix.** See *Calyx*.

**Cal′la palus′tris.** Water arum; indigenous; the rhizome is stimulant, expectorant, and diaphoretic. **C. virgin′ica**, Peltandra virginica.

**Cal′laway′s test.** In luxation of the humerus the circumference of the shoulder on that side, taken over the acromion process and through the axilla, is greater than that of the unaffected side.

**Callibleph′arum** (*kallos*, beauty, *blepharon*, eyelid). An agent for beautifying the eyelids.

**Callican′thus.** Calycanthus.

**Callicar′pa acumina′ta.** Order *Verbenaceæ*; purgative. **C. america′na**, French mulberry; indigenous; eutrophic in cutaneous diseases; used in dropsy. **C. bonplandia′na**, a species of verbenaceous plants of South America; diaphoretic and cathartic. **C. ca′na**, East Indian species; the leaves are diaphoretic and diuretic. **C. lana′ta**, a shrub of India; the bark is an aromatic bitter, and the leaves are diuretic and emollient. **C. rheed′ii**, a species growing in Malabar, the root and bark of which are used in fevers, diseases of the liver and skin. **C. tomento′sa**, C. lanata, C. cana.

**Callicoc′ca eve′as** or **ipecacuan′ha** (*kallos*, beauty, *kokkos*, berry). Ipecacuanha.

**Callion′ymos.** Convallaria maialis.

**Calliphyl′lum.** Asplenium trichomanoides, adiantum.

**Callisec′tion.** Vivisection of animals after they have been rendered unconscious by an anæsthetic.

**Cal′lisen′s opera′tion.** See *Colotomy*.

**Callisthen′ics.** Calisthenics.

**Callit′riche aquat′ica, heterophyl′la, interme′dia,** or **ver′na.** Water chickweed, water starwort; indigenous; diuretic; used in dropsy.

**Cal′litris ecklo′ni.** African tree from which gum exudes; used in fumigation in gout, rheumatism, œdema, etc. **C. quadrival′vis**, tree of N. Africa, source of gum sandarac.

**Calloma′nia** (*kallos*, beauty). Mania in regard to beauty.

**Callo′sal.** Relating to the corpus callosum; a term applied to a convolution of the brain. **C. gy′rus**, convolution or gyrus of the corpus callosum.

**Cal′lose.** Callous.

**Callos′itas.** Induration; callosity. **C. palpebra′rum**, scleriasis. **C. vesi′cæ**, enlargement of the bladder.

**Callos′ity** (*callus*, hard). Hardness, induration, and thickness of the skin, assuming horny consistence in places where exposed to pressure; induration of old wounds, old ulcers, fistulous passages, etc. See *Tyloma*, *Keratoma*.

**Callo′somar′ginal.** Relating to the corpus callosum and the margin of the hemispheres of the brain, as *callosomarginal fissure* or *sulcus*, fissure on the middle of the cerebral hemispheres.

**Cal′lous** (*callus*, hard). That which is hard or indurated.

**Callu'na atlant'ica, eri'ca,** or **vulga'ris.** Erica vulgaris.

**Cal'lus.** Osseous matter thrown out between the fractured extremities of bone, acting as a cement and as a new bony formation; callosity. **Defin'itive c.,** permanent c. **Ensheath'ing c.** or **Exter'nal c.,** provisional c. **Inter'nal c.** or **Inte'rior c.,** provisional callus in the medullary canal of the bone after fracture. **Per'manent c.,** callus deposited between the extremities of the fractured bone, afterward converted into new bone. **Provis'ional c.** or **Tem'porary c.,** callus deposited around a fracture and in the course of the medullary canal, keeping the fragments in apposition until union has occurred; it is then absorbed. Direct union between fragments may take place, as in soft parts, provisional callus—ensheathing callus of Paget—not being thrown out unless there has been some movement of the fragments.

**Cal'mant** or **Cal'mative.** Quieting; sedative.

**Calolac'tose.** An intestinal disinfectant composed of a mixture of calomel, lactose, and bismuth subnitrate.

**Calom'ba.** Calumba.

**Cal'omel.** A term formerly applied to æthiops mineral; now applied only to mild chloride of mercury, mercurous chloride, $Hg_2Cl_2$; see *Hydrargyrum.* **C. stools,** green, spinach-like evacuations occasioned by the use of calomel. **Veg'etable c.,** resin of podophyllum.

**Calo'nia.** Myrrh.

**Calophyl'lum cala'ba.** Tree of West Indies and South America; the source of ocuje oleoresin, used as a substitute for balsam of Peru and copaiva; expectorant, excitant, and diaphoretic in gonorrhœa, bronchitis, etc. **C. inophyl'lum,** see *Fagara octandra.*

**Ca'lor.** Heat. **C. anima'lis,** animal heat. **C. febri'lis,** fever heat. **C. fer'vens,** the temperature of boiling water. **C. inna'tus,** c. nativus. **C. inter'nus,** fever without appreciable elevation of surface temperature. **C. mor'dax** or **mor'dicans,** intense heat of the skin; internal heat conjoined with heat of the skin. **C. nati'vus,** animal heat.

**Calores'cence.** Phenomenon of making heat rays luminous, as by converging them on a piece of charcoal, which then becomes incandescent.

**Calor'ic.** Heat.

**Caloric'ity.** Faculty possessed by living bodies of generating sufficient caloric to enable them to resist atmospheric cold and to preserve an even temperature; animal heat.

**Cal'orie.** Calory.

**Calorifa'cient** or **Calorifi'ent** (*calor,* heat, *facio,* to make). Having power of producing heat.

**Calorif'ic.** Producing heat.

**Calorifica'tion.** The production of heat in organized bodies.

**Calorim'etry** (*calor,* heat, *metron,* measure). Measurement of the amount of heat in a body, or specific heat.

**Caloripunc'ture.** Puncture with the needle at high heat.

**Cal'ory.** The unit of heat; the amount of heat necessary to raise one kilogram of water one degree centigrade.

**Calosan'thes in'dica.** Tree of East Indies; diaphoretic; used in rheumatism.

**Calot'ropis gigan'tea** or **muda'rii.** Mudar. **C. hamilto'nia** or **heterophyl'la,** C. procera. **C. proce'ra,** tree of India and Africa, yielding mudar bark; diaphoretic, expectorant, and used as a substitute for ipecac.

**Cal'tha.** A ranunculaceous genus. **C. alpi'na,** Arnica montana. **C. arven'sis,** Calendula arvensis. **C. bish'ma** or **bis'mah,** a species of N. India, the root of which is febrifuge. **C. lute'ola,** Calendula officinalis. **C. ma'jor** or **marsh c.,** C. palustris. **C. monta'na,** Arnica montana. **C. officina'lis,** Calendula arvensis. **C. palus'tris,** marsh marigold, marsh caltha, cowslips, meadow bright, water buttercup; indigenous; syrup prepared from it for cough. **C. sati'va** or **vulga'ris,** Calendula officinalis.

**Cal'trap** or **Cal'trops.** See *Trapa natans.*

**Calum'ba.** Variously spelled colombo, calomba, colomba, columbo, calumbo; the root of Jateorrhiza palmata and of J. calumba (Ph. U. S. and Br.), Cocculus palmatus, ord. *Menispermaceæ;* indigenous in Mozambique; bitter aromatic tonic; dose, gr. x–ʒj (0.65–4.0). The official preparations are: *Flui'd ex'tract of c.,* extractum calumbæ fluidum; dose, ♏xv–ʒj (1.0–4.0). *Tinc'ture of c.,* tinctura calumbæ; dose, ʒss–ij (2.0–8.0). A crystallizable principle obtained from it is called *calumbin;* another principle in it seems identical with berberine. **Amer'ican c.,** American or Marietta columbo, Indian lettuce, yellow gentian, golden seal, meadow pride, pyramid; the root, frasera, is used in the same cases as true calumba.

**Calum'bæ rad'ix.** Official name in the Ph. Br. of calumba.

**Calum'bic acid.** A bitter principle from calumba, $C_{22}H_{24}O_7$.

**Calumbin'.** The neutral principle of calumba, $C_{42}H_{44}O_{141}$.

**Cal'va** (*calvus,* bald). Cranium, especially the vault of the cranium; skull-cap.

**Calva'ria.** Cranium.

**Calva'rium.** Calvaria.

**Calva'ta.** Calvities. **C. ferramen'ta,** surgical instruments with smooth head or button.

**Calvi'ties** (*calvus,* bald). Baldness; absence of hair, particularly on the top and at the back of the head; alopecia. **C. adna'ta,** congenital baldness. **C. palpebra'rum,** loss of the eyelashes; madarosis.

**Calvi'tium.** Calvities.

**Cal'vity.** Calvities.

**Cal'vus.** Bald; devoid of hair; athrix.

**Calx.** (Ph. U. S. and Br.) Protoxide of calcium; lime; occurring as white lumps, which on exposure to the air absorb moisture and crumble into powder. Calx also means heel, see *Calcaneum.* The following are the official preparations of lime or calx: *C. chlora'ta,* chloride of lime; chlorinated lime; a white, granular powder, or more often of a pasty consistence from the absorption of moisture, with an odor of hypochlorous acid; employed as a bleaching-powder and disinfectant. *C. sulphura'ta,* sulphurated lime; a gray powder with the odor of sulphuretted hydrogen; employed as a depilatory, and is also given internally in the treatment of skin diseases in doses of gr. $\frac{1}{10}$–$\frac{1}{5}$ (0.006–0.013). *Linimen'tum cal'cis,* lime liniment; Carron oil. *Li'quor cal'cis,* lime-water; antacid; astringent; dose, ʒj–℥j (4.0–32.0). *L. c. sacchara'tus* (Ph. Br.), saccharated solution of lime; dose, ♏xx–ʒj (1.3–4.0). *Potas'sa cum cal'ce,* potassa with lime; used as an escharotic. *Syr'upus cal'cis,* syrup, sucrate, or saccharate of lime; dose, ʒj–℥j (4.0–32.0). **C. extinc'ta,** slaked lime. **C. re'cens us'ta,** quicklime; sometimes used as a depilatory. **C. vi'va,** c. recens usta.

**Calycan'thus flor'idus** or **fra'grans,** Carolina allspice, sweet-scented shrub, sweet shrub. Indigenous plant; root is tonic and emetic and an aromatic stimulant; active principle is an alkaloid called *Calyanthine.*

**Caly'ciform** or **Cal'ycoid.** Calyx- or cup-shaped.

**Calyptran'thes caryophylla'ta.** Myrtus caryophyllata.

**Calyste'gia se'pium.** Convolvulus sepium. **C. reniform'is,** Convolvulus soldanella. **C. soldanel'la,** Convolvulus soldanella.

**Cal'yx** or **Cal'ix** (Gr., cup), pl. calices. One of numerous small, cup-like membranous canals surrounding the papillæ of the kidney and opening into its pelvis, whither they convey urine; cavity left on the ovary by rupture of the Graafian vesicle. **C. vomito'rius,** goblet made of antimony, water contained in which acquires emetic properties.

**Cam'ara** (vaulted room). Calva; fornix of brain; hollow part of external ear.

**Cam′arated.** Having the shape of an arch or dome, as the skull.

**Camara′tio, Camaro′sis,** or **Camaro′ma.** Species of fracture of the skull, camarated fracture, in which the fragments form a vault, with the base resting on the dura mater.

**Camas′.** Camassia esculenta or Quamasia quamash. **Death c.,** Zygadenus, the bulbs of several species of which are sometimes mistaken for those of the true camas, and eaten with fatal effect.

**Camas′sia esculen′ta.** Camass, kamas, or quamash root, bread root; prairie turnip; used as food by some tribes of Indians. **C. frase′ri,** species of United States with large edible bulb.

**Cambai′ba.** Curatella sambaiba.

**Cam′bery.** Myrtus pimenta.

**Cam′bie leaf.** Nymphæa alba, N. lutea.

**Cam′bing.** Tree of Molucca, from bark of which gum resin exudes; used in dysentery; resembles simarouba.

**Cam′bium.** Protoplasm; layer of periosteum adjacent to the bone.

**Cam′boc.** Aloes.

**Cambo′dia** or **Cambo′dium.** Cambogia.

**Camboge′.** Cambogia. **Amer′ican c.,** inspissated juice of Vismia guianensis and V. longifolia, of Brazil, possessing purgative properties similar to camboge.

**Cambo′gia.** (Ph. U. S. and Br.) Camboge or gamboge, ord. *Guttiferæ*; yellow gum resin, the inspissated juice of Garcinia hanburii and other plants of the order *Guttiferæ*; drastic cathartic, emetic, and anthelmintic; used in visceral obstructions and dropsy, and wherever a powerful hydragogue cathartic is required; dose, gr. ¼–v (0.016–0.32), in powder, united with calomel, squill, etc. **C. gut′ta,** Garcinia cambogia.

**Cambo′gic acid.** Yellowish, soluble acid obtained from camboge.

**Cambo′gium.** Camboge.

**Cam′buc.** Aloes.

**Cambu′ca** or **Cambuc′ca.** Bubo and venereal ulcer in the groin or near the genital organs.

**Cameli′na sati′va.** Grows in Europe and Asia; expressed oil of the seeds is like linseed oil, and is emollient in skin diseases; the herb has been used in inflammation of the eye.

**Camel′lia.** A genus of plants, ord. *Ternstræmiaceæ,* found in eastern Asia. **C. japon′ica,** the cultivated camellia, having beautiful flowers and large, handsome leaves. **C. the′a** or **theif′era,** Thea chinensis, tea plant; other species of camellia are sources of other teas.

**Cam′era.** Chamber; fornix; vault; an instrument for photographing; camara. **Ante′rior c.,** anterior cornu. **C. aquo′sa,** the anterior chamber of the eye. **C. arterio′sa,** right ventricle of the heart. **C. cerebel′li,** inferior occipital fossa. **C. cor′dis,** pericardium. **C. cra′nii,** calva. **C. lu′cida,** an appliance to facilitate the drawing of objects, consisting of a prism so arranged that the image of the object appears to rest upon the drawing paper, so that its outlines can be readily traced with a pencil. **C. medulla′ris,** centrum ovale. **C. obscu′ra,** a closed box provided with a round hole or lens through which the images of external objects are received and thrown on a screen; the most familiar form is the ordinary photographic camera. **C. oc′uli,** chamber of the eye. **C. o. ter′tia,** canal of Petit. **C. sep′ti lu′cidi,** fifth ventricle of the brain.

**Camin′ga.** Canella alba.

**Camis′ia fœ′tus** (fœtal shirt). Chorion.

**Cam′isole** (F.). Strait-jacket for restraining violently insane or delirious persons.

**Cam′omele.** Chamomile.

**Cam′omile.** Chamomile.

**Camo′tes.** Convolvulus batatas.

**Campan′ula** (dim. of *campana,* bell). A genus of plants, ord. *Campanulaceæ.* Bellflower. **C. glomera′ta,** species of Europe and Asia, the leaves of which are used in throat inflammations. **C. in′dica,** Convolvulus purpureus. **C. trache′lium,** Canterbury bell or throatwort; astringent, and used in decoction in relaxation of the fauces.

**Cam′pe.** Flexion.

**Campeach′y wood.** Hæmatoxylon.

**Cam′per's an′gle.** Maxillary angle, formed by lines drawn from the incisor teeth to the prominent point of forehead above and point of chin below. **C.'s chi′asm,** crossing of the fibres of the tendons of the flexor sublimis digitorum muscles. **C.'s lig′ament,** deep perineal fascia. **C.'s plane,** plane passing through the centres of both auditory meatuses and the centre of the lower border of the anterior aperture of the nose. **C.'s pro′file line,** middle line in a plane tangent to the most conspicuous points of the face, above and below.

**Camp fe′ver.** A continued fever occurring among bodies of troops; formerly often typhus fever, now usually typhoid fever. **C. mea′sles,** see *Rubeola.*

**Camphene′** or **Camphin′.** One of a number of volatile hydrocarbons with the general formula $C_{10}H_{16}$; terpene. The radical of camphor. The commercial name for oil of turpentine purified by distillation over caustic potassa or quicklime.

**Cam′phoid.** A thick solution of pyroxylon in an alcoholic solution of camphor, which when dried leaves a film on the surface; used as a substitute for collodion.

**Cam′phol.** See *Camphor.*

**Camphol′ic acid.** $C_{10}H_{18}O_2$. A solid, fatty acid.

**Campholure′thane.** Two isomeric bodies derived from Ngai camphor. Crystalline acid having the composition of urethanes.

**Camphopyraz′olone.** $C_{17}H_{20}N_2O$. A substance proposed as a substitute for camphor; composed of phenylhydrazine and camphocarboxylic acid.

**Cam′phor** or **Cam′phora** (Ph. U. S. and Br.) Laurinole; a concrete volatile oil or stearoptene, $C_{10}H_{16}O$, distilled from Laurus or Persea camphora, Camphora officinarum, Cinnamomum camphora, trees of E. Indies, ord. *Laurineæ.* Two kinds of crude camphor occur in commerce—one from Batavia, but chiefly a product of Japan, called Dutch camphor and Japan camphor; the other, common crude camphor, China camphor, Formosa camphor, from India; it is refined by sublimation. Camphor is also obtained in Borneo and Sumatra—Borneo or Sumatra camphor—from Dryobalanops camphora. Camphor has a strong and fragrant odor; is volatile, not easily pulverizable; texture crystalline; soluble in alcohol, ether, oils, vinegar, and slightly so in water. It is stimulant, anodyne, anaphrodisiac, antispasmodic, diaphoretic, and sedative; dose, gr. ss–iij (0.03–0.2). Dissolved in oil or alcohol it is applied externally in rheumatic pains, bruises, sprains, etc.; in large doses it is a narcotico-irritant poison. Camphor oil or liquid camphor, camphol, of India, is obtained by piercing young camphor trees, Dryobalanops camphora; *oleum camphoræ,* oil of camphor, is a volatile oil obtained from Camphora officinarum. **A′lant c.,** a camphor obtained from Inula helenium, having a taste and smell like peppermint. **Artifi′cial c.,** made from oil of turpentine by treating it with hydrochloric acid. **Bar′us c.,** Borneo c. **Birch c.,** betulin. **Blu′men c.,** obtained from Blumen balsamifera, resembles Borneo c.; called also Ngai. **Bor′neo c.,** borneol, $C_{10}H_{18}O$; a white substance produced from Dryobalanops aromatica by chemical action; used in Eastern Asia for medicinal purposes and for embalming, etc. **Bro′mide of c.; brom′ized** or **monobrom′ated c.,** white or colorless, crystalline substance, insoluble in water, soluble in alcohol and ether; formed by acting upon camphor, heated on water-bath, with bromine; dose, gr. ij–iv (0.12–0.24), in delirium tremens and analogous nervous diseases. **Car′bolized c.,** germicidal liquid, prepared by adding 1 part by weight of carbolic acid to 3 parts of camphor. **Ce′drene c.,** $C_{15}H_{26}O$, derived from red cedar oil. **C. ce′rate,** ceratum camphoræ. **Chlo′ral c.,** a liquid mixture of equal parts of camphor and chloral; used externally as an anodyne. **I'odized c.,** combination of iodine and camphor; employed as substitute for inhalation of iodine alone. **C. ju'lep,** mistura camphoræ. **C. lau'rel,** Cinnamomum camphora. **C. lin'iment,** linimentum camphoræ. **C. mix'ture,** mistura camphoræ. **C. monobro'mide,** bromide of c. **Naph'thol c.,** a liquid mixture of beta-naphthol and camphor; used externally as an antiseptic. **C. oil,** yellowish-brown oil found in all parts of the camphor tree. **C. o. of Bor'neo,** volatile, brownish oil derived from Dryobalanops aromatica. **C. oint'ment,** unguentum camphoratum. **Phen'ol c.,** a solution of camphor in carbolic acid; antiseptic, antipruritic, and locally anæsthetic. **Resorcin' c.,** a mixture of camphor and resorcin; employed as an antipruritic. **C. sal'icylate,** a mixture of salicylic acid and camphor; used externally and internally as an antiseptic; dose, gr. j–iv (0.06–0.24). **Sal'ol c.,** a mixture of salol and camphor; external antiseptic. **Spir'it of c.,** spiritus camphoræ. **C. tea,** domestic camphor-water; made by pouring boiling water on a lump of camphor. **Thyme c.,** thymol. **Tobac'co c.,** nicotianine. **C. wa'ter,** aqua camphoræ.

**Cam'phora.** Camphor. **C. monobroma'ta** (Ph. U. S.), monobromated camphor.

**Camphora'ceous.** Relating to or containing camphor.

**Cam'phorate.** A salt of camphoric acid. Various camphorates have been from time to time employed as substitutes for the corresponding valerianates.

**Cam'phorated.** Relating to camphor; containing camphor. **C. phe'nols,** combination of camphor with phenols, as thymol, resorcin, salol, etc.

**Camphor'ic acid.** Formed by the protracted action of hot nitric acid on camphor; it occurs in white, odorless crystals, and is used in the treatment of catarrhal inflammations of the respiratory mucous membranes, night-sweats, etc., in doses of gr. xx–ʒj (1.3–4.0).

**Camphoron'ic acid.** Produced by the oxidation of camphoric acid; antiseptic.

**Camphoros'ma hirsu'ta, monspeli'aca, monspelien'sis,** or **peren'nis.** Hairy camphorosma, stinking ground pine, ord. *Chenopodiaceæ;* this plant, growing near the Mediterranean, has the odor of camphor; it is diuretic, carminative, emmenagogue, diaphoretic, and antispasmodic; it is used in dropsy and asthma.

**Camphrene'.** $C_9H_{14}O$. A substance formed by the action of sulphuric acid on camphor.

**Cam'phyl.** The radical of Borneo camphor. **C. al'cohol,** Borneol or Borneo camphor.

**Camphylene'.** The commercial name of naphthalene; also a liquid terpene resulting from the action of lime on camphene at a very high temperature.

**Campim'eter.** An instrument for measuring the range of vision.

**Cam'pion rose.** Lychnis githago.

**Campomane'sia linearifo'lia** (after Campomanes, a Spanish naturalist). A tall tree of Peru, whose bright yellow fruit, palillo, has an exceedingly agreeable scent and is edible.

**Camp'sis.** Forcible bending of a bone or cartilage from its proper shape without breaking; unnatural curvature of a part, as a limb.

**Campylochei'rus** or **Campylochi'rus** (*kampylos,* crooked, *cheir,* hand). Crookedness of the hands or arms.

**Campylorrha'chis** (*kampylos,* crooked, *rhachis,* spine). Monster whose spine is crooked.

**Campylos'celus** (*kampylos,* crooked, *skelos,* leg). Having crooked or deformed legs.

**Campyl'otis** or **Cam'pylum** (*kampylotes,* flexion). Cataclasis.

**Ca'na a'gria.** Bitter cane; the juice is used in Brazil in diabetes. **C. fis'tula,** Cassia fistula.

**Can'ada bal'sam.** Turpentine from Abies balsamea. **C. bur'net,** Sanguisorba canadensis. **C. erig'eron,** Erigeron canadense. **C. flea'bane,** Erigeron canadense. **C. hemp,** Apocynum cannabinum. **C. horse disease,** a contagious disease of horses, a form of pustular eczema. **C. pitch,** Pix canadensis. **C. snake'root,** root of Ararum canadense.

**Canadine'.** An alkaloid of Hydrastis canadensis.

**Can'adol.** Hydrocarbon from petroleum, resembling rhigolene; local anæsthetic.

**Canal'.** Channel for affording passage to liquids or solids; a duct; a tube affording communication between two parts. See also *Canaliculi, Canaliculus,* and *Canalis.* **Abdom'inal c.,** inguinal canal. **Acces'sory pal'atine c.,** a passage in the palate bone for descending branches of the palatine artery. **Al'cock's c.,** the sheath of the internal pudic artery. **Alimen'tary c.,** the digestive canal or tube, alimentary duct or tube; a canal extending from the mouth to the anus, embracing the mouth, pharynx, œsophagus, stomach, small and large intestines. According to Vierordt, the digestive canal is, on an average, 8 metres in length, in the proportion of 5:1 to the length of the body:

| | | |
|---|---|---|
| Of adults | 10–11.5 m. | (Schwann). |
| Of newborn children | 4.5 m. | “ |
| Length of duodenum (12″) (convex side). | 0.32 m. | |
| Length of jejunum ($\frac{2}{5}$)<br>“ “ ileum ($\frac{3}{5}$) | 5.5–6.2 m. | |
| “ “ large intestine | 1.3–1.62 m. | |
| “ “ cæcum | 6–8 m. | |
| “ “ rectum | 0.16 m. | |

**Alisphe'noid c.,** a canal in the alisphenoid bone for the passage of the external carotid artery. **Alveoden'tal c.,** dental canal. **Alve'olar c.,** inferior dental canal. **Arach'noid c.,** a canal formed by the extension of the arachnoid over the transverse and longitudinal fissures of the brain, surrounding the vena magna Galeni; the orifice of the canal has been termed the *foramen of Bichat,* but this opening is probably made artificially in the act of removing the brain. **C. of Aran'tius,** ductus venosus. **Archine'phric c.,** duct of the primitive kidney or archinephron. **Ar'nold's c.,** a canal in the petrous portion of the temporal bone giving passage to the auricular branch of the vagus nerve. **Arte'rial c.,** ductus arteriosus. **Aud'itory c.,** see *External auditory canal* and *Internal auditory canal.* **Auric'ular c.,** external auditory canal; a canal in the fœtus between the auricle and ventricle. **C. of Bar'tholin,** ductus Bartholinus; the duct of Bartholin's gland. **C. of Bernard',** supplementary ductus pancreaticus. **C. of Bichat',** arachnoid c. **Bil'iary c.,** hepatic duct. **Blastopo'ric c.,** the remains of the notochordal canal at the termination of the primitive axis in the embryo. **C. of Botal',** ductus arteriosus. **Braun's c.,** see *Braun's.* **Braune's c.,** see *Braune's.* **C. of Breschet',** venous channel in the diploë of the skull. **Bul'bular c. of Petit',** c. of Petit. **Carot'icotympan'ic c.** one of several short canals passing from the carotid canal to the tympanum and conveying minute branches of the carotid plexus. **Carot'id c.,** a canal in the petrous bone for the internal carotid artery. **Cen'tral c.,** medullary canal. **Cer'vical c.,** canal of the cervix uteri. **Cer'vicou'terine c.,** uterine canal. **Chol'edoch c.,** choledoch duct; bile duct. **C. of the chor'da tym'pani,** a canal for the passage of the chorda tympani nerve. **Cil'iary c.,** see *Ciliary.* **C. of Cloquet',** hyaloid canal. **Coch'lear c.,** spinal canal of the cochlea. **Con'dyloid c.,** the condyloid foramen. **Connect'ing c.,** coiled portion of the uriniferous tubule. **C. of Cor'ti,** a canal formed by the arches of Corti and the basilar membrane. **C. of Cotun'nius,** aquæductus vestibuli. **Cru'ral c.,** see *Crural.* **Cu'bital c.,** passage for the ulnar vessels at the bend of the elbow. **C. of Cu'vier,** ductus venosus; the cardinal vein. **Cys'tic c.,** see *Gall bladder.* **Def'erent c.,** vas deferens. **Den'tal c.,** the inferior dental canal. **Den'tinal c.,** calcigerous tubes or canaliculi of dentine. **Digest'ive c.,** the alimentary canal. **Ejac'ulatory c.,** ejaculatory duct. **C. of epidid'ymis,** convoluted duct forming the epididymis. **Eustach′ian c.**, a canal in the petrosal bone containing part of the Eustachian tube. **Exter′nal aud′itory c.**, a canal leading from the auricle to the membrana tympani. **Fa′cial c.**, aqueduct of Fallopius. **Fallo′pian c.**, aqueduct of Fallopius; oviduct. **Fem′oral c.**, inner part of the sheath of the femoral vessels. **C. of Ferrein′**, a canal between the edges of the closed lids and the globe of the eye. **C. of Fonta′na**, the ciliary canal. **Galactoph′orous c.**, the lactiferous tubule of the mammary gland. **C. of Gärt′ner**, see *Gärtner*. **Gui′di's c.**, Vidian canal. **C. of Hav′ers** or **Haver′sian c.**, see *Haversian*. **C. of Hen′le**, Henle's loop tubes; uriniferous tubules. **Hepat′ic c.**, the hepatic duct. **C. of Ho′vius**, c. of Fontana. **C. of Hu′guier**, a small canal at the inner side of the fissure of Glaser, through which the chorda tympani nerve leaves the cavity of the tympanum. **Hun′ter's c.** (after John Hunter), aponeurotic membrane, consisting of transverse fibres passing from the surface of the vastus internus to the abductor magnus and abductor longus muscles, and enclosing between the muscles named a passage, Hunter's canal, containing the femoral artery and vein and the saphenous nerve **Hy′aloid c.**, a cylindrical passage formed by the reflection of the hyaloid membrane into the interior of the vitreous body around the nutrient artery of the lens. **Inci′sive** or **Inci′sor c.**, see *Palatine c.* **Infraorb′ital c.**, suborbital canal. **In′guinal c.**, see *Inguinal*. **Inter′nal aud′itory c.**, internal auditory meatus. **Intes′tinal c.**, the portion of the digestive canal formed by the intestines, from the pylorus to the anus. **C. of Ja′cobson**, tympanic canal. **C. of Kovalev′sky**, neurenteric c. **Lac′rymal c.**, osseous canal containing the nasal duct. **Loe′wenberg's c.**, part of the canal of the cochlea above Corti's membrane. **Ma′lar c.**, a canal in the malar bone for the passage of the malar division of the temporomalar branch of the superior maxillary nerve. **Max′illary c.**, dental c. **Me′dian c.**, central canal of the spinal cord; aqueduct of Sylvius. **Med′ullary c.**, cylindrical cavity in the body or shaft of a long bone, containing marrow; the vertebral canal; the central canal of the spinal cord. **Mem′branous c. of the coch′lea**, c. of the cochlea, following the spiral turns of the lamina spiralis. **Mucip′arous** or **mu′cous c.**, a canal the interior of which has a mucous lining. **C. of Mül′ler**, a canal existing in the fœtus on the outer side of the Wolffian body. **Na′sal c.**, lacrymal canal. **Nasopal′atine c.**, incisor canal. **Neu′ral c.**, vertebral canal; medullary tube. **Neurenter′ic c.**, see *Canalis neurentericus*. **Neurocen′tral c.**, vertebral canal. **C. of Nuck** (from Nuck, who first described it), a cylindrical sheath formed around the round ligaments of the uterus by prolongation of the peritoneum into the inguinal canal, giving rise to hydrocelic cysts in the labium externum, readily mistaken for hernia of the labium. **Nu′trient c.**, nutritive canal of bone; Haversian canal. **Obstet′ric c.**, a canal formed by the uterus and vagina during parturition, after full dilatation of the cervix. **Ob′turator c.**, a canal in the ilium for the passage of the obturator vein and nerve; see *Obturator*. **Olfac′tory c.**, one of the nasal fossæ in early embryonic life. **Op′tic c.**, optic foramen. **Pal′atine c.**, see *Palatine*. **Pancreat′ic c.**, pancreatic duct. **Partu′rient c.**, obstetric canal. **Pel′vic c.**, canal of the pelvis included between the superior and inferior straits. **C. of Petit′**, see *Petit*. **Poplite′al c.**, a canal beneath the sulcus for the popliteal vessels and nerve. **Por′tal c.**, interlobular biliary canals. **Prim′itive c.**, a canal of early embryonic life; neural canal. **Pter′ygoid c.**, Vidian canal. **Pter′ygopal′atine c.**, posterior palatine canal. **Pul′moaor′tic c.**, ductus arteriosus. **Pulp c.**, central canal of the root of a tooth. **Rachid′ian c.**, vertebral canal. **C. of Reck′linghausen**, see *Canaliculi, serous*. **C. of Reiss′ner**, membranous canal of the cochlea; ductus cochlearis. **Rhachid′ian c.**, the vertebral canal. **C. of Rivi′nus**, duct of the sublingual gland. **C. of Ro′senthal**, spiral canal of modiolus. **Sac′culococh′lear c.**, communication between the saccule and the cochlea. **Sa′cral c.**, prolongation of the vertebral canal in the sacrum. **Sagit′tal c.**, the posterior semicircular canal. **C. of Saviot′ti**, any artefact of tubular form. **C. of Schlemm**, a minute circular canal, situated at the point of union of the cornea and sclerotica. **Semicir′cular c.**, see *Semicircular*. **Sem′inal c.**, one of the ejaculatory ducts, see *Ejaculatory*. **Se′rous c.**, see under *Canaliculus*. **Spermat′ic c.**, vas deferens; inguinal canal of male. **Spi′nal c.**, the vertebral canal. **Spi′ral c. of coch′lea**, see *Scalæ of cochlea*. **Spi′ral c. of modi′olus**, a minute canal surrounding the modiolus in the lamina spiralis. **Spi′roid c.**, aqueduct of Fallopius. **C. of Ste′no, Ste′non**, or, more correctly, **Sten′son**, ductus salivaris superior. **C. of Stil′ling**, hyaloid canal; central canal of the spinal cord. **Subor′bital c.**, infraorbital canal. **Supraor′bital c.**, a canal at the superior margin of the orbit for the supraorbital nerve and artery. **Tem′poral c.** or **Tem′poroma′lar c.**, zygomaticotemporal canal. **Thorac′ic c.** thoracic duct. **Tu′bal** or **Tu′bo-ova′rian c.**, oviduct. **Tubo-tym′panal c.**, internal portion of the first gill-cleft. **Tympan′ic c.**, canal opening on the lower surface of the petrous portion of the temporal bone, between the carotid canal and the groove for the internal jugular vein; it contains Jacobson's nerve. **U′rinary c.**, urethra. **Urogen′ital c.**, urogenital sinus. **U′terine c.**, canal of the neck and body of the uterus. **Vas′cular c.**, Haversian canal; cartilage canal. **Vec′tor c.**, Fallopian tube. **Ve′nous c.**, ductus venosus; a canal existing only in the fœtus, extending from the bifurcation of the umbilical vein to the vena cava inferior, into which it opens below the diaphragm; at times it ends in an infrahepatic vein. It pours into the cava part of the blood passing from the placenta by the umbilical vein. After birth it becomes a fibrocellular cord. **Ver′tebral c.**, a canal for the lodgment of the spinal cord in the vertebræ. **Vestib′ular c.**, urogenital sinus. **Volk′mann's c.**, see *Volkmann*. **Vomerobas′ilar c.**, see *Vomerobasilar*. **Vul′var c.**, vestibule of the vagina. **Vul′vou′terine c.**, vagina; the parturient canal. **Vul′vovag′inal c.**, the vulva and vagina regarded as one canal; the opening of the hymen. **C. of Whar′ton**, Wharton's duct, the ductus salivaris inferior. **C. of Wir′sung**, the pancreatic duct. **C. of Wolff**, the Wolffian duct. **Zygomat′icotem′poral c.**, the passage between the orbital and temporal surfaces of the malar bone conveying a branch of the superior maxillary nerve.

**Cana′la.** Spigelia.

**Cana′les.** Plural of canalis.

**Canalic′ular.** Having small canals. **C. ab′scess of breast**, abscess communicating with galactophorous ducts. **C. tis′sue**, tissue containing small canals, as that of bone.

**Canalic′ulated.** Grooved.

**Canalic′uli** (pl. of canaliculus). **C. accesso′rii**, canals for the passage of veins at the external margin of the anterior condyloid canal or canals. **C. bilia′rii** or **bilif′eri**, biliary ducts. **C. of bone**, small canals in bones connecting the lacunæ or the lacunæ with the Haversian canals; see *Lacunæ of bone*. **C. calcif′eri**, see *Calciferous canals*. **C. den′tium**, dentinal tubules. **C. Haversia′ni**, nutrient canals. **Juice c.**, serous canals. **C. lacryma′les**, lacrymal ducts. **C. limac′um**, lacrymal ducts. **Lymphat′ic c.**, serous c. **C. medulla′res**, Haversian canals. **C. petro′si**, canals in the petrous portion of the temporal bone for the petrosal nerves. **C. pterygoide′i**, c. sphenoidales. **C. semicircula′res**, semicircular canals. **C. semina′les**, see *Testicle*. **C. seminif′eri**, see *Testicle*. **Se′rous c.**, Recklinghausen's canals, minute channels in the connective tissue supposed to form the origin of lymphatic vessels; small vessels connecting with lymph vessels or forming communication between the lymphatic vessels and the capillaries. **C. sphenoida′les**, small canals or furrows in the sphenoid bone. **C. vasculo′si**, nutrient canals.

**Canaliculiza′tion.** Formation of canals in cartilage; a preparatory stage of ossification of cartilage by extension of the periosteal processes.

**Canalic′ulus** (dim. of canalis). Small channel or canal. See also *Canal*, *Canaliculi*, and *Canalis*. **C. Arnol′di**, a small canal in the temporal bone transmitting the auricular branch of the vagus. **C. arterio′sus**, ductus arteriosus. **C. basipharynge′us**, a canal between the sphenoid and palate bones for the passage of the pterygopalatine vessels and pharyngeal nerve to the pharynx. **Collect′ing c.**, collecting tubule of the kidney. **C. communicatio′nis**, a canal under the petrous portion of the temporal bone transmitting the vein from the middle cranial fossa to the lateral sinus. **C. innomina′tus**, c. basipharyngeus. **C. laqueifor′mis**, Henle's loop tube. **C. mastoide′us**, c. Arnoldi. **C. pharynge′us**, the canal formed by the sphenoid and palate bones and the ala of the vomer; c. basipharyngeus. **C. tympan′icus**, a canal in the petrous bone for Jacobson's nerve.

**Cana′lis.** Canal; meatus. **C. accesso′rius**, one of the passages for veins penetrating the jugular tubercle. **C. adducto′rius**, Hunter's canal. **C. aërif′erus**, air tube, see *Bronchi*. **C. alveola′ris**, the dental canal. **C. an′imæ**, trachea. **C. arterio′sus**, ductus arteriosus. **C. canalicula′tus**, gorget. **C. carot′icus**, carotid canal. **C. centra′lis**, central canal of the spinal cord. **C. centra′lis modi′oli** or **coch′leæ**, see *Tractus spiralis foraminulentus*. **C. cervica′lis** or **cervi′cis**, see *Uterus*. **C. choled′ochus**, ductus communis choledochus. **C. ciba′rius**, alimentary canal. **C. Cloquet′i**, hyaloid canal. **C. coch′leæ os′seus**, see *Scalæ of cochlea*. **C. cochlea′ris**, cochlear canal. **C. condyloide′us**, condyloid foramen. **C. cor′porum quadrigemino′rum**, aqueduct of Sylvius. **C. cra′niopharynge′us**, a fœtal canal from the bottom of the pituitary fossa, containing process of the dura mater **C. cyst′icus**, cystic duct, see *Gall bladder*. **C. def′erens**, vas deferens. **C. eminen′tiæ quadrigem′inæ**, aqnæductus Sylvii. **C. endolymphat′icus**, aqueduct of the vestibule. **C. ethmoida′lis**, internal orbital canal. **C. facia′lis**, aqueduct of Fallopius. **C. Fallo′pii** or **Fallo′piæ**, aquæductus Fallopii. **C. fibro′sus**, a canal made by the interosseous membrane of the leg for the anterior vessels and nerves. **C. Fontan′æ**, canal of Fontana. **C. gangliona′ris**, tractus spiralis foraminulentus; spiral canal of modiolus. **C. guttura′lis tym′pani**, the Eustachian tube. **C. hepat′icocyst′icus**, ductus choledochus communis. **C. hyaloide′us**, hyaloid canal. **C. hypoglos′si**, the anterior condyloid foramen. **C. incisi′vus**, the anterior palatine canal. **C. inci′sor**, incisor canal. **C. innomina′tus**, a canal for the passage of the superficial petrosal nerve. **C. intestina′lis** or **intestino′rum**, the intestinal tube. **C. lacryma′lis**, the lacrymal or nasal duct. **C. laqueifor′mis**, one of Henle's tubes; uriniferous tubules. **C. mandibula′ris**, inferior dental canal. **C. mastoide′us**, a canal for the passage of Arnold's nerve. **C. maxilla′ris infe′rior**, the inferior dental canal. **C. maxilla′ris supe′rior**, the foramen rotundum. **C. me′dius**, aquæductus Sylvii. **C. medul′læ spina′lis**, see *Vertebral column*. **C. medulla′ris**, the medullary canal. **C. membrana′ceus**, the cochlear duct. **C. membra′neus re′num**, one of the calices or membranous canals surrounding the papillæ of the kidney, see *Calyx*. **C. metacarpa′lis**, one of the spaces in the palm of the hands between the flexor tendons. **C. mus′culoperone′us**, space between the origins of the several muscles of the leg occupied by the lower part of the peroneal artery. **C. na′solacryma′lis**, lacrymal or nasal duct. **C. nasopalati′nus**, the palatine duct (anterior). **C. ner′vi facia′lis**, aqueduct of Fallopius. **C. neurenter′icus**, a canal in the embryo between the digestive and medullary canals. **C. Nuck′ii**, the canal of Nuck. **C. nutri′tius**, Haversian canal. **C. or′bitæ nasa′lis**, the lacrymal or nasal duct. **C. op′ticus**, optic foramen. **C. palati′nus tym′pani**, Eustachian tube. **C. peripher′icus modi′oli**, see *Tractus spiralis foraminulentus*. **C. Petit′i** or **petitia′nus**, canal of Petit. **C. pharyn′gotympan′icus**, embryonic canal in the pharynx and tympanum. **C. quadrigem′inæ**, aqueduct of Sylvius. **C. radi′cis**, a canal in the root of a tooth. **C. recur′rens**, Vidian canal. **C. reu′niens**, minute canal between the round saccule in the membranous labyrinth and the ductus cochlearis. **C. rosenthalia′nus** or **Rosenthal′ii**, spiral canal of modiolus. **C. rotun′dus**, foramen rotundum. **C. sacra′lis**, see *Sacral*. **C. sanguinif′erus**, a bloodvessel. **C. scala′rum commu′nis**, infundibulum of the cochlea. **C. Schlem′mii**, canal of Schlemm. **C. semicircula′ris**, see *Semicircular canals*. **C. semina′lis**, one of the ejaculatory ducts, see *Testicle*. **C. sphenopalati′nus** or **sphenopharynge′us** canaliculus basipharyngeus. **C. spina′lis**, vertebral canal; central canal of the spinal cord. **C. spira′lis coch′leæ**, see *Scalæ of cochlea*. **C. spira′lis modi′oli**, see *Tractus spiralis foraminulentus*. **C. supraorbita′lis**, supraorbital foramen. **C. Syl′vii**, aqueduct of Sylvius. **C. tar′si**, tarsal canal. **C. tempora′lis**, occasional opening in the temporal bone between the glenoid fossa and the tympanic portion. **C. transversa′rius**, canal formed by a series of transverse foramina of the cervical vertebræ. **C. tubæfor′mis**, semicircular canal. **C. tubercula′rium quadrigemino′rum**, aqueduct of Sylvius. **C. tympan′icus**, tympanic canal. **C. urina′rius**, urethra. **C. urogenita′lis**, urogenital sinus. **C. utric′ulosaccula′ris**, a canal between the utriculus and endolymphatic duct. **C. veno′sus**, ductus venosus. **C. vertebra′lis**, spinal cord. **C. vidia′nus**, pterygoid or Vidian canal. **C. zygomat′icofacia′lis**, malar canal. **C. zygomat′icotempora′lis**, temporal canal of the malar bone. **C. zygomat′icus**, temporomalar canal.

**Canaliza′tion** Process of the formation of channels or canals, blood-vessels, for example. Conversion of a vessel into a rigid tube. Method of drainage for wounds by the formation of canals, not by the insertion of tubes.

**Canan′ga odora′ta.** Tree of S. Asia, from which ylang-ylang oil is obtained.

**Canapa′cia.** Artemisia vulgaris.

**Cana′rium commu′ne.** Amyris elemifera.

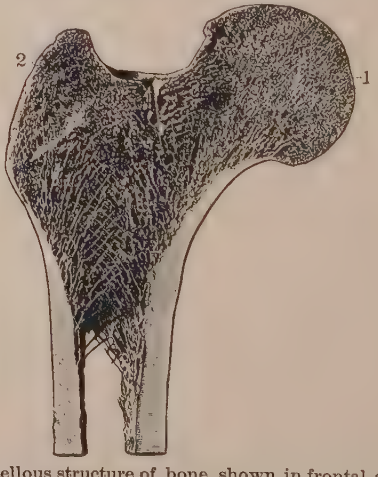
**Cana′ryseed.** Phalaris canariensis.

**Cana′ryweed.** Orchil.

**Can′camum** or **Can′camy.** Mixture of several gums and resins from Africa; formerly used as a vulnerary.

**Can′cellated, Cancel′lous,** or **Can′cellate** (made of lattice-work). Formed of cancelli.

**Cancel′li** (pl. of *cancellus*, lattice-work). Cellular or spongy texture of bones, consisting of numerous cells communicating with each other, containing



Cancellous structure of bone, shown in frontal section of the upper part of the femur. 1, caput femoris; 2, trochanter major.

fatty matter, analogous to marrow; met with principally at extremities of long bones; some short bones consist almost wholly of it. It allows of expansion of the extremities of the bones without adding weight, and deadens concussions.

**Cancel′lous.** Cancellated. See *Cancelli.*

**Can′cer** (Lat., crab). Carcinoma; a malignant new growth composed chiefly of epithelial cells, as distinguished from sarcoma, which is composed mainly of embryonic connective-tissue elements. Cancer is sometimes employed, however, to signify any malignant neoplasm. The name (crab) was probably given to it either on account of the hideous appearance which ulcerated cancer presents or on account of the great veins surrounding it, which the ancients compared to the claws of the crab. Cancers were formerly distinguished, according to the stages, into *occult, cancer occultus,* and *open, cancer apertus,* the former being the scirrhous form, the latter the ulcerated condition. The term cancer is much more limited at the present day in its application than formerly, and although it is necessary to define the different varieties previously recognized by their old and at one time familiar names, the description of cancerous or carcinomatous growths proper is greatly restricted and simplified. Cancers are defined at the present day as most atypical new formations of cells of the epithelial type, grouped irregularly in the alveoli of a more or less dense fibroid stroma. The epithelial type implies origin from epiblast or hypoblast and the absence of intercellular substance; it does not imply any specific form of cell. In cancer we have epithelial cells, often of the most abnormal form, filling up the lumina of gland tubes (if it start from a gland), bursting through their basement or limiting membrane, and ramifying in the spaces of connective tissue. (Green.) Cancer cells are of large size and of various forms—round, oval, fusiform, caudate, or polygonal, their nuclei and nucleoli are large and prominent, and they lie loosely in the alveoli without any intervening stroma; but there is no specific cancer cell different from that characterizing other new formations or even normal tissues. The stroma is of fibrillated tissue arranged so as to form communicating alveoli, in which are the cancer cells; numerous blood-vessels are in the stroma and surround the alveoli like a network, and lymphatics communicate freely with the alveoli. Cancers undoubtedly have an epithelial origin; that is, they originate either in the growth of a resting embryonic epithelial rudiment (Cohnheim) or on the multiplication of some epithelial cells. Other conditions being favorable, such as malignancy, the cells burst through any basement membrane and grow in the connective tissue along lymph spaces and channels. Glandular infection is thus easy to explain. (Green). Surrounding structures gradually become infiltrated, and secondary changes often occur, such as fatty degeneration, hemorrhage, pigmentation, colloid and mucoid degeneration, etc. According as the cancer cells spring from squamous or columnar epithelium, or the epithelium of acinous glands, cancers are divided into two classes: *Acinous cancer,* including scirrhus, and *epithelial cancer,* including squamous and columnar-celled epithelioma, the latter being also called adenoid cancer. Any of these varieties may develop into a colloid or gelatiniform degeneration that was once called *colloid* or *gelatiniform cancer.* Cancers occur usually after the age of thirty-five, are very malignant, grow rapidly, invade surrounding tissues to a serious extent, frequently ulcerate, involve the lymphatic glands at an early stage, and implicate the general system. The etiology of these neoplasms is obscure, and the varying influence of heredity, traumatism, and microparasitism is as yet undetermined. Their presence induces a peculiar diathesis or cachexia, *cancerous cachexia.* **Ac′inous,** see *Cancer.* **Acute′ c.,** encephaloid. **Ad′enoid c.,** adenocarcinoma. **C. al′bus,** c. aquaticus. **Alve′olar c.,** sometimes restricted to colloid cancer, but applicable to cancer generically, as having alveoli; see *Cancer.* **C. aper′tus,** cancerous ulceration. **Ap′inoid c.,** scirrhus having pearshaped structure in its interior. **C. aquat′icus,** variously called gangrenous inflammation of the mouth, canker of the mouth, gangrenous sore mouth, gangrenous erosion of the cheek, sloughing phagedena of the mouth, water canker, sloughing or gangrenous ulceration of the mouth, noma; formerly not uncommon in children's asylums. **Are′olar c.,** colloid. **C. as′tacus,** see *Cancrorum chelæ.* **Black c.,** melanotic c. **C. of the blood,** leucocythæmia. **C. caminario′rum,** chimney-sweepers' c. **Caul′iflower c.,** form of epithelioma having externally ulcerated fissures, resembling cauliflower. **C. cell,** cell at one time considered as characteristic of cancer; polygonal, caudate, fusiform, concentric, compound; it is not now considered that there is a distinct cell characteristic of cancer. See *Cancer.* **Cell′ular c.,** encephaloid medullary carcinoma; medullary sarcoma. **Cere′briform c.,** encephaloid; medullary sarcoma. **Chim′ney-sweep′ers' c.,** epithelioma or epithelial cancer of the scrotum; soot-wart; this affection begins with a superficial, painful, irregularly tubercular ulcer, with hard, elevated edges, occupying the lower part of the scrotum; sometimes the testicles are involved. **Chon′droid c.,** variety of scirrhus on section resembling cartilage. **Chron′ic c.,** scirrhus. **Clay-pipe c.,** smokers' c. **Col′loid c.,** see *Colloid.* **C. en cuirasse′** (Fr., shield), a shield-shaped, cutaneous cancer over the thorax. **Cyl′inder-cell c.,** cylindrical epithelioma. **Cyst′ic c.,** colloid; cystocarcinoma. **Dendrit′ic c.,** papilloma; villous c. **Ebur′neous c.,** a kind of waxy degeneration of the breast, but not strictly cancerous. **Embol′ic c.,** metastatic c. **Enceph′aloid c.** or **Encephalom′atous c.,** medullary sarcoma. **Endothe′lial c.,** villous endothelioma. **Epithe′lial c.,** see *Epithelial* and *Epithelioma.* **Fi′brous c.,** scirrhus; recurrent fibroid. **C. fungoi′des** or **fungo′sus,** fungus hæmatodes; scirrhus. **Fun′gous c.,** fungus hæmatodes. **C. Gale′ni,** bandage for head, the eight heads of the bandage resembling rudely crabs' claws; it is now supplied by a bandage with six heads, called bandage of Galen or bandage of the poor. **Gelat′iniform** or **gelat′inous c.,** colloid. **Gland′ular c.,** adenocarcinoma; cylindrical epithelioma. **C. globes,** c. nests. **Green c.,** chloroma. **Gum** or **gum′mous c.,** colloid. **Hæm′atoid c.,** fungus hæmatodes. **Hard c.,** scirrhus. **C. juice,** viscid, creamy fluid squeezed or scraped from the surface of section of a malignant growth. **Kan′gri-burn c.,** see *Kangri-burn.* **Lard′iform** or **lar′inoid c.,** lard-like form of scirrhus. **La′tent c.,** c. occultus. **Lob′stein's c.,** retroperitoneal sarcoma. **C. lu′pus,** lupus. **Med′ullary c.,** encephaloid medullary carcinoma; medullary sarcoma. **C. melæne′us,** melanotic cancer. **Melanot′ic c.,** black or melanoid cancer, see *Melanotic sarcoma.* **Milt′like c.,** medullary sarcoma, see *Miltlike.* **C. mol′lis,** encephaloid. **Mu′cous c.,** colloid. **C. mundito′rum,** chimney-sweepers' c. **Myxom′atous c.,** cancer that has been transformed into myxoma. **Na′piform c.,** cancer, turnip-like in appearance. **Neph′roid c.,** kidney-shaped medullary sarcoma. **C. nests,** cancer cells arranged in round masses like nests. **C. occul′tus,** see *Cancer.* **Os′teoid c.,** spina ventosa; cancer containing bony matter; osteoid chondroma; osteosarcoma; see *Osteoid sarcoma.* **Pancreat′ic c.,** cancer resembling the pancreas in appearance; cancer of the pancreas. **Pap′illary c.,** papillary epithelioma; papilloma. **Pig′mentary c.,** melanotic c. **Placent′al c.,** medullary sarcoma resembling the placenta in appearance; cancer of the placenta. **Pulp′y** or **pulpa′ceous c.,** colloid. **C. purgato′ris infumic′uli,** chimney-sweepers' cancer. **Ro′dent c.,** rodent ulcer. **C. root,** Orobanche virginiana; Phytolacca decandra; Conopholis americana; Epiphegus virginiana; Aphyllon uniflorum. **Sarcom′atous c.,** glandular cancer with sarcomatous degeneration. **C. scirrho′sus** or **Scir′rhous c.,** scirrhus. **C. se′rum,** c. juice. **Smo′kers' c.,** epithelioma of the mouth and lips from irritation caused by the pipe. **Soft c.**, fungus hæmatodes; medullary cancer; encephaloid. **So′lanoid c.**, see *Solanoid.* **Soot c.**, epithelioma supposed to be the result of irritation by soot, chimney-sweepers' cancer. **C. spongio′sus**, fungus hæmatodes. **Telangiectat′ic c.**, fungus hæmatodes. **C. ter′ebrans**, epithelioma. **C. tubero′sum**, carcinoma tuberosum; cheloid. **Tu′bular c.**, cylindrical epithelioma. **C. u′teri** metrocarcinoma. **C. verruco′sus**, wart-like form of epithelioma. **Vil′lous c.**, dentritic vegetation; cancer in mucous membranes when covered by villous growth; papilloma. **C. vulga′ris**, scirrhus. **Wa′ter c.**, c. aquaticus. **C. weed**, Goodyera pubescens; Salvia lyrata. **With′ering c.**, scirrhus.

**Cancera′tion.** Formation of or development into cancer.

**Cancerin′.** A ptomain detected in the urine in cancer of the uterus.

**Can′cerism.** Cancerous diathesis.

**Cancero′ma.** Carcinoma.

**Canceromy′ces.** Cladosporum cancerogenes; a microorganism believed by Neissen to be the cause of cancer.

**Can′cerous.** Relating to or affected with cancer.

**Can′cerwort.** Linoria spuria; L. elatine; veronica.

**Canchala′gua.** Chironia chilensis; Erythræa chilensis.

**Cancre′na.** Gangrene.

**Can′criform.** Cancroid.

**Cancro′des.** Cancroid.

**Can′croid** (*cancer* + *eidos*, form). Assuming a cancerous appearance; name given to certain cutaneous cancers by Alibert; called also *cheloid* or *keloid*, from their presenting a flattish, raised patch of integument resembling tortoise shell; epithelioma. **C. cor′puscles**, spheres of concentrically arranged epithelial cells occasionally found in cutaneous epithelioma. **C. ul′cer**, rodent ulcer.

**Cancroin′.** A supposed antitoxin of cancer, alleged to be curative of the disease when hypodermically administered.

**Cancro′ma.** Carcinoma.

**Cancro′rum che′læ.** Crabs' claws; like crabs' stones or eyes; concretions found, particularly, in *Cancer astacus* or *crayfish*, considered to be antacid.

**Cancro′sus.** Cancerous.

**Can′crum.** Cancer; ulceration having tendency to spread. **C. na′si**, gangrenous ulceration of the nose occurring in children in depressed states of health. **C. o′ris**, cancer aquaticus; stomacace; noma. **C. puden′di**, noma of the genital organs, occurring in young girls.

**Cande′la** (*candeo*, to glow). Bougie; candle. **C. candela′ria**, verbascum. **C. fuma′lis**, pastil. **C. medica′ta**, medicated bougie. **C. re′gia** or **re′gis**, Verbascum nigrum, V. thapsus.

**Candela′ria** (*candela*, candle). Verbascum nigrum.

**Can′dle.** Bougie. **C. ber′ry**, Myrica cerifera. **C. fish**, eulachon. **C. fish oil**, oil from Thaleichthys pacificus, eulachon or oulachon oil; similar properties to cod-liver oil. **Mercu′rial c.**, candle made of wax and vermilion, for mercurial fumigation. **C. nut**, Aleurites moluccana. **C. nut oil**, cathartic oil expressed from Aleurites triloba; kekune or kukui oil. **C. tree**, Parmentiera cerifera. **C. tril′oba**, Viola sebifera.

**Can′dytuft.** Iberis. **Bit′ter c.**, Iberis amara.

**Cane-sugar.** See *Saccharum.*

**Canel′la al′ba.** West Indian tree, so called because its bark is rolled up like a reed. Canella bark, formerly official in the Ph. U. S., ord. *Guttiferæ*, is pungent, aromatic, stimulant, tonic, and is often added to bitters and cathartics. **C. ama′ra**, bark of Cinnamomum culilawan. **C. caryophylla′ta**, Myrtus caryophyllata. **C. cuba′na**, C. alba; Laurus cassia. **C. dul′cis**, bark of C. alba. **C. jamaicen′sis**, C. alba. **C. magellan′ica**, bark of Drimys winteri. **C. malabar′ica**, Cinnamomum cassia. **C. silves′tris**, East Indian cinnamon. **White c.**, C. alba. **C. wintera′na**, C. alba. **C. zeylan′ica**, cinnamon; Daphnidium myrrha.

**Canellif′era malaba′rica.** Laurus cassia.

**Canellin′.** Principle extracted from Canella alba.

**Canelli′na.** Cinnamon bark.

**Caneo′tica** Crete boil or button; endemic ulcer.

**Canica′ceous.** Furfuraceous.

**Cani′cida** (*canis*, dog, *cædo*, to kill). Aconite.

**Canine′** (*canis*, dog). Pertaining to or resembling in structure, actions, etc., a dog. **C. ap′petite**, boulimia. **C. cusps**, pyramidal or cervical cusps of the molar and bicuspid teeth. **C. em′inence**, c. prominence. **C. fos′sa**, infraorbital or suborbital fossa; a small depression on the superior maxillary bone, above the canine tooth, giving attachment to the caninus or levator anguli oris muscle. **C. hun′ger**, boulimia. **C. laugh**, sardonic laugh; form of laugh, the facial expression of which is produced particularly by spasmodic contraction of the caninus muscle. Probably this expression, as well as cynic spasm, originated in the resemblance of the affection to certain movements in the upper lip of the dog. It is also called *risus sardonicus*, from similar symptoms having been induced by Ranunculus scleratus, growing in Sardinia. **C. mad′ness**, hydrophobia. **C. mus′cle**, levator anguli oris. **C. prom′inence**, protuberance of canine tooth of the upper jaw. **C. teeth**, eye teeth, peg teeth; teeth between the lateral incisors and small molars of the jaw, so named because resembling the teeth of a dog.

**Canin′iform.** Resembling the canines or cuspids; referring to the teeth.

**Caninilabia′lis.** Levator anguli oris muscle.

**Cani′nus.** Levator anguli oris muscle. **C. sen′tis**, Rosa canina.

**Cani′ram.** Strychnos nux vomica.

**Caniramine′.** Brucine.

**Caniru′bus.** Rosa canina.

**Can′is** (dog). Frænum præputii; vulva. **C. intersec′tor** (dog-killer), Veratrum sabadilla. **C. pon′ticus**, Castor fibre.

**Cani′tia**, **Cani′ties**, or **Canitu′do** (*canus*, white). Blanching, whiteness, or grayness of the hair, and especially that of the head. Sometimes it happens suddenly, apparently as a result of mental emotion.

**Can′ker** (cancer). Violent or corrosive ulceration. Disease of a horse's foot or dog's ears. Stomatitis, aphtha, cancer aquaticus, stomacace. **C. ber′ry**, fruit of Rosa canina and Solanum bahamense. **C. flow′er**, Rosa canina. **C. nail**, hangnail. **C. rash**, sore throat; cynanche maligna. **C. root**, sorrel. **C. rose**, Papaver rhœas; Rosa canina. **C. sore**, aphtha; ulcer of the mucous membrane of the lips, usually near the line of junction with the gums, occurring often in consequence of overindulgence in sweets. **Wa′ter c.**, cancer aquaticus. **C. weed**, Senecio jacobæa, S. silvaticus, S. tenuifolius.

**Can′na** (reed). A genus of plants, ord. *Marantaceæ.* **C. angustifo′lia**, a plant of Brazil; diaphoretic, stimulant, antirheumatic. **C. ar′rowroot**, tous-les-mois. **C. brach′ii**, ulna. **C. domes′tica cru′ris**, tibia. **C. edu′lis**, tous-les-mois. **C. fis′tula**, Cassia fistula. **C. gut′turis**, trachea. **C. in′dica**, Sagittarium alexipharmacum. **C. ma′jor**, tibia. **C. mi′nor**, fibula; radius. **C. odorif′era**, Acorus calamus. **C. orienta′lis**, C. indica; juice is used in earache. **C. pulmo′nis**, trachea. **C. soluti′va**, Cassia fistula. **C. starch**, tous-les-mois; Queensland arrowroot.

**Can′nabene.** $C_{18}H_{20}$. The main ingredient of the volatile oil of Cannabis indica. **C. hy′dride** contains two atoms of hydrogen more than simple cannabene; it is found along with the latter in the volatile oil of Indian hemp.

**Cannabin′.** Glucoside obtained from a watery extract of Cannabis indica; hypnotic. **C. tan′nate**, cannabinum tannicum.

**Cannabine′.** Brown, syrupy alkaloid derived from Cannabis indica; hypnotic.

**Cannabinine′.** Volatile alkaloid from Cannabis indica.

**Cannab'inol.** Oil obtained from Cannabis indica; assumed to contain the active principles of the drug.

**Cannabino'na** or **Cannabinone'.** $C_{\text{[illegible]}}H_{12}O$. A soft, resinous substance derived from Indian hemp; hypnotic.

**Cannabi'num.** See *Cannabin.* **C. tan'nicum,** cannabin tannate. Astringent, brownish powder; hypnotic; obtained by precipitating a watery extract of Indian hemp by tannic acid.

**Can'nabis.** Hemp; fruit of Cannabis sativa. **C. america'na,** American hemp; flowering tops of Cannabis sativa, cultivated in the southern United States. **C. in'dica,** Indian hemp; according to the Ph. U. S., the flowering tops of the female plant of Cannabis sativa, grown in the East Indies, from which the resin has not been removed (Ph. Br.). The leaves and flowers are narcotic and astringent; they are chewed and smoked. The seeds, mixed with opium, areca, and sugar, cause intoxication. An alcoholic extract of the dried tops, churrus, *extractum cannabis indicæ* (Ph. U. S. and Br.), has been used in Europe and in this country as a narcotic and anticonvulsive, in the dose of gr. ¼ (0.016), increased cautiously and gradually. The other official preparations are: *Fluid Ex'tract of c. i.*, extractum cannabis indicæ fluidum; dose, ♏ij–xx (0.12–1.2). *Tinc'ture of c. i.*, tinctura cannabis indicæ; dose, gr. xv–ʒj (1.0–4.0). Tannate of cannabin has also been prescribed as a narcotic and hypnotic. The dried plant which has flowered, and from which resin has not been removed, called gunjah, ganjah, guaza, and guazah, haschisch, hashish, or hasheesh, consists of the tops and tender parts only of the plant, collected immediately after inflorescence, and simply dried. **C. sati'va,** common hemp of Asia, America, and Europe. The seed, hempseed, is oily and mucilaginous; a decoction is sometimes used in gonorrhœa.

**Can'nabism.** The toxic action of hemp.

**Cannabitetanine'.** An alkaloid derived from hemp and having a tetanic action.

**Cannaco'rus rad'ice cro'cea.** Curcuma longa.

**Can'nel.** Laurus cinnamomum; Cinnamomum zeylanicum. **C. bone,** clavicle. **C. wa'ter,** aqua cinnamomi.

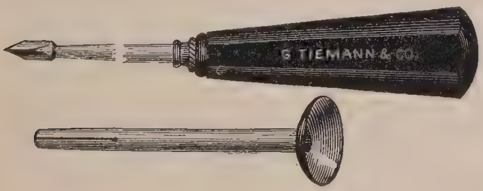
**Cannel'la.** Canella; cinnamon.

**Can'nellate** or **Can'nellated.** Grooved. **C. bod'ies,** corpora striata.

**Can'non.** Metatarsal and metacarpal regions of horses, cattle, and sheep. **C. bone,** metacarpal bone of the horse.

**Can'non-Pfeif'fer bacil'lus.** Bacillus of influenza.

**Can'nula.** Small metal, wood, or rubber tube used in surgery, usually inclosing a trocar, by means of which it is passed into the abdomen or other cavity which it is desired to drain. **Bellocq's' c.,** a silver tube, with movable rod and curved steel spring, used in plugging the posterior nares in hemorrhage from the nose and its cavities; see cut under *Bellocq.* **C. à chemise',** see *Chemise.* **Lac'rymal c.,** a small tube introduced into the lacrymal duct in constriction of its calibre. **Perfu'sion c.,** a double c. for flushing out a cavity by means of an inflowing and an outflowing stream. **C. pulmo'num,** trachea.



Cannula with trocar.

**Can'nulæ** (pl. of cannula). Bronchia.

**Can'nular** or **Can'nulate.** Tubular.

**Canoe' birch.** Betula papyracea. **C. wood,** Liriodendron tulipifera.

**Cano'pum.** Elder flower. See *Sambucus.*

**Can'or stethoscop'icus** (*canor*, tune). Metallic tinkling heard on auscultation.

**Canquoin's' caus'tic paste.** Pasta zinci chloridi.

**Cantab'rica** (from *Cantabri*, people of Spain). Convolvulus cantabrica.

**Canta'ni's di'et.** An exclusive meat diet, recommended in diabetes.

**Cantarel'la.** Acqua tofana; Meloe proscarabæus.

**Cantarel'lus.** Meloe proscarabæus.

**Can'taris.** Fumaria officinalis; cantharis.

**Can'tel.** Vertex.

**Can'tering rhythm.** A reduplicated heart sound resembling the beat made by a cantering horse.

**Can'thal.** Relating to the canthus or angle of the eyelids.

**Cantharel'lus ciba'rius.** Chanterelle, a form of fungus prized in Europe as an article of food.

**Canthari'asis.** Condition of infection from cantharis or other coleopterous insect.

**Can'tharic acid.** $C_{10}H_{12}O_4$. Acid derived from cantharidin by the action of hydriodic acid.

**Canthar'idal.** Relating to or containing cantharides. **C. collo'dion,** collodion with cantharides, collodium cantharidatum (Ph. U. S.), collodium vesicans (Ph. Br.).

**Canthar'idate.** Salt of cantharidic acid and a base. **C. of so'dium and cocaine',** a mixture of sodium cantharidate with cocaine hydrochlorate; it has been employed in the treatment of tuberculosis in dose of gr. $\frac{1}{100}$ (0.0006), subcutaneously administered.

**Canthar'idated.** Containing cantharides.

**Canthar'ides.** See *Cantharis.* **C. ce'rate,** ceratum cantharidis. **C. lin'iment,** linimentum cantharidis. **C. pa'per,** charta cantharidis.

**Cantharid'ic.** Relating to cantharides. **C. acid,** $C_{10}H_{14}O_4$; acid derived from cantharidin. **C. acid, anhyd'rous,** cantharidin.

**Cantharidin'.** See *Cantharis.*

**Cantharidin'ic acid.** Cantharic acid.

**Cantharidi'num.** Cantharidin.

**Canthar'idism.** Symptoms resulting from the employment of cantharides, either internally or externally, such as strangury, pain or swelling of the genital organs, and bloody urine, due to inflammation of the kidneys or bladder or gastrointestinal irritation.

**Can'tharis** (pl. cantharides). (Ph. U. S. and Br.) Blistering fly, blister fly, blister beetle, Spanish fly. This fly (Cantharis vesicatoria, ord. *Coleoptera*) is originally, perhaps, a native of Italy and Spain. It is found on a species of *Oleaceæ*, as ash, privet, and lilac; and of *Caprifoliaceæ*, as elder and lonicera. It is the most common vesicatory; given internally, and even when absorbed from the skin, it stimulates the mucous membrane of the stomach and bowels and affects the urinary organs, exciting strangury. This may be prevented, in cases of blisters, by interposing between the blistering plaster and the skin a piece of tissue paper. Diluents relieve the strangury. If kept dry the flies will retain their activity for many years. Their active principle, *cantharidin*, *cantharidinum*, or *vesicatorin*, anhydride of cantharic acid, in colorless scales or prisms, $C_{10}H_{12}O_4$, is a colorless substance used in lieu of cantharides in cerates, plasters, blistering fluid, etc. Internally cantharidin has been recently prescribed in tuberculosis. Cantharis vesicatoria is the ordinary blistering insect used in Europe. Cantharis or Lytta vittata and C. atrata, C. marginata, and C. cinerea, of America; C. atomaria, of Brazil; C. ruficeps, of Sumatra and Java; C. gigas, Lytta cærulea, of Guinea and East Indies; C. violacea, Lytta gigas mas, of East Indies; C. syriaca, Lytta segetum, of Arabia; Mylabris, M. punctata, M. pustulata, and M. cichorii, of China and E. Indies; Meloe proscarabæus and M. maialis, or true mayworm, possess similar properties. The official preparations are the following: *Ce'rate of c.*, ceratum cantharidis. *Collo'dion of c.*, cantharidal collodion, collodium cantharidatum; used for blistering. *Plas'ter of pitch with c.*, emplastrum califaciens; emplastrum picis cantharidatum. *Tinc'ture of c.*, tinctura cantharidis, dose, ♏j–x (0.065–0.65).

**Canthec'tomy** (*kanthos*, angle of eye, *ektome*, excision). Division or excision of the canthus or angle of the eye.

**Canthi'tis.** Inflammation of the canthus of the eye.

**Can'thium corona'tum.** Gardenia or Randia dumetorum.

**Canthol'ysis** (*kanthos*, angle of eye, *lysis*, loosening). Division of the canthus of the eye and the canthal ligament.

**Can'thoplasty** (*kanthos*, angle of eye, *plastikos*, formative). Formation, by plastic operation, of the angle of the eye, usually the outer angle; an operation performed when the eyelids are not sufficiently cleft.

**Canthor'rhaphy** (*kanthos*, *rhaphe*, suture). Suture of the angle of the eye for the restoration of normal interpalpebral fissure.

**Canthot'omy** (*kanthos*, angle of eye, *tome*, incision) Simple division of the canthus of the eye, generally external canthus.

**Can'thus.** Corner or angle of the eye. The greater or major canthus is the inner angle; the lesser or external or minor canthus, the outer angle. See *Palpebra*. **Na'sal c.**, inner canthus of the eye. **Tem'poral c.**, outer canthus.

**Can'tion.** Crystallized sugar, candy.

**Cantong'.** A plant of the Philippines; edible, laxative, and externally applied to wounds, burns, and scrofulous sores.

**Can'tus gal'li** (Lat., cock-crowing). Laryngismus stridulus.

**Can'ula.** Cannula.

**Canutil'lo.** Ephedra antisyphilitica, growing in Texas; used internally in gonorrhœa and leucorrhœa, externally as a styptic.

**Can'vum.** Cannabis sativa.

**Caoutchouc** (koo'chook). E. Indian name for india rubber; substance formed by drying milky juice of Hævea or Hevea guaniensis, Jatropha elastica, Siphonia cahuchu, S. elastica, Seringue tree, and of Ficus indica and Artocarpus integrifolia, and other S. American trees; insoluble in water and alcohol. It may be sulphured or vulcanized; that is, combined with sulphur by aid of heat, which process, long continued, converts it into hard rubber. Boiling water softens and swells it. Used in the fabrication of catheters, bougies, pessaries, court plaster, elastic stockings, bandages, etc.

**Cap.** Conical end of lymph follicle; tegmentum. **C. of Bro'ca**, *preoperculum*. **Chin c.**, part of an appliance for the correction of prognathism. **Fri'ar's c.**, Aconitum napellus. **Head c.**, part of an appliance for the correction of prognathism. **Pitch c.**, see *Depilatory*. **Reg'ulating c.**, a series of metallic caps fitted to the natural teeth for purpose of orthodontia. **Sol'dier's c.**, friar's c.

**Capac'ity.** The power of containing or doing. **Breath'ing c.**, see *Vital capacity*. **Calorif'ic c.**, specific heat. **Combi'ning c.**, atomicity. **Lung, pulmon'ic, pul'monary,** or **res'piratory c.**, see *Vital capacity*. **Testamen'tary c.**, mental power sufficient to enable a person to make a will. **Ther'mal c.**, specific heat. **Thorac'ic** or **vi'tal c.**, see *Vital*.

**Cape horse sick'ness.** Anthrax.

**Capeli'na** or **Capelli'na** (woman's hat). A recurrent bandage, resembling a riding-hood, applied to the head, to the clavicle in fractures of that bone or of the acromion process, spine of scapula, etc., and to stumps after amputation. **C. of am'putated limb**, bandage applied around a stump. **C. of clav'icle**, employed in fractures of acromion, clavicle, and spine of scapula.

**Cap'eline ban'dage.** Capelina.

**Ca'per** (goat). Odor of axilla; bromidrosis. **C. bush** or **plant**, Capparis spinosa; Euphorbia lathyris.

**Cap'etus.** Small pit or fossa.

**Cape'weed.** Roccella tinctoria. **Austra'lian** or **New Zea'land c.**, Hypochœris radicata.

**Caphopicrin'** or **Caphopic'rite.** Brown, bitter acid from rhubarb.

**Cap'iat** (let it take). Instrument for seizing and removing foreign matters from the uterus, as remains of placental or other structures.

**Capillamen'tum** (*capillus*, hair). Villous or hairy fibril or covering.

**Capillar'ity.** Attraction of liquids to the walls of capillary tubes; capillary attraction. Hair-like condition, as of fibrils.

**Cap'illary** (*capillus*, hair). Hair-like; very small or fine. **C. attrac'tion**, attraction of the walls of a tube for any contained liquid, raising the latter above the level of that outside of the tube. **C. bronchi'tis**, see *Bronchitis*. **C. drain'age**, insertion of a wick or other material in order to drain a cavity by capillary attraction. **C. fis'sure**, minute slender fissure or cleft. **C. næ'vus**, birth-mark; form of nævus vascularis, in which the capillaries are distended and massed together. **C. tubes**, tubes of delicate calibre. **C. ves'sels**, extreme radicles of arteries and veins, together constituting the capillary, intermediate, or peripheral vascular system. Arterial capillaries are those terminating minute arterioles; biliary and gall capillaries are the intralobular bile ducts; lymph capillaries are the extremely fine lymph vessels; pulmonary capillaries are those between pulmonary arteries and veins; venous capillaries are those immediately preceding the minute veins.

**Capilla'tio.** Trichismus; condition of being covered with hair.

**Capillicul'ture.** The care of the hair.

**Capillimen'tum.** Hair or hairy covering.

**Capillit'ium.** Capillamentum; entropion; scalp. **C. distich'ia**, distichiasis. **C. intrica'tum**, plica polonica.

**Capillo'rum deflu'vium.** Alopecia.

**Cap'illurgy.** The art of removing superfluous hair.

**Capil'lus.** Hair; hair of the head; see *Hair*. **C. ven'eris**, Adiantum capillus veneris. **C. v. canaden'sis**, Adiantum pedatum or canadense.

**Capistra'tio** (*capistrum*, halter). Phimosis; trismus.

**Capis'trum.** Capelina; trismus. **C. au'ri**, borax. **C. sim'plex**, bandage for the head or jaw; capelina.

**Cap'ita** (pl. of caput) **cor'porum cavernoso'rum.** Crura of penis. **C. diaphrag'matis**, crura of diaphragm. **C. medul'læ oblonga'tæ**, thalami optici.

**Cap'ital.** Belonging to the head; important. **C. opera'tions**, important or major operations.

**Cap'itate.** Having a head or heads. **C. papil'læ**, fungiform papillæ.

**Capita'tum.** Os magnum.

**Capitel'late.** Having small head or prominence.

**Capitel'lum** (dim. of caput). Alembic; head of a small bone or small head of bone; round lower end of humerus.

**Capitilu'vium** (*caput*, head, *luo*, to wash). Bath or wash for the head.

**Capit'ium.** Head bandage. **C. mag'num quadrangula're** or **quadra'tum**, four-cornered head bandage. **C. mi'nus** or **triangula're**, three-cornered head bandage.

**Capitoduc'tor** (*caput*, head, *duco*, to lead). Obstetrical forceps.

**Capit'ular pro'cess.** Process on dorsal vertebra for attachment of rib.

**Capit'ulum** (dim. of *caput*, head). Alembic; condyle; head of small bone; small head or process. **C. arytenoide'um**, corniculum laryngis. **C. cos'tæ**, head of a rib, see *Costa*. **C. laryn'gis**, corniculum laryngis. **C. mar'tis**, Eryngium campestre. **C. medul'læ spina'lis**, optic thalamus. **C. pi'li**, bulb of hair. **C. Santori'ni**, corniculum laryngis. **C. stape'dis**, elevation for articulation of stapes and incus. **C. ul'næ**, round projection at lower end of ulna.

**Capni'sis** or **Capnis'ma** (*kapnos*, smoke). Fumigation.

**Capnoi'des ca'va** or **Capnor'chis.** Fumaria bulbosa.

**Cap′nos** or **Cap′nus** (*kapnos*, smoke). Fumaria.

**Capotement′** (Fr.). A splashing sound sometimes heard in cases of dilatation of the stomach.

**Cap′paris** or **Cappa′ria.** Caper bush, prickly caper bush; grows on the shore of the Mediterranean; ord. *Capparideæ.* Bark of the root is astringent and diuretic; the buds are stimulant and antiscorbutic. The latter are a well-known pickle—capers. **C. ægypti′aca,** species of Egypt; the root is diuretic and anthelmintic. **C. amygdali′na,** the root and fruit of this South American plant are anodyne and laxative; the flowers are used in jaundice and amenorrhœa; the leaves are antispasmodic. **C. aphyl′la,** this Indian plant is employed as an application to boils, skin diseases, arthritic affections, etc. **C. baduc′ca,** a species of caper, cultivated in India. A liniment is made with its juice and rubbed on painful parts. The flowers are purgative. **C. brevispi′na,** E. Indian plant; the leaves and flowers are cathartic. **C. brey′nia,** plant of West Indies; the bark of the root is diuretic, purgative, and emmenagogue. **C. coria′cea,** plant of Peru; employed in epilepsy and hysteria. **C. cynophalloph′ora,** plant of West Indies; bark of the root is diuretic and purgative; the fruit is antispasmodic. **C. ferrugin′ea,** plant of West Indies; bark of the root is diuretic, cathartic, and emmenagogue. **C. moriso′nia,** of South America, is antispasmodic. **C. sati′va,** C. spinosa. **C. soda′da,** of Asia and Africa; unripe berries are used as a condiment; when ripe they are used for cases of sterility. **C. spino′sa,** capparis.

**Capped hock.** An enlarged bursa with thickened skin over the point of the os calcis in the horse. **C. knee,** bursal enlargement over the knee in the horse.

**Capragi′na** or **Capro′go.** Galega officinalis.

**Cap′rate.** A salt of capric acid.

**Cap′re.** Marabou mulatto, of five combinations, the white element in combination being 40–48, the colored 80–88.

**Capreola′ria va′sa.** Spermatic arteries and veins.

**Cap′reolary** or **Cap′reolate** (*capreolus*, tendril). Twisted, spiral, as the spermatic vessels.

**Capre′olus** (tendril). Helix.

**Cap′ria.** Capparis spinosa.

**Cap′ric acid.** $C_{10}H_{20}O_2$. An acid possessing a more or less marked goat-like odor, found in butter, sweat, and other substances; caproic acid.

**Capricor′nus.** Plumbum.

**Caprifo′lia** (*caper*, goat, *folium*, leaf). Lonicera periclymenum.

**Caprifo′lium distinc′tum.** Lonicera periclymenum. **C. pericly′menum,** Lonicera periclymenum. **C. sympervi′vens,** Lonicera sempervivens. **C. sylvat′icum,** Lonicera periclymenum.

**Caprilo′quium** (*caper*, goat, *loquor*, to speak). Egophony.

**Caprin′ic acid.** Capric acid.

**Capri′zans pul′sus** (*caper*, a goat). Bounding pulse. See *Pulse, caprizant.*

**Cap′roate.** A salt of caproic acid. **C. of gly′ceryl,** caproin.

**Capro′ic** or **Capron′ic acid.** $C_6H_{12}O_2$. An oily substance occurring with capric acid in butter.

**Caproin′.** Caproate of glyceryl; tricaproin is found in butter.

**Cap′rone.** $C_{11}H_{22}O$. Caproic ketone, a volatile oil found in butter and in oil of rue.

**Capron′ic acid.** Caproic acid.

**Cap′royl.** Hexyl.

**Caproylamin′.** $C_6H_{15}N$. Ptomain occurring in the putrefaction of yeast and in cod-liver oil. See *Ptomains* (table).

**Cap′ryl.** Radical of a series including caprylic acid.

**Cap′rylate.** A salt of caprylic acid.

**Cap′rylene.** $C_8H_{16}$. A hydrocarbon derived from caprylic acid.

**Capryl′ic acid.** $C_8H_{16}O_2$. An acid found in butter and cocoanut oil; it forms caprylates.

**Caprylin′.** Caprylate of glyceryl; tricaprylin is found in butter.

**Capsel′la bur′sa pasto′ris.** Thlaspi bursa.

**Cap′sici fruc′tus** (Ph. Br.) The dried ripe fruit of Capsicum minimum. See *Capsicum.*

**Capsi′cia.** A camphor derived from capsicum.

**Capsicine′** or **Capsici′na.** A volatile alkaloid derived from capsicum.

**Cap′sicol.** A volatile oil derived from capsicum.

**Cap′sicum.** (Ph. U. S.) Cayenne or African pepper, the fruit of Capsicum fastigiatum, ord. *Solanaceæ.* The pungent aromatic properties of baccæ capsici, capsicum berries, known in commerce as Guinea pepper, pod pepper, chillies, are yielded to ether, alcohol, and water. Capsicum is highly stimulant and rubefacient, and is used as a condiment. Powdered capsicum has been found efficacious in delirium tremens, in doses of gr. v–x (0.32–0.65). The following are the ordinary preparations, all but the first being official: *C. bags,* small muslin bags containing powdered capsicum, applied as a counterirritant to the gums. *C. plas′ter,* emplastrum capsici; used externally. *Fluid ex′tract of c.,* extractum capsici fluidum; dose, ♏j–iij (0.06–0.19). *Oleores′in of c.,* oleoresina capsici; dose, ♏¼–j (0.016–0.065). *Tinc′ture of c.,* tinctura capsici; dose, ♏x–xxx (0.65–2.0). **C. an′nuum,** chiefly grown in this country, was formerly regarded as the main and official source of capsicum. **C. bacca′tum,** bird pepper. **C. fastigia′tum,** see *Capsicum.* **C. frutes′cens,** of East Indies, spur pepper, goat pepper. These three plants are indigenous in the warmer regions of Asia and America, and are cultivated all over the world. **C. gros′sum,** bell pepper, is considered a variety of C. frutescens. **C. hispan′icum,** Capsicum annuum. **C. lon′gum,** C. annuum. **C. min′imum,** the source of the preparation official in the Ph. Br. **C. tetrago′num,** boneset pepper, from Jamaica; variety of C. annuum.

**Cap′sis.** Quick breathing or swallowing.

**Capsi′tis.** Inflammation of the capsule of the crystalline lens.

**Capsocat′aract.** Capsular cataract.

**Capsot′omy.** Capsulotomy.

**Cap′sula** (dim. of capsa). Capsule. **C. adipo′sa,** external capsule. **C. aq′uea cartilagino′sa,** membrane of Descemet. **C. articula′ris,** capsular ligament. **C. atrabilia′ria,** suprarenal capsule. **C. bul′bi oc′uli,** capsule of Bonnet. **C. commu′nis Glisso′nii,** capsule of Glisson. **C. crystalli′na,** capsule of the crystalline lens. **C. den′tis,** dental follicle or capsule. **C. fibro′sa,** sclerotica; fibrous capsule of the kidney. **C. Glisso′nii** or **hepat′ica,** capsule of Glisson. **C. hæmat′ica,** hæmatic capsule. **C. humo′ris aq′uei,** membrane of Descemet, see *Aqueous humor.* **C. len′tis,** capsule of the crystalline lens. **C. lie′nis,** a splenic corpuscle. **C. lumba′ris,** receptaculum chyli. **C. Malpi′ghii,** a splenic corpuscle. **C. Muller′ii,** Bowman's capsule. **C. nervo′rum,** neurilemma; perineurium. **C. nu′clei cerebel′li,** the white fibres around a dentate body. **C. ova′rii,** the peritoneal covering of the ovary. **C. præaquo′sa,** membrane of Descemet. **C. prostat′ica,** pelvic and prostatic fascia. **C. re′nis** or **rena′lis,** the suprarenal capsule. **C. Ret′zii,** c. prostatica. **C. semina′lis,** seminal vesicle. **C. sequestra′lis** or **seques′tri,** see *Sequestrum.* **C. suprarena′lis,** suprarenal capsule. **C. synovia′lis,** synovial bursa. **C. ve′næ por′tæ,** capsule of Glisson.

**Cap′sular.** Relating to or resembling a capsule. **C. advance′ment,** operation to produce displacement of the insertion forward of the tendon of an ocular muscle, drawing Tenon's capsule with it. **C. ar′teries,** suprarenal arteries and veins; vessels belonging to the suprarenal capsules, divided into the superior, middle, and inferior; the first proceed from the inferior phrenic, the second from the aorta, the third from the renal artery; corresponding veins enter the phrenic, vena cava, and renal veins. **C. cat′aract,** cataract of the capsule of the lens. **C. lig′ament,** articular or fibrous capsule; membranous, fibrous, and elastic bags or capsules, of whitish consistence, thick and resisting, which surround joints, are so called.

**Capsula′ris hu′meroscapula′ris.** Brachiocapsularis muscle.

**Capsula′tion.** Enclosing drugs in capsules to facilitate their administration.

**Cap′sule** (box or case). Name given by anatomists to various enveloping parts which bear no analogy to each other. A gelatin case used to inclose drugs of disagreeable taste. **Artic′ular c.**, capsular ligament of joints. **Atrabil′iary c.**, suprarenal capsule. **Aud′itory c.**, otic vesicle. **C. bacil′lus of Loeb, of ozæna, of Smith**, see *Bacillus*. **C. of Bonnet′**, ocular sheath at equator of eyeball, is pierced by tendons of the oblique muscles and more anteriorly by those of the recti muscles; the posterior portion of the sheath, up to the passage of the tendons, is called the capsule of Bonnet; the anterior portion, the capsule of Tenon. **Bow′man′s c.**, see *Kidney*. **Brood c.**, mother cyst enclosing daughter cysts. **C. of a cell**, cell membane. **Cell′ular c. of the eye**, see *Eye*. **Crys′talline c.**, c. of the lens. **Exter′nal c.**, layer of fatty and connective tissue around the kidney; layer of white nerve-fibres between the claustrum and nucleus lenticularis. **Fi′brous c.**, capsular ligament. **Gel′atin c.**, a capsule of gelatin, in which drugs of unpleasant taste are contained. **C. of Glis′son**, membrane described by Glisson, nothing more than a dense areolar membrane surrounding the vena porta and its ramifications in the liver. **C. of the glomer′ulus**, see *Capsule of Bowman*. **C. of the heart**, pericardium. **Hemorrhoi′dal c.**, an instrument which, embracing the base of a hemorrhoidal tumor, forms a capsule into which Vienna paste may be applied. **Hy′aloid c.**, membrana limitans of the retina. **Inter′nal c.**, white nerve-fibres between the optic thalamus and nucleus caudatus and nucleus lenticularis. **C. of the kid′ney**, fibrous covering of the kidney; renal c. **C. of the lab′yrinth**, bony investment of the membranous labyrinth. **C. of the lens**, a transparent membrane surrounding the crystalline lens. **C. of Malpi′ghi**, Bowman′s c. **C. of Mül′ler**, Bowman′s c. **Na′sal c.**, olfactory c. **C. of nerves**, neurilemma. **Oc′ular c.**, c. of Tenon, see *Eye*. **Olfac′tory c.**, cartilaginous or bony structure in animals in which the olfactory organs are situated. **Op′tic c.**, cartilaginous or bony structure in animals corresponding with the sclerotica in man. **Ova′rian c.**, Graafian vesicle. **Persist′ent c.**, cuticula dentis. **Re′nal c.**, suprarenal or atrabiliary or adrenal capsule, adrenal or suprarenal body; a flat, triangular body covering the upper part of each kidney as with a helmet. The hollow cavity in its interior contains brown, reddish, or yellowish fluid. The adrenal capsules were long supposed to be secretory organs of fancied atrabilis; they are ductless glands, and much larger in the fœtus than in the adult. The following facts are of interest: The weight of the right suprarenal body is 4 g.; left, 4.6 g. (E. Bischoff); height, 20–34 mm.; breadth, 41–54 mm.; thickness (anteroposterior), 3–6 mm., 9 mm. at base (the left is generally smaller and higher than the right). Globular projections occasionally seen on their surface are called *renunculi succenturiati*. *Suprarenal cachexia*, the leading characteristics of which are anæmia, general languor, and debility, remarkable feebleness of the heart′s action, irritability of the stomach, and a peculiar bronzed skin, was first described by Dr. Thomas Addison, of London, as connected with a diseased condition of the suprarenal capsules; hence called *Addison′s disease, bronzed-skin disease*. **Sem′inal c.**, extremity of vas deferens, which is sensibly dilated in the vicinity of the vesiculæ seminales; also the vesiculæ themselves. **Sense c.**, a cavity in animals, as ear, nose, orbit, etc., in which the organs of sense are contained. **C. of spleen**, fibrous investment of that organ. **Suprare′nal c.**, renal c. **Syno′vial c.**, membranous bag surrounding movable articulations and canals and giving passage to tendons; the synovial capsules exude from their articular surface a fluid to favor motions of the parts upon each other; see *Bursa mucosa* and *Synovia*. **C. of teeth**, enamel cuticle. **C. of Ten′on**, see *Capsule of Bonnet*. **C. of urinif′erous tu′bule**, Bowman′s c.

**Capsuli′tis.** Inflammation of a capsule; specifically, of the capsule of the crystalline lens. **C. ocula′ris**, inflammation of the fibrous capsule of the globe of the eye.

**Cap′sulocilia′ris.** Relating to the capsule of the crystalline lens and the ciliary body.

**Cap′sulolentic′ular.** Relating to the crystalline lens and its capsule.

**Cap′sulopu′pillary.** Relating to both the capsule of the lens and the pupil.

**Capsulot′omy** (*capsula*+*tome*, incision). Division of the capsule of the crystalline lens, as practised in cataract operations. The instrument used is called a *cap′sulotome*.

**Capta′tion.** First stage of hypnotism, in which the subject′s attention is fixed.

**Cap′tol.** A brown powder, made by the action of tannic acid on chloral; antiseptic and astringent, and employed also in the treatment of hair and scalp diseases.

**Capula′ga.** Amomum cardamomum.

**Cap′ulum.** Contortion or curvature of the eyelids or other parts.

**Cap′uron′s card′inal points.** Fixed points on the pelvis—the ileopectineal eminence in front, the sacroiliac articulations behind.

**Cap′ut** (head). The head. Top of bone or other part; the head of a small bone is sometimes termed capitulum, cephalidium, cephalis, cephalium. Glans penis. **C. angula′re**, head of quadratus labii superioris muscle. **C. as′peræ arte′riæ**, larynx. **C. auricula′re**, muscular slip from styloglossus muscle, arising from cartilage of ear. **C. cæ′cum co′li** or **C. co′li**, the cæcum. **C. cor′dis**, base of the heart. **C. cor′nu poste′rius**, expanded extremity of posterior horn of lateral half of gray substance of the spinal cord. **C. epididym′idis**, head of epididymis; globus major. **C. galea′tum**, child′s head born with a caul. **C. gal′li, gallina′ceum**, or **gallinag′inis**, an oblong, rounded projection of the mucous membrane in the prostatic portion of the urethra, on the sides of which the ejaculatory ducts open; the veru montanum. **C. gelatino′sum**, mass of gray matter on the back and inner margin of posterior gray column of the spinal cord; substantia gelatinosa. **C. genita′le**, glans. **C. inclava′tum** or **incuvea′tum**, head of child impacted during birth. **C. infraorbita′le**, infraorbital head of quadratus labii superioris. **C. lie′nis**, head or upper end of spleen. **C. ma′jus**, head of epididymis; globus major. **C. medul′læ**, cerebrum. **C. medul′læ oblonga′tæ**, optic thalamus. **C. Medu′sæ**, venous dilatation around the navel in newborn child, and occurring also in cirrhosis and cancer of the liver. **C. mi′nus**, tail of epididymis. **C. mon′achi**, Leontodon taraxacum. **C. obli′quum**, adductor hallucis. **C. ob′stipum**, torticollis. **C. pancrea′tis**, head of pancreas. **C. pe′nis**, glans penis. **C. pur′gia**, remedies for purging the head: errhines, sternutatories, apophlegmatisantia, etc. **C. quadra′tum**, rectangular appearance of the skull noticed in rickets. **C. scap′ulæ**, acromion. **C. succeda′neum** (succedaneous head), tumefied scalp, which first presents in certain cases ol labor. **C. ta′li**, head of astragalus. **C. ter′tium**, adductor magnus femoris. **C. tes′tis**, epididymis. **C. vit′uli**, antirrhinum majus. **C. zygomat′icum**, a head of quadratus labii superioris; levator anguli oris.

**Caque′ta bark.** Carthagena bark.

**Car′a.** Head, as of a bone. **C. schul′li**, Malabar plant, applied externally; maturative and resolvent; decoction of root used internally in ischuria.

**Caraa′te.** Mal de las pintos.

**Carabac′cium.** Aromatic wood of India; tonic, stomachic, and antiscorbutic.

**Carabay′a bark.** From Brazil; allied to cinchona bark; Cinchona elliptica.

**Car′abus.** Genus of coleopterous insects, recommended for toothache, pressed between the fingers and rubbed on the gum and tooth. Some species are vesicant.

**Cara'che.** Pustular eruption on negroes in Peru.

**Caraga'na fla'va** or **macrophyl'la.** Shrub, roots of which are considered in China as tonic and emollient, and used also in gout and rheumatism.

**Carageen'** or **Caragheen'.** Irish moss. See *Chondrus*.

**Carai'pa angustifo'lia.** Astringent tree of Guiana, S. America. **C. fascicula'ta,** S. American tree yielding balsam of tamacoari; used in scabies.

**Caraman'nia gum.** Bassora gum.

**Carama'ta.** Tree in Pomeroon, febrifuge bark of which is used in typhoid and remittent fevers.

**Caram'bola.** Averrhoa carambola.

**Car'amel.** Sugar subjected to the action of heat, nearly 400° F., until partly decomposed; deliquescent, of brown color, and strong, agreeable, empyreumatic odor.

**Caran'na** or **Carag'na.** Tacamahaca caragna, gum caranna; gum resin flowing from Icico caranna, in tropical America, and formerly used as vulnerary and in plasters.

**Cara'pa.** A genus of trees of the order *Meliaceæ*, natives of the tropics. **C. guianen'sis,** andiroba; S. American tree, ord. *Meliaceæ;* bark is bitter and astringent; antiperiodic and anthelmintic, virtues depending upon a peculiar bitter principle, *carapin;* oil of the nuts, oleum carapæ, or crab oil, is bitter and anthelmintic, and poisonous to insects. **C. guineen'sis,** indigenous in Senegal; oil expressed from it—kundah or tallicoonah oil—is purgative and anthelmintic; decoction of wood is tonic, and the resin is used as fumigative in chronic otorrhœa. **C. in'dica** or **moluccen'sis,** E. Indian tree, bark and root of which are bitter, tonic, and used in diarrhœa and dysentery; seeds are used in colic. **C. rumph'ii,** of E. Indies, has similar properties. **C. toulou'couna,** bark has properties similar to C. guineensis; from it a bitter resinoid, *touloucounin,* is obtained.

**Car'apat.** Castor oil; Ricinus communis.

**Cara'te** or **Cara'thes.** Form of endemic chloasma in S. America, affecting colored races particularly; pinta disease.

**Car'away.** Carum. **C. seeds,** see *Carum.* **C. wa'ter,** aqua carui.

**Car'bamate.** A salt of carbamic acid. **C. of eth'yl,** urethane.

**Carbam'ic acid.** Carbonic acid in which OH is replaced by $NH_2$.

**Car'bamide.** Urea, regarded as the union of an acid radical with the compound radical amidogen, $NH_2$; or compound of urea and a radical.

**Car'banil.** $C_7H_5NO$. Phenylisocyanate, resulting from the distillation of oxanilide.

**Carbanilam'ide.** Phenylurea or amide of carbanitic acid.

**Carbanil'ethane.** Ethyl phenylcarbamate; phenylurethane.

**Carban'ilide.** $C_{13}H_{12}N_2O$. Diphenyl urea, resulting from the heating of carbanilamide with anilin, or from the action of phosgene gas on anilin.

**Car'basa** or **Car'basus.** Lint; surgical gauze.

**Car'bazol.** Diphenylimide.

**Carbaz'otate.** Picrate. **C. of ammo'nium,** picrate of ammonium; combination of ammonia with carbazotic or picric acid; found efficient in intermittent fever and whooping-cough.

**Carbazot'ic acid.** Picric acid.

**Carbe'nia benedic'ta.** Blessed thistle; tonic.

**Car'bide.** Carburet.

**Car'binol.** Methyl alcohol.

**Car'bo.** Carbon (chemical symbol C); an element extensively distributed in nature, the presence or absence of which forms the distinguishing mark of organic and inorganic chemical compounds respectively; mineral coal; charcoal; also anthrax. In the Ph. U. S. and Br., charcoal, the official preparations being distinguished as *carbo animalis* and *carbo ligni,* see these titles. **C. anima'lis,** animal charcoal; usually prepared by subjecting bones to red heat in close vessels; result is bone-black or ivory-black; given in same cases as carbo ligni. The Ph. U. S. contains a formula for the preparation of *carbo animalis purificatus,* purified animal charcoal, employed in pharmaceutical manipulations. **C. car'nis,** c. animalis. **C. fu'ci vesiculo'si,** charcoal prepared from seawrack; applied externally in scrofulous enlargements. **C. huma'num,** human excrement. **C. lig'ni** (Ph. U. S. and Br.), charcoal, wood charcoal; fresh charcoal is antiseptic; used to improve digestion; as cataplasm to gangrenous and fetid ulcers, tinea, etc., and unwisely as a tooth-powder; dose, gr. v–ʒj (0.32–4.0). **C. os'sium,** animal charcoal. **C. pal'pebræ** or **palpebra'rum,** anthracosis. **C. pa'nis,** burnt bread. **C. san'guinis,** burnt blood. **C. spon'giæ,** spongia usta. **C. vegeta'bilis** or **vegeta'lis,** wood charcoal.

**Carbohæ'mia** (*carbo + haima,* blood). Accumulation of waste and excrementitious carbon or of carbon compounds in the blood.

**Carbohy'drates.** Composed of carbon, hydrogen, and oxygen, the H and O forming water; starch, dextrin, and sugar are carbohydrates. They generally contain six atoms of carbon or a multiple of six; most of them are white, solid, and soluble in water. The most important carbohydrates are the sugar and starch groups, saccharoses, glucoses, and amyloses, as arranged in the following table (Simon):

| | Glucoses. | Saccharoses. | Amyloses. |
|---|---|---|---|
| | $C_6H_{12}O_6$. | $C_{12}H_{22}O_{11}$. | $C_6H_{10}O_5$. |
| Vegetable | Grape sugar,<br>Fruit sugar,<br>Mannitose, | Cane sugar,<br>Melitose,<br>Maltose, | Starch.<br>Dextrin.<br>Gums.<br>Cellulose. |
| Animal, | Inosite, | Milk sugar, | Glycogen. |

**Carbohydratu'ria.** Glycosuria.

**Car'bolate.** Salt formed by the union of carbolic acid with a base. Carbolates, especially calcium carbolate, have been much used as deodorizen and disinfectants, and internally in diarrhœa, etc.

**Car'bol-fuchsin'.** A mixture of a 5 per cent. aqueous solution of carbolic acid, 90 parts, and a 10 per cent. alcoholic solution of fuchsin, 10 parts; used in the staining of histological specimens.

**Carbol'ic acid** (*carbo + oleum,* oil). $C_6H_{51}HO$. Phenic acid, phenylic acid, phenol, coal-tar, creosote, hydrated oxide of phenyl, phenylic alcohol, phenyl hydrate. Solid substance obtained from the products of distillation of coal-tar, between 180°–190° C. (356°–374° F.). More closely identified in composition with alcohols than acids; white or colorless when pure; odor and taste like creosote; fusible at from 93° to 106° F., forming an oily liquid, soluble in 20 parts of water at 60° F., and in alcohol, ether, glycerin, and essential oils. It is officinal in Ph. U. S. and Br., under the name *acidum carbolicum,* which see. It is generally employed externally; when applied pure or in strong solution, it is a strong irritant, exciting burning pain, which is followed by local anæsthesia. It prevents or corrects putrefaction in animal substances, and has therefore been used in cases of purulent infection, dissection wounds, hospital gangrene, etc. It has also been extensively employed as a disinfectant, and in microparasitical diseases, such as scabies, porrigo, thrush, etc., applied in a weak solution or ointment. Carbolic acid may be prescribed externally in aqueous, alcoholic, and ethereal solutions, solution in glycerin—*glyceritum acidi carbolici* (Ph. Br.)—lard, etc., in form of carbolized or antiseptic liniments, ointments (*unguentum acidi carbolici,* Ph. U. S. and Br.), plasters, etc. The Ph. Br. has *acidum carbolicum liquefactum,* carbolic acid, liquefied by the addition of 10 per cent. of water. *Acidum carbolicum crudum* (Ph. U. S.) consists of carbolic and cresylic acids, with impurities derived from coal-tar, and is used externally or for disinfecting purposes.

**Car'bolism.** Deleterious effects upon the system by the absorption of carbolic acid when taken internally to excess or applied to a denuded surface, with perhaps vomiting and diarrhœa, coma, anæsthesia, dark urine, and sometimes a fatal result. If the acid has been swallowed, albuminous drinks, sweet oil, lime-water, or a soluble sulphate should be given.

**Car'bolized.** Carbolated; treated with carbolic acid, so as to make the substance antiseptic.

**Carbolu'ria.** Occurrence of an aromatic compound in the urine following the internal administration of carbolic acid.

**Car'bon** (symbol, C). A chemical element found in all organic compounds. See *Carbo*. **C. bichlo'ride,** carbonic chloride, tetrachloride of carbon; transparent, colorless fluid with ethereal odor; made from chloroform by the action of chlorine, by passing dry chlorine through a bottle containing sulphuret of carbon, or by the decomposition with chlorine of olefiant gas. As an anæsthetic it resembles chloroform, but has a more depressing effect on the action of the heart. It has been used hypodermically in neurotic affections in doses of ♏x (0.65). **C. bisul'phide,** c. sulphide. **C. diox'ide,** carbonic acid. **C. monox'ide,** carbonic oxide. **C. sesquichlo'ride,** c. trichloride. **C. sesqui-i'odide** or **sesqui-i'oduret,** made by mixing concentrated alcoholic solutions of iodine and carbonate of potassium until the former loses its color; a solution is thus obtained from which water throws down a yellow precipitate, sesqui-iodide of carbon; used in enlarged glands and in cutaneous affections; applied externally. **C. sul'phide** or **sul'phuret,** carburet of sulphur, a transparent, colorless fluid, with very penetrating, disagreeable odor and taste, cooling at first, but afterward acrid and aromatic; diffusible, excitant, diaphoretic, diuretic, emmenagogue, and antispasmodic; used externally when a cooling influence must be rapidly exerted and as a local anæsthetic, and also inhaled as an anæsthetic. **C. terchlo'ride** or **trichlo'ride,** formed by the action of chlorine on chlorohydric ether under the influence of sunlight; has been given in cholera and applied to correct the fetor of foul ulcers. **C. tetrachlo'ride,** carbon bichloride.

**Carbona'ceous.** Carboniferous.

**Carbonæ'mia.** Undue quantity of carbon—carbon dioxide—in the blood.

**Carbon'agogue** (*carbon + agogos,* leading). Agent that expels carbon.

**Carbonaphthol'ic acid.** Oxynaphthoic acid; antiseptic.

**Carbo'nas.** Carbonate; generic name for salt formed by the combination of carbonic acid with salifiable base.

**Car'bonate.** A salt of carbonic acid.

**Car'bonated.** Impregnated with carbonic-acid gas.

**Carbo'nei disul'phidum.** (Ph. U. S.) Carbon bisulphide or disulphide; internally not important except as a poison; externally, counterirritant and a local anæsthetic; used as a solvent.

**Carbo'neum.** Carbon.

**Carbon'ic.** Relating to or derived from carbon. **C. acid,** factitious or fixed air, carbonaceous or calcareous or aërial or mephitic acid, mephitic air, carbon dioxide; gas supporting neither respiration nor combustion, exhaled from the lungs in respiration. It has been used in medicine by rectal insufflation for the control of spasmodic affections, such as whooping-cough. It is the main agent in effervescent draughts, fermenting poultices, etc. It is often found occupying the lower parts of mines—then called choke-damp—caverns, tombs, wells, brewers' vats, etc., and not unfrequently has been a cause of death; lime thrown into such places absorbs the carbonic acid. **C.-a. wa'ter,** aqua acidi carbonici, water impregnated with carbonic-acid gas. **C. anhy'dride,** carbonic-acid gas. **C. ox'ide,** carbonous oxide; gas resulting from passing carbonic acid over red-hot charcoal or metallic iron; positively deleterious, often causing injurious phenomena which have been ascribed to the inhalation of carbonic acid; when directed on the denuded surface it produces anæsthetic effects.

**Carbonif'erous** (*carbo + fero,* to bear). Containing carbon.

**Carboniza'tion.** Process by which substances are changed into charcoal by combustion.

**Car'bonize.** To change into charcoal, or char.

**Carbonom'etry** (*carbo + metron,* measure). Estimation of the amount of carbonic acid in the air of expiration.

**Car'bonous.** Relating to or containing carbon.

**Car'bonyl.** An assumed bivalent radical, CO, which in combination with hydroxyl, OH, forms carboxyl.

**Carborun'dum.** A mineral substance formed in the electric furnace, harder than emery and used as an abrasive.

**Carbosty'ril.** $C_9H_7NO$. Oxyquinolin, a crystalline substance formed by the digestion of quinolin with a solution of calcium chloride.

**Carbosulphu'ric acid.** Sulphocarbolic acid.

**Carboxyhæmoglo'bin.** Compound of hæmoglobin and carbon monoxide, occurring in poisoning by the latter gas; owing to its not being broken up on contact with oxygen it causes suffocation by paralyzing the erythrocytes.

**Car'boxyl.** An assumed radical, $CO_2H$, existing in organic acids, compounded of carbonyl and hydroxyl, various salts being formed by the replacement of the H by metals.

**Car'buncle** (dim. of *carbo,* live coal). Localized, deeply seated suppurative inflammation involving the skin and cellular tissue, accompanied with a hard, painful swelling and asthenia; often erroneously termed anthrax, although allied to it in symptoms, etc. **C. ber'ry,** terminthus. **Fa'cial c.,** œdematous, inflammatory swelling of the lip involving the nose and cheek, often preceded by a pustule or vesicle; painful, sloughing, and accompanied with constitutional depression; it is sometimes malignant, being then miscalled malignant pustule. **Fun'gous c.,** chronic fungous, discharging tumor on the head or trunk; terminthus. **C. of tongue,** glossanthrax.

**Car'buncled face.** Gutta rosea.

**Carbun'cular** or **Carbun'culate.** Relating to or resembling carbuncle; anthracoid. **C. erysip'elas,** symptomatic anthrax. **C. exan'them,** anthracia.

**Carbuncula'tion.** Formation of carbuncle; development of gangrene.

**Carbun'culoid.** Resembling carbuncle.

**Carbunculo'sis.** Anthracosis.

**Carbun'culus.** Carbuncle; anthrax. **C. angino'sus,** cynanche maligna. **C. benig'nus,** boil. **C. bul'bi,** carbuncular inflammation of the eye. **C. contagio'sus,** see *Anthrax*. **C. epizoöt'icus,** malignant pustule. **C. fungoi'des,** fungous carbuncle. **C. gal'licus,** see *Anthrax*. **C. hungar'icus,** see *Anthrax*. **C. labio'rum et gena'rum,** cancer aquaticus. **C. mag'nus** or **malig'nus,** contagious anthrax. **C. oc'uli,** anthracosis of the eye. **C. palpebra'rum,** gangrenous inflammation of the eyelids. **C. pestilentia'lis,** contagious anthrax. **C. polo'nicus,** see *Anthrax*. **C. pulmo'num,** gangrenous inflammation of the lungs. **C. septentriona'lis,** see *Anthrax*. **C. sep'ticus,** contagious anthrax. **C. sibe'ricus,** malignant pustule. **C. sim'plex** or **sporad'icus,** anthrax. **C. symptomat'icus,** a carbuncle occurring as a symptom of other affections, as certain fevers or diabetes. **C. ulcusculo'sus,** cynanche maligna.

**Car'buret.** Compound of carbon and some other element; carbide.

**Car'bureted hy'drogen.** See *Hydrogen*.

**Car'byl.** Ethylene in its action as a basic radical.

**Carbylam'ine.** Hydrocyanic acid; also a class of colorless, malodorous liquids isomeric with nitrites, and decomposed with facility into formic acid and amines.

**Carcassone's' lig'ament.** Deep layer of the superficial fascia of the perineum.

**Carcinæ′mia.** Cancerous cachexia.

**Carcinelco′sis** (*karkinos*, cancer, *helkosis*, ulceration). Cancerous ulcer.

**Carcino′des.** Cancerous or canceroid.

**Car′cinoid.** Canceroid.

**Carcino′ma** (*karkinos*, cancer). Cancer; sometimes employed, by those who apply the term cancer to all malignant neoplasms, to designate epithelial cancer as opposed to sarcoma. **C. alveola′re,** colloid cancer. **C. asbol′icum,** chimney-sweepers' cancer. **Atroph′ic c.,** barsati. **C. caminario′rum,** chimney-sweeper's cancer. **C. collo′des** or **colloi′des,** see *Colloid.* **C. cuta′neum** or **cu′tis,** cancer of the skin. **C. cylindromato′sum,** a cancer in which the cells are cylindrical in form and in which hyaline degeneration is usually present. **C. du′rum,** scirrhus. **C. encephaloi′des,** encephaloid cancer. **C. epithelio′des** or **epithelio′sum,** epithelial cancer. **C. fascicula′tum,** spindle-celled sarcoma. **C. fibro′sum,** scirrhus. **C. gelatino′sum,** colloid cancer. **C. gigan′to-cellula′re,** a form of cancer marked by the presence of giant cells. **C. glandula′re,** glandular cancer. **Gum c.,** colloid cancer. **C. hæmato′des,** hæmatodes fungus. **C. hyali′num,** colloid cancer. **C. lenticula′re,** scirrhous cancer of the skin, afterward involving the glands. **C. medulla′re** or **medullo′sum,** encephaloid. **C. melano′des** or **melanot′icum,** melanotic cancer. **C. mol′le,** encephaloid. **C. mucip′arum** or **muco′sum,** colloid. **C. myxomato′des,** cancer in which mucous tissue is involved. **C. ni′grum,** melanotic cancer. **C. osteoi′des,** spina ventosa; osteoid cancer. **C. reticula′re** or **reticula′tum,** scirrhus. **C. sarcomato′des,** sarcomatous cancer. **C. scirrho′sum,** scirrhus. **C. scro′ti,** chimney-sweepers' cancer. **C. sim′plex,** scirrhus. **C. spongio′sum,** encephaloid; hæmatodes fungus. **Squam′ous-celled c.,** epithelial cancer. **C. testic′uli,** see *Sarcocele.* **C. tubero′sum,** cancer involving connective tissue, nodules appearing on various parts, going on to softening and ulceration. **Tu′bular c.,** cylindroma. **C. u′teri,** metrocarcinoma; metroscirrhus. **C. ventric′uli,** gastroscirrhus. **C. villo′sum,** villous cancer; papilloma.

**Carcino′matous.** Relating to carcinoma.

**Carcinomelco′sis.** Carcinelcosis.

**Carcino′ses.** A family of diseases embracing different forms of cancer.

**Carcino′sis.** General development of carcinoma; cancerous cachexia. **Mil′iary c.,** a generalization of cancer, the disease appearing as disseminated nodules in various parts of the body.

**Carcino′sus.** Cancerous.

**Car′cinous.** Cancerous.

**Car′cinus.** Cancer.

**Cardaman′tica.** Cardamine pratensis; Lepidium iberis.

**Cardamine** (kar-dam′i-ne). A genus of shrubs of the order *Cruciferæ.* **C. ama′ra,** European bitter cress; antiscorbutic. **C. chelido′nia,** herb of S. Europe; antiscorbutic. **C. fonta′na,** Sisymbrium nasturtium. **C. hirsu′ta,** a species of small bitter cress; its properties are those of C. amara. **C. impa′tiens,** a species of England and France, with similar properties. **C. mi′nor,** Tropæolum majus. **C. nastur′tium,** Sisymbrium nasturtium. **C. praten′sis,** cardamom, cardamum, ladies' smock, cuckoo flower, common bitter cress, meadow cress. The flowers are alterative, antiscorbutic, and antispasmodic. **C. umbro′sa,** C. amara.

**Car′damom.** Fruit of Elettaria repens (Ph. U. S.) and various species of amomum and elettaria; carminative and aromatic; dose, gr. iij–ʒj (0.2–4.0); of the *tincture* and of the *compound tincture* (both official), ʒj–ij (4.0–8.0). **Bengal′ c.,** Amomum maximum. **Clus′ter c.,** Amomum cardamomum. **Great′er c.** or **great′er Ja′va c.,** Amomum grana paradisi. **Ja′va c.,** Amomum maximum. **Les′ser c.,** Amomum cardamomum. **Long c.,** fruit of Elettaria major, from Ceylon. **Madagas′car c.,** fruit of Amomum angustifolium or A. grana paradisi. **Mal′abar c.,** variety of lesser cardamom, see *Amomum cardamomum.* **Nepal′ c.,** Amomum maximum. **Offic′ial** or **offic′inal c.,** Amomum cardamomum. **Round c.,** Amomum cardamomum. **Small c.,** lesser c. **True c.,** Amomum cardamomum.

**Cardarel′li's symptom.** See *Oliver's symptom.*

**Car′den's amputa′tion.** See *Amputation.*

**Car′dia** (the heart). Superior or œsophageal orifice of the stomach. The heart.

**Car′diac.** Relating to the heart or to the upper orifice of the stomach; a cordial; tonic to the heart. **C. an′eurysm,** aneurysm of the heart. **C. ap′oplexy,** hemorrhage in the structure of the heart. **C. ar′teries,** coronary arteries, two in number; they arise from the aorta, a little above the free edge of the sigmoid valve, and are distributed on both surfaces of the heart. **C. asth′ma,** asthma dependent on disease of the heart. **C. cy′cle,** period of a systole and diastole of the heart. **C. gan′glia,** minute ganglia upon nerves distributed to the heart. **C. gan′glion,** ganglion of Wrisberg, nerve ganglion situated beneath the arch of the aorta, to the right side of the ligament of the ductus arteriosus in the superficial cardiac plexus. **C. glands,** small glands at the cardiac opening of the stomach; small lymphatic glands in the mediastinum. **C. im′pulse,** visible elevation of the chest wall from movement of the heart. **C. mur′murs,** see *Murmurs.* **C. mus′cle,** the muscular substance of the heart. **C. nerves,** commonly three on each side, superior, middle, and inferior, furnished by the corresponding cervical ganglia. Usually there are two on the left side, the upper and middle, drawing their origin from the last two cervical ganglia. There are, besides, cardiac filaments from the pneumogastric nerve, confounded with the above. **C. notch,** space on the anterior surface of the left lung for the apex of the heart. **C. or′ifice,** opening between the stomach and the œsophagus. **C. or′ifices,** openings between the cavities of the heart. **C. plex′us,** there are three plexuses: 1. *Great cardiac plexus,* situated upon the bifurcation of the trachea; formed by the convergence of the middle and inferior cardiac nerves, and by branches from the pneumogastric, descendens noni, and first thoracic ganglion. 2. *Anterior cardiac plexus,* situated in front of the ascending aorta, near its origin; it is formed by filaments from the superior cardiac nerves, from the cardiac ganglion, and from the great cardiac plexus; filaments from this plexus accompany the left coronary artery, and form the anterior coronary plexus. 3. *Posterior cardiac plexus,* seated upon the posterior part of the ascending aorta, near its origin; it is formed by branches from the great cardiac plexus, and divides into two sets of branches, which together constitute the posterior coronary plexus. **C. revolu′tion,** period of a systole and diastole of the heart. **C. sed′atives,** substances which diminish the force and frequency of the action of the heart. **C. stim′ulants,** substances which speedily increase the force and frequency of the pulse in cases of depressed vitality, etc. **C. ton′ics,** substances which do not exhibit any immediate action on the heart, but which gradually increase the force of the pulse. **C. valves,** see *Heart.* **C. veins,** coronary veins, commonly four in number, two anterior and two posterior; of the former—venæ innominatæ of Vieussens—one, which runs along the right border of the heart, is called the vein of Galen; the cardiac veins open into the right auricle by one orifice, furnished with a valve.

**Cardi′aca cris′pa** or **lyc′opus.** Leonurus cardiaca. **C. pas′sio,** cardialgia. **C. triloba′ta** or **vulga′ris,** Leonurus cardiaca.

**Cardiag′ra** (*kardia*, heart, *agra*, seizure). Gout or pain of the heart.

**Cardiag′raphy** (*kardia*, heart, *graphe*, description). Anatomical description of the heart.

**Car′dial.** Relating to the heart; cardiac.

**Cardial′gia** (*kardia*, heart, *algos*, pain). Pain of the stomach; stomach-ache; heartburn; impaired appetite, with gnawing or burning pain in the stomach or epigastrium; a symptom of dyspepsia; neuralgia of the stomach; pyrosis. **C. inflammato′ria,**

gastritis. **Ner′vous c.,** a painful affection of the stomach not dependent on a perceptible change of structure. **C. sputato′ria,** pyrosis.

**Cardial′gic.** Relating to or affected with cardialgia.

**Cardial′gy.** Cardialgia.

**Cardial′ogy** (*kardia,* heart, *logos,* discourse). The science of the development, structure, and functions of the heart.

**Cardiamor′phia** (*kardia,* heart, *a,* priv., *morphe,* shape). Malformation of the heart.

**Cardianæsthe′sia** or **Cardianæsthe′sis.** Loss of sensibility of the heart.

**Cardianas′trophe** (*kardia,* heart, *anastrophe,* turning round). Transposition or displacement of the heart.

**Cardianeu′ria** (*kardia,* heart, *a,* priv., *neuron,* nerve). Deficient nervous power of the heart.

**Cardianeurys′ma.** Aneurysm or extreme dilatation of the heart; dilatation of the cardiac orifice of the stomach.

**Car′diant.** Medicine affecting the action of the heart.

**Cardiaple′gia.** Cardioplegia.

**Cardiarc′tia** (*kardia,* heart, *arctus,* narrow). A term denoting diminution of the cavities of the heart from hypertrophy of the walls; cardiostenosis.

**Cardiasth′ma.** Cardiac asthma.

**Cardiatax′ia** (*kardia,* heart, *a.,* priv., *taxis,* order). Want of coordination in the movements of the heart.

**Cardiatax′ic.** Relating to or affected with cardiataxia.

**Cardiate′lia.** Defective development of the heart; atelecardia.

**Cardiat′omy.** Cardiotomy.

**Cardiatroph′ia.** Atrophy of the heart.

**Cardiaux′e** (*kardia,* heart, *auxe,* increase). Hypertrophy of the heart.

**Cardicente′sis** (*kardia,* heart, *kentesis,* puncture). Puncture of the heart; aspiration of the heart.

**Cardiechem′ata** (*echema,* sound). Heart sounds.

**Cardiecta′sia** or **Cardiec′tasis** (*kardia,* heart, *ektasis,* extension). Dilatation of the heart; cardianeurysma. **C. partia′lis,** aneurysm of the heart.

**Cardielco′sis** (*helcos,* ulcer). Ulceration of the heart.

**Cardiethmolipo′sis** (*kardia,* heart, *ethmos,* sieve, *lipos,* fat). Deposit of adipose matter in the connective tissue of the heart; steatosis cordis.

**Cardieurys′ma.** Cardianeurysma.

**Cardihelco′sis.** Ulceration of the heart.

**Car′dinal.** Chief; main; of prime importance; red in color. **C. flow′er,** Lobelia cardinalis. **C. f., blue,** Lobelia syphilitica. **C. plant,** Lobelia cardinalis. **C. points,** principal nodal and focal points associated with refraction of spherical surfaces. **C. veins,** veins in the embryo passing from the Wolffian bodies to the heart.

**Cardinamen′tum** (*cardo,* hinge). Ginglymus; gomphosis; articular surface of the inferior extremity of the humerus.

**Cardine′.** An animal extract made from bullocks' or sheep's hearts, which has been used as a cardiac tonic and diuretic.

**Cardioaor′tic.** Relating to the heart and the aorta.

**Car′dioarte′rial.** Relating to the heart and arteries. **C. in′terval,** difference in time between the apex beat and the radial pulse.

**Cardiobot′anum.** Centaurea benedicta.

**Car′diocele** (*kele,* rupture). Hernia of the heart, especially into the abdominal cavity.

**Cardiocente′sis.** Cardicentesis.

**Cardiocla′sis** (*klasis,* rupture). Rupture of the heart.

**Cardiode′mia,** (*demos,* fat). Fatty heart.

**Cardiodyn′ia** (*kardia,* heart, *odyne,* pain). Pain in the heart or cardiac region; cardialgia. **C. spasmod′ica intermit′tens,** angina pectoris.

**Cardiodyn′ic.** Relating to pain in the heart.

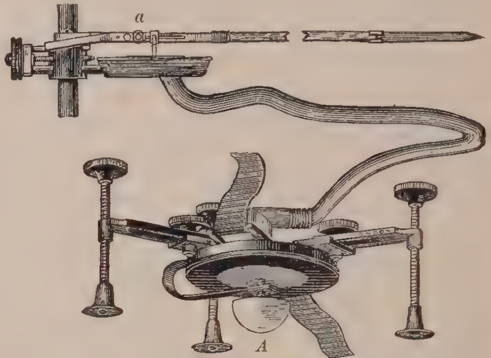
**Cardiodysæsthe′sia** or **Cardiodysæsthe′sis.** Impaired sensibility of the heart.

**Cardiodysneu′ria.** Impaired nervous supply to the heart; want of tone in the heart.

**Cardiog′mus.** Cardialgia; palpitation; obscure aneurysm of the heart or great vessels; angina pectoris. **C. cor′dis sinis′tri,** angina pectoris. **C. strumo′sus,** exophthalmic goitre.

**Car′diogram.** Tracing of the movements or apex-beat of the heart by a cardiograph.

**Car′diograph** (*kardia,* heart, *grapho,* to write). Instrument in which the cardiac movements are recorded by means of a writing lever, similar to a sphygmograph.



Cardiograph. *A*, pad applied to the thorax over the heart; *a*, recording style.

**Cardiog′raphy.** Examination with the cardiograph.

**Cardiohepat′ic.** Relating to both the heart and the liver. **C. tri′angle,** area in right fifth interspace separating the right heart and the liver. The apex of the triangle points to the sternal edge, the base to the axilla.

**Cardioinhib′itory cen′tre.** Supposed nerve centre in medulla oblongata arresting the heart's action when stimulated. **C. nerves,** fibres of the spinal accessory nerve to the par vagum.

**Cardiokine′sis** (*kardia,* heart, *kinesis,* movement). Cardiac action.

**Cardiokinet′ic.** Causing movement of the heart; any drug or other agent that stimulates the cardiac movements.

**Car′diolith** (*kardia,* heart, *lithos,* stone). Concretion within the heart or its muscle.

**Cardiol′ogy.** Cardialogy.

**Cardiomala′cia** (*kardia,* heart, *malakia,* softness). Softening of the heart from inflammation or as a consequence of a lesion of the function of nutrition.

**Cardiom′eter.** See *Hæmodynamometer.*

**Cardiom′etry** (*kardia,* heart, *metron,* measure). Measurement of the heart, as by percussion and auscultation.

**Cardiomyolipo′sis** (*kardia,* heart, *mys,* muscle, *lipos,* fat). Steatosis cordis; fatty degeneration of the heart.

**Cardion′cus** (*kardia,* heart, *onkos,* tumor). Aneurysm of the heart.

**Cardioneural′gia.** Neuralgia of the heart; angina pectoris.

**Cardiopal′mus** (*kardia,* heart, *palmos,* palpitation). Rapid and feeble palpitation or fluttering of the heart.

**Cardioparap′lasis** or **Cardioparaplas′mus** (*kardia,* heart, *paraplazo,* to lead astray). Malformation of the heart.

**Cardiopath′ia** or **Cardiop′athy** (*kardia,* heart, *pathos,* affection). Disease of the heart.

**Cardiopericardi′tis.** Inflammation of both heart muscle and pericardium.

**Car′diophone** (*kardia,* heart, *phone,* sound). An instrument for rendering the heart sounds more distinct.

**Cardiophthal′mos** (*kardia,* heart, *ophthalmos,* eye). Exophthalmic goitre.

**Cardioplec'tic.** Relating to cardioplegia; one so affected.

**Cardiople'gia** (*kardia*, heart, *plege*, a stroke). Paralysis of the heart; wound of the heart; spasm of the cardiac orifice of the stomach.

**Cardiopleth'ora.** Engorgement of the heart with blood.

**Cardiopneumat'ic** (*kardia*, heart, *pneumon*, lung). Relating to the heart and lungs. **C. move'ments,** movements of the air in respiration, due to pulsations of the heart and the great vessels.

**Cardiopneu'mograph** (*kardia*, heart, *pneumon*, lung, *grapho*, to write). Instrument devised to describe or register the movement of the air in respiration as affected by the systole and diastole of the heart and the action of the larger vessels.

**Cardiopolyæ'mia** Cardiaplethora.

**Cardiopto'sis** (*kardia*, heart, *ptosis*, falling). An abnormally low position of the heart.

**Cardiopul'monary** or **Cardiopulmon'ic.** Cardiopneumatic.

**Cardiopunc'ture.** Puncture of the heart, as with a needle, to study its movements cardiographically; cardiocentesis.

**Cardiopylo'ric.** Relating to both cardiac and pyloric orifices of the stomach.

**Car'diorespi'ratory mur'mur.** See *Murmur*.

**Cardiorrheu'ma** (*kardia*, heart, *rheuma*, defluxion). Rheumatism of the heart.

**Cardiorrhex'is** (*kardia*, heart, *rhexis*, laceration). Laceration or rupture of the heart.

**Cardioscirrho'sis.** Scirrhus of the heart.

**Cardiosclero'sis** (*kardia*, heart, *skleros*, hard). Induration of the heart through overgrowth of fibrous tissue.

**Car'dioscope** (*kardia*, heart, *skopeo*, to see). Instrument for observing heart movements.

**Car'diospasm.** Spasmodic action of the cardiac orifice of the stomach.

**Cardiosper'mum halicac'abum.** Root of this plant of India, winter cherry, balloon-vine, heartseed, growing in U. S., is aperient; leaves are expectorant; externally is applied to rheumatic parts.

**Cardiosphyg'mograph.** Cardiograph and sphygmograph combined.

**Cardiosteno'sis** (*kardia*, heart, *stenosis*, narrowing). Contraction of the openings or cavities of the heart.

**Cardiothy'roid exophthal'mos.** Exophthalmic goitre.

**Cardiot'omy** (*kardia*, heart, *tome*, incision). Dissection of the heart; incision into the heart.

**Cardiotox'ic** (*kardia*, heart, *toxicon*, poison). Poisonous to the heart.

**Cardiotrau'ma** (*kardia*, heart, *trauma*, wound). Wound of the heart.

**Cardiot'romus** (*kardia*, heart, *tromos*, tremor). Rapid and feeble palpitation or fluttering of the heart.

**Cardiotroph'ia** (*kardia*, heart, *trophe*, nourishment). Nutrition of the heart.

**Car'diovalvuli'tis.** Inflammation of the valves of the heart.

**Cardiovas'cular.** Relating to both heart and bloodvessels.

**Cardipericardi'tis.** Cardiopericarditis.

**Cardit'ic.** Cardiac; relating to carditis.

**Cardi'tis.** Inflammation of the myocardium or muscular substance of the heart; myocarditis. The symptoms are often confounded with those of pericarditis. Carditis is also employed to denote general inflammation of the heart, and includes endocarditis, myocarditis, and pericarditis. **C. exter'na,** pericarditis. **C. inter'na,** endocarditis. **C. membrano'sa,** pericarditis. **C. muscula'ris,** myocarditis. **C. polypo'sa,** polypi of the heart. **C. sero'sa,** pericarditis.

**Cardivalvuli'tis.** Cardiovalvulitis.

**Car'do** (a hinge). Ginglymus.

**Car'dol.** Acrid vesicating oil from the juice of the cashew nut, Anacardium occidentale. Also the name of a synthetic remedy used as an hypnotic and intestinal antiseptic; tribromsalol.

**Cardo'leum.** See *Anacardium occidentale*.

**Cardoon'.** Cynara cardunculus.

**Cardopath'ium, Cardopat'ium,** or **Cardopa'tum corymbo'sum.** Acronarcotic herb of Southern Europe; employed externally in cutaneous affections, as the itch, to check gangrene, and for odontalgia.

**Cardopat'ium.** Cardopathium; also Carlina acaulis.

**Cardopericardi'tis.** Cardiopericarditis.

**Car'duus.** A genus of herbs of the order *Compositæ*. **C. acan'thus,** Acanthus mollis. **C. al'tilis,** Cynara scolymus. **C. benedic'tus,** Centaurea benedicta. **C. brazilia'nus,** Bromelia ananas. **C. cni'cus,** Centaurea benedicta. **C. domes'ticus cap'ite majo'ri,** Cynara scolymus. **C. hæmorrhoida'lis,** Cirsium arvense. **C. maria'nus** or **Mari'æ,** common milk thistle, ladies' thistle; ord. *Compositæ*; bitter tonic; seeds are oleaginous. **C. pi'neus,** Atractylis gummifera. **C. sati'vus,** Carthamus tinctorius. **C sati'vus nonspino'sus,** Cynara scolymus. **C. solstitia'lis,** Centaurea calcitrapa. **C. stella'tus,** Centaurea calcitrapa. **C. tomento'sus,** Onopordium acanthium. **C. ven'eris,** Dipsacus fullonum.

**Care'na.** Twenty-fourth part of a drop.

**Care'num.** Head.

**Care'taker.** Nurse.

**Ca'reum.** Carum.

**Ca'rex arena'ria.** German sarsaparilla. See *Sarsaparilla*. **C. dis'ticha,** root of this herb of Europe and N. America is diaphoretic and emollient.

**Car'gile mem'brane.** Sterilized animal membrane (such as gold-beaters' skin), employed in abdominal operations for the purpose of preventing the reunion of previously adherent peritoneal surfaces.

**Ca'riated.** Carious.

**Car'ica.** A genus of plants of the order *Papayaceæ*. See also *Ficus carica*, or fig. **C. papa'ya,** papaw tree, melon tree; native of America, India, and Africa; fruit has the flavor of pumpkin, and is eaten like it; milky juice of plant—papaw juice—and seed and root are anthelmintic. The juice has been used as digestive of albuminoid substances and to remove diphtheritic membrane.

**Caricin'.** Amorphous material derived from precipitating the juice of Carica papaya with alcohol; formerly considered its active peptonizing agent.

**Ca'ries** (decay). Ulceration or molecular decay of bone, necrosis being the death of the bone in mass; recognized by swelling and discoloration of the bone preceding and accompanying it, by abscesses it occasions, fistulæ which form, the sanious character, peculiar odor, and quantity of suppuration, and by the evidence afforded by probing. **C. articulo'rum,** fungous arthritis. **C. callo'sa,** syphilitic chancre. **C. carno'sa,** c. fungosa in which there are fleshy granulations. **C. centra'lis,** caries of bone caused by inflammation beginning in central part of medullary structure. **Den'tal c.,** chemical decomposition of the calcic tissues of a tooth, caused by the action of a microorganism, possibly Leptothrix buccalis. **C. den'tis** or **den'tium,** dental caries. **Dry c.,** rarefying osteitis; carious arthritis without suppuration. **C. fungo'sa,** tuberculous caries; fungous arthritis. **C. gal'lica,** syphilitic chancre. **C. gangræno'sa,** caries. **C. granulo'sa,** fungous arthritis. **C. inter'na,** c. centralis. **C. mol'lis,** c. granulosa. **C. necrot'ica,** caries with necrosis. **C. pudendo'rum** or **puden'dagra,** see *Chancre*. **C. scrofulo'sa** or **strumo'sa,** tuberculous caries. **C. sic'ca,** dry c. **C. of the spine,** Pott's disease of the spine. **C. tubercu-lo'sa,** tuberculous caries. **Ver'tebral c.,** Pott's disease of the spine. **C. vir'gæ,** chancre of the penis.

**Cari'na** (keel). Vertebral column, especially that of the fœtus. Prominence on the roof of the aqueduct of Sylvius. Breastbone bent inward. **C. for'nicis,** ridge on the surface of the fornix cerebri. **C. tra'cheæ,** projection of rings of bronchi at the bifurcation of trachea. **C. vagi'næ,** projection of the anterior wall of the vagina near the vestibule.

**Car'inate.** Shaped like a keel.

**Car'iol.** A toxic principle from parsley, similar to apiol in some of its medicinal actions, and prescribed in atonic conditions of the genitourinary apparatus.

**Carios'ity.** Caries.

**Ca'rious.** Relating to or affected with caries.

**Caris'sa caran'das.** A shrub of India, the ripe fruit of which is stomachic; when unripe it is astringent. **C. xylopic'ron**, a tree of the island of Bourbon; bitter tonic, vermifuge, and antipyretic.

**Carissin'.** A glucoside from the bark of Carissa ovata. It resembles strophanthin in therapeutic action.

**Ca'rium ter'ræ.** Calx; gluten.

**Carli'na.** A genus of plants, ord. *Compositæ*. **C. acau'lis**, Carline thistle, growing in the Pyrenees, Switzerland, Italy, etc.; tonic, stimulant, emmenagogue, diuretic, and sudorific. **C. chamæ'leon**, c. acaulis. **C. gummif'era**, Atractylis gummifera. **C. vulga'ris**, diaphoretic and diuretic.

**Car'line this'tle.** Carlina acaulis.

**Carlin'ic acid.** Atractylic acid.

**Carls'bad.** A town in Bohemia celebrated for its hot baths. There are several springs, differing chiefly in temperature. The principal salts are sulphate of sodium, sulphate of potassium, chloride of sodium, carbonate of calcium, carbonate of sodium, etc. The waters are stimulating, alterative, and aperient; temperature, 121° to 167° F.

**Carmin'.** Leucomain from yeast, wine, etc.

**Car'minants** or **Carmin'atives** (*carmen*, a charm). Remedies which allay pain "like a charm," by causing expulsion of flatus from the alimentary canal; they generally belong to the classes of aromatic oils, alcohols, or ethers, and act by increasing gastric and intestinal peristalsis. The chief carminatives (Brunton) are:

Allspice and its oil.
Anise and its oil.
Asafœtida.
Cajeput oil.
Capsicum.
Caraway and its oil.
Cardamoms.
Chilies.
Chloroform.
Cinnamon and its oil.
Cloves and its oil.
Coriander and its oil.
Dill and its oil.
Ether and acetic ether.
Fennel.
Ginger.
Horseradish.
Mace.
Mustard.
Nutmeg and its oil.
Pepper.
Peppermint and its oil.
Spearmint and its oil.
Spirits.
Valerian and its oil.

**Car'mine.** Pigment of an intense crimson color derived from cochineal; used for histological staining.

**Carmin'ic acid.** The coloring principle of cochineal. When acted upon by dilute sulphuric acid the product is *red carmine*.

**Carmin'ophile.** A cell or other element that stains readily with carmine.

**Carminoph'ilous.** Taking carmine stains easily.

**Carnaba'dia.** Carum (seed).

**Carnaba'dium.** Cuminum cyminum.

**Car'nal.** Fleshly. **C. in'tercourse** or **know'ledge**, sexual intercourse.

**Carnas'sial.** Flesh-eating. **C. teeth**, molars and premolars of the carnivora.

**Carna'tion.** Dianthus caryophyllus.

**Carnau'ba.** Root of Copernicia cerifera; used as an alterative in place of sarsaparilla. The tree also furnishes a wax, called by the same name.

**Car'neous** (*caro*, flesh). Fleshy; consisting of flesh; resembling flesh. **C. col'umns**, columnæ carneæ. **C. fi'bres**, fleshy fibres; muscular fibres.

**Car'neum marsu'pium** (fleshy pouch). Ischiotrochanterianus.

**Car'nic acid.** $C_{10}H_{15}N_3O_5$. An acid resulting from the decomposition of carniferrin; antipeptone.

**Carnic'ula** (dim. of *caro*, flesh). The gums.

**Carniferrin'.** A German preparation of phosphoric acid and iron, prescribed in anæmia in daily dose of gr. vijss (0.5).

**Carnifica'tio.** Carnification. **C. pulmo'num**, hepatization of the lungs.

**Carnifica'tion** (*caro*, flesh, *fio*, to become). Transformation into flesh; morbid state of certain organs, in which the tissue acquires a consistence like that of fleshy or muscular parts. It is sometimes observed in hard parts, the texture becoming softened, as in osteosarcoma. When it occurs in the lungs, as from pressure of exudation of pleurisy, they present a texture like that of the liver, as in the fœtal lung; splenization; amyloid degeneration. **C. of bone,** osteosarcosis. **Pul'monary c.,** consolidation of the lung; conversion of the lung structure into apparently muscular structure; hepatization; splenization.

**Car'nified.** Transformed into flesh or flesh-like material.

**Car'niform** (*caro*, flesh, *forma*, form). Flesh-like. **C. ab'scess**, abscess ordinarily occurring near the articulations, whose orifice is hard and whose sides are thick and callous.

**Carnin'.** $C_7H_8N_4O_3$. White, bitter leucomain in muscle and meat extracts.

**Carniv'ora.** See *Carnivorous*.

**Carniv'orous** (*caro*, flesh, *voro*, to eat). Eating flesh; any substance which destroys excrescences in wounds, ulcers, etc., as an escharotic. Flesh-eating animals form a separate order of mammalia, under the name of *Carnivora*.

**Carniza'tion.** Carnification.

**Car'nochan's opera'tion.** Excision of the ganglia of Meckel and the infraorbital nerve.

**Car'nogen.** A mixture of fibrin and red bone-marrow; used as a supplement to the ordinary diet in tuberculosis and other wasting diseases.

**Carno'sa cu'tis** (fleshy skin). Panniculus carnosus. **C. tu'nica**, fleshy layer.

**Car'nose.** Fleshy; like flesh; also the name of a proprietary meat preparation.

**Carnos'ity.** Fleshy excresence; polysarcia. **C. of the ure'thra**, caruncle in the urethra; a small, fleshy excresence or fungous growth in the male urethra. **Vene'real c.**, cutaneous, cellular, and membranous tumor, dependent upon syphilitic virus; condyloma.

**Carno'sus.** Carneous.

**Car'nous.** Carneous.

**Ca'ro.** Flesh, as of muscles. **C. accesso'ria**, see *Flexor longus digitorum pedis profundus perforans* (*accessorius*). **C. anseri'na**, horrida cutis. **C. carcino'des**, cancerous growth. **C. contu'sa**, bruise of the flesh. **C. cru'da**, raw meat. **C. em'inens** or **excres'cens**, excrescence. **C. fungo'sa**, proud flesh; fungosity. **C. gallina'cea**, horrida cutis. **C. glandulo'sa**, gland; epiglottic gland. **C. luxu'rians**, proud flesh; fungosity. **C. orbicula'ris**, placenta. **C. parenchymat'ica**, parenchyma. **C. quadra'ta**, palmaris brevis. **C. quadra'ta Syl'vii**, see *Flexor longus digitorum pedis profundus perforans* (*accessorius*). **C. vis'cerum**, parenchyma.

**Car'ob tree.** Creatonia siliqua.

**Caro'ba.** Bark of Bignonia copaia, Jacaranda caroba or Brasiliana or procera, Kordelestris; genus of order *Bignoniaceæ*, of Brazil; the leaves are alterative, diuretic, and sudorific, and are used in syphilis and syphilides; the fruit of Ceratonia siliqua.

**Carobin'.** Crystallized principle from caroba.

**Carobi'nha.** Caroba.

**Caro'des.** Carotid

**Car'oid.** A ferment from Carica papaya; used as a digestant in doses of gr. j–v (0.065–0.32).

**Caroli'na all'spice.** Calycanthus floridus. **C. ip'ecac**, Euphorbia ipecacuanha. **C. jas'mine**, Gelsemium sempervivens. **C. pink**, Phlox carolina.

**Caro'ny bark.** Angustura or cusparia bark; Galipea officinalis.

**Ca'ros.** Carus; caraway.

**Caro'sis.** Profound sleep; carus.

**Caro'ta** (carrot). See *Daucus carota*.

**Carot'ic** (*karos*, stupor). Carotid; comatose; relating to or producing stupor; relating to carotids.

**Carot'icothyroide'us.** Stray fibres of the sternothyroid muscle from the carotid sheath.

**Carot'icus.** Carotic or carotid.

**Carot'id** (*karos*, stupor). The name given to certain arteries of the neck and head or to parts associated with them. **C. ar'teries**, cephalic arteries; the great arteries of the neck, carrying blood to the head; they are divided into: 1. *Primitive* or *common carotid artery*, the left of which arises from the aorta, and the right from the trunk common to it and the subclavian. 2. *External*, or *pericephalic carotid*, branch of the primitive extending from the last to the neck of the condyle of the lower jaw. 3. *Internal carotid*, cerebral or encephalic artery, another branch of the primitive, which, arising at the same place as the external, enters the cranium, and terminates on a level with the fissures of Sylvius, dividing into several branches. **C. canal'**, a canal in the temporal bone, through which the carotid artery and several nervous filaments pass. **C. foram'ina**, the internal and external arc at each extremity of the carotid canal. **C. gan'glion**, see *Carotid nerve*. **C. gland**, a ductless gland formerly regarded as an intercarotid ganglion of the great sympathetic. **C. groove**, depression on the sphenoid bone from contact of the internal carotid artery. **C. nerve**, carotic nerve; a branch from the superior cervical ganglion of the great sympathetic, ascending by the side of the internal carotid; divides into two portions, which enter the carotid canal, and by communication with each other and the petrosal branch of the Vidian form the carotid plexus. They frequently form a small gangliform swelling on the under part of the artery, carotic or carotid or cavernous ganglion, ganglion of Laumonier. **C. plex'us**, see *Carotid nerve*. **C. sheath**, process of the fascia of the neck, in which are the carotid artery, pneumogastric nerve, and jugular vein. **C. si'nus**, venous plexus in the carotid canal. **C. tri'angle**, see *Cervical triangles*. **C. tu'bercle**, tubercle on the transverse process of the sixth cervical vertebra; the carotid artery may be compressed against it.

**Carotin'.** Red coloring-matter from the root of a carrot.

**Caro'tis.** The carotid artery. **C. cephal'ica** or **cerebra'lis**, internal carotid artery. **C. commu'nis**, common carotid artery. **C. exter'na** or **facia'lis**, external carotid artery. **C. inter'na**, internal carotid artery. **C. primiti'va**, common carotid artery.

**Carot'ta.** Daucus carota.

**Car'oy-seeds.** Seeds of Carum carvi.

**Carpag'ra.** Pain or gout in the wrist.

**Carpaïne'.** $C_{14}H_{27}NO_2$. An alkaloid from Carica papaya; a cardiac remedy, employed in aortic insufficiency and stenosis as a substitute for digitalis; given hypodermically in doses of gr. $\frac{1}{10}$–$\frac{1}{6}$ (0.006–0.01).

**Car'pal** (*karpos*, wrist). Belonging or relating to the carpus or wrist. **C. arch'es**, network of branches of arteries distributed to the wrist and vicinity. **C. articula'tions**, articulations of bones of the wrist. **C. bones**, see *Carpus*. **C. bur'sæ**, bursæ of the wrist-joint. **C. joints**, articulations of the carpal bones. **C. lig'aments**, see *Carpal*.

**Carpa'lia.** Bones of the wrist.

**Carpa'thian bal'sam.** Thin turpentine from Pinus cembra.

**Carpenta'ria.** Achillea millefolium.

**Car'penter's leaf.** Galax aphylla.

**Carpho'des** (*karphos*, flocculus). Flocculent, stringy, as mucus.

**Carpholo'gia** or **Carphol'ogy** (*karphos*, flocculus, *lego*, to gather). Floccilation; floccitation; action as of gathering flocculi; a delirious picking of bedclothes, denoting great cerebral irritability and debility; an unfavorable sign in fevers, etc. **C. spasmod'ica**, subsultus tendinum.

**Car'phos.** Trigonella fœnum.

**Car'pia** (*carpo*, to pluck). Lint; charpie.

**Carpiæ'us.** Palmaris brevis.

**Car'pial.** Belonging to the carpus. **C. lig'aments**, fibrous fasciæ uniting the bones of the carpus; annular ligaments.

**Car'pian.** Carpial.

**Carpi'nus bet'ulus.** Hornbeam, ironwood, horn beech, horse beech, white beech. Tree of the Oak family, ord. *Cupuliferæ*, resembling beech, in the woods of Europe. Leaves contain tannin, hence are astringent.

**Carpis'mus.** Carpus.

**Carpobal'samum.** Fruit of Balsamodendron gileadense; allspice. See *Amyris opobalsamum* and *Pimento*.

**Carpocace**, kar-pok'a-se (*carpos*, wrist, *kakos*, evil). Disease of the carpus.

**Carpocar'pal.** Relating mutually to the bones of the carpus.

**Carpocer'vical.** Relating to the wrist and neck, as carpocervical tie, an arm-sling.

**Carpolog'ia** or **Carpol'ogy.** Carphologia.

**Carpometacar'pal.** Relating to the carpus and metacarpus, as carpometacarpal articulations.

**Carpometacar'pus min'imi dig'iti.** Abductor metacarpi minimi digiti. **C. min'imi pol'licis**, opponens pollicis.

**Car'po-olec'ranal.** Relating to wrist and olecranon process; term given to a sling so applied.

**Carpope'dal** (*carpus* + *pes*, foot). Relating to the wrist (or hand) and foot. **C. spasm**, cerebral croup; spasmodic affection of the chest and larynx accompanied by convulsions, occurring between the third and ninth month, and characterized by excessive dyspnœa and loud croupy noise on inspiration. The seat of the disease is evidently in the cerebrospinal axis, perhaps owing to erethism seated elsewhere, but communicated to the cerebrospinal centre, and reflected to the respiratory and other muscles concerned. See *Asthma thymicum*.

**Carpophalange'us min'imi dig'iti.** Abductor minimi digiti.

**Carpophalangi'nus.** Carpophalangeus.

**Carpopo'gon pru'riens.** Mucuna pruriens.

**Carpopol'licis.** Flexor brevis pollicis manus.

**Carpopto'sis.** Wrist-drop.

**Car'pos.** Fruit.

**Car'poside.** A glucoside from Carica papaya.

**Carpot'ica** (*karpos*, fruit). Diseases affecting or incidental to impregnation or parturition.

**Carpozy'ma** (*karpos*, fruit, *zyme*, ferment). Alcoholic ferment.

**Car'pus.** The wrist; part between the forearm and hand. Eight bones compose it (in two rows). In the superior row, from without to within, are the scaphoid or navicular, lunar or semilunar, cuneiform, and orbicular or pisiform. In the lower row, trapezium, trapezoid, os magnum, and unciform.

**Carrageen'** or **Carragheen'.** Fucus crispus; Irish moss.

**Carrageen'ia.** Mucilage of Chondrus crispus or carrageen; converted by the action of nitric acid into mucic acid.

**Car'raway.** Carum.

**Carrefour' sensitif'** (Fr., sensitive crossroads). The posterior third of the posterior limb of the internal capsule.

**Carricht'era vel'læ.** Herb of S. Europe, the leaves of which are antiscorbutic.

**Carrion's' disease'.** Verruga peruviana.

**Car'ron oil.** Linimentum aquæ calcis; a mixture of linseed oil and lime-water, used as an application to burns.

**Car'rot.** Daucus carota. **C. can'dy**, Athamanta cretensis. **Dead'ly c.**, Thapsia.

**Carrotin'.** $C_{18}N_{24}O$. The coloring-matter of carrots and tomatoes.

**Car'sickness.** Symptoms resembling those of seasickness, only milder, caused by riding in railway cars.

**Carsu'ta.** Gentiana purpurea.

**Cars'well's grapes.** Tuberculous disease around the smaller bronchi, the enlarged glands having the appearance of a bunch of grapes.

**Carthage'na barks.** See *Cinchona*.

**Carthamin′.** $C_{14}H_{16}O_7$. Coloring-matter derived from Carthamus tinctoria and other plants.

**Car′thamus lana′tus.** Species of composite herbs of Europe, Asia, and Africa; bitter tonic and stomachic; its root is diaphoretic and antipyretic. **C. macula′tus,** Carduus marianus. **C. tincto′rius,** saffron flower, safflower, safflow, bastard saffron, dyer's saffron, ord. *Compositæ.* The seeds are aromatic, cathartic, and diuretic, yet to parroquets they are an article of food. The flowers are cosmetic and diaphoretic.

**Carthe′gon.** See *Buxus.*

**Carthu′sian pow′der.** Kermes.

**Car′tilage.** Gristle; solid part of the animal body, of medium consistence between bone and ligament, which in the fœtus is a substitute for bone, but in the adult exists only in joints, at the extremities of the ribs, etc. Cartilages are whitish, flexible, compressible, and very elastic. Several varieties are met with, as hyaline, which has a translucent matrix; white fibrocartilage, the matrix being made up of white, fibrous tissue; yellow elastic, with a matrix of elastic tissue. When cartilage, in any of its forms, is boiled it yields chondroid, with the exception of those connected with joints—articular cartilages. Cartilages, with the exception of articular c., are covered by white, fibrous, elastic tissue, the perichondrium, to which vessels and nerves are distributed. **Access′ory c.,** sesamoid c. **A′lar c.,** nasal c. **An′nular c.,** cricoid c., c. between conchal c. and the meatus auditorius externus. **Anon′ymous c.,** cricoid c. **Aor′tic c.,** second right costal c., situated in front of the arch of the aorta. **Arthro′dial c.** or **Artic′ular c.,** layer of c. over the articulating surface of a bone. **Aryt′enoid c.,** see *Arytenoid.* **Aster′nal c.,** costal c. not connected with the sternum. **Aud′itory c.,** embryonic auditory capsule. **Auric′ular c.,** c. of the external ear. **C. bone,** a bone formed by the ossification of cartilage. **C. cap′sule,** capsule around c. cell. **C. cells,** connective-tissue cells found in cartilaginous structure. **Cel′lular c.,** c. made up chiefly of cells; found only in embryonic life in man. **Cen′tral c.,** an opaque spot in the centre of the crystalline lens. **Cil′iary c.,** tarsal c. **Circumferen′tial c.,** c. around the edges of the articular cavity. **Connect′ing c.,** c. of which that of the symphysis pubis is an example, where the joint has little motion. **C. cor′puscles,** c. cells. **Cos′tal c.,** the cartilage forming the anterior end of the rib, which is articulated with the sternum. **Cri′coid c.,** see *Cricoid.* **Cu′neiform c.,** c. of Wrisberg, see *Cuneiform cartilages of the larynx.* **Dentin′al c.,** the framework of dentine left after dissolving out the earthy matter. **Diarthro′dial c.,** arthrodial c. **C. of the ear,** see *Ear.* **Elas′tic c.,** see *Cartilage.* **En′siform c.,** see *Xiphoid* and *Sternum.* **Epac′tal c.,** one of the small cartilaginous bodies on the superior border of the alar nasal cartilage. **Epiglot′tic c.,** epiglottis. **Epiphys′eal c.,** a layer of c. between the shaft and epiphysis of a long bone. **Eusta′chian c.,** triangular c. between the bony part of the Eustachian tube and the pharynx. **Fi′bro-c.,** see *Fibrocartilage.* **Float′ing c.,** loose c. in an articulation. **Hy′aline c.,** see *Hyaline.* **C. of incrusta′tion,** arthrodial c. **Innom′inate c.,** cricoid c. **Interartic′ular c.,** fibrocartilage between the articulating surfaces of bones. **Interos′seous,** see *Arthrodial* or *Articular c.* **Inter-ver′tebral c.,** fibrocartilage placed between the vertebræ. **Invest′ing c.,** articular c. **C. of Ja′cobson,** cartilaginous nodule in the nasal septum situated above the anterior nasal spine. **Lat′eral c.,** see *Lateral.* **Loose c.,** floating c. **C. of Lusch′ka,** cartilaginous nodule in the true vocal cord. **Mandib′ular c.,** Meckel's c. **Meat′al c.,** auricular c. **Meckel's′ c.,** c. in intrauterine life, the upper part of which forms the malleus and its handle; the lower part a rod, on the external surface of which the lower jaw is developed. **Obdu′cent c.,** articular c. **C. of ossifica′tion,** one which, in the progress of ossification, has to form the integrant part of bones; the centres in the long bones of the newborn infant are termed *temporary,* the others being *permanent.* **Parachor′dal c.,** see *Parachordal.* **Parenchy′matous c.,** cellular c. **Perio′tic c.,** see *Periotic.* **Per′manent c.,** see *Cartilage of ossification.* **Plex′iform c.,** elastic c. **Precur′sory c.,** c. of ossification. **Primor′dial c.,** temporary c. **Pul′monary c.,** left second costal c., situated in front of the pulmonary orifice of the heart. **Quad′rate c.,** see *Quadrate.* **Reich′ert's c.,** see *Reichert.* **Retic′ular c.** or **Re′tiform c.,** elastic c. **Santori′ni's c.,** see *Corniculum laryngis.* **Semilu′nar c.,** see *Semilunar.* **Sep′tal c.,** nasal c. **Ses′amoid c.,** small c. occasionally found in tendons. **Sig′moid c.,** semilunar c. **Ster′nal c.,** costal c. **Supra-aryt′enoid c.,** corniculum laryngis. **Tar′sal c.,** see *Tarsus.* **Tem′porary c.,** see *Cartilage of ossification.* **Thy′roid c.,** see *Thyroid.* **Tu′bal c.,** Eustachian c. **Uni′ting c.,** connecting c. **C. of Weit′brecht,** interarticular c. in the acromio-clavicular joint. **C. of Wris′berg,** see *Cuneiform cartilage of the larynx.* **Xi′phoid c.,** see *Xiphoid* and *Sternum.* **Y-c.,** the cartilage in the triradiate fissure at the bottom of the acetabulum.

**Cartilagin′.** Organic ingredient of cartilage; converted by boiling into chondrin.

**Cartilaginifica′tion** (*facio,* to make). Production or generation of cartilage; chondrogenesis.

**Cartilagin′iform.** Resembling cartilage.

**Cartila′ginis arytenoid′eæ capit′ulum.** Corniculum laryngis.

**Cartilaginoid,** kar-til-aj′in-oid. Resembling cartilage.

**Cartilaginous,** kar-til-aj′in-us. Belonging to, composed of, or resembling cartilage. **C. tis′sue,** see *Cartilage.* **C. tu′mor,** chondroma; enchondroma.

**Cartila′go.** Cartilage. **C. annula′ris,** cricoid cartilage. **C. auric′ulæ** or **aur′is,** cartilage of the ear. **C. basila′ris,** cricoid cartilage; fibrocartilage in foramen lacerum medium. **C. clypea′lis,** thyroid cartilage. **C. cornicula′ta,** corniculum laryngis. **C. cricoide′a,** cricoid cartilage. **C. cuneifor′mis,** see *Cuneiform cartilages of the larynx.* **C. ensifor′mis,** xiphoid cartilage. **C. epiglot′tica,** epiglottis. **C. gingiva′lis,** fibrous covering of alveolar groove at birth. **C. guttura′lis,** arytenoid cartilage. **C. innomina′ta,** cricoid. **C. lin′guæ,** septum of tongue. **C. mucrona′ta,** xiphoid cartilage. **C. osses′cens,** temporary cartilage. **C. pelta′lis,** thyroid cartilage; xiphoid cartilage. **C. pelta′tus,** thyroid cartilage. **C. peren′nis,** permanent cartilage. **C. per′manens,** permanent cartilage. **C. quadrangula′ris,** cartilage of nasal septum. **C. reticula′ris,** reticular cartilage, as of epiglottis, cornicula laryngis, pinna of ear. **C. santorinia′na,** corniculum laryngis. **C. scutifor′mis,** thyroid cartilage. **C. sep′ti na′rium,** see *Nasal cartilage.* **C. triangula′ris** or **trique′tra car′pi,** triangular cartilage of the wrist. **C. triti′cea,** see *Thyreohyoid membrane.* **C. tu′bæ,** cartilage of lining of the Eustachian tube. **C. u′vifer,** uvula. **C. ve′ra,** hyaline cartilage. **C. Wrisberg′ii,** see *Cuneiform cartilages of the larynx.* **C. xiphoi′des,** xiphoid cartilage.

**Car′tridge, sem′inal or spermat′ic.** Spermataphore.

**Ca′rum.** (Ph. U. S.) Caraway; carraway; fruit or seeds of Carum carvi, caraway seeds, are carminative; dose, gr. j–x (0.065–0.65). The oil, *oleum cari,* official, has properties of the seeds; dose, ♏j–v (0.065–0.32). **C. aj′owan,** see *Ajwain.* **C. bul′bocas′tanum,** Bunium bulbocastanum. **C. car′ui,** carum. **C. petroseli′num,** Apium petroselinum. **C. vulga′re,** C. carui.

**Car′uncle** (dim. of *caro,* flesh). Small portion of flesh; fleshy excrescence, as *lacrymal caruncle,* on the conjunctiva, near the inner canthus. **Ure′thral c.,** fibrovascular tumor at the aperture of the female urethra; see *Carnosities, Caruncula,* and *Carunculæ.*

**Carun′cula.** Caruncle. **C. cuticular′is,** nympha. **C. hymena′lis,** c. myrtiformis. **C. innomina′ta,** lacrymal gland. **C. lacryma′lis,** lacrymal caruncle; small, reddish, follicular body at the inner angle of the eye; secretes a gummy substance. **C. ma′jor,**

small papilla or elevation on duodenal mucous lining at the point of emptying of the biliary and pancreatic ducts. **C. mammilla'ris**, olfactory tubercle; extremity of a lactiferous tubule in the nipple. **C. mi'nor**, small papilla or elevation in the duodenum at the point of entrance of the accessory pancreatic duct. **C. Morgagn'ii**, middle lobe of the prostate, see *Prostate*. **C. myrtifor'mis**, one of several small, reddish tubercles near the orifice of the vagina, formed by mucous membrane; they are regarded as remains of the ruptured hymen. **C. oc'uli**, lacrymal caruncle. **C. papillar'is**, papilla of the kidney. **C. prostat'ica**, middle lobe of prostate gland. **C. saliva'ris** or **sublingua'lis**, sublingual caruncle at the opening of Wharton's duct. **C. semina'lis**, gallinaginis caput. **C. ure'thræ**, gallinaginis caput, see *Carnosities*. **C. uteri'na**, one of the fleshy excrescences of the lining membrane of the uterus. **C. vagina'lis**, c. myrtiformis.

**Carun'culous** or **Carun'cular.** Relating to caruncles or carnosities.

**Ca'ruon.** Carum.

**Ca'rus.** Profound sleep; last degree of coma, with complete insensibility, which no stimulus can remove. Sopor, coma, lethargia, and carus are four degrees of the same condition. **C. apoplex'ia**, cerebral apoplexy. **C. asphyx'ia**, asphyxia. **C. catalep'sia**, catalepsy. **C. ec'stasis**, ecstasis. **C. hydrocephal'icus**, hydrocephalus internus. **C. lethar'gus**, lethargy. **C. l. cataph'ora**, somnolency. **C. l. vig'il**, coma vigil. **C. paral'ysis** paralysis. **C. p. paraple'gia**, paraplegia. **C. veter'nus**, lethargy.

**Ca'rus, curve of.** See *Pelvis*.

**Car'vacrol.** $C_{13}H_{14}O$. Thick oil, with smell and taste of creosote; obtained by acting on oil of caraway with caustic potassa or glacial phosphoric acid; antiseptic and of service in toothache. **C. i'odide**, iodocarvacrol or iodocrol; has been employed externally in same cases as iodoform.

**Car'vene.** A terpene derivation of caraway oil.

**Car'vol.** $C_{10}H_{14}O$. Aromatic, odorous liquid, produced by acting on oleum cari with sulphide of hydrogen and digesting the product with caustic potash.

**Car'vum.** Caraway.

**Car'ya.** Hickory; Juglans regia. **C. basil'ica**, Juglans regia.

**Caryd'ion.** Corylus avellana.

**Car'yochrome** (*karyon*, nucleus, *chroma*, color). A smell nerve cell, the staining properties of which are mainly resident in the nucleus.

**Caryocine'sis** (*karyon*, nucleus, *kinesis*, motion). Term expressive of the various structural phases undergone by a nucleus in the course of the indirect division of cells or other nuclei; see *Mitosis*.

**Caryocinet'ic.** Relating to caryocinesis.

**Caryodaph'ne densiflo'ra.** Plant of Java having bitter bark, and leaves that are used in colic.

**Caryol'ysis** (*karyon*, nucleus, *lysis*, loosening). Caryocinesis.

**Caryolyt'ic.** Relating to caryolysis.

**Caryom'itome** (*karyon*, nucleus, *tome*, incision). Nuclear fibril.

**Caryomito'sis.** Caryocinesis, mitosis.

**Caryomitot'ic.** Relating to caryomitosis.

**Car'yon.** See *Juglans regia*. **C. heracleon'ticon**, **lep'ton**, or **pon'ticon**, Corylus avellana (nut). **C. trip'ton**, nutmeg.

**Caryophyl'la.** Geum urbanum.

**Caryophylla'ta alpi'na, aquat'ica,** or **lu'tea.** Geum rivale. **C. monta'na**, Geum rivale and G. montanum. **C. nu'tans** or **riva'lis**, Geum rivale. **C. urba'na**, Geum urbanum. **C. vulga'ris**, Geum urbanum.

**Caryophyllin'.** $C_{20}H_{32}O_{21}$. White, resinous substance obtained from cloves; when treated with nitric acid *caryophyllinic acid* results, $C_{20}H_{32}O_8$.

**Caryophyl'lum.** Eugenia caryophyllata. **C. ru'brum**, Dianthus caryophyllus.

**Caryophyl'lus.** (Ph. U. S.) Cloves, the unexpanded flowers of *Eugenia caryophyllata*, which see; a carminative; dose, gr. j–x (0.065–0.65). The official oil of clove, oleum caryophilli, is used externally in toothache; internally it may be given in doses of ♏j–v (0.065–0.32). **C. america'nus**, see *Myrtus pimenta*. **C. aromat'icus**, Eugenia caryophyllata. **C. horten'sis** or **mul'tiplex**, Dianthus caryophyllus. **C. pimen'ta**, Myrtus pimenta. **C. vulga'ris**, Geum urbanum.

**Car'yoplasm** (*karyon*, nucleus, *plasma*, formative material). Nuclear protoplasm.

**Caryorrhex'is** (*karyon*, nucleus, *rhexis*, rupture). Rupture of the envelope of the cell nucleus or of the cell nucleus itself.

**Cas'amum.** Cyclamen.

**Casamu'nar.** Cassumuniar.

**Cas'ca bark.** Erythrophlæum.

**Cas'cara** (Sp., bark). Name under which cinchona bark is known in Peru; the gatherers are called cascarilleros. **C. amar'ga**, Honduras bark; bark of Picramnia antidesma, of Central America; alterative; used in syphilis and chronic skin diseases. **C. sagra'da**, dried bark of Rhamnus purshianus; mild laxative in habitual constipation; see *Rhamnus*.

**Cascaril'la** (Sp., little bark). (Ph. U. S. and Br.) The bark of Croton eluteria, an astringent bitter; dose, gr. x–xxx (0.65–2.0). The infusion and tincture are official in the Ph. Br.; dose of the infusion, ℥ss–j (16.0–32.0); of the tincture, ʒss–j (2.0–4.0). **C. carabay'a**, see *Cinchonæ cordifoliæ cortex*. **C. colora'da**, Cinchonæ oblongifoliæ cortex. **C. rox'a**, Cinchonæ oblongifoliæ cortex.

**Cascarillin'.** $C_6H_9O_2$. White, crystalline substance derived from bark of Croton eleuteria. See *Croton cascarilla*.

**Cascarin'.** $C_{12}N_{10}O_5$. A glucoside isolated from Cascara sagrada, and identical with rhamnoxanthin, which is found in Rhamnus frangula, or buckthorn; employed in habitual constipation in doses of gr. j–iij (0.065–0.2).

**Case.** Box for the preservation of instruments or medicines; a pocket-case contains small instruments in constant use with the surgeon. An instance of disease under treatment or observation; often incorrectly employed as synonymous with patient. **Dress'ing c.**, case of instruments for dressing wounds. **Heart c.**, pericardium. **Mus'cle c.**, elements entering into the formation of striated muscular fibre.

**Casear'ia astrin'gens.** Bark of this S. American plant is used as a poultice to indolent ulcers. **C. cauzia'la**, E. Indian tree; bitter; pulp of fruit is diuretic.

**Casease**, ka'ze-aze. A bacterial ferment capable of dissolving albumin.

**Ca'seate.** To undergo caseation; also a salt of caseic acid.

**Casea'tion** or **Caseifica'tion** (*caseus*, cheese). Degeneration, as of inflammatory exudations, into a cheesy or curdy mass, tending to further decomposition or transformation. Precipitation of casein in the coagulation of milk.

**Ca'seic acid.** An acid derived from cheese; probably the same as lactic acid.

**Ca'seiform.** Cheesy or caseous.

**Casein'.** Caseous matter; the great nitrogenized constituent of milk, occurring in the proportion of 2 to 6 per cent; identical in composition with the chief constituents of blood, fibrin, and albumin, all being compounds of protein; contains a large quantity of phosphorus. A similar principle exists in vegetables, vegetable casein or legumin, vegetable gluten, chiefly in leguminous seeds—peas, beans, lentils. Like vegetable albumin, casein is soluble in water, and the solution is not coagulable by heat. Casein is precipitated from milk by acid and by rennet at 104° F. Casein also occurs in the sebaceous secretion of the surface of the body. **An'imal c.**, see *Casein*. **C. of blood**, albuminose; globulin. **Glu'ten c.**, vegetable c., see *Casein*. **Milk c.**, see *Casein*. **C. of sali'va**, ptyalin, see *Saliva*. **C. of small intes'tine**, albuminose. **Veg'etable c.**, see *Casein*.

**Casein′ogen.** A proteid in milk that produces casein when subjected to the action of a digestive ferment.

**Caseo-i′odine.** An iodine compound of casein; used in the treatment of goitre.

**Ca′seose.** A proteose resulting from the digestion of casein.

**Ca′seous.** Cheesy. **C. degenera′tion,** caseation. **C. mat′ter,** the cheesy mass resulting from caseation. **C. pneumo′nia,** see *Pneumonia.*

**Cashew′.** Anacardium occidentale. **C. gum,** see *Anacardium occidentale* and *Swietania mahogani.* **C. nut,** fruit of Anacardium occidentale; irritant and escharotic. **Orien′tal c. nut,** fruit of Semecarpus anacardium; called also marking-nut, marsh-nut, Malacca bean.

**Cashoo′.** Aromatic pectoral drug of India; catechu.

**Casimiro′a ed′ulis.** Mexican tree, ord. *Rutaceæ,* the fruit of which is eatable, also anthelmintic; the pulp is hypnotic; bark is a bitter.

**Cas′sa.** Thorax. **C. bark,** sassy bark.

**Cassa′da.** Cassava.

**Cas′sareep** or **Cas′saripe.** A non-poisonous extract of cassava root; antiseptic.

**Cassa′va.** Various species of manihot, especially *Jatropha manihot,* which see. **C. flour** or **meal,** dried, ground residue in the roots of Manihot utilissima or Jatropha manihot after the juice has been expressed. **C. starch,** starch obtained from expressed juice of Manihot utilissima; Brazilian starch; by drying on heated plates it is converted into tapioca.

**Cassee′na** or **Casse′na.** Ilex vomitoria.

**Cas′ser's fontanelle′.** That formed by the edges of the occipital, parietal, and temporal bones. **C.'s gan′glion** or **Casse′rian g.,** the Gasserian ganglion. **C.'s mus′cle,** name given to what was formerly called the laxator tympani minor muscle. **C.'s per′forating nerve,** external cutaneous nerve of the arm.

**Cas′sia.** Laurus cassia. **C. ab′sus,** absus. **C. acutifo′lia,** C. senna. **C. ala′ta,** ringworm shrub, winged senna plant; a species of cassia, from West Indies, used externally in diseases of the skin, as herpes and eczema; also cathartic. **C. alexandri′na,** C. fistula. **C. angustifo′lia,** Indian senna; C. elongata. **C. auricula′ta** grows in India; the root is used in skin diseases and those of the urinary organs, the bark in syphilis, the leaves in skin diseases, the flowers in diabetes, and the seeds in diabetes and rheumatism. **C. bark,** Chinese cinnamon; bark of Cinnamomum aromaticum. **C. bonplandia′na,** C. fistula. **C. brazilia′na,** C. grandis. **Brown c.,** C. glandulosa. **C. buds,** unripened flowers of several species of cinnamomum. **C. canel′la,** Laurus cassia. **C. caryophylla′ta,** Myrtus caryophyllata. **C. cathart′ica,** plant of Brazil; cathartic like senna. **C. chamæcris′ta,** prairie senna, partridge pea, wild senna; indigenous; ord. *Leguminosæ;* resembles Cassia marilandica. **C. cinnamo′mea,** Laurus cassia. **Egyp′tian c.,** senna. **C. elonga′ta,** Cassia senna. **C. emargina′ta,** tree of West Indies; leaves have action like senna, pods like those of C. fistula. **C. excel′sa,** C. fistula. **C. fis′tula** (Ph. U. S.), purging cassia, pulp of Cassia fistula or Cathartocarpus fistula, pudding pipe tree; see *C. pulp.* Laxative in dose of ʒj–ij (4.0–8.0) Pods of Cassia moschata of New Granada are smaller, but have like properties. **C. glau′ca,** tree of East Indies and Australia; used in gonorrhœa, diabetes, and gout. **C. gran′dis,** horse cassia, from Brazil; purgative. **C. lanceola′ta,** C. senna. **C. leniti′va,** C. acutifolia. **C. ig′nea,** Laurus cassia. **C. lig′nea malabar′ica,** Laurus cassia. **C. marilan′dica,** American or wild senna, locust plant; its leaves are similar in virtue to those of Cassia senna, but inferior in strength. **C. med′ica** or **medicina′lis,** C. angustifolia. **C. mol′lis,** C. grandis. **C. moscha′ta,** see *Cassia fistula.* **C. ni′gra,** C. fistula. **C. occidenta′lis,** stinkweed or stinkwood, grows in Southern United States; styptic; root is diuretic; bark is antipyretic; leaves are purgative. **C. officina′lis,** senna. **C. orienta′lis,** C. senna. **C. pulp,** sweet, mucilaginous matter obtained from carefully prepared recent pods of Cassia fistula, or by diffusion in water, straining, and evaporation; it is the chief cathartic ingredient in them. **Pur′ging c.,** Cassia fistula. **C. sen′na,** name of plant affording senna. Senna (Ph. U. S.) is leaflets of Cassia acutifolia and elongata; of C. angustifolia (Ph. Br.). Varieties of senna in commerce are Tinnivelly senna, Bombay or common India senna, Alexandrian senna, Tripoli senna, and Aleppo senna. **C. sensiti′va** or **seric′ea,** shrub of South America and West Indies; juice has been used in inflammation of the nates and legs. **C. siliquo′sa,** C. fistula. **C. sopho′ra,** roots of this East Indian herb are used in diseases of the skin and liver; bark and seeds in diabetes. **C. to′ra** or **toroï′des,** East Indian herb; leaves are laxative and used as applications to ulcers, pustules, etc.; root is used externally in ringworm.

**Cassi′ala.** Hyssopus.

**Cas′sida galericula′ta.** Scutellaria galericulata.

**Cassi′na.** Ilex. **C. carolinian′a,** Ilex paraguensis. **Ev′ergreen c.,** Ilex vomitoria. **C. par′agua,** Ilex paraguensis. **C. ve′ra,** Ilex vomitoria.

**Cas′sis.** Ribes nigrum.

**Cassom′ba** or **Cassom′bo.** Carthamus tinctorius.

**Cas′su.** Superior form of catechu, from Areca catechu.

**Cassumu′niar, Cassumu′nar,** or **Casamu′nar.** Bengal root, from East Indies; aromatic bitter, tonic, and stimulant; once considered a panacea.

**Cassu′vium.** Anacardium. **C. pomif′erum,** Anacardium occidentale.

**Cas′syta** or **Cas′sytha filifor′mis.** South African plant, employed by Cape colonists as a wash in scald head and as an antiparasitic; also in gonorrhœa, ophthalmia, ulcers, etc., and as a cooling drink in fevers.

**Cast.** Anything formed in a mold, as it were; hence, cylindrical bodies of varied constitution formed in the urinary tubules, the nasal cavities, the trachea, bronchi, etc., in disease of these parts. **Bron′chial c.,** a branching mass of pseudomembrane formed in the bronchial tubes. **Cork′screw c.,** spiral c. **Epithe′lial c.,** cast of the epithelial cells of urinary tubules. **C. in the eye,** strabismus. **Hy′aline c.,** translucent cast, probably from coagulation of albuminoid substance, found in the urine, coming either from the kidney or testicle. **Mu′coid c.** or **Mu′cous c.,** cast-like matter made up of mucus. **Re′nal c.,** tube c. **Spi′ral c.,** renal cast twisted over itself in the urinary passages. **Testic′ular c.,** form of cast, like renal cast, sometimes noticed in spermatorrhœa. **Transpa′rent c.,** hyaline c. or waxy c. **Tube c.,** see *Tube casts.* **U′rinary c.,** tube c. **Wax′y c.,** renal cast having a resemblance to wax.

**Casta′lia specio′sa.** Nymphæa alba.

**Casta′nea.** (Ph. U. S.) Chestnut leaves, the leaves of Castanea dentata; astringent in doses of ʒj–ij (4.0–8.0) in infusion. The fluid extract, *extrac′tum casta′neæ flu′idum* is given in doses of ʒj–ij (4.0–8.0). See also *Fagus castanea pumila.* **C. denta′ta,** the source of the official (Ph. U. S.) castanea. **C. equi′na,** Æsculus hippocastanum. **C. pu′mila,** Fagus castanea pumila. **C. ves′ca,** Fagus castanea. **C. vulga′ris.** Fagus castanea.

**Caste′la nicholso′ni.** Shrub of tropical India, Africa, and America, having antiperiodic properties; similar qualities are assigned to its active principle, *amargosin.*

**Castelli′no's sign.** Oliver's symptom.

**Casti′gans** (*castigo,* to correct). Corrigent.

**Castiglio′nia loba′ta** (after L. Castiglioni). Pinoncillo tree; tree of Peru; when an incision is made into the stem a clear liquid flows out, which becomes black and horny-like, and is a powerful caustic; Jatropha curcas.

**Castil′lon pow′ders.** See *Powders, Castillon.*

**Castin′.** Bitter extractive from Vitex agnus-castus.

**Cas′tor.** Beaver. A plant, *Ricinus,* the source of castor oil. **Amer′ican** or **Cana′dian c.,** American variety of Castor fiber. **Bay c.,** Magnolia glauca. **C. bean,** see *Ricinus.* **Cana′dian c.,** American c. **Eng′lish c.,** American c. **C. fi′ber,** the beaver, which furnishes castor, an odorous secretion used, as a nervine and antispasmodic; see *Castoreum.* Its blood, urine, bile, and fat were also formerly used in medicine. **C. gal′liæ,** French and European variety of C. fiber. **C. oil,** expressed oil of Ricinus communis; cathartic; used externally in ointments, hair-washes, etc.; see *Ricinus communis.* **Prus′sian** or **Rus′sian c.,** castor procured from the European or Asiatic beaver; more valuable medicinally than American castor. **C. seeds,** seeds of Ricinus communis. **C. wood,** magnolia glauca.

**Casto′reum.** Castor; peculiar concrete matter found in follicles between the anus and the external genitals of the beaver (Castor fiber) in both sexes; the odor is strong, unpleasant, and peculiar; taste bitter, subacid; antispasmodic and nervine; dose, gr. x–xx (0.65–1.3). **C. america′num** or **C. canaden′se,** from Castor americanus. **C. europæ′um,** Russian castor; known also under the names c. germanicum, c. moscoviticum, c. rossicum, c. sibericum.

**Castorin′.** White, waxy, crystalline derivative of castor.

**Castran′gula.** Scrophularia aquatica, S. nodosa.

**Cas′trate.** To remove one or both testicles or ovaries.

**Castra′tion** (*castro,* to emasculate). Orcheotomy, orchidectomy, gelding, spaying; operation of removing the testicles or one testicle only. *Spaying, female castration,* is a term usually restricted to the removal of the ovaries. See *Oöphorectomy.*

**Castra′tus.** One deprived of testicles. An animal in this condition is said to be "altered."

**Cas′ual.** Temporary; accidental. A temporary patient in a hospital; one brought in for treatment of injury or sudden, transient illness. **C. ward,** a hospital ward in which casuals or transient patients are received; casualty ward.

**Cas′ualty.** An accident resulting in bodily injury or death. **C. ward,** a hospital ward for the reception of cases of accidental injury; casual ward.

**Casuari′na.** A genus of plants of Australasia and India. **C. equisetifo′lia** or **in′dica,** astringent bark of this plant of the E. Indies is used in diarrhœa and dysentery. **C. litora′lis, lito′rea,** or **muriat′ica,** tinian pine of India, has similar properties; also tonic.

**Casumu′niar.** Cassumuniar.

**Ca′sus** (*cado,* to fall). Case; symptom; prolapsus; accident. **C. pal′pebræ superio′ris,** falling down of the upper eyelid, see *Blepharoptosis.* **C. u′vulæ,** relaxation and tumefaction of the uvula.

**Cat-foot.** Gnaphalium polycephalum. **C.-mint,** Nepeta cataria. **C.-tail,** Typha latifolia. **C. thy′me,** Teucrium marum.

**Cata-** or **Cath-** (*kata,* down, after). A prefix signifying down; at times adding emphasis to the radical; also written kata.

**Catab′asis** (*katabaino,* to descend). Expulsion of humors downward; descent, as of the testicles; decline of disease.

**Catabat′ic.** Having a tendency to fall, descend, or decline.

**Catabol′ic.** Relating to catabolism; retrograde.

**Catabolin′.** A product of catabolic action.

**Catab′olism** (*kataballo,* to throw down). Normal tissue disintegration; retrograde metabolism.

**Catab′olite.** Catabolin.

**Catabythismoma′nia** (*katabythismos,* submersion). An insane impulse to suicide by drowning.

**Catacas′mus** (*akazo,* to prick). Cupping; scarification.

**Catacathar′tic.** Purgative, as distinguished from anacathartic or emetic; cathartic downward.

**Catacau′ma** (*kauo,* to burn). Burn or scald.

**Catacau′sis.** Alleged spontaneous combustion of the human body, especially in alcoholic subjects.

**Catac′lasis** (*kataklazo,* to break to pieces). Distortion or spasmodic fixation of the eyes; spasmodic occlusion or eversion of the eyelids. Fracture of a bone.

**Catadei′sis** (locking up). Morbid union of the eyelids.

**Catacrot′ic** or **Catac′rotous** (*kata,* again, *kroteo,* to strike). Pulse with double beat, two notches being observed in the downward line of the sphygmographic tracing.

**Catac′rotism.** Catadicrotism.

**Catadicrot′ic** or **Catadic′rotous** (*kata, di,* twice, *kroteo,* to strike). Marked by catadicrotism.

**Catadic′rotism.** A double break in the pulse beat, pictured by two upward notches in the descending line of the sphygmographic tracing.

**Catadid′ymus.** Twin monster as regards the lower parts, but joined above.

**Cataglos′sum** (*kata,* down, *glossa,* tongue). Instrument for pressing down the tongue.

**Catag′ma.** Fracture. **C. fissu′ra,** see *Contrafissura.* **C. fractu′ra,** fracture.

**Catagmat′ics.** Remedies supposed to be capable of occasioning a formation of callus to unite fragments of bone.

**Catagraphol′ogy** (*katagrapho,* to write down, *logos,* discourse). Art of writing prescriptions.

**Cat′alase.** A comparatively persistent enzyme of very general occurrence in the animal and vegetable world, the most striking peculiarity of which is its ability to break down hydrogen peroxide.

**Catalen′tia.** Epilepsy; epileptiform disease.

**Catalep′sia.** Catalepsy. **C. pulmo′num,** spasm of the glottis.

**Cat′alepsy** (*katalambano,* to seize upon). Disease in which there is a sudden suspension of action of the senses and of volition, the limbs and trunk preserving the different positions given to them; the affection occurs at times as a form of or in association with hysteria, insanity, and ether or chloroform intoxication. **Artific′ial c.,** c. induced in the hypnotic state. **Feigned, sim′ulated,** or **spu′rious c.,** form of catalepsy imitated by malingerers; distinguished by the fact that there is no loss of sensation or of sensibility to pain.

**Catalep′tic.** Relating to catalepsy; affected with catalepsy. **C. meth′od,** administration of external agents when internal agents are inapplicable.

**Catalep′tiform** or **Catalep′toid** (*eidos,* resemblance). Resembling catalepsy.

**Catalot′ic.** Remedy which removes cicatrices.

**Catal′pa.** Catawba tree, bean tree, Indian bean; a decoction of the pods of catalpa, an American tree, Didynamia angiospermia; has been used in chronic nervous asthma; seeds are antispasmodic and expectorant, wood is emetic, and bark anthelmintic; leaves are emollient and anodyne, applied externally. **C. arbo′rea, bignonioi′des, cordifo′lia,** or **syringæfo′lia,** catalpa.

**Catal′ysis** (*katalyo,* to decompose). Paralysis; dissolution, as by death; chemical decomposition induced by the mere presence of a body, catalytic agent, which body itself does not undergo any change, or, if modified temporarily, is restored to the original state before the decomposition process is concluded.

**Cat′alyst.** Substance producing catalysis.

**Catalyt′ic.** Pertaining to, characterized by, or resulting from catalysis; also in therapeutics, alterative, a remedy acting by destruction or counteraction of morbid agencies in the blood. **C. a′gent,** in chemistry, a substance inducing catalysis seemingly by its simple presence; in medicine, an alterative. **C. force,** the supposed inherent property by which a catalytic agent exerts its specific action.

**Catame′nia** (*kata,* according to, *men,* month). Menses. **C. al′ba,** leucorrhœa usually preceding, taking the place of, or increased by the monthly menstrual discharge.

**Catame′nial.** Menstrual; relating to the catamenia.

**Catam′ysis.** Occlusion or closure of the eyelids.

**Catanan′che.** A genus of herbaceous plants of

S. Europe. **C. cæru'lea,** the blue cupidone; considered laxative.

**Catantochas'mus** (*katanta,* downward, *chasma*). Term applied to skulls in which the line connecting the staphylion and basion looks forward when referred to the radius fixus as a horizontal, making with it an angle of from 0° to 13°.

**Catantop'ylus** (*katanta,* downward, *pyle,* orifice). Term applied to skulls in which the foramen magnum looks slightly backward (1° to 8°) when referred to the radius fixus as a horizontal.

**Catantorrhi'nus** (*katanta,* downward, *rhis,* nose). Term applied to skulls in which the line from the hormion to the subnasal point lies below the radius fixus, making with it an angle of from 1° to 16.5°.

**Catantos'tomus** (*katanta,* downward, *stoma,* mouth). Term applied to skulls in which the line connecting the hormion and alveolar point lies below the radius fixus, making with it an angle of from 9° to 25.5°.

**Cantanturanis'cus** (*katanta,* downward, *ouraniskos,* roof of mouth). Term applied to skulls in which the line connecting the posterior border of the incisive foramen and alveolar point looks backward when referred to the radius fixus as a horizontal, making with it an angle of from 1° to 20°.

**Catantur'anus** (*katanta,* downward, *ouranos,* palate). Term applied to skulls in which the line connecting the staphylion and alveolar point looks backward when referred to the radius fixus as a horizontal, making with it an angle of from 1° to 17°.

**Cat'apasm** (*katapasso,* to sprinkle). A powder to be dusted over a part; also gentle friction.

**Catapau'sis** (*pausis,* sedation). Sedation.

**Catapep'sis** (*kata,* intensive, *pepsis,* digestion). Normal complete digestion.

**Catapha'sia** (*kata,* down, *phasis,* speech). Repetition of a word or words to a morbid degree.

**Catapho'nic** (*kata,* down, *phone,* sound). Relating to reflection of sound.

**Cataph'ora** (*kataphora,* fall). State resembling sleep, with privation of feeling and voice; somnolency; profound sleep, synonymous with sopor; lethargy. **C. co'ma,** sanguineous apoplexy. **C. hydrocepha'lica,** serous apoplexy. **C. magnet'ica,** hypnotism.

**Cataphore'sis** (*kataphero,* to drive down). Act of transferring remedial agents through the skin by means of the constant current to deeply situated tissues. **Anæ'mic c.,** c. in which the action of the remedy is limited to a special part by pressure or other means of restricting the circulation in that part, and thus preventing absorption.

**Cataphoret'ic.** Relating to cataphoresis.

**Cataphor'ia** (*kata,* downward, *phoreo,* to carry). Condition of the eyes in which the visual axes are inclined below the horizontal plane.

**Cataphor'ic.** Relating to power of inducing passage of fluids through membranes by medium of the constant current, or to cataphora, or to cataphoria.

**Cataphrix'is** (*kata,* intensive, *phrisso,* to shiver). Chilliness and pain from exposure to cold.

**Catapi'esis** (*katapiezo,* to press down). Depression.

**Catapino'sis** (*pino,* to drink). Absorption.

**Cat'aplasm** (*kataplasso,* to besmear). Poultice; a remedy applied externally, under the form of a thick pap. Cataplasms are formed of various ingredients and used for different objects, being anodyne, emollient, antiseptic, etc. A simple poultice acts only by virtue of its warmth and moisture. Mealy, fatty substances, such as ground flaxseed, leaves of plants, certain fruits, crumb of bread, slippery elm, yeast, etc., are the most common bases.

**Cataplas'ma.** Cataplasm; poultice. **C. aëra'tum,** yeast poultice. **C. antisep'ticum,** poultice containing charcoal, creosote, carbolic acid, or other antiseptic material. **C. astrin'gens,** poultice of galls, alum, or other astringent substance. **C. carbo'nis,** charcoal poultice; made by adding powdered charcoal to common cataplasm; antiseptic to foul ulcers, etc. **C. cerevis'iæ,** yeast poultice. **C. commu'ne,** flaxseed poultice. **C. coni'i,** hemlock cataplasm; poultice made by spreading soft extract of hemlock on flaxseed poultice; used in malignant, painful ulcers. **C. dau'ci,** carrot cataplasm; made by boiling carrot root until soft enough to form a poultice; used in fetid ulcers. **C. emol'liens,** flaxseed poultice. **C. fæc'ulæ cerevis'iæ** or **fermen'ti,** yeast cataplasm or poultice (wheaten flour, beer-yeast, and water); antiseptic, and good application to bruises; a cataplasm of beer-grounds, cataplasma fæculæ cerevisiæ, is used in the same cases. **C. li'ni,** linseed or flaxseed poultice; made by mixing boiling water with linseed meal. **C. rubefa'ciens,** mustard poultice or plaster. **C. sina'pis,** sinapism, mustard cataplasm, poultice, or plaster (mustard and linseed meal equal parts and boiling water); rubefacient and stimulant; applied to the painful part in rheumatism, localized pains, etc. **C. so'dæ chlorina'tæ** or **chlora'tæ,** chlorine poultice; made by adding solution of chlorinated soda to flaxseed cataplasm; applied to foul, offensive ulcers. **C. ul'mi,** slippery-elm poultice, made by adding boiling water to powdered bark of Ulmus fulva, stirring constantly; light, agreeable cataplasm.

**Cataplec'tic** (*kataplesso,* to strike down). Striking suddenly, as a cataplectic attack.

**Cataplex'ia** or **Cataplex'y.** A sudden mental shock causing profound prostration; apoplexy; extreme sensibility of teeth.

**Catapone'sis** (*kataponeo,* to overcome with fatigue). Exhaustion from overwhelming exertion or labor.

**Catapo'sis** (*posis,* drinking). Deglutition.

**Catap'otra.** Cardiac opening of the stomach.

**Catapsyx'is** (*katapsycho,* to refrigerate). Coldness of the body or limbs, without rigor and horripilation.

**Catapto'sis** (*kata,* down, *ptosis,* fall). Fall of a patient with epilepsy or apoplexy; sudden resolution of a paralytic limb.

**Catapu'tia ma'jor.** Ricinus communis. **C. mi'nor,** Euphorbia lathyris.

**Cat'aract** (*kataraktes,* waterfall, cataract). Opacity of the crystalline lens or its capsule, preventing the passage of rays of light and precluding vision. Cataracts have been divided into spurious and genuine; the former, pseudocataracta, when the obstacle to vision is between the capsule of the lens and the uvea; the latter, when it is in the lens or capsule.

*Lenticular cataract* is seated in the lens, capsular or membranous in the capsule. *Capsular cataract* is divided again into anterior, posterior or polar, and complete capsular cataract. When the anterior form is elevated above the surface of the capsule it has been termed *pyramidal cataract*. *Lamellar* or *zonular cataract* consists of a layer of opaque lens substance lying between the nucleus and the transparent portion of the cortical substance; it is generally congenital or developed in infancy. *Cortical cataract* usually commences at the margin, grayish-white stripes being observed running toward the centre of the lens, cloudiness soon involving the whole lens. *Nuclear* or *hard senile cataract* is a form usually met with in old people. When the capsule is rendered opaque, in consequence of injury (*traumatic cataract,* suffusio ex vulnere) which cuts or ruptures any part of it, it thickens and becomes leathery; this condition has been called *aridosiliquose cataract*. *Morgagnian, lacteal,* or *puriform cataract* is a milky variety, in which the crystalline is transformed into a liquid similar to milk, or in which there is opacity of the fluid between the lens and its capsule. *Capsulolenticular cataract* affects both lens and capsule.

Cataracts are also called *hard,* sclerocataracta, suffusio dura; *soft,* phacomalacia, suffusio mollis; *stony; milky* or *cheesy,* galactocataracta, cataracta lacticolor, according to their density; white, pearly, yellow, brown, gray, green, black, according to their color; fixed or vacillating, cataracta capsulolenticularis fixa or tremula, according as they are fixed or movable behind the pupil. In diabetic cataract the opacity is probably dependent on impaired nutrition connected with diabetes.

Cataract may be *simple* or *complicated* with adhesion, amaurosis, specks, etc.; and *primary* or *primitive*, when opaque before operation; *secondary*, when the opacity is a result of operation. Cataract is commonly a disease of elderly individuals, although not infrequently it is congenital, suffusio congenita. It forms slowly; objects are at first seen as through a mist; light bodies appear to fly before the eyes, and not until after months or years is sight wholly lost.

Operation alone will obviate the evil by removing the obstacle to the passage of light to the retina. The following methods are employed for this purpose, the operator observing the rules of antiseptic surgery: the flap operation, linear extraction, the modified or peripheral linear (Von Graefe), the short flap (De Wecker), the needle operation, and the suction method. The old operation of couching or depression has been quite generally abandoned by ophthalmic surgeons. The *needle operation*, or *discission*, consists in opening the capsule of the lens; the aqueous humor comes in contact with the substance of the lens, and absorption is brought about. This mode of operating is adapted to cataracts in children. The *suction method* consists in lacerating the anterior lenticular capsule with needles; an incision is made in the cornea large enough to allow the aspirator to be introduced, suction is made with it, and the lens matter removed in this manner. Selection of the most appropriate operation must depend upon the peculiar nature of the case.

**Af′ter-c.**, a secondary capsular c. **Ante′rior cen′tral c.**, polar c. **Arbores′cent c.**, one in which the opacity has a branching appearance. **Ar′idosil′iquose** or **Aridosil′iquate c.**, one in which the opacity is due to a leathery thickening or calcareous deposit in the capsule. **Ax′ial c.**, nuclear c. **Ax′illary c.**, spindle c. **Black c.**, nuclear c. darkened by the absorption of hæmatin, with inflammation of the inner part of the eye; at one time amaurosis was so called. **Calca′reous c.**, c. with calcareous deposits, often so hard as to receive the name *osseous*. **Cap′sular c.**, see *Cataract*. **Cap′sulolentic′ular c.**, see *Cataract*. **Ca′seous c.**, cheesy c. **Cen′tral c.**, neutral c.; centradiaphanes. **Chee′sy c.**, an over-ripe c. which has undergone degeneration into an opaque, cheesy mass. **Choles′terin c.**, c. having particles of cholesterin glistening in the lens. **Complete′ c.**, one in which the opacity involves the entire lens. **Com′plicated c.**, see *Cataract*. **Congen′ital c.**, see *Cataract*. **Contu′sion c.**, traumatic c. **Cor′tical c.**, see *Cataract*. **Crys′talline c.**, lenticular c., see *Cataract*. **Cys′tic c.**, see *Cataracta cystica*. **Diabet′ic c.**, cataract associated with diabetes. **Dot′ted c.**, punctated c. **Dry-shell c.**, aridosiliquose c. **False c.**, opacity of the cornea or aqueous humor not involving the lens. **Fi′brinous** or **Fi′broid c.**, false c., in which plastic lymph is deposited on the lens or its capsule. **Fixed c.**, see *Cataract*. **Flu′id c.**, see *Cataracta cystica*. **Fu′siform c.**, spindle-shaped nuclear c. **Gen′eral c.**, one in which both lens and capsule are involved. **Gen′uine c.**, see *Cataract*. **Glass′blower′s c.**, a c. due to exposure of the eyes to great heat. **Glauco′matous c.**, one associated with glaucoma. **Glycosu′ric c.**, diabetic c., see *Cataract*. **Green c.**, cataract complicated with glaucoma. **Hard c.**, see *Cataract*. **Hy′aloid c.**, c. probably dependent upon opacity of the vitreous humor. **Hypermature′ c.**, over-ripe c. **Im′mature c.**, a forming c. or one not involving the entire lens or capsule. **Incip′ient c.**, a beginning c.; a minor degree of immature c. **In′fantile c.**, c. occurring in early life, lamellar in form. **Intersti′tial c.**, lenticular c. **Intumes′cent c.**, one accompanied by swelling of the lens. **Lac′teal c.**, milky c. **Lamel′lar, lam′inar**, or **lam′inated c.**, opacity of several lamellæ of the lens, not of the whole lens itself; generally congenital. **Lentic′ular c.**, see *Cataract*. **Lymph c.**, cataracta cystica. **Mature′ c.**, a c. in which the entire lens is involved and ready for operation. **Mem′branous c.**, see *Cataract*. **Milk′y c.**, soft, milk-like opacity of the lens. **Mixed c.**, opacity of the lens, at first cortical, afterward nuclear also. **Morgag′nian c.**, cataracta cystica. **Nu′clear c.**, see *Cataract*. **Opaque′ c.**, see *Cataract*. **Os′seous c.**, see *Calcareous cataract*. **Over-ripe′ c.**, one in which the lenticular substance has become entirely opaque and degenerated into a fluid or a shrivelled, hard state. **Par′tial c.**, one not involving the entire lens. **Perinu′clear c.**, lamellar c. **Pigmen′tous c.**, spurious c. due to traumatism, causing detachment of pigment. **Po′lar c.**, opacity of the centre of the capsule of the lens anteriorly, *anterior central* or *polar c.*; or posteriorly, *posterior central* or *polar c.* **Pri′mary** or **prim′itive c.**, see *Cataract*. **Progres′sive c.**, one which has not yet reached the stage of maturity, but in which the opacity is increasing. **Pseudomem′branous c.**, opacity of the lens, having white maculæ, the result of iritis. **Punc′tate c.**, dotted form of c. of the cortex of the lens. **Pur′ulent c.**, hypopyon. **Pu′trid c.**, hypopyon. **Pyram′idal c.**, see *Cataract*. **Recur′rent cap′sular c.**, secondary c. **Ripe c.**, mature c. **Sec′ondary c.**, c. consequent on some disease in the vicinity, tumor, etc., or one in which the capsule becomes opaque after removal or destruction of the lens. **Se′nile c.**, hard cataract of old age. **Sha′king c.**, tremulous c. **Sim′ple c.**, see *Cataract*. **Soft c.**, see *Cataract*. **Sol′id c.**, hard c. **Spin′dle-shaped c.**, a fusiform opacity of the centre of the lens. **Spu′rious c.**, see *Cataract*. **Sta′tionary c.**, an immature c. in which the opacity does not appear to be increasing. **Stel′late c.**, a cortical c., so called because of the stellate arrangement of the lines of opacity in the cortical portion of the lens. **Sto′ny c.**, see *Cataract*. **To′tal c.**, one involving the entire lens. **Traumat′ic c.**, see *Cataract*. **Trem′ulous c.**, condition in which, from laceration of parts or other cause, there is unusual mobility of the lens and iris. **True c.**, lenticular c. **Unripe′ c.**, immature c. **Vac′illating c.**, tremulous c. **Zon′ular c.**, lamellar c.

**Catarac′ta.** Cataract. **C. accre′ta**, cataract with adherent iris. **C. arbores′cens**, cataract with pigmentary deposit on the lens. **C. argante′a**, cataract with fatty matter of bile in the lens. **C. ar′ida siliquo′sa**, see *Cataract*. **C. axia′lis**, cataract with central opacity; nuclear cataract. **C. calca′rea**, calcareous cataract, **C. capsula′ris**, capsular cataract. **C. cap′sulolenticula′ris**, see *Cataract*. **C. centra′lis**, cataract from obscurity of the central portion of the lens. **C. cys′tica**, cystic or fluid condition of the lens, especialy its cortex. **C. fusifor′mis**, spindle-shaped opacity of the lens. **C. glau′ca**, glaucoma. **C. grumo′sa**, cataract with blood deposit in the pupil. **C. gyp′sea**, c. accreta. **C. lac′tea** or **lactic′olor**, milky cataract. **C. liq′uida**, liquid or fluid form of cataract. **C. marmora′cea. C. morgagnia′na, C. ni′gra**, amaurosis. **C. nuclea′ris**, nuclear cataract. **C. puncta′ta**, punctate cataract. **C. pyramida′ta**, opacity having pyramidal shape. **C. secunda′ria**, after-cataract, **C. seni′lis**, cataract of old people. **C. stella′ta**, stellate cataract. **C. traumat′ica**, see *Cataract*. **C. vir′idis**, glaucoma.

**Catarac′tous.** Of the nature of a cataract; relating to a cataract.

**Cata′ria** or **C. vulga′ris.** See *Nepeta*.

**Catarrh′** (*katarrheo*, to flow down). Discharge of fluid from a mucous membrane. The term was originally applied to simple inflammation of the mucous membrane of the nasal and respiratory passages (a cold), but is now extended to all mucous membranes, as of the stomach, bladder, etc. Catarrh, in the English sense, nasal or bronchial catarrh, a cold, is a superficial inflammation of the mucous follicles of the nose or of the trachea and bronchi; commonly of but little consequence, but apt to relapse and become chronic. It is characterized by cough, thirst, lassitude, fever, watery eyes, with increased secretion of mucus from the air passages; antiphlogistic regimen and time usually remove it; sometimes inflammation of the bronchial tubes may prove fatal. **Acute c.**, a common cold, marked, first, by dryness or swelling of the mucous membrane of the nasal passages, followed by a stage of profuse secretion, serous and mucous at the beginning, later becoming more or less purulent. **Alcohol'ic c.**, gastrointestinal irritation of habitual drinkers. **Alve'olar c.**, engorgement of the alveoli of the lung occurring in bronchopneumonia. **Atroph'ic na'sal c.**, chronic disease characterized by atrophy of the lining membrane of the nose and turbinated bones, with offensive discharge; see *Ozæna* and *Rhinitis*. **Autum'nal c.**, hay fever. **C. of the blad'der**, see *Cystitis*. **Bos'tock's c.**, hay fever. **Bron'chial c.**, bronchitis. **Choler'iform c.**, see *Cholera infantum*. **Chron'ic c.**, a slow inflammation of the mucous membranes of the respiratory or alimentary tract, accompanied usually by the discharge of a thick, mucopurulent secretion. **Dry c.**, see *Bronchitis*. **Epidem'ic c.**, catarrh prevailing throughout an extensive area, sometimes affecting a whole country—influenza. **Follic'ular c.**, catarrh involving the follicles, which become elevated and granular. **Gas'tric c.**, gastritis. **Hemorrhag'ic c.**, catarrh in which fluid secreted is mixed with blood, as in cases of variola, pyæmic poisoning, etc. **Hypertroph'ic na'sal c.**, chronic disease characterized by hypertrophy of the lining membrane of the nose and pharynx. **Intes'tinal c.**, enteritis. **Laennec's' c.**, see *Laennec*. **Laryn'geal c.**, laryngitis. **Na'sal c.**, coryza. **Pap'illary c.**, c. of the papillæ of the kidney. **Pitu'itous c.**, chronic bronchorrhœa, with excessive secretion; humid asthma. **Pul'monary c.**, bronchitis. **Rose c.**, an affection similar to hay fever occurring in June. **Rus'sian c.**, influenza. **Se'rous c.**, mucous membrane inflammation attended with a thin, clear, or slightly bloody secretion. **C. of skin**, dermatitis. **Spring c.**, vernal c. **Suf'focative c.**, capillary bronchitis; asthma. **Sum'mer c.**, hay fever. **C. of u'terus**, metritis. **Vag'inal c.**, see *Leucorrhœa*. **Ver'nal c.**, conjunctivitis occurring in the spring. **Ves'ical c.**, cystitis.

**Catar'rhal.** Relating to or resembling catarrh. **C. pneumo'nia**, bronchopneumonia or lobular pneumonia.

**Catarrheu'ma** (*rheuma*, defluxion). Catarrh.

**Catarrhex'ia** or **Catarrhex'is** (*katarrhexis*, breaking down). Evacuant action from the bowels, stomach, or other organs. **C. ve'ra**, discharge of blood from the bowels.

**Catarrho'pia** (*kata*, down, *rhope*, inclination). Afflux of fluids toward inferior parts, and especially toward the viscera of the abdomen; *anarrhopia* expresses the opposite phenomenon, tendency toward upper parts.

**Catarrhopneumo'nia.** Catarrhal pneumonia.

**Catarrhos'chesis** (*katarrhoos*, catarrh, *schesis*, suppression). Suppression of mucous discharge or catarrh.

**Catar'rhous.** Catarrhal; affected with catarrh.

**Catar'rhus.** Catarrh; defluxion; tussis. **C. æsti'vus**, hay fever. **C. bellinsula'nus**, mumps. **C. benig'nus**, common cold. **C. bronchia'lis** or **bronchio'rum**, bronchitis. **C. à. conta'gio**, influenza. **C. epidem'icus**, influenza; epidemic catarrh. **C. febri'lis**, catarrhal fever. **C. feri'nus**, whooping-cough. **C. à. frig'ore**, a cold, see *Catarrh*. **C. genita'lium**, urethritis or leucorrhœa. **C. gonorrhœ'a**, gonorrhœa. **C. intestina'lis**, diarrhœa. **C. larynge'us** or **laryn'gis**, laryngitis. **C. ad na'res** or **nasa'lis**, coryza. **C. pec'toris**, **pulmona'lis**, or **pulmo'num**, bronchitis; catarrh. **C. rubeolo'sus**, catarrh incident to measles. **C. rus'sicus**, influenza. **C. seni'lis**, chronic bronchitis of the aged. **C. sic'cus**, dry catarrh. **C. soffocati'vus barbaden'sis**, suffocative catarrh. **C. trachea'lis**, catarrh of the trachea alone or of the larynx and trachea. **C. ure'thræ** or **urethra'lis**, urethritis; gonorrhœa. **C. vesi'cæ**, cystitis.

**Catasar'ca** (*kata*, down, *sarx*, flesh). Anasarca.

**Cat'aschasm** (*schazo*, to scarify). Blood-letting; scarification.

**Catastag'mus** (*kata*, down, *stazo*, to drop). Catarrh; coryza.

**Catastal'tic** (*katastello*, to repress). Hæmostatic, sedative, astringent, styptic; passing downward, as nervous force.

**Catas'tasis** (*katastasis*, constitution). Constitution, state, condition; reduction of bone; sedation.

**Cat'astate.** A product of catabolic action.

**Catat'asis** (*katateino*, to extend). Extension; extension and reduction of a fractured limb; reduction of a dislocation.

**Catath'esis** (act of depositing). Depression.

**Catathlip'sis** (*katathlibo*, to depress). Oppression.

**Catato'nia, Catat'ony** (*kata*, intensive, *tonos*, tone, or tension). Disease of the brain, of the nature of intense melancholy and general paresis of the insane.

**Catatricrot'ic.** Relating to catatricrotism.

**Catatric'rotism.** A condition of the pulse in which there are two abortive beats following the main one, indicated by two interruptions in the descending stroke of the sphygmograph.

**Catatro'pia** (*kata*, down, *tropa*, turning). An abnormal downward deflection of the eyes; cataphoria.

**Cataw'ba.** A native grape and the wine made from it. **C. tree**, catalpa.

**Catch fly.** Apocynum androsæmifolium; Silene virginica. **C. weed**, Galium aparine.

**Catechin'.** $C_{19}H_{18}O_8$. White, astringent principle derived from catechu; catechuic acid.

**Catechin'ic acid.** Catechin.

**Cat'echol.** $C_5H_6O_2$. An antiseptic and antipyretic preparation made from guaiacol.

**Cat'echu** (East Indian term, signifying juice of a tree). Extract prepared from wood of Acacia catechu (Ph. U. S.), black catechu or cutch, and from leaves and young shoots of Nauclea or Uncaria gambir (Ph. Br.), pale catechu, Oriental trees. Catechu is a powerful astringent, used in diarrhœa, intestinal hemorrhage, leucorrhœa, ulcers, sore throat, etc.; dose, gr. x–xxx (0.65–2.0). The compound tincture, *tinctura catechu composita*, contains cinnamon; dose, ʒss–ij (2.0–8.0). **C. ni'grum**, Acacia catechu. **C. pal'lidum**, Uncaria gambir.

**Cat'echutan'nic acid.** Peculiar form of tannic acid derived from catechu.

**Catelec'trode.** Cathode.

**Catelectroton'ic** or **Catelectrot'onous** (*cathode* + *electrotonus*). Relating to or producing catelectrotonus.

**Catelectrot'onus.** Increased excitability or irritability of a nerve at the negative pole after the passage of a current through it.

**Cat'enating.** Connecting as the links of a chain; as *catenating ague*, intermittent fever alternating with some other disease.

**Catesbœ'a mecran'tha** or **spino'sa.** W. Indian shrub, bark of which is tonic and antipyretic.

**Cat'foot.** Antennaria dioica.

**Cat'gut.** The intestine of the sheep twisted into strings of varying thickness; used in medicine as sutures and ligatures; also Galega virginiana.

**Cath'a ed'ulis.** Shrub of Asia and Africa, leaves of which are used as a drink, similar to coffee, and in insomnia and migraine.

**Cathar'sis** (*kathairo*, to purge). Natural or artificial purgation of any passage—mouth, anus, vagina, etc.; usually from the bowels only.

**Cathar'tate.** A salt of cathartic acid.

**Cathar'tic.** Producing catharsis; medicine which, when taken internally, increases the number of alvine evacuations. Some substances act upon the upper part of the intestinal canal, as calomel and colocynth; others on the lower part, as aloes, and some on the whole extent, as saline purgatives. Cathartics are divided into laxatives, simple cathartics, drastic cathartics, saline cathartics, hydragogues, and cholagogues, as follows (Brunton):

*Laxatives.*

Cassia.
Castor oil (in small doses).
Figs.
Gingerbread.
Honey.
Magnesia.
Manna.
Molasses.
Prunes.
Stewed apples.
Sulphur.
Tamarinds.

*Simple Cathartics.*

Aloes.
Cascara sagrada.
Castor oil.
Magnesia.
Magnesium carbonate.
Olive oil.
Rhamnus frangula.
Rhubarb.
Senna.
Sulphur.

*Drastic Cathartics.*

Colocynth.
Croton oil.
Elaterium.
Gamboge.
Jalap.
Podophyllin.
Scammony.

*Saline Purgatives.*

Magnesium citrate.
Magnesium sulphate.
Potassium bitartrate.
Potassium and sodium tartrate.
Potassium sulphate.
Potassium tartrate.
Sodium phosphate.
Sodium sulphate.
Sodium sulphovinate.

*Hydragogues.*

Elaterium.
Gamboge.
Potassium bitartrate.

*Cholagogues.*

Aloes.
Euonymin.
Iridin.
Mercurial preparations (blue pill, calomel, hydrargyrum cum cretâ.

**C. acid**, glucoside, $C_{180}H_{90}N_2SO_{82}$, active principle of senna.

**Cathartin′.** Bitter purgative substance from senna or jalap; also principle derived from Rhamnus catharticus.

**Cathartocar′pus excel′sus.** Cassia fistula. **C. fis′tula** or **fistuloi′des**, Cassia fistula. **C. moscha′tus**, Cassia moschata.

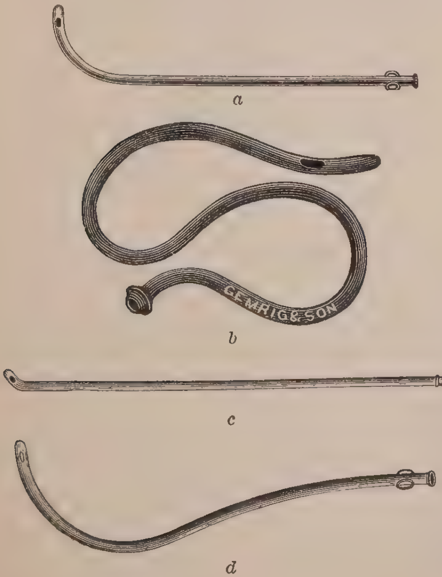
**Cathartogen′ic acid, Cathartogenin′.** Brown substance, product of the action of dilute acids, as hydrochloric acid, upon cathartic acid.

**Cathartoman′nit.** Saccharine principle from senna leaves, $C_{21}H_{44}O_{19}$.

**Cathemer′inus** or **Cathemer′ius** (*kata*, according to, *hemera*, day). Quotidian.

**Catheret′ic** (*kathaireo*, to destroy). Mild caustic applied to warts, exuberant granulations, etc.

**Cath′eter** (*katheter*, a probe). Hollow tube introduced into the urethra or other passage to draw off fluid or to dilate the passage. Catheters may also be passed into the nasal dust or Eustachian tube see *Bougie*. **Bent** or **el′bowed c.**, a catheter, extremity of which is an elbowed curve; used especially in prostatic affections. **Elast′ic c.**, flexible c. **Eustach′ian c.** or **Fau′cial c.**, catheter for dilating the Eustachian tube or introducing medicated vapor or fluid into the tympanum. **Fe′male c.**, a short catheter, to be passed into the female urethra. **C. fe′ver**, adynamic form of fever after catheterization; urethral fever. **Flex′ible c.**, catheter made of flexible material, as rubber. **C. gauge**, a plate containing perforations of various sizes corresponding to the usual catheter scale, by which the diameter of a catheter can be measured. **Lac′rymal c.**, instrument adapted for catheterizing the lacrymal duct. **Mercier's′ c.**, bent or elbowed c. **Na′sal c.**, lacrymal c. **Prostat′ic c.**, c. with a wide curve for use in cases of enlarged prostate. **Ure′thral** or **ves′ical c.**, c. to be passed through the urethra into the bladder for drawing off the urine in cases of retention.



a
b
c
d

Urethral catheters: *a*, metallic; *b*, flexible; *c*, elbowed; *d*, prostatic.

**Cath′eterism** or **Catheteriza′tion.** Introduction of a catheter, hollow sound, or tube into a natural passage, as through the urethra into the bladder, Eustachian tube, larynx, etc.; in the latter cases called tubage; probing a wound.

**Cath′eterize.** To introduce a catheter; to probe or sound a cavity.

**Cathidry′sis** (*kathidryo*, to set in place). Reduction of a part to its natural situation.

**Cath′ion.** Cation.

**Cath′odal.** Cathodic.

**Cath′ode.** Negative pole or electrode, point of exit of the galvanic current. **C. rays**, rays originating in a vacuum-tube at the negative pole when a discharge of electricity is passed through the tube; at the point where these rays infringe the *x*-rays are generated; see *Ray*.

**Cathod′ic** (*kata*, down, *hodos*, a way). Relating to cathode; term referring to downward or efferent course of nervous action. **C. clo′sure contrac′tion**, muscular contraction, either clonic (**c. c. clo′nus**) or tonic (**c. c. tet′anus**), taking place when the galvanic circuit is completed. **C. o′pening contrac′tion**, muscular contraction, either clonic (**c. o. clo′nus**) or tonic (**c. o. tet′anus**), taking place when the galvanic circuit is broken.

**Cath′odus.** Downward or efferent course of nervous action, or downward afflux of blood.

**Cathol′icon.** Panacea; purging electuary.

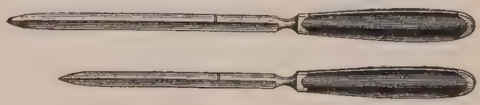
**Cathor′asis** (*kathorao*, to look intently). Acuteness of sight.

**Cathyp′nia** or **Cathypno′sis** (*kata*, intensive, *hypnos*, sleep). Profound sleep.

**Cat′ion.** The electropositive element, that which passes to the cathode or negative pole.

**Cati′vi.** Contagious cutaneous disease of Honduras, characterized by numerous colored spots.

**Cat′ling** or **Cat′lin.** Double-edged knife.



Catlings.

**Cat′mint, Cat′nep,** or **Cat′nip.** Nepeta cataria; Catamintha officinalis.

**Catocathar′tic** (*kato*, down, *kathairo*, to purge). Medicine purging downward, catacathartic.

**Cat′oche.** Catalepsy; coma vigil; tetanus; fever with coma.

**Catochei′lon** (*kato*, down, *cheilos*, lip). Lower lip.

**Cat′ochus.** Catoche. Induration of connective tissue. **C. cervi′nus**, tetanus. **C. holoton′icus**, tetanus. **C. infan′tum**, induration of the cellular tissue.

**Catocœ′lia** (*kato*, down, *koilia*, abdomen). Hypogastrium; lower part of the abdomen.

**Catomis′mus** (*kato*, down, *omos*, shoulder). Reducing luxation of the humerus by raising the body by the arm.

**Catop′ter.** A reflecting speculum.

**Catop′tric** (*katoptron*, mirror). Relating to catoptrics or reflection of light. **C. examina′tion of the eye**, or **C. test**, when a lighted candle is held before the eye, the pupil of which has been dilated by belladonna, three images of it are seen—two erect, one inverted—the former owing to the reflection from the cornea and anterior surface of the crystalline; the latter, to reflection from the posterior layer of the crystalline, inverted, and between the other two; a means of diagnosis between cataract and amaurosis, in the latter all the images being seen. The ophthalmoscope is now used as a substitute for this method.

**Catop′trics.** Part of physics treating of reflected light.

**Catop′tron.** A mirror speculum.

**Catoret′ic** or **Catoter′ic.** Purgative.

**Cator′rhinus** (*kato*, down, *rhis*, nose). Term applied to skulls in which a line from the hormion (the point or middle line of junction of posterior border of vomer and sphenoid) to subnasal point (centre of inferior border of anterior nasal aperture) lies below the radius fixus (linear distance between the hormion and inion), the resulting angle being from 16.5° to 35°.

**Catos′tomus** (*kato*, down, *stoma*, mouth). Term designating skulls which have line between the hormion and alveolar point (centre of anterior margin of superior alvelor arch) below the radius fixus, the angle being from 25.5° to 42.5°.

**Catouranis′cus** (*kato*, down, *ouraniskos*, roof). Craniometrical term to designate skulls in which the line between posterior border of the incisive foramen and alveolar point looks backward when referred to the radius fixus as a horizontal, the resultant angle being from 20° to 40°.

**Catour′anus** (*kato*, down, *ouranos*, roof of mouth). Craniometrical term used to designate skulls in which line between the staphylion (median point of posterior nasal spine) and alveolar point (centre of anterior margin of superior alveolar arch) looks backward when referred to the radius fixus as a horizontal, the resultant angle being 17° to 34°.

**Catox′ys** (*kata*, intensive, *oxys*, acute). Highly acute, as a disease.

**Cat's ear,** deformity of the concha of the human ear causing it to resemble that of a cat. **C.'s eye,** opalescent appearance of the pupil and of the fundus of the eye, which reflect light in various colors or degrees of intensity, according to the direction in which the eye is turned; see *Amaurotic cat's eye.* **C.'s-eye pu′pil,** elongated pupil in the human eye resembling that in a cat's eye. **C.'s foot,** Antennaria dioica. **C.'s hair,** Euphorbia piluifera. **C.'s purr,** peculiar thrill sometimes heard in diseases of the heart.

**Cat′tail.** Typha latifolia. **C. flag,** Typha latifolia.

**Cat′tle far′cy.** See *Farcy.* **C. fe′ver,** see *Southern cattle fever.* **C. plague,** rinderpest.

**Cat′tle-poi′son plant.** Australian name for different varieties of gastrolobium.

**Catulot′ic.** Promoting cicatrization.

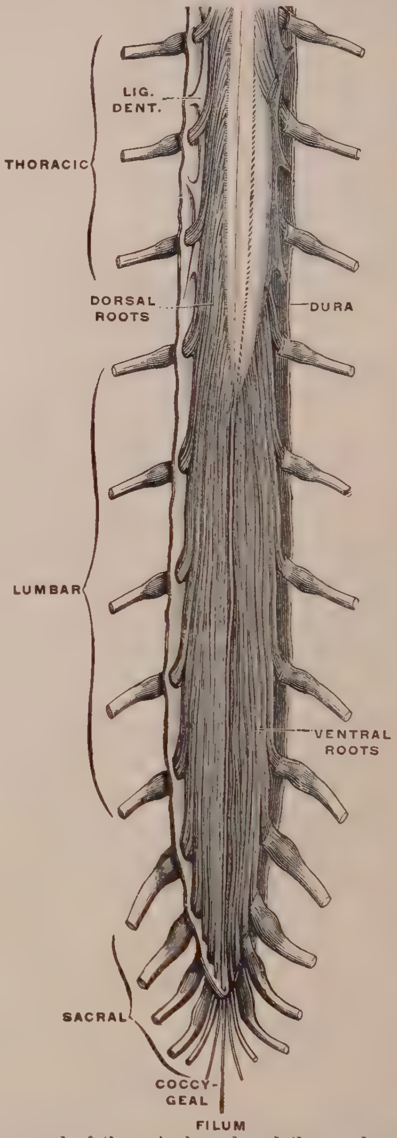
**Catu′rus speciflo′rus.** E. Indian shrub, used in diarrhœa and dysentery.

**Caucal′is caro′ta.** Daucus carota. **C. baucoi′des,** bur-parsley, hedge-parsley, of Europe; fruit is diuretic and emmenagogue. **C. latifo′lia,** bastard parsley of Europe; diuretic. **C. sanic′ula,** sanicula.

**Caucaloi′des** (like caucalis). Patella.

**Cauca′sian.** See *Homo.*

**Cau′da** (a tail). Tail; elongated extremity of a muscle or other structure. **C. agres′tis,** Acalypha betulina. **C. cauda′ti,** c. corporis striati. **C. cerebel′li,** vermiform process. **C. coccyge′a,** coccyx. **C. collic′uli cauda′ti,** c. corporis striati. **C. cor′poris stria′ti,** posterior extremity of corpus striatum. **C. epididym′idis,** tail of epididymis. **C. equi′na** (horse's tail), the terminal division of the spinal cord, at about the level of the second lumbar vertebra, into a mass of separate nerves having a resemblance to a horse's tail; hence the name. **C. fe′lis,** caturus. **C. hel′icis,** tail of the process of the helix of the ear. **C. lie′nis,** lower extremity of spleen. **C. mus′culi,** see *Muscle.* **C. pancre′atis,** tail of the pancreas, a prolongation of the organ extending to the left. **C. pri′or flexo′ris bre′vis,** abductor brevis alter. **C. puden′di,** clitoris; polypus uteri. **C. sa′lax,** penis. **C. stria′ti,** delicate termination of nucleus caudatus.



Lower end of the spinal cord and the cauda equina, dorsal aspect. The dorsal roots of the right side have been removed. (Gerrish, after Testut.)

**Cau′dad.** In a direction toward the tail or posterior extremity.

**Cau′dal** or **Caud′ate** (*cauda*, tail). Relating to a tail; having a tail or tail-like appendage. **C. lig′ament,** lower extremity of the spinal cord. **C. ver′tebræ,** coccygeal and sacral vertebræ, those belonging to the tail.

**Cau′date.** Caudal. **C. lobe of liv′er,** see *Liver.* **C. nu′cleus,** see *Corpus striatum.*

**Cauda′tion** (*cauda*, tail). Clitorism.

**Cauda′tum.** Caudate nucleus.

**Cau′dex cer′ebri** (*caudex,* stem). Peduncle of brain. **C. dorsa′lis,** spinal cord; medulla oblongata. **C. enceph′ali,** cerebral peduncle; medulla oblongata; crus cerebri; pons Varolii. **C. medulla′ris,** cerebral peduncle.

**Cau′diduct.** To draw backward or toward the tail.

**Cau′dofem′oral.** Agitator caudæ muscle.

**Caudolentic′ular.** Having reference to both the caudate and lenticular nuclei of the corpus striatum.

**Caul** (*caula,* sheepfold). When a child is born with membranes intact or covering the face it is said to be *born with a caul.* The caul is popularly supposed to bring luck to the possessor; hence the membranes are dried, and sometimes sold for a high price and even bequeathed, and are occasionally carried about for a long series of years. The peritoneum, pericardium, or serous investment of any viscus; the epiploon.

**Caul′iflower.** Brassica florida. **C. can′cer,** ulcerated cancer of the cervix uteri. **C. excres′cence,** excrescence appearing about the origin of the mucous membranes, chiefly about the anus and vulva, and resembling in appearance a head of cauliflower; it is often syphilitic. *Cauliflower excrescence of the uterus* is an epitheliomatous growth from the circumference of the os uteri, and at times from the interior of the cavity of the uterus.

**Caul′is.** Penis; cervix uteri; crus cerebri. **C. flor′ida,** Brassica florida. **C. u′teri,** cervix uteri.

**Caulophyllin′.** Resinous matter derived from caulophyllum; tonic.

**Caulophyl′lum.** (Ph. U. S.) Blue cohosh, the rhizome and roots of C. thalictroides,, called also blueberry cohosh, papoose-root, squaw-root, blue ginseng, yellow ginseng; plant of ord. *Berberidaceæ,* growing all over the United States. Said to be emmenagogue, diaphoretic, diuretic, and antispasmodic; dose, gr. x–xxx (0.65–2.0) in decoction. There is also an unofficial fluid extract, of which the dose is ♏x–ʒj (0.65–4.0).

**Caulorrha′gia.** Hemorrhage from the penis. **C. ejaculato′ria,** discharge of blood from the urethra in the act of emission of sperm. **C. stillati′tia,** hemorrhage from the urethra.

**Caulorrhœ′a.** Discharge from the penis. **C. benig′na,** non-veneral urethritis.

**Caul′us.** Penis; neck of uterus; crus cerebri.

**Cau′ma** (burn part). Great heat of the body or atmosphere; inflammation; internal inflammation; inflammatory fever; spot burned by cautery. When prefixed to bronchitis, nephritis, otitis, etc., it signifies an intensity of the inflammatory process.

**Caumat′ic.** Febrile; pyretic.

**Caun′ga.** Areca.

**Cau′sa.** Cause. **C. ab′dita,** latent or remote cause. **C. actua′lis,** occasional cause. **C. conjunc′ta** or **con′tinens,** proximate cause. **C. exci′tans,** exciting cause. **C. prægu′mena,** predisposing cause. **C. præincip′iens** or **procatarc′tica,** predisposing cause; occasional cause. **C. prox′ima,** proximate cause.

**Cau′sal.** Relating to a cause.

**Causal′gia** (*kausos,* heat, *algos,* pain). Burning pain, commonly in the foot, but also elsewhere in the region of an injured nerve.

**Cause.** Act preceding another, and seeming to be a necessary condition for the concurrence of the latter. **Acces′sory c.,** one which has only secondary influence in the production of disease. **Acciden′tal c.,** one which acts only in certain given conditions and does not always produce the same disease; cold, for example. **Antece′dent c.,** remote or predisposing cause. **Constitu′tional c.,** one residing in the body, such as a diathesis or predisposition. **Endopath′ic c.,** one arising within the body. **Essen′tial c.,** one that produces the effect without regard to other causes. **Exci′ting c.,** occasional c.; proximate c. **Exopath′ic c.,** external c. **Exter′nal c.,** one acting from without, as air, cold, etc. **Hid′den c.,** occult c. **Imme′diate c.,** essential or proximate c. **Inter′nal c.,** endopathic c. **La′tent c.,** occult c. **Mechan′ical c.,** one acting mechanically, as pressure upon the windpipe in inducing suffocation. **Neg′ative c.,** anything the privation of which may derange the functions, as abstinences too long continued; opposed to *positive causes,* which directly induce disease, as the use of indigestible food, spirituous drinks, etc. **Obscure′ c.,** occult c. **Occa′sional c.,** exciting c.; one which immediately produces a disease. **Occult′ c.,** hidden cause; obscure cause. **Phys′ical c.,** one acting by virtue of physical properties, as form, hardness, etc. **Physiolog′ical c.,** one acting only on living matter; narcotics, for example. **Pos′itive c.,** one which induces disease directly. **Predispo′nent** or **predispo′sing c.,** remote cause; one which renders the body liable to disease; *general,* affecting a number of people, or *particular,* affecting only one person. **Pri′mary c.,** proximate c. **Prin′cipal c.,** one exerting the chief influence in the production of disease, as distinguished from accessory cause. **Procatarc′tic c.** (relating to the origin or beginning), a word used with different significations, synonymously with predisponent or remote cause and with occasional or exciting cause. **Prox′imate c.,** one producing direct and immediate effect; superabundance of blood, for example, being the proximate cause of plethora. **Remote′** or **sec′ondary c.,** predisponent c. **Specif′ic c.,** one which always, when effective, produces the same disease. **Ult′imate c.,** the first cause, or the one farthest removed in point of time from the actual outbreak of disease.

**Cau′sis** (Gr., a burning), Burn, cauterization, combustion, ebullition, fermentation.

**Caus′tic** (*kaustikos,* that which burns). A term applied to bodies having the property of burning or disorganizing animal substances. The most active are called *escharotics,* completely decomposing the tissues to which they are applied. Caustics are also termed corrosives. **C. al′cohol,** sodium ethylate. **C. ammo′nia,** aqua ammoniæ fortior. **C. ar′rows,** small, sharp-pointed cones of paste, containing zinc chloride or other caustics, introduced into the substance of tumors. **C. bary′ta,** barium hydrate. **C. bear′er,** instruments for carrying lunar caustic. **Black c.,** concentrated sulphuric acid made into paste with saffron; used in cancer. **Can′quoin's c.,** pasta zinci chloridi. **C. collo′dion,** solution of corrosive sublimate, 4 parts, in collodion, 30 parts, used for destroying nævi. **Com′mon c.,** causticum commune. **C. of Fil′hos,** a mixture of melted potassa, 100 parts, lime, 20 parts, poured into moulds. **Landol′fi's c.,** a mixture of chlorides of bromine, zinc, gold, and antimony. **Lu′gol's c.,** iodine and iodide of potassium, each ℥j, dissolved in water f℥ij; used in lupus and fungous granulations. **Lu′nar c.,** argenti nitras. **Mit′igated c.,** diluted nitrate of silver. **C. paste,** Canquoin's pasta zinci chloridi. **C. points,** c. arrows. **C. pot′ash,** potassium hydrate. **Rousselot's′ c.,** see *Rousselot.* **C. so′da,** sodium hydrate. **Vien′na c.,** potassa cum calce.

**Caustic′ity.** Impression made by caustic bodies on the organ of taste; property distinguishing those bodies.

**Caus′ticum.** Caustic. **C. æthiop′icum,** paste made by rubbing powdered saffron with concentrated sulphuric acid; used as a caustic in gangrenous and carcinomatous ulcers. **C. alkali′num,** potassa fusa. **C. america′num,** Veratrum sabadilla. **C. antimonia′le,** antimonium muriatum. **C. chirur′gicum,** potassa fusa. **C. commu′ne,** potential cautery, common caustic, consisting of quicklime and black soap, equal parts; potassa fusa. **C. c. acer′rimum,** potassa fusa. **C. c. for′tius,** potassa cum calce. **C. luna′re,** argenti nitras. **C. ni′grum,** black caustic. **C. potentia′le,** potassa fusa. **C. sali′num,** potassa fusa. **C. viennen′se,** potassa cum calce.

**Cau′sus** (*kausos,* heat). Ardent fever; gastric intermittent fever. **C. trop′icus endem′icus,** yellow fever.

**Cau′ter.** Cautery.

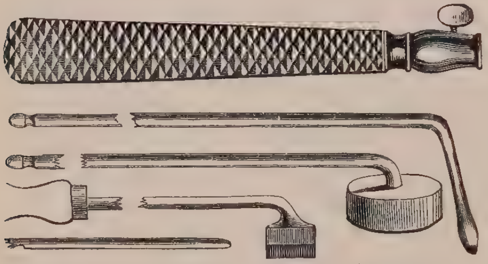
**Cau′terant** or **Cauteret′ic.** Possessing caustic effects.

**Caute′rium.** Cautery.

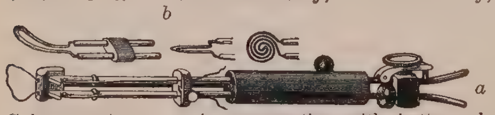
**Cauteriza′tion.** Act of applying caustic or cautery; effect of the cautery or caustic.

**Cau′terize.** To apply a cautery or caustic; to burn with a cautery or caustic.

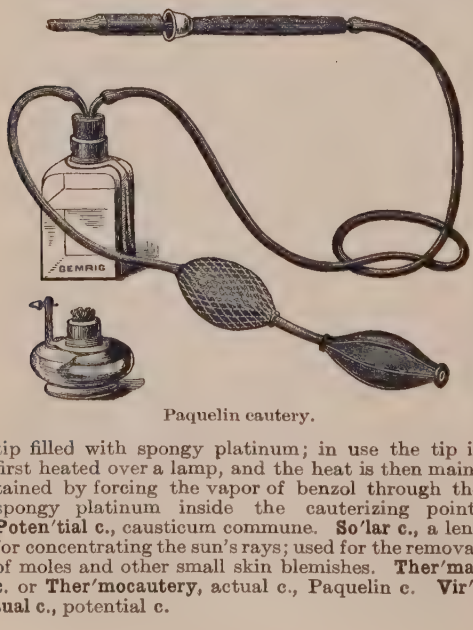
**Cau′tery.** Substance used for firing, burning, or disorganizing parts to which it is applied. Cauteries were formerly divided into actual and potential. The word is now restricted to the former, *i. e.*, the red-hot iron, or thermocautery, or galvanocautery, potential cauteries being now usually called caustics. It was formerly much used for preventing hemorrhage from divided arteries and also as a blister. The "button cautery," recommended by Sir Dominic Corrigan for "firing" or producing speedy rubefaction, consists of a thick iron wire shank inserted into a small wooden handle, having on its slightly curved extremity an iron disk or button. **Ac′tual c.,** cautery. **But′ton c.,** see *Cautery*. **Clamp c.,** instrument for cauterizing the pedicle of an ovarian tumor. **Galvan′ic c.** or **Gal′vanocautery,** actual cautery, in which wire is made intensely hot by electricity. **Gas c.,** application of heat through metallic or porcelain instruments heated by ordinary burning gas. **Lin′ear c.,** c. applied in a straight line. **Paquelin′ c.,** thermocautery consisting of a hollow platinum tip filled with spongy platinum; in use the tip is first heated over a lamp, and the heat is then maintained by forcing the vapor of benzol through the spongy platinum inside the cauterizing point. **Poten′tial c.,** causticum commune. **So′lar c.,** a lens for concentrating the sun's rays; used for the removal of moles and other small skin blemishes. **Ther′mal c.** or **Ther′mocautery,** actual c., Paquelin c. **Vir′tual c.,** potential c.



Actual cautery: handle and tips of various shapes.



Galvanocautery: *a*, wires connecting with battery; *b*, tips of various shapes.



Paquelin cautery.

**Ca′va** (hollow). Any cavity, as orbit, vulva, etc. **Ve′na c.,** see *Vena*.

**Cav′al.** Appertaining to the vena cava. **C. ap′erture,** opening in the central tendon of the diaphragm for the passage of the ascending vena cava.

**Cav′alry bone.** Osseous deposit in the adductor muscles of the thigh, from pressure in the saddle; riders' bone.

**Cav′ascope** (*cavum*, a cavity, *skopeo*, to look at). An instrument with which to illuminate a cavity for diagnostic or therapeutic purposes.

**Cava′tio** (*cavus*, hollow). Cavity; excavation.

**Cave of Ret′zius.** See *Retzius*.

**Caver′na** (cavern). Cavity, as in the lungs; female organs of generation. **C. den′tis,** see *Alveoli*. **C. fron′tis,** see *Frontal sinuses*.

**Caverni′tis.** Inflammation of the corpora cavernosa penis.

**Caverno′ma.** A cavernous angioma.

**Cav′ernous.** Having small cavities or caverns, especially such connecting with or composed of blood-vessels, and so filled or capable of being filled with blood. Hollow (as to sound heard on auscultation). **C. angio′ma,** a vascular tumor, composed mainly of large and communicating blood-vessels or spaces filled with blood. **C. ar′tery,** artery of the corpus cavernosum. **C. bod′ies,** corpora cavernosa; two cylindrical sacs made up of spaces communicating with blood-vessels, separated by a vertical, incomplete septum, and forming nearly two-thirds of the penis. The corpus cavernosum on each side arises from the ascending portion of the ischium and terminates obtusely behind the glans. The filling of the cells or spaces in these bodies with blood causes the phenomenon of erection. **C. bod′ies of the clit′oris,** two hollow crura, forming the clitoris, similar in structure and function to the cavernous bodies of the penis. **C. bod′y of the vagi′na,** a structure composed of blood-vessels and cells, similar to those of the penis and clitoris, covering the outer extremity of the vagina on each side; it contracts the entrance to the vagina during coition; see *Bulbus vestibuli*. **C. breath′ing,** c. respiration. **C. gan′glion,** see *Carotid nerve*. **C. groove,** carotid groove. **C. lymph tu′mor,** lymphangioma. **C. nerves,** nerves from the prostatic plexus to the corpora cavernosa. **C. plex′us,** plexus of sympathetic nerves in the carotid groove; plexus of nerves on the membranous urethra. **C. râle,** c. rhonchus. **C. respira′tion,** when a cavity exists in the lungs, and one or more ramifications of the bronchi terminate in it, a loud, tubal noise is heard on auscultation provided the cavity is not full of fluid; this is called cavernous respiration, and the cough under these conditions is also cavernous. When the capacity of the cavern is great the sound of respiration is like that produced by blowing into a decanter with the mouth at a little distance from the neck—*amphoric respiration* (*amphora*, a flask). The *veiled puff* is a modification of cavernous respiration, in which, according to Laennec, a sort of movable veil interposed between the excavation and the ear seems to be agitated to and fro. **C. rhon′chus,** see *Cavernous respiration* and *Gurgling*. **C. si′nus,** venous cavity of the dura mater, filled with a multitude of reddish, soft filaments, intersecting each other, and, as it were, reticulated; the anterior extremity of each cavernous sinus has been named ophthalmic sinus. **C. tex′ture** or **tis′sue,** spongy substance forming the greater part of the penis and clitoris. **C. tu′mor,** a tumor having a loosely reticulated or spongy structure, similar to that of the corpora cavernosa penis, often communicating with a blood-vessel. **C. voice,** a hollow sound of the voice heard on auscultation of the chest when cavities exist in the lung substance. **C. whis′per,** blowing sound heard over cavities when words are whispered.

**Cavic′ula** or **Cavil′la** (*cavus*, hollow). Ankle or space between malleoli; cuneiform bone; astragalus.

**Cavita′ria.** See *Entozoa*.

**Cav'itary.** Forming cavities, as *cavitary myelitis.*

**Cav'itas** (*cavus*, hollow). Cavity. **C. antro'sa au'ris**, tympanum. **C. arachnoida'lis**, subarachnoid or subdural space. **C. bucca'lis**, cavity of mouth. **C. buccina'ta**, cochlea. **C. cer'ebri**, a ventricle of the brain. **C. cochlea'ta**, cochlea. **C. con'chæ**, inner, hollowed part of concha. **C. cotyloide'a**, acetabulum. **C. den'tis**, pulp cavity. **C. digita'ta ventric'uli latera'lis**, cornu posterius ventriculi lateralis. **C. du'ris ma'tris**, a sinus of the dura mater. **C. ellip'tica**, dilatation at one end of the semicircular canals of the ear. **C. glenoide'a**, glenoid cavity. **C. hemisphær'ica**, see *Crista vestibuli.* **C. hu'meri glenoi'des**, glenoid cavity of the scapula. **C. innomina'ta**, navicular fossa; cardiac auricle. **C. intermalleola'ris**, glenoid cavity of the tibia. **C. interscapula'ris**, the depression between the scapula and the spinous processes of the vertebræ. **C. labyrin'thi**, see *Labyrinth.* **C. nasa'lis** or **na'rium**, nares. **C. oc'uli**, orbit. **C. orbicula'ris**, see *Crista vestibuli.* **C. o'ris**, mouth. **C. ova'lis**, see *Crista vestibuli.* **C. pri'ma** or **quin'ta**, fifth ventricle. **C. pul'pæ**, see *Tooth.* **C. rhomboida'lis**, fourth ventricle. **C. rotun'da**, see *Crista vestibuli.* **C. semiluna'ris**, sigmoid fossa. **C. semiova'lis**, see *Crista vestibuli.* **C. sigmoide'a**, sigmoid fossa. **C. subrotun'da**, see *Crista vestibuli.* **C. Syl'vii**, fifth ventricle. **C. tym'pani** or **tympan'ica**, tympanic cavity. **C. Valsal'væ**, mastoid cavity. **C. Vieussen'ii**, fifth ventricle.

**Cav'ity.** Any hollow, as of the cranium, mouth, nasal fossæ, etc. **Abdom'inal c.**, see *Abdomen.* **Aë'rial c.**, air-cell. **Amniot'ic c.**, the space over the back of the embryo containing the amniotic fluid. **An'cyroid** or **An'kyroid c.**, posterior cornu of the lateral ventricle. **Arach'noid c.**, subdural space. **C. of Aran'tius**, ventricle of Arantius or of Aranzi. **Aud'itory c.**, c. of tympanum. **Cerebral c.**, one of the ventricles of the brain. **Cleav'age c.**, blastocele. **Closed c.**, a serous sac. **Cot'yloid c.**, acetabulum. **Cra'nial c.**, the cavity formed by the skull, containing the brain and its membranes. **Decid'ual c.**, c. between the decidua vera and decidua reflexa in early fœtal life. **Den'tal c.**, pulp cavity. **Dig'ital c.**, ancyroid c. **Epiplo'ic c.**, omental bursa. **Glen'oid c.**, see *Glenoid.* **Gut'tural c.**, c. of the pharynx. **Lymph c.**, see *Lymph spaces.* **Mar'row** or **med'ullary c.**, c. in bone in which marrow is contained. **Mas'toid c.**, see *Mastoid.* **Neu'ral c.**, spinal canal; neural canal. **O'ral c.**, c. of the mouth. **Or'bital c.**, orbit. **Pel'vic c.**, portion of c. of abdomen situated below the level of linea ileopectinea and promontory of sacrum. **Pericar'dial c.**, hollow space between the pericardium and the heart. **Perienter'ic c.**, cœloma. **Peritone'al c.**, abdominal, c.; space between layers of peritoneum; see *Peritoneum.* **C. plate**, a dental plate containing a vacuum chamber. **Pleu'ral c.**, c. between layers of the pleura. **Pleu'roperitone'al c.**, cœlom or embryonic body cavity. **Preperitone'al c.**, loose, areolar space in the subperitoneal tissue of the anterior wall of the abdomen. **Pul'monary c.**, c. formed by the morbid process, chiefly tuberculous, in the tissue of the lungs. **Pulp c.**, c. in a tooth in which the dental pulp is found. **C. of reserve'**, one of the cavities under the deciduous teeth in which the permanent teeth afterward appear. **Respi'ratory c.**, air-cell. **C. of Ret'zius**, see *Cavum Retzii.* **Ro'senmüller's c.**, see *Rosenmüller.* **Segmenta'tion c.**, space between the entoderm and ectoderm, afterward occupied by the mesoderm. **Se'rous c.**, any cavity or lymph space enclosed by a serous membrane. **Sig'moid c.**, see *Sigmoid.* **Somat'ic c.**, pleuroperitoneal c. **Splanch'nic c.**, one of the three great cavities of the body—cranial, thoracic, and abdominal. **Subger'minal c.**, blastocœle; yolk cavity. **Thorac'ic c.**, see *Thorax.* **Tympan'ic c.**, tympanum. **Vas'cular c.**, pulp cavity. **Ven'tral c.**, c. of the abdomen. **Ventric'ular c.**, cavity of a ventricle of the brain, of the heart, or of the larynx. **Vis'ceral c.**, abdominal c. **Yolk c.**, a minute space in the impregnated ovum.

**Cavoval'gus.** Pes cavus and valgus (clubfoot) united in the same individual.

**Ca'vum.** Cavity. **C. abdom'inis**, cavity of the abdomen. **C. arachnoidea'le** or **arachnoide'um**, subdural space. **C. bucca'le**, cavity of the mouth. **C. cervi'cis u'teri**, cervical canal. **C. coch'leæ**, cavity of cochlea. **C. cra'nii**, cavity formed by the proper bones of the cranium. **C. den'tis**, see *Tooth.* **C. Douglas'ii**, Douglas's pouch. **C. endolymphat'icum**, cavity of the membranous labyrinth. **C. fau'cium**, isthmus of fauces. **C. laryn'gis**, cavity of larynx. **C. mastoide'i**, mastoid cavity. **C. Meckel'ii**, space between the layers of the dura mater in which is the Gasserian ganglion. **C. mediasti'ni** or **mediastina'le**, see *Mediastinum.* **C. medulla're**, medullary canal. **C. na'rium** or **na'si**, nares; nasal fossæ. **C. o'ris**, mouth. **C. pericard'ii**, see *Pericardium.* **C. perilymphat'icum**, cavity between membranous and osseous labyrinths. **C. pharyn'golarynge'um**, part of cavity of the pharynx nearest the larynx. **C. pharyn'gonasa'le**, portion of the pharynx nearest the nose. **C. pharyn'go-ora'le**, continuous space of the mouth and pharynx. **C. pul'pæ**, pulp cavity of a tooth. **C. Retz'ii**, loose, areolar space in the subperitoneal tissue of the anterior wall of the abdomen. **C. thora'cis**, see *Thorax.* **C. tym'pani**, tympanum. **C. u'terorecta'le**, recto-uterine fossa. **C. u'terovesica'le**, uterovesical fossa.

**Ca'vus.** Talipes arcuatus or cavus.

**Cayapo'na globulo'sa.** Plant of Brazil, used as a purgative; active principle, *cayaponine*, is a prompt purgative in dose of gr. $\frac{1}{10}$ (0.006).

**Cayenne' pep'per.** Capsicum.

**Caz'enave's lu'pus.** Lupus erythematosus. **C.'s vitili'go**, alopecia areata.

**Cb.** Chemical symbol for columbium.

**C. c.** Abbreviation for cubic centimetre.

**CCC.** Abbreviation for cathodal closure contraction.

**CCTe.** Abbreviation for cathodal closure tetanus.

**Cd.** Chemical symbol for cadmium. Abbreviation for caudal (vertebra).

**Ce.** Chemical symbol for cerium.

**Ceano'thus.** Cirsium arvense. **C. america'nus**, celastrus, red root or New Jersey tea. **C. reclina'tus**, Columbrina reclinata; alkaloid derived from it is called *ceanothine.* **C. triner'vis**, celastrus.

**Ceas'ma.** Fissure; fragment.

**Ceas'mic.** Fissured. **C. monstros'ity**, a monstrosity resulting from the persistence of one or more of the fissures of embryonal life.

**Cebadil'la.** Sabadilla.

**Cebipi'ra.** Brazilian tree, whose bitter and astringent bark is used in antirheumatic baths and fomentations.

**Ceboceph'alus** (*kebos*, ape, *kephale*, head). Monster in which the nose does not project and the interocular region is narrow and plane, giving the physiognomy a striking resemblance to that of the ape. The condition is termed *cebocephal'ia* or *ceboceph'aly.*

**Ce'cal, ce'cum**, etc. See *Cæcal, Cæcum*, etc.

**Ce'cis.** Gallnut. See *Quercus infectoria.*

**Ce'city.** Blindness.

**Ce'cograph.** An instrument for writing by the blind.

**Cecro'pia pelta'ta.** Tree of S. America, bark of which is astringent and mucilaginous in diarrhœa, ulcers, etc.

**Cecu'tiency.** Incipient obscurity or cloudiness of vision.

**Ce'dar.** A tree of the cone-bearing genus *Cedrus.* **C. of Leb'anon**, Cedrus libani. **Red c.**, Juniperus virginiana. **White c.**, Cupressus thyroides.

**Ced'ma.** Aneurysm; varix; bubo; rheumatic pain of the joints, especially of the hips, groin, or genital organs.

**Cedre'la febrif'uga.** See *Swietenia febrifuga.* **C. odora'ta**, Barbadoes bastard cedar, Jamaica cedar; bark and wood are antiperiodic. **C. rosmari'nus**, tree of Cochin China; flowers are nervine and diuretic, and employed in headache, catarrh, rheumatism, etc. **C. too′na,** Indian mahogany, white cedar; bark is astringent, and used also in same cases as cinchona.

**Cedrele′um** (*kedros*, cedar, *elaion*, oil). Oil of cedar.

**Ce′drene.** A hydrocarbon in oil of cedar.

**Ced′ria** or **Ced′reum.** Oil of resin which flows from cedar of Lebanon, identical with oil of cedar.

**Cedrin′.** Bitter principle derived from Simaba cedron.

**Ced′ron.** See *Simaba cedron*.

**Cedronel′la.** Melissa. **C. mexica′na,** Mexican plant, flowering tops of which are used in place of melissa. **C. triphyl′la,** Dracocephalum canariense.

**Cedros′tis.** Bryonia alba.

**Ce′drus baccif′era.** Juniperus lycia; Juniperus sabina. **C. libanot′ica** or **lib′ani,** cedar of Lebanon, from which a variety of manna is obtained. **C. mahog′ani,** Swietenia mahogani.

**Ceke** (the-ke). Elephantiasis of the scrotum (Fiji term).

**Cel′andine.** Impatiens; chelidonium. **Com′mon c.,** Chelidonium majus. **Les′ser c.,** Ranunculus ficaria. **C. pop′py,** Stylophorum diphyllum.

**Cela′rium.** Epithelium of the body cavity in the embryo.

**Celastrine′.** Alkaloid obtained from Celastrus edulis, possessing properties resembling cocaine.

**Celas′trus.** New Jersey tea; red root; used like lobelia in syphilis; also in splenic enlargement. It is bitter and astringent; a strong infusion of dried leaves and seeds is used in aphthæ, and as a gargle in scarlatina. **C. panicula′tus,** shrub of India and South America; oil of the seeds is tonic, stimulant, and diaphoretic, but is chiefly used in veterinary medicine. **C. scan′dens,** climbing staff tree, climbing bittersweet, waxwork; American shrub, the bark of which is emetic, diaphoretic, and narcotic.

**Cel′ery.** Apium graveolens. **C. pine,** Phyllocladus trichomanoides. **Wa′ter c.,** Ranunculus sceleratus. **Wild c.,** Bubon galbanum.

**Celiot′omy.** Cœliotomy.

**Ce′lis** (*kelis*, spot, stain). Macula or spot on the skin. See *Kelis*.

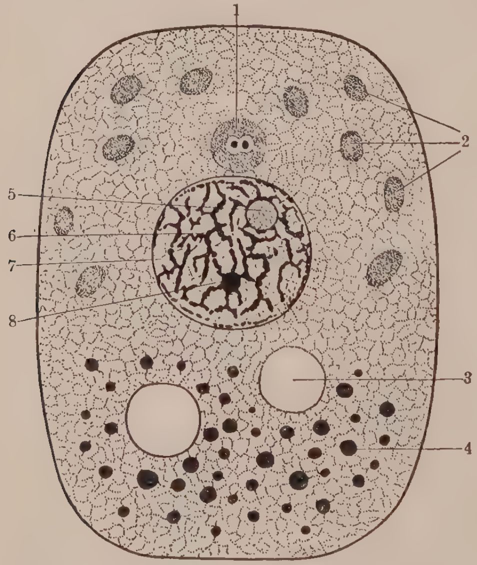


Diagram of a cell. (Wilson.) 1, attraction sphere inclosing the centrosomes; 2, plastids lying in the cytoplasm; 3, vacuole; 4, lifeless bodies (metaplasm) suspended in the cytoplasm reticulum; 5, plasmosome or true nucleolus; 6, chromatin network; 7, linin network; 8, karyosome.

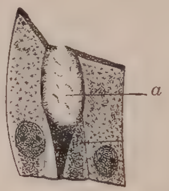
**Cell.** Elementary or protoplasmic structure of which organic substances are formed or from which they are developed. The whole organized body may be regarded as a congeries of cells having different endowments, each set being concerned in special acts connected with absorption, nutrition, and secretion wherever the action of selection or elaboration has to be effected. When cells give rise to other cells they are termed parent or mother cells, the resulting cells being termed daughter cells. A small cavity. Element of the galvanic battery; see *Galvanism*. For special cells not defined in the following list, see the qualifying word. **Acid c.,** the cells in the cardiac extremity of the stomach. **Adelomor′phous c.,** one of the columnar cells lining the secretory portion of the gastric glands. **Ad′ipose c.,** see *Fatty vesicles*. **Air-c.,** pulmonary vesicle. **Albu′minous c.,** cell containing albumin, but not mucus. **Alve′olar c.,** c. in the wall of acinus of a gland. **Amœ′boid c.,** c. capable of changing shape like an amœba; wandering cell. **Apo′lar c.,** nerve cell; devoid of poles or processes, particularly of sympathetic system. **Apoplec′tic c.,** see *Apoplectic*. **Ba′sal** or **bas′ilar c.,** layer of these cells constitutes the deepest layer of the epithelium.



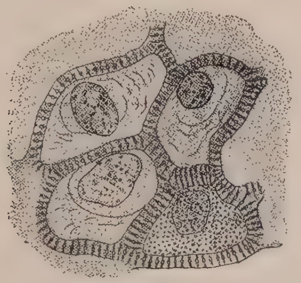
Beaker cell (*a*) from the small intestine of a mouse. (Pantek.)

**Beak′er c.,** goblet-shaped cell observed on mucus-secreting surfaces. **Bipo′lar c.,** nerve cell with two poles or processes. **Blood c.,** blood corpuscle. **C.-body,** mass of a cell. **Bone c.,** c. in lacuna of bone. **Bron′chic c.,** pulmonary air cell. **Bud′ding c.,** gemmation; cytogenesis. **Bun′sen′s c.,** see *Bunsen*. **Calcig′erous c.,** see *Tooth*. **Cal′iciform c.,** beaker c. **Can′cer c.,** round cell, with large nucleus, observed in some forms of cancer, but not diagnostic of it; see *Cancer cell*. **C.-cap′sule,** cell-wall. **Car′rier c.,** wandering c.; phagocyte. **Car′tilage c.,** nucleated c. of cartilage, often containing glycogen and fatty matter. **Cen′tral c.,** adelomorphous c. **Cil′iated c.,** see *Cilia*. **Colum′nar c.,** cylindrical c., as in the small intestine.

Columnar epithelial cells from the tongue of *Pseudopus*; the central cell contains a vacuole. (Seiler.)

**Connec′tive-tis′sue c.,** connective-tissue corpuscle. **C. of Cor′ti,** external hair cells of the organ of Corti. **C.-cov′er,** operculum. **Daugh′ter c.,** see *Cell*. **Decid′ual c.,** c. appearing in the uterus after impregnation. **Dei′ter′s c.,** small cells in the cochlea. **Delomor′phous c.,** a large c. in the secreting portion of a peptic gland. **Dem′ilune c.,** crescent-shaped cells in the submaxillary and parotid glands of dogs and rabbits. **C.-devel′opment** or **forma′tion,** cytogeny. **Denti′nal c.,** see *Tooth*. **C.-divis′ion,** formation of new or daughter cells by the separation of mother cells; see *Mitosis*. **C.-doc′trine,** the doctrine or theory of the formation of cells and of tissues from cells. **Elemen′tary c.,** see *Cell*. **Embryon′ic c.,** one of the cells from which embryonic organs and tissues are developed, or which in the adult resemble cells of the embryo. **Endog′enous c.,** developmental cells within mother cells. **Endothe′lial c.,** pavement corpuscle of the blood-vessels, the pleura, and the peritoneum.

**Epider′mic c.**, one of the numerous cells or corpuscles that cover the free membranous surfaces of the body and form the epidermis and epithelium. **Epithe′lial c.**, epidermic c. **Exuda′tion c.**, see *Corpuscles, exudation.* **Fibre c.**, c. forming minute connective tissue fibres. **Floor c.**, auditory cell in the organ of Corti. **C.-force**, plastic or formative force seated in a cell, by the agency of which different tissues are developed; **C.-forma′tion**, cytogeny. **Fou′lis's c.**, see *Foulis.* **C.-gen′esis**, cytogeny. **Germ c.**, cytoblast. **Germ′inal c.**, see *Cytoblast.* **Gi′ant c.**, see *Giant.* **Gob′let-shaped c.**, beaker c. **Hepat′ic c.**, one of the cells constituting the glandular structure and lobules of the liver. **C.-islets**, occasional groups of cells distinct from those lining the glandular acini in the pancreas. **C. life**, life possessed by the separate cells that form tissues, and by which nutrition of the tissues is presumed to be effected. **Lym′phoid c.**, c. having amœboid movement. **Mast c.**, a basophilic leucocyte. **Mas′toid c.**, cell in the interior of the mastoid process. **C. mem′brane**, capsule or tissue surrounding a cell; membrane forming the wall of capillary vessels. **Moth′er c.**, see *Cell.* **Mo′tor c.**, motor cellule; the cell whence nerve-power sets out to be distributed to muscular fibre. **Mu′cous c.**, cells having mucus in their interior or engaged in its secretion. **C.-multiplica′tion**, cytogenesis. **Mus′cular c.**, contractile c. of muscular fibre. **Nerve c.**, nerve corpuscle or vesicle; cell characteristic of nervous substance. **Neuromus′cular c.**, the lower forms of cell life, having partly nervous and partly muscular qualities. **Nu′cleated c.**, see *Cytoblast.* **Olfac′tory c.**, sensory c. of olfactory organs. **Os′seous c.**, lacuna of bone. **Pa′rent c.**, see *Cell.* **Pig′ment c.**, pigment cells mingled with epidermic cells, most manifest in the colored races and best seen on the inner surface of the choroid of the eye, where they form pigmentum nigrum. **Prick′le c.**, one of the cells forming the rete mucosum of the skin, from the surfaces of which numerous minute spines project.



Prickle cells from human stratified epithelium. (Rabl.) The lower right-hand cell is just below the upper surface of the section, and its surface is seen covered with minute spots, which are end views of the prickles directed toward the observer.

**Pri′mary c.**, see *Cell.* **Primor′dial c.**, see *Cell.* **C.-proc′ess**, prolongation of cell-substance. **C.-prolifera′tion**, cytogenesis. **C.-pro′toplasm**, protoplasm. **C. of Purkin′je**, cells forming fibres of Purkinje in the heart; spindle-shaped nerve cells forming a layer between the outer and nuclear layer of the cortex of the cerebellum. **Pyram′idal c.**, nerve cells found in the cortex of all regions of the cerebellum. **C.-sap**, protoplasm. **C. of Schult′ze**, olfactory cells. **Sperm c.**, see *Sperm.* **Squam′ous c.**, pavement cells. **C.-stro′ma**, matrix of cell. **C.-ter′ritory**, according to Virchow, district of intercellular substance ruled over by a cell lying in the middle of it and exercising influence on neighboring parts. **C.-the′ory**, cell-doctrine. **C.-wall**, see *Cell* and *Cytoblast.* **Wan′dering c.**, see *Wandering* and *Amœboid.*

**Cel′la.** Cell. **C. latera′lis**, lateral ventricle of the brain. **C. me′dia**, middle cornu of the lateral ventricle of the brain.

**Cel′læform.** Having the shape of a cell; cytoid.

**Cellif′erous** (*cella*, cell, *fero*, to carry). Cell-bearing or producing.

**Cel′loid.** Resembling a cell or cellule.

**Celloidin′.** Concentrated collodion from which the ether has been evaporated; used for embedding histological specimens.

**Cel′lula** (dim. of cella). Cellule.

**Cel′lular.** Relating to or composed of cells or cellules. **C. mem′brane**, membrane formed of cellular or areolar tissue; generally used for the tissue itself. **C. pathol′ogy**, doctrine of cell agency in the causation of disease. **C. sys′tem**, whole areolar tissue of the human body. **C. tis′sue**, loose, fibrous connective tissue. **C. tis′sue of bones**, see *Cancelli.*

**Cel′lulated.** Containing or made up of small cells.

**Cel′lule.** Small cell or cavity. Cellules are small cavities between the laminæ of the cellular tissue, corpora cavernosa, etc.

**Cellulif′ugal cur′rents.** Nervous currents passing from the neuron through the axis cylinder processes.

**Cellulin′.** Cellulose.

**Cellulip′etal cur′rents.** Nervous currents passing into the neuron through the protoplasmic processes.

**Celluli′tis.** Inflammation of cellular or areolar tissue. **C. or′bitæ**, inflammation of cellular tissue of the orbit. **Para-u′terine c.**, parametritis. **Pel′vic c.**, parametritis, often associated with abscess-formation and profound systemic disturbance. **Peri-u′terine c.**, parametritis. **C. venena′ta**, inflammation from dissection wound or from absorption of any animal poison, see *Wound.*

**Cellulocuta′neous.** Relating to or composed of skin and areolar tissue.

**Cellulofi′brous.** Fibrocellular.

**Cel′luloid.** Artificial substance, resembling hard rubber in its properties, made from pyroxylin and camphor.

**Cellulo′sa.** Cellular tissue.

**Cel′lulose.** A substance forming cell-walls and tissues of plants; it forms almost the entire portion of woody fibre, linen, and cotton fibre. Cellulose is left after the action on vegetable tissue of solvents fitted to dissolve out matter deposited in its cavities and interstices. It is identical with starch in its chemical constitution. **C. degenera′tion**, see *Lardaceous.*

**Cellulos′ity.** Condition of having small cells or spaces.

**Cellulo′sus** or **Cel′lulous.** Cellular.

**Celocol′ica.** Colic produced by strangulated hernia.

**Ce′loid.** Keloid.

**Celol′ogy** (*kele*, hernia, *logos*, discourse). Doctrine or description of hernia.

**Celo′ma.** Cœloma.

**Celo′sia arven′sis.** African plant; seeds are anthelmintic. **C. irig′yna**, plant of Africa; leaves are astringent. **C. nit′ida**, plant of W. Indies; seeds and flowers are astringent.

**Celoso′mus** (*kele*, hernia, *soma*, body). Monster in which the trunk is malformed and eventration or displacement of viscera exists.

**Cel′otome** (*kele*, hernia, *tome*, incision). Knife for operation on hernia.

**Celot′omy.** Operation for the relief or radical cure of hernia; herniotomy.

**Cel′sia coromandelia′na.** Bengalese plant; sedative and astringent.

**Cel′sus, a′rea of.** Alopecia areata. **C., chan′cre of**, soft chancre; chancroid. **C., ke′rion of**, a form of ringworm accompanied with suppuration. **C., meth′od of**, see *Lithotomy.* **C., pap′ulæ of**, lichen agrius.

**Cel′tis austra′lis.** Nettle tree; European tree; branches are astringent. **C. obli′qua** or **occidenta′lis**, sugarberry, hackberry, American nettle tree, beaverwood; indigenous; bark is anodyne and cooling; berries are sweet and astringent; used in dysentery. **C. orienta′lis**, Asiatic tree, having aromatic root and bark. **C. ta′la**, plant of S. America; leaves are expectorant.

**Cement′.** Substance for binding together by adhesion two opposing surfaces. A substance introduced into a carious tooth to fill the cavity and prevent access of air or other extraneous matters. Layer of bone covering the neck and root of a tooth. **C. cor′puscles,** see *Corpuscles.* **Den′tal c.,** the substances used for this are the oxychloride, phosphate, and oxysulphate of zinc. **Nerve c.,** the connective tissue supporting nervous tissue; neuroglia.

**Cementine′.** The material connecting and binding together the cells of squamous epithelium.

**Cement′oblasts** (*blastos,* bud or cell). Cement-forming cells.

**Cemento′ma.** A neoplasm resembling in its structure tooth cementum.

**Cemen′tum.** Cement; the bony covering of the roots of the teeth, to which the pericementum (dental periosteum) is attached. **C. lamina′tion,** deposition of the dental cementum in strata.

**Cenesthe′sia.** Cœnæsthesia.

**Cenogen′esis** or **Cenog′eny** (*kenos,* empty, *genesis,* generation). False development, not in accordance with the evolution of species or ancestral type.

**Cenosiophthi′sis** (*kenosis,* evacuation, *phthisis,* wasting). Wasting from excessive evacuations or discharges.

**Ceno′sis** (*kenoo,* to empty). Evacuation.

**Cenot′ic.** Drastic; evacuant.

**Centau′rea.** A genus of herbaceous plants of the order *Compositæ.* **C. behen′,** white behen; astringent. **C. benedic′ta,** blessed thistle, Virgin Mary thistle; strong decoction is emetic; strong infusion diaphoretic; light infusion tonic and stomachic. **C. calcitra′pa,** calcitrapa, common star thistle, star knapweed; tonic given in intermittents, dyspepsia, etc. **C. centau′rium,** greater centaury of S. Europe; root is bitter, tonic, and astringent. **C. cy′anus,** corn flower, blue bottle or bonnets; plant of Europe and United States; juice is used for collyria; flowers were once much used as a cordial, tonic, etc., and in ophthalmia. **C. ja′cea,** species growing in Asia and Europe; bitter astringent, root of which is diuretic and also used in gargles. **C. ni′gra,** black centaury or knapweed, bellwood, buttonweed; properties similar to C. jacea. **C. sic′ula** or **solstitia′lis,** St. Barnaby thistle, yellow-flowered centaury; flowers are bitter and antiperiodic; root is diuretic. **C. stella′ta,** Centaurea calcitrapa.

**Centaurin′.** Bitter principle from Erythrœa centaurium.

**Cen′taury.** A name applied to the knapweed and other plants. **Amer′ican c.,** Chironia angularis; Sabbatia angularis. **Austra′lian c.,** Erythrœa australis. **Europe′an c.,** Chironia centaurium. **Great′er c.,** Centaurea centaurium or Chlora perfoliata. **Les′ser c.,** Chironia or Erythrœa centaurium.

**Centena′rian.** One who has attained a hundred years.

**Cen′ter.** See *Centre.*

**Cente′sis** (*kenteo,* to perforate). Paracentesis; puncture.

**Centi-** (*centum,* a hundred). In composition, a hundred.

**Cen′tigrade** (*centum,* a hundred, *gradus,* degree). Term applied to the thermometric scale having 100 degrees between the freezing and boiling points of water. See *Thermometer.*

**Cen′tigramme** or **Cen′tigram.** Hundredth part of a gramme, equal to about the fifth part of a French grain, 0.1543 Troy grain. See *Weights and Measures.*

**Cen′tilitre.** Hundredth part of a litre—0.61028 English cubic inch, equal to nearly 2.7053 fluiddrachms. See *Weights and Measures.*

**Cen′timetre.** Hundredth part of a metre, equal to about four lines, 0.3937 English inch. See *Weights and Measures.*

**Centimor′bia.** Lysimachia nummularia.

**Centiner′via.** Plantago major.

**Centino′dia.** Polygonum aviculare.

**Centinor′mal.** Having a strength of $\frac{1}{100}$ of the normal.

**Cen′trad.** Toward the centre.

**Centradiaph′anes** (*kentron,* centre, *a,* priv., *diaphanes,* transparent). Central cataract.

**Cen′tral.** Relating to the centre of a body or to a nervous centre. **C. ar′teries of brain,** branches to the central ganglia from circle of Willis. **C. ar′tery of ret′ina,** central artery of Zinn; artery given off from the ophthalmic artery, penetrating the optic nerve a little behind the ball of the eye, running in axis of nerve and spreading out into many small branches upon the inside of the retina. When the nerve is cut across near the eye the orifice of the divided artery is observable; this was formerly called porus opticus. **C. as′pect,** aspect toward the centre of an organ. **C. canal′,** medullary canal; space in the optic nerve for the central artery and vein of the retina; canal in modiolus for branch of cochlear nerve. **C. convolu′tions,** convolutions of the brain separated by the central sulcus. **C. fis′sure,** central sulcus. **C. gy′ri,** central convolutions. **C. inci′sors,** the incisor teeth on either side of the median line. **C. lig′ament,** filum terminale. **C. lobe,** insula cerebri. **C. lob′ule,** small lobule of superior vermiform process of the cerebellum in the incisura anterior. **C. myeli′tis,** inflammation of the central matter of the spinal cord. **C ner′vous sys′tem,** the whole brain and the spinal cord. **C. point of perine′um,** point of intersection of tendons in front of the anus. **C. spin′dle,** nuclear spindle. **C. sul′cus,** fissure separating the frontal and parietal lobes of the cerebrum. **C. ten′don of the di′aphragm,** see *Diaphragm.*

**Centra′le.** Bony element in the embryonic carpus or tarsus, becoming afterward the tubercle of the scaphoid carpal bone or navicular tarsal bone.

**Cen′traphose.** A sensation of darkness or absence of light (*aphose*) originating in the visual centre.

**Cen′tre.** Middle point of a figure or body. A collection of nerve-cells to which external impressions are carried and whence impulses are sent out; see *Localization.* **Abdom′inal c.,** a c. for reflexes from the skin of the upper part of the abdomen, located in the dorsal spinal cord. **Accel′erating c.,** hypothetical centre in medulla oblongata, producing acceleration of pulsation of the heart. **Acous′tic c.,** sensory centre of the auditory nerve in the back part of the superior temporal convolution. **C. of ac′tion,** viscus in which a function is executed and to which several other organs contribute; as the stomach during chymification, duodenum during chylification, or uterus during gestation. **Anospi′nal c.,** nervous centre at the level of the fifth, sixth, and seventh lumbar vertebræ, controlling defecation. **Anoves′ical c.,** centre in spinal cord, near origin of third and fourth sacral nerves, regulating sphincters of rectum and bladder. **Arm c.,** c. in the cortical portion of the brain having charge of the movements of the arm. **Associa′tion c.,** c. having charge of associated movements. **Aud′itory c.,** point in brain—probably in the temporosphenoidal lobes—to which auditory impressions are conveyed; acoustic centre. **Bro′ca's c.,** see *Broca.* **Budge's c.,** genitospinal c. **Car′diac c.,** part of the inferior cervical and superior dorsal regions of the spinal cord, which exert excitomotory action on the heart. **Car′dioaccel′eratory c.,** accelerating c. **Car′dioinhib′itory c.,** centre in the medulla producing slowness of pulsation of the heart. **Cer′ebrospi′nal c.,** cerebrospinal axis. **Cil′iospi′nal c.,** nervous centre in the lower part of the cervical portion of the spinal cord regulating the dilatation of the pupil. **Col′or c.,** c. in the occipital cortex for the perception of color. **Convul′sion c.** c. in the floor of the fourth ventricle, stimulation of which produces spasm. **Coord′inating c.,** part of the nervous system supposed to regulate and control coordination, as cerebellum, cerebral ganglia, and gray matter of the spinal cord. **Cor′tical c.,** regions of the cortex of the brain to which special functions have been ascribed. **Cough'ing c.**, nervous centre connected with coughing, in the medulla above the respiratory centre. **Defeca'tion c.**, anospinal c. **Degluti'tion c.**, swallowing c. **Diabet'ic c.**, c. in the medulla spinalis and floor of the fourth ventricle, causing glycogen to be changed to sugar. **Ejacula'tion** or **ejac'ulatory c.**, nervous centre, about the fourth lumbar vertebra, controlling the ejaculation of semen. **Epigas'tric c.**, ganglions and nervous plexuses formed by the great sympathetic and pneumogastric nerves in the epigastrium, around the cœliac artery; solar plexus. **Epio'tic c.**, c. of ossification of mastoid bone. **Erec'tion c.**, genitospinal centre. **Expi'ratory c.**, c. in the medulla spinalis controlling expiration. **C. of flux'ion**, the part toward which fluids are particularly attracted, as an irritated organ. **Gen'ital c.** or **Gen'itospi'nal c.**, see *Genitospinal.* **Gen'ito-u'rinary c.**, centre in lumbar region in the spinal cord controlling the genito-urinary apparatus. **Gus'tatory c.**, centre in the brain for taste, in uncinate gyrus. **Heat c.**, thermogenic c. **Inhib'itory c.**, moderator c. **Inspi'ratory c.**, several centres are described, being in the optic thalamus, corpora quadrigemina, and the medulla oblongata. **Leg c.**, seated in the ascending frontal convolution and controlling the movements of the leg. **Mastica'tion c.**, c. in the medulla presiding over mastication. **Med'ullary c.**, part of the embryonic nervous system afterward developed into the brain and spinal marrow. **Micturi'tion c.**, vesicospinal c. **Mo'tor cor'tical c.**, ascending parietal and frontal convolutions, the centre for origination of voluntary movements. **Ner'vous c.**, organs whence the nerves originate, as the brain and spinal marrow. **Neu'ral c.**, medullary c. **Nutri'tion c.**, trophic c. **Olfac'tory c.**, gustatory c. **Opistho'tic c.**, c. of ossification of petrous portion of the temporal bone. **Op'tic c.**, see *Optic centre.* **C. of ossifica'tion**, point of commencing ossification of the bone. **O'val c.**, when the two hemispheres of the brain are sliced away, down to a level with the corpus callosum, the medullary part in each is of oval shape, hence called centrum ovale minus; two centres of opposite sides, together with the corpus callosum, form the centrum ovale of Vieussens. **Pant'ing c.**, polypnœic c. **Parturi'tion c.**, reflex centre in the medulla spinalis, opposite the first and second lumbar vertebræ, associated by nerves with the uterine plexus. **Peristal'tic c.**, c. in the medulla oblongata controlling the peristaltic action of the intestines. **Phren'ic c.**, central aponeurosis; central or cordiform tendon of the diaphragm. **Polypnœ'ic c.**, causes panting, seated in the tuber cinereum. **Pu'pillary c.**, c. in the quadrigeminal body causing contraction of the pupil; c. in the medulla spinalis (lower cervical portion) controlling its dilatation; called also *Ciliospinal centre.* **Re'flex c.**, part of gray nervous matter which transforms into a motor impulse a sensory impulse it has received. **Respi'ratory c.**, region in the medulla oblongata, or floor of the fourth ventricle, for inducing and coordinating the movments of respiration. **C. of rota'tion**, term used in ophthalmology to designate the point about which the eye revolves; located about 14 mm. behind the cornea. **Sal'ivary** or **saliva'tion c.**, c. seated in the floor of the fourth ventricle, regulating the secretion of saliva. **Sen'sory c.**, region in the brain for the reception of the sensory impressions; it includes those for the special senses. **Smell c.**, olfactory c. **Sneez'ing c.**, c. in the medulla oblongata, sending nerves to the expiratory muscles. **Spasm c.**, convulsion c. **Speech c.**, centre in the third left frontal convolution controlling speech. **Sudorif'ic c.**, c. in the spinal cord causing diaphoresis. **Swal'lowing c.**, nervous centre in the floor of the fourth ventricle controlling such action. **Sweat c.**, sudorific c. **C. of sympathet'ic irradia'tions**, any organ which excites, sympathetically, the action of other organs, more or less distant, with which it seems to have no immediate communication. **Taste c.**, gustatory c. **Ten'dinous c. of di'aphragm**, phrenic centre. **Thermogen'ic c.**, c. for the generation of heat; supposed to be the caudate nucleus and medulla spinalis. **Ther'moinhib'itory c.**, c. for inhibiting the generation of heat; supposed to be in the gray nervous matter near the fissure of Sylvius and tuber cinereum. **Thermolyt'ic c.**, thermoinhibitory c. **Troph'ic c.**, centre presiding over nutrition, seated in the gray matter of the brain, spinal cord, and sympathetic ganglia. **Vasoconstric'tor c.**, nervous centre producing contraction of the blood-vessels. **Vasodila'tor c.**, nervous centre producing dilatation of the blood-vessels. **Vasomo'tor c.**, region of the medulla oblongata and spinal cord regulating the movement of the smaller vessels. **Vasoton'ic c.**, vasomotor c. **Ves'ical** or **vesicospi'nal c.**, nervous centre in the lumbar region, connected with the cerebrum, controlling urination. **Vis'ual c.**, nervous centre of vision, in occipital lobe. **C. of vis'ual direc'tions**, point between the eyes from which the direction of the vision is measured. **Vi'tal c.**, respiratory centre. **Vom'iting c.**, c. in the medulla regulating this action. **Word c.**, portion of the auditory or visual centres associated with the intelligent understanding of words.

**Cen'tric.** Relating to a centre.

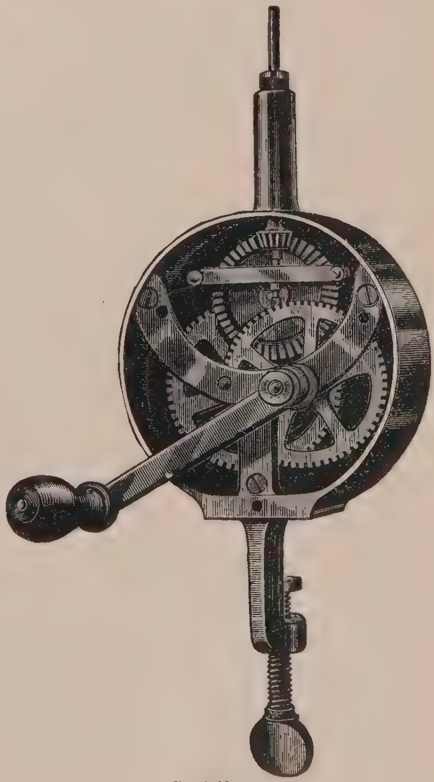
**Centric'iput** (*caput*, head). Second segment of the cranium between the upper and back parts of the head.

**Centrif'ugal** (*fugio*, to fly from). In a direction away from the centre. Efferent, as the motor nerves, which are centrifugal nerves conveying impressions to the periphery from the central parts of the nervous system. **C. machine'**, a centrifuge.

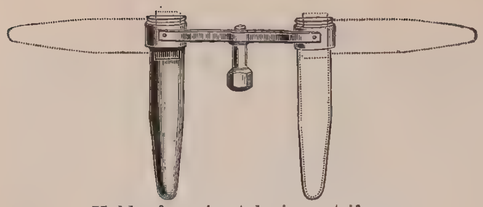
**Centrifugaliza'tion.** Act of separating solid particles of a liquid, such as the blood, from the liquid portions by centrifugal force. The instrument employed is called a *centrifuge.*

**Centrif'ugalize.** To rotate rapidly to divide solid from liquid constituents by centrifugal action.

**Cen'trifuge.** Instrument to perform centrifugalization.



Centrifuge.



Holder for urine-tube in centrifuge.

**Centrip'etal** (*peto*, to seek). In a direction toward the centre. Afferent, as the sensory nerves, which are centripetal nerves conveying impressions from the periphery to the central nervous system.

**Centrodes'mus.** The incipient central spindle formed by the band of junction between the centrosomes.

**Centrolec'ithal** (*lekithos*, yolk of egg). A term applied to ova in which the yolk mass is in the centre.

**Centromyrs'ine.** Ruscus.

**Cen'trophose.** A sensation of light (*phose*) originating in the optic centre.

**Centrosclero'sis.** Formation of bone in the medulla of a long bone.

**Cen'trosome** (*soma*, body). Dynamic centre of the cell, a minute round, refractive body or point.

**Cen'trosphere.** Attractive sphere.

**Centrostal'tic** (*kentron*, centre, *stello*, to send). Relating to centre; a term applied to the action of nervous force in the spinal centre.

**Centrosteosclero'sis.** Ossification in the central spaces of the long bones.

**Cen'trum.** Centre; body of vertebra; projection of the spine. **C. cer'ebrospina'le**, cerebrospinal axis. **C. cine'reum**, posterior gray commissure. **C. commu'ne**, solar plexus. **C. ner'veum**, phrenic centre. **C. op'ticum**, optic centre. **C. ova'le**, see *Oval centre*, under *Centre*. **C. perine'i**, central region of the perineum. **C. phren'icum**, central tendon of the diaphragm. **C. semicircula're gem'inum**, tænia semicircularis. **C. semiova'le**, centrum ovale majus. **C. tendin'eum** or **tendino'sum**, phrenic centre. **C. Vieussen'ii**, centrum ovale majus. **C. vita'le**, term applied to the medulla oblongata or to the medulla oblongata and spinal cord as far as the second cervical nerve, in any part of which a wound would be instantly fatal.

**Cen'tum cap'ita** (hundred heads). Eryngium campestre.

**Centumno'dia.** Polygonum aviculare.

**Cen'tury plant.** Agave americana.

**Ce'pa** (onion). Allium cepa. **C. ascolon'ica** or **fis'silis**, Bulbus esculentus. **C. mari'na**, scilla. **C. victoria'lis**, Allium victoriale. **C. vulga'ris**, Allium cepa.

**Cephaeline'.** An alkaloid derived from ipecac, or Cephaelis ipecacuanha; said to be much more powerful than emetine; in combination with the latter it forms the substance formerly called emetine.

**Cephae'lis.** A genus of plants of the order *Rubiaceæ*, native of tropical America. One variety growing in the West Indies is used in respiratory affections. **C. ipecacuan'ha**, ipecacuanha. **C. musco'sa**, root of this Cuban tree is emetic, as is that of the Jamaica shrub, **C. punice'a.**

**Ceph'alad.** Toward the head.

**Cephalæ'a** (*kephale*, head). Headache; cephalalgia; periodical, violent, or chronic headache.

**Cephalæmat'ocele** (*kephale*, head, *haima*, blood, *kele*, tumor). Effusion under the scalp of blood coming from a sinus of the dura mater through an opening in the cranium. **Stro'meyer's c.**, see *Stromeyer.*

**Cephalæmato'ma** (*kephale*, head, *haima*, blood). Sanguineous tumor, sometimes developed between the pericranium and bones of the head of a newborn child; caput succedaneum. **C. du'ræ ma'tris**, sanguineous tumor between the dura mater and bone of the skull in the newborn child. **Inter'nal c.**, c. duræ matris. **C. neonato'rum**, caput succedaneum.

**Cephalæ'mia** (*kephale*, head, *haima*, blood). Hyperæmia or congestion of the brain; accumulation of blood in the vessels of the brain.

**Cephalag'ra** (*kephale*, head, *agra*, seizure). Pain in the head; gouty or rheumatic headache.

**Cephalagraph'ia** (*kephale*, head, *graphe*, description). Anatomical description of the head.

**Cephalal'gia** (*kephale*, head, *algos*, pain). Pain in the head; headache; generic name for every kind of headache, whether symptomatic or idiopathic. **C. anæ'mica**, headache from anæmia, the cranial blood-vessels being spasmodically contracted. **C. arthrit'ica**, gouty or rheumatic headache. **C. catamenia'lis**, headache at the time of the menses or from their suppression. **C. catarrha'lis**, headache from cold or catarrh. **C. congesti'va**, congestive headache. **C. contagio'sa**, influenza. **C. gravida'rum**, headache of pregnant women. **C. inflammato'ria**, headache of inflammations, as of phrenitis. **C. neurasthen'ica**, headache of nervous exhaustion. **C. period'ica**, intermittent headache; headache returning periodically; migraine. **C. pulsat'ilis**, headache accompanied with pulsation in the head or temples. **C. rheumat'ica**, rheumatism affecting the frontal, occipital, or temporal muscles, scalp, and cranial periosteum. **C. spasmod'ica** or **stomach'ica**, sick headache, characterized by partial spasmodic pain, often shifting from one part of the head to another; usually commencing in the morning, with sickness and faintness, and extremely apt to recur.

**Cephalal'gic.** Relating to cephalalgia; one affected with or subject to headache.

**Cephalal'gy.** Cephalalgia.

**Cephalal'ogy** (*kephale*, head, *logos*, discourse). Anatomy of the head.

**Cephalan'dra in'dica.** Plant of S. Africa and S. Asia; the root and leaves are used in smallpox.

**Cephalanthin'.** A glucoside derived from cephalanthus.

**Cephalan'thus occidental'is.** Buttonwood shrub, buttonbush, whiteball, little snowball, swampwood, pond dogwood, globe flower; shrub growing all over the United States; bark of the root is antiperiodic, tonic, expectorant, and laxative.

**Cephala'ria centauroi'des.** Plant of S. Europe and Asia; aperient and depurative.

**Cephalar'tic** (*kephale*, head, *artizo*, to make complete). Cephalic remedy.

**Ceph'alatome.** Instrument for performing cephalatomy.

**Cephalat'omy.** Anatomy, or dissection, or opening of the head.

**Cephalhæmat'ocele** (*kephale*, head, *haima*, blood, *kele*, rupture). Cephalæmatocele.

**Cephalhæmato'ma.** Cephalæmatoma.

**Cephalhy'drocele** (*kephale*, head, *hydor*, water, *kele*, tumor). Accumulation of water under the cranial fascia.

**Cephal'ic.** Relating to the head. **C. ar'tery**, common carotid artery. **C. flex'ure**, see *Flexure*. **C. hood**, part of fold of external germ-layer nearest to the anterior extremity of the fœtus. **C. in'dex**, proportion of longitudinal to transverse diameter of the cranium, obtained by assuming the former to be 100 and reducing the latter to this denomination. **C. nerves**, nerves of the cranium. **C. rem'edy**, a remedy for headache. **C. tet'anus**, see *Tetanus*. **C. vein**, great superficial vein at outer part of arm and forearm, beginning on the back of the hand by radicles, which unite into a single trunk, called cephalic, at the thumb. The name cephalic was given to it because it was supposed to have connection with the head, and that bloodletting ought to be performed from it in head affections. **C. ver'sion**, see *Turning.*

**Cephal'ica pol'licis.** Superficial radial vein.

**Cephalid'ium** (dim. of kephale). Small head.

**Cephalin'.** Substance like lecithin, obtained from the brain.

**Cephalin'dex.** Cephalic index.

**Cephali'tis.** Phrenitis; encephalitis.

**Cephal′ity.** Undue size or preponderance of the head to the rest of the body.

**Cephal′ium.** Cephalidium.

**Cephalocathar′tic.** Cleansing to the head passages, such as catarrh remedies promoting secretion.

**Ceph′alocele** (*kephale*, head, *kele*, rupture). Encephalocele.

**Cephalocente′sis** (*kephale*, head, *kentesis*, puncturing). Puncturing of the head, as for hydrocephalus.

**Cephalocer′cal** (*kephale*, head, *kerkos*, tail). That which relates to both head and tail in animals, *i. e.*, the long axis of the body.

**Cephalocla′sia** (*kephale*, head, *klasis*, breaking). Cephalotripsy.

**Ceph′alocysts** (*kephale*, *kystis*, cyst). Broad worms, cestoidea; parasitic in the intestines of various animals.

**Cephalodes′mion** (*kephale*, head, *desmos*, band). Bandage for the head.

**Cephaloduc′tor.** Obstetric forceps.

**Cephalodym′ia** (*kephale*, head, *dyo*, to enter into). Class of double monstrosities, in which the heads are united; divided into two genera, frontodymia and bregmatodymia. In the former union is between the ossa frontis; in the latter, between the bregmata.

**Cephalodyn′ia** (*kephale*, head, *odyne*, pain). Cephalalgia; epicranial rheumatism.

**Cephalœde′ma** (*kephale*, head, *oidema*, swelling). Hydrocephalus; œdema of the head.

**Cephalofa′cial in′dex.** Relation of the capacity of the skull to the combined capacity of the orbits and nasal fossæ, including the cavities contiguous to the latter.

**Cephalogas′ter.** Anterior portion of the enteric canal in fœtal life.

**Cephalogen′esis** (*kephale*, head, *genesis*, generation). Generation or development of the skull or head.

**Ceph′alograph** (*kephale*, head, *grapho*, to describe). Instrument for measuring the shape and proportions of the head.

**Cephalog′raphy.** Anatomical description of the head; use of a cephalograph.

**Cephalohæmato′ma.** Cephalæmatoma.

**Cephalohæ′mia.** Cephalæmia.

**Cephalohæmom′eter.** Instrument for determining changes in blood pressure within the cranium.

**Cephalohumeral′is.** Muscle in the horse corresponding to the human deltoid and upper part of the sternocleidomastoid.

**Cephalohyoepiglot′ticus.** Fibres of glossoepiglottic muscle arising from the hyoid bone.

**Ceph′aloid** (*kephale*, head, *eidos*, resemblance). Resembling a head; encephaloid.

**Cephalol′ogy** (*kephale*, head, *logos*, discourse). Treatise on or description of the head.

**Cephalolox′ia** (*kephale*, head, *loxos*, oblique). Wryneck.

**Cephalo′ma.** Encephaloid; soft form of carcinoma.

**Cephalom′elus** (*kephale*, head, *melos*, limb). Monster having one or two accessory limbs on the head.

**Cephalome′nia.** Sialorrhœa, rhinorrhœa, or other head symptoms of vicarious menstruation.

**Cephalomeningi′tis** (*kephale*, head, *meninx*, membrane). Inflammation of the membranes of the brain; meningoencephalitis.

**Cephalom′eter** (*kephale*, head, *metron*, measure). Instrument for measuring different dimensions of the head, especially of the fœtal head during delivery.

**Cephalom′etry.** Craniometry.

**Cephalomonodid′ymi** (*kephale*, head, *monos*, alone, *didymos*, twin). Monstrous twins, united at the head or having only one head.

**Cephalomyi′tis** (*kephale*, head, *mys*, muscle). Inflammation of the muscles of the head.

**Cephalomyodyn′ia** (*kephale*, head, *mys*, muscle, *odyne*, pain). Pain in the muscles of the head.

**Cephalona′sal in′dex.** Proportionate capacity of the cranium and nasal cavities.

**Cephalo′nia.** Abnormal development of the cranium and brain.

**Cephalon′osus** (*kephale*, *nosos*, disease). Any cerebal disease or fever.

**Ceph′alo-or′bital in′dex.** Proportionate capacity of orbits and cranium.

**Ceph′alo-or′bitona′sal in′dex.** Cephalofacial index.

**Cephalop′agus** (*kephale*, head, *pegnymi*, to join together.) Twin monstrosity united by the head, the condition being called *cephalop′agy*.

**Ceph′aloparasit′icus.** Twin monsters united by the head, one imperfectly formed as a parasitic growth on the other.

**Cephalopath′ic** (*kephale*, head, *pathos*, disease). Relating to disease of the head.

**Cephalop′athy.** Generic term for disease of the head.

**Cephalopharynge′us** (*kephale*, head, + *pharynx*). Belonging to the head and pharynx. Portion of the constrictor pharyngis superior muscle attached above to the inferior surface of the basilar process of the os occipitis. Cephalopharyngeal aponeurosis is a thin, fibrous membrane attached to basilar process, and giving insertion to fibres of the constrictor pharyngis superior muscle.

**Cephalophy′ma** (*kephale*, head, *phyma*, tumor). Tumor of the head; cephalæmatoma.

**Cephalopo′nia** (*kephale*, head, *ponos*, pain). Cephalalgia.

**Cephalopyo′sis** (*kephale*, head, *pyon*, pus). Abscess of the head.

**Cephalorachid′ian** or **Cephalorrhachid′ian.** Cerebrospinal; relating to both head and spinal column. **C. flu′id,** cephalorachidian fluid, cerebrospinal fluid, subarachnoidean fluid; fluid beneath the arachnoid, wherever the pia mater exists in connection with the brain and spinal cord. **C. in′dex,** comparative area of foramen magnum and cubic capacity of the cranium.

**Cephalorrhæ′mia** (*kephale*, head, *rheo*, to flow). Hemorrhage of the brain.

**Cephalorrheu′ma.** Rheumatism of the head.

**Cephalosomatodym′ia** (*kephale*, head, *soma*, body, *dyo*, to enter into). Double monstrosity, in which union is between heads and trunks.

**Ceph′alospi′nal.** Cephalorrhachidian.

**Ceph′alostat.** Head-rest for securing immobility of the head, as in operations on the eye.

**Ceph′alostyle** (*kephale*, head, *stylos*, pillar). Osseous sheath of the chorda dorsalis.

**Cephalothla′sia** (*kephale*, head, *thlao*, to crush). Operation of crushing the fœtal head.

**Ceph′alothlast.** Cephalotribe, for crushing the fœtal head.

**Cephalothoracop′agus.** Twin monstrosity, having heads and chests united.

**Ceph′alothoracosteru′menos** (*kephale*, head, *thorax*, chest, *stereo*, to rob). Monster without a head or chest.

**Cephalothryp′sis** (*kephale*, head, *thrypsis*, breaking up). Cephalotripsy.

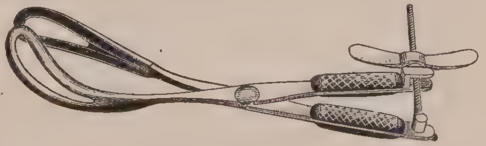
**Cephalothryp′tor.** Cephalotryptor.

**Ceph′alotome.** Instrument for perforating the cranium.

**Cephalot′omy.** Craniotomy; cephalatomy.

**Cephalotrac′tor** (*kephale*, head, *traho*, to draw). Obstetrical forceps.

**Ceph′alotribe** (*kephale*, head, *tribo*, to crush). Instrument for crushing the head of the fœtus in utero during parturition.



Lusk's cephalotribe.

**Cephalotrid′ymus.** Three-headed monster.

**Ceph'alotripsy.** Operation of crushing the head of the fœtus in utero.

**Cephalotrype'sis** (*kephale*, head, *trypesis*, perforation). Trepanning or trephining.

**Cephalotryp'tor.** Trephine; cranium perforator.

**Cephalul'cus.** Fillet with which to facillitate expulsion of the fœtal head.

**Cepul'la** (dim. of cepa). Allium cepa.

☞**Ce'ra.** Wax. See *Ceratum*. **C. al'ba**, see *Cera flava*. **C. amyla'ta**, pulverizable beeswax, basis for pills. **C. citri'na**, cera flava. **C. fla'va**, yellow wax; peculiar concrete animal substance prepared by the bee—Apis mellifica—and by some plants, as Ceroxylon and Myrica cerifera. By bleaching, cera alba, or white wax, is produced; demulcent and emollient; sometimes given in emulsion, in diarrhœa and dysentery, but chiefly in cerates and ointments. Many vegetable products also contain wax, hence the name *vegetable wax*.

**Cera'ceous.** Waxy.

**Ceradine'.** Alkaloid derived from veratrum album.

**Ceram'ium.** Liquid measure containing over seven gallons. **C. helminthochor'tus**, Corsican moss; Corallina corsicana; see *Helminthochorton*.

**Ce'ras** (horn). Cornu; cornea.

**Ceraseïn'.** Resinous matter from the bark of the wild cherry tree; diuretic and sedative.

**Cerasin'.** Insoluble material derived from gummy exudation from cherry, peach, and plum trees; identical with metarabin.

**Cer'asus.** A genus of trees of the order *Rosaceæ;* cherry tree. **C. ac'ida**, Prunus cerasus. **C. a'vium**, Prunus avium; P. nigra. **C. capronia'na**, Prunus cerasus. **C. dul'cis**, Prunus nigra. **C. duraci'na**, Prunus cerasus. **C. fimbria'ta**, Prunus virginiana. **C. horten'sis**, Prunus cerasus. **C. laurocer'asus**, Prunus laurocerasus. **C. pa'dus**, Prunus padus. **C. pe'nis**, glans penis. **C. racemo'sus sylves'tris**, Prunus padus. **C. ru'bra**, Prunus cerasus. **C. serot'ina**, Prunus virginiana. **C. virginia'na**, Prunus virginiana. **C. vulga'ris**, Prunus cerasus.

**Ce'rate** (*cera*, wax). Pharmaceutical preparation of wax and oil or lard, with or without other ingredients. **Blis'tering c.**, cerate of cantharides. **C. of cal'amine**, known also as cerate of carbonate of zinc, Turner's cerate, is a mixture of calamine, yellow wax, and lard. **C. of canthar'ides**, blister or blistering ointment, ointment of Spanish flies, is a mixture of spermaceti cerate and powdered cantharides. It is used to keep blisters, issues, etc., open. Cerate of cantharides is official under the name of *ceratum cantharidis* (Ph. U. S.). **Goulard's' c.**, ceratum plumbi compositum. **Hu'feland's c.** contains zinc oxide and lycopodium, of each 2 parts, in simple cerate, 30 parts. **Sim'ple c.**, a mixture of white wax (3 parts) and lard (7 parts); emollient and used as a base for various medicated cerates. **Soap c.**, ceratum saponis. **Spermace'ti c.**, ceratum cetacei. **Tur'ner's c.**, cerate of calamine. **C. of zinc car'bonate**, cerate of calamine.

**Cerate'a** or **Cerat'ia.** Ceratonia siliqua.

**Ceratecta'sia** (*keras*, cornea, *ektasis*, extension). Staphyloma of the cornea; abnormal projection of the cornea. **C. con'ica**, ceratoconus; conical staphyloma. **C. sphæ'rica**, spherical staphyloma.

**Ceratec'tomy** or **Cerec'tomy** (*keras*, cornea, *ektome*, cut out). Kerectomy of keratectomy; section or incision of the cornea, as in cataract, or to give exit to pus effused in the eye, in hypopyon, etc.

**Cerati'asis** (*keras*, horn). Morbid condition characterized by corneous growths.

**Ceratin'.** Horny matter existing in hair, nails, epidermis, etc.

**Cera'tion.** Siliqua. Cornu of uterus.

**Cerati'tis.** Inflammation of the cornea; corneitis, see *Keratitis*.

**Cera'tium.** Ceratonia siliqua. Ceration.

**Cerato-** (*keras*, horn or cornea). In composition, cornu or horn or cornea; for words so beginning, see *Kerato-*.

**Ceratococ'cus.** Sphærococcus.

**Ceratocri'coid.** Merkel's muscle; rare muscle of the larynx, first described by Merkel, of Leipsic; existing only on one side, arising close to the origin of the outer fibres of the cricoarytenoidæus posticus, and attached to the posterior margin of the inferior cornu of the thyroid cartilage.

**Cer'atoid** (*keras*, horn, *eidos*, resemblance). Resembling horn; cornea.

**Cerato'ma.** Horny growth or formation.

**Ceratomalag'ma.** Cerate.

**Cerato'nia sil'iqua.** Algaroba or St. John's bread, carob tree, sweet-pod; fruit is mucilaginous, and employed in decoction where mucilages are indicated.

**Ceratonyx'is** (*keras*, horn, *nysso*, to puncture). Operation to depress the crystalline by means of a needle introduced into the eye through the cornea. See *Cataract*.

**Ceratopharynge'us.** Small, fleshy bundles forming part of the hyopharyngeus muscle.

**Ceratostaphyli'nus.** Fleshy fibres of the thyrostaphylinus muscle.

**Ceratostro'ma** (*keras*, horn, *stroma*, layer). Ichthyosis.

**Ceratostro'sis.** Development of ichthyosis, or the formation of a layer of horny tissue on the skin.

**Cera'tum.** (Ph. U. S.) Simple cerate, composed of 30 per cent. white wax and 70 per cent. lard. **C. al'bum**, c. cetacei; c. Galeni. **C. cam 'phoræ** (Ph. U. S.), camphor cerate; made of camphor liniment (10 per cent.) in cerate; somewhat stimulating dressing. **C. canthar'idis** (Ph. U. S.), cerate of cantharides (cantharides 32 per cent., yellow wax, resin, lard, and oil of turpentine); (in Ph. Br. cantharides, yellow wax, prepared suet, prepared lard, and resin). **C. de cerus'sâ**, unguentum plumbi subcarbonatis. **C. ceta'cei** (Ph. U. S.), spermaceti cerate; cerate made of spermaceti (10 per cent.), white wax (35 per cent.), and olive oil (55 per cent.); emollient and used as a base for medicated cerates. **C. citri'num**, ceratum resinæ. **C. coni'i**, made of ointment of conium, spermaceti, white wax; used in cancerous and scrofulous sores, etc. **C. epilot'icum**, cerate of calamine. **C. extrac'ti canthar'idis** (formerly official in the Ph. U. S.), cantharides, resin, yellow wax, lard, and alcohol. **C. fla'vum**, cerate made of yellow wax, expressed oil of almonds, and water. **C. Gale'ni**, Galen's cerate; made of cold cream, white wax, oil of sweet almonds, and water or rose-water; mild application to chaps, etc. **C. Goular'di**, c. plumbi subacetatis. **C. hydrar'gyri compos'itum**, compound cerate of mercury (made of unguentum hydrargyri, ceratum saponis compositum, and camphor); is discutient to indolent tumors. **C. lap'idis calamina'ris**, cerate of calamine. **C. laudanisa'tum**, mixture of Sydenham's laudanum and Galen's cerate **C. lithar'gyri aceta'tis compos'itum**, c. plumbi subacetatis. **C. lyt'tæ**, cerate of cantharides. **C. mercuria'le**, unguentum hydrargyri. **C. myris'ticæ**, yellow wax, olive oil, and expressed oil of nutmeg. **C. pica'tum**, oily matter from boiling pitch; same uses as tar. **C. pi'cis**, c. resinæ pini. **C. plum'bi compos'itum**, c. p. subacetatis. **C. plum'bi subaceta'tis** (Ph. U. S.), compound lead cerate, Goulard's cerate, Goulard's ointment; it is composed of liqor plumbi subacetatis. (20 per cent.) in ceratum camphoræ. **C. plum'bi superaceta'tis**, cerate of superacetate or sugar of lead; it is made of acetate of lead, white wax, and olive oil; cooling and astringent. **C. refrig'erans Gale'ni**, c. Galeni. **C. resi'næ**, resin cerate or ointment, yellow basilicon, basilicon ointment; it is made of resin (35 per cent.), yellow wax (15 per cent.), and lard (Ph. U. S.); of resin, yellow wax, and simple ointment (Ph. Br.); a stimulating application to old ulcers, etc. **C. resi'næ compos'itum**, compound resincerate, Deshler's salve; it is made of resin, sevum, cera flava, terebinthina, oleum lini. **C. resi'næ pi'ni**, yellow wax, pine resin, turpentine. **C. rosa'tum**, rose cerate. **C. sabi'næ**, savin cerate or ointment; it is made of extractum sabinæ fluidum and ceratum resinæ; irritative; used in the same cases as cerate of cantharides. **C. sapo'nis** soap cerate; it is made of emplastrum saponis, cera flava, oleum olivæ; applied in sprains or fractures. **C. satur'ni**, c. plumbi compositum. **C. spermace'ti**, c. cetacei. **C. sulphura'tum**, washed sulphur, almond oil, and Galen's cerate. **C. tetraphar'macum**, pisselæum. **C. vir'ide**, unguentum subacetatis cupri. **C. zin'ci carbona'tis**, cerate of carbonate of zinc; it is made of zinci carbonas præparata and unguentum simplex; used in the same cases as cerate of calamine.

**Cer'bera.** A genus of trees of tropical Asia and Africa. **C. aho'vai**, see *Strychnine*. **C. man'ghas**, tree of the East Indies; the leaves and juice are emetic and purgative. **C. odol'lam**, poisonous tree of the East Indies; yields a poisonous glucoside called cerberin; the bark and leaves are purgative. **C. saluta'ris**, tree of Cochin China; root and nut are employed in colic and affections of the stomach. **C. tan'ghin**, tanghinia; tree of Madagascar; kernel of the fruit is a deadly, paralyzing poison, formerly used as an ordeal poison. **C. theve'tia**, see *Strychnine*.

**Cerberin'.** See *Cerbera odollam*.

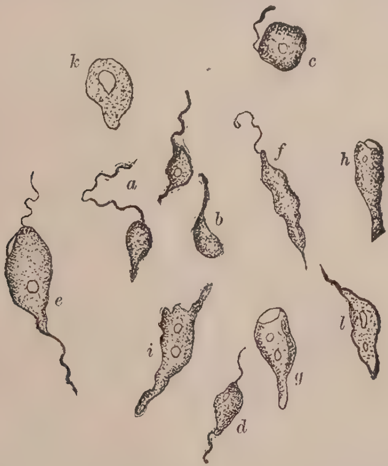
**Cerca'ria** (*kerkos*, tail). Larval form of trematode worms, of a tadpole or spermatozoon shape.

**Cer'cis.** A genus of trees of the order *Leguminosæ*. **C. canaden'sis**, red bud, Judas tree; astringent bark is used in diarrhœa and dysentery and as an injection in leucorrhœa and gleet.

**Cerco'ma schaeff'eri.** Species of vesicating coleopterous insects in France.

**Cercomo'nad** (*kerkos*, tail, *monas*, unit). An organism of the genus *Cercomonas*.

**Cercomo'nas.** Genus of flagellate infusoria. **C. glob'ulus**, species found in incrustations on human teeth. **C. hom'inis** or **intestina'lis**, infusoria found in evacuations, especially of typhoid fever, diarrhœa, and cholera; Megastoma intestinale. **C. vagina'lis**, infusoria found in the vagina, *trichomonas vaginalis*.



Cercomonas intestinalis. *a*, *b*, *c*, *d*, ordinary forms; *e*, *f*, well-developed forms; *g*, *h*, *i*, degeneration forms; *k*, *l*, abortive forms. (Simon.)

**Cerco'sis** (*kerkos*, tail). Nymphomania and elongation of the clitoris; clitorism.

**Ce'rea.** Cerumen.

**Cerea'lia** (*Ceres*, goddess of corn). Gramineous plants, the seeds of which serve for the nourishment of man; as wheat, barley, rye, etc.

**Cerealin'.** Albuminoid matter derived from cereals.

**Cerebel'lar.** Relating to the cerebellum. **C. an'gle**, suboccipital angle. **C. ap'oplexy**, effusion of blood into the substance or on the surface of the cerebellum. **C. ar'teries**, arteries supplying the cerebellum, derived from the vertebral and basilar. **C. cap'sule**, white fibres surrounding the corpus dentatum. **C. gan'glion**, the corpus dentatum. **C. hem'ispheres**, two hemispheres of the cerebellum. **C. lam'inæ**, narrow folds of the cortical layer of the cerebellum. **C. pro'cesses**, superior peduncles of the cerebellum. **C. sec'tor**, space in the middle plane of the skull, between lines projected from the hormion to the opisthion and inion. **C. veins**, veins from the cerebellum emptying into the venæ Galeni or venous sinuses at the base of the skull.

**Cerebellif'ugal** (*fugo*, to flee from). A term applied to nervous influences proceeding from the cerebellum.

**Cerebellip'etal** (*peto*, to seek). In the direction toward the cerebellum; a term applied to nerve currents or impulses.

**Cerebelli'tis.** Inflammation of the cerebellum.

**Cerebel'lo-ol'ivary.** Relating to both cerebellum and olivary body.

**Cerebel'lospi'nal.** Part of the nervous system which includes the cerebellum and spinal cord.

**Cerebel'lous.** Cerebellar.

**Cerebel'lum** (dim. of **cerebrum**). Little brain; portion of medullary mass contained in the cavity of the cranium, filling the lower occipital fossæ below the tentorium and embracing the tuber annulare and the medulla. It is composed, like the cerebrum, of vesicular and tubular substance, so that on section it has an arborescent appearance—arbor vitæ. The cerebellum is divided into two lobes or hemispheres or lateral masses, superior anterior or quadrangular lobe and superior posterior or semilunar lobe; each lobe is again subdivided into monticuli or lobules. The hemispheres are separated in front by a deep notch, incisura cerebelli anterior, and behind by the incisura cerebelli posterior.

**Cer'ebral.** Relating to the brain, or specifically to the cerebrum. **C. an'gle**, angle between lines projected from auricular point to the glabella and inion. **C. apoph'ysis**, pineal gland. **C. ar'teries**, these are three on each side: anterior, or artery of corpus callosum; middle, sylvian artery, furnished by internal carotid; posterior or posterior and inferior artery of the brain, profunda cerebri, from the vertebral. **C. com'missures**, commissures uniting the hemispheres of the brain. **C. convolu'tions**, tortuous divisions of the cortical substance of the cerebrum. **C. exhaus'tion**, neurasthenia. **C. fe'ver**, meningitis. **C. gan'glia** optic thalami and corpora striata. **C. hemiple'gia**, hemiplegia due to cerebral hemorrhage. **C. hem'ispheres**, two portions into which the cerebrum is divided by the great longitudinal fissure; united at the inferior part by the corpus callosum. **C. in'dex**, relation of transverse diameter of the brain to longitudinal. **C. lobes**, see *Cerebrum*. **C. localiza'tion**, apportionment of functions to various localities on the substance of the brain, see *Localization*. **C. mac'ula**, redness of the skin following slight irritation, supposed to be connected with inflammation of the brain. **C. nerves**, those arising within the cranium. **C. neurasthe'nia**, cerebrasthenia. **C. pe'duncles**, crura cerebri. **C. pneumo'nia**, see *Pneumonia*. **C. protu'berance**, pons Varolii. **C. rheum'atism**, rheumatic inflammation of membranes of the brain. **C. sec'tor**, space in middle plane of the skull between lines projected from the hormion to the nasion and basion or from the hormion to the nasion and inion. **C. si'nuses**, sinuses of the dura mater. **C. surprise'**, instantaneous stupor occurring after a sudden compression or laceration of the brain. **C. tri'gone**, fornix cerebri. **C. veins**, veins lying within the pia mater. **C. ven'tricles**, ventricles of the brain. **C. ves'icles**, bulbous expansions on the primary neural tube of the early embryo, developing into the brain.

**Cerebral'gia.** Deep-seated cephalalgia; cerebral neuralgia.

**Cerebrasthe'nia** (*cerebrum* + *astheneia*, weakness). Weakness of the brain; mental exhaustion; neurasthenia due to cerebral disturbance or lesion.

**Cerebrasthen'ic.** Relating to cerebrasthenia.

**Cerebra'tion.** Action of the brain during any mental or moral manifestation. **Uncon'scious c.**, unconscious exercise of the mind during sleep or mental preoccupation.

**Cere′bria.** Spontaneous acute, general inflammation of the substance of the brain uncomplicated with meningitis; cerebritis. **C. partia′lis,** monomania.

**Cer′ebric.** Cerebral. **C. acid,** nitrogenous material existing in the gray substance of the brain; impure cerebrin.

**Cereb′riform** (*cerebrum*+*forma,* form). Encephaloid.

**Cerebrif′ugal** (*fugo,* to flee). Passing from the brain, a term applied to nerve fibres or nervous impulses.

**Cerebrin′.** Substance in the form of a light, white, crystalline powder obtained from brain matter; forms nearly 10 per cent. of the white nervous matter.

**Cerebrine′.** An extract of ox brain, said to be useful in epilepsy and other nervous affections.

**Cerebrin′ic acid.** Weak acid found in brain tissue.

**Cerebrinine′.** An extract of calves' brain, which has been recommended for the treatment of chorea and other nervous affections.

**Cerebrip′etal** (*peto,* to seek). Passing to the brain, a term applied to nerve fibres or nervous impulses.

**Cerebri′tis.** Inflammation of the substance of the brain; encephalitis.

**Cer′ebroid.** Encephaloid.

**Cer′ebrol** (*cerebrum*+*oleum,* oil). An oily substance extracted from brain matter.

**Cerebrol′ogy** (*cerebrum*+*logos,* discourse). The aggregation of scientific facts relating to and their application in the study of the brain and its functions.

**Cerebro′ma.** A tumor composed of brain substance; hernia of the brain.

**Cerebromala′cia** (*cerebrum*+*malakia,* softness). Softness of brain substance.

**Cerebromed′ullary.** Cerebrospinal. **C. tube,** the neural tube, formed by the infolding of the medullary plate in the embryo, from which is developed the cerebrospinal axis.

**Cerebrom′eter** (*cerebrum*+*metron,* measure). An instrument devised for recording cerebral action.

**Cerebrop′athy** (*cerebrum*+*pathos,* affection). Mental disorder.

**Cerebrophysiol′ogy.** The physiology of the brain.

**Cerebropon′tile.** Relation to both cerebrum and pons Varolii.

**Cerebropsycho′sis** (*psyche,* mind). Cerebral disease with mental disturbance.

**Cerebrorachid′ian** or **Cerebrorrhachid′ian** (*cerebrum*+*rhachis,* spine). Cerebrospinal.

**Cerebrosclero′sis.** Sclerosis or induration of the brain.

**Cere′broscope.** Opthalmoscope used to determine the condition of the cerebral blood circulation.

**Cerebros′copy** (*cerebrum*+*skopeo,* to see). Examination of the brain, encephaloscopy; use of the ophthalmoscope for the diagnosis of brain diseases.

**Cer′ebrose.** Saccharine matter, $C_6H_{12}O_6$ in brain tissue, isomeric with glucose. Also (adj.) cerebrous.

**Cer′ebrosides.** Substances in the tissue of the brain containing cerebrose.

**Cerebro′sis.** Brain disease.

**Cerebrospi′nal.** Relating to the brain and spinal cord. **C. ax′is,** the brain and spinal cord considered as one organ. **C. fe′ver,** cerebrospinal meningitis. **C. flu′id,** cephalospinal fluid. **C. mening′itis,** see *Meningitis.* **C. nerves,** nerves arising from the brain and spinal cord, as distinguished from those belonging to the sympathetic nervous system. **C. sclero′sis,** multiple sclerosis of the brain and spinal cord. **C. seg′ment,** portion of the motor tract passing from the cerebral cortex to the anterior cornua of the gray matter in the spinal cord. **C. sys′tem,** brain and spinal cord and nerves connected therewith.

**Cerebrospi′nant.** A remedy exercising a special influence over the functions of the brain and spinal cord.

**Cerebrosu′ria.** Excretion of cerebrose in the urine.

**Cer′ebrote.** White, fatty amyloid principle in the brain.

**Cerebrot′omy** (*cerebrum*+*tome,* incision). Dissection of the brain; encephalotomy.

**Cer′ebrous** or **Cer′ebrose.** Maniacal; passionate.

**Cer′ebrum.** The brain; the whole contents of the cranium, or the upper portion only, the posterior and inferior portions being called the cerebellum. (See plates under *Brain.*) The brain, properly so called, extends from the os frontis to the superior occipital fossæ. Anteriorly it rests on the orbital vault; behind this, on the middle fossæ of the base of the cranium; and posteriorly on the tentorium cerebello superextensum. The upper surface is divided by a deep median cleft into two halves or hemispheres, united at the base by the corpus callosum. On its surface are numerous convolutions. (See plates under *Convolutions.*) The inferior surface exhibits, from before backward, three lobes, distinguished as anterior, middle, and posterior. The cerebrum is contained in a triple envelope, dura mater, pia mater, and arachnoid (see *Meninges*). Two substances may be distinguished in it: white, medullary, tubular or fibrous—medulla cerebri; and cineritious, vesicular, or gray—cortex cerebri. The former occupies all the interior and base of the brain; the latter is grayish and softer, and is situated particularly at the surface.

The brain is the material organ of mental and moral manifestations. Three primary vesicles are developed at an early period of fœtal life from the medullary canal, and, with their lining of epiblast, constitute the primitive brain, as follows:

| | | |
|---|---|---|
| I. Anterior primary vesicle. | 1. Prosencephalon, fore-brain. | Cerebral hemispheres, corpora striata, corpus callosum, fornix, lateral ventricles, olfactory bulb (rhinencephalon). |
| | 2. Thalamencephalon, diencephalon, interbrain. | Thalami optici, pineal gland, pituitary body, third ventricle, optic nerve (primarily). |
| II. Middle primary vesicle. | 3. Mesencephalon, mid-brain. | Corpora quadrigemina, crura cerebri, aqueduct of Sylvius, optic nerve (secondarily). |
| III. Posterior primary vesicle. | 4. Epencephalon, metencephalon, hindbrain. | Cerebellum, pons Varolii, anterior part of fourth ventricle. |
| | 5. Myelencephalon, after-brain. | Medulla oblongata, fourth ventricle, auditory nerve, cerebellar peduncles. |

The brain differs in weight in different nations and races. According to Davis:

| | *Men.* | *Women.* |
|---|---|---|
| European races.. | 1367 grammes. | 1204 grammes. |
| Oceanic " .. | 1319 " | 1219 " |
| American " .. | 1308 " | 1187 " |
| Asiatic " .. | 1304 " | 1194 " |
| African " .. | 1293 " | 1211 " |
| Australian " .. | 1214 " | 1111 " |

The average human brain weighs from 48 to 50 ounces, in a newborn child 10 to 14 ounces, and at the age of seven years already averages 40 ounces. The average weight of the adult female brain is about 44 ounces, or about five ounces less than that of the adult male. (Kirkes.) The blood circulating in the brain amounts to about $\frac{1}{15}$ of its volume. The relative weights of the cerebrum, cerebellum, etc., are as follows (Quain):

| | *Male.* | *Female.* |
|---|---|---|
| Cerebrum | 43.98 oz. | 38.75 oz. |
| Cerebellum | 5.25 " | 4.76 " |
| Pons and medulla | 0.98 " | 1.01 " |
| Entire encephalon | 50.21 " | 44.52 " |
| Ratio of cerebrum to cerebellum | 1 to $8\frac{4}{7}$ | 1 to $8\frac{1}{4}$ |

The brain consists chemically of about 75 per cent. of water, 15 of fats, 7.5 of albuminoids, 1.5 of salts, 1 of extractives, including cerebrin, lecithin, cholesterin, fat, fatty acids, phosphorus, sodium chloride, salts of lime, potash, and magnesia. The amount of phosphorus is from 1.3 to 1.7 per cent. (Chapman.)

**Cer'ebrum abdomina'le.** Solar plexus. **C. elonga'tum,** medulla oblongata. **C. exsicca'tum,** dried and powdered cortical substance from calves' brains; has been used in the treatment of cerebral and other nervous diseases. **C. lon'gum** or **oblon'gum,** spinal cord. **C. par'vum, C. poste'rius,** cerebellum.

**Cere'cloth.** Cloth impregnated with wax and so made moisture proof. **Antisep'tic c.,** cloth or thin calico saturated with melted paraffin, to which oil, wax, and carbolic acid are added; used for wounds.

**Cerefo'lium.** Scandix cerefolium. **C. hispan'icum,** Chærophyllum odoratum. **C. sylves'tre,** Chærophyllum sylvestre.

**Cerelæ'um** (*keros,* wax, *elaion,* oil). Cerate.

**Ceresin'.** Paraffin derived from ozocerite; used to adulterate wax.

**Ce'reus** (*cera,* wax). Bougie. A genus of cacti. **C. flagellifor'mis,** poisonous Mexican plant; antispasmodic and anthelmintic; externally rubefacient. **C. grandiflo'rus,** Cactus grandiflora. **C. medica'tus,** bougie. **C. monilifor'mis,** plant of West Indies; used in fomentations and cataplasms in inflammatory diseases of the skin and rheumatism. **Night-bloom'ing c.,** Cactus grandiflora. **C. panicula'tus,** pulp of the fruit is used in bilious affections and fevers.

**Cerevis'ia.** Malt liquors, as ale, beer, porter.

**Cerevis'iæ fermen'tum.** (Ph. Br.). Beer-yeast; a ferment obtained in brewing beer, and produced by Saccharomyces cerevisiæ.

**Ce'ria.** Celia; cerevisia; flat intestinal worm.

**Ce'rii ox'alas.** Oxalate of cerium; official in Ph. U. S. and Br. See *Cerium*

**Cerin'.** The portion of beeswax which is soluble in alcohol; probably cerotic acid.

**Cerine'.** $C_{20}H_{32}O$. A waxy alkaloid derived from cork shavings.

**Cerin'tha ma'jor.** Honeywort, wax-plant; European plant; astringent and employed in affections of the eye.

**Cer'ion** (honeycomb). See *Favus, Porrigo favosa.*

**Ce'rium** (chemical symbol, Ce). Metal resembling iron; oxidizable at ordinary temperatures in a moist atmosphere. Nitrate and oxalate are the only compounds used medicinally. Salts of cerium are sedative and tonic, and have been used in dyspepsia, vomiting of pregnancy, chorea, etc., resembling subnitrate of bismuth in action. The oxalate of the sesquioxide is official in the Ph. U. S. and Br., under the name *cerii oxalas;* dose, gr. j–x (0.065–0.65).

**Ceroco'ma.** Genus of coleopterous insects, all species of which are vesicant.

**Cero'leum** (*cera,* wax, *oleum,* oil). Cerate.

**Cero'ma** (*keros,* wax). Cerate; amyloid degeneration.

**Cer'omel** (*cera,* wax, *mel,* honey). Mixture of wax and honey, used in India as an application to indolent ulcers.

**Cero'nia.** Ceratonia siliqua.

**Cerope'gia acumina'ta.** Species of asclepiadaceous plants of the East Indies; used as a stomachic tonic and in diseases of the bowels of children.

**Cero'sis.** Waxy condition of a membrane.

**Cerostro'ma** or **Cerostro'sis** (*keras,* horn, *strosis,* spreading). Hystriciasis; ichthyosis hystrix.

**Cerot'ic acid.** A crystalline, fatty acid soluble in alcohol; found in beeswax.

**Cerox'ylon** (*keros,* wax, *xylon,* wood). See *Cera flava* and *C. alba.* **C. andic'ola,** large Peruvian tree, from which wax is obtained.

**Ceru'men** (*cera,* wax). Unctuous excretion, similar to wax, in the meatus auditorius externus, secreted by glands beneath the skin lining the meatus. It lubricates the meatus, preserves suppleness of the lining membrane, prevents the introduction of bodies floating in the atmosphere, and by its bitterness and unctuousness prevents insects from penetrating.

**Ceru'minal.** Relating to or secreting cerumen; ceruminous.

**Cerumino'sis.** Condition of or causing excessive secretion or accumulation of cerumen in the external auditory canal.

**Ceru'minous.** Relating to or secreting cerumen. **C. fol'licles** or **glands,** glands or follicles secreting cerumen.

**Ceruse'.** Plumbi subcarbonas.

**Cerus'sa.** Plumbi subcarbonas. **C. aceta'ta,** plumbi superacetas. **C. al'ba hispan'ica,** plumbi subcarbonas. **C. al'bi no'rica,** plumbi subcarbonas. **C. ni'gra,** graphites. **C. psym'mithron,** plumbi subcarbonas. **C. serpenta'riæ,** see *Arum maculatum.*

**Cerva'ria al'ba.** Laserpitium latifolium.

**Cer'vi bole'tus.** Elaphomyces granulatus. **C. el'aphi cor'nu,** cornu cervi, see *Cervus.*

**Cer'vical** (*cervix,* neck). Trachelian; relating to the neck or to the cervix uteri. **C. ar'teries,** these are three in number: 1. Ascending, superior, or superficial, branch of the inferior thyroid. 2. Transverse, branch of the axillary or subclavian artery. 3. Posterior or profound, branch of subclavian; see *Princeps cervicis artery.* **C. bend,** bend made between the medulla spinalis and myelencephalon in the embryonic development of the cerebrospinal axis. **C. canal',** canal of the neck of the uterus. **C. curve,** curve of the cervix uteri. **C. em'inence,** prominence of the spine of the seventh cervical vertebra. **C. fas'cia,** sheath of the muscles of the neck. **C. gan'glion,** one of the three ganglions of the great sympathetic in the neck; lymphatic gland of the neck; also the ganglion formed by the union of several ganglia in the uterovaginal plexus. **C. glands,** lymphatic glands of the neck. **C. lig'aments,** two in number: 1. Anterior, extending from the basilar process of the occipital bone to the anterior part of the first cervical vertebræ. 2. Posterior or supraspinous, ligamentum nuchæ, extending from the outer occipital protuberance to the spinous process of the seventh cervical vertebra; in animals with large heads it is very strong; see *Nucha.* **C. mar'gin,** portion of a tooth cavity at its neck **C. nerves,** these are eight in number on each side, and form eight cervical pairs. **C. nu'cleus,** mass of gray matter in the spinal cord opposite the third and fourth cervical nerves. **C. pachymeningi'tis,** see *Pachymeningitis.* **C. plex'us,** nervous network formed by the anterior branches of the first three cervical nerves, above the posterior scalenus muscle, and at the outer side of the pneumogastric nerve, carotid artery, and jugular vein. **C. preg'nancy,** development of fœtus in the cervical canal. **C. re'gion, ante'rior deep,** prevertebral region; region of the neck occupied by three pairs of muscles placed immediately in front of the cervical and three superior dorsal vertebræ—viz., the rectus capitis anticus major, the rectus capitis anticus minor, and the longus colli—hence termed prevertebral muscles. **C. ribs,** prolongations like ribs occasionally seen in connection with the vertebræ of the neck. **C. tri'angles,** the side of the neck is divided into two large triangles by the sternomastoid muscle—anterior triangle or triangular space, and posterior triangle or triangular space. The anterior triangular space is divided into three smaller triangles by the digastric muscle above and by the anterior belly of the omohyoid below; named, from below upward, inferior carotid triangle, superior carotid, and submaxillary. The posterior triangle or triangular space is crossed by the posterior belly of the omohyoid, which divides it into two triangles—upper or occipital, and lower or subclavian. **C. veins** have nearly the same distribution as the arteries. **C. ver'tebræ**, first seven vertebræ of the spine, see *Vertebræ.*

**Cervical'is.** Cervical. **C. ascen'dens**, iliocostalis cervicis muscle; four or five fleshy slips forming an extension of the iliocostalis accessory muscle into the neck. **C. descen'dens**, hypoglossus muscle; fasciculus of the sacrolumbalis muscle.

**Cervica'ria.** Name given to several varieties of campanula.

**Cer'viciplex.** Cervical plexus.

**Cerviciscapula'ris.** Levator anguli scapulæ muscle.

**Cervicispi'nal.** Relating to the neck and spinal column.

**Cervici'tis.** Trachelitis; inflammation of the cervix uteri.

**Cervico-** (*cervix*, neck). In composition neck, or neck of the uterus.

**Cervicoacromia'lis.** Part of the trapezius muscle passing from the neck to the acromion process.

**Cervicoauricula'ris.** Relating to the back of the neck and ear, or to one of several muscles so distributed in the lower animals.

**Cervicobas'ilar.** Relating to the neck and region of the basilar process of the occipital bone.

**Cervicobrach'ial.** Relating to the neck and arm, or the brachial plexus and cervical nerves.

**Cervicobranch'ial fis'tula.** Branchial fistula.

**Cervicobregmat'ic.** Relating to the neck and vertex of the head, as cervicobregmatic diameter.

**Cervicocos'tohumera'lis.** Rare muscle passing from the sixth cervical vertebra and first rib to the humerus.

**Cervicodyn'ia** (*cervix*, neck, *odyne*, pain). Pain in the neck; rheumatism of the neck.

**Cervicofa'cial.** Belonging to the neck and face; smaller main division of facial nerve distributed to the face and neck.

**Cervicohu'meral.** Levator claviculæ.

**Cervicomastoide'us.** Relating to the neck and mastoid process; splenius capitis.

**Cervicona'sal.** Relating to the neck and nose, as muscle in lower animals so distributed.

**Cervico-occip'ital.** Cleido-occipital; relating to the neck and occipital bone.

**Cervicoscap'ular ar'tery.** Transverse cervical artery.

**Cervicospi'nal.** Relating to the neck and spine.

**Cervicosubscapula'ris.** Rhomboideus muscle of some lower animals, arising from the posterior cervical ligament.

**Cervicovag'inal.** Relating to the neck of the uterus and vagina.

**Cervicoves'ical.** Relating to both the cervix uteri and urinary bladder.

**Cervicoves'icovag'inal.** Relating to the cervix uteri, bladder, and vagina; as cervicovesicovaginal fistula.

**Cervim'eter.** An instrument for measuring the cervix uteri.

**Cervispi'na.** Rhamnus.

**Cer'vix.** Neck, neck of uterus, etc. **C. cor'nu**, narrow portion of posterior cornu of medulla spinalis. **C. cor'poris restifor'mis**, narrowed portion of restiform body. **C. cos'tæ**, neck of rib. **C. den'tis**, neck of a tooth. **C. fem'oris**, neck of the femur. **C. glan'dis**, narrow portion of penis back of the glans. **C. obsti'pa**, torticollis. **C. pedunculo'rum**, c. corporis restiformis. **C. pe'nis**, c. glandis. **C. rig'ida**, torticollis. **C. u'teri**, neck of the uterus. **C. vesi'cæ**, neck of the bladder. **C. vesi'cæ fel'leæ**, neck of the gall-bladder.

**Cer'vus** (stag). Horn of cervus elaphus; hartshorn; it contains 27 parts of gelatin in the 100; jelly made from the shavings is emollient and nutritive. See *Cornu cervi*. Cornu ustum, burnt hartshorn, is a weak antacid.

**Cesa'rean.** Cæsarean.

**Cessa'tio men'sium.** Amenorrhœa; menopause.

**Cesto'da** or **Cesto'des.** Order of parasitic worms. Tænia is an example. See *Parasites* and *Worms.*

**Ces'toid entozo'a.** See *Parasites* and *Entozoa.*

**Ces'tron** or **Ces'tros.** Betonica officinalis; trocar.

**Ces'trum auricula'tum.** Yerba santa; leaves of this shrub of Peru are used in fevers. **C. hediun'dinum**, shrub of Peru; emollient and astringent; applied to hemorrhoids. **C. par'qui**, Chilian plant; decoction of leaves is used for tinea.

**Ceta'ceous.** Relating to spermaceti; like spermaceti.

**Ceta'ceum** (*cetus*, whale). Official in Ph. U. S. and Br. Spermaceti; sperm. Inodorous, insipid, white, crystallized, friable, unctuous substance, obtained from Physeter macrocephalus or spermaceti whale; demulcent and emollient, but mostly used in the preparation of cerates and ointments.

**Cet'erach officina'lis** or **officina'rum.** Asplenium ceterach.

**Cetin'.** White substance resulting from the crystallization of spermaceti from boiling alcohol.

**Ceto'nia aura'ta.** Beetle in Russia, used medicinally.

**Cetra'ria.** (Ph. U. S. and Br.) Iceland moss; Cetraria or Lichen islandicus. Employed in pulmonary and intestinal affections. The decoction, *decoctum cetrariæ*, is official; dose, ℥ij–iv (64.0–128.0).

**Cetrar'ic acid.** Bitter acid, $C_{18}H_{16}O_8$, in Cetraria islandica, to which its tonic properties are ascribed.

**Cetrarin'.** $C_{18}H_{16}O_8$. Bitter principle from Cetraria islandica; in white, bitter crystals; employed in chlorosis, because it is thought to augment the number of red blood globules; also stimulates salivary, biliary, and pancreatic secretions, and hence used in chronic constipation; dose, gr. ij–iij (0.13–0.2).

**Cet'yl.** $C_{16}H_{33}$. Hypothetical radical of cetyl alcohol. **C. al'cohol** or **C. hy'drate**, $C_{16}H_{34}O$, ethal; white, crystalline substance, soluble in ether and alcohol, resulting from the saponification of spermaceti

**Cevad'ic acid.** $C_5H_8O_2$. Acid obtained from cevadilla.

**Cevadil'la.** See *Veratrum sabadilla.* **C. hispano'rum**, Veratrum sabadilla.

**Cevadilline'.** $C_{34}H_{53}NO_8$. Alkaloid derived from cevadilla.

**Cevadine'.** $C_{32}H_{49}NO_9$. Alkaloid from cevadilla. When saponified, *cevine*, $C_{27}H_{43}NO_8$, results.

**Cevine'.** See *Cevadine.*

**Ceylon', bad sick'ness of.** Beriberi. **C. card'amom**, product of a variety of Elettaria cardamomum in Ceylon. **C. cin'namon**, bark of Cinnamomum zeylanicum. **C. moss**, edible moss from Ceylon; Gracilaria lichenoides, a source of agar. **C. sore mouth**, psilosis.

**Ceys'satite.** A fossil earth, almost wholly silica, employed as a dusting-powder on exposed or injured surfaces.

**Chabert's** (shab-airs') **disease'.** Sympathetic anthrax; blackleg; an endemic disease of cattle.

**Chærefo'lium.** Scandix cerefolium.

**Chæroma'nia** (*chairo*, to be pleased). Gay form of insanity, called also amenomania.

**Chærophyl'lum.** Chervil; a genus of plants, ord. *Umbelliferæ.* **C. angula'tum**, C. sylvestre. **C. anthris'cus**, C. vulgaris. **C. aromat'icum**, musk chervil; diuretic. **C. cerefo'lium**, Scandix cerefolium. **C. monog'ynum**, C. sylvestre. **C. odora'tum**, sweet cicely; has aromatic smell of aniseed. **C. sati'vum**, scandix. **C. sylves'tre**, bastard hemlock, wild chervil, or cowweed; slightly fetid and aromatic. **C. tem'ulum**, Chærophyllum sylvestre. **C. verticilla'tum**, C. sylvestre.

**Chæto′sis** (*chaite*, mane). Bristliness of the hair.

**Chafe′weed.** Gnaphalium.

**Chaff′bone.** Lower jaw.

**Cha′fing.** Fret; gall of the skin; red excoriations occurring in consequence of friction by ill-fitting clothing or boots, or of one part on another (intertrigo), or between the folds of the skin, especially in fat or neglected children. Washing with cold water and dusting with hair-powder is the best preventive.

**Cha′gres fe′ver.** Pernicious fever, malarial or yellow fever, contracted on the Isthmus of Panama.

**Chag′ual gum.** Chilian gum from Pourretia lanuginosa.

**Chain.** A connected series; in chemistry, a series of multivalent atoms so connected that some of their affinities are left unsaturated. **C. bacte′ria,** streptobacteria; cocci or other bacterial forms which are arranged in linear groups, forming chain-like threads. **Closed c.,** in chemistry, a chain in the form of a ring, the two extremities being joined; see *Benzol ring.* **O′pen c.,** in chemistry, a chain the two extremities of which are not united, but present free affinities. **Side c.,** the atom or radical groups taking the place of the hydrogen atoms in the benzol ring. **S.-c. the′ory,** Ehrlich's theory of antitoxin production, namely, that every protoplasm molecule consists of a functionating nucleus and side chains (receptors) which latter possess the property of binding toxins; when this binding occurs the protoplasm forms other side chains to supply the deficiency resulting from the union with the toxin; once started, this process goes on to such an extent that a number of superfluous side chains are formed, and these are cast off by the protoplasm of the cell and enter the blood; in the blood they retain their power of binding toxins, and so seize upon them before they can be joined to the cells and damage them; these cast-off side chains therefore constitute the antitoxins. The same theory is extended in explanation of cytolysis.

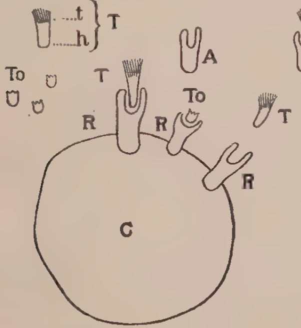


Diagram illustrating the side-chain theory of immunity. *C*, cell; *R*, receptor; *T*, toxin; *h*, haptophore and *t*, toxophore group; *To*, toxoids; *A*, free receptor, or antitoxin; *I*, union of toxin and antitoxin, effecting immunity. (For definitions of the terms here employed, see these words.)

**Chair.** A seat; a professorship in a university. **Bath c.,** a wheeled chair in which an invalid is transported. **Obstet′ric c.,** a specially constructed chair in which a woman sits during her confinement; formerly much in use. **Whirl′ing c.,** chair in which insane were formerly placed, made to revolve with great rapidity, as a tamer in furious mania.

**Chairamine′.** $C_{22}H_{26}N_2O_4$. Alkaloid from Remijia purdiana bark.

**Chairoma′nia.** Chæromania.

**Chala′cium.** Chalazion.

**Chalasis** (kal′as-is) or **Chalas′mus** (*chalao*, to relax). Relaxation; atony; separation of the cornea from the sclerotic; obstruction of the pupil by the iris.

**Chalastoder′mia** or **Chalasoder′mia** (*chalastos*, relaxed, *derma*, skin). Chalodermia.

**Chalaza** (kal-az′ah), **Chala′zion, Chala′zium,** or **Chalazo′sis** (*chalaza*, hail). Tarsal tumor; tarsal or Meibomian cyst; hard, round, transparent tumor, developed in the eyelid by the distention of a Meibomian gland. Cicatricula of egg, or more dense internal layer of albumin, which adheres to the yolk and is continued, in spiral twisted bands, toward the extremities of the egg.

**Chalazif′erous mem′brane.** Membrane with which the chalaza is connected in the egg.

**Chala′zion.** Chalaza. Meibomian cyst.

**Chalazoder′mia.** Dermatolysis; chalodermia.

**Chalazonephri′tis.** Bright's disease.

**Chalcosis,** kal-ko′sis (*chalkos*, brass). A deposit of fine particles of metallic copper in the tissues.

**Chal′ice.** A cup. **C. cells,** goblet cells. **C. flow′er,** Narcissus pseudonarcissus.

**Chalico′sis** (*chalix*, gravel). Deposit of dust in the lung; stone-cutters' phthisis; fibroid phthisis.

**Chalinoplas′ty** (*chalinos*, frænum, *plasso*, to form) Operation for forming new frænum; plastic operation on the corner of the mouth.

**Chalk.** Creta; calcium carbonate. **C. eat′ing,** see *Limosis.* **C. and gum band′age,** form of immovable apparatus or bandage made by adding boiling water to equal parts of gum arabic and precipitated chalk. **C. mix′ture,** mistura cretæ. **Precip′itated c.,** creta præcipitata. **Prepared′ c.,** creta præparata. **Red c.,** rubrica fabrilis. **C.-stones,** arthritic calculi; gouty concretions, mainly about the knuckles, composed chiefly of sodium urate.

**Chalmoo′gra.** Chaulmoogra.

**Chaloder′mia.** A form of hypertrophy of the skin in which the integument hangs in loose folds, like an ill-fitting undergarment, having lost its elasticity.

**Chalyb′eate** (*chalyps*, iron or steel). Ferruginous, martial, ferrated; of or belonging to iron; containing iron, as chalybeate tonic or chalybeate springs.

**Chal′yps** (*chalyps*, steel). Steel; protocarburet of iron. As a medicine steel does not differ from iron, **C. tartariza′tus,** ferrum tartarizatum.

**Cham′a.** Yawning, gaping.

**Chamæac′te.** Sambucus ebulus.

**Chamæ′batos.** Fragaria; rubus.

**Chamæ′cedrus.** Artemisia santonica.

**Chamæcephal′ic** or **Chamæceph′alous** (*chamai*, on the ground, *kephale*, head). Having a skull with a cephalic index of 70 or less. The condition is called *chamæceph′aly.*

**Chamæcis′sus.** Glechoma hederacea.

**Chamæclem′a.** Glechoma hederacea; Nepeta glechoma. **C. hedera′cea,** Glechoma hederacea.

**Chamæcon′chus** (*chamai*, or the ground, low, *konchos*, eye-socket). Having an orbital index of 80° or less.

**Chamæcra′nius** (*chamai*, on the ground, *cranion*, skull). A term applied to skulls having a ratio of length to height from 59.6 to 74.5.

**Chamæcyparis′sus.** Artemisia santonica.

**Chamædolichoceph′alous.** Both chamæcephalous and dolichocephalous.

**Chamæ′drops.** Teucrium chamædrys.

**Chamæ′drys** (*chamai*, on the ground, *drys*, the oak). Rubus chamæmorus, Teucrium c., hamædrys **C. inca′na marit′ima,** Teucrium marum. **C. ma′rum,** Teucrium marum. **C. mi′nor re′pens,** or **C. officina′lis,** Teucrium c. hamædrys. **C. palus′tris,** Teucrium scordium. **C. scor′dium,** Teucrium scordium. **C. spu′ria,** Veronica officinalis. **C. vulga′ris,** Teucrium c. hamædrys.

**Chamælæ′a.** Daphne alpina.

**Chamælæag′nus.** Myrica gale.

**Chamæ′leon al′bum** (*chamai*, on the ground, *leon*, lion). Carlina acaulis; Atractylis gummifera.

**Chamæleu′ce** (*chamai*, on the ground, *leukos*, white). Tussilago.

**Chamæ′linum** (*chamai*, on the ground, *linon*, flax). Linum catharticum.

**Chamælirin′.** Bitter glucoside from Chamælirium luteum; cardiac depressant.

**Chamælir'ium lu'teum** (*chamai,* on the ground, *leirion,* lily). Devil's bit, blazing star, unicorn root; an indigenous plant said to possess remedial properties in leucorrhœa, amenorrhœa, and dysmenorrhœa.

**Chamæme'lum** (*chamai,* on the ground, *melon,* apple). Anthemis nobilis. **C. chrysan'themum,** Leucanthemum vulgare. **C. fœt'idum,** Anthemis cotula. **C. no'bile** or **C. odora'tum,** Anthemis nobilis. **C. vulga're,** Matricaria chamomilla.

**Chamæmesoceph'alous.** Being both chamæcephalous and mesocephalous.

**Chamæ'morus** (*chamai,* on the ground, *morea,* mulberry tree). Teucrium chamæpitys; Rubus chamæmorus. **C. norweg'ica,** Rubus chamæmorus.

**Chamæopis'thius** (*chamai,* on the ground, *opisthios,* behind). Term applied to skulls having an angle of 17° to 24.5° formed between a line from the hormion to the lambda and the radius fixus.

**Chamæpeu'ce** (*chamai,* on the ground, *peuke,* pine). Camphorosma monspeliaca.

**Chamæ'pitys** (*chamai,* on the ground, *pitys,* pine). Teucrium chamæpitys. **C. anthyl'lus,** Teucrium iva; Ajuga iva. **C. monspeli'aca** or **moscha'ta,** Teucrium iva; Ajuga iva.

**Chamæ'plion.** Erysimum; sissymbrium.

**Chamæproso'pic** (*chamai,* on the ground, *prosopon,* face). Having a low face.

**Chamæ'rops serrat'ula.** Saw palmetto; used in urinary disorders.

**Cham'ber.** A room, compartment, enclosed space. **A'queous c.,** there are two chambers in the eye called by this name; the *anterior* is the space between the cornea and the anterior part of the iris; the *posterior* was formerly described as the space between the iris and the anterior surface of the crystalline; but the only space to be called the posterior chamber is a narrow chink between the peripheral part of the iris, the suspensory ligament, and the ciliary processes. They are filled with aqueous humor, and communicate through the opening of the pupil. **Car'diac c.,** one of the four cavities of the heart. **Laryn'geal c.,** cavity of the larynx. **Pulp c.,** pulp cavity of a tooth. **Res'onance c.,** a hollow space sometimes attached to a tuning-fork in order to increase the resonance. **Vac'uum c.,** depression in a dental plate from which the air is exhausted. **Vit'reous c.,** the portion of the eye between the retina and the lens containing the vitreous humor.

**Cham'omile.** Anthemis nobilis; official in Ph. U. S. and Br.; see *Anthemis*. **Dog's c.,** Anthemis cotula; Matricaria chamomilla. **Dy'er's c.,** Anthemis tinctoria. **Eng'lish c.,** Anthemis nobilis. **C. flow'ers,** Anthemis nobilis. **Ger'man c.,** Matricaria chamomilla. **Ro'man** or **Scotch c.,** Anthemis nobilis. **Span'ish c.,** Anthemis pyrethrum. **Stink'ing c.,** Anthemis cotula. **C. tea,** infusum anthemidis. **Wild c.,** Anthemis cotula; Matricaria glabrata.

**Chamomil'la.** Chamomile; Anthemis nobilis. **C. fœt'ida,** Anthemis cotula. **C. ma'jor** or **no'bilis,** Anthemis nobilis. **C. nos'tras,** Matricaria chamomilla. **C. officina'lis** or **officina'rum,** Matricaria chamomilla. **C. roma'na,** Anthemis nobilis. **C. silves'tris** or **vulga'ris,** Matricaria chamomilla. **C. spu'ria,** Anthemis cotula. **C. vulga'ris,** matricaria.

**Champagne'.** An effervescent wine containing from 6 to 12 per cent. of alcohol; a diffusible stimulant.

**Cham'pakol.** A camphoraceous substance from the champac tree; Michelia champaca.

**Champignon'** (Fr., mushroom). Chronic suppurative inflammation of the spermatic cord, sometimes following castration in the horse.

**Chance'bone.** Ischium.

**Chancela'gua.** Canchalagua.

**Chancre,** shank'er (Fr., from *cancer*). Sore arising from the direct application of venereal virus; the term now applied to the syphilitic chancre, the initial lesion of syphilis, while the simple, non-infecting sore is called a *chancroid*; or the two are sometimes distinguished as hard and soft chancres, respectively. The following table shows the situation of the enlarged glands accompanying chancres in various locations (Culver and Hayden):

| | |
|---|---|
| Chancres of the genital organs, of the integument in their immediate neighborhood, or of the anus. | Inguinal glands. |
| Chancres of the lips and chin. | Submaxillary glands. |
| Chancres of the tongue. | Subhyoid glands. |
| Chancres of the eyelids. | Preauricular glands. |
| Chancres of the fingers. | Epitrochlear and axillary glands. |
| Chancres of the arm and breast. | Axillary glands. |

Chancres have been classified into two varieties: *hard*—indurated, Hunterian, infecting, ulcus venereum durum or syphiliticum; *soft*—non-indurated, ulcus venereum molle, chancroid. *Mixed chancre* or *Rollet's chancre* is one existing in an individual who has at the same time soft chancre and syphilis. *Phagedenic chancre* or *chancroid* is an erosive, ulcerating, sloughing, non-syphilitic, venereal sore having a tendency to spread widely from the original point of infection. *Serpiginous chancre* is a phagedenic chancroid extending from several points, in the form of portions of circles. *Fungating chancre* is a non-syphilitic chancroid with fungous granulations on the surface. *Concealed* or *masked chancre* is one situated in the urethra or vagina or os uteri. The French use the word chancre, in popular language, for cancerous ulcers, malignant aphthæ of children, etc. The term chancre has also been applied to corroding ulcer, tartar of the teeth, carbuncle of the tongue in animals, and ulcer of the mucous membrane of the nose.

**Chancrelle'.** Chancroid.

**Chancroid,** shang-kroid' (*chancre*+*eidos,* resemblance). Soft, suppurating, non-syphilitic, venereal ulcer. **Diphtherit'ic c.,** a chancroid incrusted with lymph. **Phageden'ic c., Serpig'inous c.,** see under *Chancre*.

**Chancroid'al.** Relating to chancroid. **C. bu'bo,** enlargement, sometimes proceeding to suppuration and the formation of an ulcer, of the lymph glands of the groin, present in about one-third of the cases of chancroidal disease. **C. ul'cer,** chancroid.

**Chan'crous.** Resembling or relating to chancre.

**Change of life.** Period of life when the menses cease. See *Menopause* and *Menses*.

**Chan'nel.** Canal. **Ju'gular c.,** space for jugular vein between levator humeri and sternomaxillaris muscles in lower animals. **Lymph c.,** lymph sinus. **Lymphat'ic** or **plasmat'ic c.,** serous canaliculi, see *Canaliculi*.

**Chan'nelled.** Canaliculate.

**Chantran'sia rivula'ris.** Species of algæ in European rivers; used for asthma and tuberculosis, and applied externally to wounds, fractures, burns, etc.

**Chap.** Superficial abrasion of the skin, the process being called *chapping*; see *Rhagades*. The jaw.

**Chap'pa.** A disease occurring in West Africa, characterized by pains in the muscles and joints, followed by swelling and effusion in the joints and the appearance of subcutaneous nodules in various parts of the body; these nodules are later absorbed or break down and give rise to chronic ulceration; eventually the joints also become disorganized; the knees, elbows, and wrists are the parts chiefly affected.

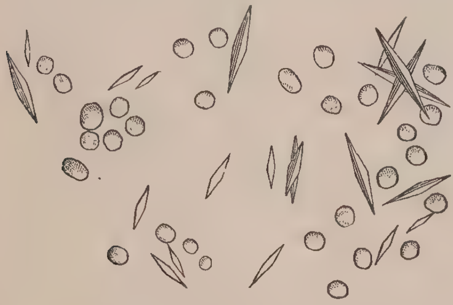
**Char'acter** (mark or impression). In pathology, stamp or appearance; special nature or history of a disease. That which distinguishes one individual from another as regards his understanding and passions.

**Charan'tia.** Momordica elaterium.

**Charbon'** (Fr.). Gangrenous swelling; carbuncle; anthrax.

**Char'coal.** Carbo; carbo ligni. **An'imal c.,** carbo animalis. **Blood c.**, animal charcoal derived from carbonizing dried blood with carbonate of potassium and washing product with water. **Bone c.**, charcoal from bones of animals. **C. poul'tice**, cataplasma carbonis. **C. res'pirator**, see *Respirator*. **Veg'etable** or **Wood c.**, see *Carbo*.

**Charcot's** (shar-koze') **ar'tery.** Artery—the lenticulostriate—considered by Charcot to be a common location of rupture of the vessel and hemorrhage in cerebral apoplexy. **C.'s arthrop'athy**, a trophoneurotic affection of a joint, commonly the knee, accompanied by effusion of fluid, dislocation, and eventually disorganization of the joint structures, accompanying tabes dorsalis, syringomyelia, and other spinal affections. **C.'s cirrho'sis of the liv'er**, hypertrophic cirrhosis of the liver. **C.'s crys'tals**, crystals of phosphoric acid and albuminous matter detected in the sputum of asthmatic patients, in phthisis and fibrinous and acute bronchitis, in the spleen and other parts, and in semen—phosphate of spermin—in leukæmia, etc. **C.'s disease'**, sclerosis of the spinal cord occurring in scattered patches; lateral amyotrophic sclerosis; trophoneurotic arthropathy. **C.'s fe'ver**, form of fever met with in jaundice attending the formation and impaction of gallstones **C.'s gait**, that characteristic of Friedreich's ataxia, dependent on exaggerated concavity of the sole, with hyperextension of the toes. **C.'s joint**, trophoneurotic arthropathy. **C.'s pain**, hysterical ovarian pain. **C.'s poste'rior root-zone**, back and external portion of the spinal cord. **C.'s sens'ory cross'way**, posterior portion of posterior limb of the internal capsule, or fibrous tract between the crura and cortex cerebri. **C.'s sign**, elevation of the eyebrow in facial paralysis; depression of it in facial rigidity. **C.'s syn'drome**, intermittent lameness in arteriosclerosis. **C.'s zones**, zones in hysterical subjects, which when pressed upon produce an hysterical attack.



Charcot's crystals. (Scheube.)

**Charcot-Guinon's' disease'.** Dementia with progressive muscular dystrophy. **C.-Ley'den's crys'tals**, see *Charcot's crystals*. **C.-Marie's' symp'tom**, tremor, general or partial, met with in exophthalmic goitre. **C.-Marie's type**, neural progressive muscular atrophy. **C.-Marie-Tooth's type**, see *Charcot-Marie's type*. **C.-Neu'mann's crys'tals**, see *Charcot's crystals*. **C.-Robin's' crys'tals**, see *Charcot's crystals*. **C.-Vigouroux's' sign**, diminution of the sensitiveness of the skin to the application of galvanism in exophthalmic goitre.

**Chardonin'.** Bitter substance of Carduus benedictus.

**Charistoloch'ia.** Artemisia vulgaris.

**Charlatan**, shar'lat-an (I., *ciarlare*, to talk much). Quack; empiric. Originally, itinerant vender of a medicine, to which he attributed marvellous properties; by extension, any one who endeavors to deceive the public by passing himself off as more skilful than he really is.

**Char'latanism** or **Char'latanry.** Conduct or action of a charlatan; quackery; empiricism.

**Charles's law.** Under constant pressure the volume of a gaseous substance is in direct proportion to the temperature.

**Char'lock.** Sinapis arvensis.

**Charm** (*carmen*, verse, because charms often consisted of verses). Trick; spell; enchantment.

**Charpie**, shar-pe' (Fr.). Lint.

**Charrière's' guillotine'.** An instrument for amputating the tonsil.

**Char'ta** (paper). Paper medicated for therapeutic purposes. A piece of paper used for wrapping up a powder; and, by extension, the powder itself. **C. antiarthrit'ica** or **antirheumat'ica**, gout paper. **C. arsenica'lis**, arsenical cigarrettes. **C. atropisa'ta**, fine paper containing a solution of sulphate of atropia, to place on the eyelid, just as **C. calabar'ica**, paper similarly treated with extract of physostigma, is used. **C. canthar'idis** (Ph. U. S.), cantharides or blistering paper, made of oleum olivæ, terebinthina canadensis, cantharides, and water; intended as a convenient substitute for common blistering plaster. **C. cera'ta**, fine paper coated with a thin layer of wax. **C. epispas'tica** (Ph. Br.), c. cantharidis. **C. potas'sii nitra'tis** (Ph. U. S.), strips of unsized paper dipped into a saturated solution of potassium nitrate and dried; used by burning and inhaling the fumes for the relief of asthma. **C. resino'sa**, c. antirheumatica. **C. sina'pis** (Ph. U. S. and Br.), mustard paper (made of *sinapis nigra* and *liquor guttæ perchæ*, spread on stiff paper, four inches square, and dried). This is intended as a substitute for mustard plaster. Before application to the skin the mustard paper is to be dipped for about fifteen seconds in warm water. **C. vesicato'ria**, see *Sparadrapum vesicatorium*. **C. virgin'ea**, amnion.

**Charta'ceous.** Paper-like.

**Chartreuse', liqueur' de.** Celebrated cordial elixir.

**Chart'ula.** Small paper; paper in which powdered medicine is enclosed.

**Chas'ma.** Yawning; spasm of the respiratory muscle.

**Chassaignac's** (shas-sane-yak's') **ax'illary mus'cle.** Muscular fasciculi passing from the inferior edge of the latissimus dorsi muscle to the inferior edge of the pectoralis minor or fascia of the arm. **C.'s drain'age-tube**, tube of small calibre with numerous perforations near one end, used as a drain for wounds. **C.'s opera'tion**, operation for excision of the shoulder-joint, in which the biceps tendon is not divided. **C.'s tu'bercle**, carotid tubercle on the sixth cervical vertebra.

**Chaste' tree.** Vitex.

**Chaudepisse**, shode-peese' (Fr., *chaud*, hot, *pisse*, urine). Burning on urination in gonorrhœa.

**Chaule.** Maxillary bone.

**Chaulmoo'gra** or **Chaulmu'gra.** Fruit of Gynocardia odorata; chaulmoogra; ord. *Capparideæ*, of India. Bland, fixed oil is obtained by expressing the dried seed, which is used in leprosy. Seeds are given internally, in dose of about ʒss (2.0) in the day, and the eruption is rubbed with the oil. The oil is also used externally in psoriasis, and internally in pulmonary tuberculosis, rheumatism, and syphilis. *Gynocardic acid* is the active principle.

**Chaussier's** (sho-se-aze') **are'ola.** Areola indicating the extent of the inflammation and hardening in malignant pustule. **C.'s line**, rhaphe of corpus callosum. **C.'s tube**, tube resembling a catheter in shape; employed in artificial respiration in children.

**Cha'vel.** Maxillary bone.

**Chav'ica be'tle.** Betel. **C. officina'rum**, Piper officinarum. **C. roxburgh'ii**, Piper longum.

**Chavic'ic acid.** Acid obtained from chavicine.

**Chavicine'.** Alkaloid of pepper.

**Chaw'bone.** Maxillary bone.

**Chaw'stick.** Chewstick.

**Chea'dle-Bar'low's disease'.** Barlow's disease.

**Check lig'aments.** Odontoid ligaments.

**Check'en.** Cheken.

**Check'erberry.** Arbutus uva ursi; Mitchella repens.

**Cheek.** Side of the face. **C.-bone**, malar bone. **C. teeth**, molar teeth.

**Cheese** (A.-Sax., *cyse*). An aliment prepared from caseous and oleaginous parts of milk. The flavor of cheese is owing to an ammoniacal caseate. Cheese itself is not easy of digestion, although it may stimulate the stomach to greater exertion, and thus aid the digestion of other substances. **C. bacil'lus**, Spirillum tyrogenum. **C. poi'son**, tyrotoxicon. **C. ren'net**, Galium verum.

**Cheese'lope.** Rennet.

**Chee'sy.** Having the nature of cheese. **C. degenera'tion**, caseation, see *Degeneration*.

**Cheilal'gia** (*cheilos*, lip, *algos*, pain). Pain in the lip.

**Cheili'tis.** Inflammation of the lip. **C. glandula'ris**, chronic inflammation of the lip originating in the glandular structures.

**Cheilo-** (*cheilos*, lip). In composition, lip.

**Cheiloan'gioscopy** (*cheilos*, lip, *angeion*, blood-vessel, *skopeo*, to examine). Microscopic examination of the circulation of the lips.

**Cheilocace**, ki-lok'a-se (*cheilos*, lip, *kakos*, evil). Disease characterized by swelling, induration, and slight redness of the lips, without inflammation; also the thickened upper lip of scrofulous children.

**Cheilocarcino'ma.** Cancer of the lip.

**Cheilodiæ'resis** (*cheilos*, lip, *diairesis*, partition). Harelip.

**Cheilogenios'chesis.** Fissure of the lip and alveolar process.

**Cheilogram'ma** (*cheilos*, lip, *gramma*, line). Line extending downward from the angle of the mouth, supposed to indicate pulmonary or cardiac disease in children.

**Cheilomala'cia** (*cheilos*, lip, *malakia*, softening). Cancer aquaticus; stomacace.

**Chei'lon.** Inflammatory swelling of the lips; one who has a thick lip.

**Cheilon'cus** (*cheilos*, lip, *onkos*, swelling). Swelling of the lip.

**Cheilophy'ma** (*cheilos*, lip, *phyma*, tumor). Cheiloncus.

**Chei'loplasty** (*cheilos*, lip, *plastikos*, forming). Operation for an artificial lip.

**Cheilorrha'gia** (*cheilos*, lip, *rhegnymi*, to break forth). Hemorrhage of the lips.

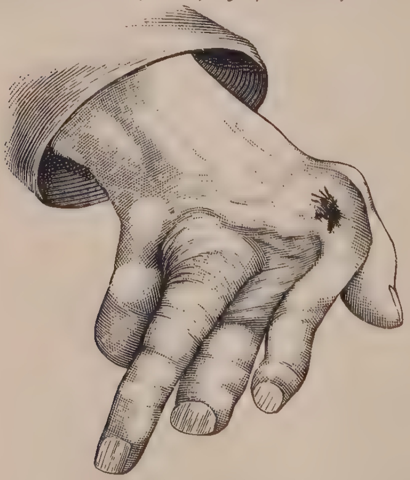
**Cheilos'chisis** (*cheilos*, lip, *schisis*, a splitting). Harelip.

**Cheilosto'matoplasty** (*cheilos*, lip, *stoma*, mouth, *plasso*, to form). Plastic operation for forming the mouth after removal of the lower lip.

**Cheilosynclei'sis** (*cheilos*, labium, *syn*, together, *klino*, to incline). Congenital adhesion of the labia majora; cellular atresia of the vulva.

**Cheimet'lon** (*cheimon*, winter, *tlao*, to suffer). Chilblain.

**Cheirag'ra** (*cheir*, hand, *agra*, seizure). Gout in the hand, especially tophaceous gout with deflexion and torsion of the fingers.



Cheiragra; the "seal-fin" type of gouty deformity of the hand. (Duckworth.)

**Cheiran'thus chei'ri** (*cheir*, hand, *anthos*, flower). Systematic name of the common yellow wallflower; flowers have been esteemed nervine, narcotic, and deobstruent.

**Cheirap'sia** (*cheir*, hand, *hapto*, to touch). The action of rubbing or scratching.

**Cheirarthroc'ace** (*cheir*, hand, *arthron*, joint, *kakos*, evil). Inflammation of the articular surfaces of the wrist.

**Cheiri'ater**, (*cheir*, hand, *iatros*, physician). Surgeon.

**Cheiromeg'aly** (*cheir*, hand, *megas*, large). Increase in the size of the arm, hand, and fingers seen in acromegaly and sometimes in other diseases, as syringomyelia.

**Cheirop'odist** (*cheir*, hand, *pous*, foot). One who treats corns and other minor ills of the feet and hands.

**Cheiropom'pholyx** (*cheir*, hand, *pompholyx*, small vesicle). Bullous eruption on the palms of the hands and soles of the feet.

**Cheiroptery'gium** (*cheir*, hand, *pterygion*, little wing). The typical five-fingered limb.

**Chei'rospasm.** Writers' cramp.

**Cheiroste'mon platanoi'des.** Mexican plant; hand-flower tree.

**Chekanine'.** Volatile alkaloid obtained from the leaves of Myrtus cheken.

**Chek'en, Chek'an.** Leaves and root of Chilian Myrtus chekan; used in catarrh of the mucous membranes; diuretic and expectorant.

**Chela**, ke'lah (*chele*, claw, hoof, etc.). A forked probe used for extracting polypi from the nose. *Chelæ.*

**Che'læ** (pl. of chela). Chaps or cracks on the feet; claws, especially those of the crab; see *Cancrorum chelæ*.

**Chela'pa.** Convolvulus jalapa.

**Che'lene.** Ethyl chloride.

**Chelerythrine'.** Alkaloid of chelidonium, possibly identical with sanguinarine.

**Chelidon**, kel'id-on (*chelidon*, the swallow). Hollow at the bend of the arm.

**Chelidon'ic acid.** An acid derived from Chelidonium majus.

**Chelidonine'.** Alkaloid of Chelidonium majus. **C. phos'phate, C. sul'phate, C. tan'nate**, all these salts are slightly narcotic; used in painful and cancerous conditions of the stomach and bowels; dose, of sulphate, gr. j (0.6); of phosphate and tannate, gr. ij–iij (0.13–02).

**Chelidonin'ic acid.** An acid derived from Chelidonium majus.

**Chelido'nium.** A genus of plants of the order *Papaveraceæ*. **C. diphyl'lum**, Stylophorum diphyllum. **C. hæmato'des**, C. majus. **C. ma'jus**, Chelidonium (Ph. U. S.); celandine; root and recent plant have been considered aperient and diuretic; externally the juice has been employed in cutaneous diseases; dose, gr. x–xv (0.65–1.0); of the juice ♏ v (0.32). **C. mi'nus**, Ranunculus ficaria.

**Chelidoxanthine'.** A bitter, crystalline component of celandine.

**Chelis**, ke'lis. Kelis.

**Cheloid**, ke'loid (*chele*, claw, *eidos*, resemblance). A fibroma of the skin appearing often at the seat of a scar and prone to recur, after excision, in the cicatrix; it sends forth prolongations or spurs from the central mass. Often incorrectly written, keloid. **Ad'dison's c.**, Addison's keloid or kelis. **Al'ibert's c.**, simple cheloid.

**Chelo'ma.** Cheloid.

**Chelo'ne** (Gr., tortoise) Instrument for extending a limb; so called because in its slow motions it resembles a tortoise; see *Testudo*. A plant of the ord. *Scrophulariaceæ*. **C. glab'ra**, common snakehead, turtlehead, turtlebloom, shellflower, balmony; indigenous plant, blossoming from July to November;

leaves are bitter and tonic; without any aromatic smell, and with very little astringency.

**Chelonin′.** Concentrated extract of Chelone glabra; cathartic and anthelmintic.

**Chelo′nion** or **Chelo′nium** (*chelone*, tortoise). Upper, gibbous part of the back, so called from its resembling in shape the shell of the tortoise; scapula.

**Chel′tenham salts.** Sometimes made from the waters; at others factitiously, in imitation of the celebrated purgative Cheltenham waters of England.

**Chelys, ke′lis.** Thorax.

**Chemi′a.** Chemistry.

**Chemi′ater** (*chemia* + *iatros*, physician). Chemical physician.

**Chem′iatry.** Medical practice based on the idea that diseases must be treated on chemical principles.

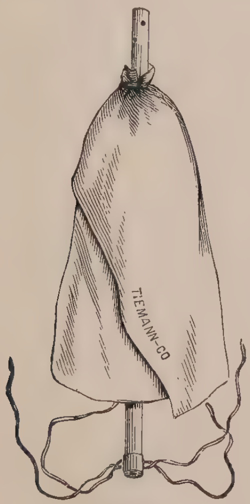
**Chem′ical.** Relating to chemistry. **C. equa′tion,** symbolic statement of a given reaction. **C. food,** see *Ferri phosphas*. **C. med′icine,** medicine formed by the aid of chemistry, in contradistinction to galenical medicine. **C. rays,** rays of light which influence chemical action; actinic rays.

**Chemicocau′tery.** Cauterization electrolysis or chemical dissolution of the tissues.

**Chemicohistol′ogy.** Science in relation to the organic chemistry and morphology of the tissues.

**Chemiotax′is.** Chemotaxis.

**Chemise′.** A piece of muslin attached to a catheter or larger tube, between which and the tube a packing is inserted after the appliance has been placed in situ; employed chiefly after operations in the rectum and perineotomy.



Chemise.

**Chem′ism.** The aggregate of chemical actions appertaining to a function, as chemism of respiration.

**Chem′ist.** One acquainted with chemistry. In Great Britain, and occasionally in the United States, the term is used synonymously with apothecary or druggist.

**Chem′istry.** Branch of the natural sciences whose object is to investigate the nature and properties of bodies, simple and compound, inorganic and organic, and to study the force or power by virtue of which every combination is effected. It investigates the action between the integrant molecules or atoms of bodies. **Analyt′ical c.,** chemistry applied to the analysis of organic or inorganic bodies, especially the former. **Inorgan′ic c.,** chemistry of substances not endowed with properties or characteristics of organized bodies, or, more accurately, of substances not containing carbon. **Organ′ic c.,** chemistry of organized bodies or of substances containing carbon in combination. **Physiolog′ical c.,** chemistry of the vital processes taking place in the bodies of animals and plants; chemistry of nutrition.

**Chemol′ysis** (*chemeia*, chemistry, *lyo*, to loosen). Decomposition of organic bodies by chemical means.

**Chemolyt′ic.** Relating to chemolysis.

**Chemo′sis** (*cheme*, aperture). Name given to ophthalmia when the conjunctiva surrounding the cornea forms a high ring, making the cornea seem, as it were, at the bottom of a well; it is, essentially, œdema of the subconjunctival areolar tissue.

**Chemotac′tic.** Relating to chemotaxis.

**Chemotax′is** (*chemeia*, chemistry, *taxis*, order). The property possessed by certain chemical agents of attracting or repelling living cells; the former is *positive*, the latter is *negative* chemotaxis.

**Chemot′ic.** Relating to chemosis.

**Chemot′ropism** (*chemeia*, chemistry, *trope*, a turning). Influence of chemical agents in the blood on living cells; mutual antagonism of bacteria and leucocytes.

**Chenobos′con.** Potentilla anserina.

**Chenocholal′ic** or **Chenochol′ic acid** (*chen*, goose, *chole*, bile). Acid derived from goose-bile.

**Chenopo′dium** (*chen*, goose, *pous*, foot). A genus of plants of the order *Chenopodiaceæ*, many of them common weeds. **C. al′bum,** lambsquarters; a common garden vegetable in the United States; antiscorbutic. **C. ambrosi′acum,** C. ambrosioides. **C. ambrosioi′des,** Mexican or Spanish tea; an infusion was once drunk as tea; has been given in paralytic cases, and in the United States is used as an anthelmintic indiscriminately with C. anthelminticum; at Rio Janeiro it is called *herva de Santa Maria* in Portugal, *herva formigueira*, and at the Azores, *uzaidella*. **C. anthelmin′ticum,** wormseed, worm goosefoot, wormseed goosefoot, Jerusalem oak of America, goosefoot, stinkweed. This plant grows plentifully in the United States; fruit (chenopodium, Ph. U. S.) is much used as a vermifuge, in doses of gr. xx–xxx (1.3–2.0); the oil *oleum chenopodii* (Ph. U. S.), in doses of 5 to 10 drops (0.32–0.65), is more frequently exhibited. **C. bo′nus Henri′cus,** English mercury, allgood, angular-leaved goosefoot, mercury goosefoot, Good King Henry; leaves are emollient and have been applied to ulcers, etc.; considered refrigerant and eccoprotic. **C. bo′trys,** Jerusalem oak; possesses anthelmintic properties. **C. fœ′tidum,** Chenopodium vulvaria. **C. ol′idum,** C. vulvaria. **C. qui′noa,** quinua; nutritious, wholesome, and agreeable article of food with the Peruvians; the leaves, before the plant attains maturity, are eaten as spinach; the seeds are used as food. **C. sagitta′tum,** C. bonus Henricus. **C. suffructico′sum,** C. ambrosioides. **C. vulva′ria,** stinking orache or goosefoot; the fetid smell has occasioned it to be used as an antispasmodic and nervine.

**Cheoplas′tic** (*cheo*, to pour, *plastikos*, formative). Applied to a process for mounting artificial teeth, consisting in pouring an alloy of metals into a properly prepared matrix.

**Cherchev′sky′s disease′.** Ileus of a nervous character, being rather nervous colic than intussusception or obstruction, met with sometimes in neurasthenia.

**Cher′ry.** See *Prunus cerasus*. **Bird c.,** Prunus padus. **Choke c.,** Prunus virginiana. **Ground c.,** Physalis viscosa. **C.-lau′rel,** Prunus laurocerasus; the distilled leaves yield hydrocyanic acid and a volatile oil; it is used diluted to 0.05 per cent. of hydrocyanic acid; see *Prunus laurocerasus*. **C.-l. wa′ter,** aqua laurocerasi. **Black c.,** Prunus avium. **Red c.,** Prunus cerasus. **Wild c.,** Prunus virginiana. **Wild clus′ter c.,** Prunus padus. **Win′ter c.,** Physalis.

**Cher′vil.** Scandix cerefolium. **Wild c.,** Chærophyllum sylvestre.

**Chest.** Thorax. **Bar′rel-shaped c.,** peculiar formation of chest existing in chronic empyema, in which the chest resembles a barrel in shape, and moves up and down during respiration as if consisting of one piece; lateral expansion is absent. **Flat c.,** phthinoid c. **Fun′nel c.,** deformity of the chest marked by depression of the sternum. **C. meas′urer,** stethometer; one form, described by Dr. Sibson, is used for determining the mobility of the chest; it is a spring, which when applied to the parietes of the chest measures the modifications of its diameters, and indicates by the motion of the index hand on a dial any movement of respiration to the hundredth of an inch. **Phthin′oid c.,** deformity of the chest marked by a flattening of the anterior wall.

**Chest′nut.** Castanea nux. **Horse-c.,** Æsculus hippocastanum. **C. oak,** Quercus prinus; the bark possesses marked astringent properties. **C. tree,** Fagus castanea.

**Chew′ing.** Mastication.

**Chew′stick.** Gonania domingensis; so named because employed as a masticatory and dentrifice.

**Cheyne's nystag′mus.** A form of nystagmus characterized by a marked rhythm.

**Cheyne-Stokes asth′ma** or **respira′tion,** called also **Cheyne-Stokes gasp** or **Tidal-wave breath′ing.** A form of dyspnœa, consisting of inspirations becoming shorter, deeper, and more labored until temporarily suspended, and then resumed with the same succession. An alarming symptom, especially of heart affection, aortic disease, etc., and from cutting off of the supply of arterial blood from the brain or respiratory centre in the medulla.

**Chezanan′ce** (*chezo,* to go to stool, *ananke,* necessity). Ointment composed of honey and alum, and rubbed on the anus to occasion evacuations.

**Chi′a, Chi′a ter′ra** (*Chios,* the island whence obtained). A kind of white earth. **C. seed,** fruit of Salvia chian and S. columbariæ.

**Chiaie** (ke-ah′ye) **teeth.** A blackening of the teeth, with loss of enamel, common among the inhabitants of the Italian littoral, supposed to be due to the use of water impregnated with volcanic gases.

**Chi′an tur′pentine.** Turpentine obtained from bark of Pistacia terebinthinus.

**Chi′asm** (*chiazo,* to mark like the letter X). Crossing or intersection or decussation of parts, as the optic commissure or chiasm of the optic nerves.

**Chiastom′eter** (*chiastos,* crosswise, *metron,* measure). Instrument for measuring the distance between the eyes.

**Chick′en-breast′ed.** Projection of the sternum, caused by forward curvature of the vertebral column or extreme narrowness of the thorax.

**Chick′en chol′era.** Cholera of barnyard fowls, due to the presence of the Bacillus choleræ gallinarum. **C.-fat clot,** yellowish, fatty looking blood clot. **C. grapes,** fruit of Vitis cordifolia. **C. pep′per,** Ranunculus abortivus. **C. tuberculo′sis,** tuberculosis of chickens, ducks, etc., and sometimes of men and cattle, due to the presence of the Bacillus tuberculosis avium. The tubercles are generally found in all the important organs except the lungs, which they rarely invade.

**Chick′enpox.** Varicella.

**Chick′enwort.** Alsine media.

**Chick′weed.** Alsine media; Anagallis arvensis. **Wa′ter c.,** Callitriche verna.

**Chic′ory.** Cichorium intybus; tonic and stimulant; used to adulterate coffee.

**Chiene's lines.** Hypothetical lines for localization of centres in the brain when a surgical operation is about to be performed upon it.

**Chig′ger, Chig′go, Chig′gre,** or **Chig′oe.** See *Chique.*

**Chignon** (shin-yon′) **fun′gus.** Growth of fungous nodules on the hair, probably due to a microorganism.

**Chilal′gia.** Labial neuralgia.

**Chil′bladder.** Chilblain.

**Chil′blain.** Erythematous inflammation of the feet, hands, etc., occasioned by cold. It is very common in youth—not so in the adult or in advanced age—and is apt to degenerate into painful, indolent ulcerations. Chilblains are prevented by accustoming the parts to exposure, and are treated by stimulant, terebinthinate, and balsamic washes, ointments, and liniments. **Ne′crotizing c.,** necrotic granuloma.

**Child.** A son or daughter; infans, puer.

**Child′bearing.** Parturition.

**Child′bed.** Parturition; the state of parturiency. **C. fe′ver,** puerperal fever.

**Child′birth.** Parturition.

**Child′crowing.** Laryngismus stridulus; asthma thymicum.

**Child′hood.** Infancy.

**Child-mur′der.** Infanticide.

**Chil′dren's bane.** Cicuta maculata.

**Chili saltpe′ter.** Sodium nitrate.

**Chiliophyl′lon** (*chilioi,* a thousand, *phyllon,* leaf). Achillea millefolium.

**Chili′tis.** Inflammation of the lip.

**Chill.** Rigor. **Conges′tive c.,** the cold stage of congestive fever. **Dumb c.,** masked malarial fever.

**Chil′li, Chil′lies.** Capsicum.

**Chills and fe′ver.** Intermittent malarial fever.

**Chimaph′ila** or **C. umbella′ta.** (Ph. U. S.) Pipsissewa; the leaves are the parts used in medicine; tonic and diuretic. The fluid extract, *extractum chimaphilæ fluidum,* is given in doses of ʒss–j (2.0–4.0). Pyrola umbellata.

**Chimaphilin′.** Crystalline product of the aqueous distillation of wintergreen.

**Chimet′lum.** Chilblain.

**Chim′ney-sweepers' can′cer.** Scrotal epithelioma. See *Cancer.*

**Chim′neyweed.** Lichen roccella.

**Chin.** Inferior and middle part of the face, below the lower lip. **C.-cough,** pertussis. **C.-jerk,** jaw-jerk.

**Chi′na.** Cinchona. **C. root,** Smilax china.

**Chinamine′.** Alkaloid obtained from the cultivated Indian bark of Cinchona siccarubra.

**Chinaph′thol** or **Chinap′tol.** An intestinal antiseptic, due to its splitting up, in the digestive canal, into naphthol-sulphonic acid and quinine; dose, gr. v–xv (0.32–1.0).

**Chinasep′tol.** Diaphthol; a yellowish, crystalline substance; used in solution as an antiseptic.

**Chincapin′.** Fagus castanea pumila. **C. wa′ter** Nelumbium luteum.

**Chin′che** (Sp., a bedbug). Cimex.

**Chinchona** (chin-ko′nah). Cinchona.

**Chin′-cough.** Pertussis.

**Chinese′ an′ise.** Star anise. **C. cin′namon,** see *Cinnamon.* **C. galls,** see *Rhus semialata.* **C. ring′-worm,** tinea tricophytina of the leg.

**Chi′nic acid.** Quinic acid.

**Chinidin′.** Quinidine.

**Chininom′etry.** See *Quiniometry.*

**Chini′num.** Quinine.

**Chin′ium.** Quinine.

**Chin-jerk.** Jaw-jerk. See *Reflex.*

**Chinoform,** kin′o-form. Compound of formaldehyde with cinchotannic acid. Internally, intestinal antiseptic and astringent; externally, used in burns, piles, pruritus, ozæna, etc.

**Chinoidine′.** Chinoidinum (formerly Ph. U. S.); quinoidine. Substance separated from cinchona, occurring in black or dark brown masses or cylindrical rolls, resembling resin; has been supposed to be a mixture of quinine, cinchonine, and a peculiar resinous matter, but according to Liebig simply the alkaloid quinine in an amorphous state—amorphous quinine—sometimes called precipitated extract of the bark. In the Ph. U. S. it was defined as a mixture of alkaloids, mostly amorphous, obtained as a by-product in the manufacture of the crystalllizable alkaloids from cinchona. A fluorescent substance closely resembling quinine has been found in the animal body, and hence has been called animal chinoidine or quinoidine.

**Chin′ol.** Chinolin hydrochloride.

**Chinolin′.** $C_9H_7N$. A tertiary amine, prepared by the distillation of quinine or cinchonine, and afterward synthetized by other processes; colorless, pungent liquid; antiseptic, antipyretic, and antifermentative. **C. hydrochlo′ride,** antipyretic and analgesic; dose, gr. iij–v (0.2–0.32). **C. rho'donate,** c. sulphocyanate. **C. sal'icylate,** a white powder; antipyretic and antiseptic; dose, gr. vii–xv (0.5–1.0). **C. sulphocy'anate,** a white, soluble powder; antipyretic and antiseptic; dose, gr. vij–xv (0.5–1.0); active microbicide, even in weak solutions. **C. tar'trate,** colorless substance having properties somewhat similar to those of the salicylate, and given in the same doses.

**Chinone** (ki'none). Quinone.

**Chinopyrin'.** Quinopyrin.

**Chinosol** (ki'no-sol). $C_9H_6NKSO_4$. Oxychinolin-sulphonate of potassium; a yellow powder; antipyretic; externally, astringent, styptic, and antiseptic; powerful bactericide, even in minute doses.

**Chinovin'.** $C_{30}H_{38}O_8$. A glucoside derived from cinchona.

**Chin'quapin.** Fagus castanea pumila.

**Chin'whelk.** Sycosis.

**Chionablep'sia** (*chion*, snow, *ablepsia*, blindness). Snow-blindness.

**Chionanthin'.** A principle precipitated from the tincture of the bark of Chionanthus virginica; cathartic, diuretic, and tonic; dose, gr. i–iij (0.065–0.2).

**Chionan'thus virgin'ica.** Fringe tree, snowdrop tree; indigenous; ord. *Oleaceæ*. Infusion of the root has been used as an antiperiodic and tonic.

**Chionotyphlo'sis** (*chion*, snow, *typhlosis*, blindness). Snow-blindness.

**Chion'yphe car'teri** (*chion*, snow, *hyphe*, texture). A name given to the parasite of fungous foot. See *Mycetoma* and *Parasites*.

**Chi'que** (Sp., *chico*, small). Pulex penetrans, tick, chiggre, chigoe, chiggo, chegre, chigoë, sikka of Cayenne, bicho, tunga of Brazil, nigua of Mexico, pique of Paraguay, jigger; small insect of tropical America, which penetrates the epidermis and excites great irritation.

**Chir'ades** or **Cheir'ades.** Chaps of the hand.

**Chiræ'ta.** Gentiana chirata.

**Chirag'ra.** Cheiragra.

**Chirap'sia.** Friction; massage.

**Chirarthri'tis** (*cheir*, hand, *arthron*, joint + *itis*). Inflammation of the joints of the hand.

**Chirarthroc'ace.** Cheirarthrocace.

**Chira'ta** (Ph. U. S. and Br.) or **Chiret'ta.** Swertia or Centiana or Ophelia chirata, an East Indian bitter, similar to gentian in action and uses. Dose, gr. x–xxx (0.65–2.0). The fluid extract, *extractum chiratæ fluidum*, and tincture, *tinctura chiratæ*, are official, and given in doses of ʒss–j (2.0–4.0).

**Chiratin'.** Bitter principle of chirata.

**Chiro-** (*cheir*, hand). In composition, hand. For words not found here, see under *Cheiro-*.

**Chi'romancy** (*cheir*, hand, *manteia*, divination). Palmistry; art of divining by inspection of the hand.

**Chiroma'nia** (*cheir*, hand, *mania*). Masturbation.

**Chiro'nia** (after Chiron, the Centaur, who is said to have discovered its use). Genus of plants, ord. *Gentianaceæ*; also Tamas communis. **C. angula'ris,** American centaury, rose pink, wild succory, bitter-bloom, centry. Every part of this plant is a pure and strong bitter, which property is communicated alike to alcohol and water; tonic and stomachic. **C. centau'rium,** smaller or lesser centaury; European centaury; tops of the lesser centaury are aromatic and tonic, and are sometimes employed as such. **C. chilen'sis,** very bitter plant; indigenous in Chile; possesses the virtues of the *Chironeæ*.

**Chiro'nian ul'cer.** Chironium.

**Chiro'nium.** An ulcer difficult of cure—of a swollen, hard, and callous nature—Chironian ulcer.

**Chirono'mia.** Cheironomia.

**Chiropodal'gia** (*cheir*, hand, *pous*, foot, *algos*, pain). Painful affection of the wrist and ankles. See *Acrodynia*.

**Chirop'odist** (*cheir*, hand, *pous*, foot). One who treats corns and bunions and other minor ailments of the feet or hands.

**Chirop'ody.** Treatment of the minor ailments of the feet and hands.

**Chiropom'pholyx.** Cheiropompholyx.

**Chirorrheu'ma.** Rheumatism of the hands.

**Chirostropho'sis** (*cheir*, hand, *strepho*, to turn). Distortion of the hand.

**Chirothe'ca,** (*cheir*, hand, *theke*, sheath). Bandage for the hand; a kind of bandage in which the fingers and hand are enveloped in spiral turns. When the whole hand and fingers are covered it is called the *double* or *complete*, and when only a finger is covered, the *half* or *incomplete*.

**Chirotrib'ia** (*cheir*, hand, *tribo*, to rub). Friction with the hand.

**Chirur'geon.** Surgeon.

**Chirur'gia** (*cheir*, hand, *ergon*, work). Surgery.

**Chirur'gical.** Surgical.

**Chi'rurgy.** Surgery.

**Chitin,** ki-tin' (*chiton*, a covering). The substance forming the exterior surface of crustaceans and insects.

**Chi'tinous.** Relating to or consisting of chitin. **C. degenera'tion,** amyloid degeneration, so called from chitin, which combined with an albuminous material constitutes the amyloid substance.

**Chi'ton.** Tunic.

**Chitonis'cus** (dim. of chiton). Indusium.

**Chit'tem** or **Chit'tim bark.** Bark of Rhamnus purshianus.

**Chittramoo'lum.** Plumbago zeylanica.

**Chives.** Allium schœnoprasum, a variety of garlic.

**Chloas'ma** (*chloos*, greenish-yellow). Liver-spot, moth-patch; cutaneous affection characterized by one or more broad, irregular-shaped patches, of a yellow or yellowish-brown color, occurring most frequently on the front of the neck, breast, abdomen, and groins. The patches do not generally rise above the surface. There is usually some degree of itching. A cryptogamous growth has been found in certain cases of chloasma, called *Microsporon furfur*. Sulphur internally generally removes the discoloration speedily. Should there be difficulty, the external use of the remedy in baths or fumigations may succeed. A form of chloasma or of pityriasis versicolor, called *mal de los Pintos, pinta, quiricua*, and *tinna*, occurs in tropical America. **C. al'bum,** achroma. **C. cachectico'rum,** a form of chloasma accompanying some cachexia, such as the tuberculous, cancerous, etc. **C. gravida'rum,** chloasma occurring in pregnant women. **C. hepat'icum,** discoloration due to liver disorder. **C. phthisico'rum,** c. occurring in tuberculosis, marked especially on the face. **C. tox'icum,** c. due to the action of some poison circulating in the blood. **C. traumat'icum,** c. from injury or undue pressure. **C. uteri'num,** c. gravidarum. **C. vulga're,** c. hepaticum; also tinea versi-color.

**Chlorace'tic acid.** Caustic, somewhat similar in its action to nitric acid, producing a rapid and deep cauterization; formed by the action of chlorine on acetic acid, the latter losing one equivalent of hydrogen and taking chlorine in its place. The salts are *chlorac'etates*.

**Chloracetiza'tion.** Local anæsthetization by means of acetic acid and chloroform.

**Chloræ'mia** (*chloros*, green, *haima*, blood). Chlorosis.

**Chlo'ral.** $C_2HCl_3O,H_2O$. (Ph. U. S. and Br.) Substance formed by the prolonged action of chlorine on pure anhydrous alcohol; hence its name (from chlorine and alcohol). The impure oily liquid thus obtained is distilled and purified, and anhydrous chloral, an oily, colorless fluid, is the result. This undergoes decomposition by standing, and is converted into a solid. It combines with water to form acicular crystals of the hydrate of chloral, *chloral hydrate* (of the formula above given in the official form of chloral), a soluble substance, decomposed by alkalies, producing chloroform in a pure state. Some of its effects have, indeed, been ascribed to the partial decomposition of chloral into chloroform in the circulation. It is prescribed as an anodyne and soporific, causing extreme muscular relaxation, etc., in doses of gr. v–xxx (0.32–2.0) in solution, in insomnia, delirium tremens, eclampsia, neuralgia, colic, etc. **C. al′coholate,** crystalline product of absolute alcohol and chloral hydrate. **C. ammo′nium,** trichloramidoethylic alcohol, $CCl_3COH,NH_3$; a white, crystalline powder, prepared by passing ammonia gas through a solution of chloral in chloroform; analgesic and hypnotic; dose, gr. xv–xxx (1.0–2.0). **C. antipyrin′,** hypnal; oily substance produced by mixing concentrated solutions of hydrate of chloral and antipyrin; hypnotic, but depressant to the heart's action. **C. butyl′icum,** butyl-chloral hydrate; occurring in white, crystalline scales; dose, gr. v–xxx (0.32–2.0) in fresh solution. **C. caffeine′,** a combination of the two substances; occurring in white scales; used in rheumatism, asthma, and nervous irritability in doses of gr. iij–iv (0.2–0.26). **C. cam′phor,** a liquid composed of equal parts of camphor and chloral; used externally as an analgesic. **C. car′bamide,** occurs in liquid form; used rarely as a hypnotic. **C. car′bol,** a mixture of chloral and carbolic acid; employed as a local analgesic. **C. car′mine,** a staining fluid composed of chloral, alcohol, hydrochloric acid, and carmine. **C. chlo′roform,** a pure preparation of chloroform, obtained from chloral hydrate. **Cro′ton c.,** crotonate of chloral; formed by the action of chlorine on allyl; it is an anæsthetic, producing profound cerebral insensibility and, if continued, loss of function of the spinal cord and paralysis of the medulla oblongata. **C. cyanhy′drate** or **cyanhydrin′,** c. hydrocyanate. **C. form′amide,** chloralamide. **C. hy′drate,** see *Chloral.* **C. hydrocy′anate,** in white prisms; used as a substitute for bitter-almond water and cherry-laurel water. **C. men′thol,** oily liquid resulting from heating together equal parts of chloral and menthol; used in neuralgia of the face, migraine, odontalgia, etc. **C. phe′nol,** c. carbol. **C. thy′mol,** a mixture of equal parts of chloral and thymol. **C. ure′thane,** ural.

**Chloralam′ide.** Chloral formamide or formamidate, a compound of chloral anhydride with formamide; colorless, crystallized substance; used as a hypnotic and analgesic and as a substitute for chloral hydrate; average hypnotic dose for an adult is about 30 grains.

**Chloral′imide.** Derivative of chloral resulting from the action of ammonium acetate on chloral hydrate; in colorless, tasteless, odorless crystals; used at one time as a substitute for chloral hydrate.

**Chloralin′.** A fluid consisting chiefly of mono- and tri-chlorphenol; a local and general disinfectant.

**Chlo′ralism.** Condition produced by the habitual use of chloral, marked by cerebral anæmia, sleeplessness, melancholy, joint pains, feeble heart, slight paralysis, eruptions, etc.

**Chloraliza′tion.** Administration of chloral; effect of chloral.

**Chlo′ralize.** To submit to the effects of chloral.

**Chloraloin′.** Product of the combination of chlorine and aloin.

**Chlo′ralose.** A white, crystalline, very bitter substance, a condensation product of anhydrous chloral and glucose; used as an analgesic and hypnotic in doses of gr. ij–vij (0.13–0.5).

**Chloralox′imes.** Compounds of chloral with oximes, such as chloral camphoroxime, acetoxime, etc., all of which are credited with hypnotic properties.

**Chloralox′ylose.** Compound of chloral and xylose.

**Chloral′um.** Chloral. Also a name given to several preparations employed as disinfectants; they contain varying proportions of chloride of aluminum, hence the name. **C. formamida′tum,** chloralamide.

**Chloram′yl.** A preparation consisting of two drachms of amyl nitrite to one pound of chloroform; used cautiously for inhalation when amyl nitrite is indicated.

**Chloranæ′mia.** Chlorosis.

**Chlo′ranil.** $C_6Cl_4O_2$. A gold-colored substance derived from compounds of benzene by the action of chlorine or potassium chlorate and hydrochloric acid.

**Chloran′thus.** Plant of the order *Chloranthaceæ*. *C. brachystachys* and *C. officinalis* are natives of Japan; used as aromatic stimulants. **C. inconspic′ius,** used in China for scenting tea.

**Chlo′ras.** Chlorate.

**Chloras′ma** (*chloros*, green). Chlorosis.

**Chlo′rate.** Salt of chloric acid with a base.

**Chloraur′ate of ammo′nium.** Ammoniochloride of gold.

**Chlorcam′phor.** Combination of chlorine and camphor.

**Chlorepati′tis** (*chloros*, green, *hepar*, liver). Hepatitis complicated with chlorosis.

**Chlorephidro′sis** (*chloros*, green, *ephidrosis*, perspiration). Green perspiration.

**Chlore′thane.** Ethyl chloride.

**Chloreth′yl.** Ethyl chloride.

**Chlorethyl′idene.** Ethylidene chloride.

**Chlo′retone.** Made by adding caustic potash to chloroform and acetone; a white, camphoraceous compound; anæsthetic, general and local, and hypnotic; dose, gr. ij–x (0.13–0.65).

**Chlore′tum.** Chloride.

**Chlorhy′drate.** Hydrochlorate; muriate.

**Chlorhy′dric.** Hydrochloric.

**Chlori′asis** (*chloros*, green). Chlorosis.

**Chlor′ic.** Relating to or containing chlorine. **C. acid,** $HClO_3$; its salts are chlorates. **C. e′ther,** see *Ether.*

**Chlo′ride.** Compound containing an element or radical in combination with chlorine. **C. of eth′yl,** $C_2H_5Cl$; prepared by treating alcohol with hydrochloric acid; colorless, inflammable, volatile liquid; used as a local anæsthetic in spray form in minor surgery. **C. of gold,** auri chloridum; salt used therapeutically in phthisis and tuberculous diseases; dose, gr. $\frac{1}{160}$ (0.0004). (For chlorides of iron, sodium, potassium, etc., see *Iron, Sodium, Potassium,* etc.)

**Chlo′ridene.** Ethylidene chloride.

**Chlorim′etry** (*chlorine*+*metron*, measure). Measurement of the quantity of chlorine contained in a compound.

**Chlo′rinated.** Containing or combined with chlorine. **C. lime,** calx chlorinata. **C. so′da,** combination of sodium chloride and sodium hypochlorite. *Liquor sodæ chloratæ*, Ph. U. S., is a solution of this preparation in water; it is disinfectant, deodorant, and locally stimulant to offensive and indolent ulcers.

**Chlo′rine** (symbol, Cl) (*chloros*, green). An elementary substance, a greenish-yellow gas, of a strong, suffocating smell and disagreeable taste, incapable of maintaining combustion and respiration, and very soluble in water. One of its characteristics is that of destroying almost immediately all vegetable and animal colors. It is employed in fumigations as a powerful disinfecting agent. A dilute solution, *aqua chlori* (Ph. U. S.), liquor chlori (Ph. Br.), chlorine-water, or solution of chlorine, contains 0.4 per cent. of chlorine; it has been administered internally in diarrhœa and chronic dysentery in doses of ʒss (2.0).

**Chlor′ite.** Compound of chlorous acid with a base.

**Chlormeth′yl.** Methyl chloride.

**Chloroanæ′mia** (*chloros*, green+*anæmia*). Chlorosis.

**Chlorobo′rate of so′dium.** White, crystalline powder, soluble in water; said to possess antiseptic properties.

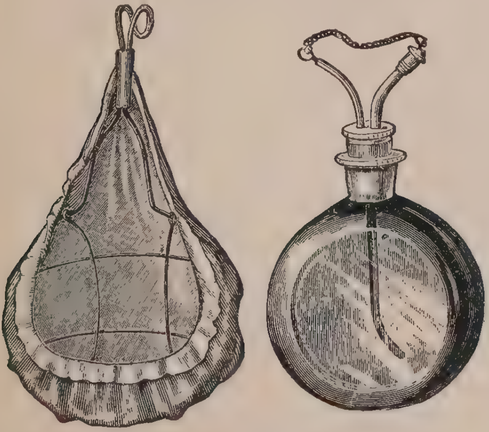
**Chlo′robrom.** A solution of 30 grains each of chloralamide and potassium bromide in one ounce of water, flavored with licorice; hypnotic, and has been employed in seasickness in doses of ℥ss–j (16.0–32.0).

**Chlorocar′bon.** Carbon bichloride.

**Chlorocruorin′.** Greenish substance present in the blood of some annelids, analogous to the hæmoglobin of the blood of mammalia.

**Chlo′rodyne.** A preparation, originally secret, and said to consist of "perchloric acid with a new alkaloid." Later analyses proved it to consist of a variety of substances, and it has been imitated by combining morphine, dilute muriatic and hydrocyanic acids, capsicum, chloroform, ether, cannabis indica, oil of peppermint, etc., in formulæ varying with different chemists. Given as an anodyne chiefly in serous diarrhœas and cramps in the stomach; dose, ♏v–x (0.32–0.65).

**Chlo′roform** (*chlorine + formyl*). $CHCl_3$. Perchloride and terchloride of formyl, chloroformyl, trichloromethane, called also, but not correctly, terchloride of carbon and chloric ether, is a colorless, oleaginous liquid, of a sweetish, ethereal odor, hot, aromatic, and peculiar taste. Specific gravity of *chloroformum venale*, a liquid containing at least 98 per cent. of chloroform, is 1.47. This preparation is used only externally and as a solvent. The Ph. U. S. preparation (formerly called *chloroformum purificatum*), contains 99 per cent. of absolute chloroform and has a sp. gr. of 1.485 to 1.490 at 59° F. The chloroform of the Ph. Br. has a sp. gr. of 1.490 to 1.495, and contains about ½ per cent. by weight of alcohol. Chloroform is used with great advantage in asthma and in diseases in which a grateful soothing agent is required. It is largely prescribed as an anæsthetic agent in painful diseases, and to obtund sensibility in surgical operations and in parturition by inhalation. The usual quantity to be inhaled with this view is from fʒss to fʒij (4.0–8.0). **A′cetone c.**, c. obtained by the decomposition of acetone. **An′schütz's c.**, c. salicylide. **Chlo′ral c.**, c. obtained from chloral. **C. emul′sion**, *emulsum chloroformi* (Ph. U. S.), contains 4 per cent. of chloroform; dose, ʒj–iv (4.0–16.0). **Gel′atinized c.**, mixture of chloroform with white of egg; used as a liniment. **C. inha′ler**, an appliance for exhibiting chloroform by inhalation in order to induce general anæsthesia; Esmarch's inhaler consists of a wire frame covered with thin flannel, upon which chloroform is dropped from a specially constructed bottle. **C. lin′iment**, see *Linimentum chloroformi*. **Meth′yl c.**, $CH_3CCl_3$; used in the production of general anæsthesia as a substitute for chloroform, than which it is believed to be safer. **C. mix′ture**, see *Mistura chloroformi*. **C. sal′icylide**, Anschütz's c., a crystalline substance from which chloroform vapor is liberated on gently heating. **C. wa′ter**, *aqua chloroformi* (Ph. U. S. and Br.), is a saturated solution (1:200) of chloroform in distilled water; dose, ʒj–iv (4.0–16.0).



Esmarch's chloroform inhaler and bottle.

**Chloroformam′ide.** Chloralamide.

**Chlo′roformism.** Addiction to chloroform by inhalation or internally.

**Chloroformiza′tion.** The aggregate of anæsthetic phenomena occasioned by the inhalation of chloroform. To *chloroformize* a patient is to induce such phenomena.

**Chlorofor′mum.** Chloroform.

**Chloroform′yl.** Chloroform.

**Chlorogen′ic acid.** Caffeotannic acid.

**Chlorogenine′.** Alstonine.

**Chlorohæ′matin.** Hydrochloride of hæmatin, a crystalline substance obtained from the blood.

**Chloro-iodolip′ol.** Mixture of creosote and chlorinated phenols; disinfectant and antiseptic; used also for inhalation in bronchial and pulmonary diseases in 5 per cent. solution.

**Chloroleu′cos** (*chloros*, green, *leukos*, white). Greenish-white.

**Chlorolin′.** Solution of a chlorphenol; disinfectant and antiseptic.

**Chloro′ma** (*chloros*, green). Chlorosarcoma; a peculiar form of tumor, containing a yellow-green substance, which takes the place, at times, of muscles and periosteum. A form of this disease, known as *Balfour's disease*, is a grave affection of childhood, showing on examination after death fibrosarcomas, particularly periosteal deposits, of that character.

**Chlorometh′yl** or **Chlormeth′yl.** Methylene bichloride.

**Chloroper′cha** (*chloros*, green). Gutta-percha dissolved in chloroform.

**Chlor′ophane.** See *Chromophane.*

**Chlorophe′nol.** Trichlorphenol; omol; a derivative of phenol, three atoms of chlorine replacing those of hydrogen. **C. sal′icylate**, chlorsalol.

**Chlorophthis′is** (*chloros*, green, *phthisis*). Phthisis accompanied with chlorosis.

**Chlo′rophyl** (*chloros*, green, *phyllon*, leaf). Green coloring-matter of leaves.

**Chloro′pia** or **Chlorop′sia** (*chloros*, green, *opsis*, vision). State of vision in which everything seen seems to be of a green color.

**Chloroplas′tid.** A chlorophyl body.

**Chloroquin′ones.** Compounds of chlorine with quinone.

**Chlorosarco′ma.** Chloroma.

**Chloro′sis** (*chloros*, green). Disease which affects adolescent girls, more particularly those who have not menstruated. It is characterized by a pale complexion, languor, listlessness, disordered appetite and digestion, palpitation, etc. It generally disappears on the occurrence of the menstrual flux; but sometimes it is long before this is established, and at times the catamenia are in larger quantity than usual. The blood of chlorotics is generally thin, light colored, and deficient in red corpuscles and in iron, and the clot is in less proportion to the serum than in health. On auscultation a bellows sound is almost invariably detected over the heart, and a continuous, blowing sound in the larger arteries (especially the carotids and subclavians), reinforced by each systole of the ventricle, and resembling the buzzing of a humming-top, the cooing of doves, the whistling of air through a keyhole, etc. Very similar sounds are heard in the arteries after copious hemorrhage; they seem, therefore, to indicate enfeebled circulation. Tonics, especially iron, are usually required in the treatment, the disease most commonly occurring in those in whom there is considerable torpor of the system. **C. Æthio′pum**, chlorosis with an irresistible desire to eat dirt, see *Chthonophagia.* **C. amato′ria**, hectic fever. **Egyp′tian c.**, ankylostomiasis; a disease first studied carefully in Egypt and Italy, characterized by bloody stools, slowly progressive emaciation, debility, and anæmia, caused by the presence of an entozoon, *Ankylostoma duodenale*, in the bowels. **C. gigante′a**, see *Polysarcia.* **C. trop′ica**, anæmia tropica.

**Chloros′ma** (from *chloros*, green). Chlorosis.

**Chlorot′ic.** Affected with chlorosis or pertaining to chlorosis; as a chlorotic girl, chlorotic murmur (see under *Chlorosis*), chlorotic symptoms, etc.

**Chlo′rous.** Chlorine in combination with oxygen, the latter being in a small quantity, as *chlorous acid*, $HClO_2$, the salts of which are chlorites.

**Chloroxan'thous** (*chloros*, green, *xanthos*, yellow). Greenish-yellow.

**Chlor'ozone.** A combination of chlorine and caustic soda; employed as a disinfectant.

**Chlorphe'nol.** $C_6H_4Cl,OH$. Monochlorphenol; a mixture of chlorinated phenol, alcohol, menthol, and eugenol. Volatile liquid; antipyretic; has been employed in the treatment of tuberculosis in the shape of inhalations; possesses antiseptic properties; applied locally to wounds and ulcers. **C. sal'icylate,** chlorsalol.

**Chlorsal'ol.** Chlorphenol salicylate; salicylic chlorphenol ester; employed as a substitute for salol; it is produced by mixing orthochlorphenol and parachlorphenol, and acting upon the mixture with phosphorus pentachloride.

**Chlo'rum.** Chlorine.

**Chlor'uret.** Chloride.

**Chlor'yl.** A mixture of methyl chloride with ethyl chloride; employed as an anæsthetic.

**Choa'na** (*choane*, funnel). Infundibulum; pelvis; in the plural, *choanæ*, denotes the posterior nares. **C. cer'ebri**, infundibulum of the brain.

**Choanoid'.** Funnel-shaped; relating to a muscle found in the eyes of certain animals.

**Choanorrha'gia** (*choane*, funnel, *rhegnymi*, to break forth). Epistaxis.

**Choc'olate.** An alimentary paste prepared from the kernels of Theobroma cacao with sugar, and often aromatics. See *Cacao*. **C. root,** Geum rivale; G. virginianum.

**Chœradenterophthi'sis** (*choiros*, swine, *aden*, gland, *enteron*, intestine, *phthisis*, wasting). Intestinal phthisis; tabes mesenterica.

**Chœ'ras** (*choiros*, swine). Scrofula.

**Chœrocnes'mus** (*choiros*, vulva, *knesme*, itching). Itching of the vulva.

**Chœ'rus** (Gr., *choiros*). Vulva.

**Choke cher'ry.** Prunus virginiana. **C.-damp,** carbonic acid gas.

**Choked disk.** Engorged condition of the optic disk, symptomatic of intracranial affection; inflammation of the papilla of the eye, indicating inflammation of the optic nerve (optic neuritis). Papillitis is therefore a better term than choked disk.

**Chokes.** Throat.

**Cho'la** (Gr., *chole*). Bile.

**Cholæ'mia, Cholhæ'mia,** or **Cholihæ'mia** (*chole*, bile, *haima*, blood). Morbid state, in which bile exists in the blood; jaundice.

**Chol'agogue** (*chole*, bile, *ago*, to expel). Causing an increased discharge of bile into the intestine, or a remedy possessing this property. The most important cholagogues are ox-gall, and the salicylates. The salines and the salts of mercury cause an increased flow of bile as a direct result of their purgative action.

**Chol'alate.** Salt of cholalic acid.

**Cholal'ic acid.** Cholic acid.

**Cholangioï'tis, Cholangei'tis,** or **Cholangi'tis** (*chole*, bile, *angeion*, vessel + *itis*). Inflammation of the bile ducts.

**Cholangios'tomy** (*chole*, bile, *angeion*, vessel, *stoma*, mouth). The establishment of communication by an operation through the liver substance to reach gallstones in the ducts of the liver or in a very contracted gall-bladder.

**Cholas'ma.** Cholosis.

**Cho'late.** A salt of cholic acid.

**Chole.** Bile.

**Chol'eate.** A salt of choleic or cholic acid.

**Cholec'chysis** (*chole*, bile, *ekchysis*, effusion). Effusion of bile.

**Cholechlorin'** (*chole*, bile, *chloros*, green). Green coloring-matter of the bile; biliverdin.

**Chol'ecrome.** Cholocrome.

**Cholecyanin'.** Bilicyanin.

**Cho'lecyst** (*chole*, bile, *kystis*, bladder). Gall-bladder.

**Cholecystal'gia.** Pain in the gall-bladder; biliary colic.

**Cholecystecta'sia** (*cholekystis*, gall-bladder, *ektasis*, dilatation). Dilatation of the gall-bladder.

**Cholecystec'tomy** (*chole*, bile, *kystis*, bladder, *ektome*, amputation). Excision of the gall-bladder.

**Cholecystend'ysis** (*chole*, bile, *kystis*, bladder, *endysis*, entrance). Operation on the gall-bladder for the removal of calculi, etc.

**Cholecystent'eroanastomo'sis.** Cholecystenterostomy.

**Cholecystenteros'tomy** (*chole*, bile, *kystis*, bladder, *enteron*, intestine, *stoma*, opening). Operation for making a communication between the gall-bladder and bowel, for the purpose of relieving obstruction in the common bile-duct or for removal of the gall-bladder.

**Cholecysteurys'ma** (*chole*, bile, *kystis*, bladder, *eurysma*, dilatation). Dilatation of the gall-bladder.

**Cholecys'tis** (*chole*, bile, *kystis*, bladder). Gall-bladder.

**Cholecysti'tis.** Inflammation of the gall-bladder. **C. calculo'sa,** inflammation of the gall-bladder caused by the presence of calculi.

**Cholecystocolos'tomy** (*cholekystis*, gall-bladder, *colon* + *stoma*, mouth). The establishment of a fistulous communication between the gall-bladder and the colon.

**Cholecystocolot'omy** (*chole*, bile, *kystis*, bladder, *colon* + *tome*, incision). Operation involving the gall-bladder and colon when these parts are mutually affected with disease.

**Cholecystoduodenos'tomy.** Establishment of a fistulous communication between the gall-bladder and the duodenum.

**Cholecys'tointes'tinal.** Relating to the gall-bladder and the intestine.

**Cholecystolith'otripsy** (*chole*, bile, *kystis*, bladder, *lithos*, stone, *tribo*, to crush). The operation of crushing gallstones in the bile-duct or the gall-bladder.

**Cholecyston'cus** (*chole*, bile, *kystis*, bladder, *onkos*, tumor). Hypertrophy of the gall-bladder.

**Cholecystor'rhaphy** (*cholekystis*, gall-bladder, *rhaphe*, suture). Cholecystotomy combined with suture of the gall-bladder to the margins of the wound.

**Cholecystos'tomy** (*chole*, bile, *kystis*, bladder, *stoma*, mouth). Operation for the production of an artificial opening into the gall-bladder.

**Cholecystot'omy** (*chole*, bile, *kystis*, bladder, *tome*, incision). Opening the gall-bladder by an abdominal operation, as for the removal of gallstone.

**Chol'edoch** or **Choled'ochus** (*chole*, bile, *dochos*, containing). Conveying bile. The *ductus choledochus*, or choledoch duct, is the duct formed by the union of the hepatic and cystic ducts, which pours the hepatic and cystic bile into the duodenum.

**Choledochi'tis.** Inflammation of the choledoch duct.

**Choled'ochoduodenos'tomy.** Operation for artificial communication between the common bile-duct and the duodenum.

**Choled'ochoenteros'tomy.** Surgical operation for the production of an artificial communication between the choledoch ducts and the small intestine.

**Choled'ocholithot'omy.** Operation on the common choledoch duct for removal of gallstones.

**Choled'ocholith'otripsy.** Operation of crushing a calculus in the choledoch duct.

**Choledochos'tomy.** The establishment of a fistulous communication with the choledoch duct by incision through the abdominal wall.

**Choledochot'omy.** Operation on the choledoch duct.

**Choled'ochous.** Choledoch.

**Choledog'raphy** (*chole*, bile, *grapho*, to describe). Description of what relates to the bile and biliary organs.

**Choledol'ogy** (*chole*, bile, *logos*, discourse). Science of the bile and biliary organs.

**Cholehæ'mia** (*chole*, bile, *haima*, blood). Icterus.

**Cholei'a** (*cholos*, lame). Claudication.

**Chole'ic.** Relating to bile. **C. acid,** taurocholic acid.

**Cholein'.** A fatty principle of bile.

**Chol'elith** (*chole,* bile, *lithos,* stone). Gallstone.

**Cholelith'ia** or **Cholelithi'asis** (*chole,* bile, *lithos,* stone). Aggregate of phenomena caused by biliary calculi.

**Cholelithot'omy** (*chole,* bile, *lithos,* stone, *tome,* incision). Operation for the removal of gallstones.

**Cholelith'otripsy** or **Cholelithot'rity** (*chole,* bile, *lithos,* stone, *tribo,* to crush). Operation of crushing a gallstone in situ.

**Choleme'sia** or **Cholem'esis** (*chole,* bile, *emesis,* vomiting). Vomiting of bile.

**Cholen'chysis.** Cholecchysis.

**Cholepoie'sis** or **Cholopoie'sis** (*chole,* bile, *poiesis,* fabrication). Secretion of bile.

**Cholepoiet'ic** or **Cholopoiet'ic** (*chole,* bile, *poietikos,* producing). Bile secreting.

**Cholep'yra** (*chole,* bile, *pyr,* fever). Bilious fever.

**Cholepyrrhin'** or **Cholepyrrin'** (*chole,* bile, *pyrrhos,* of a golden color). See *Cholochrome.*

**Chol'er.** Bile. Anger was supposed to be produced by a superabundance of bile; hence the term *choler* for anger.

**Chol'era** (*chole,* bile). An acute, infectious disease, of very rapid course, endemic in certain parts of India and making occasional epidemic incursions into other countries. In a typical case there are three stages: first, of diarrhœa; second, of rice-water evacuations, vomiting, cramps, coldness and lividity of the skin, etc., with a peculiar pinched expression of the face—*facies cholerica*—and collapse; and a third stage, in favorable cases, of reaction or consecutive fever. In temperate climates common cholera is not usually a disease of much consequence. It requires that the stomach and bowels should be cleared, and afterward the irritation be allayed by full doses of opium. *Sporadic* or *bilious cholera* is a less severe form of the disease, characterized by anxiety, gripings, spasms in the legs and arms, and by vomiting and purging (generally bilious). Vomiting and purging are, indeed, the essential symptoms. The disease is most common in hot climates and in temperate climates during summer. In *Asiatic cholera* the treatment must vary with the stage of the disease, the efforts of the physician during that of collapse being directed to the restoration of animal heat by external applications, etc. Proper sanitary conditions and pure drinking water, as has been demonstrated in the epidemic in Hamburg in 1892, which was due to obtaining polluted drinking water from the Elbe, may prevent outbreaks of the disease. Robert Koch, in an investigation of cholera discharges, has shown the presence of a special bacillus, to which the causation of the disease is ascribed. From its shape it is called the *Comma bacillus;* see *Spirillum choleræ asiaticæ.* The following are some of the names which have been given to this disease: *Spasmodic, Asiatic, malignant, Indian, epidemic, pestilential, serous, algid, convulsive, nervous, Eastern* or *Oriental cholera, asphyxia pestilenta, pestilential asphyxia, choleric pestilence, cholera orientalis, cholera indica, cholera epidemica, cholera asphyxia, cholera pestifera, cholera serosa, cholera spastica, typhoid fever of India, rice disease* (because supposed by some to be caused by damaged rice). **Al'gid c.,** Asiatic c. **Asiat'ic c.,** or **C. asiat'ica,** see *Cholera.* **Bil'ious c.,** see *Cholera.* **C. blue** colored substance observed in cholera culture in meat extract containing peptone and gelatin. **C. cells,** c. fungi. **Chick'en c.,** epidemic disease of fowls, with inflammation and ulceration of the organs of digestion, etc.; see *Bacillus choleræ gallinarum.* **C. cor'puscles,** c. fungi. **Eng'lish** or **Europe'an c.,** sporadic cholera, see *Cholera.* **C. fun'gi,** c. cells, c. corpuscles, comma bacilli. **C. hand,** the appearance presented by the cyanotic hand of a patient in the collapse of cholera. **Hog c.,** a very fatal and epidemic disease occurring among hogs, of a contagious nature, characterized by skin eruptions, coughing, and dyspnœa. It runs its course very fast, and is accompanied with rapid emaciation, debility, and frequently paralysis of the extremities. **In'dian c.** or **C. in'dica,** see *Cholera.* **C. infan'tum,** choleraic fever of infants, cholera of infants; a disease occurring during the hot weather, hence called the "summer complaint." Chief symptoms are vomiting, purging of green or yellow matter, mucus, or blood, attended with pain or uneasiness, and swelling of the abdomen, with some pyrexia, generally. The heat of the weather seems to be the predisposing cause. A microorganism has been discovered in the stools which seems to be identical with Shiga's dysentery bacillus. It is a very fatal disease in towns, differing little, if at all, from what is vulgarly called the "watery gripes" in England. **Malig'nant c.,** Asiatic c. **C. mor'bus,** a popular term for severe acute gastroenteritis accompanied by vomiting, purging and colic; it occurs in the hot months, and is believed to be frequently a manifestation of food poisoning. **C. nos'tras,** bilious or sporadic cholera. **Orien'tal c.,** Asiatic c. **C. pep'tone,** a toxalbumin formed in cultures of the cholera spirillum **C. pestif'era** or **pestilen'tial c.,** Asiatic c. **C. pois'on,** see *Poison.* **C. reac'tion,** the color reaction of mineral acids upon the cholera bacillus. **C. red,** coloration produced on the addition of nitric acid to filtered cholera stools or rice-water stools. **Se'rous c.,** Asiatic c. **C. sic'ca,** pneumatosis of the digestive passages, in which there is a copious discharge of gas upward and downward. **Spasmod'ic c.** or **C. spas'tica,** Asiatic c. **Sporad'ic c.,** bilious c., see *Cholera.* **Sum'mer c.** cholera infantum or cholera morbus. **C. toxoglobulin',** a toxalbumin formed in cultures of the cholera spirillum. **Ty'phoid c.,** term applied to the secondary symptoms that often follow the cholera attack proper, as excessive adynamia, etc. **C. vulga'ris,** cholera morbus.

**Choleragen'ic** (*cholera*+*gennao,* to produce). Cholera breeding.

**Cholera'ic.** Relating to cholera. **C. face,** the sharp, pinched, and peculiarly altered face in spasmodic cholera. **C. fe'ver of in'fants,** cholera infantum. **C. tem'perament,** bilious temperament. **C. voice,** cholerophonia.

**Chol'eric.** Belonging to bile. Irascible. Choleraic.

**Choler'iform.** Choleroid.

**Cholerine'.** Choleraic diarrhœa, a diarrhœa prevailing during cholera epidemics; first stage of epidemic cholera; precursory symptoms of cholera; mild form of cholera.

**Cholerodiarrhœ'a.** Diarrhœa of cholera; mild attack of that disease.

**Chol'eroid** (*cholera*+*eidos,* resemblance). Resembling cholera, as a choleroid diarrhœa.

**Choleroma'nia.** Morbid dread of cholera to such an extent sometimes that the disease is actually simulated in the individual.

**Cholerophо'bia** (*cholera*+*phobos,* dread). Choleromania.

**Cholerophо'nia** (*cholera*+*phone,* voice). A weak, husky voice in one gravely attacked by cholera and in the stage of collapse.

**Choleroty'phus.** Typhoid or malignant form of cholera.

**Cholerrha'gia** (*chole,* bile, *rhegnymi,* to break forth). Active discharge of bile; cholera.

**Cholerrhœ'a** (*chole,* bile, *rheo,* to flow). Flow of bile; bilious diarrhœa. **C. lymphat'ica,** cholera.

**Cholerythrin'** (*chole,* bile, *erythros,* red). Bilirubin. See *Cholochrome.*

**Cholestearin'.** Cholesterin.

**Cholestearino'ma** (*chole,* bile, *stear,* suet). Cholesteatoma.

**Cholesteatin'.** Cholesterin.

**Cholesteato'ma** (*chole,* bile, *stear,* suet). Pearl tumor; encysted tumor, presenting upon the anterior of the cyst several superimposed layers of cholesterin, which glisten like pearl; hence it was named by Cruveilhier *laminated nacreous fatty tumor,* and it is sometimes termed *adipoceriform* tumor.

**Cholesteræ′mia** (*cholesterin* + *haima*, blood). A morbid condition in which an accumulation of retained cholesterin is supposed to exist in the blood.

**Cholesterin′.** $C_{26}H_{43}OH$. Cholesterine, cholestearin, cholesteatin, adipocere, cholin. It is an alcohol, *cholesteric alcohol;* an inodorous, insipid substance, in white, shining scales; fusible, and crystallizing, on cooling, in radiated fibres. It forms the crystalline part of certain biliary calculi; is found in the blood, the brain and nerves, the liver and spleen, the meconium, the crystalline lens, and in various tumors, deposits, and degenerations, as well as in the seeds of many plants, olive oil, etc. It is an ingredient of bile. See *Adipocere.* **C. degenera′tion** or **disease′**, see *Lardaceous.*

**Choles′teryl.** $C_{26}H_{43}$. Radical of cholesterin.

**Choletelin′.** Derivative of ordinary bile pigment by oxidation; found in the urine of patients suffering from affections of the liver.

**Cholether′apy** (*chole*, bile, *therapeuo*, to cure). The treatment of a disease in which there is a deficiency of bile by the administration of bile or ox-gall.

**Choleuria**, ko-le-u′ri-a. Choluria; bile in the urine.

**Choleverdin′** (*chole*, bile, *viridis*, green). Product of the oxidation of biliverdin.

**Cholhæ′mia.** Cholæmia.

**Cholic** (kol′ik) **acid.** A biliary acid liberated by the decomposition of glycocholic or taurocholic acid.

**Cholin′.** $C_5H_{15}NO_2$. Cholesterin. Also a ptomain or leucomain found in bile and elsewhere, with an action similar to, but more virulent than neurin. Obtained by the action of hydrochloric acid on hog bile, but may be prepared synthetically. It is also found in fatty seeds and nuts, yolk of egg, in the blood, lungs, heart, eye, placenta, etc. It is derived from the decomposition of lecithin. The four ptomains cholin, neurin, betain, and muscarin form the cholin group. See *Ptomains* (table).

**Cholochloin′** (*chole*, bile, *chloos*, greenish-yellow). See *Cholochrome.*

**Cholochlorin′** (*chole*, bile, *chloros*, green). See *Cholocrome.*

**Chol′ochrome** (*chole*, bile, *chroma*, color). Cholecrome. Term proposed by Thudicum to designate the coloring-matter of bile in all its varieties. *Cholophæin, cholepyrrhin, biliphæin,* and *bilifulvin* are synonymous terms for the brown coloring-matter, and *cholochlorin, cholochloin,* and *biliverdin* for the green coloring-matter.

**Cholocyanin′.** Bilicyanin.

**Cho′locyst, Cholocysti′tis, Cholodochi′tis,** etc. See *Cholecyst,* etc.

**Chol′oid** (*chole*, bile, *eidos*, resemblance). Having the appearance of bile.

**Choloidin′ic acid.** $C_{24}H_{38}O_4$. An anhydride of cholalic acid.

**Cholophæin′.** $C_{16}H_{18}N_2O_4$. See *Cholochrome.*

**Cholo′sis** (*cholos*, lame). Claudication; Hippocrates employs this word particularly for a lameness of the hand which renders a person onehanded. Also icterus; bilious dyscrasy. **C. america′na,** yellow fever.

**Cholu′ria** (*chole*, bile, *ouron*, urine). Presence of bile in the urine; greenish appearance of the urine suggestive of bile.

**Chon′dral.** Relating to cartilage.

**Chondral′gia** (*chondros*, cartilage, *algos*, pain). Pain in a cartilage.

**Chondrarthrocace**, kon-drar-throk′a-se (*chondros*, cartilage, *arthron*, joint, *kakos*, evil). Disease affecting the articular cartilage.

**Chondrec′tomy** (*chondros*, cartilage, *ektome*, excision). Excision of a cartilage or a part of it.

**Chondrexarthro′ma** or **Chondrexarthro′sis** (*chondros*, cartilage, *exarthreo*, to dislocate). Displacement of a cartilage.

**Chon′dric.** Cartilaginous.

**Chondrifica′tion** (*chondros*, cartilage, *facio*, to make). Formation of or conversion into cartilage.

**Chon′drigen** (*chondros*, cartilage, *gennao*, to form). A substance contained in cartilage which on boiling yields chondrin.

**Chondriglu′cose.** A sugar derived from chondrin.

**Chondrin′** (*chondros*, cartilage). A gelatinous substance, obtained by boiling the cornea, the permanent cartilages, and the bones before they are ossified.

**Chondrin′ogen.** Chondrigen.

**Chondri′tis.** Inflammation of cartilage.

**Chondro-** (*chondros*, cartilage). In composition, cartilage.

**Chon′droblast** (*chondros*, cartilege, *blastos*, germ). Cell forming cartilage.

**Chondrocatag′ma** (*chondros*, cartilege, *katagma*, fracture). Fracture of a cartilage.

**Chon′drocele.** Sarcocele whose contents resemble cartilage.

**Chondroc′lasis** (*klasis*, fracture). Fracture of a cartilage.

**Chon′droclasts** (*chondros*, cartilage, *klao*, to prune). Cells which are believed to exert an influence on the absorption of cartilage.

**Chondrocoracoide′us.** Variation of the pectoralis major muscle.

**Chondrocos′tal** (*chondros*, cartilage, *costa*, rib). Having relation to the ribs and their cartilages, as *chondrocostal articulation,* etc.

**Chon′drocra′nium** (*chondros*, cartilage, *kranion*, skull). Embryonic form of the cranium of the higher vertebrates.

**Chondroden′dron tomento′sum.** Climbing vine, ord. *Menispermaceæ,* inhabiting Peru and Brazil; root furnishes pareira.

**Chondrodes′ma** (*chondros*, cartilage, *desma*, ligament). Cartilaginous ligament.

**Chondrodial′ysis** (*chondros*, cartilage, *dialysis*, dissolution). Decomposition or dissolution of cartilage.

**Chondrodyn′ia** (*chondros*, cartilage, *odyne*, pain). Pain in a cartilage.

**Chondrodystro′phia.** Achondroplasia.

**Chondrodys′trophy.** Chondrodystrophia.

**Chon′dro-epitrochlear′is.** Chondrocoracoideus.

**Chondrofibro′ma.** Chondroma with elements of fibroma.

**Chon′drogen.** Chondrigen.

**Chondrogen′esis** (*chondros*, cartilage, *genesis*, formation). Formation of cartilage; morbid conversion of parts into cartilage.

**Chondroglos′sus** (*chondros*, cartilage, *glossa*, tongue). Fasciculus of fleshy fibres passing from the lesser cornu of the os hyoides to the tongue; forms part of the hyoglossus muscle.

**Chondrog′raphy** (*chondros*, cartilage, *graphe*, a description). Description of cartilages.

**Chon′droid** (*chondros*, cartilage, *eidos*, resemblance). Cartilaginiform; resembling cartilage.

**Chondroit′ic acid.** $C_{18}H_{27}NSO_7$. Chondroitin-sulphuric acid; the result of the disintegration of chondromucoid, and occurring also in the matrix of cartilage.

**Chondroitin′.** $C_{18}H_{27}NO_{14}$. Gummy acid obtained by decomposition of chondroitic or chondroitin-sulphuric acid. **C.-sulphu′ric acid,** see *Chondroitic acid* and *Chondroitin.*

**Chon′drolith** (*chondros*, cartilage, *lithos*, stone). Cartilage in a state of concretion.

**Chondrol′ogy** (*chondros*, cartilage, *logos*, discourse). Treatise on or description of cartilages.

**Chondro′ma.** Benign osteosarcoma; osteochondrophyte; cartilaginous growth, not a simple overgrowth or hyperplasia of pre-existing cartilage. Chondroma rarely arises from permanent cartilage; it usually proceeds from bones. It involves especially the extremities of the long bones and the bones of the hands and feet. The term, as well as *enchondroma,* is also applied to growths which, histologically, resemble cartilage. To a pouched cartilaginous growth the term *cylindroma* has been given. The latter term has also been applied to a sarcomatous tumor met with in the eyelids, orbit, etc.

*Ecchondroses* are simple outgrowths from normal cartilage. Cartilaginous tumors may also be developed in soft parts entirely distinct from the bones or cartilages, as in the testicles, lung, etc., and especially in the vicinity of the parotid gland. **Os′teoid c.**, periosteoma.

**Chondro′mala′cia** or **Chondromalaco′sis** (*chondros*, cartilage, *malakia*, softening). Softening of cartilage.

**Chondromatous.** Relating to a cartilaginous growth, or chondroma.

**Chondromu′coid.** Proteid united with chondroitic acid, obtained from cartilage; mucin from chondrin.

**Chondromy′ces** (*chondros*, *mykes*, fungus). Fungoid degeneration of cartilage.

**Chondromyo′ma.** A mixed chondroma and myoma; a tumor with both cartilaginous and muscular elements.

**Chondromyxo′ma.** Mucous enchondroma.

**Chondropharynge′us.** Fibres of the muscular coat of the pharynx, arising from the lesser cornu of the os hyoides and forming part of the constrictor medius.

**Chondrophy′ma** (*chondros*, cartilage, *phyma*, tumor). Cartilaginous tumor; tumor involving cartilage.

**Chon′drophyte** (*chondros*, cartilage, *phyton*, plant). Cartilaginous growth of a fungoid character.

**Chon′droplast** (*chondros*, cartilage, *plasso*, to form). Cartilage cell See *Osteoplast*.

**Chondroporo′sis** (*chondros*, cartilage, *poros*, pore). The formation of open spaces in cartilage, constituting the first stage of cartilaginous ossification.

**Chondrosarco′ma.** Cartilaginous sarcoma.

**Chondroscap′ular mus′cle.** Muscular band occasionally found extending from the first costal cartilage to the superior margin of the scapula.

**Chondrosidin′.** A crystalline substance derived from chondrosin.

**Chondrosin′.** $C_{12}H_{21}NO_{11}$. A gummy acid resulting from the hydration of chondroitin.

**Chondro′sis.** Morbid formation or condition of cartilage.

**Chondroster′nal** (*chondros*, cartilage, *sternon*, the breast-bone). Having relation to the cartilages of the ribs and the sternum, as *chondrosternal ligament*.

**Chondrosyndes′mus** (*chondros*, cartilage, *syndesmos*, ligament). Union of bones by means of fibrocartilage; synchondrosis.

**Chondrot′omy** (*chondros*, cartilage, *tome*, incision). Section or division of cartilages, the instrument used being a *chondrotome*.

**Chondroxi′phoid** (*chondros*, cartilage, *xiphoid*, the cartilage so called). Having relation to the xiphoid cartilage, as *chondroxiphoid ligament*.

**Chon′drus.** (Ph. U. S.) Irish moss or carragheen, the sea algæ, Chondrus crispus and Gigartina mamillosa; demulcent and astringent; used in bronchitis and in diarrhœa; dose, ℥ss–j (16.0–32.0) in decoction. Also cartilage—xiphoid or ensiform cartilage in particular.

**Chonus**, ko′nus (*chonos*). Infundibulum.

**Chopart's′ amputa′tion.** Amputation at the mediotarsal articulation. See *Amputation*. **C.'s joint**, the mediotarsal articulation, through which C.'s amputation is performed. **C.'s mix′ture** consists of copaiba, alcohol, sweet spirit of nitre, syrup of tolu, and peppermint-water.

**Chop′nut.** Calabar bean.

**Chorah**, ko′rah (region). Any void space; also the orbit of the eye.

**Chorda**, kor′dah (*chorde*, a catgut string). Cord. It has several meanings, as tendon, nerve, etc. **C. acus′tica**, stria acustica. **C. arte′riæ umbilica′lis**, remains of the umbilical artery. **C. dorsa′lis**, dorsal chord; notochord; axis around which, according to von Baer, the first parts of the fœtus are formed, the rudiment of the future vertebral column. **C. duc′tus arterio′si**, remains of the ductus arteriosus, chord from the pulmonary artery to the arch of the aorta. **C. d. veno′si**, remains of the ductus venosus, extending from the left branch of the portal vein to the vena cava. **C. Ferren′ii**, vocal cord. **C. Hippoc′ratis**, tendo Achillis. **C. internun′cia**, a nerve, see *Internuncial*. **C. Lancis′ii**, one of the longitudinal striæ on the corpus callosum, see *Raphe*. **C. longitudina′lis cor′poris callo′si**, c. Lancisii. **C. mag′na**, tendo Achillis. **C. obli′qua cu′biti**, oblique ligament. **C. œsophage′a**, one of the œsophageal nerves. **C. pe′nis**, chordee. **C. serpenti′na**, one of the small striæ on the floor of the fourth ventricle, in front of the fovea anterior. **C. spasmod′ica**, chordee. **C. spermat′ica**, spermatic cord. **C. spina′lis**, spinal cord. **C. tendin′ea**, one of the tendinous, cord-like bands which connect the columnæ carneæ of the ventricles of the heart to the valves. **C. transversal′is Willis′ii**, one of the transverse striæ on the *corpus callosum*, which see. **C. tym′pani**, funiculus tympani; a branch of the seventh pair of nerves, according to some; of the fifth pair, according to others, which passes through the tympanum. **C. umbilica′lis**, umbilical cord. **C. ve′næ umbilica′lis**, round ligament of the liver. **C. vene′rea** or **ven′eris**, chordee. **C. vertebra′lis**, spinal cord. **C. voca′lis**, vocal cord. **C. volu′bilis**, c. serpentina. **C. Willis′ii**, trabecula Willisii, one of the small fibres crossing the sinuses of the dura mater; so called from Willis, who first described them.

**Chor′dal.** Relating to a chorda. **C. sali′va**, secretion of saliva which occurs when the chorda tympani nerve is irritated. **C. tis′sue**, variety of connective tissue existing in the notochord.

**Chordap′sus** (*chorde*, intestine, *hapto*, to tie). Constriction or twisting of the intestines; ileus.

**Chordee**, kor-de′ (F.). Painful erection of the penis attending gonorrhœa, and happening chiefly at night. It occurs when the violence of the inflammation is such that the urethra cannot expand as much as the corpora cavernosa during erection, and consequently the glans seems painfully drawn downward.

**Chordi′tis.** Inflammation of the spermatic or the vocal cords. **C. tubero′sa** or **voca′lis**, inflammation of the vocal cords.

**Chordoskel′eton.** Part of the fœtal skeleton surrounding the notochord.

**Chordurethri′tis** (*chordee* + *urethritis*). Gonorrhœa accompanied with chordee.

**Chorea**, ko-re′ah (*choreia*, a dance). St. Vitus's dance, St. John's dance. An affection characterized by irregular and involuntary motions of one or more limbs, of the face, and of the trunk. It is a disease usually occurring before puberty, and is generally connected with rheumatism and often valvular disease of the heart. Its duration is long, but it is usually devoid of danger, although frequently but little under the control of medicine. The spasms do not continue during sleep. Indications of treatment are to strengthen the general system and to repress the nervous excitability. Rest, mental and physical, an occasional laxative, chalybeates, and nervines, with appropriate regimen, will fulfil these. **C. Anglo′rum**, chorea proper. **Automat′ic c.**, c. in which the motions, though actually involuntary, seem to be intentional. **Ber′geron's c.**, a rhythmical, spasmodic affection, but not strictly choreic. **But′tonmakers' c.**, a form of tic or occupation neurosis occurring in buttonmakers. **Cen′tral c.**, c. dependent upon a lesion of the central nervous system. **Chron′ic c.**, hereditary c. occurring in adults; Huntingdon's c. **C. cor′dis**, chorea with disordered action of the heart. **Degen′erative c.**, Huntingdon's c. **C. diaphragmat′ica**, laryngeal c. **C. dimidia′ta**, hemichorea. **Elec′tric c.**, convulsivocerebral typhus, Dubini's disease; affection seen in certain districts of Lombardy, so called in consequence of the similarity between the convulsive shock of the limbs and the shocks caused by the action of the induction coil; very fatal. **Epidem′ic c.**, the dancing mania. **C. of the eye**, c. oculi. **Fa′cial c.**, spasm of the facial muscles; tic non-douloureux. **C. festi′nans**, form of chorea in which the patient is irresistibly impelled to run forward or backward; see also *Paralysis agitans*. **Fi′brillary c.**, c. characterized by spasmodic contractions of the muscle fibres. **C. Germano′rum**, c. magna. **C. gesticulato′ria**, chorea. **Hab′it c.**, irregular, spasmodic action of a muscle or set of muscles, beginning with disordered facial expression or gestures. **Hen′och's c.**, Bergeron's c. **Hered′itary c.**, Huntingdon's c. **Hun′tingdon's c.**, form of chronic chorea of adults, affecting whole families, with irregular movements, confusion of speech, and dementia. **Hyster′ical c.**, see *Hysteria*. **Im′itative c.**, a form of habit c. in which the actions of others are mimicked. **C. insan′iens**, disease of adults, particularly of the period of pregnancy, in which there are violent movements, with delirium, fever, etc. **Laryn′geal c.**, a peculiar cry or bark accompanying tic non-douloureux. **C. mag′na** or **C. mag′na Germano′rum**, c. accompanied with convulsive motions, observed in hysterical persons or due to a psychosis. **C. ma′jor**, this form includes certain hysterical and hypnotic affections, often of an epidemic character, as rhythmical hysterical spasms, tarantism, etc.; c. magna. **Mal′leatory c.**, c. in which the patient seems as if hammering or using a mallet. **Mani′acal c.**, c. insaniens. **Method′ical c.**, c. saltatoria. **Mimet′ic c.**, imitative c. **C. mi′nor**, ordinary c. **Mor′van's c.**, fibrillary c.; confined to the muscles of the lower extremities or at most the trunk as well, and never extending to the face. **C. neural′gica**, tic douloureux. **C. nu′tans**, c. in which there are nodding movements. **C. oc′uli**, clonic spasm of the muscles of the iris. **C. oscillato′ria**, characterized by measured oscillations of the head, trunk, or limbs. **Tandem′ic c.**, c. major. **Paralyt′ic c.**, involuntary choreic movements associated with paralysis of voluntary movements. **Par′tial c.**, see *Tic*. **Posthemiple′gic c.**, **Prehemiple′gic c.**, choreiform movements before and after attack of hemiplegia. **Rhyth′mic c.**, c. saltatoria. **C. rotato′ria**, a form characterized by rotation or oscillation of the head or trunk or one limb. **C. saltato′ria**, a form of the disease characterized by involuntary jumps, often taking place methodically or rhythmically. **C. Sanc′ti Johan′nis** or **Modes′ti**, chorea. **C. S. Valenti′ni**, chorea; tarantismus. **C. S. Vi′ti**, chorea. **C. scripto′rum**, writers' cramp. **Sec′ondary c.**, c. dependent upon some organic lesion of the brain. **C. seni′lis**, paralysis agitans and senile tremor. **Syd′enham's c.**, ordinary chorea. **Tic c.**, spasmodic movements of a rhythmical character associated in some way with tic, and called, according to the location affected or the special nature of the spasms, *laryngeal*, *diaphragmatic*, *gesticulatory*, *saltatory*, etc., *chorea*.

**Chore′al.** Relating or appertaining to or having the characters of chorea; affected with chorea; choreic.

**Chore′gia** (*choros*, a troop of dancers and singers, *ago*, to lead). Hippocrates uses this term for the whole of the apparatus necessary for a physician or surgeon.

**Chore′ic.** Relating or appertaining to or having the characters of chorea; one affected with chorea.

**Chore′iform.** Resembling chorea.

**Choreoma′nia.** Epidemic chorea, the dancing mania of the middle ages.

**Cho′rial.** Relating to the chorion.

**Choriocapilla′ris.** Inner layer of capillaries of the choroid coat of the eye.

**Cho′riocele** (*chorion*, membrane, *kele*, tumor). Protrusion of the choroid tunic of the eye, resembling a hernia in appearance.

**Chorioepithelio′ma.** Decidua malignum.

**Cho′rioid.** Choroid.

**Chorioidere′mia** (*eremia*, want of). Absence of the choroid.

**Chorioidi′tis.** Choroiditis.

**Choriodocycli′tis.** Inflammation of the choroid extending to the ciliary body.

**Choriodo-iri′tis.** Inflammation of the choroid involving the iris; as in *choriodoretinitis*, the retina is similarly affected.

**Chorio′ma.** Deciduoma malignum.

**Cho′rion** (*chorion*, skin). The true chorion; thin, transparent membrane surrounding the fœtus in utero on every side. It is a complex membrane made up of two parts, viz., the membranes of the ovum, external to the pleuroperitoneal cavity—that is to say, of the vitelline membrane and false amnion—and of the allantois, which is a diverticulum of the splanchnopleura and hypoblast pushed out into the pleuroperitoneal cavity. (Gray.) Soon after the entrance of the ovum into the uterus, villous prolongations are formed on its surface, which have given it the name shaggy chorion or chorion frondosum. These villi are the agents of the absorption of nutritive matter for the fœtus. By some anatomists the chorion is considered to be formed of two layers: the outer, called by Burdach exochorion; the inner, endochorion. The chorion is exterior to the amnion. The term is also used, but rarely, to designate the corium or true skin; and by some the zona pellucida. **C. frondo′sum**, see *Chorion*. **C. fungo′sum**, decidua. **C. læ′ve**, non-villous part of the chorion. **Prim′itive c.**, zona pellucida. **C. reticula′tum**, decidua. **Shag′gy c.**, see *Chorion* and *Decidua*. **C. spongio′sum** or **Spon′gy c.**, see *Decidua*. **C. tomento′sum**, see *Decidua*. **Vil′lous c.**, shaggy c.

**Chorion′ic.** Relating to the chorion. **C. vil′li**, vascular prolongations on the surface of the chorion.

**Chorioni′tis.** Inflammation of the true skin or corium, resulting in scleroderma.

**Chorioret′inal.** Relating to the choroid tunic and the retina.

**Chorioretini′tis.** Choroiditis complicated with retinitis. **C. dissemina′ta**, chorioretinitis, usually syphilitic, followed by exudation and atrophy. **Equato′rial c.**, chorioretinitis affecting the periphery of the retina.

**Choristoceph′alus.** Monster with two heads.

**Cho′roid**, more properly **Cho′rioid** (*chorion*, skin, *eidos*, resemblance). Several parts are so called which resemble the chorion in the multitude of their vessels, especially the choroid tunic. **C. ap′oplexy**, effusion of blood from the choroidal vessels, from traumatic causes, between the choroid and retina; detected by ophthalmoscopic examination. **C. ar′teries**, anterior choroid; small branch of the internal carotid, distributed especially to the choroid plexus; the posterior, similarly distributed, comes from the posterior cerebral. **C. cleft**, an opening in the eye of the embryo through which the middle germ layer passes to form the vitreous humor. **C. coat**, c. tunic. **C. fis′sure**, c. cleft; also the anterior transverse fissure of the brain. **C. mem′brane**, c. tunic. **C. mus′cle**, ciliary muscle. **C. plex′us**, two membranous and vascular duplicatures of the pia mater, situated in the lateral ventricles; they are fixed to the tela choroidea by one edge, and are loose and floating at the other. **C. tu′nic**, or simply the *choroid*, a thin, highly vascular membrane, of a very dark color, which lines the sclerotica internally. The part behind the iris is called the *uvea*. Situated between the sclerotica and retina, it has an opening posteriorly for the passage of the optic nerve, and terminates anteriorly at the great circumference of the iris, where it is continuous with the ciliary processes. Its outer surface is pretty intimately attached to the sclerotica by blood-vessels and nerves, as well as by a delicate brown tissue, which has been called the *lamina fusca*. Its inner surface is smooth, and lies in contact with the retina. The choroid consists mainly of a dense capillary plexus and of small arteries and veins to and from this plexus. On its external surface, next the sclerotic, is a thin membrane of fine, elastic fibres arranged in lamellæ, the *lamina suprachoroidea*, continuous with the lamina fusca of the sclerotic, and covered with endothelium and forming spaces which communicate, by perforations in the sclerotic through which the vessels and nerves enter, with the capsule of Tenon. Internal to this is the *choroid proper*, consisting of two layers, the outermost composed of small arteries and veins, with pigment cells interspersed between them, and the inner consisting of a capillary plexus. The *external layer* consists, in part, of the larger branches of the short ciliary arteries, but is formed principally of veins, the *venæ vorticosæ*, which converge to four or five equidistant trunks that pierce the sclerotic midway between the margin of the cornea and the entrance of the optic nerve. Interspersed between the vessels are dark, star-shaped pigment cells, fibrous offsets from which, communicating with similar branchings from neighboring cells, form a delicate network or stroma, which toward the inner surface of the choroid loses its pigmentary character. The *internal layer* consists of an exceedingly fine capillary plexus formed by the short ciliary vessels, and known as the *tunica Ruyschiana*, on the inner surface of which is a very thin, structureless—or, according to Kolliker, faintly fibrous—membrane, called the *lamina vitrea*, closely connected with the stroma of the choroid and separating it from the pigmentary layer of the retina. (Gray.) The layers of pigment cells, called pigmentum nigrum, stratum pigmenti, ophthalmochroites, Æthiops animal, absorb the rays of light after they have traversed the retina. Others make the choroid consist of three layers, the innermost of which is the *membrana pigmenti* or *Bruchii*, *membrane of Bruch*. **C. veins,** two veins that creep along the tela choroidea, into which almost all those of the lateral ventricles of the upper part of the cerebellum, of the pineal gland, and the corpora quadrigemina open. The venæ Galeni open into the *sinus quartus* or *fourth sinus*.

**Choroid′al.** Relating to the choroid. **C. ring,** the outer ring, seen with the ophthalmoscope, which bounds the choroid coat of the eye at the entrance of the optic nerve. **C. te′la,** a kind of vasculomembranous prolongation of the pia mater which lines the lower surface of the fornix united with the corpus callosum. It is stretched above the third ventricle, and covers the posterior commissure and corpora quadrigemina. Anteriorly, the tela choroidea is continuous with the plexus choroides.

**Choroide′a infe′rior.** Choroid plexus of the fourth ventricle. **C. supe′rior,** choroid plexus of the lateral ventricles.

**Choroidere′mia** (*choroid*+*eremia*, want of). Absence of the choroid.

**Choroidi′tis.** Chorioiditis; internal ophthalmia. Inflammation of the choroid coat of the eye may be either specific, as from syphilis—*syphilitic choroiditis*—or non-specific—*simple choroiditis*. *Choroiditis disseminata* or *exudativa* is characterized by disseminated exudations of a buff color on the surface and into the tissue of the choroid, producing atrophy of the choroid. Choroiditis may be complicated with inflammation of the retina, sclerotica, iris, etc., as *retinochoroiditis*, *scleroticochoroiditis*, *choroido-iritis*, etc. *Suppurative choroiditis* involves all the tissues of the eye, and is generally of traumatic origin; see *Panophthalmitis*.

**Choroidocycli′tis.** Inflammation of the choroid and ciliary parts.

**Choroido-iri′tis.** See *Iridochoroiditis*.

**Choroidoretini′tis.** Chorioretinitis.

**Choroma′nia** (*choros*, dance, *mania*). Dancing mania; epidemic chorea.

**Chortasth′ma** (*chortos*, hay). Hay fever.

**Chrem′ma** (*chremma*, sputum). Sputum.

**Chremp′sis.** Exspuition.

**Chris′ma.** The act of anointing; also the salve or liniment used.

**Chris′tian sci′ence.** The tenets of a religious sect, the members of which, among other beliefs, look upon disease as non-existent except in thought, and hold consequently that the use of medicines or other physical remedies is useless or even harmful, because it perpetuates the thought of non-existent disease. Death is explained by the fact that, in the end, the thought of disease becomes so strong, even among the believers, that it suffices to remove the soul of the thinker from his body, or causes him to die.

**Chris′tison's form′ula.** Formula for calculating the solids in urine. Multiply the last two figures of the specific gravity by 2 for specific gravities below 1018, and by 2.33 for specific gravities above 1018, the result being the amount of solids per 1000 parts.

**Christ′mas rose.** Helleborus niger.

**Chris′topher herb.** Actæa spicata.

**Christophoria′na canaden′sis racemo′sa.** Actæa racemosa. **C. spica′ta,** Actæa spicata.

**Chro′a.** Chroma; color in general; surface of the body; skin

**Chro′atol.** A dark green liquid resulting from the action of iodine on turpentine; used in skin diseases.

**Chro′ma.** Color.

**Chromacrin′ia** (*chroma*, color, *krino*, to separate). Secretion of colored matter, as from the skin, by perspiration.

**Chromæsthe′sia** (*chroma*, color, *aisthesis*, sensation). The sense of color perception; also the subjective sensation of color aroused by the action of the auditory and other senses.

**Chromasciam′eter** or **Chromaskiam′eter** (*chroma*, color, *skia*, shadow, *metron*, measure). Apparatus for testing color sense by contrasting colors.

**Chromaskiop′tikon** (*chroma*, color, *skia*, shadow, *optikos*, seeing). Apparatus for detecting color-blindness by the use of colored shadows.

**Chro′mate.** Salt of chromic acid.

**Chromatelop′sis** (*chroma*, color, *ateles*, incomplete, *opsis*, sight). Color-blindness.

**Chromat′ic.** Relating to color. **C. aberra′tion,** see *Aberration*. **C. audi′tion,** a subjective sensation of color associated with the perception of sound. **C. gran′ules,** granular portion of the cell-body which is readily and deeply stainable. **C. sub′stance,** c. granules.

**Chromatin′.** Cell substance having special capacity for coloration; a delicate plexus of fibrils found in the nuclei of cells; see *Nucleoplasm* and *Karyoplasm*.

**Chro′matism.** Color production; unnatural coloration or pigmentation.

**Chro′matize.** To charge or impregnate with a chromate.

**Chromatodyso′pia** (*chroma*, color, *dys*, with difficulty, *opsis*, vision). Partial color-blindness.

**Chromatogen′ic** or **Chromatog′enous** (*chroma*, color, *gennao*, to generate). Chromogenic; producing color. **C. appara′tus,** glandular apparatus for producing the coloring-matter of the skin, formerly supposed to exist.

**Chromatog′raphy** (*chroma*, color, *grapho*, to write). A treatise on colors.

**Chromatol′ogy** (*chroma*, color, *logos*, description). Science of colors; examination of color spectroscopically.

**Chromatol′ysis** (*chroma*, color, *lysis*, loosening). The breaking up and solution of the chromatic cell material.

**Chromatolyt′ic.** Relating to chromatolysis.

**Chromatom′etry.** Measurement of color intensity. The instrument employed is called a *chromatometer*.

**Chromatopath′ic** (*chroma*, color, *pathos*, disease). Affecting the pigment system of the skin. Chromatopathic affections include melasma, leucasmus, xanthocroia, achroma, ephelis, etc.

**Chro′matophile** (*chroma*, color, *phileo*, to love). Having an affinity for stains; said of cells and other histological elements.

**Chromatophil′ia.** The condition of being chromatophilic.

**Chromatophil′ic.** Chromatophile.

**Chromatopho′bia** (*chroma*, color, *phobos*, dread). Morbid sensibility to certain colors.

**Chro′matophore** (*chroma*, color, *phoreo*, to carry). A pigment cell.

**Chromatoph′orous.** Pigmented; relating to or resembling a chromatophore.

**Chromatopseudop′sia** (*chroma*, color, *pseudes*, false, *opsis*, vision). Achromatopsia.

**Chromatop′sia** (*chroma*, color, *opsis*, vision). Iridescent vision; state of vision in which a colored impression, as of the spectrum, is made on the retina.

**Chromatoptom′etry.** Measurement of the color sense.

**Chromato′ses.** Skin diseases characterized by excess or absence or deficiency of pigment.

**Chromato′sis.** Abnormal pigmentation of tissue.

**Chromatoskiam′eter.** Chromaskiopticon.

**Chromatu′ria** (*chroma*, color, *ouron*, urine). Discharge of urine of an unnatural color.

**Chrome-al′um.** Sulphate of chromium and potassium.

**Chromhidro′sis** (*chroma*, color, *hidros*, sweat). Abnormal coloration of the perspiratory secretion, as in stearrhœa nigricans, seborrhœa nigricans, and pityriasis nigricans.

**Chromhydro′sis** (*chroma*, color, *hydor*, water). Chromhidrosis.

**Chro′mic.** Relating to or derived from chromium. **C. acid**, acidum chromicum, $H_2CrO_4$; obtained by crystallization from a mixture of bichromate of potassium and sulphuric acid. **C. anhy′dride**, $CrO_3$; has been used as an escharotic in external hemorrhoids, and is well suited to the destruction of morbid growths, condylomata, excrescences, etc., being said to give less pain than other caustics. It is used in dentistry as a hæmostatic, for painting on syphilitic ulcers, as an application to tender and sweaty feet, in ozæna, and in gonorrhœa. **C. hydrox′ide** or **ox′ide**, Guignet's green, a pigment prepared by heating potassium bichromate with borax.

**Chro′micize.** To impregnate with chromic acid.

**Chro′micized.** Treated with chromic acid. **C. cat′gut**, catgut soaked in a solution of chromic acid, 1 : 4000, whereby it is rendered less absorbent and less absorbable.

**Chromidro′sis** Chromhidrosis.

**Chro′mioles.** Minute bodies contained in the homogeneous chromoplasm composing the chromosomes.

**Chro′mium** (Symbol, Cr). A metallic element whose compounds, except chromic acid, are but little used in medicine; chromic acid is a teroxide. **Hy′drated sesquiox′ide of c.**, this substance has been employed as an astringent and tonic in cholera infantum and other diseases of the alimentary canal.

**Chromobacte′rium viola′ceum** (Bergonzini). Bacterium violaceum.

**Chro′moblast** (*chroma*, color, *blastos*, bud). A pigment-producing cell.

**Chromocrin′ia** (*chroma*, color, *krino*, to separate). Secretion of colored matter, as from the skin, by perspiration; chromidrosis.

**Chro′mocyte** (*chroma*, color, *kytos*, cell). A pigmented cell, such as an erythrocyte.

**Chromocytom′eter.** Instrument for determining the amount of hæmoglobin in the blood.

**Chro′mogen** (*chroma*, color, *gennao*, to produce). A collective term for plant pigments.

**Chromogenet′ic.** Chromatogenic.

**Chromogen′ic** or **Chromog′enous.** Chromatogenic.

**Chromolep′tic** (*chroma*, color, *lambano*, to take). Staining easily; chromatophile.

**Chro′momere** (*chroma*, color, *meros*, part). A granule of a chromosome.

**Chromom′etry.** Determination of the degree of color in a body. The instrument used is called a *chromom′eter*.

**Chromop′aric** or **Chromop′arous** (*chroma*, color, *pario*, to give birth to). Producing pigment; applied to chromatogenic bacteria.

**Chro′mophane** (*chroma*, color, *phaino*, to show). Coloring substance of the retina; chlorophane, xanthophane, and rhodophane—green, yellow, and red.

**Chro′mophile** or **Chromophil′ic.** Chromatophile.

**Chromoph′ilous** (*chroma*, color, *phileo*, to love). Chromatophilic; chromoleptic; term applied in particular to cell nucleus.

**Chro′mophose.** A subjective sensation of color when looking at an uncolored object or when the eyes are closed.

**Chromophyto′sis** (*chroma*, color, *phyton*, growth). In this country synonymous with tinea versicolor; in continental Europe with pityriasis versicolor; phytosis versicolor.

**Chro′moplasm** (*chroma*, color, *plasso*, to form). Rete or network of the nucleus of a cell which is chromatophilic or readily stainable.

**Chromoplas′tid.** A protoplasmic pigment granule.

**Chromopro′teid.** A native compound of a proteid with an animal pigment, such as hæmoglobin.

**Chromopseudop′sis.** Color-blindness.

**Chromop′sia.** Chromatopsia.

**Chromoptom′eter** (*chroma*, color, *opto*, to see, *metron*, measure). Apparatus for testing color sense.

**Chro′moscope** (*chroma*, color, *skopeo*, to see). An instrument used in testing for color-blindness.

**Chro′mosome** (*chroma*, color, *soma*, body). A thread of chromatin substance in a cell nucleus.

**Chromosteato′des** (*chroma*, color, *stear*, fat). Affection of the skin characterized by alteration in the color of the sebaceous secretion.

**Chron′ic** (*chronos*, time). Of long duration. **C. diseas′es** are those whose duration is long or whose symptoms proceed slowly; the antithesis to chronic is acute, and between the two is *subacute*.

**Chronic′ity.** State of being chronic, as a disease.

**Chro′nograph** (*chronos*, time, *grapho*, to write). Instrument for recording intervals of time.

**Chronogyn′ia** (*chronos*, time, *gyne*, a woman). Menstruation.

**Chro′noscope** (*chronos*, time, *skopeo*, to view). Electro-magnetic clock for recording fractional parts of a second.

**Chronother′mal** (*chronos*, time, *therme*, heat). Relating to time and temperature; epithet given to a system, which at one time prevailed slightly, which maintained that there could be no increase or diminution of temperature without motion; that motion consisted in attraction and repulsion, and these being peculiar to electric action, medicines must change the motions of the system and be electrical in their operation.

**Chroöp′sy** (*chroa*, color, *opsis*, vision). Chromatopsia.

**Chry′sa fibrau′rea.** Coptis.

**Chrysal′ea.** Nitromuriatic acid.

**Chrys′alis** (*chrysos*, gold). The pupa of insects.

**Chrysam′mic acid** (*chrysos*, gold, *ammos*, sand). Acid obtained from aloes or from treating chrysophanic acid with nitric acid.

**Chrysanilin′.** Anilin yellow.

**Chrysan′themum** (*chrysos*, gold, *anthemon*, flower). A genus of plants of the order *Compositæ*. **C. leucan′themum**, ox-eye daisy, whiteweed, maudlinwort; flowers and herb are slightly acrid, and were once used in pulmonary diseases. **C. parthe′nium**, Matricaria parthenium.

**Chrysarobin′** (*chrysos*, gold, *araroba*). $C_{30}H_{26}O_7$. Chrysarobinum (Ph. U. S. and Br.); a neutral principle extracted from Goa powder, obtained from Andira araroba, of Brazil; a yellow powder, found very useful in cutaneous affections, as psoriasis and chronic eczema; internally it is emetic and cathartic; dose, gr. $\frac{1}{8}$–$\frac{1}{2}$ (0.008–0.032).

**Chryse**, kris′e (*chryseos*, golden). Name of an ancient yellow plaster, composed of thus, alum, lead, colophony, resin, oil, and orpiment, boiled in vinegar.

**Chrys′ene.** $C_{18}H_{12}$. A hydrocarbon obtained from coal-tar.

**Chrysobal′anus Gale′ni.** See *Myristica moschata*.

**Chrysocol′la** (*chrysos*, gold, *kolla*, glue). An old name of borax.

**Chrysoc′oma** (*chrysos*, gold, *kome*, hair). Achillea millefolium.

**Chrysokreatinin′** (*chrysos*, gold, *kreas*, meat). A leucomain, resembling kreatinin, from muscle.

**Chrysolach′anum** (*chrysos*, gold, *lachanon*, pot-herb). Chenopodium bonus Henricus.

**Chrysolep′ic acid** Picric acid.

**Chrysome′lia** (*chrysos*, gold, *melon*, apple). See *Citrus aurantium*.

**Chrys′ophan** (*chrysos*, gold, *phaino*, to shine). Yellowish powder obtained from senna and rhubarb.

**Chrysoph′anate of zinc.** Brownish-red powder; compound of chrysophanic acid and zinc.

**Chrysophan′ic acid.** Acid derived from Goa powder, senna, rhubarb, and several other vegetable substances; and by oxidation from chrysarobin.

**Chrysophyl′lum buran′hem** (*chrysos*, gold, *phyllon*, leaf). Monesia. **C. caini′to**, broad-leaved star apple; tree of the Antilles, ord. *Sapotaceæ*, which produces one of the best fruits of the country; there are several varieties of it. **C. glyciphlæ′um**, monesia.

**Chrys′opus.** Cambogia.

**Chrysosper′mum** (*chrysos*, gold, *sperma*, seed). Sempervivum tectorum.

**Chrysosple′nium.** Genus of *Saxifragaceæ*. **C. alternifo′lium** and **C. oppositifo′lium**, two species, the herbs of which were formerly employed as mild laxatives.

**Chrysotoxin′.** A principle derived from ergot; combined with ergochrysin it forms sphacelotoxin.

**Chthonopha′gia** or **Chthonoph′agy** (*chthon*, earth, *phago*, to eat). Dirt-eating, geophagism, cachexia africana; a disorder of the nutritive functions observed among the negroes of the South and of the West Indies, in which there is an irresistible desire to eat dirt. It is accompanied by most of the signs of chlorosis. In many cases, it is believed, the disorder is associated with uncinariasis. The Ottomacs on the Orinoco and the natives of portions of the Hudson's Bay territory are earth-eaters, the earth being a form of steatite.

**Chvos′tek's symp′tom.** Augmented irritability of the motor nerves, particularly of the face; a symptom met with in some forms of tetanic spasm.

**Chyaz′ic.** Relating to hydrocyanic acid.

**Chyla′ceous.** Relating to chyle.

**Chylæ′mia.** The presence of chyle in the blood.

**Chylangio′ma** (*chylos*, chyle, *angioma*). Dilated condition of the intestinal lymphatics.

**Chyla′queous.** A term applied to a watery fluid containing lymphocytes.

**Chyle**, kile (*chylos*, juice). The word, in Hippocrates, means decoction of barley; chylarion. Galen first used it in its present sense—*i. e.*, of a nutritive fluid, extracted by intestinal absorption from food which has been subjected to the action of the digestive organs. It is of a whitish appearance, and is formed from the chyme in the small intestines. It is taken up by the chyliferous vessels, which arise at the mucous surface of the intestine. Along these it passes through the mesenteric glands to the thoracic duct, and is finally poured into the left subclavian vein. It is composed, like the blood, of a fluid—liquor chyli—and of chyle corpuscles or globules, the average size of which is about $\frac{1}{4600}$ of an inch. See *Chyme*. **C. blad′der**, receptaculum chyli. **C. cor′puscle**, one of the cells of the chyle, resembling white blood corpuscles or lymphocytes. **C. res′ervoir**, receptaculum chyli. **C. ves′sels**, lymphatics of the mesentery.

**Chylidro′sis** (*chylos*, chyle, *hidrosis*, sweating). Sweating of a milky fluid.

**Chylifac′tion.** Chylification.

**Chylifac′tive.** Forming chyle.

**Chylif′erous** (*chylos*, chyle, *fero*, to carry). Chyle-bearing. **C. ves′sels**, lacteals; vessels which convey the chyle from the intestines to the thoracic duct. They have also been called galactophorous vessels.

**Chylifica′tion** (*chylos*, chyle, *facio*, to make). The formation of chyle during the digestive processes. The term has at times been applied to the changes produced on the aliment in the small intestine, but is now restricted to the act of forming chyle at the radicles of the chyliferous vessels.

**Chy′locele** (*chylos*, chyle, *kele*, tumor). Effusion of lymph into the tunica vaginalis testis.

**Chy′locyst** or **Chylocys′tis** (*chylos*, chyle, *kystis*, bladder). Receptaculum chyli.

**Chyloder′ma** (*chylos*, chyle, *derma*, skin). Elephantiasis, especially of the scrotum.

**Chylodiabe′tes.** Chyluria.

**Chylodiarrhœ′a.** Cœliac flux.

**Chylodoch′ium** (*dechomai*, to receive). Receptaculum chyli.

**Chylogas′ter** (*chylos*, chyle, *gaster*, stomach). The duodenum; literally, the chyle stomach.

**Chylog′raphy.** Description of the chyliferous vessels.

**Chylopericar′dium.** Effusion of chyle within the pericardium.

**Chyloperitone′um.** Effusion of chyle into the peritoneal cavity.

**Chylopoie′sis.** Chylification.

**Chylopoiet′ic** (*chylos*, chyle, *poieo*, to make). Relating to or connected with the formation of chyle; chiefly applied to the organs immediately concerned in it, as the stomach, intestine, omentum, and mesentery. *Assistant chylopoietic* organs are viscera which aid in the formation of chyle, as the liver and pancreas.

**Chylorrhœ′a** (*chylos*, chyle, *rheo*, to flow). Excessive flow of chyle; diarrhœa with milk-colored discharges; cœliac flux. **C. pec′toris**, chylothorax. **C. rena′lis**, chyluria. **C. urina′lis**, chyluria.

**Chylo′sis.** Chylification.

**Chylotho′rax.** Effusion of chyle into the chest, owing to the rupture of a chyliferous vessel.

**Chy′lous.** Relating to chyle or having some analogy to that fluid. **C. u′rine**, chyluria.

**Chylu′ria.** Chylous urine; discharge of milky urine without any apparent lesion of the kidneys or bladder.

**Chyme**, kime (*chymos*, juice). Chymus; a pulp formed by the food mixed with the digestive secretions after it has been for some time in the stomach. In this state it continues until it reaches the biliary and pancreatic ducts, which open into the duodenum, where the conversion into chyle occurs; this is absorbed by the chyliferous vessels, the excrementitious portion of the food traversing the large intestine, to be evacuated *per anum*. *Chyme* and *chyle* were used by the ancients in an inverse sense to that accepted at present.

**Chym′ical, Chym′ist, Chym′istry**, etc. See corresponding words commencing with *Chem*.

**Chymifica′tion** (*chymos*, chyme, *facio*, to make). Formation of chyme.

**Chymoplan′ia** (*chymos*, juice, *plane*, wandering). Transposition of secretions; a term formerly used to include icterus, uroplania, menoplania, and galactoplania.

**Chymorrhœ′a** Cœliac flux; lientery.

**Chymosep′sis.** Fermentative putrefaction of the chyme.

**Chymosin′.** Rennin, an ingredient of the gastric juice.

**Chymosin′ogen.** A preënzyme, analogous to peptinogen, from which chymosin is derived.

**Chymo′sis.** Chemosis; chymification.

**Chy′mous.** Relating to or resembling chyme.

**Chyt′len ra′dix.** A root, bitter and inodorous, brought from China; the Chinese regard it as a stomachic.

**Cibis′itome** (*kibisis*, pouch, *tome*, incision). An instrument devised for opening the capsule of the lens in cataract operations.

**Cibopho′bia** (*cibum*, food, *phobos*, fear). Sitophobia.

**Cibo′tium** or **Cibo′tion.** Genus of ferns. **C. bar′ometz**, growing in China; rhizome possesses astringent properties; the hairs are also employed in medicine.

**Ci′bus.** Aliment. **C. deo′rum**, asafœtida.

**Cicatric′ia.** Relating or appertaining to or having the character of a cicatrix. **C. tis′sue,** variety of connective tissue in which but few cells and vessels are present; it exists in wounds and ulcers when they are undergoing the process of healing.

**Cicatric′iform** or **Cicat′riform.** Resembling a cicatrix.

**Cicatric′ula** (dim. of cicatrix). Small cicatrix; the term is also applied to a small white spot, called the *tread chalaza* or *chalazium,* observable at the surface of a fecundated egg; archiblast; the blastoderm of an egg.

**Cicatrisan′tia.** Remedies which favor cicatrization; cicatrizants.

**Cica′trix** (Lat.). Scar; a new formation, of a reddish color, afterward whitish, and of variable thickness, which takes place at the surface of wounds or ulcers after their cure. A cicatrix may vary much in shape, consistence, and thickness. The cicatrix of a bone is called callus. **Atroph′ic c.,** cicatrix depressed below the level of the surrounding surface. **Hypertroph′ic c.,** cicatrix elevated above the surrounding surface. **C. vari′olæ,** pockmark. **Vic′ious c.,** one which interferes with the action of the parts on which it occurs.

**Cicat′rizant.** Favoring cicatrization, especially any agent possessing this property.

**Cicatriza′tion.** Process by which a cicatrix is formed. Every tissue, except the nails, epidermis, hair, and enamel, is probably capable of cicatrization.

**Cicho′rium.** A genus of plants of the order *Compositæ.* **C. agres′te** or **cris′pum,** C. intybus. **C. endiv′ia,** endive, a common potherb of the East, and eaten as salad; the root roasted and ground is often mixed with coffee. **C. in′tybus,** chicory or wild endive; it is bitter and has been given as a tonic and alterative; the root, roasted and ground, is often used instead of or mixed with coffee. **C. officina′rum** or **silves′tre,** C. intybus.

**Cicu′ta.** Conium maculatum; æthusa. **C. amo′mum,** seeds are diuretic and carminative. **C. angustifo′lia,** variety of C. virosa, used externally in rheumatism; very poisonous. **C. aquat′ica,** C. virosa, water hemlock, cowbane, brook tongue, deathin, devil's salep, scoots, poison turnip; not used internally; violent poison, often eaten by mistake for wild smallage, Apium graveolens; it produces tremors, vertigo, burning at the stomach, and all the symptoms occasioned by the narcotico-acrid class of poisons. **C. califor′nica,** variety of C. virosa growing in the United States near the Pacific. **C. cyna′pium,** Æthusa cynapium. **C. macula′ta,** American water hemlock, American hemlock, snakeweed, water parsley, poisonroot, wild hemlock, children's bane, spotted cowbane, is analogous in botanical character and medical properties to the European species; see *Conium maculatum.* **C. ma′jor** or **ma′jor fœt′ida,** or **vulga′ris,** Conium maculatum. **C. officina′le,** fresh young parts of Conium maculatum. **C. stoerk′ii,** Conium maculatum. **C. tenuifo′lia,** C. angustifolia. **C. terres′tris,** Conium maculatum. **C. viro′sa,** Cicuta aquatica. **C. vulga′ris,** Conium maculatum.

**Cicuta′ria.** Chærophyllum sylvestre. **C. aquat′ica,** Cicuta aquatica; Phellandrium aquaticum. **C. odora′ta,** Chærophyllum odoratum. **C. viro′sa,** Cicuta aquatica.

**Cicutine′.** Volatile alkaloid from Cicuta virosa.

**Cicutoxin′.** Poisonous acid liquid obtained from Cicuta virosa.

**Ci′der.** The expressed juice of the apple; before fermentation called *sweet cider;* after fermentation called *hard cider,* containing alcohol.

**Cigar′.** Small, tubular roll of tobacco, used for smoking.

**Cigarette′.** Dried leaves of tobacco or other plants rolled in paper, used for smoking. Cigarettes of belladonna contain 1 gr. each of the leaf of belladonna; cigarettes of digitalis each contain 1 gr. of digitalis; while those of eucalyptus contain each 1 gr. of eucalyptus. Mercurial cigars or cigarettes are made by steeping denarcotized tobacco in a weak corrosive sublimate solution, opium being added. Arsenical cigarettes are made of paper impregnated with an aqueous solution of arsenous acid or of arsenate of sodium and dried. Those of nitre are prepared by soaking blotting-paper in a nearly saturated solution of nitrate of potassium.

**Cil′ia** (pl. of cilium). Eyelashes; hairs on the eyelids. Their use seems to be to prevent the entrance into the eye of light bodies flying in the atmosphere, and to diminish in certain cases the intensity of light. Also the tarsi or eyelids. Likewise hair-like appendages of certain animal and vegetable cells. These ciliated cells are found on parts of the body habitually in contact with more or less fluid matters, and produce motion in these fluids, impelling them along the surface of the parts. Cilia have been found to exist in all animals except *Crustaceæ,* having been discovered on the respiratory, uterine, and other membranes of mammalia, birds, and reptiles. **Invert′ed c.,** turning in of the eyelashes or of the free edges of the eyelids upon the ball of the eye. **Vi′bratile** or **vi′bratory c.,** see *Cilia.*

Columnar cells with cilia.

**Cil′iar.** Ciliary.

**Cilia′ris.** Ciliary. Orbicularis palpebrarum muscle. **C. circula′ris,** circular fibres of the ciliary muscle. **C. radia′lis,** radiating fibres of the ciliary muscle. **C. Riola′ni** (after Riolan, the French anatomist), transversely striated muscular fasciculi in the eyelid, running parallel with and close to the margin of the lid.

**Ciliar′iscope.** An instrument used in inspection of the ciliary region.

**Cil′iary.** Relating to the eyelashes or to the cilia; term also applied to different parts entering into the structure of the eye, from the resemblance between some of them (ciliary processes) and the eyelashes. **C. ar′teries,** these are furnished by the ophthalmic artery. They are distinguished into: 1. *Short* or *posterior,* thirty or forty in number, which are distributed to the ciliary processes. 2. *Long,* two in number, which by the anastomosis of their branches form two arterial circles at the anterior surface of the iris. 3. The *anterior, arteriæ ciliares anteriores* of Haller, the number of which is variable. These pierce the sclerotic a few lines from its union with the cornea, and are principally distributed to the iris. **C. bod′y,** ciliary disk; a ring of the choroid surrounding the crystalline in the manner of a crown, placed behind the iris and the ciliary circle; resembling the disk of a radiated flower, and formed by the union of the ciliary processes. See *Ciliary muscle.* **C. canal′,** canal of Fontana; a small, extremely narrow circular space, formed between the ciliary circle, the cornea, and the sclerotica; it can be filled by injection, and it is not certain that it is not the cavity of a blood-vessel, and hence has been called *circulus venosus iridis.* **C. cir′cle,** ciliary ligament. **C. disk,** ciliary body. **C. epithe′lium,** see *Epithelium.* **C. gan′glion,** ophthalmic ganglion. **C. lig′ament,** c. circle or ring, commissure of the uvea; a grayish ring, of a pulpy consistence, situated between the choroid, iris, and sclerotica. The internal surface of the choroid is uniform until it approaches within ten lines and a half of the edge of the cornea; here a dentated line is observed, termed *ora serrata.* The outer surface presents the annulus albidus or gangliformis, the anterior edge of which joins with the inner surface of the sclerotica and constitutes the ciliary ligament. **C. mar′gin of the eye′lids,** edge in which the cilia or eyelashes are stituated. **C. mo′tion,** phenomenon exhibited by the cilia of the epithelial cells lining the bronchi or other tubes, the action of which is to aid the progression of fluids within the tube; the motion is in the direction of the outlet. **C. mus'cle,** the part of the orbicularis palpebrarum in the vicinity of the ciliary margin; also, the grayish, semitransparent structure behind the ciliary ligament, and covering the outside of the ciliary body; by its contraction the ciliary processes, and with them the lens, must be drawn toward the cornea. It appears to be the same muscle as the *tensor choroideæ, protrahens lentis, musculus brueckianus, choroid muscle* of some anatomists. Its circular fibres constitute the *compressor lentis muscle.* **C. mus'cle of Riolan',** ciliaris Riolani. **C. nerves,** twelve to sixteen in number. They arise from the nasal nerve, and particularly from the anterior part of the ophthalmic ganglion, and unite in two fasciculi, which pass around the optic nerve and pierce the sclerotica near the entrance of that nerve into the eye; they are lost in the ciliary ligament. **C. neural'gia,** neuralgic pain in the brow, temples, etc. **C. plex'us,** c. ligament. **C. proc'esses,** triangular folds, sixty or eighty in number, placed at the side of each other, and radiating so as to resemble the disk of a radiated flower; they are lodged in depressions at the anterior part of the vitreous humor. **C. re'gion,** region at inferior part of the cornea and ciliary body. **C. ring,** ciliary ligament. **C. stri'æ** are numerous pale, radiated striæ in the posterior portion of the ciliary body, but so covered by pigment as not to be distinctly seen until this is removed. The ciliary processes are formed by these striæ. **C. veins** follow nearly the same course as the arteries; in the choroid they are so tortuous that they have received the name *vasa vorticosa;* they open into the ophthalmic vein. **C. zone,** under the corpus ciliare the capsule of the vitreous humor sends off an external lamina, which accompanies the retina, and is inserted with it into the forepart of the capsule of the lens, a little before its anterior edge; this is the *zonula ciliaris* or *Zinnii, zonula* or *zone of Zinn, zone of Haller;* it is of a striated appearance and circular form, and assists in fixing the lens to the vitreous humor.

**Cil'iate** or **Cil'iated.** Provided with cilia, as ciliated epithelium, the epithelium to which vibratory cilia are attached.

**Cilia'tion.** State of being possessed of cilia.

**Cil'iform.** Resembling a cilium.

**Cilioret'inal.** Relating to the ciliary body and the retina.

**Ciliospi'nal.** Relating to the ciliary body and the spinal cord. **C. cen'tre,** that portion of the spinal cord where resides the control of ciliary or pupillary movement.

**Cil'ium.** Eyelash. See *Cilia.*

**Cil'lo.** Name given by some authors to a perpetually tremulous upper eyelid; formerly called *life's blood.*

**Cillo'sis.** Cillo.

**Cim'bia.** Fasciculus arciformis pedis of the brain.

**Ci'mex.** A genus of insects, the best known of which is **C. lectula'rius,** bedbug or chinch; once used medicinally.

**Cimicif'uga** (*cimex,* bug, *fugo,* to drive away). (Ph. U. S. and Br.). The rhizome and rootlets of Cimicifuga or Actæa racemosa, black snakeroot or black cohosh; tonic and antispasmodic; employed in rheumatism, chorea, uterine troubles, etc.; the official preparations are the extract, *extractum cimicifugæ;* dose, gr. i–v (0.065–0.32); fluid extract, *extractum cimicifugæ fluidum;* dose, ♏x–xxx (0.65–2.0); tincture, *tinctura cimicifugæ;* dose, ʒj–ij (4.0–8.0). **C. fœt'ida,** fetid bugbear, so called from its offensive odor. **C. racemo'sa,** the official cimicifuga, Actæa racemosa. **C. serpenta'ria,** species of the United States.

**Cimicifugin'.** A resinoid principle obtained from cimicifuga; dose, gr. j–iij (0.065–0.2).

**Cimina'lis.** Gentiana.

**Cimmaro'ma.** The pulp of this plant of Spain and Brazil is laxative.

**Cimo'lia.** Cimolite, from Kimolos, an island in the Cretan Sea, where it was procured; formerly used as an astringent. **C. purpures'cens,** fuller's earth; compact bolar earth employed in the arts; used at times as a cooling application to inflamed nipples, etc.

**Ci'na.** Artemisia santonica and other varieties of artemisia; anthelmintic. **C. ci'na,** cinchona. **C. levan'tica,** see *Cina* and *Artemisia santonin;* this is the only variety of cina now imported.

**Cinab'aris.** Cinnabar.

**Cinæ'bene.** A constituent and volatile oil of artemisia.

**Cinæ'dia** (*kinaidia*). Masturbation; pæderasty; excessive indulgence of sexual appetite.

**Cin'ara.** Artichoke. **C. horten'sis,** Cynara scolymus. **C. scol'ymus,** Cynara scolymus.

**Cinchamidine'.** Hydrocinchonidine; an alkaloid from mother-water from which cinchonidine has been extracted.

**Cin'chene.** $C_{19}H_{20}N_2$. Base obtained from cinchonine.

**Cinchocerotin'.** $C_{27}H_{48}O_2$. Substance derived from some forms of South American calisaya bark.

**Cin'chol.** $C_{20}H_{34}O$. Substance like cholesterin, from Cinchona officinalis.

**Cincholine'.** Volatile, oily liquid alkaloid from mother-water of quinine.

**Cincho'na** (from the Spanish viceroy's lady, the Countess de Chinchon, who was cured of fever by it at Lima, about 1638). Called also Jesuit's bark or powder, cortex patrum, because it was introduced into Europe by the Jesuits; also Countess's powder and Cardinal del Lugo's powder, because he introduced it at Rome; and in France, Talbor's powder and English remedy, because successfully used there by Sir Robert Talbor, who kept it a secret. Cinchona is called also santonica bark, Peruvian bark, kina or quina, bark of barks, kinkina, cina cina, quinquina, magnum dei donum, and in Peru cascara and cascarilla. Pharmacopœial name (Ph. U. S. and Br.) of the bark of *Cinchona calisaya, Cinchona officinalis,* and other varieties of cinchona yielding not less than 5 per cent. of the total alkaloids and 2½ per cent. of quinine. The richest in the antiperiodic alkaloids is said to be the bark of *Cinchona succirubra,* of Ecuador, which, with other species, has been transplanted to India, Java, Jamaica, and other countries. The productiveness in alkaloids seems to have been increased by such transplantation. Dose, gr. x–ʒj (0.65–4.0) in decoction. (See also *Cinchonæ cordifoliæ cortex, Cinchonæ lancifoliæ cortex,* and *Cinchonæ oblongifoliæ cortex.*) A large number of natural alkaloids have been obtained from cinchona bark, and many artificial ones, which will be referred to under their appropriate heads. Several of these possess therapeutic interest, the chief of which, quinine, cinchonine, and other alkaloids, exist in combination with kinic, cinchonic, or quinic acid as kinates. *Quinine,* $C_{20}H_{24}N_2O_2$, is derived largely from the yellow; *cinchonine,* $C_{29}H_{22}N_2O$, from the pale bark *Quinidine,* $C_{20}H_{24}N_2O_2$, is another alkaloid, isomeric with quinine; *cinchonidia* or *cinchonidine,* $C_{19}H_{22}N_2O$, with cinchonine; and *quinicia* or *quinicine* and *cinchonicia* or *cinchonicine* are isomeric with cinchonine and cinchonidine, from which they are derived by heat. *Quinamine,* $C_{19}H_{24}N_2O_2$, and *conquinamine,* $C_{19}H_{24}N_2O_2$, and a number of other comparatively unimportant alkaloids, are also derived from the cinchona barks. (See *Quinine, Cinchonine,* etc.) Certain acid principles are also contained in the cinchona barks, as *quinic* or *chinic acid, cinchonic acid, cinchotannic acid,* and *kinovic* or *quinovic acid.* They also contain *quinovin,* which is decomposed by the action of muriatic acid into quinovic acid and a saccharine matter. **C. amygdalifo'lia.** See *Cinchonæ cordifolæ cortex.* **C. angustifo'lia,** C. lancifolia. **C. austra'lis,** species of cinchona growing in Bolivia; an inferior bark. **C. bark,** bark of any species of cinchona. **C. b. tan'nin,** cinchotannic acid. **C. ba'ses c.** alkaloids, see *Cinchona.* **C. bi'color,** an inferior bark; used as a substitute for genuine cinchona. **C. bolivia′na**, see *Cinchonæ cordifoliæ cortex.* **C. calisay′a**, see *Cinchonæ cordifoliæ cortex.* **C. carabayen′sis**, see *Cinchonæ caribææ cortex.* **C. carolinia′na**, Pinckneya pubens. **C. cine′rea**, C. pallida. **C. coccin′ea**, species of Guayaquil; bark is a variety of red cinchona bark. **C. condamine′a**, see *Cinchonæ lancifoliæ cortex.* **C. cordifo′lia**, bark of New Granada and Peru; known as Santa Martha bark and common yellow Carthagena bark or yellow bark of Santa Fé. **C. cris′pa**, species of Cinchona officinalis. **C. ellip′tica**, Carabaya bark is obtained from it. **C. erythan′thra**, a species affording quinamine. **C. excel′sa**, of India, Hymenodictyon excelsum, supposed to possess the antiperiodic virtues of the true cinchonas, does not contain any quinine or cinchonine; the bitter principle rather resembles that of the horse-chestnut. **C. feb′rifuge**, mixture of cinchona alkaloids procured from various barks. **C. fla′va**, see *Cinchonæ cordifoliæ cortex.* **C. hirsu′ta**, variety of C. pubescens; bark is a variety of Loxa bark. **C. lanceola′ta**, Peruvian species yielding Carthagena bark. **C. lancifo′lia**, yellow bark, variously called Colombia bark, Bogota bark, Coquetta bark, etc. **C. ledgeria′na**, variety of C. calisaya. **C. lox′a**, pale bark from Ecuador and Peru, recognized by a number of pharmacopœias. **C. micran′tha**, see *Cinchonæ lancifoliæ cortex.* **C. nit′ida**, pale cinchona bark, forming the principal part of Huanuco bark and imported sometimes as Loxa bark. **C. officina′lis** (yellow bark), see *Cinchonæ cordifoliæ cortex.* **C. ova′ta**, see *Cinchonæ cordifoliæ cortex.* **C. pal′lida**, C. lancifolia. **C. peruvia′na**, native of Peru and cultivated in India; yields pale bark. **C. pitay′a** or **pitayen′sis**, Pitaya bark. **C. pubes′cens**, see *Cinchonæ cordifoliæ cortex.* **C. ru′bra**, red cinchona. **C. scrobicula′ta**, see *Cinchonæ cordifoliæ cortex.* **C. succiru′bra**, see *Cinchona* and *Cinchonæ oblongifoliæ cortex.* **C. of Virgin′ia**, Magnolia glauca.

**Cincho′næ caribæ′æ cor′tex.** Bark of Exostema caribæum, Caribbæan or Saint Lucia bark; has properties similar to those of Peruvian bark, but contains neither quinine nor cinchonine. **C. cordifo′liæ cor′tex**, Cinchona calisaya, C. flava (Ph. U. S.); yellow, royal, or calisaya cinchona bark. Odor aromatic; taste strong, bitter, astringent. The active principle is *quinine.* The *false* or *spurious calisaya barks* are those of Cinchona calisaya, C. boliviana, C. ovata, called in Peru Cascarilla carabaya—the Carabaya bark of commerce, C. scrobiculata, C. pubescens, which furnishes the Cusco or Arica bark, and C. amygdalifolia. **C. lancifo′liæ cor′tex**, Cinchona pallida (Ph. U. S.), pale cinchona bark, Loxaor crown bark; bark of Cinchona condaminea and C. micrantha. Its odor is aromatic; taste pleasant, bitter, and astringent. Its active principle is *cinchonine.* **C. oblongifo′liæ cor′tex**, Cinchona rubra (Ph. U. S.), red cinchona bark, red bark, Cascarilla roxa and C. colorada, of South America. Odor and taste the same as the pale, but more intense. This variety of bark is assigned to the *Cinchona oblongifolia* and *C. succirubra*, but in the Ph. U. S. to the latter alone. Active principles, *cinchonine* and *quinine.* The last three are the only official varieties in the Pharmacopœia of the United States. There are many other varieties, however, which are genuine cinchona barks, and yet have not been considered worthy of an official position, as *Cinchona cinerea, gray bark, silver bark,* or *Huanuco* or *Lima bark,* which is obtained around Huanuco, in Peru, and, with the *Jaen* or *ash bark* and the *Huamilies bark,* belongs to the class of pale or Loxa barks. Among the genuine but inferior barks are those brought from the northern Atlantic ports of South America, which in commerce are variously called *Pitaya, Bogota, Carthagena, Maracaybo,* and *Santa Martha barks.* The *Bogota* is also called *Fusagasuga* and *Coquetta bark.* All these barks are bitter, astringent, tonic, and eminently febrifuge. While the alkaloids derived from the bark are usually prescribed, there are cases in which the bark in substance is often demanded. It is employed in every disease in which there is deficient tone; but in cases in which the stomach is much debilitated the powder should be avoided in consequence of the woody fibre, which might disagree. It is also used in enemata, gargles, etc., and in gangrenous ulcerations. *Bark jackets* were formerly employed, especially in the agues of children, consisting of waistcoats with powdered cinchona quilted between the layers.

**Cinchonamine′.** $C_{19}H_{24}N_2O$. Alkaloid in cuprea bark, usually associated with cinchonine; sialagogue, and far more toxic than quinine.

**Cin′chonate.** A salt of cinchonic acid.

**Cinchonetine′.** Substance obtained by acting on cinchonine sulphate with iron peroxide.

**Cincho′nia.** Cinchonine.

**Cinchon′ic.** Appertaining or relating to cinchona. **C. acid**, see *Cinchona.*

**Cinchonicine′.** When a salt of cinchonine is exposed to heat, with certain precautions, the alkaloid is changed into another, isomeric with itself, to which this name has been given. Cinchonicine and its sulphate possess the same medical properties as cinchonine and its salts. Dose, gr. v–xxx (0.32–2.0).

**Cinchonid′ia.** Cinchonidine.

**Cinchonidine′.** See *Cinchona.* Various salts are employed, as the benzoate, bromhydrate, hydrochloride, salicylate, sulphate, etc. **C. sul′phate**, *cinchonidinæ sulphas* (Ph. U. S. and Br.); neutral sulphate of cinchonidine; an alkaloid of exceedingly bitter taste, obtained from the bark of various species of cinchona; its action is similar to that of quinine, but it is less powerful; dose, gr. v–xxx (0.32–2.0).

**Cinchonine′.** $C_{20}H_{24}N_2O$. *Cinchonina* (Ph. U. S.); an alkaloid obtained from various species of cinchona; of a white color and bitter, slightly astringent taste; very soluble in alcohol and ether, but almost insoluble in water; dose, gr. v–x (0.32–0.65). **C. iodosul′phate**, antiseptol. **C. sul′phate**, *cinchoninæ sulphas* (Ph. U. S.), a salt of cinchonine which is sometimes substituted for sulphate of quinine; the action of the sulphate of cinchonine is similar to that of the sulphate of quinine, but it is less energetic, and consequently must be given in larger doses—gr. v–xxx (0.32–2.0).

**Cin′chonism.** The symptoms of poisoning by cinchona or its alkaloids, consisting chiefly of ringing in the ears, deafness, headache, and sometimes dimness of vision, also called quininism or quinism.

**Cin′chonize.** To saturate with cinchona or its alkaloids; to place in a condition of cinchonism.

**Cinchonol′ogy.** The scientific study of the botany of cinchona, and of the preparation and therapeutic uses of cinchona bark and the alkaloids derived from it.

**Cinchonom′etry.** Analysis of cinchona barks to determine the proportion of alkaloids in them.

**Cinchoquinine′.** White, tasteless, preparation, said to contain all the alkaloids of the cinchona barks, as quinine, cinchonine, quinidine, etc., but probably devoid of quinine.

**Cinchoratine′.** Aricine.

**Cinchotan′nic acid.** A form of tannic acid derived from cinchona bark.

**Cinchotine′.** $C_{19}H_{24}N_2O$. Alkaloid in various cinchona barks and cuprea barks.

**Cincin′nulus** (dim. of cincinnus). A curled or frizzled lock; hair on the temples.

**Cin′clisis** or **Cinclis′mus** (*kinklisis*, agitation). Movement of the thorax in dyspnœa; used, also, synonymously with winking.

**Cinc′ture feel′ing.** Girdle sensation.

**Cinefac′tion** (*cinis*, ash, *facio*, to make). Incineration.

**Cin′eol.** $C_{10}H_{18}O$. A constituent of the oils of wormseed, cajeput, and eucalyptus.

**Cinera′ceous.** Ash-colored; livid.

**Cinera′ria.** A genus of plants of the order *Compositæ.* **C. marit′ima**, a plant of Venezuela and other parts of tropical America, the juice of which has been recommended for the absorption of cataract.

**Cinera'tion.** Reducing to ashes; incineration.

**Cine'rea** (fem. of *cinereus*, ashy). Gray substance of the brain and nerves.

**Cine'real.** Relating to the cinerea or gray matter of the brain and spinal cord.

**Cineri'tious** (*cineres*, ashes). Of the color of ashes; the gray substance of the brain has been so called.

**Cine'sia.** For this and other words beginning with *Cine-* (derived from *kinesis*, motion), see under K.

**Cin'gula.** Band or belt **C. of Bur'dach,** upper part of gyrus fornicatus.

**Cingula'ria.** Lycopodium.

**Cin'gulum** (*cingo*, to gird). Zone; cincture; girdle; waist; herpes zoster; bundle of fibres in the gyrus fornicatus. **C. abdom'inis mus'culoaponeurot'icum,** the abdominal muscles. **Den'tal c.,** rounded projections of enamel at the palatocervical aspects of the teeth, particularly on the upper incisors. **C. Hilda'ni,** leathern girdle formerly used for the reduction of luxations and fractures of the extremities. **C. hu'meri,** pectoral arch. **C. mercuria'le,** mercurial belt; woollen girdle or belt containing mercurial ointment; was used as an antisyphilitic and in diseases of the skin. **C. pudicit'iæ,** a device formerly used to cover the female genitals, intended to prevent coition. **C. Sanc'ti Joan'nis,** Artemisia vulgaris. **C. Ven'eris,** corona Veneris. **C. veno'sum prostat'ico-urethra'le,** plexus of veins around the prostate and rectum which connect the veins of each side.

**Cinin'.** Santonine.

**Cin'nabar.** Hydrargyri sulphuretum rubrum. **C. Græco'rum,** see *Calamus rotang*.

**Cin'namate.** A salt of cinnamic acid. **Ben'zyl c.,** cinnamein. **Cin'namyl c.,** styracin. **So'dium c.,** betol.

**Cinnameïn'.** $C_9H_7O_2,C_7H_7$. Benzyl cinnamate; an oleaginous liquid in balsam of Peru and balsam of Tolu.

**Cin'namene.** $C_8H_8$. Colorless oil having an agreeable aroma, derived from cinnamic acid, storax, and other substances.

**Cinnam'ic.** Pertaining to or derived from cinnamon. **C. acid,** $C_9H_8O_2$; a crystalline acid obtained from Tolu and several other balsams; it is procured by the oxidation of cinnamic aldehyde, **C. al'dehyde,** $C_9H_8O$, main constituent of oil of cinnamon.

**Cinnamoden'dron axilla're.** Bitter bark of Brazil; used in asthenic fevers and scurvy. **C. cortico'sum,** aromatic bark of the Antilles; used as a substitute for Wintera aromatica.

**Cin'namole.** Cinnamene.

**Cinnamo'mic acid.** Cinnamic acid.

**Cinnamo'mum.** (Ph. U. S.) Cinnamon, cassia bark; the bark of C. cassia, C. saigonicum, and C. zeylanicum; carminative, astringent; dose, gr. j–x (0.065–0.65). The following preparations are official: *Water*, aqua cinnamomi; dose, ʒi-℥i (4.0–32.0). *Oil*, oleum cinnamomi; dose, ♏j–iij (0.065–0.2). *Spirit*, spiritus cinnamomi; dose, ♏x–ʒj (0.65–4.0). *Tincture*, tinctura cinnamomi; dose, ʒss–j (2.0–4.0). *Aromatic powder*, pulvis aromaticus, and *aromatic fluid extract*, extractum aromaticum fluidum, contain Ceylon cinnamon. **C. acu'tum,** Ceylon cinnamon. **C. al'bum,** Canella alba. **C. aromat'icum lig'num,** Canella alba. **C. cam'phora,** indigenous in China, Japan, and E. Asia; calmative in nervous diseases, used in spasmodic cough and asthmatic affections; and externally in the form of liniment. **C. cas'sia** or **C. chinen'se,** Chinese cinnamon. **C. culil'awan,** Laurus culilawan; bark is bitter and used in intestinal affections, blennorrhœa, etc. **C. iners',** tree of Sumatra; bark is a condiment; seeds are used in dysentery and bronchial affections of children. **C. saigon'icum,** Saigon cinnamon. **C. ve'rum,** Ceylon cinnamon. **C. win'teri,** Canella alba. **C. zeylan'icum,** tree of Ceylon, see *Cinnamon, Ceylon*.

**Cin'namon.** Cinnamomum. **Bas'tard c.,** Canella alba; cascarilla. **Black c.,** Pimenta acris, a plant of Jamaica. **Ceylon' c.,** Cinnamomum zeylanicum and its inner bark; carminative and astringent. **Chi'na** or **Chinese' c.,** bark of Cinnamomum cassia or other species of China. **Mal'abar c.,** Laurus cassia. **C. oil,** oleum cinnamomi. **Saigon' c.,** Cinnamomum saigonicum. **True c.,** Cinnamomum zeylanicum. **C. wa'ter,** aqua cinnamomi. **Wild c.,** Laurus cassia.

**Cinnamos'ma.** Stimulant and aromatic bark, resembling canella.

**Cin'namyl.** $C_9H_7O$. Radical in cinnamic acid or hydrate of cinnamyl. **C. al'cohol,** $C_9H_{10}O$, from heating styracin with a caustic alkali. **C. al'dehyde,** $C_9H_8O$; oil derived from oxidation of cinnamyl alcohol; main constituent of oil of cinnamon. **C. cin'namate,** styracin. **C. eu'genol,** derivative of eugenol; in colorless, odorless, tasteless crystals; presumed to be useful in tuberculous affections. **C. guai'acol,** see *Guaiacol*.

**Cinnam'ylate of caffeine'.** Said to be well adapted for hypodermic injections; a diuretic and cardiac stimulant.

**Cinnamyl'ic acid.** Cinnamic acid.

**Cinquefoil,** sink'foil. Potentilla reptans and other species of potentilla. **Marsh c.,** Comarum palustre. **Nor'way c**, Potentilla norvegica.

**Cin'ta** (*cingo*, to apply a belt). Girdle. **C. beriber'ica,** feeling of tightness around the waist, symptomatic of beriberi.

**Cinzil'la.** Herpes zoster.

**Ci'on** (*kion*, a column). Uvula. Excrescence of vulva. Eruption on the nose.

**Cionec'tomy** (*kion*, uvula, *cktome*, excision). Cionotomy.

**Cioni'tis** (*kion*, uvula + *itis*). Uvulitis, staphylitis.

**Cionopto'sis** (*kion*, uvula, *ptosis*, a falling down). Elongation of the uvula.

**Cionorrhaph'ia** (*kion*, uvula, *rhaphe*, suture). Staphylorraphy.

**Cion'otome** (*kion*, uvula, *tome*, incision). Curved scissors for cutting off the uvula.

**Cionot'omy.** Excision of the uvula; staphylotomy.

**Cipu'ra martinicen'sis.** Species of herbs, root of which is tonic, astringent, and emmenagogue.

**Circæ'a** (after Circe, the enchantress). Atropa mandragora. **C. lutetia'na,** Parisian circæa, enchanter's nightshade, or bindweed, mandrake. This plant, common in the vicinity of Paris, was formerly considered resolvent and vulnerary, and supposed to possess magical properties. **C. pubes'cens** or **vulga'ris,** C. lutetiana.

**Circel'li** (pl. of circellus). Small circles. **C. cerebel'li,** laminæ of the cerebellum. **C. veno'si spina'les** or **vertebra'les,** transverse veins between the anterior and posterior longitudinal spinal veins.

**Circel'lus.** Small circle; applied to circular anastomoses. **C. veno'sus foram'inis intervertebra'lis,** plexus of veins around the intervertebral foramen. **C. v. hypoglos'si,** plexus of veins around the hypoglossal nerve in the anterior condyloid foramen.

**Cir'cinate.** Resembling a ring in shape; term applied to the appearance of cutaneous lesions.

**Cir'cinus** (dim. of *kirkos*, circle). Herpes zoster.

**Cir'cle.** Circulus; circuit. **C. of Ca'rus,** Carus's curve. **Cil'iary c.,** ciliary ligament. **Diffu'sion c.,** indistinct image resulting from the rays not being focused exactly at the retina. **C. of Hal'ler,** circulus Halleri. **Tym'panal c.,** annulus of the tympanum. **C. of Wil'lis,** see *Circulus*.

**Cir'cuit.** In pathological language, generally means period, course, revolution. In electricity, the path of the current from one pole to the other of a battery or electrical machine. **Bro'ken c.,** term applied to galvanic circuit when the path of the current is interrupted. **Closed c.,** term applied to the galvanic circuit when there is no impediment to the current of electricity. **Interrup'ted c.,** broken c. **O'pen c.,** broken c. **Short c.,** a circuit of limited extent formed between two points on a larger circuit; also a current confined to a battery cell.

**Cir′cular** (*circulus*, circle) Having the form of a circle, as circular amputation, circular bandage, etc. **C. insan′ity,** insanity alternating in different manifestations, interspersed with lucid intervals; periods of depression and excitement, for example, recurring alternately. **C. si′nus of Rid′ley,** see *Sinus coronarius.*

**Circula′ris.** Circular or orbicular muscle, as of the lips or eyelids or sphincter ani.

**Cir′culating.** Carried around in the blood-current to the tissues of the body. **C. flu′id,** see *Blood.* **C. pro′teid,** a proteid which simply floats about in the circulating fluids and is then excreted without being utilised in the body.

**Circula′tion.** Physiologists give this name to the motion of the blood through the different vessels of the body (*sanguimotion*); to that function by which the blood, setting out from the left ventricle of the heart, is distributed to every part of the body by the arteries through the capillaries, proceeds into the veins, returns to the heart, enters the right auricle, and passes into the corresponding ventricle, which sends it into the pulmonary artery, to be distributed to the lungs, whence it issues by the pulmonary veins and passes into the left auricle; from this it is sent into the left ventricle, and is again distributed by means of the arteries. Circulation also denotes continuous movement of the air. **Arte′rial c.,** the movement of blood through the arteries. **Cap′illary c.,** that which takes place in the capillary vessels, and is, in some measure, independent of the action of the heart. See *Capillary vessels.* **Collat′eral c.,** circulation through other vessels when the supply of blood by vessels important in the ordinary system of circulation is cut off or closed, as after ligation, amputation, etc. **Compen′satory c.,** collateral c. **Deriv′ative c.,** the direct passage of blood from the arterial to the venous system without going through the capillaries. **First c.,** vitelline c. **Fe′tal c.,** see *Fetal.* **Great′er c.,** systemic c. **Les′ser c.,** pulmonary c. **Placen′tal c.,** c. of the blood of the fœtus through the umbilical arteries, fœtal veins, etc., and of the blood of the mother through the uterine arteries, sinuses, etc., and uterine veins. **Por′tal c.,** see *Vena porta.* **Prim′itive c.,** vitelline c. **Pul′monary** or **pulmon′ic c.,** the circle from the right to the left side of the heart through the lungs. **System′ic c.,** the circulation of blood from the left ventricle through the aorta and general arterial system into the capillaries, thence into the veins and back to the right auricle of the heart. **Ve′nous c.,** the sluggish movement of dark blood through the veins toward the heart. **Vitel′line c.,** circulation during existence of the umbilical vesicle, to the vitellus and back to the heart, before the establishment of the placental circulation at the beginning of the third month.

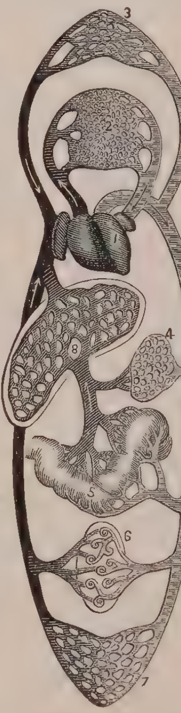


Diagram of the circulation. (Dalton.) 1, heart; 2, lungs; 3, head and upper extremities; 4, spleen; 5, intestine; 6, kidney; 7, lower extremities; 8, liver.

**Cir′culatory.** Relating to the circulation of the blood; sanguimotor.

**Cir′culus.** Circle or ring; cycle; any part of the body which is round or annular, as *circulus oculi,* globe of the eye; also applied to objects which are by no means round, as the circle of Willis. **C. arterio′sus Halle′ri,** plexus of vessels on the surface of the sclerotic where the optic nerve enters that membrane. **C. a. i′ridis,** c. iridis. **C. a. mus′culi cilia′ris,** very small arteries arranged in circular form in the centre of the ciliary muscle. **C. a. ner′vi op′tici,** plexus of arteries in the sclerotic, circular in form, around the optic nerve, consisting of branches from the short posterior ciliary arteries. **C. a. umbilica′lis,** circular anastomosis of vessels around the umbilicus. **C. a. Willis′ii,** circle of Willis; an anastomotic circle at the base of the brain, formed by the anterior and posterior cerebral arteries and the communicating arteries of Willis. **C. a. Zinn′ii,** circulus arteriosus nervi optici. **C. artic′uli vasculo′sus,** vascular circle around the cartilages of the joints. **C. callo′sus Halle′ri,** fibrocartilaginous ring around each auriculoventricular opening of the heart, to which the tricuspid and mitral valves are attached. **C. cilia′ris,** ciliary ligament. **C. conjuncti′væ,** see *Corona conjunctivæ.* **C. Halle′ri,** circle of Haller; circular anastomosing chain formed under the areola by the veins of the nipple. **C. i′ridis** or **C. i. ma′jor,** arterial circle at anterior border of the ciliary muscle, formed by branches of the long posterior ciliary and of the anterior ciliary arteries. **C. i. mi′nor,** a circle of anastomoses formed by the arteries of the iris near the pupillary margin. **C. Mascagn′ii,** circle of minute capillaries in the vicinity of zonule of Zinn in the fœtus. **C. membrana′ceus** or **membrano′sus,** hymen. **C. mi′grans,** geographical tongue. **C. os′seus,** tympanic portion of the temporal bone. **C. quad′ruplex,** fourfold bandage used by the ancients. **C. san′guinis aor′ticus** or **ma′jor,** systemic circulation. **C. s. mi′nor** or **pulmona′lis,** pulmonic circulation. **C. tonsilla′ris,** plexus formed by tonsillar branches of the glossopharyngeal nerve around the base of the tonsil. **C. umbilica′lis,** circle around the umbilicus in the subperitoneal tissue by branches from the superior and inferior epigastric and superior vesical arteries. **C. veno′sus,** venous circle in the embryo which bounds the area vasculosa or vascular area. **C. v. are′olæ,** venous circle formed by the union of the veins around the nipple; it embraces, however, only two-thirds of the circuit. **C. v. cilia′ris** or **v. cor′neæ,** canal of Schlemm. **C. v. Halle′ri,** c. v. mammæ. **C. v. i′ridis,** ciliary circle. **C. v. ischiad′icus,** anastomosis between internal iliac and sciatic veins. **C. v. mam′mæ,** plexiform anastomosis of subcutaneous veins around the nipple. **C. v. obturato′rius,** anastomosis between internal circumflex and external and internal iliac veins around the obturator foramen. **C. v. orbicula′ris cilia′ris,** canal of Fontana. **C. v. Rid′leyi,** sinus coronarius. **C. v. trachea′lis,** circle formed around the trachea by the thyroid veins just below the thyroid gland. **C. v. umbilica′lis,** circle of vessels around the umbilicus. **C. Willis′ii,** c. arteriosus Willisii. **C. Zin′nii,** c. arteriosus nervi optici.

**Circum-** (Lat.). As a prefix, around.

**Circuma′nal** (*circum,* around, *anus*). Surrounding the anus. **C. glands,** glands around the anus.

**Circumbuc′cal** (*circum,* around, *bucca,* mouth). Around the opening of the mouth.

**Circumbul′bar.** Around the eyeball.

**Cir′cumcise.** To remove the foreskin of the penis.

**Circumci′ser.** One who practises circumcision, especially ritual circumcision.

**Circumcis′ion.** The removal, in whole or in part, of the foreskin of the penis; posthetomy. **C. of the conjuncti′va,** or **C. of the cor′nea,** peritomy. **Rit′ual c.,** c. performed on infants as a religious rite; practised among the Hebrews, Mohammedans, and others. A similar operation is practised among the Egyptians, Arabians, and Persians on the female, *circumcisio fœminarum,* by removing a portion of the nymphæ and at times the clitoris.

**Circumclu′sion** (*cludo,* to close). Closure of an artery by a pin and wire loop; a form of acupressure.

**Circumcor′neal.** Around the cornea.

**Circumduc′tion** (*duco,* to lead). Circular motion impressed on a luxated bone for the purpose of reducing it.

**Circumferen'tia articula'ris.** The cylindrical surface which produces lateral articulation of the radius; also the surface by which the head of the ulna similarly articulates with the lower end of the radius.

**Circumferen'tial car'tilage.** Circular fibrocartilage surrounding the cavity of a joint.

**Cir'cumflex** (*circumflecto*, to bend round). Curved circularly; name given to several organs **C. ar'teries of the arm** are distinguished into anterior and posteror; they arise from the axillary, and are distributed around the shoulder. **C. ar'teries of the thigh**, distinguished as external and internal, are given off from the profunda, and surround the head of the thighbone. **C. il'iac ar'teries**, see *Iliac*. **C. mus'cle**, muscle arising from the spinous process of the sphenoid bone, and inserted into the velum pendulum palati; it stretches the velum. **C. nerve**, axillary nerve. **C. of pal'ate**, circumflexus palati muscle. **C. veins**, follow the arteries.

**Circumflex'or.** Muscle that bends or twists, as the circumflexor muscle of the Eustachian tube.

**Circumflex'us.** Circumflex. **C. pala'ti** or **C. p. mol'lis**, tensor palati; abductor of the Eustachian tube.

**Circumgyra'tion** (*gyrus*, circle). Vertigo.

**Circumin'sular.** Around the island of Reil.

**Circumlen'tal.** Around a lens; specifically, the crystalline lens.

**Circumnu'clear.** Around a nucleus.

**Circumnuta'tion.** Describing a circle by variable arcs.

**Circumoc'ular.** Surrounding the eye.

**Circumor'bital.** Around the orbit.

**Circumpo'lar.** Surrounding a pole.

**Circumpolariza'tion.** Rotation of polarized light.

**Cir'cumscribed** (*circum*, around *scribo*, to write). Limited; a term applied in pathology to tumors which at their base are distinct from the surrounding part.

**Circumsec'tion** (*seco*, to cut). Circumcision.

**Circumval'late** (*vallo*, to intrench). Surrounded by a ridge or prominence. **C. papil'læ**, papillæ on the posterior portion of the tongue, conical in shape and surrounded by a narrow trench-like ring.

**Circumvas'cular.** Around a blood-vessel or lymphatic.

**Circumvolute'.** Twisted.

**Circumvolu'tion.** A winding around; convolution; coil. **Cris'tate c.**, dentate convolution.

**Cir'cus** (circle). Circular bandage. **C. move'ments**, circular locomotion observed in brain affections of a certain character.

**Cirrhag'ra** (*cirrus*, curl, *agra*, seizure). Plica. **C. Polono'rum**, plica polonica.

**Cirrhono'sis** (*kirrhos*, yellow). Cirrhosis.

**Cirrhon'osus** (*kirrhos*, yellow, *nosos*, disease). Disease of the fœtus in which there is a yellow coloration of the serous membranes.

**Cirrho'sis** (*kirrhos*, yellow). Pathological condition in which the tissues become indurated in consequence of an excessive formation of connective tissue followed by contraction. The term was originally applied to a granular condition of the liver caused by yellow coloring-matter sometimes secreted in the tissues. **Alcohol'ic c.**, c. occurring in those addicted to an immoderate use of alcoholic liquors. **Atroph'ic c.** or **C. atroph'ica**, the later stage of c., in which the liver is reduced in size through contraction of the newly formed fibrous tissue and destruction of the acini. **Bil'iary c.**, c. affecting the tissues around the bile ducts. **Car'diac c.** or **C. cor'dis**, c. of the liver associated with chronic interstitial inflammation of the heart. **Charcot's' c.**, hypertrophic c. **Fat'ty c.**, c. hypertrophica adiposa. **Glis'son's c.**, perihepatitis. **C. hep'atis**, c. of the liver; interstitial hepatitis, granulated, granular, mammillated, tuberculated, or hobnailed liver. The granular induration of drunkards is sometimes called lobular cirrhosis. **Hypertroph'ic c.** or **C. hypertroph'ica**, c. of the liver in which the great increase in the connective-tissue stroma causes an increase in size of the organ. **C. hypertroph'ica adipo'sa**, interstitial inflammation of the liver with fatty degeneration. **Ir'ritative c.**, c. from irritation by some deleterious agent, such as alcohol. **C. jec'oris**, c. of the liver. **C. of the kid'ney**, interstitial nephritis **Laennec's' c.**, c. hepatis. **C. of the liv'er**, c. hepatis. **Lob'ular c.**, alcoholic c. **C. of the lung**, interstitial pneumonia; condition of the lung, the general character of which is a tendency to consolidation or contraction of the pulmonary tissue, with dilatation of the bronchial tubes. It has been termed fibroid degeneration of the lung. **Mala'rial c.**, c. due to the action of the malarial poison. **Multilob'ular c.**, c. hepatis. **Mus'cular c.**, neurotic atrophy of muscle from injury or disease of the ganglion cells of the anterior cornu of the cord, medulla, or pons, or of the efferent nerve fibres connecting them with the muscles. **C. of the o'vary**, interstitial oöphoritis. **C. parasita'ria**, interstitial hepatitis caused by a parasite, Distomum campanulatum. **C. perito'ne'i**, peritonitis deformans. **Peripor'tal c.**, atrophic c. **Pig'mentary c.**, a form of c. hepatis sometimes occurring in diabetes. **C. pulmo'nis** or **pulmo'num**, interstitial pneumonia; c. of the lung. **C. re'num**, interstitial nephritis. **C. of the stom'ach**, chronic interstitial gastritis. **Syphilit'ic c.**, lobular disease of the liver, with gummata and deformity; or interstitial inflammation of the liver, with hyperplasia of connective tissue. **Unilob'ular c.**, c. hepatis, involving single lobules. **C. ventric'uli**, c. of the stomach.

**Cirrhot'ic.** Affected with or having the character of cirrhosis. **C. inflamma'tion**, cirrhosis.

**Cir'ri** (pl. of cirrus). Locks of hair; tendrils. **Aud'itory c.**, hair-like elements in the internal ear, presumably associated with audition.

**Cirsaneurys'ma** (*kirsos*, varix). Cirsoid aneurysm.

**Cir'sicus.** Varicose.

**Cir'sium arven'se.** Common plant, used in France in the form of cataplasm in hemorrhoids, and worn as an amulet. **C. macula'tum**, Carduus marianus.

**Cirsobleph'aron** (*kirsos*, varix, *blepharon*, eyelid). Varicosity of the eyelid.

**Cir'socele** (*kirsos*, varix, *kele*, hernia). Varicose hernia; by some authors employed synonymously with varicocele; by others, *varicocele* is the tumor formed by the veins of the scrotum; *circocele*, the varicose dilatation of the spermatic veins. The scrotum feels as if it contained earth worms; it is commonly an affection of no consequence, demanding merely the use of a suspensory bandage, but sometimes requires an operation. See *Varicocele*.

**Cir'soid** (*kirsos*, varix, *eidos*, resemblance). Varicose, or resembling a varix; term once applied to the upper part of the brain, as well as to the spermatic vessels. **C. an'eurysm**, see *Aneurysm*.

**Cirsom'phalos** or **Cirsom'phalus** ((*kirsos*, varix, *omphalos*, navel). Varicose dilatation of the veins surrounding the navel. The term has likewise been applied to the aneurysmal dilatation of the arteries of that region; called also *varicomphalus*.

**Cirsophthal'mia** (*kirsos*, varix, *ophthalmos*, eye). Varicose ophthalmia; a high degree of ophthalmia, in which the vessels of the conjunctiva are considerably injected; varicose condition of corneal staphyloma.

**Cirsot'omy** (*kirsos*, varix, *tome*, incision). Operation for the removal of varices by incision.

**Cirsul'cus.** Varicose ulcer.

**Cir'sus** (Pr., *kirsos*). Varix.

**Cis'sa.** Softening; malacia.

**Cissampe'lia** or **Cissampeline'.** Principle in pareira root ($C_{18}H_2NO_3$). See *Pareira brava*.

**Cissam'pelos abu'tua.** Chondodendron tomentosum. **C. capen'sis** grows in the mountainous parts of the Cape of Good Hope; root is used as an emetic and cathartic by the Boers. **C. glaber'rima**, see *Pareira brava*. **C. microcar'pa**, C. pareira. **C. parei'ra**, Pareira brava.

**Cis′sus ac′ida.** Sacred vine of India; roots are applied externally to buboes and piles. **C. ala′ta** has astringent leaves. **C. digita′ta,** native of Arabia; leaves are antipyretic. **C. glau′ca,** elephants′ vine; juice is used in form of plaster; leaves are antipyretic. **C. heptaphyl′la,** native of India; used in diseases of the eye. **C. quadrangula′ris** grows in E. Indies and Africa; the leaves are used in affections of the bowels, and are applied externally in lumbago. **C. quinquefo′lia,** Ampelopsis quinquefolia.

**Cis′tern.** A receptacle for water or other fluid. See *Cisterna*. **Lum′bar c.,** receptaculum chyli. **C. of Pecquet′,** receptaculum chyli.

**Cister′na** (*cista*, chest). Term applied to various parts of the body which serve as reservoirs for different fluids: fourth ventricle of the brain; common meeting of the lactiferous vessels in the mamma. **C. am′biens,** arachnoid canal: subarachnoid space around crura cerebri. **C. cer′ebri,** fourth ventricle. **C. cerebromedulla′ris,** subarachnoid space. **C. chias′matis,** interpeduncular space. **C. chy′li,** receptaculum chyli. **C. cor′poris callo′si,** third ventricle; subarachnoid reservoir or confluence of vessels at the fossa of Sylvius. **C. fos′sæ Syl′vii,** c. corporis callosi. **C. intercrura′lis profun′da,** space between the arachnoid and a cerebral peduncle. **C. intercrura′lis superficia′lis,** c. pontis. **C. lumba′ris,** receptaculum chyli. **C. mag′na,** fourth ventricle; part of the subarachnoid space above the transverse fissure of the cerebellum. **C. Pecquet′i,** receptaculum chyli. **C. perilymphat′ica vestib′uli,** space separating the utricle and saccule from the osseous wall of the vestibule. **C. pon′tis,** subarachnoid space. **C. sem′inis,** receptacle of the semen. **C. subarachnoida′lis,** subarachnoid space.

**Cis′tus.** A genus of glants of the order *Cistaceæ*. **C. canaden′sis,** Helianthemum canadense.. **C. cre′ticus,** gum cistus, rock rose; systematic name of the plant whence labdanum, labdamen, or ladanum, a blackish-green, gum-resinous substance of agreeable smell, is obtained. Formerly it was a component of warm plasters, and prescribed internally as a stomachic. Ladanum is also obtained from *Cistus ladaniferus* and *C. laurifolius*. **C. gum,** C. creticus. **C. salvifo′lius,** C. creticus. **C. taur′icus,** C. creticus.

**Cith′arus.** Thorax.

**Citra′go** or **Citra′ria.** Melissa.

**Cit′ral.** $C_{10}H_{16}O$. An aldehyde in oil of lemon.

**Cit′ras.** Citrate.

**Cit′rate.** A salt of citric acid.

**Cit′rea mal′us.** See *Citrus medica*.

**Cit′rene.** ($C_{10}H_{16}$). Terebinthinate volatile oil. from rind of the lemon. **C. hy′drate** or **C. terpin′,** crystallized substance from adding water to citrene.

**Citre′olus.** Cucumis sativus.

**Cit′reous.** Lemon-like.

**Cit′ric.** Relating to lemon. **C. acid,** $H_3C_6H_5O_7,H_2O$, acidum citricum (Ph. U. S. and Br.), acid of lemons; is found in the juice of the lemon, lime, cranberry, etc., from which it is obtained, and has an extremely acid, but agreeable taste; employed in medicine as an antiseptic, refrigerant, and diuretic.

**Cit′rine oint′ment.** Ointment of nitrate of mercury.

**Citromy′ces** (*mykes*, fungus). Genus of fungi which have the property of changing sugar into citric acid.

**Cit′ron.** The fruit of Citrus medica; also the lemon.

**Citronelle′.** Artemisia abrotanum; melissa.

**Cit′rophen.** Compound of citric acid and paraphenetidin; white, soluble powder; antineuralgic and antiperiodic; dose, gr. vij–xv (0.5–1.0).

**Citrophos′phate.** Combination of a citrate and a phosphate.

**Citropyrophos′phate.** Combination of a citrate and a pyrophosphate.

**Cit′rul, Sicil′ian.** Cucurbita citrullus.

**Citrul′lus.** Cucurbita citrullus. **C. ama′rus,** African plant, called by the Boers bitterapple of wild watermelon, the pulp of which, like that or colocynth, is a drastic cathartic. **C. colocyn′this** or **vulga′ris,** Cucumis colocynthis.

**Cit′rus.** A genus of trees of the order *Rutaceæ*. **C. ac′ida,** see *Lime*. **C.a′cris,** species of Citrus medica; its fruit is called lime. **C.auran′tium,** systematic name of the orange tree. The flowers of the orange, *aurantii flores*, are highly odoriferous, and are used as a perfume. On distillation they yield a small quantity of essential oil, *oleum aurantii*, oleum or essentia neroli, neroli, forming with spirit and water, *aqua aurantii florum* (Ph. U. S.), *aqua aurantii floris* (Ph. Br.), or orange-flower water. They were once used in convulsive and epileptic cases; the leaves *folia aurantii*, have a bitterish taste and furnish an essential oil, and have been used for the same purposes as the flowers. The yellow rind of the fruit, *aurantii cortex* (Ph. Br.), of Citrus bigaradia, bigarade or bitter orange, orange-peel, is an aromatic bitter, and is used in dyspepsia and when that class of remedies is required. The juice, succus aurantii, orange juice, is a grateful acid, and used as a beverage in febrile and scorbutic affections. The Ph. U. S. has *aurantii amari cortex*, bitter orange-peel, the rind of the fruit of Citrus vulgaris; and aurantii dulcis cortex, sweet orange-peel, the rind of the fruit of Citrus aurantium. Citrus aurantium has a large number of varieties in different parts of the world, the fruit differing in appearance, taste, and quality. **C. berga′mia,** Citrus mella rosa. **C. bigara′dia,** see *Citrus aurantium*. **C. decuma′na,** shaddock. **C. limet′ta,** see *Citrus mella rosa* and *Lime;* also a variety of C. medica. **C. limo′num,** C. medica. **C. med′ica,** systematic name of the lemon tree. The lemon has a fragrant odor, depending upon the essential oil of the rind, oleum limonis. The outer rind, cortex limonum, *limonis cortex* (Ph. U. S. and Br.), lemon-peel, is used in the same cases as the cortex aurantii. The juice, *succus limonis* (Ph. U. S. and Br.), limonum succus, is sharp but gratefully acid, the acidity depending upon the citric acid it contains, and is given as a refrigerant beverage in febrile affections. In doses of half an ounce to an ounce, three times a day, it has appeared to some to exert a sedative influence on the circulation, and has been given, apparently with benefit, in acute rheumatism and rheumatic gout. Alone, or combined with wine, it is prescribed in scurvy, putrid sore throat, etc. Its general properties are refrigerant and antiseptic. Sweetened and diluted, it forms lemonade. *Artificial lemon juice* is made by dissolving an ounce of citric acid in fourteen fluidounces of water, adding a few drops of essence of lemon. *Citron tree* is likewise considered to belong to the same species—Citrus medica. Its fruit is called *cedromela*. It is larger and less succulent than the lemon. **C. mel′la ro′sa,** another variety of Citrus medica, affords the bergamot, as also do Citrus limetta and C. bergamia; see *Bergamot*. **C. vulga′ris,** bitter orange; Seville orange, from East Indies, China, and Cochin China, Southern Europe, Northern Africa, and the West Indies. The leaves are employed in nervous diseases, and the rind is tonic and carminative.

**Cit′tos.** Hedera helix.

**Citto′sis.** Chlorosis; malacia.

**Cit′y a′vens.** Geum urbanum.

**Civ′et.** Unctuous perfume, of very penetrating odor, obtained from different mammalia of the Viverra kind, particularly from Viverra civetta, contained in a fold of the skin situated between the anus and the organs of generation; very seldom employed as an antispasmodic.

**Civet′ta.** Civet.

**Civiale′s′ opera′tion.** Lithotrity.

**Civini′ni′s spine.** Prominence on the outer edge of the external pterygoid plate.

**Cl.** Chemical symbol for chlorine.

**Clab′bergrass.** Galium verum.

**Clack′ing.** Sound made by valves coming together, as at the mouth of the pulmonary artery or of the aorta during the dilatation of the ventricles.

**Cla′des glandula′ria** (glandular scourge). Plague.

**Cladis′cus** (*klados*, young shoot). Ramusculus.

**Clad′odont** (*klados*, branch, *odous*, tooth). A tooth having a branched crown.

**Cladon′ia islan′dica.** Lichen islandicus. **C. pyxida′ta,** species at one time prescribed for intermittent fever and whooping-cough. **C. rangiferi′na,** European plant; pectoral and stomachic. **C. sanguin′ea,** Brazilian species; employed in aphthæ. **C. vermicula′ris,** species of South America; stomachic.

**Cladoph′ytum** (*klados*, branch, *phyton*, vegetable). Growth of mycoderma in the intestines of animals.

**Cladospo′rum cancerog′enes.** Canceromyces.

**Clad′othrix** (*klados*, branch, *thrix*, hair). A genus of *Schizomycetes*, of long, filamentous formation. See *Bacteria*. **C. asteroi′des,** Streptothrix eppingeri. **C. bo′vis,** Actinomyces bovis. **C. ca′nis,** resembles Actinomyces bovis. **C. dichot′oma** (Cohn and Zopf), Leptothrix ochracea; found in impure water. **C. foers′teri** (Cohn), causes concretions in the tear ducts; Streptothrix foersteri. **C. intrica′ta** (Russel), detected in earthy deposit in the Bay of Naples. **C. liquefa′ciens,** Streptothrix alba. **C. ochra′cea,** obtained from water containing carbonate of iron; the latter becomes oxidized.

**Cladras′tis tincto′ria.** Yellow ash, fustic tree, yellow locust; indigenous tree, flourishing from Kentucky to Alabama. The bark of the tree and the roots are cathartic.

**Cla′dus.** Ramus.

**Clam′my** (Sax., *clam*, D., *klam*, moist). Viscous; glutinous. **C. weed,** Polanisea graveolens.

**Clam′or.** Cry; loud exercise of the voice; vociferation.

**Clamp.** Arrangement for holding fast to a tumor, artery, etc., by compression.

**Clan′gor** (*klange*, loud clang or noise). A resonant, sharp, metallic sound. **C. infan′tum,** asthma thymicum; laryngismus stridulus.

**Clap.** Gonorrhœa ("leper with a *clap dish*, to give notice he is infectious."—Massinger). **C. threads,** albuminous filaments in the urine in gonorrhœa.

**Clapotage′** or **Clapotement′** (Fr.). Succussion sound.

**Clap′ton's line.** A sign of the chronic toxic action of copper, being a green discoloration of the teeth and gums.

**Clap′ton-Ha′vers's glands.** Mucilaginous glandules or fatty masses in the synovial articular fringes, and presumed by Havers to secrete the synovial fluid.

**Clap′wort.** Orobanche americana.

**Clar′et.** French wine, which may be used whenever wine is required; also a wine impregnated with spice and sugar, called likewise *vinum hippocraticum*. **C. stain,** a form of angioma or nævus.

**Claret′a** (*clarus*, clear). Albumen ovi.

**Clarif′icant** (*clarus*, clear, *facio*, to make). That which has the effect of making a liquid clear.

**Clarifica′tion** (*clarus*, clear, *facio*, to make). Depuration; pharmaceutical operation consisting in separating from a liquid every insoluble substance held in suspension by it that affects its transparency. Decanting and filtering are the operations necessary for this purpose.

**Clar′ified hon′ey.** See *Mel despumatum*.

**Clar′ify.** To make clear a liquid in which foreign matter is in solution or suspension.

**Clarke's col′umn.** A mass of cells occupying a tract in the dorsal region of the spinal cord, to the side and a little back of the central canal. **C.'s corrod′ing ul′cer,** ulcer of the neck or of the portio vaginalis of the uterus. **C.'s tongue,** indurated and fissured tongue, due to syphilitic inflammation of that organ. **C.'s vesic′ular col′umn,** C.'s column.

**Clark's sign.** Tympanitic sound elicited over the region of the liver in tympanites caused by perforative peritonitis.

**Cla′ry, com′mon.** Salvia scla

**Cla′sis.** Fracture; fragment.

**Clas′ma.** Fragment.

**Clasmat′ocytes** (*klasma*, anything broken in pieces, *kytos*, cell). Very large branched cells discovered by Ranvier in the connective tissue, which tend to break up into small particles. They resemble mast cells, but contain no basophilic granules; they are believed by some observers to be mast cells in which these granules have been destroyed by fixatives containing osmic acid.

**Clasmatocyto′sis.** The formation of cells by division; also the breaking up into small particles, of clasmatocytes.

**Clasp-knife rigid′ity.** Reflex spasm of the legs in myotatic irritability of the spinal cord, the peculiar motion of extension suggesting the name.

**Clasps.** Split cylinders embracing teeth; used as retainers for dental plates.

**Class.** Assemblage of a certain number of objects: in natural history and in medicine, a group of objects or individuals having one or more common characters. Classes are divided into *orders*, orders into *families*, families into *genera*, genera into *species*, and these last into *varieties*.

**Classifica′tion** (*classis*, class, *facio*, to make). Formation of classes; methodical distribution of any object whatever—as in natural history—into subkingdoms, classes, orders, families, genera, species, and varieties. See *Nosography* and *Nosology*.

**Clas′tic** (*klao*, to break). Easily broken; capable of being taken apart piecemeal. **C. anat′omy,** see *Anatomy*.

**Clas′tothrix** (*klastos*, broken, *thrix*, hair). Trichorrhexis nodosa.

**Clathrocys′tis** (*klethra*, trellis, *kystis*, pouch). Genus of bacteria which form zoöglœa in circular layers. **C. ro′seopersici′na** (Cohn), Beggiatoa roseopersicina.

**Claudica′tio** (*claudico*, to halt). Claudication. **C. anat′ica,** staggering; waddling. **C. sponta′nea,** limping from the hip-joint, a symptom noticed at an early period of hip-joint disease in children.

**Claudica′tion.** The act of halting or limping; lameness. This condition may be the result of the shortening or elongation of one of the lower limbs, of ankylosis of the joints, palsy of the muscles, pain, etc. **Intermit′tent c.,** a term employed by Charcot to denote the occurrence of a sudden limp occasioned by walking and relieved by rest; it is due to arteriosclerosis causing obliteration of the arterioles or to aneurysm of a larger artery in the limb.

**Clau′dius, cells of.** Large, conoidal nucleated cells situated in the organ of Corti on either side of the arches to the outer side of the ciliated cells. **C., fos′sa of,** ovarian fossa; a depression in the back wall of the pelvis in which the ovary rests.

**Claustropho′bia** (*claustrum*, a closed place, *phobos*, fear). Morbid dread of confinement in closed places.

**Claus′trum.** Barrier: layer of gray cerebral matter situated between the island of Reil and the external capsule. **C. gut′turis,** isthmus of the fauces. **C. o′ris** or **pala′ti,** velum pendulum palati. **C. virginita′tis** or **virgina′le,** hymen.

**Clausu′ra** (*claudo*, to shut). Imperforation of any canal or cavity.

**Cla′va.** Calamus aromaticus. Posterior pyramid; enlargement of funiculus gracilis in the medulla oblongata. **C. rugo′sa,** Acorus calamus.

**Clavæfor′mis** (*clava*, knotty branch, *forma*). Club-shaped.

**Clava′ria coralloi′des.** Coralwort, ord. *Fungi;* said to be corroborant and astringent.

**Clav′ate.** Club-shaped. **C. nu′cleus,** nucleus of gray matter in the funiculus gracilis in the medulla oblongata.

**Clava′tio** (*clavus*, a nail). Gomphosis.

**Claveliza′tion** (*clavelée*, sheeppox). Inoculation with the virus of sheeppox; ovination.

**Clav′ellate.** Club-shaped.

**Clavel′li cinnamo′mi.** Cassia buds.

**Cla'ves** (pl. of *clavis*, key) **calva'riæ.** Wormian bones.

**Clav'iceps.** Parasitic fungi, from one species of which ergot of rye is derived. **C. purpu'rea,** ergot of rye fungus, from which the official ergot, *ergota* (Ph. U. S. and Br.), is obtained. Other ergots are also included in this species.

**Clav'icle** (dim. of *clavis*, key). Collarbone. The clavicle is shaped like the letter S, and is placed transversely at the upper part of the thorax. It is articulated at one extremity with the sternum, at the other with the acromion process of the scapula. It gives attachment above to the sternocleidomastoid; below, to the subclavius; before, to the pectoralis major and deltoid; and behind, to the trapezius. It serves as a point of support for the muscles of the arm, and protects the vessels and nerves passing to that extremity.

**Clavic'ula.** Clavicle.

**Clavic'ular.** Relating to the clavicle or collarbone. **C. nerves,** branches of the fourth cervical nerve which are distributed to the clavicular region. **C. re'gion,** upper part of the thoracic region about the clavicle.

**Clavicula'ris.** Clavicular; subclavius muscle.

**Clavic'ulate.** Provided with clavicles.

**Clavic'ulus** (dim. of *clavus*, nail). One of the fibres connecting the lamellæ or plates of a flat bone; called also nail, or Sharpey's fibre.

**Clav'iform.** Club-shaped.

**Clavim'anus.** Having a club-hand.

**Claviotrache'lian.** Relating to the clavicle and neck; occasional muscle from the transverse process of the third and fourth cervical vertebræ to the outer third of the clavicle.

**Clavipec'toral.** Relating to clavicle and chest.

**Clavipes,** klav'e-pes. Having club-feet.

**Cla'vis** (key). Clavicle; key. **C. an'glica,** key.

**Clav'ism.** Ergotism.

**Clavister'nal.** Sternoclavicular. **C. bone,** manubrium.

**Claviven'tris.** Having a club-shaped belly.

**Clavo'sus.** Nail-shaped.

**Clav'ulate.** Club-shaped.

**Clavu'liger** or **Clavaligero'sus.** Possessing a club-shaped appendage.

**Cla'vus** (nail). This word is employed in medicine in various senses. It means a corn, from its resemblance to the head of a nail; condylomatous excrescence of the uterus; callous tumor which forms on the white of the eye, and resembles a nail, clavus oculi, considered by some as synonymous with staphyloma, by others with staphyloma of the cornea; the penis. **C. cerea'lis,** ergot. **C. hyster'icus,** acute pain confined to a small point of the head, described by the sick as resembling that which would be produced by a nail driven into the head; particularly noticed in hysterical females, hence its its name. It is called *ovum hystericum* when the pain occupies a greater extent. **C. oculo'rum,** staphyloma. **C. secali'nus,** ergot. **C. seca'lis,** ergot. **C. silig'inis,** ergot. **C. syphilit'icus,** a hard, corneous substance in the hand or foot, regarded as syphilitic in origin.

**Claw'foot.** Atrophy of the foot with forced extension of the first phalanges and flexion of the others, a deformity similar to clawhand.

**Claw'hand.** Deformity of the hand in which the wrist is extended and the fingers are permanently flexed, so as to produce the effect of a claw; there is a loss of the normal convexity of the back of the hand, the tendons on the extensor surface standing out in ridges, the proximal phalanges being drawn backward toward the wrist, the second and third phalanges being drawn toward the palm of the hand. The condition is due to atrophy and paralysis of the interossei muscles and lumbricales supplied by the median and ulnar nerves.

**Claw'toe.** Incurved toes; clawfoot.

**Clay'-eater.** Geophagist.

**Clay'-eating.** Geophagism.

**Clay'ton gas.** A mixture of anhydrous, sulphurous and sulphuric acids employed as a disinfectant and to rid ships of vermin.

**Clayto'nia tubero'sa.** Plant growing in Siberia and North America; bulbs are used as food.

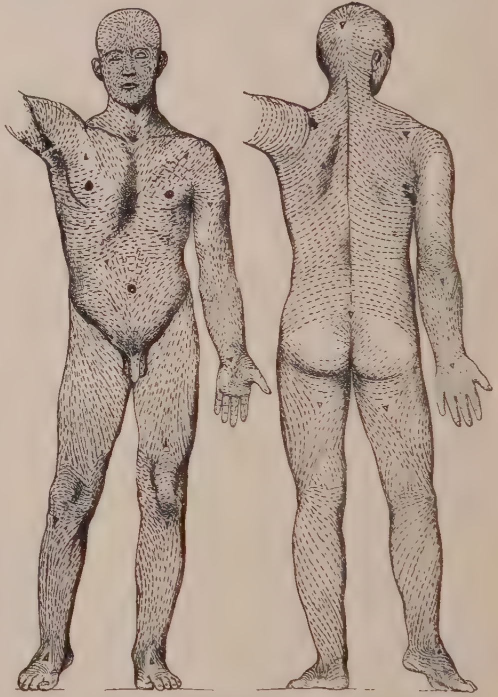
**Clean'liness.** Condition of being free from dirt of all kinds. **Sur'gical c.,** a condition of freedom from microscopic dirt or bacteria; asepsis.

**Cleans'ings.** Lochia.

**Clear'ing-nut.** Seed of Strychnos potatorum.

**Clear'weed.** Pilea pumila.

**Cleav'age.** The natural line of separation exhibited by certain substances, as minerals, when subjected to mechanical force. The term has been applied to the separation of muscles into longitudinal and circular striæ when mechanical violence is used; also to the segmentation or furrowing of the vitellus in early fœtal life. See *Segmentation*. **C. lines of the skin,** arrangement of connective-tissue bundles in the corium, in accordance with which a small, punctured wound assumes an elongated shape; these bundles are disposed symmetrically, after a definite arrangement, and are separated by minute spaces which constitute lines, along which the skin is cleavable. **C. nu'cleus,** segmentation nucleus. **C. of o'vum,** see *Segmentation*.



Cleavage lines of the skin. (Toldt.)

**Cleav'ers.** Galium aparine.

**Cleave'wort.** Galium verum.

**Cleft.** Rima. See *Monster*. **Acces'sory c.,** calibre of a portion of the Eustachian tube resembling a slit. **Bran'chial c.,** cleft or fissure occurring in early fœtal life in the development of the cranium. **Chorioi'dal** or **choroi'dal c.,** optic vesicle. **Hy'oid** or **hy'obran'chial c.,** space existing between the hyoid and the first branchial arches. **Hyomandib'ular c.,** c. between the mandibular and hyoid arches in the embryo. **Maxillo-intermax'illary c.,** space existing between the frontonasal and the maxillary plates in the fœtus; if this space remains open, cleft palate ensues. **C. of the na'tes,** space between the nates. **Oc'ular c.,** embryonic cleft between the frontonasal process and the superior maxillary plate. **C. pal'ate,** see *Harelip*. **Prim'itive cer'ebral c.,** noticeable depression in the embryonic roof of the cerebrum dividing the prosencephalon from the thalamencephalon. **C. ster'num,** congenital fissure of the sternum due to cartilaginous defect. **Vis'ceral c.,** four branchial openings in the fœtus, only one of which remains open, and from it the meatus auditorius, Eustachian tube, and tympanum are developed. **C. of the vul'va,** space embraced between the labia majora of the vulva.

**Cleidag'ra** (*cleis*, clavicle, *agra*, seizure). Cleisagra.

**Cleid'al.** Pertaining to the clavicle.

**Cleidarthri'tis** or **Cleidarthroc'ace.** Disease of the clavicle.

**Cleido-.** In composition, clavicle.

**Cleidoatlan'ticus.** Levator claviculæ muscle.

**Cleidobrachia'lis.** Relating to the clavicle and arm.

**Cleidocervica'lis.** Relating to the clavicle and neck.

**Cleidocos'tal.** Costoclavicular.

**Cleidoepistrophe'us.** Relating to the clavicle and to the cervical vertebræ.

**Cleidofascia'lis.** Cleidocervicalis.

**Cleidohy'oid.** Sternohyoid. **C. mus'cle,** accessory to the sternohyoid.

**Cleidomastoide'us.** Posterior portion of the sternocleidomastoideus, considered as a separate muscle.

**Cleidonar'thex** (*narthex*, splint). Splint for the clavicle.

**Cleido-occip'ital.** Relating to the clavicle and occiput.

**Cleido-omohyoide'us.** Omohyoid muscle.

**Cleidoster'nal.** Sternoclavicular.

**Cle'is.** Clavicle; key.

**Cleisag'ra** (*cleis*, clavicle, *agra*, seizure). Gouty pain in the clavicle.

**Cleithropho'bia** (*kleithron*, lock of a door, *phobos*, fear). Claustrophobia.

**Clematidin'.** Substance obtained from Aristolochia clematitis; has properties similar to aristolochia.

**Clematine'.** Alkaloid of Clematis vitalba.

**Clem'atis.** Genus of plants of the order *Ranunculaceæ*. **C. alpi'na,** leaves act as an irritant, and seeds possess purgative properties. **C. angustifo'lia** grows in Southern Europe and parts of Asia; tea is prepared from dried leaves in Siberia. **C. biterna'ta,** roots and part of stem possess sudorific and diuretic properties. **C. cam'phor,** substance with a pungent odor derived by distillation from some varieties of clematis. **C. chinen'sis,** used in China; same properites as C. biternata. **C. corymbo'sa,** C. erecta. **C. cris'pa,** see *Clematis vitalba*. **C. daphnoi'des ma'jor,** Vinca major. **C. dioi'ca,** Jamaica clematis. **C. erec'ta,** upright virgin's bower; leaves contain an acrid principle; have been esteemed antivenereal, and in the form of powder have been used as an escharotic. **C. flam'mula,** sweet-scented virgin's bower, see *Clematis vitalba*. **C. rec'ta,** C. erecta. **C. se'pium,** C. vitalba. **C. seric'ea,** Mexican clematis. **C. vior'na,** leather-flower, see *Clematis vitalba*. **C. virgin'ica,** common virgin's bower, see *Clematis vitalba*. **C. vital'ba,** travellers' joy, common virgin's bower; has been used in the same cases as C. erecta; in infusion it has been applied in cases of itch. Leaves *C.* of *crispa*, *C. flammula*, *C. virginica*, and *C. viorna* have similar properties to C. vitalba.

**Clematitin'.** Clematidin.

**Clemati'tis erec'ta.** Clematis erecta.

**Clem'en's solu'tion.** A solution of bromide of arsenic.

**Cle'ome.** Spider-flower; genus of the *Capparidaceæ*. **C. dodecan'dra** grows in India and United States; the root is employed as a vermifuge in the latter country. **C. feli'na** grows in India; employed in that country in epistaxis. **C. frutes'cens,** found in French Guiana; the leaves have vesicant properties. **C. frutico'sa,** employed as a vermifuge. **C. icosan'dra** has vesicant properties.

**Cleo'ne pentaphyl'la.** Gynandropsis pentaphylla.

**Cleonic'ion.** Clinopodium vulgare.

**Cleo'nis collyr'ium.** Collyrium described by Celsus, composed of equal parts of Samian earth, and myrrh, mixed with white of egg (called, doubtless, after its inventor). **C. glu'ten,** astringent formula of myrrh, frankincense, and white of egg.

**Clepsyd'ra** (*klepto*, to conceal, *hydor*, water). Instrument contrived by Paracelsus to convey fumigations to the uterus; also, a water clock.

**Cleptoma'nia** (*klepto*, to steal). Kleptomania.

**Cler'gymen's sore throat.** Chronic catarrhal condition of the mucous membrane of the pharynx and larynx, with alteration of the voice, to which clergymen and public speakers are especially liable. See *Phar yngitis, follicular*.

**Clerk-Max'well's exper'iment.** In looking across a solution of chrome alum the purple coloring-matter of the macula is noticed.

**Cleroden'dron** or **Cleroden'drum.** Genus of shrubs or trees. **C. iner'me** grows in India, where it is used in syphilis and scrofulosis; said to be a tonic and febrifuge. **C. infortuna'tum,** a shrub of India, where it is employed as an antiperiodic and vermifuge. **C. phlomoi'des,** juice of the leaves is employed in the treatment of syphilis. **C. serra'tum,** employed internally in India in fevers; also externally as an ointment.

**Cleth'ra.** Alnus. **C. anifo'lia,** sweet pepperbush, white alder; indigenous; ord. *Ericaceæ;* leaves and flowers are diaphoretic and excitant.

**Clethropho'bia** (*klethron*, a bar or bolt, *phobos*, fear). Morbid dread of enclosed places.

**Cle'venger's fis'sure.** Inferior occipital fissure.

**Cliamon'none.** Jatropha gossypifolia.

**Click'.** A sharp, non-resonant sound. See *Râle, sibilant*.

**Cli'der.** Galium aparine.

**Cliffor'tia ilicifo'lia** (after George Clifford, burgomaster of Amsterdam). Ord. *Rosaceæ;* common South African plant used by the Boers as an emollient expectorant in catarrh.

**Clig'notte.** Fatal disease which occurred in the mountainous part of Spain in the year 1849, characterized by ulcers in various parts of the body.

**Cli'ma.** Climate.

**Climac'ter** (*klimax*, staircase). Climacterium.

**Climacter'ic.** Relating to certain times of life regarded as critical. It is now chiefly applied to periods of life at which great changes may occur, independently of any numerical estimate of years; such are the period of puberty in both sexes and that of the cessation of menses in women. **C. years,** according to old beliefs, those in the life of man which are multiples of the number seven—*septenniads*. Some have admitted only three *climacterics;* others have extended them to the third, fifth, seventh, and ninth multiples of seven, the sixty-third year being the *grand climacteric*—sixty-three being the product of the multiplication of seven by nine.

**Climacte'rium.** Period of life at which the menstrual functions cease.

**Cli'matal.** Climatic.

**Cli'mate** (*klima*, region). This term embraces, in a general manner, all the physical circumstances, especially the meteorological phenomena, belonging to any country or region, which exert an influence on living beings. The complexion of the inhabitants of one zone, as well as the prevalent diseases, are modified by climate or locality. Hot climates predispose to abdominal affections or to abdominal complications in febrile affections; cold or changeable climates, to thoracic complications, etc. One of the most important considerations is the comparative fitness of climates for the residence of invalids, and especially those liable to or suffering under bronchitic or pulmonary affections. The great object is to select a climate which will admit of regular and daily exercise in the open air, so that the invalid may derive every advantage which this form of revulsion can effect. The temperature of the winter months is a most important object of attention. Equability of temperature is essential, as all sudden changes interfere with the great desideratum of exercise in the open air. Chronic rheumatism and gout are benefited by a warm climate, which, again, is unfavorable to those predisposed to cerebral diseases, especially to such as are characterized by debility and mobility of the nervous system. Hypochondriasis and dyspepsia require rather a change of climate and travelling exercise than a sojourn in any one.

**Climat′ic.** Climatal; belonging to or dependent upon climate. **C. diseas′es,** such as are caused by climate.

**Clima′tion.** Acclimation.

**Climatolog′ical.** Relating to climatology.

**Climatol′ogy** (*klima*, region, *logos*, discourse). The science of climates, their effects on the physical condition of man in health and disease, etc.

**Climatotherapeu′tics** or **Climatother′apy** (*klima*, climate, *therapeuo*, to cure). Climatic treatment of diseases.

**Cli′max.** The height or period of greatest intensity of a disease.

**Climb′er, wood′y.** Ampelopsis quinquefolia.

**Climb′ing staff tree.** Bark and root of Celastrus scandens; alterative, diuretic, narcotic.

**Cling.** Diarrhœa occurring among sheep.

**Cling-ras′cal.** Galium aparine.

**Cliniat′er** (*kline*, bed, *iatros*, a physician). Clinical physician.

**Cliniat′ria.** Clinical medicine.

**Clin′ic** (*kline*, a bed). Instruction at the bedside; but the term now includes instruction also on cases brought before a class even when the patient is not in bed; also the place where such instruction is given to a class.

**Clin′ical.** Relating to a clinic. **C. lec′ture,** one given at the bedside or on a particular case or cases. **C. med′icine,** that which is occupied with the investigation of diseases at the bedside or individually. **C. physic′ian,** one who practises or teaches clinical medicine. **C. thermom′eter,** thermometer for determining the temperature of the body.

**Clin′ically.** Viewed from a clinical standpoint.

**Clini′cian.** Clinical physician.

**Clin′icist.** Clinician; also pupil attending a clinic.

**Clinique′** (Fr.). Clinical; clinic.

**Clinocephal′ia** or **Clinoceph′aly** (*kline*, bed, *kephale*, head). Monstrosity in which the head is usually flattened, owing to synostosis of the parietal and sphenoid bones—*saddle-head.*

**Clinoceph′alus.** One affected with clinocephalia; saddle-headed.

**Clinodac′tylous** (*klino*, to flex, *daktylos*, finger). Flexed-fingered or toed.

**Clin′oid** (*kline*, bed, *eidos*, form). Resembling a bed. **C. plate,** rough plate behind the sella turcica. **C. pro′cesses,** four processes at the upper surface of the sphenoid bone, which have been compared to the posts of a bed. On them the pituitary gland rests. They are divided into *anterior* and *posterior;* each of the anterior processes terminates in a point called the *transverse spinal process.*

**Clinol′ogy** (*klino*, to decline, *logos*, discourse). Science relating to the retrograde changes following the period of maturity in the life of man.

**Clinomastoide′us.** Cleidomastoideus.

**Clinom′eter.** An apparatus devised for the determination of the amount of inclination of the vertical meridians of the cornea.

**Clinop′ale** (*kline*, bed, *pale*, wrestling). Excess of sexual intercourse.

**Clinopo′dia.** Thymus mastichina.

**Clinopodion′tes.** Polygonum aviculare.

**Clinopo′dium arven′se.** C. vulgare. **C. inca′num,** Pycnanthemum incanum. **C. ma′jus,** C. vulgare. **C. vulga′re,** wild basil; European plant, ord. *Labiatæ;* formerly considered to be an antidote to the bites of venomous animals, to facilitate labor, relieve strangury, stop diarrhœa, etc.

**Cli′noscope.** Clinometer.

**Clinospor′eæ** (*kline*, bed, *spora*, seed). Division of fungi embracing ergot, etc.

**Clinot′rochos.** Acer campestre.

**Clipped speech.** Incomplete pronunciation of the words which are begun but not always terminated; often noted in general paralysis of the insane.

**Cliseom′eter** (*klisis*, inclination, *metron*, measure). Instrument intended to measure the degree of inclination of the pelvis and to determine the relation between the axis of the pelvis and that of the body.

**Clit′bur, Clite, Clithe,** or **Clith′eren.** Galium aparine; Arctium lappa.

**Clit′eon.** The central portion of the anterior edge of the clivus.

**Clitoral′gia.** Pain of a neuralgic nature in the clitoris.

**Clitoricarcino′ma.** Cancer of the clitoris.

**Clitoridau′xe** (*clitoris+auxe*, augmentation). Enlargement of the clitoris.

**Clitorid′ean.** Relating to the clitoris.

**Clitoridec′tomy** (*clitoris+ektome*, excision). Amputation of the clitoris.

**Clitoriderec′tor.** Erector clitoridis muscle.

**Clitor′ides inferior′es la′ti et pla′ni mus′culi.** Constrictores cunni.

**Clitorid′ian.** Clitoridean.

**Clit′oris** (Gr., *kleitoris*). Small, round organ situated at the upper part of the vulva, and separated by a small space from the anterior commissure of the labia. Its base is surrounded by a slight fold, similar to the prepuce, and it is, internally, of the same structure as the corpora cavernosa penis. The artery of the clitoris is a branch of the internal pudic. The vein communicates with the internal pudic and the nerve with the pudic. **C. cri′ses,** occasional attacks of sexual excitement in tabetic women.

**Clit′orism.** The abuse made of the clitoris to satisfy an unnatural sexual desire; also, the condition in which an unusually large clitoris is present.

**Clitori′tis** or **Clitoriti′tis.** Inflammation of the clitoris.

**Clito′rium.** Vulva.

**Clitoroma′nia.** Nymphomania.

**Clitorot′omy** (*clitoris+tome*, incision). Operation upon or incision of the clitoris.

**Clitorrha′gia.** Hemorrhage from the clitoris.

**Clits.** Galium aparine.

**Cli′ver.** Galium aparine.

**Cli′vus.** A slope. **C. Blumenbach′ii,** inclined surface behind the dorsum ephippii of the sphenoid bone, which is continuous with the basilar process of the occipital bone. **C. cerebel′li,** the inclined upper surface of the vermis of the cerebellum. **C. os′sis sphenoi′dis,** c. Blumenbachii.

**Cliz′ia.** Helianthus annuus.

**Cloa′ca** (Lat., a sewer). Pouch at the extremity of the intestinal canal, in which the solid and liquid excretions are commingled in birds, fish, and reptiles; in the male it gives exit to the fæces, sperm, and urine; in the female to the eggs, fecal matters, and urine. Term used in surgery to denote a cavity containing pus, from which it cannot escape, or the fistula leading down to a cavity containing necrosed bone. **C. congenita′lis,** congenital abnormality in which the opening of the rectum is located in the genitourinary tract. **Urogen′ital c.,** congenital condition in which the vagina and urethra have a common opening. **Ves′icorec′tovag′inal c.,** a condition in which the bladder, rectum, and vagina have a common opening.

**Clo′acal.** Relating to the cloaca. **C. cav′ity,** a cavity produced in an early stage of fœtal life by the anus and urogenital tract.

**Cloacis′mus.** Anal discharge of urine.

**Cloac′ula.** Small cloaca.

**Clo′anx.** Orpiment.

**Clock.** Leontodon taraxacum; also the Plantago lanceolata. **C.-face, astigmat′ic,** employed in tests for astigmatism, consists of a card provided with lines, which extend from a centre and are marked with numbers, similar to the face of a clock.

**Clod′weed.** Filago germanica.

**Cloff′ing.** Species of hellebore.

**Clog.** Cone of Pinus picea.

**Cloisonnement′** (Fr.). The division of a hollow organ, such as the bladder, vagina, uterus, or into two portions by a septum.

**Clon′ic** (*klonos*, tumultuous movement). Term applied to irregular convulsive motions, convulsion with alternate relaxation; in contradistinction to *tonic*, which signifies a constant rigidity; clonus; clonospasm. **C. spasm,** convulsion marked by alternate contraction and relaxation of the affected muscles.

**Clo′nis.** Sacrum.

**Clon′ism.** Clonic spasm.

**Clo′nospasm.** Clonic spasm.

**Clo′nus** (*klonos*, tumultuous movement). Tremulous and chronic agitation of various muscles. **Ankle** or **foot c.,** morbid condition characterized by rhythmical contractions of the muscles of the calf of the leg when sudden flexion of the foot is made by pressure on the sole while the leg is extended; observed in lateral sclerosis of the spinal cord; similar conditions affect the jaw, the toe, and the wrist. **Dor′sal c.,** ankle c. **Fin′ger c.,** palmar reflex. **C. nictita′tio,** nictation. **C. palpita′tio,** palpitation. **C. pendicula′tio,** pendiculation. **C. pendicula′tio maxilla′rum,** yawning. **C. singul′tus,** hiccough. **C. sternuta′tio,** sneezing. **C. subsul′tus,** twitching of tendons. **Toe c.,** toe reflex. **Wrist c.,** wrist reflex.

**Cloquet's** (klo-kaze′) **an′gle.** Cloquet's method of obtaining the facial angle—the intersection of the facial angle with the base being, by his method, at the centre of the superior alveolar border. **C.'s canal′,** hyaloid canal, transmitting the hyaloid artery in the fœtus. **C.'s fas′cia,** crural septum. **C.'s gan′glion,** an elargement of the nasopalatine nerve in the anterior palatine canal. **C.'s her′nia,** femoral hernia passing behind the femoral vessels; pectineal hernia. **C.'s lig′ament,** cord formed by the closure of the canal between the peritoneal cavity and that of the tunica vaginalis.

**Closed cir′cuit.** See *Circuit.*

**Close′stool.** A chamber cabinet for use in evacuating the bowels or bladder.

**Closh.** Founder; a disease attacking the feet of cattle.

**Closs.** Juncus acutiflorus.

**Clostrid′ium** (*closter*, a spindle). A genus of *Bacteria*, the spores of which occur within enlarged rods. **C. butyr′icum,** Bacillus butyricus. **C. of char′bon,** Bacillus chauvæi. **C. fœt′idum** (Liborius), Bacillus fœtidus. **C. of sympathet′ic an′thrax** (Neelsen and Ehlers), Bacillus chauvæi. **C. polymyx′a** (Prazmowski), Bacillus polymyxa.

**Clot.** Coagulum. See *Embolism* and *Thrombosis.* **An′te-mor′tem c.,** clot formed in the heart before death; thrombus. **Exter′nal c.,** see next term. **Inter′nal c.,** clot formed by the coagulation of blood inside the vessel, that formed without the vessel being called an **exter′nal clot. Lam′inated c.,** a clot formed by the successive deposit of fibrin in layers, occupying the cavity of an aneurysm, or forming vegetations on the heart valves. **Maras′mic** or **Maran′tic c.,** clot due to stagnation of blood from cardiac weakness, general diminution of vascular tonus, and dilatation of the veins (Virchow). **Strat′ified c.,** laminated c. **Post-mor′tem c.,** clot formed in the heart after death. **Washed** or **White c.,** a clot from which the coloring-matter has been absorbed.

**Clot′bur.** Xanthium spectrosum.

**Clot′tage.** Coagulation. **C. of the u′reters,** term applied to a surgical process intended to check profuse hæmaturia from a kidney due to traumatism or occurring in carcinoma. The soft clots are removed from the ureter by an aspirator, and pressure is exerted so that a firm coagulum is made to form.

**Clot′ted.** Coagulated.

**Clot′ty.** Composed of clots.

**Clot′weed.** Xanthium strumarium.

**Cloud.** Film appearing in an otherwise clear fluid.

**Cloud′berry tree.** Rubus chamæmorus.

**Cloud′iness.** Turbidity.

**Cloud′y swel′ling.** A form of degeneration frequently found in the kidney, liver, and heart muscle, consisting of increase in the size of the cells and their minute granular appearance under the microscope. The cloudy swelling precedes breaking up, disintegration, and detachment of the cells, and occurs in infectious diseases and in some forms of irritant or corrosive poisoning.

**Clove** (*clavus*, nail). See *Eugenia caryophyllata.* **C. bark,** see *Myrtus caryophyllata.* **C. hitch,** noose-knot formed of two loops, made by combining two half hitches. **C. pink,** Dianthus caryophyllus.

**Clo′ven spine.** Spina bifida.

**Clo′ver.** Trifolium. **Win′ter c.,** Mitchella repens.

**Clo′ver's appara′tus.** An apparatus employed in the production of anæsthesia by ether or chloroform inhalation, by means of which the amount inhaled can be accurately determined and controlled. **C.'s syr′inge,** syringe connected with a catheter, and employed in emptying the bladder.

**Clove-stalks.** Flower-stalks of Eugenia caryophyllata, from which a volatile oil is obtained; ground cloves are sometimes adulterated with it.

**Clove-tongue.** Helleborus niger.

**Clovorubrin′.** Resin of a red color obtained by treating oil of cloves with concentrated sulphuric acid.

**Clown′ism.** Term given by Charcot to symptoms of emotion or contortions occurring in hysteroepilepsy.

**Clubbed.** Club-shaped; having a thickened extremity. **C. fin′gers,** Hippocratic fingers, a knobbed appearance of the ends of the fingers, with curved nails, observed in some forms of disease of the heart and lungs. **C. hip,** coxa vara. **C. pe′nis,** see *Penis.*

**Clubfoot′.** Talipes.

**Clubhand′.** Talipomanus, manus curva; a deformity of the hand analogous to that of the foot in talipes.

**Club-moss.** Lycopodium. **Com′mon c.-m.,** Lycopodium complanatum. **C.-m. fir,** Lycopodium selago. **Up′right c.-m.,** Lycopodium selago.

**Clump′ing.** Gathering together in clumps or shapeless masses; a term applied specifically to the massing together of bacilli in the agglutination test; see *Widal.*

**Clune′sia** (*clunes*, nates). Inflammation of the buttocks.

**Clu′nis.** Sacrum; natis.

**Clu′nium.** Fissure between the nates.

**Clu′pea thrys′sa.** Yellow-billed sprat; a very poisonous fish of the West Indies.

**Clupeïn′.** $C_{30}H_{57}N_{17}O_5+4H_2O$. A ptomain derived from the herring.

**Clu′sia.** Balsam tree; genus of plants, order *Guttiferæ.* **C. insig′nis,** species of Brazil; resin is obtained from the flowers and stamens, and used as an application to sores. **C. ro′sea,** juice possesses cathartic properties; resin is utilized in plasters.

**Clu′tia cascaril′la** (after T. A. Cluyt (L. *Clutius*), an apothecary of Leyden). Croton cascarilla. **C. colli′na,** species growing in East India; bark and rind of nuts are poisonous **C. elute′ria,** Croton cascarilla.

**Clut′tering.** Impairment of speech in which shortening of syllables and words and excessive rapidity of speech coexist.

**Cluy′tia.** Clutia.

**Clydas′mus** (*klydasmos*, surging of waves). Condition in which splashing of fluids is present in the stomach or other cavities of the body.

**Cly′don.** Flatulence.

**Clypea′lis** (*clipeus* or *clypeus*, a shield). Thyroid.

**Clyp′eate** or **Clyp′eiform.** Shield-shaped.

**Cly′sis.** Application of a clyster; washing out by means of an injection.

**Clys′ma.** Clysis; clyster. **C. ton′icum,** enema fœtidum.

**Clys′mic** (*klyzo*, to wash out). Suitable or employed for washing out.

**Clys′mus.** Application of a clyster; washing out by means of a clyster.

**Clys′ter** (*klyzo,* to wash away). Enema; rectal injection; a liquid thrown into the large intestines by means of a syringe or bladder and pipe properly prepared, etc., the nozzle of the syringe or pipe being introduced into the anus. See *Enema.* **C. pipe,** tube for the injection of fluid into the bowels. **C. uteri′nus,** injection into the vagina.

**Clyste′rion.** Clyster.

**Cm.** Abbreviation of centimetre.

**Cna′phos.** Dipsacus fullorum.

**Cne′cion.** Genista tinctoria.

**Cne′cos.** Carthamus tinctorius.

**Cne′me.** Leg; tibia.

**Cnemelephanti′asis.** Elephantiasis of the leg.

**Cnemerysip′elas.** Erysipelas of the leg.

**Cne′mial** (*kneme,* leg). Relating to the leg or tibia.

**Cnemi′tis.** Inflammation of the tibia.

**Cnemodactylæ′us.** Extensor communis digitorum pedis muscle.

**Cnemolordo′sis.** Bending of the leg forward.

**Cnemoscolio′sis.** Bending of the leg sideways; the state of being bowlegged or bandylegged, outkneed; valgus.

**Cneo′ron** or **Cneo′rum.** Daphne gnidium. **C. ni′grum,** Daphne gnidium. **C. pulverulen′tum** grows in the Canary Islands; occasionally substituted for cinchona. **C. tricoc′cum,** spurge olive, widow-wail, ord. *Terebinthaceæ,* a native of Southern Europe; contains a very irritating acrid principle; the ancients employed its leaves as a powerful purgative; it is now sometimes used for deterging ulcers.

**Cne′sis** or **Cnes′ma.** Painful itching.

**Cnesmopom′pholyx.** Intensely itching pompholyx.

**Cnes′mos** or **Cnes′mus.** Itching; prurigo.

**Cnice′læum** (*cnicus+elaion,* oil). Oil of carthamus.

**Cnicin′.** $C_{42}H_{56}O_{15}$. A bitter, crystalline substance derived from Centaurea benedicta.

**Cni′cus.** Thistle. **C. benedic′tus,** Centaurea benedicta. **C. sylves′tris,** Centaurea benedicta.

**Cni′da** (*knede,* nettle). One of the stinging-cells of the jellyfish.

**Cni′de.** Urtica, nettle.

**Cnidefem′era** (*knide,* nettle, *ephemeros,* empheeral). Urticaria ephemera.

**Cnidelæ′on.** Oil made from the Grana cnidia or mezereon berries.

**Cnid′ia gra′na.** Cnidii cocci; berries of the Daphne gnidium.

**Cnid′ian school** (from Knidos, a city of Greece). A Grecian school of medicine which existed before Hippocrates.

**Cnid′ium sil′aus.** Peucedanum silaus. **C. tenuifo′lium,** Sison ammi.

**Cni′doblast** (*knide,* nettle, *blastos,* cell). A germinating thread cell.

**Cni′docell.** A thread-cell; cnida.

**Cnido′ma** (*knide,* nettle). Urticaria.

**Cnidomecphlogiois,** nid-om-ek-flo-je-o′is. Smallpox in a modified form accompanied by a rash bearing a resemblance to urticaria.

**Cnidopsydra′cia** (*knide,* nettle, *psydrakion,* small vesicle). Vesicles bearing a resemblance to lesions existing in urticaria.

**Cnidos′colus** (*knide,* nettle, *skolos,* thorn) **quinquelo′bus.** Jatropha urens; possesses purgative properties. **C. stim′ulans,** tread softly; grows in Southern United States; leaves are provided with hairs which are very irritating to the touch; roots can be eaten.

**Cnido′sis.** A pungent itching compared to that produced by the nettle; urticaria; urtication.

**Cnip′otes.** Itching; dry ophthalmia, xerophthalmia.

**Cnopo′dium.** Polygonum aviculare.

**Cny′ma.** Slight itching; also a puncture.

**Co.** Chemical symbol of cobalt.

**Co-.** As a prefix, like *cum,* with.

**Coa′con.** Black plaster, mentioned by Celsus, and composed of litharge and resin, the litharge being first boiled in oil.

**Coac′tus.** Coagulated or curdled.

**Coagmenta′tion** (*coagmento,* to join together). Immovable articulation, as of the teeth; gomphosis.

**Coag′ula.** Plural of coagulum.

**Coagulabil′ity.** Capability of being coagulated.

**Coag′ulable.** Capable of coagulation. **C. lymph,** fibrin; liquor sanguinis.

**Coag′ulants.** Substances formerly supposed to possess the power of coagulating the blood or to give consistency to animal fluids; now the term is applied only to agents having that effect upon other bodies, as rennet on milk.

**Coag′ulate.** To bring together into a clot.

**Coag′ulated.** Curdled; clotted.

**Coagula′tio.** Coagulation. **C. cal′ida,** coagulation by heat. **C. frig′ida,** coagulation by cold.

**Coagula′tion.** Conversion of a liquid into a more or less soft and tremulous or jelly-like mass. Many animal and vegetable fluids are capable of coagulation. See *Blood.* **C. necro′sis,** a circumscribed necrosis from local asphyxia, in the midst of or adjoining healthy tissue with normal blood supply. **Ther′mic c.,** coagulation by heat.

**Coag′ulative.** Having a tendency to coagulate.

**Coagulin′.** An antibody formed in the blood of an animal after inoculation with a coagulable substance. It is specific in its action only against the substance employed for inoculation, causing coagulation of this substance when brought in contact with it in a fluid medium of a proper dilution. Coagulins specific for certain substances are probably present normally in the blood.

**Coag′ulum.** Clot; soft mass formed in a coagulable liquid. The clot of the blood is particularly so called—the cruor, insula, placenta, or hepar sanguinis, crassamentum, sanguis concretus—the red mass, composed of fibrin, serum, and coloring-matter, which separates when the blood is left to itself. See *Blood, Thrombosis,* and *Embolism.* **C. alu′minis,** alum curd or cataplasm, is made by beating the white of egg with a little alum until a coagulum is formed; it was formerly much used in cases of ophthalmia when an astringent was necessary.

**Coales′cence** (*coalesco,* to grow together). Adhesion or union of parts previously separated, as in case of wounds, and abnormal adhesions or malformations. See *Monster.*

**Coales′cent.** In a condition of coalescence.

**Coal′fish.** See *Oleum jecoris aselli.*

**Coali′tion** (*coalesco,* to grow together). Union of particles in one mass; symphysis; concretion.

**Coal-lung.** See *Anthracosis.*

**Coal-mi′ners′ phthi′sis.** Anthracosis.

**Coal-oil.** Petroleum.

**Coal-tar.** This dark, thick, semiliquid substance, which is obtained as a product of the dry distillation of bituminous coal, not only supplies many valuable materials in the arts, but several which have a therapeutical importance, such as amyl, benzole, carbolic acid, creosote, etc. It is itself disinfectant, and mixed with plaster-of-Paris forms a powder, which may be applied on lint or mixed with poultices, or thickly sprinkled on fetid, gangrenous, and other ulcers, or applied to offensive suppurating surfaces, etc. *Coal-tar creosote* is carbolic acid.

**Coalter′nate fe′vers.** Name given to two intermittents attacking a person at the same time, but whose paroxysms are distinct, so that the attack of one supervenes when the other has ceased. The term *double intermittent* expresses the same meaning.

**Coapta′tion** (*coapto,* to adjust). The act of adapting the two extremities of a fractured bone to each other, or of restoring a luxated bone to its place.

**Coarcta′tion** (*coarcto,* to press together). Stricture; contraction.

**Coarctot′omy** (*coarctatus,* constricted, *tome,* incision). Urethrotomy; division of a stricture in the urethra.

**Coartic′ulated.** Articulated together.

**Coarticula′tion.** Diarthrosis; synarthrosis.

**Coat.** Covering; fur, as of the tongue. **Buf′fy c.**, corium phlogisticum.

**Coat′ed.** Covered; having a fur, as of the tongue.

**Coat′ing of pills.** Wrapping pills in sugar, glycerin, etc., to mask their taste.

**Coat′l** or **Coat′li.** Wood of Hæmatoxylon campechianum.

**Co′balt** (symbol, Co). Metal of a reddish-gray color; as an oxide much used as a pigment. **Protox′ide of c.**, smalt.

**Cobal′toni′trate of potas′sium.** Double salt of potassium and cobalt, occurring in yellow crystals; said to be of value in cardiac dropsy.

**Co′bra bean.** Physostigma amazonica, a climbing plant of Brazilian Guiana. **C. poi′son,** poison of the cobra.

**Co′bra di capel′lo.** Hooded snake, spectacled snake; a very venomous reptile of India, of the family *Viperidæ*—the *Naja tripudians*.

**Cob′web.** Araneæ tela.

**Co′ca.** (Ph. U. S. and Br.) The leaves of Erythroxylon coca, a small shrub, native of Peru, ord. *Erythroxylaceæ*. Coca leaves are chewed in Peru by the Indians, and the plant is used very extensively in South America, serving in lieu of tea and coffee. A wine is made of the leaves, and is considered to be of value as a tonic, and is recommended in affections of the voice in singers. A powerful nerve stimulant; dose, ʒss–j (2.0–4.0). The official preparation is the fluid extract, *extractum cocæ fluidum* (Ph. U. S.) or *liquidum* (Ph. Br.); dose, ʒss–ij (2.0–8.0).

**Cocai′na.** Cocaine; an alkaloid obtained from the leaves of Erythroxylon coca.

**Cocai′næ hydrochlor′as** (Ph. U. S.) or **hydrochlor′idum** (Ph. Br.). White, crystalline powder, easily soluble in water; employed as a local anæsthetic to the mucous membranes in 2 to 10 per cent. solutions and as a mydriatic; internally it is given in doses of from gr. $\frac{1}{8}$–j (0.008–0.065); it is a diuretic nerve stimulant. **C. phen′as,** analgesic and local anæsthetic; dose, gr. $\frac{1}{4}$–j (0.016–0.065).

**Cocaine,** ko-kah-een′. Alkaloid of Erythroxylon coca. **C. alu′minum cit′rate,** a crystalline salt; astringent, and local anæsthetic. **C. a. sul′phate** has similar therapeutic action. **C. ben′zoate,** employed as a local anæsthetic in diseases of various organs and in operations upon them, and internally in nausea and irritability of the stomach. **C. bo′rate,** a reliable preparation of cocaine, on account of its stability and antiseptic qualities when used hypodermically or for eye-washes. **C. canthar′idate,** a white, saline powder; employed in tuberculosis of the larynx. **C. car′bolate,** cocainæ phenas. **C. hydrobro′mide,** $C_{17}H_{21}NO_4$,HBr, a salt of cocaine with the properties of cocaine and of the bromides; local anæsthetic. **C. hydrochlo′rate,** cocainæ hydrochloras. **C. lac′tate,** a soluble salt employed in the local treatment of tuberculous cystitis. **C. ni′trate,** employed alone or in combination with silver nitrate in genitourinary diseases. **C. o′leate,** see *Oleate*. **C. phen′ate,** cocainæ phenas. **C. phen′ylate,** used to produce local anæsthesia in dentistry. **C. sac′charate,** employed in solution as an agreeable application in throat affections. **C. sal′icylate,** a soluble salt; used hypodermically in asthma; dose, gr. v (0.32). **C. ste′arate,** used as a substitute for c. oleate; also in oily solution or ointment, or in suppositories.

**Cocainidine′.** An alkaloid derived from coca, similar in its action to, but weaker than cocaine.

**Co′cainism.** Untoward effects of the habitual use of cocaine, as blindness, loss of speech, nausea and vomiting, epileptiform convulsions, etc.

**Cocainiza′tion.** The process of bringing the organism or a part under the influence of cocaine.

**Cocainoma′nia.** Cocainism; addiction to cocaine.

**Cocainoma′niac.** One who is addicted to the use of cocaine.

**Cocamine′.** An alkaloid derived from coca; called also truxalline and isotropococaine.

**Cocapyrin′.** Mixture of antipyrin, 100 parts, and cocaine, 1 part.

**Cocatan′nic acid.** Variety of tannic acid from the leaves of Erythroxylon coca.

**Cocca′ceæ.** A family of the *Bacteria* or *Schizomycetes*. See *Bacteria*.

**Coc′ci** (pl. of coccus). Single, unaggregated spheroidal cells of *Schizomycetes;* also insects of the order *Hemiptera*. See *Bacteria*, *Micrococci*, and *Coccus*. **C. gra′num,** kermes. **C. orienta′les,** see *Menispermum cocculus*.

**Coccid′ial.** Relating to or caused by a coccidium.

**Coccidio′sis.** Peculiar non-contageous parasitic disease of rabbits, resembling cancer; morbid condition caused by the presence of a coccidium.

**Coccid′ium.** Genus of the *Sporozoa*. **C. ovifor′me,** parasite found in the liver of rabbits and also in the human liver. **C. sarkoly′tum,** a protozoon believed by some to be the microparasite of carcinoma.

**Coccilla′na.** Bark of a West Indian and South American plant, Guarea swartzii; emetocathartic, and in large doses narcotic; used in bronchial catarrh; dose of the fluid extract, gtt. xv–xxx (1.0–2.0).

**Coccinel′la.** Coccus cacti; cochineal. **C. sep′tem puncta′ta,** ladybird, ladycow, ladybug, cowlady, cushy-cowlady.

**Coccionel′la.** Coccus cacti.

**Coccobacil′lus.** A spheroidal bacillus or elongated coccus. **C. pyog′enes ure′æ** (Rörsing), Coccobacterium ureæ.

**Coccobacte′rium.** An elongated coccus or spheroidal bacterium. **C. lys′sæ,** Bacillus lyssæ. **C. sep′ticum,** Billroth includes under this term all cocci, bacilli, or bacteria which have the power of causing peptic fermentation. **C. ure′æ,** Diplococcus pyogenes ureæ.

**Coccobal′samum.** See *Amyris opobalsamum*.

**Coccog′enous** (*kokkos*, berry, *gennao*, to engender). Producing cocci; due to the presence of pus cocci; a term employd by Unna in sycosis non-parasitica.

**Coccog′lia** (*kokkos*, berry, *glia*, glue). Collection of micrococci joined together by a substance resembling glue.

**Coccognid′ia.** Cnidia grana.

**Coccol′oba austra′lis.** Polygonum tamnifolium. **C. grandiflo′ra,** C. pubescens. **C. niv′ea** grows in the West Indies; used as a refrigerant and in hemorrhage; the fruit can be eaten. **C. pubes′cens** grows in the West Indies; the fruit can be eaten. **C. sagittæfo′lia,** root has astringent properties. **C. uvif′era,** the seaside grape, a West Indian species yielding a variety of kino.

**Coccomelas′ma.** Cutaneous granular melanosis.

**Coc′cos.** Schizomyces with single round cell.

**Coccos′teophyte** (*kokkos*, berry, *osteon*, bone, *phyton*, outgrowth). Granular or warty bony outgrowth.

**Coc′cothrix** (*kokkos*, berry, *thrix*, hair). Rod form, consisting of cocci in a row united by cement substance.

**Cocculin′.** Picrotoxin.

**Coc′culus.** A genus of menispermaceous plants of tropical habitat. **C. crisp′us** (dim. of coccus), Menispermum tuberculatum. **C. in′dicus,** see *Menispermum cocculus*. **C. palma′tus,** columba. **C. subero′sus,** Menispermum cocculus. **C. toxif′erus,** a poisonous species, resembling curare in its effects.

**Coc′cum** (*kokkos*, berry). See *Cnidia grana*. **C. baph′icum, C. infecto′rium, C. scarlati′num,** or **C. tincto′rum,** kermes.

**Coc′cus.** Coccus cacti; pilula. **C. america′nus,** Coccus cacti. **C. cac′ti,** systematic name of the cochineal insect, coccus (Ph. U. S. and Br.), ord. *Hemiptera*. The cochineal insects are blackish-red externally, purple-red within. They are used chiefly for giving a red color to tinctures, etc. They were at one time esteemed astringent, stimulant, diuretic, and anodyne. Coccus (Ph. U. S. and Br.) refers only to the female insect. **C. i'licis,** kermes. **C. in'dicus,** see *Menispermum cocculus.* **C. in'dicus tincto'rius,** Coccus cacti. **C. polon'icus,** Coccus cacti.

**Coccyal'gia** (*coccyx* + *algos,* pain). Coccygodynia.

**Coccyceph'alus** (*coccyx* + *kephale,* the head). Monster whose head has the shape of the os coccygis.

**Coccygeal,** kok-sij'e-al. Relating to the coccyx. **C. ar'tery,** branch of the sciatic artery. **C. bod'y,** c. gland. **C. gland,** gland of Luschka, nervous gland of the pelvis; ductless gland about the size of a pea in front of the top of the coccyx; its functions are unknown; as it mainly consists of a rich plexus of capillary vessels, the name *plexus vasculosus coccygeus* has been given to it; the intervascular tissue of this gland is very liberally supplied with nerves. **C. joint,** articulation between the sacrum and coccyx. **C. lig'aments,** see *Sacrococcygeal ligaments.* **C. mus'cle,** coccygeus. **C. nerve,** see *Sacral nerve.* **C. ver'tebræ,** see *Coccyx.*

**Coccygec'tomy** (*coccyx* + *ektome,* excision). Excision of the coccyx or of a portion of it.

**Coccygerec'tor.** Extensor coccygis muscle.

**Coccyge'us.** Coccygeal. The muscle *ischiococcygeus, levator coccygis, triangularis coccygis,* which arises from the spinous process of the ischium, and is inserted into the extremity of the sacrum and into nearly the whole length of the os coccygis laterally. It supports the coccyx and raises it.

**Coccygexarthro'sis** (*coccyx* + *exarthrosis,* dislocation). Dislocation of the coccyx.

**Coccygoceph'alus.** Coccycephalus.

**Coccygodyn'ia** (*coccyx* + *odyne,* pain). Neuralgic or rheumatic pain in and about the coccyx.

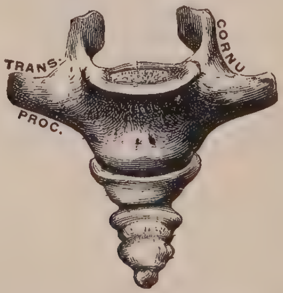
**Coccygot'omy.** Coccygectomy.

**Coccyme'lia.** Prunus domestica.

**Coccyodyn'ia.** Coccygodynia.

**Coccyperone'al mus'cle.** Muscular band extending from the coccyx to the biceps femoralis.

**Coc'cyx** (*kokkux,* cuckoo, whose bill it is said to resemble). Rump-bone or crupper-bone; an assemblage of small bones attached to the lower part of the sacrum, the curvature of which it prolongs and of which it seems to be an appendage. In man it consists of four bones, usually ankylosed together. Behind the base of the coccyx are two small tubular eminences, called *cornua of the coccyx.*



Coccyx, ventral surface. (Gerrish, after Testut.)

**Co'chia.** Ancient name for several forms of purgative pills, usually compounded of aloes and colocynth.

**Co'chin Chi'na diarrhœ'a.** Diarrhœa occurring in endemic form in Cochin China; a parasite, the Rhabdonema intestinale, is found in the stools. **C. C. leg,** elephantiasis. **C. C. ul'cer,** endemic disease, whose chief symptom is an ulceration following even upon a trivial lesion of the skin, in the lower extremities especially, and which attacked the foreign soldiers in China.

**Co'chin leg.** See *Elephantiasis.*

**Coch'ineal** (from coccinella). Coccus cacti.

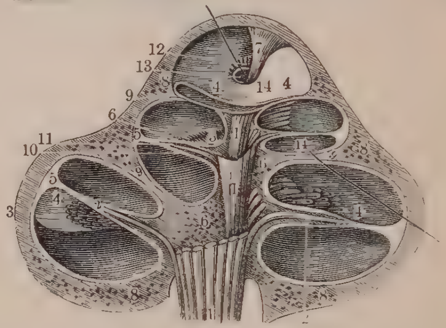
**Cochinelif'era cochinil'la.** Coccus cacti.

**Cochinilin'.** Carminic acid; the coloring-matter of cochineal.

**Cochinil'la.** Coccus cacti.

**Cochinillin'.** Cochinilin.

**Coch'lea** (snail's shell). Anatomists have given this name to the most anterior of the three cavities which constitute the labyrinth of the ear, and that of the *scalæ of the cochlea* to two spiral cavities in the interior of the cochlea. One of these scalæ terminates at the fenestra rotunda, and is called *scala tympani;* the other opens at the anterior and inferior part of the vestibule, and is called *scala vestibuli.* See *Corti.*



Vertical section of cochlea, highly magnified to show the arrangement and connection of its parts. 1. Trunk of auditory nerve; 2, 2, filaments of it in the zona ossea; 3, anastomoses in the zona vesicularis; 4, 4, zona membranacea; 5, 5, doubling-up of its external edge; 6, 6, axis of cochlea; 7, modiolus; 8, 8, exterior osseus wall of cochlea; 9, 9, bony plates of lamina spiralis; 10, scala tympani; 11, scala vestibuli; 12, hamulus cochleæ; 13, infundibulum; 14, 14, bristle passed through the course of the lamina spiralis.

**Coch'leaform.** Resembling a cochlea in shape.

**Coch'lear.** Relating or appertaining to the cochlea. **C. ap'erture,** fenestra rotunda. **C. ar'tery,** branch of the internal auditory artery. **C. canal',** osseous canal of the cochlea. **C. duct,** ductus cochlearis. **C. fos'sa,** recess in the vestibule. **C. nerve,** see *Auditory nerve.*

**Cochlea're.** A spoon or spoonful; abbreviated in prescriptions usually to *coch;* also a scoop. **C. am'plum,** tablespoonful. **C. auricula're,** ear-pick. **C. mag'num,** tablespoonful. **C. me'dium,** dessert-spoonful or papspoonful. **C. min'imum,** teaspoonful.

**Cochlea'ria.** A genus of cruciferous herbs. **C. an'glica,** English scurvy-grass; properties like those of C. officinalis. **C. armora'cia,** horseradish; root is frequently used as a condiment, and is official in the Ph. Br. under the name Armoraciæ radix; stimulant and diuretic; dose of the fluid extract, ʒj (4.0); externally it is rubefacient. **C. britan'nica,** C. anglica. **C. coron'opus,** wild scurvy-grass, swine's cress; European plant, considered to be diuretic and antiscorbutic. **C. horten'sis,** Cochlearia officinalis. **C. officina'lis,** lemon scurvy-grass, common scurvy-grass; has been considered a powerful antiscorbutic; sometimes eaten in salad. **C. oil,** volatile oil obtained from C. officinalis. **C. pyrena'ica,** C. officinalis. **C. vulga'ris,** C. officinalis.

**Cochlea'riform** (*cochleare,* spoon, *forma,* shape). Spoon-shaped. **C. pro'cess,** small, very thin plate separating the bony portion of the Eustachian tube from the canal for the passage of the tensor tympani.

**Cochlearin'.** Crystalline substance from Cochlearia officinalis.

**Cochlea'ris.** Gelatinous-looking tissue, seen on opening the cochlea, by which the membranous zone is connected, at its outer or convex margin, with the outer wall. It was supposed to be muscular and to have a preservative office, being placed to defend the cochlear nerves from undue vibrations of sound, in a way analogous to that in which the iris protects the retina from excessive light.

**Cochlea'rium.** Cochleare.

**Cochlearthro'sis.** Hinged articulation with slight capacity for angular movement.

**Coch′leary.** Relating to the cochlea.

**Coch′leate** or **Coch′leated.** Winding like the spiral shell of the snail; having the shape of the cochlea.

**Cochleat′im.** By spoonfuls.

**Cochleifor′mis.** Cochleariform.

**Cochlei′tis.** Inflammation of the cochlea.

**Coch′leous.** Cochlear or cochleate.

**Cochleovestib′ular.** Relating to both the vestibule of the labyrinth and the cochlea.

**Cochli′tis.** Inflammation of the cochlea.

**Cochlosper′mum gossyp′ium.** Tree, native of India; kuteerah gum is obtained from it. **C. insig′ne** resembles Cochlospermum gossypium; grows in Brazil, where the fruit is eaten by the Indians. **C. tincto′rum** grows in Senegambia, where it is used for dyeing; employed externally in amenorrhœa.

**Cocho′ne.** Junction of the ischium, near the seat or breech; the breech proper, from the hip-bones to the anus; the perineum; the coccyx.

**Cocilla′na bark.** Bark of Sycocarpus rusbyi; possesses action similar to that of ipecac; irritant narcotic in large doses; medicinal dose of the fluid extract, ♏x–xx (0.65–1.3).

**Cocin′ic acid.** Fatty acid derived from cocoanut oil.

**Cocinin′.** Fatty substance which is the principal constituent of cocoanut oil.

**Cock′eye.** Strabismus.

**Cock′grass.** Lolium temulentum.

**Cock′le, corn.** Lychnis githago.

**Cock′lebur.** Agrimony; xanthium.

**Cock′mint.** Tanacetum balsamita.

**Cock′roach.** Blatta orientalis; reputed to possess diuretic properties.

**Cock′spur** or **C. rye.** Ergot.

**Cock′s tu′mor.** Epithelioma-like ulceration of the scalp, following an unhealed sebaceous cyst.

**Cock′up hat.** Stillingia.

**Cock′ybaby.** Arum maculatum.

**Co′co.** Frambœsia; Cocos nucifera. **C. of the Maldives′,** fruit of a palm called lodoicea; formerly termed, in the shops, Nux medica.

**Co′coa.** Cocos nucifera; cacao. **C. but′ter,** a fatty concrete substance separated from the cocoanut. **C. cacavif′era,** cacao. **C. nibs,** crushed seeds of Theobroma cacao. **C. palm,** Cocos nucifera. **C. root,** root of Colocasia antiquorum; used as food in the tropics.

**Co′coanut.** Fruit of Cocos nucifera.

**Co′cobay.** Mal de San Lazaro.

**Cocoölein′.** See *Cocos nucifera.*

**Co′cos.** See *Arum esculentum.* **C. butyra′cea,** name of the plant which affords the palm oil, *oleum palmæ,* obtained chiefly from the fruit; is of the consistence of an ointment, with little taste and a strong, though not disagreeable, smell. It is applied to sprains, etc., but has no advantage over other oils. It has been used as the excipient for suppositories. It is procured likewise from the *Elais guineensis* and *Elais occidentalis,* two species of palms. **C. nucif′era,** the cocoanut palm; the fruit is agreeable to the taste, but is not easy of digestion. Emulsions, orgeat, etc., are made from it; the juice of the cocoa, *toddy,* when fermented forms wine, and arrack is distilled from it. The expressed oil, *cocoanut oil—cocoölein*—has been found efficacious in tuberculosis and other wasting diseases. The milk of the fresh cocoanut is used in India as a blood purifier; also in phthisis and debility, and in large doses as a purgative.

**Cocostea′ric acid.** Cocinic acid.

**Cocostearin′** or **Cocoste′aryl.** Cocinin.

**Co′cowort.** Thlaspi bursa.

**Coc′tion** (*coquo,* to boil). This word has been employed in various senses; with the ancients it meant the alteration which food experiences in the digestive organs, particularly in the stomach; a preparation from its crude state; it expressed the maturation or change which the humoral pathologists believed morbific matter experienced before elimination. It was considered that coction was produced during the violence of the disease, and hence this was called the period of coction. See *Humorism.*

**Coctolab′ile** (*coquo, coctum,* to boil, *labilis,* unstable). Destroyed or altered by boiling.

**Coctosta′ble** (*coquo, coctum,* to boil, *stabilis,* stable). Unaltered by boiling.

**Cod.** The codfish, Gadus morrhua. Scrotum. **C. oil,** cod-liver oil.

**Coda′gam.** Hydrocotyle asiatica.

**Codaga′pala bark.** Nerium antidysentericum.

**Codamine′** or **Coda′mia.** $C_{20}H_{25}O_4$. See *Porphyroxine.*

**Cod′dington lens.** A spherical lens with an opaque equator.

**Code.** Codex. **C. of eth′ics,** laws regulating the rules of intercourse among medical men, their duties to the public, to the profession, and to their own patients.

**Co′deate.** Salt of codeic acid.

**Codei′a.** Codeine.

**Code′ic.** Relating to codeine. **C. acid,** acid derived from codeine.

**Codei′na.** (Ph. U. S. and Br.) Codeine.

**Codeine,** ko-de-een′ (*kodeia,* poppy head). Codeina (Ph. U. S. and Br.); alkaloid discovered by Robiquet in opium, in 1832; soluble in water, alcohol, and ether, and unites readily with acids; as a hypnotic one grain of codeia is equal to half a grain of morphine; it has been prescribed also in diabetes mellitus and as a remedy for cough; dose, gr. ss–ij (0.03–0.13). *Apocodeine* has been obtained from codeine; it has therapeutic qualities very similar to those of codeine; see *Apocodeine.* **C. phos′phate,** white, bitter substance, soluble in water; used in mental diseases.

**Codeinum** (kod-e-e′num). Codeine.

**Codesel′la.** Anthrax.

**Codeth′ylene.** Compound of morphine and ethyl.

**Co′dex.** Collection of laws; also a collection of approved medical formulæ, with the processes necessary for forming the compounds referred to in it; the French pharmacopœia.

**Codiæ′um.** Chrysosticton; shrub, native of parts of Asia and the Molucca Islands; employed in indigestion and as a sudorific.

**Cod-liver oil.** Oleum jecoris aselli; oleum morrhuæ (Ph. U. S.). **C.-l. olein′,** see *Oleum morrhuæ.*

**Cod′ocele.** Bubo.

**Co′dol.** Retinal.

**Cod′orarth.** Atropa belladonna.

**Codoscel′la.** Bubo.

**Cod′weed.** Centaurea nigra.

**Cœ′citas.** Blindness.

**Coeffi′cient.** A number expressing rate of progress, as of some chemical or physical process. **C. of absorp′tion,** expressive of volume of gas absorbed by unit volume of liquid at 0° C. and 760 m.m. pressure. **Biolog′ical c.,** a figure expressing the energy consumed by the body at rest. **C. of conductiv′ity,** exhibits the amount of heat going in a unit of time through a unit depth of surface during a change of 1° C. **C. of expan′sion,** exhibits the amount of expansion in a body when the temperature is raised 1° C. **C. of extinc′tion,** reciprocal of the thickness of a layer of a solution reducing the intensity of a beam of light passing through it to one-tenth of its natural value. The *absorption ratio* is the ratio between this coefficient and the amount of light-absorbing substance in the solution. **Isoton′ic c.,** see *Isotonic.* **C. of partage′** (Fr.) or **Parti′tion c.,** a number indicating the proportionate amount of a chemical body removed by ether from an aqueous solution of that body and the amount left in it unremoved. **C. of viscos′ity,** expresses the relative amount of viscous matter in the circulating blood.

**Cœla′rium.** Epithelial membrane of the body cavity or cœlom.

**Cœlelmin′tha** (*koile,* hollow place, *helmins,* worm). Class of hollow worms, such as ascarides, trichinæ, etc., found in the human intestines, muscles, etc.

**Cœlen′teron.** Archenteron.

**Cœ'lia** (*koilia*, a cavity). A cavity in the body, the abdomen in particular; the alimentary canal. One of the cerebral ventricles.

**Cœ'liac.** Relating to the cavity of the abdomen. **C. ar'tery,** a blood-vessel situated above the pancreas and behind the upper part of the stomach; it arises from the anterior part of the abdominal aorta, where it passes between the pillars of the diaphragm, and soon divides into the *coronaria ventriculi, hepatic* and *splenic* arteries, the division being called tripus cœliacus or tripus Halleri. **C. ax'is,** c. artery. **C. flux,** cœliac passion; species of diarrhœa in which the food is discharged by the bowels in an undigested condition; by some defined to be diarrhœa attended with discharges of chyle or chyme; it is, in general, symptomatic of tuberculous disease of the mesenteric glands; see *Lientery*. **C. gan'glion,** semilunar ganglion. **C. glands,** lymphatic glands around the cœliac axis. **C. pas'sion,** cœliac flux. **C. plex'us,** solar plexus; is formed of numerous nervous filaments which proceed from the semilunar ganglia of the great sympathetic; it is strengthened by several branches of the right and left pneumogastric nerves; is seated around the trunk of the cœliac artery, behind the stomach, and furnishes the secondary plexuses—the diaphragmatic, coronary of the stomach, splenic, and hepatic, which accompany the arteries of the same name.

**Cœliadel'phus** (*koilia*, abdomen, *adelphos*, brother). Anocœliadelphus; double monster, in which the two bodies are united at the abdomen.

**Cœliæ'mia.** Hyperæmia or congestion of the blood-vessels of the abdomen.

**Cœliag'ra** (*koilia*, abdomen, *agra*, seizure). Gout of the abdomen.

**Cœlial'gia** (*koilia*, abdomen, *algos*, pain). Tormina, colic.
